> Few people, however, are aware that after all this toil; after the first four volumes were printed; after they had been received with a welcome more enthusiastic than had ever been given to any serious literary work; after fifty-six tons of vols. iii. and iv. had failed to meet the first demand in England; after the fiercest criticism had failed to lessen the popularity of the work; after the purity and clearness of the English had been universally recognised—he sat down to undertake a complete and thorough revision of the four volumes, making a thousand corrections in spelling, grammar, punctuation, the use of capitals, arrangement of words in sentences, omitting words in some places, inserting them in others, adding sentences and whole paragraphs, and making some alteration in small details.

A less enthusiastic admirer might suggest that some of this time would have been better spent in correcting unjust inferences and matters of fact.

✧ ✧ ✧

The Edinburgh "Evening Despatch" prints an article called "The Secret of Swanston: the Truth about Stevenson." Two friends, one of whom has just been reading "Dr. Jekyll and Mr. Hyde," visit Swanston together. There they meet two Swanston natives, and, in reply to a question concerning visitors to the place, one of them says:—"Yes, we've a lot of visitors out here now." This in response to our inquiry. "An American the other day told me he came here first after landing. It's a' aboot that Stevenson an' his bukes. There's nothing in them. Noo, there's Burns," he said, "that's poetry. That wis wark." "Aye," chimed in the other Swanston man, "Stevenson would dae naething but lie about the dykes. He would'na wark. He was aye rinnin' aboot wi' lang Todd, amang the hills, getting him to tell a' the stories he kent." "Todd?" broke in my friend. "Is that the roaring shepherd?" "I believe," was the reply, "he had the impidence to ca' him that in his bukes—though Todd was the makkin' o' 'im. Gin Todd had kent what Stevenson was ta dae wi' it he wouldna have tell't him so much." The narrative continues:—"We walked half way home in silence. Suddenly my friend broke out, 'There were two Stevensons—Stevenson the Worker, Stevenson the Idler—Stevenson the Scot, Stevenson the Frenchman—polar twins—continually struggling in the agonised womb of consciousness.' 'That's from "Jekyll and Hyde,"' I replied! 'Yes,' he said slowly, 'that's my explanation. It wasn't Deacon Brodie at all. In the story, Hyde, the worst one, wins. Henley, in his estimate of Stevenson, makes out that the later Stevenson, the friend of the missionary—the believer in prayer—was not the real Stevenson. The Stevenson who quarrelled with his father of the revolt period—that, to him, was the real Stevenson. All the time Stephenson was coming to himself—to his best self. In real life Jekyll won, and not Hyde.' 'That,' said he, as we parted, 'is the secret of Swanston—the truth about Stevenson—at last.'"

SCIENTIFIC TOPICS.

After having vanished from view for more than a year, the planet Eros has been rediscovered. The planet was first observed in 1898 by Witt, of the Urania Observatory, Berlin, and given the name which it bears. Until 1898, as far as telescopes could show, Mars came nearer to the earth than any other planet, but after Witt's discovery it was found that Eros reached a point a little more than a third of the distance from earth to Mars. The honour of the rediscovery belongs to Professor G. D. Ling, of the Chamberlin Observatory, Colorado.

✧ ✧ ✧

At Westfield, Chautauqua County, N. Y., the remains of a great mastodon were unearthed. Various bones among which are the following, were found—Shoulder blade, with socket for articulation of foreleg; hip bone; section of spinal column containing four vertebræ; sections of both extremities of spinal column; knee cap, nine ribs and some other bones. The ribs are 4 feet 3 inches long and 4 inches wide. Two mastodon skeletons have been previously found in this county, one at Sheridan and one at Jamestown, but both in an advanced stage of decay.

✧ ✧ ✧

In the streets of Paris there may soon be installed a novel apparatus for rendering first aid to the injured. A model of the device was recently tested. According to reports which have been received from Paris, the contrivance resembles a lamp-post letterbox, and contains a small medicine chest, folding stretcher, and is equipped with a telephone apparatus for communication with the nearest ambulance station. In order to obtain access to the box, a glass panel is broken, as in some fire alarm systems.

✧ ✧ ✧

A curious astronomical phenomenon was observed in the south of England recently, a short time after sunset. From a bank of clouds hanging over the horizon to about 35 degrees, a clear pillar of light, about 5 degrees in width and perfectly cylindriform, shot up. It was distinguishable almost to the zenith, and was deep crimson in colour on the horizon, dissolving to the sky colour through orange as it ascended. This appearance was nearly stationary and perpendicular to the horizon, and what slight movement could be detected was with the sun, but the column remained perfectly upright. This remarkable light faded down rapidly in about eighteen minutes from the time when it began to decrease, although it had rather the appearance of being withdrawn below the horizon than fading, for the colour did not decrease in intensity in the same proportion that the column decreased in size. This phenomenon was seen on an evening following one of which there was a vivid display of zodiacal light and Eastern night glow.

✧ ✧ ✧

One of the New York Central Company's new tandem compound locomotive recently hauled a train of 108 loaded cars from De Witt to Albany in eleven hours. The 108 cars were loaded with 4,500 tons of freight. This s the greatest tonnage ever moved by a single ocomotive on any railroad in the world. Some dea of the size of the load can be gathered when it is realised that 9,000,000 pounds of reight were moved. The engine was in harge of Philip Eberhardt, of Albany. The ame locomotive has also drawn 100 cars over he division. In the 100 cars there were 4,200 ons. The hauling capacity of the locomoive is enormous. It drew 50 loaded cars up he Schenectady hill without assistance, an nheard of feat among Central enginemen. he increased power of the monster is gained y the use of steam four times, that is, one ompound cylinder placed ahead of the other, ence its name tandem compound.

✧ ✧ ✧

M. Henri Moissan has been making experients with silicide of calcium in order to determine its properties, and especially to find out whether it possesses any analogy with carbide of calcium in the formation of compounds like acetylene. Although the silicide of calcium has already been prepared in a more or less pure state its properties have been but little known. M. Moissan prepares it by heating in the electric furnace a mixture of calcium oxide and pure silicon. The mixture is heated in a carbon tube closed at one end, using a current of 600 amperes at 60 volts. The melted mass is not homogeneous, but is surrounded by an external layer of carbide of calcium and below the striæ of crystallised silicate of lime, while in the centre is a brilliant mass of silicide of calcium, mixed with varying quantities of silicon. The reaction is thus represented:—

$$2\ Ca\ O + 5\ Si = 2\ Ca\ Si_2 + 2\ Si\ O_2$$

The silicide is then separated by an appropriate treatment; it is easily characterised under the microscope by the formation of yellow crystals of silicon on contact with weak hydrochloric acid. As to its physical properties, the mass of silicide may be pulverised in an agate mortar. It has a metallic appearance, and is made up of crystals of undetermined form. The crystals are of a grayish colour and very brilliant. The density of this body is 2.5. It is insoluble in alcohol, ether, benzine, or ammonia.

✧ ✧ ✧

It presents some chemical reactions of interest; it does not combine with hydrogen at redness, but takes fire when cold in fluorine gas, giving off fluoride of silicon and forming a fluoride of calcium which is partly melted by the heat. Chlorine does not attack it cold, but when heated in a current of the gas it becomes rapidly incandescent, and produces chloride of calcium and silicon chloride. When heated in air or oxygen it is but slightly attacked, but under the oxyhydrogen blowpipe it burns with incandescene, forming lime and silica. When the silicide is heated in the electric furnace for 10 minutes in the presence of carbon, using a current of 800 amperes at 60 volts, it is completely transformed into carbide of calcium and silicide of carbon. Melted copper dissolves it slightly, while on the contrary aluminium dissolves it readily but also decomposes it, forming silicide of aluminium. The latter body, when acted upon by hydrochloric acid, gives off hydrogen silicide gas which is spontaneously inflammable. Cast-iron infusion decomposes this body into silicide of iron and carbonundum. The action of water upon the silicide has been specially observed, owing to its analogy with carbide of calcium. When reduced to powder and placed in water the decomposition is very slow and even requires several months. In this case it gives off hydrogen and does not form any products resembling acetylene. The acids act upon this substance to a greater or less degree; one of the most striking reactions is that of hydrofluoric acid upon its powder. In this case it becomes incandescent, giving off fumes of silicon fluoride and producing silicon of a yellow colour.

✧ ✧ ✧

The report of the Parliamentary Committee which was formed some time ago in England for the purpose of investigating acetylene generators in the interests of public safety, has been published. Various types of generators, the greater proportion of which belonged to the automatic class, were examined, but the latter type are not recommended as being the most secure. In the automatic generators the object is the gradual generation of the gas as used, thus dispensing with the necessity of the gas holder. This principle of generation is claimed to be more advantageous and convenient than the non-automatic type in which the gas is evolved in a short time from a given charge of carbide, and has to be stored in a gas holder. The committee, however, point out that the advantage of the automatic type is emphasised only where skilled supervision and favourable conditions are assured, but the varied conditions of use, especially with unskilled labour, these advantages are completely nullified, while many automatic generators were condemned as being of too complicated design and deficient in constructional strength to be of practical utility. On the whole, having regard to the conditions of use which must often prevail, the committee have advised that a generator conducive to the greatest safety should comprise the following desiderata: Simplicity of construction and design, strength of construction, high efficiency as indicated by the yield of gas per pound of carbide, low pressure in generator, and facility of removal of the residue.

✧ ✧ ✧

In the "Popular Science Monthly" Professor Woodward discusses the progressive cooling of the earth and its relation to the length of day. Whether the day was formerly shorter than now, and whether it will be longer in future, depends upon the mass of the earth, for the meteorological dust constantly falls upon the surface and increases the quantity of matter. Laplace concluded that there had been no sensible change in the length of the day for nearly 2,000 years. Repeating this calculation with new data Professor Woodward finds that the day has not changed so much as half a second during the first ten million years after the beginning of the solidification of the earth's material. When the cooling of the earth is finally determined the change will be marked. Professor Woodward finds that the ratio of the change by day to its initial length is two-thirds of the product of the loss of temperature multiplied by its cubical contraction. If the primitive temperature of the earth, for example, was 3,000 degrees C., and if its cubical contraction was that of iron, the day will be finally reduced about 6 per cent; that is to say, about one and a half hours. In order to bring about so pronounced a change, an enormous lapse of time is necessary. About three hundred thousand millions of years, according to Professor Woodward, are required for a 95 per cent contraction to take place. After the expiration of one million million of years the length of the day will not be sensibly affected.

✧ ✧ ✧

One of the most ancient industries in existence at the present time in Europe is the production of zinc in Silesia. From the sixteenth century calamine was obtained in the manors of Beuthen and Jagerndorf; it was used in the local manufacture of brass, and it was exported to the countries adjoining the Oder and Vistula. During the Thirty Years War, when the workmen, mostly Huguenots, had abandoned the mines, this industry disappeared, and its exploitation did not recommence until the eighteenth century, when George de Giesche, a Breslau merchant, obtained in the year 1704 from his sovereign Leopold the privilege, for 20 years, to extract calamine in Silesia. The first zinc foundry established in Silesia was that of Lydagnla, which existed from 1809 to 1900. At first prices were very high, £4 7s per quintal. As the production increased, which in 1816 reached 20,000 quintals, prices dropped to 15s, and in 1820 to 9s 5d. This year proved fatal to the high furnaces, some of which were obliged to shut up. At that time the article was exported to Asia via Brody and Russia. In 1820 the English route was employed for shipment to India, where it proved a powerful competitor to the Chinese zinc. This exportation gave fresh prosperity to the Silesian mines. Since 1830 the production has continued to increase. In 1837 there were 32 works, employing 1,091 workmen, in activity, and the production reached 207,707 quintals. At present it exceeds 2,000,000 quintals, and requires nearly 8,000 workmen. The exportation in 1897 amounted to 496,004 double quintals, and in 1901 to 533,129 double quintals. The nominal price at Breslau is now from 13s.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

DUBLIN, FRIDAY, MAY 25.

A few days ago a young man of genteel manners and appearance was taken by a party of the Cork True Blues, at a publichouse between that city and Robert's Cove, charged with defrauding a merchant of Bristol of a large quantity of goods by tendering in payment a draft on Messrs. Goold and Mills, of Bridgewater, for five hundred pounds sixteen shillings sterling, which, on inquiry, was found to be forged, together with the acceptance, which was dated the 10th of May instant. The manner in which the sharper happened to be discovered was as follows: A young gentleman, brother to the Bristol merchant, who had been present when the draft was offered, and the goods taken away, came over to transact some business with a correspondent in Limerick; he landed in Kinsale, and, standing one day at the door of the Exchange coffeehouse, in Corke, saw the identical person who had defrauded his house pass by; he immediately sent a porter to watch his motions, and soon received intelligence that he was at the above-mentioned publichouse. The gentleman then set out with a few of the True Blues, and caught the sharper napping. He was lodged in the South jail till an opportunity offers of transferring him to Bristol.

The new method of victualling ships for long voyages has so much lessened the demand for the Irish provision beef in several foreign markets that great quantities of the last season's beef remain there unsold, a mere drug, particularly at Bordeaux, from which place several of the proprietors are actually shipping parcels on their own accounts for the French West India Islands.

How are the people of Ireland indebted to those patriotic characters who, rejecting the splendour of foreign courts, expend their princely fortunes at home? But how few are those virtuously independent gentlemen who thus promote the welfare of their native land, and how rarely do we meet a Leinster, a Conolly, an O'Neill, etc., whose noble incomes circulate so importantly and so generously to cheer that peasantry, who contribute to their ease and convenience, and without whom the Lordlings of Ireland would cut a sorry figure indeed?

In a late debate, on the necessity of an absentee tax (that adoption on which the safety of this country so materially depends) it was speciously argued that it would be circumscribing liberty to tax a gentleman for spending his time where he pleased. To the fallacy of this refined argument we have only to answer, that it is the fortunes, not the personages, we regret to lose; for, indeed, those characters who despise the land of their birth are as contemptible as those mushrooms of an hour, who blush to own their parents.

An uncommon species of fraud has lately been practised, with success in a few instances, by a set of sharpers, against persons advertising in some of the public prints. By some contrivance they learn, or suspect, that accounts are kept with the publishers, and accordingly wait on the advertisers with bills for the different insertions. If previously discharged, or if no credit has been sought for, an apology is made for the pretended mistake, which is artfully imputed to an unavoidable hurry of business. The public are, therefore, particularly cautioned to circumspection on demands of this nature by unauthorised persons, lest a loss should be sustained by this novel species of swindling.

It has often been remarked that the Irish landlords are, in general, chargeable with a greater severity towards their tenants than the landlords of other countries; those of the southern parts of Ireland fall more particularly under this censure, as a system of tyranny is established there, which, in the Senate even, at a time when laws were framing to check a riotous spirit amongst the peasantry, was universally admitted. If landlords could be brought to survey their real interests, leaving humanity out of the question, experience would soon convince them that they proceed injudiciously towards themselves and those poor sufferers, who certainly are entitled to a little comfort and convenience for their labours; these, however, they assuredly do not enjoy, and the consequences are often injurious to the man of fortune, while they overwhelm with distress the miserable objects destined to submit to labour without pity or an adequate recompense.

Dr. Thomas, in his observations on some late pamphlets, has the following remarks on the above subject:—"In the province of Munster the men of fortune enforce payment of the rent from their tenantry as regularly as at each half year it becomes due, and the wretched farmer is obliged to thresh and bring his corn to market in the month of October, at which time he obtains for it from the merchant less than one half the sum for which it would sell in the ensuing March. By this means, in contradiction to sound policy, the merchant rapidly accumulates a fortune, and without any exertion, while the industrious husbandman does not enjoy the common necessaries of life. But the landlord, not content with injury, adds insult to it, slanderously asserting that those oppressions are occasioned by the villainous characters of the lower orders of the people, who, if they were entrusted with a half-year's rent, would drive away their cattle, and immediately run off with the money in their pockets; a charge in general notoriously false, and which, if in some instances true, must be ascribed to the force of brutal severity."

There does not, happily, appear at present any complaint among the working people of the woollen branch for want of employment, but, on the contrary, they have as much as they can possibly execute. This certainly is a very pleasing piece of intelligence, and more especially when we call to mind those times which must be still fresh in memory, when above two-thirds of the working people of those branches were entirely idle, and they and their families in a most wretched and starving condition; but, notwithstanding this flattering circumstance, there, however, are not half the looms employed in this city that were about forty years ago, though our ports are now open to a foreign trade with other nations, which was not then the case. At that period the wool was comparatively cheap to what it is at present, provisions moderate, and the rates of mechanic labour not so high as of late years; independent of these considerations, superfine cloths were not so much called for, but refines worn by the most eminent citizens, and the writings of Swift conduced to give a preference in many instances to the consumption of Irish manufactures.

Since the erection of the lighthouse and the adjoining part of the South Wall, the bank called the Eastern Bar, which before that time had only four feet of water at ebb tides, in like circumstances is now covered with nine feet, as appeared by soundings taken about two years since; and the ford near the Pigeonhouse, called Nightingale Ford, which was dry when the tide was out about thirty years ago, is now covered with from four to six feet water in the lowest ebbs. As soon as the South Wall is joined to the lighthouse it must tend to make the channel much deeper and safer than it is at present, and, of course, admit vessels of greater tonnage up the river. When, therefore, this grand object is completed, the course of the River Dodder diverted into another channel, and the pier of Dunleary lengthened to about double its present projection into the sea, our harbour will be improved, it is hoped, to a degree highly beneficial to the trade of the metropolis, and remove the unfavourable impressions of many foreigners.

We felicitate the public on the approaching theatrical after-season. Our Manager, whose unremitting care in providing every novel entertainment and every capital actor, has made, we hear, very liberal engagements for our amusement this summer. The celebrated Miss Brunton, a dramatic star of the first magnitude, though not exceeding the age of nineteen, is, we are informed, to make her first appearance, in a few days, in this city. Mr. Holman, also an actor from whose intrinsic abilities we have often experienced infinite pleasure, is also, we hear, to contribute to the consequence of the after-company; from such an union of theatrical excellence we are induced to augur most favourably of the theatre, and have no doubt but Mr. Daly's diligence in the public service will, as it deserves, secure extensive and ardent patronage.

SATURDAY, MAY 26.

Though the sixpenny loaf is not reduced two pounds, as thrown out in some of the public prints, yet it is rather unaccountable why it should suddenly sink two pounds and upwards in the twelvepenny, after a cheap year, and an ensuing promise of a good harvest. There is no actual scarcity, and notwithstanding all the puffs of the Canal agents, the evil of monopoly exists in this city, which is sufficiently mischievous to produce the effects of hardship. Mutton is still four pence halfpenny a pound, a circumstance inimical to manufacture, and unfriendly to every class of the community.

The inhabitants of Patrick street owe the greatest obligations for the timely and effectual assistance and protection afforded them through the activity and zeal of Mr. Sheriff Fleming and Alderman James, at the dreadful fire of Mr. Wall's warehouse, which from the immense quantities of spirits, etc., contained therein, as well as in the numerous and adjacent stores, threatened inevitable destruction to their properties on the one hand, and by the callous hearts and hands of an unfeeling mob prompt for devastation and plunder on the other; but rescued from both by these worthy magistrates, whose judicious disposition of the soldiery and police guard, together with their own anxious and unremitting care even at the peril of suffocation, preserved that regularity so necessary to overcome the first, and effectually to check the last, so as to completely secure both life and property.

We hear that the scheme of turning the River Dodder is totally relinquished, and that notice to that effect has been sent to the Grand Jury of the City in order to their presenting a sum of money for rebuilding Ringsend Bridge; and that the three premiums of 50, 30, and 20 guineas offered for the best plans, etc., have been adjudged to Mr. William Chapman, engineer, Mr. Christopher Myers, and Mr. Whitmore Davies, architects.

The Church-Wardens of St. Werburgh's Parish acknowledge the receipt of a large quantity of light bread, seized by Mr. Sheriff Thompson, which was distributed among the poor widows in the Alms-house, and sincere thanks are returned to that worthy and active magistrate.

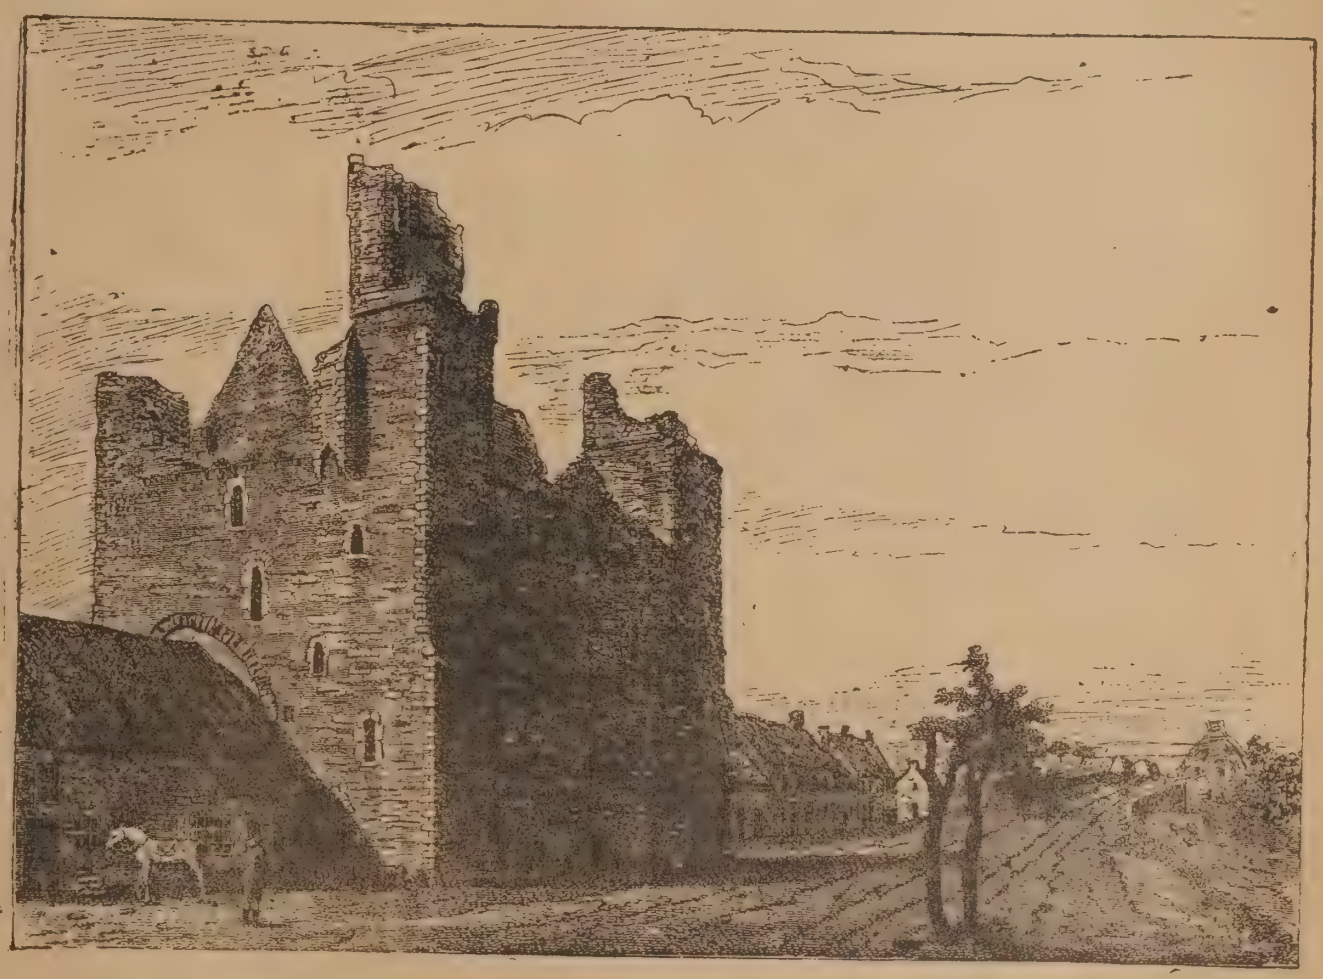
(To be Continued.)

RATES OF SUBSCRIPTION.

"DUBLIN PENNY JOURNAL."

Post free to any part of Ireland, Great Britain, Australia, New Zealand, Canada, United States.

Twelve months, 6s 6d; Six months, 3s 3d; Three months 1s 8d.



Printed and published for the proprietors at 90 Middle Abbey street, Dublin, by W. F. Dennehy, to whom all cheques and money orders should be made payable.

Dublin Penny Journal

A Magazine of Art, Archæology, Literature, and Science

VOL. I., No. 28.] DUBLIN: SATURDAY, OCTOBER 11, 1902. [PRICE ONE PENNY.

ARDEE CASTLE.

FROM GROSE'S "ANTIQUITIES OF IRELAND," 1792.

This fortress was erected by Roger de Pippard, styled Lord of Atherdee (shortened into Ardee), about 1207. In 1538 O'Neal, with his associates, invaded the English pale, and burnt Ardee; and a descendant of his, Sir Phelimy O'Neal, in 1641, procured this town to be surrendered to him. The same year Sir Henry Tichborn advanced against it: when he was about a mile from the town, the enemy were described to be drawn up in two divisions, and above a thousand in number; however, Sir Henry drew up his soldiers in battle array, sending a forlorn hope to scour the ditches, in doing which they fell into an ambuscade, but their valour triumphed, and they slew above four hundred of the enemy. They then fled to Ardee, where Tichborn found resistance at the foot of the bridge, from musketeers placed there in a tower; however, passing the river and attacking them in the rear, the enemy fled and left the town and castle.

The castle stands in the middle of the town; the east and west fronts are defended by projecting towers, which rise above the other parts of the building. On the north sides are turrets; the whole is, except the front, surrounded by houses. The castle serves for a gaol.

This view, which represents the north-west aspect, was drawn by Lieutenant Daniel Grose, anno 1792.

MAGH FEIMHIN.

TWO MUNSTER ROYAL OXEN.

By REV. J. F. LYNCH.

I have put together some notes on Sliabh na m Ban and Magh Feimhin for the "Dublin Penny Journal," and in that paper I have given Keating's important item concerning Magh Feimhin, which I took from Dr. Joyce's edition, but since I wrote the article which is now in the hands of the Editor, I have seen Mr. David Comyns's recently published and splendid edition of the first part of Keating's "History," and I think that it as well now to discuss more at length, before the publication of the notes on Magh Feimhin, this important particular given by Keating.

In the section of his History in which Keat gives an enumeration of the noblest of the Tuatha De Danann, he says:—Eire agus Fodhla agus Banbha, tri h-inghiona Fhiachach, mhic Dealbhaoith mhic Oghma. Badhbh, Macha, agus Moirrioghan a d-tri bain-dee. Danann agus Beuchuill an da bhanthuathaigh, agus Brighit bain-fhile. Ag na bantuathaibh Seo bhadar an da riogh-dhamh, eadon, Fe agus Meann a n-anmanna; is uatha ainmnighthear Magh Feimhin isin Mumhain. Is aca fos baoi Triath-ri-thorc o raidhtear Treitheirne Mumhan.

The passage is thus rendered by Dr. Joyce—"Eire and Fodhla and Banbha, three daughters of Fiachaidh, son of Dealbhaoth, son of Oghma. Badhbh, Macha, and Moir-rioghan, their three goddesses. Danann and Beuchuill, the two bantuathachs (noble females), and Brighit, the poetess. Among these noble females were the two royal poetesses, viz., Fe and Meann their names; it is from them is named Magh Feimhin in Munster. Belonging to them also was Triath-ri-thorc, from whom is called Treitheirne of Munster."

After Oghma Mr. Comyn inserts the following clause from MSS. H. and F. Eirnin inghean Eadarlaimh, mathair na m ban sin. "Eirin, daughter of Eadarlamh, mother of those women."

In the case of Danann and Beuchuill, or "Wife of Coll," Mr. Comyn renders Bantuathaigh "female chiefs," which is also rendered by Dr. Joyce (note p. 123) "female-rulers," and Keating says that tuathach and tighearna (lord) are equivalent as are tuath and tighearnus (lordship). The latter portion of the extract is thus rendered by Mr. Comyn.

"Appertaining to these noble females were the two royal institutes—i.e., Fe and Meann (being) their names; it is from them is named Magh Feimhin. It is among to them also was Triath-ri-thorc, from whom is called Treitheirne Mumhan."

Referring to the first sentence Mr. Comyn says, note 1—"This sentence is very obscure, and the translation is merely tentative," and with reference to Triath-ri-thorc, he says—"This is obscure, and doubtful whether a personal or a place-name," and he adds that Treitheirne of Munster has not been identified.

In the "Book of Rights," pp. 42, 45, O'Donovan describes the position of Muscraidhe Treitheirne, or Muscraidhe Breoghain, or Muscraidhe Ui Chuirc, the country of O'Cuirc, in Clanwillam. Treitheirne consequently included the district of Cnamchoill, now Clieghile, about a mile and a half east of the town of Tipperary, which is also named Foi in Cormac's Glossary. The celebrated lake on the Galtees named Loch Bel Sead, Loch Bel Dragain, Loch Crotta Cliach O'Curry's "Lectures," p. 427, and now called Lake Muscry, was in Treitheirne. Triath-ri-thorc may have been the old name of the districts of Kilfeacle and Cnamchoill, or Foi, and it may have included Sliabh na Muice, "Mountain of the Pig," south of Tipperary. Triath, which signifies king, chief, or boar, is said to have been son of Ugaine Mor, and it is said that the district of Triath-ri thorc, so named from him, was bestowed upon him. For Sliabh na Muice see "Boyish Exploits of Finn." It may be remembered that I have explained Ugaine as an extension of Ugh, which is a form of Oc or Ac. Triath ri-thorc means "Triath, King of the Boars," and I think that Triath-ri-thorc must be equated with Roighne Rosgadhach, or Roighne (Raighne) the Poetic, who is said to have been son of Ugaine Mor. The district of Cnamhchoill and Sliabh na muice was one of the great centres of the Druids of Munster, and there in the sacred wood was the pillar stone of Tlachtga, daughter of Mogh Ruith (O'Curry's "Lectures" and Hibbert "Lectures"). district there is no tradition of it. Professor Rhys (Hibbert "Lectures") quotes from "Revue Celtique" a tale which connects Oenghus mac Ind Oc with Loch Bel Sead, and Bodb Derg, Ind Dagda, Boand, and Coerabar are mentioned in this tale. Several local legends are still told about this lake and the serpent. Keating's explanation of Femen cannot be accepted, but the two oxen, for da rioghdhamh means two royal oxen, and not two royal poetesses, or two royal institutions, are mentioned in "Silva Gadelica," p. 529, and in the notes on Magh Feimhin. I have given particulars of them. These oxen are also mentioned in Cormac's Glossary, voce Feimhen. The Museraidhe, from whom were named several districts in Munster, are said to have descended from Cairbre Musc, father of Corc, by Duibhne, from whom were named the Corco Dhuibhne, or old inhabitants of the district of Corco Dhuibhne, now Corkaguiny barony, in Kerry. Cairbre Musc is made the son of Conaire ii., Joyce's Irish Names, Vol I. p. 132, and Silva Gadelica, pp. 487, 535. Dr. Joyce ranks Cairbre Musc amongst historical personages, but see Hibbert's Lectures, by Professor Rhys. In the notes on Magh Feimhin I have forgotten to give the following quotation from Dr. Joyce's "Irish Grammar," p. 100—"Is binne a ceol na lon 'sna smol," ("Sweeter is her voice (music) than the blackbird or thrush"). Here we have smol instead of the extended and present form smolach, and the quotation also shows that the smol, or thrush, and the lon, or blackbird, were regarded as the two chief songbirds of Ireland. In "Silva Gadelica," p. 344, Clanna Smoil and the Fianna are stated to have been bound in the cave of Keshcorran, and in "Silva Gadelica," p. 378, Clanna Smoil are said to have been present at the banquet at Almahain.

There is also another matter to which I would like to refer in this note. Keating (Introduction, p. 13) says that Cambrensis asserts that King Arthur, when at Caerleon, in the year 519, imposed a tax on the Irish, and he adds that Campion sets forth in his chronicle that Gillamar, or Giolla Mor, was then King of Ireland, but Keating defies anyone to produce proof from the ancient records of Ireland that there was ever a King of Ireland named Giolla Mor, and at page 49 he quotes from Hanmer that the person whom authors call Gillamar, King of Ireland, was son to the King of Thomond, but adds that the confutation which he has already given this thing he deems sufficient.

I have mentioned that John Hayes at Lough Gur has an Irish manuscript copied by his father from one belonging to John Collins, of Myross, and in that manuscript, which contains an Irish poem about death, the name Caherguillamore is written Cathair Ghiolla Mhoir, or "fort of Giolla Mor." John Hayes was of opinion that Giolla Mor was the White Knight, having confounded the White Knight with Richard White, who rented the lands of Caherguillamore from the last Earl of Desmond, as mentioned in one of Queen Elizabeth's State papers, in which the name is written Cahergillamore. The fort named Cahergillamore is at the west side of the avenue leading to Caherguillamore House, as identified by John Hayes, and I think that it must be Cathair Chinn Chon, fort of Cencon, or "Hound's Head." In "Battle of Magh Rath," p. 177, Cennconn is said to be the name of the faithful servant (Gilla tairisi) of the lordly hero Congal, and he is sent forth by Congal to reconnoitre the phalanx of the race of Conall before the battle of Magh Rath. O'Donovan "Magh Rath," p. 22, note w, says—"Maelduin the son of Aedh Bennain—According to the Annals of Tighernach, the father of this Maelduin, died in the year 619. He was the ancestor of the famous family of O'Moriarty, in the county of Kerry, as mentioned in all the genealogical Irish books. Maelduin himself was defeated in the battle of Cathar Cinn Con, in the year 640, and burned to death in the year 641, on the island of Inis Cain." In "Magh Rath," p 279, Maelduin is said to be the son of Aedh Bennain, King of Desmond, and at p. 313 Maelduin mac Aedha Bennain is stated to have cut off the hand of Congal in the battle of Magh Rath."

"In Chronicum Scotorum," at year 639, we read—"Battle of Cathair Cinn Conn in Mumhan—Aengus Liathana, from Glenn Damhain (Glanworth, Co. Cork), was victorious, and Maelduin, son of Aedh Bennain, was put to flight. . . . Burning of Maelduin, son of Aedh in Inis Cain." Hennessy, who was only once at Lough Gur for a few hours, not long before his death, says that Cathair-Cinn-Con was a stone fort, near Rockbarton, Co. Limerick. In the Book of Rights, Cathair Chinn Chon is mentioned as one of the royal forts of Munster, and O'Donovan says—"Cathair Chinn Chon, Anglice Caherkincon, a Cyclopean stone fort near Rockbarton, the seat of Lord Guillamore, in the barony of Small County, and county of Limerick. There are extensive remains of such stone forts in this immediate neighbourhood, which indicate its having been anciently a place of importance."

In "Silva Gadelica," p. 235, it is stated that Eogan MacAngus MacNadfraech, having with him Patrick and Caeilte, progressed to another Raith Chinn Chon, in south part of Magh Femin, and in Lios an bhanntrachta, or "fort of the women folk," asked why were this rath and lios called by those names. And then Caeilte replied that Cellach, son of Dubh dead, or "black toothed," was a royal hospitaller, whose wealth and substance when they were numbered covered all the great plain of Femen, but in the world was not a man better endowed than he was with churlishness and niggardliness, and that when Finn and the Fiana visited him he heeped upon the Fianna insult and reproach, and thereupon said Cuinnscleo, son of Ainnscleo, King of Britain in the east: "A mighty ready bit of dog's head snapping and snarling this is to which the boor has treated Ireland's Fianna," Then, said Finn, "Thou hast lighted on a happy word by way of name for him, fix Cenn Con or 'dog's head' on him." But Raith Chinn Chon in the northern part of Magh Femen is said to have been named from the hound of the three young warriors of Ioruath, or Norway, which cast up treasure. Cuinnscleo is said to have been the tinnmedoir or "carver" of Finn ("Silva Gadelica," p. 101), The first Lord Guillamore made many alterations in the grounds of Rockbarton and Caherguillamore, and several old monuments were destroyed, and so it is well nigh hopeless now to expect to bring to light the old things of this place. I have tried by the method of comparison to throw some light on the place from Magh Feimhin. In "Silva Gadelica," p. 354, Dil is described as a blind druid dwelling on Druim

Dile, in Ossory, and he and his daughter Moncha and Eoghan Mor are stated to have driven to Magh Cliach, which is the same as Magh Aine. Moncha, who acted as her father's charioteeress, is stated to have become wife of Eoghan Mor, and mother of Fiacha Muilleathan, who is connected with Badamar, near Cahir, Co. Tipperary, and was present with Finn at Oenach Culi Mna Nechtain, and is also stated to have been born on a stone in the Suir, which is a very old word for river. This birth of children on flag stones is often referred to in the Irish tales, and appears to have been a very old custom. It is referred to by Dr. Whitley Stokes in Tripartite Life of St. Patrick. See also Life of St. Columcille. In "Silva Gadelica," p. 359, however, Moncha is said to be the daughter of Trethan Mac Bicidh, and she is in that passage also said to have been wife of Eoghan Mor, son of Olioll Olum. It is well to remember that the father of Oilioll Olum was also Eoghan Mor. And so, through the identification of Dil, the blind druid, son of Dachreca, with Dil, daughter of Lugh Mannair, or "famous Lugh," given in notes on Magh Femin, may appear to many as absurd, it is, however, one of the things of the mythology about which I feel most certain, and analogous cases may easily be obtained from the mythologies of old races.

Work at present must be destructive, but we cast down only to rebuild, and the flash of the Mac an Loin will be followed by the sound of the Mac an Smoil.

THE FISHERMAN.

By Ethelwyn Wetherald.

The fisher's face is hard to read,
His eyes are deep and still;
His boots have crushed a pungent weed
Beside a far-off rill.
Oh, early lifted he the latch
And sped through dew away,
But when we ask him of the "catch"
That was to mark the day,
He lifts his empty hands and smiles:
"I fished for hours, I fished for miles."

The fisher has an open mind,
A meditative heart;
He walks companioned by the wind,
Or sits alone, apart,
Within some stream-enchanted dell.
The fish about him play
In sweet content. They know full well
That friends of his are they.
Dame Nature all his soul beguiles
With murmurous hours, with emerald smiles.

But one who trod the path he took
By fragrant woodland ways,
To where the cold trout-haunted brook
Ran thick-leaved from the gaze,
Heard him but sigh, "How fair it is!
My God—and what am I
That Thy most secret harmonies
Should flood the ear and eye?"
At eve, with empty hands, he smiles:
"I caught the best of hours and miles."

There has been a decided boom in the cultivation of rice in the past year or two and many great plantations have been taken up and are being put in shape for business through the southern States of America. A large factory for the manufacture of the rice polishing machinery is about to be started in Baltimore, Md. This company has acquired a number of patents, mainly those of Oliver R. Welch, of Baltimore, which makes use of a system of wire mesh belts and screens, and which is said to do the work of polishing the rice grains better and cheaper than by the old process of using belts of sheepskin, known as the "skin process." Rice in the hull is almost black, and when the outer skin is removed the grain is dirty yellowish in appearance. Rice is used almost over the entire world, and the custom of polishing it is general except among the Chinese, who eat it in the yellow stage.

DUBLIN'S OLD THEATRE ROYAL

(HAWKINS STREET).

HOW IT CAME TO BE BUILT.

SOME HISTORIC PERFORMANCES.

By H. CALCRAFT.

II.

In 1824 the theatre was let to Mr. W. Abbott, of Covent Garden, at the enormous and unpayable rent (as he soon discovered) of £4,000 per annum. He entered on his career in high spirits, and with a host of introductions, which carried him at once into the best society, where he became a general favourite. He was a very agreeable, versatile actor, an unrivalled table companion, with exhaustless spirits, and a gentleman of accomplished mind and manners. But, unfortunately for himself, he was not a man of business. He loved a lord with more devotion than even Mrs. Heidelberg did, and bowed down before the spell of aristocratic notice. Society held him as completely in her thralls as Venus was enmeshed by the net of Vulcan. Nothing could induce him to look into a ledger or face an account, while answering letters was in his eyes an utter abomination. His neglected correspondence lay piled on his table for a month, and then he disposed of it in a twinkling, by a holocaust. On these quicksands, added to the accumulated abuses and enormous expense under which he found the theatre groaning in every department, his vessel was wrecked. The resources of all the Rothschilds could scarcely have extricated it. Nevertheless, his his receipts in two years exceeded £40,000. If any of his successors could have averaged this sum, a large fortune might have been realised in a gallop. That fatal year of panic, 1825, has left impressions not yet obliterated.

Mr. Abbot, by his personal interest, brought back to the theatre the Marquess Wellesley, who had been driven from it by the bottle outrage. He gave a command soon after his marriage. The house, as might have been expected, was crowded in every part. There was much curiosity and anxiety as to how he would be received. He came down alone to the front of the state-box, as bold as Achilles, bowed his acknowledgments to the reiterated plaudits with which he was greeted, and gallantly handed in his lady, who looked, as the Page describes Jane de Montfort, in Miss Baillie's play:—

"So queenly, so commanding, and so noble,"

that her appearance caused the whole theatre to ring with acclamations. In grace, in beauty, and in dignity, she might have challenged competition with the proudest of England's coronetted matrons, and filled the Viceregal chair beside her noble consort as if she had been "native and to the manner born." While I pen these lines, the scene presents itself as vividly to my memory as if it occurred yesterday. About this time Sir Walter Scott, then on a tour in Ireland, being in the theatre, was recognised by the audience, who insisted on a speech from the Wizard of the North, with which he good-humouredly indulged them. An entertaining account of this will be found in Lockhart's "Life." Early in Mr. Abbot's first season, the late Charles Mathews, an intimate friend of his, accepted an engagement in Dublin, and commenced with the character of Goldfinch and Morbleu, in Moncrieff's popular farce of "Monsieur Tonson." On the nights when he appeared in the legitimate drama the houses were thinly attended. When he gave his own peculiar entertainment they were filled to suffocation. In the farce of "Monsieur Tonson," the part of Morbleu had been originally personated with great success by Montague Talbot, an actor of long standing in the Dublin company, and still remembered by the patriarchs of the expiring generation.* During the first scene, whenever Mathews produced an effect, some half-dozen malcontents in the gallery raised a cry of "Talbot, Talbot!" which operated like an epidemic, and was speedily caught up by a few more. The actor paused, appeared astonished, and at length said, "I hear a cry of 'Talbot, Talbot,' but I am unable to follow the meaning." "We want Talbot," was the reply. "You may have him," muttered the indignant Mathews, sotto voce, bowed, and walked off the stage considerably excited. The interruption then increased to an uproar. The manager came forward and stated that his friend Mr Mathews was merely there for a short engagement to oblige him; that he performed, as a matter of course, his usual round of characters, and that he was not come to displace Mr. Talbot, or remove him from his position. This address was received with universal acclamations, which redoubled when Mathews immediately afterwards entered and reassumed his character. But in a few moments the mischievous spirits again shouted, "Talbot, Talbot!" Mathews, never the most patient of men, came forward and said, brusquely—"Either you want to see this farce, or you do not, so make up your minds at once. If I am interupted again by this cry of 'Talbot, Talbot,' I shall relieve you from my performance; but it is rather too amusing, after having acted this part with universal applause in London, and all the principal theatres in England, to come here and be annoyed by your disapprobation." Many thought he had now committed himself beyond recovery, and would be pelted off; but the audience succumbed, took it all in good part, and there was no more "Talbot" for the rest of that evening. It is amazing what the public will sometimes endure without anger, from favourite

* Talbot was a gentleman of good family and education, a graduate of Trinity College. His forte lay in light comedy and Frenchmen, but his tragic assumptions were ineffective. He is greatly lauded in the following lines of the "Familiar Epistles":—

"By art and nature chastely fit
To play the gentleman or wit;
Not Harris's, nor Colman's boards,
Nor all that Drury lane affords,
Can paint the rakish Charles so well,
Give so much life to Mirabel;
Or show for light and airy sport,
So exquisite a Doricourt."

Talbot was the original Rezenvelt in Miss Baillie's heavy tragedy of "De Montfort," at Drury lane, a character unsuited to him, and in which he made little impression. I only saw him in his decline, when his notions of acting had become very peculiar. Among other eccentricities, he played the Ghost in "Hamlet" with tin eyes, and a sort of revolving, ambient motion, under the idea that a disembodied spirit should not stand fixed on the earth, but float etherially. I have seen more than one Hamlet much disconcerted by this demeanour of his father's spirit. In 1826, Talbot's partisans concocted a "row," which lasted several nights, the object being to compel Mr. Harris to engage him contrary to his wishes.

performers, when they are either taken by surprise, or the good-humoured vein predominates. George Frederic Cooke told the people of Liverpool to their teeth that they were a disgrace to humanity, and that every stone in their city was cemented with human blood. A figurative mode of conveying that their commercial prosperity sprang from encouraging the slave trade. They saw that he laboured under his "old complaint," and forgave the actor while they pitied the man. At Washington, in America, when the President had come expressly to see him in "Richard the Third," he flatly refused to commence his character, or act before the king of the Yankee Doodles, as he called him, until the band had played "God Save the King," in addition to their own national air. And in this extravagance the stiff Republicans actually indulged him.

During Elliston's management of the Surrey Theatre, a very poor play was one night unequivocally damned. He rushed from his dressing-room on the stage, under a tempest of disapprobation, and when silence was with difficulty restored, exclaimed, with a face of bewildered astonishment, "I thought I heard a hiss—unusual sound! Ladies and gentlemen, you are under a very grievous mistake here. I can assure you (and I think you will allow my opinion is worth something) this is a most excellent piece, and so you will find out when you exercise your unbiased judgment, and have seen it three or four times. A British audience invariably give fair play to everybody. With your kind permission, therefore, I shall announce the new drama for every evening until further notice." This address was received without a dissentient voice, and procured for the condemned play a long and successful run. But the climax of public endurance occurred in the case of Edmund Kean at the Victoria, formerly the Coubourg, on the Surrey side of the water. He had been tempted into an engagement there by the large salary of £50 per night. He opened in "Richard the Third," to an enormous house, and all passed off with great eclat. On the second night he appeared as Othello, on which occasion Iago was enacted by Cobham, a prodigious Victoria favourite.

The house was again crowded as before, but noisy and inattentive. The best effects in the most striking scenes were marred by such unclassical expletives and interuptions as a Coburg audience are wont to dispense with more freedom than taste—by the incessant popping of ginger-beer bottles, and by yells of "Bravo Cobham!" whenever Kean elicited his most brilliant points. The great tragedian was disconcerted, and by the time the curtain fell, overflowing with indignation, a little assisted by copious libations of brandy and water. He was then loudly called for, and after a considerable delay came forward, enveloped in his cloak, his face still smirched, not more than half cleansed from the dingy complexion of the Moor, and his eyes emitting flashes as bright and deadly as forked lightning. He planted himself in the centre of the stage, near the foot-lights, and demanded with laconic abruptness, "What do you want?" There was a moment's interval of surprise, when "You, you!" was reiterated from many voices. "Well, then, I am here!" Another short pause, and he proceeded: "I have acted in every theatre in the United Kingdom of Great Britain and Ireland. I have acted in all the principal theatres throughout the United States of America; but, in my life, I never acted to such a set of unmitigated brutes as I see now before me." So saying, he folded his mantle majestically, made a slight, contemptuous obeisance, and stalked off with the dignity of an offended lion. Then ensued an awful silence for a minute or two, until, at last, pent up revenge burst forth in one simultaneous shout of "Cobham, Cobham!" Cobham, who was evidently in waiting at the wing, rushed forth at once, bowed reverentially, placed his hand on his heart, and acted emotion and gratitude after the prescribed rules. When the applause subsided, he delivered himself nearly as follows—"Ladies and gentlemen, this is unquestionably the proudest moment of my life. I cannot give utterance to my feelings; but to the latest hour of my existence I shall cherish the remembrance of the honour conferred upon me, by one of the most distinguished, liberal, and enlightened audiences I ever had the pleasure of addressing."

Mr. Abbott abdicated in September, 1826,* when Mr. Harris, most unexpectedly, and with little preparation, was compelled to take the reins of government once more into his own hands. He finally retired in 1827,† wearied out by the disastrous result of a season which began with great brilliancy, but ended in a heavy loss—Finis coronat opus. During the year half price was introduced in the Dublin theatre. As a proof of the change of times and taste, this same half price, which was considered by many a damaging experiment, as being too low, exceeded in scale the full price of the present day. In the year following, it was denounced by the new management in the annexed paragraph, which headed the opening bills and advertisements—"The experiment of second price having proved a failure, is abandoned by general desire."

Mr. Bunn, the new lessee, commenced with a capital of £2,000, which, from diurnal demands, soon became "fine by degrees and beautifully less," dwindling before long into an infinite decimal. Yet his efforts were fully equal to those of his predecessors, his company excellent, his novelties well selected, the attractions he produced equal to any reasonable demand, and his expenditure liberal. As an instance of the latter item, he engaged a celebrated vocalist, at the rate of £50 per night for a long series of performances, to many of which the entire receipts fell below the sum claimable by the auxiliary. As a case on the per contra side, and to show the impossibility of estimating theatrical results by experience or analogical reasoning:—In 1826, Mr. Abbott engaged together Miss Stephens and Mr. Braham. His actual expense on each evening of this "unprecedented combination of talent" (as the play-bills invariably designate all exotic monstrosities), amounted to £150 before he could realise a farthing. Yet, in twelve nights, the profit exceeded £1,000; but then followed an exhausting reaction, from which the season never recovered. "These violent delights have violent ends." Read the memoirs of Charles Mathews, and will it not be found written there, how, at the close of what was called one of the most successful seasons the Adelphi Theatre ever witnessed, when the house could scarcely contain the crowds who nightly thronged the doors, the managers wound up their account with a surplus on the left hand side—simply because the expenses exceeded any possible receipts. The great secret of profitable management consists less in the sum you take, than in the sum you can contrive to keep. The old song says:—

"How happy the soldier that lives on his pay,
And spends half-a-crown out of sixpence a day."

But we never yet heard of any manager disposed to join chorus in this canticle.

We presume it will be admitted by the most disputatious dogmatist as a self-evident axiom that everything which is limited must come to an end. The longest purse has two ends. Now, the best replenished manager will find his banker's account bounded by a given figure. If his private drafts are not replaced by good bills on the public treasury, his balance will soon become nil, and his book will be politely enclosed to him, labelled no effects. As the British constitution is admirably poised by a judicious amalgamation of the three estates, Sovereign, Lords, and Commons, so is a theatrical government equally sustained by its three indispensable constituencies—manager, actors, and public. In either case, the latter furnish the supplies. If they are contributed with a niggardly hand, or withdrawn altogether, the wheels of the machine will stop for want of oil, and the whole fabric falls to pieces. It cannot fail to be observed, by all who take an interest in the subject, that from the earliest to the latest period, ever since Dublin had a theatre, the constant cry has been—not as Macbeth says, "they come!" but, "they come not!" In every record, we read of gigantic efforts followed by diminitive results.

Mr. Harris's last letter, which closed a long correspondence, is now before me, dated August the 14th, 1827. In this he says—"I rejoice that your disastrous season is over—a season which must ever be renowned in Dublin for unparalleled exertions on the part of the management, and unparalleled apathy on the part of the audience." During this very season, in addition to an unexceptionable stock company, including many new candidates of established pretension, as well as old favourites, the public were treated to visits from Mrs. Waylett, her first appearance; Miss Paon (afterwards Mrs. Wood), her first appearance, in the high zenith of her reputation; Monsieur Laporte (his first appearance), Mrs. Fitzwilliam (her first appearance), Mr. Wood (his first appearance), Mr. and Mrs. Noble (formerly Miss Lupino), with a ballet company; Miss Hughes (her first appearance), Mr. Braham; and, to conclude, Madame Pasta, in nine performances, for which she received one hundred guineas per night. A system may fail, an experiment may break down, a ministry may prove incompetent or mistaken; but when successive systems invariably fail, when no experiment ever succeeds, and no ministry can be found with a pilot sufficiently able to "weather the storm," it is but reasonable to conclude "there is something rotten in the state of Denmark," and that the state vessel is unmanageable. On the inauguration of Mr. Bunn, the following highly poetical address, written by the Right Honourable Richard Sheil, was spoken by Mr. Calcraft, who continued to hold the office of stage manager, which he had filled for the three preceding years, under Messrs. Abbot and Harris. There are some pungent lines in the original copy, which bear rather heavily on the supposed puritanism of those who object to the theatre on what are called religious grounds. These were omitted (though sufficiently humorous), as not eligible for public recitation:—

ADDRESS,

Spoken at the Theatre Royal, Hawkins' street, Dublin, on Saturday, November 2nd, 1827; written by R. L. Sheil, Esq.

Why droops the Drama, in the isle so long
Fam'd for the love of laughter, tears, and song—
Amidst a people o'er whose fervid soul

* Mr. Abbot, on leaving Dublin, took the first English company to Paris. He afterwards became lessee of the Victoria Theatre, London, in conjunction with Egerton, of Covent Garden; and finally died at Charleston, in America, having been very popular, both as actor and manager, in the United States.

† Mr. Harris, who was very partial to a country life, retired with his family to the neighbourhood of Boulogne, and died there not many years since.

Pale Tragedy should hold her high control,
While over bosoms, vivid, warm, and gay,
Thalia should assert her equal sway?
On Barry's, Macklin's, Mossop's, Ryder's shore,
Why should the Actor's magic charm no more?
Say, shall the land that gave such genius birth,
In Jordan's wild variety of mirth,
And where the fond Melpomene's caress
Nurs'd fair O'Neill in tragic loveliness—
Say, shall that land neglect the glorious art
That lights the fancy and dissolves the heart,
Life's real griefs with joyous fiction cheers,
And melts the airiest spirit into tears?
Alas! the stage declines; and where, of yore,
It triumph'd, all its pride and power are o'er.
The Tragic Muse deserted on her throne,
In place of other's woes, now mourns her own;
While her gay sister, in her liveliest mood,
Looks from the boards on dreary solitude;
And her own laughter, with a hollow sound,
From empty boxes sadly echoes round.
Whence in this cold oblivion of the stage?
Alas! we live in an o'er-righteous age,
And all our pretty women are so sage!
["While laden o'er with piety and paint,
"Each rouged and wrinkled sinner turns a saint.
"When all her days of youth and joy are past,
"She takes to Mary Magdalen at last;
"And having given the devil her age of glee,
"Makes heaven her heart's residuary legatee."]
Ah, me! the sad "good people" of the day
Our innocent enjoyments scare away;
["And, to attract the soft, elected fair,
"Set up the rival playhouses of prayer.
"There, to speak truth, pleasures demure and holy
"Relieve religion of its melancholy;
"And passion, like Prometheus, from above,
"Steals heaven's best fire to light the feasts of love.
"From box to box ne'er amorous glances flew,
"One half so melting as from pew to pew.
"It is no marvel, then, that they prefer
"To ours their more convenient theatre;
"For there, in dim, accommodating light,
"That faintly glimmers through the fav'ring night.
"The 'moral agents' of each titled belle
"Who fills the mystic situation well),
"Amidst devotion's ecstacies, askance,
"On pious countesses securely glance;
"And while, in nasal uproar, to the sky,
"The Mawworms howl their barbarous psalmody:
"With eyes uprais'd, and hands discreetly down,
"Each glossy Cantwell feels—a lady's gown!"*]
But still, despite of all the boiling rage
From new-light rostrums hurl'd against the stage,
Of life and hope the Drama is not reft:
There are some staunch, unflinching vot'ries left.
The love of harmless pleasure is not fled;
The Muses only sleep—they are not dead.
Let us awake them. In a stranger's name,
Your ancient hospitality I claim.
A bold adventure here that stranger tries,
And risks his fortunes in the enterprise.
Wherever genuine talent can be found,
He'll strive to win and lure to Irish ground;
While Irish genius, with a liberal hand,
He'll nurse to glory in its own green land.
By others' losses, he arrives unscared:
Nor pains to please, nor gold, shall here be spared.
In brief and simple phrase he bids me say,
That for a noble stake he'll boldly play.
For all that labour, cost, or care can do,
He'll pledge himself—the rest depends on you.

(To be continued.)

There are some weighty remarks in the "Connoisseur" for October—an excellent number—on the value of original editions of Sir Walter Scott's works, a subject on which delusive ideas haunt the public mind. It seems that, next to "Waverley," the three volumes of "Guy Mannering," 1815, are the most difficult to obtain. The former, in the original boards, has reached as much as £10*l*, and the latter (similarly bound) £86—both "record" prices. But rebound copies, cut down or otherwise mutilated (and these are met with in profusion), are of no account; the novels must be in their original boards and uncut if they are to be of any material value. "The present-day collector of books (says our contemporary) should go about armed with a microscope if he would be in the fashion."

ELECTRIC GLASS SMELTING.

A large electric installation for the smelting of glass by the electric current, which is being erected at Deutsch Matrei in Tyrol, will be in working order in the course of a few months. These are the first works constructed for the manufacture of glassware by electricity; though several experimental plants have been laid down, and the electrical process of glass-making has been practised for some time past at Plattenberg in Westphalia, where there is an installation of 2,000 horse-power, water and steam combined, for supplying the necessary current. The first successful attempts at glass manufacture by the aid of the electric current were made some four years ago at Cologne by F. Becker, a glass-maker. Glass-making by electricity is rather a difficult process, since there is a great danger of devitrification through the heat generated by the arc being too intense. To surmount this difficulty Becker devised an ingenious arrangement of a series of arcs, and the glass in a molten state flowed into crucibles which were heated by coal or some other means. But Becker found this process of combining electrical and ordinary heat unsatisfactory. Voelker, his collaborator in these experiments, suggested another process by which he to a certain extent availed himself of the conductivity of the glass. On each side of the receptacles he ranged electrodes, and by this means kept the glass in a molten condition for some time. But in this system there was the danger of the glass being deteriorated by the crumbling carbon, by which its purity was ruined, and it was rendered unsaleable. To obviate this difficulty the electrodes were placed behind perforated diaphragms. Voelker also devised a system by which he could melt the glass, not with the arc, but by a direct current of high resistance, by making briquettes of the smelting materials and the carbon, and thus fusing the components. The Industrie Verriere et des Derives of Brussels, in conjunction with the glass works at Plattenberg, took up the invention and reduced it to practice at Plattenberg and Brussels; but at first it was not found to be a very satisfactory process. The consumption of the current was too heavy. For example, a kilogramme of glass required 4 horse-power-hours to produce it. This consumption of current, however, has now been reduced to 1½ and 1¼ horse-power-hours. The cost of production will be still further cheapened at the works of the Matrei Compagne, the electric furnaces for which are to be simpler and more durable. A potential of 3,000 electric horse-power will be utilised. Whether this electric process of manufacturing glass will become of any commercial utility it is yet too early to say; but the material at present produced by the electric current has no special advantages over that made by the conventional smelting process to recommend it.

Professor Dixon's Presidential Address at the Library Association Conference contained many felicitous phrases. One that should become classic described the contents of libraries as the "preserved verbosity of centuries."

OUR WEEKLY STORY

A RUNAWAY AUTOMOBILE.

BY ROE L. HENDRICK.

Mr. John McChesney Alport is a Philadelphia merchant and a man of wealth, who owns a handsome country place called Fairmount, on Tamarack Lake, six miles from Dupont Station. Although the good-roads movement so far had made little progress in DeKalb County, and the highways there are still rather primitive, Mr. Alport came out this summer in a new automobile, with is sixteen year-old daughter, Gladys, as a companion.

Since that time the gasoline machine has been propelled many hundreds of miles about Fairmount, and the residents of the neighbourhood are beginning to believe it can be made to run across lots and jump stake-and-rider fences, if Gladys so wills. At all events, there is no road anywhere in the vicinity bad enough to stop it.

Gladys had only the most general knowledge of horseless vehicles before she accompanied her father from Philadelphia to Fairmount, but the two-hundred-and-fifty-mile trip was one long lesson, and at its end he pronounced her an expert chauffeur. She still had some things to learn, however, although the accident that befel her a little later, of which this is the story, might have occurred to any other rather reckless person.

The Alport automobile is what makers term a [illegible] runabout. It is a sort of horseless dog-cart, with the machinery and tank partly under the seat and in part concealed beneath the top of the rear behind it. The working parts are not accessible when the vehicle is in motion, as the seat has to be turned forward like a lid to expose the mechanism.

Soon after the family reached Fairmount, Mr. Alport engaged carpenters to build a boat-house and pier at the side of the lawn, which slopes down to the head of Tamarack Lake, a sheet of water seven miles long and from half a mile to two miles in width. Dupont Station, the small village where the carpenters, Frank and Amos Lindsley, live, is near the other end of the lake.

The Lindsley brothers had nearly completed the frame of the boat-house when, on Tuesday morning, they discovered that a few more timbers and boards were needed. If the order could be got to Dupont at once the lumber might be brought up on the small steamer which was due to arrive at Fairmount that noon.

Amos Lindsley went to the telephone in the Alport house, but owing to conflicting earth-currents, or some other cause, the circuit worked badly. Short as the distance was, he could not make the proprietor of the lumber-yard understand just what he wanted, and finally he put down the receiver in disgust and rang off.

Gladys had been watching him intently. She was expecting a party of young friends the next week, and it was in her behalf that the work was being rushed.

"Wait!" she exclaimed. "I'll get out the auto and take you down there in a jiffy." Her parents made no objection, and in a few minutes the two were off at a twenty-mile speed, Amos clinging to his hat as they described a wide semicircle in passing from the driveway out upon the valley pike. This formerly was a toll road, and is still the best-kept highway in DeKalb County.

For four miles south from Fairmount it is almost level, the ground rising and falling only a few feet as the shallow creek valleys are

passed. No bridges are needed, all the tiny brook being crossed on solid culverts.

At the end of this four miles, however, and about half that distance north of Dupont Station, and the railroad, is Breakneck Hill. Indian Bluffs, about two hundred feet in height, frown down upon the water, and the pike no longer can follow the shore; so it turns inland, climbing Iroquois Ridge diagonally. The rise is fully one hundred and eighty feet here, and is nearly a fourth of a mile in length, with three level terraces to break the ascent. The middle stretch is the steepest grade in the county.

In the plateau-like summit the road again approaches the lake, finally descending in a huge capital "S," that brings one to the four corners near the water's edge, about which the village clusters. The railroad line cuts two streets just beyond the public square.

Once on the highroad Gladys said to her companion, "Now I'll show you how superior this is to a horse, or even a pair of them. On such a road as this one can rival an express-train."

She grasped the speed lever and thrust it forward to the farthest notch. The automobile sprang ahead like a living thing. To their previous rate of a mile in about three minutes, fully fifty per cent was added on the instant. Along the level road they flew, with now and then a sudden lurch as a rut was crossed, but otherwise smoothly, except for the all-pervading sense of vibration which made every fibre of the vehicle quiver beneath them.

Amos, although still in his twentieth year, was a sober, steady-going young fellow, who took no delight in risky exploits. The pace alarmed him.

"Is it safe?" he asked, looking steadily at his companion.

"Perfectly," she replied, with a merry laugh. "Besides, we must catch that steamer, you know."

"There is plenty of time," he said, after glancing at his watch. Then he added quickly, 'If you can stand it, guess I can." He did not wish to appear cowardly before this bright, courageous young girl, however little he might relish the experience.

They were approaching Breakneck Hill. Till now they had met no one, for the turnpike is not greatly travelled, but near the foot of the slope they saw a farmer approaching with a heavy load of fire-wood. Although his load entitled him to the main roadway, he saw no chances of a collision, but swung far out to the right. They shot past him like a rocket, the slight swerving nearly throwing Amos from his seat. Gladys was clinging to the levers.

"I think we'll slacken up a little here," she said; "put on more power and less speed."

Amos was well pleased to hear this, but in a moment he noticed that their progress seemed to be checked very little by the ascent.

Gladys was tugging at the speed-lever, by means of which the automobile is also stopped and started. She did not seem able to move it.

The young carpenter sat still. He had been taught that, as a passenger, he must not interfere with the driver, even of a runaway team, under any circumstances, unless the latter calls for help; and he sensibly concluded that automobile rules should be the same. He was not enjoying the ride, however, especially when they dashed across the first terrace, and he clung to the seat only by grasping its front edge with both hands. His hat flew off, but he had neither time nor inclination to notice where it went.

"I-I'm af-fraid you'll have to hel-lp me!" Gladys ejaculated, between bumps on the stony ground. "This thing's s-stuck!"

Amos grasped the lever, first with one hand, then with both, and pulled his hardest, but it refused to budge.

"Hur-ry!" his now thoroughly alarmed companion gasped. "We-'re al-most at-t the top!"

The sturdy young man braced his feet and pulled with back and legs, as well as with arms, like a rower. Suddenly he sat down very hard, and but for the stout back of the seat would have tumbled out behind. The lever had bent towards him at the floor, and as he attempted to thrust it back it broke short off. He held the now useless bar of steel in his hands and stared blankly at the girl .

"We're in for it!" he ejaculated.

They had reached the level summit and were rushing headlong towards the "S" that led down to the valley beyond. Could they make it at that express-train speed A breakdown of a collision meant almost certain death.

The automobile did not jolt so badly now, and by speaking quickly a whole word could be uttered unbroken. "How much gasoline's in the tank?" Amos asked.

"Filled last night; enough for ninety or one hundred miles."

"Keep running till it's used up, I suppose."

"I'm afraid so."

"Well, there's nobody on the hill that I can see"—he stood half-erect for a second and surveyed the slope. "Hold her in the centre and swing the corners as widely as possible, while we throw our weight to the inside. If we can make this hill we'll head for Salem on the straight road west, and then come back Newbury way. Two hours should tire her out at that rate."

Amos would have taken masterful possession of the steering-lever but for the expression on the girl's face. "She's a thoroughbred!" he said to himself, forced to unwilling admiration by her courage. She fully realised their peril, but her first momentary alarm had been succeeded by a determination to do her best, and thus atone as far as possible for her previous recklessness. This Amos saw, and he believed she would be equal to the emergency. Besides, he felt that her experience better qualified her for guiding the machine. This was his first ride in an automobile, and he mentally resolved that it should be his last.

Now they had reached the descent, just as another idea came to the carpenter, and he asked if there was any way to get at the naphtha-tank. She shook her head. "It's—under—seat!" she shouted, looking straight ahead at the flying ribbon of roadway.

Downwards they shot, not running smoothly like a wheeled vehicle, but making mighty leaps across every depression. Sometimes the wheels barely touched the ground for several rods.. Amos wondered if there was friction enough beneath them to permit even the widest turn to be made.

They slowed round the upper loop of the "S" in some fashion, although the rear of the box scraped against a bank on the lower side, where, fortunately, a deep cut had been made in grading the road.

The automobile had been made to order at one of the largest factories in the United States. With the exception of the broken lever, all parts seemed to have been made equally strong, like the famous "one-hoss shay," and so it successfully withstood the severest test to which such a machine could be subjected. Amos, who was a good mechanic himself, paid some regretful mental compliments to the skill of the fellow craftsmen who had done such excellent work.

As they dashed down the nearly straight bar leading to the lower loop of the "S" a new danger became apparent. Out from the deepest part of the cut, which previously had concealed him, came a boy on horseback. No, on muleback. The boy looked up to see Amos frantically waving the lever towards the left—the boy's right.

The lad understood what was wanted, but the mule did not. The small rider dug his bare heels furiously into the animal's flanks while he jerked on the bridle, whereupon the contemplative beast flattened his huge ears against his neck and stopped short. The boy slid off and ran for the fence, clucking and shouting at his stubborn steed, which remained unmoved.

Time was counted by seconds just then, and very short seconds, too, it seemed to the occupants of the runaway vehicle. Gladys bore as far to the right as she dared, between Scylla and Charybdis, represented respectively by the mule and a black ash-tree. As the mule was apparently the softer of the two, she steered so as to graze him, although hardly doubting that a collision with either obstacle would be equally fatal.

When ten feet distant she shut her eyes, only to open them immediately to see the animal make a surprisingly active jump, his heels clearing Amos's head by a hairbreadth. He had awakened to the situation just in time.

The lower curve being wider than the one above, and avoiding the mule having thrown them as far to the right as it was safe to go, they made this turn much easier than the other, although now, owing to the long descent, they were going at terrific speed. At the foot of the hill neither doubted that they exceeded a mile a minute, although there was no way of registering the rate accurately.

Alarming as the situation still was, they drew a simultaneous sigh of relief as they emerged upon the straight stretch, still descending slightly, that led through the village. Then Gladys clutched Amos's arm with her disengaged hand and screamed, "The ten-fifteen express! Look!"

At the same instant a whistle sounded, and Amos saw the long, west-bound passenger-train, which had been standing beside the depot, start slowly ahead. The cars blocked both streets leading west and south from the square, and so slowly was the locomotive gathering headway that neither road would be cleared by the time the automobile reached the track.

In emergencies requiring instantaneous action, people do not reason out conclusions. They have to depend upon the inspiration of the moment, and Amos employed it now.

"Turn to the right!" he shouted.

"But the lake!" the girl gasped, without taking her eyes from the crawling train.

"Turn to the right!" he repeated the command almost menacingly. There was no time to explain his plan, but she obeyed.

A hundred persons had seen their arrow-like approach. The car windows were filled with peering faces, and half the residents of Hill Street came runing to their front porches. A runaway automobile affords a spectacle not seen every day. Gladys felt their combined gaze rather than saw it; she heard only the rushing wind, although the clamour of shouts and screams filled the air.

Water Street is narrower as well as shorter than the three others that branch off from the Dupont public square; and to make the turn successfully, even at a moderately high speed, requires a quick eye and careful discrimination. Gladys swung as far to the right as she dared. Another inch, she felt sure, would throw

them over, although Amos was leaning far over the left wheel.

It was not quite enough, and she made the final turn a mere thousandth part of a second too late, but fortune favoured them. Upon the board sidewalk they went with a bump and a spring, just inside an iron hitching-post. They cleared the side wall of a brick building by a fraction of an inch, and after following the walk for a hundred yards, regained the roadway.

There they ran over a yelping cur that with foolish bravado dared them to an encounter. He will carry a crooked tail for life, but, in the circumstances was a most fortunate dog.

Fifty yards lower down, the street ends at a tottering wooden pier, which projects a hundred feet into the lake. Beside it lay the little "Carrie Sutphen," with steam up, ready to start for the head of the lake. There was nothing else to be done, owing to the tight board fences on either side, so Gladys held straight for the pier, and the group of passengers and idlers gave them a clear track.

They left the solid ground with undiminished speed, and with a whir and a rumble shot across the clattering planks. Then with a mighty splash they struck the water six feet below, and skimmed over its surface as if the automobile were a new and fast nautical device.

The swiftly revolving wheels churned the water into lines of foam. The automobile was heavy, but its momentum, with the buoyancy of its box and large pneumatic tyres, kept it from sinking at once. Gladys turned the lever to the left and released her hold.

"I can't swim—much!" she said.

"I can," Amos replied. "Don't be afraid; a girl with your grit is safe anywhere."

The vehicle had described two-thirds of a circle, and was headed diagonally for the receding shore of Lapham's Cove, when at Amos's last word it suddenly sank beneath them with a hiss and gurgle as the water reached the heated cylinder and extinguished the gasoline flame.

Gladys felt herself submerged, but in an instant Amos's arm was about her, and she was drawn backwards towards the shore with only her head above the surface. "Don't cling to me," was all he said, and she passively entrusted her safety to his skill. In a moment he was able to stand upright on the shallowing bottom, and then side by side they waded ashore.

Several boats put off, and within ten minutes the automobile had been dragged to the beach. It was trundled aboard the "Carrie Sutphen," not much the worse for its headlong flight and subsequent bath. When the bustling little steamer made her usual trip just before noon she carried two dripping passengers, wrapped in blankets, to keep the wind from their wet garments.

Amos, with calm singleness of purpose, had secured the lumber he needed, while Gladys, through the agency of the captain, had arranged to have a repair man accompany them to put he naptha runabout in order again.

Gladys laughingly declared she would take another trip the following morning, and she was as good as her word, but her father accompanied her, and fifteen miles an hour was the utmost limit of the speed he allowed. Amos was heard to vow that he would not be a passenger again for a million dollars, but he certainly changed his mind, for within a week he was taken from Fairmount to Dupont in exactly twenty-four minutes, including all stops and slow-downs.

Ancient Boroughs of Ireland

From Lewis's "Topographical Dictionary of Ireland," 1837.

CARLOW.

CARLOW, an incorporated borough, market, and post-town, and a parish, in the barony and county of Carlow, and province of Leinster, 18¼ miles (N.E.) from Kilkenny, and 39¼ (S.W. by S.) from Dublin; containing 9,597 inhabitants, of which number, 9,114 are in the borough. This town, called, till within a comparatively recent period, "Catherlough," or "Catherlagh," is supposed to have derived that name, signifying in the Irish language, "the city on the lake," from its proximity to a large sheet of water which formerly existed here. The erection of the castle has been variously attributed to Eva, daughter of Dermot Mac Murrough; to Isabel, daughter of Strongbow; and to King John; but with more probability to Hugh de Lacy, about the year 1180. In the reign of Edw. II., the castle belonged to the Crown, and was made the headquarters of the seneschalship of the counties of Carlow and Kildare, instituted on account of the disturbed state of these districts. About the year 1361, Lionel, Duke of Clarence, established the exchequer of the kingdom at this place, and expended £500 in fortifying the town with walls, of which at present there is not a vestige. James Fitzgerald, brother of the Earl of Kildare, seized the castle in 1494; but it was soon afterwards invested by the Lord-Deputy, Sir Edward Poynings, to whom, after a siege of ten days, it was surrendered. In 1534 it was taken by Lord Thomas Fitzgerald, during his insurrection; and in 1577 the town was assaulted by Rory Oge O'More. James I. granted the manor to Donogh, Earl of Thomond, whom he also made constable of the castle. In 1641 the whole country was overrun by the insurgents, and the castle of Carlow was invested by a strong party and reduced to great extremity; a number of Protestants had taken refuge within its walls, and the garrison was about to surrender, when it was relieved by a detachment of the Earl of Ormonde's forces under the command of Sir Patrick Wemys. On his approach, the insurgents raised the siege, and, after burning the town, took flight, but 50 of them were killed in the pursuit. This place was constantly exposed to the assaults of the insurgents; and the castle, after sustaining a siege for nearly a month, ultimately surrendered in May, 1647. It was, in 1650, closely invested by Ireton and the republican army, and after a severe cannonade which greatly injured the castle, the garrison surrendered on conditions to Sir Hardress Waller, whom Ireton had left to conduct the siege. After the battle of the Boyne, in 1690, Wm. III. led his army southward through this town; and during the disturbances of 1798, it was assaulted by the insurgents on the morning of the 25th of May. The garrison, consisting partly of regular troops and partly of yeomanry, amounting in the whole to 450, repulsed the assailants, though 2,000 in number, with the loss of 600 of their men, on which occasion they were obliged to burn several of the houses, in order to compel the insurgents to abandon them.

The town is pleasantly and advantageously situated on the eastern bank of the river Barrow, over which is a bridge of four arches connecting it with the extensive suburban village of Graigue, in Queen's County: it is surrounded by a rich agricultural district, and sheltered by some ranges of hills well cultivated to their summits. The river Barrow is navigable from Athy, where the Grand Canal from Dublin joins it, and thence to its confluence with the river Suir below Waterford.

The earliest charter on record relating to the borough is that of William Marshall, Earl of Pembroke, granted about the close of the 13th century. It created an open community of burgesses endowed with considerable privileges, including a guild mercatory and other guilds, with exemptions from tolls and customs throughout the Earl's whole lands, except the towns of Pembroke and Wexford; it also mentions a hundred court as being then in existence in the town, and ordained that it should be held only once in the week. Jas. I., in 1613, granted a charter of incorporation, conferring, among other privileges, a right to return two members to Parliament; and the present governing charter was obtained on petition from Chas. II., in 1674. Jas. II. granted a charter founded on a seizure of the franchises by a decree of the exchequer, which being declared void, it soon became inoperative. Under the charter of Chas. II. the corporation is styled "The Sovereign, Free Burgesses, and Commonalty of the Borough of Catherlagh;" and consists of a sovereign, twelve free burgesses, and a commonalty, assisted by a town-clerk, two serjeants-at-mace, a weighmaster of butter, and a bellman. The borough returned two members to the Irish Parliament till the Union, since which period it has sent only one to the Imperial Parliament.

The remains of the old castle consist only of one side of the quadrangle, at each end of which is one of the massive round towers that flanked its angles; the walls show that it must have been a fortress of much strength; and from the loftiness of its elevation and the commanding position which it occupies, it has a striking appearance of majestic grandeur. Near Oak Park was a small Franciscan Friary, founded by the Croke family, formerly proprietors of that estate. Browne Hill and Viewmount both occupy the site of an ancient religious establishment, called St. Kieran's Abbey; and in the vicinity are the remains of a cromlech, of which the table stone is 23 feet in length, 19 in breadth, and at the upper end nearly 4½ feet thick; it is supported at the east end on three upright stones, 15 feet 8 inches high, and at a distance is another upright stone standing by itself. Carlow gives the inferior title of Viscount to the family of Dawson, Earls of Portarlington.

(To be Continued.)

THE SCHOOLS OF IRELAND
IN THE
SIXTH, SEVENTH, AND EIGHTH CENTURIES.

From M. H. D'ARBOIS DE JUBAINVILLE'S "LITTERATURE CELTIQUE."

By J. C.

The second half of the sixth century, the seventh, and the eighth centuries, form the great epoch of classic literature in Ireland. The culture of Greek or Latin letters had ceased in Gaul since the Germanic conquest, in the fifth century; whilst Ireland, which at that period had not yet been invaded by the piratical hosts from the countries lying to the north-east of Gaul, appears to have become the refuge of those students and scholars who had been driven out of Gaul by the arms and savage rule of the Burgundians, Visigoths, and Franks.

The precise date at which the study of the Latin classics began in Ireland cannot be fixed; but it appears to be coincident with the introduction of Christianity. The year A.D. 432 seems that in which St. Patrick's apostolate began; but St. Patrick was not the first founder of the Irish Church, for, in the preceding year, Pope Celestine the First had sent to Ireland Bishop Palladius, who, it is said, built there three churches, and whose mission was, according to the Chronicle of Prosper of Aquitaine "to the Scots (i.e., the Irish) believing in Christ." As Prosper was the contemporary of Pope Celestine I. and of Bishop Palladius, and his chronicle ends with the year 455, his testimony proves that in the year which preceded the mission of St. Patrick, viz.:—431, there were already Christians to be found in Ireland.

Previous to this, Saint Jerome, who died in 420, complained of the attacks made on one of his books by a Scot; that is to say, an Irishman. It is, therefore, certain that there were Christians in Ireland before St. Patrick's apostolate began, and that one of their number—St. Jerome's antagonist—evidently possessed, besides a knowledge of Latin, some literary culture as well.

It is, however, to the creation of Armagh as the religious capital of Christian Ireland that we must date back the first efforts of an organised system of teaching theology and the classics in Ireland. The exact date of this great event is not definitely known; but it can be traced back to about the middle of the fifth century, whilst its results did not become clearly manifest till a century later, when the more important of the great Irish monasteries were founded, those literary as well as religious centres, whence set forth to the different parts of Great Britain and the Continent that were still Pagan or had again lapsed into barbarism, bands of Apostles bent on the propagation of Christianity and the culture of classic literature.

Of these we shall only instance Clonard Abbey, founded by St. Finnian, who died in 563; and Bangor, which dates seemingly from 558. From Clonard went forth St. Columba, to whom is due the foundation of Iona, in Scotland, one of the principal religious and literary centres of Great Britain. At Bangor was reared St. Columbanus, who is celebrated for his monastic foundations in Eastern Gaul and the North of Italy. From 563 dates the commencement of Iona Abbey, whilst a few years later began the apostolate of Columbanus on the Continent, which ended with his life, in 615. His success as a Christian missionary does not come within the scope of our subject; but it shows incidentally the literary superiority of this Irishman over the best-instructed Gallo-Romans of his time. . . . St. Columbanus and his disciples arrived in Gaul some twenty years before the death of Gregory of Tours, one of the most eminent of the Gallic clergy of that day—the earliest and one of the most illustrious of our national chroniclers; yet it only needs a glance at the writings of St. Columbanus to perceive at once his marvellous superiority over Gregory of Tours and the Gallo Romans of that period.

He was as keen a student of the classic authors as those later erudite writers of the 16th century must have been, to whom he certainly is not equal, and yet forms a sort of pioneer. This austere and ascetic monk, famed for his severe fasts, who repulsed with indignation the adulterous offspring of a Merovingian King, was the author of an ode addressed to a friend in Adonic verses, imitated from the ancients, reprinted in Migne's "Patrologia Latina," tome 80, col. 292; and in five short Latin poems of his we find quotations from Virgil, Juvenal, and Homer.

Jonas, who wrote the Life of St. Columbanus shortly after the year 615, the date of this celebrated Abbot's death, states that the latter was, from his early youth in Ireland, devoted to the study of grammar and letters, and St. Columbanus's Latin verses bear substantial witness to the value of the teaching he then received. That the fantastic grammatical theories put forward by the grammarian, Virgil of Toulouse, towards the close of the sixth century found their way into Ireland has been clearly shown, of which the "Hesperica Famina" furnishes a proof; but St. Columba has none of that pretentious obscurity which characterises Virgil and his school. In him we find that sound classical tradition which his contemporary Gregory of Tours and other Gallo-Roman writers had lost.

The grammatical and literary lore of the illustrious Irish abbot appears not to have formed many disciples in Gaul. We find, however, that Bishop Agilbert, of Gallo-Roman birth, who filled the Episcopal See of Paris from 667 to 675, had studied in Ireland. It was not till the Carlovingian period that the great results of Irish teaching in regard to classical studies began to be felt. This commenced under Charlemagne, when Clement, an Irishman, became professor of grammar in the Palace School, about the year 780, nearly two centuries after Columbanus and his Irish fellow-countrymen had, for the first time, introduced into Gaul the methods of classical studies which they had acquired in their native land.

But it was in the succeeding century more especially—during the reign of Charles the Bald—that Irish classical lore seems to have migrated to the Continent. Ireland was then laid waste by the Danish pirates, who burnt and destroyed her monasteries, whose King, Turgesius, finally made the ecclesiastical metropolis Armagh his capital city, whence, so that he might live without let or hindrance, he expelled the clergy. This was about the year 841, the very time that St. Columbkille's foundation, Clonard Abbey, was destroyed. The havoc and destruction of all kinds wrought by these barbarian hordes after landing from their ships from the westward, form, in fact, almost the only events in the history of luckless Ireland of that period.

A considerable number of Irish monks and savants now sought an asylum in Gaul, under the benevolent sceptre of a prince friendly to literature, viz:—Charles the Bald, whom the monk Heric congratulates on the progress made in learning, due to his stimulating patronage, in this wise:—"Greece," he says, "is jealous of it; and almost the whole of Ireland, with its numerous philosophers, despising the sea and its dangers, transfers itself to our shores. The more learned and able an Irishman is, the more ready is he to exile himself in this way in response to the invitations of our new Solomon."

What surprises us most in regard to these Irish who sought refuge on the Continent during the 9th century is that they knew Greek. In all Western Europe, they alone appear to have known it. They had Greco-Latin glossaries, Greek grammars, and books of the Bible in Greek, accompanied with Latin translations. One of them, known as John Scotus Erigenus, translated the aprocryphal works of Denis the Arcopagite from Greek into Latin. He was a disciple of Plato, whose Timeus he appears to have read from the original text; and on the doctrines of this celebrated Greek writer Erigenus, or John the Scot, founded a system of philosophy as astonishing for its time as it was dangerous for its rashness. At this period, and for some centuries previous, it was considered a point of good taste to introduce Greek words into the Latin texts of the compilations written. John the Scot was the most daring in this fashion, and wrote whole verses in Greek.

This development of the classical studies amongst the Irish only became fully known to us at the critical moment when, the culture of letters having become no longer possible at home, on account of the inroads of the Danes, all the learning of Ireland betook itself to Gaul—that learning of which Columbanus in the latter years of the sixth century, and Clement at the end of the eighth, had only given us a superficial idea. So that we only began to fully know the extent of classical teaching as imparted in the great schools of Ireland just at the moment these schools had all but ceased to exist, and their last scholars had taken flight to the Continent.

The same epoch in which the study of the classics flourished with such marvellous success in Ireland is precisely that in which the oldest and most curious specimens of Ireland's national literature were committed to writing in the Irish language. Of the two earliest collections of profane literature that Dublin possesses, the Leabar na h'Uidre and the Book of Leinster—which date from the end of the eleventh and middle of the twelfth century—Zimmer, in his "Keltische Studies," writes that they are collections of the debris of a rich manuscript literature, which was annihilated at the same time as the monasteries by the Norse invaders of the ninth and tenth centuries. These two collections contain many pieces composed prior to these invasions; and even amongst the manuscripts of the 14th, 15th, and 16th century, literary works of an earlier date than the 9th century are to be met with in abundance. One cannot otherwise account for the persistency with which these MSS. preserve, in numbers of words, letters that had ceased to be pronounced at the time they were being copied out on parchment.

The earliest catalogue that we possess of these ancient Irish manuscripts appears to have been compiled about the year 700 A.D. In the form in which it has now reached us it contains 187 titles, one of which was added in the first half of the tenth century, and another one (disfigured probably through a bad transcription in the twelfth century), which, rightly or wrongly, has been assigned to the cycle of King Arthur and the Round Table. Other than this there is nothing in it foreign to the national literature of Ireland, and no

FROM THE
IRISH MAGAZINE AND MONTHLY ASYLUM OF NEGLECTED BIOGRAPHY, 1811.

LORD A— GOING OUT IN THE MORNING.

mention occurs in it of any event that took place subsequent to the middle of the seventh century.

The most recent facts therein referred to occurred two hundred years previous to the reign of Charles the Bald, and that migration of classical knowledge from Ireland to the Continent caused by the incursion of the Danes. The Irish literary compositions whose titles are grouped in this catalogue must have been written a very long time prior to this migration.

At the time when the files or bards gave to these old narratives that form in which they have now come down to us (with the exception of various alterations due to later scribes and some more or less intelligent revisers), the study of the classics, banished from Western Europe by the Germanic conquest, flourished in Ireland with incomparable brilliancy, and two kinds of literary culture—the one national, the other Christian and Roman, existed there side by side, occasionally no doubt rivals, but usually extending towards each other mutual support.

It would be quite wrong to suppose that there was then in Ireland, between the savants—who were devoted to the classic letters or to theology, at that period their inseparable associate, and those men of letters whose calling was the cultivation of their national literature, that insuperable line of separation which is noticeable on the Continent throughout the Middle Ages.

In the fifth century, the file (bard or poet) Dubthad condemned to death the murderer of St. Patrick's coachman. When the celebrated apostle intended for the first time to confer the episcopal dignity on an Irishman, he took counsel of this same Duothad, and, acting upon his advice, his choice fell on another file, Fiacc, who founded the bishopric of Sletty.

In the sixth century, St. Columbkille, one of the head monks of Ireland, composed verses, we are told, in the national tongue. His own monks, in their severe and pious solitude at Iona, did not lose their love of their national poems, and deemed it lawful to gratify it.

Adamnan, the biographer of Columbkille and one of his successors, who wrote about a century after his death, relates that one day an Irish file or poet visited the monastery, and left it after the sermon. "Why was it," said the monks to Columbkille, "that you did not ask him to sing us a poem to one of those pretty airs that are so well known to people of his profession?"

The Abbot was not scandalised at their question, but replied: "If I did not ask him for a joyful song, it was because it would have been cruel of me to do so, knowing that on his exit from the monastery the unfortunate fellow was to be slain by his enemies."

Towards the close of his life Columbkille gave the Irish many letters of that day, a most striking proof of his sympathy and regard; for, in spite of his age and infirmities, he quitted his beloved abbey, made the voyage to Ireland, and repaired to the national Convention of Drumceat, so that he might get the sentence of banishment pronounced against the file or bards by King Aed, the son of Anmur, revoked, which he succeeded in doing.

Amongst the oldest known manuscripts containing Irish verse is No. 904 in the Monastic library of St. Gall; and another in St. Paul's Monastery in Carinthia. Both were written in the 9th century by Irish monks who were as well informed in respect to classic literature as they were in that of their own country. One of these MSS. contains Priscan's Grammar, overladen with Irish glosses; in the other there is a Greek vocabulary, paradigms of Greek declination, and a treatise on astronomy.

The Irish monks who devoted themselves to these learned studies did not, for all that, look down on the literature of their native land. Later on, Cormac MacCullennain, bishop and also file or bard, who died at the commencement of the tenth century, was the composer in Irish of a valuable glossary of the difficult words in that tongue, and some poems which he wrote in Irish still exist.

Whilst the French monks and clergy, who were but poorly acquainted with Latin letters, despised their national tongue, or looked upon it as a degenerate offshoot from the Latin, the Irish monks, whose classical studies were far more advanced, esteemed in the highest degree the language and literature of their country.

If we, now-a-days, are beginning to know something of old Irish, we owe it most of all to those glosses written in their native tongue

with which the Irish monks used to interline the Latin manuscripts, grammatical, theological, or literary, which fell into their hands, and also to their custom of singing hymns to the saints in Irish as well as in Latin.

The Book of Hymns of the Irish Church, besides poetical compositions written in Latin, contains versified pieces in Irish, several of which are undoubtedly of an earlier date than the ninth century.

In the seventh century, when Agilbert, the future Bishop of Paris, went to Ireland to follow a course of study of the Holy Scriptures, and when English students flocked to its theological schools, there were then in Ireland, side by side with Latin schools of Christian foundation, other educational establishments devoted to the study of that traditional lore which dated back to pre-Christian times and to the earliest known periods of Celtic history.

An interesting manuscript bearing on this subject is that relating to Cennfaelad, an Irishman of letters of that period. Cennfaelad was one of the warriors who were wounded at the battle of Mag Rath, in 636 A.D., in consequence of which, having to abandon the military profession, he retired to Tuam Drecain, where he devoted his life to study. In this locality there were three schools—one for Christian and Latin letters (scol leigend); one for Irish national law (scol feinechais); and one for that course of national literature which was chiefly attended by the file, or bards, and was known as the scol filidechta. Cennfaelad followed the course of instruction of all the three schools, and at night rehearsed in his memory all that he had heard during the day. He committed his recollections to verse, which he first wrote out on stone, then on boards, and finally on parchment.

In old Irish there is a distinct word for designating those young students who were preparing themselves for attaining the highest rank in that learned body the file, or bards. This word is ecsine, the diminutive of ecs, which means doctor or learned man. Cormac's glossary has preserved the fragment of an ancient epic composition in which Senchan Torpeist, the supreme head of the bards of Ireland in the seventh century of our era, appears surrounded by a numerous crowd of followers, which included fifty ecs or doctors, without reckoning the students, ecsine. Another passage in the same glossary exposes the ignorance of an ecsine who had not yet mastered the secrets of the learned tongue in which the file conversed amongst themselves.

If we are to rely upon the Irish treatise known as the Book of Ollam, the Bards' complete course of study lasted twelve years, during which they were taught Oghamic writing, the highly complicated laws of versification, the glossary of words that had fallen into disuse, Irish grammar, and the scel, or epic narratives, which were held to be the authentic history of the country. It may seem extraordinary that in the Ireland of the seventh century should be taught the grammar and a glossary of the national tongue. But it is quite certain that, along with the grammatical terms of Latin or Greek origin to be found in the Irish manuscripts of the ninth century, Cormac's glossary has further preserved other grammatical terms of Celtic origin borrowed from treatises now lost or else unpublished. We have, furthermore, fragments of a glossary of old Irish in verse, which was probably intended to be got off by heart.

These debris carry us back to days prior to the Scandinavian invasion—to that period of prosperity, when the study of the national literature and that of Latin-Christian letters flourished side by side, affording each other mutual support, and producing that quantity of curious literary productions which has since been in great part destroyed by the Norse barbarians who devastated Ireland in the ninth and tenth centuries, and by civilised (?) beings who put them to fire and sword in the sixteenth and following century. The remains of this vast literature now preserved in our libraries may be compared to those gigantic ruins which still bear witness to the greatness, and power, and civilisation of long-vanished nations. Enough of it is left to enable us to judge what must have been, in its entirety, that great literary body of which we have now got merely the incomplete fragments—enough, also, to prompt us to begin its study with mingled feelings of curiosity and admiration.

THE FOOTPATH AND THE RIVER.

By Martha Baker Dunn.

A silver line the river flows
Past hills and wooded hollows,
And everywhere the river goes
The little footpath follows.

The river is a sun-bright thing,
A child of mist and laughter,—
She little heeds the following
Of that brown footpath after;

But in and out, and all about,
The footpath tries to reach her,
To join her errant, frolic rout—
The lovely, laughing creature!!

With pouts and dimples, becks and smiles,
Her face is all a-quiver,
She has a hundred winning wiles,
This winding, winged river.

To her the wood-thrush warbles free,
Above her skim the swallows,
So many love her—why should she
Heed the footpath that follows?

The sun comes down and kisses her,
He sets her all a-glimmer
With diamond's flash and jewel's stir
And robes of rainbow shimmer.

Here grows the feathery ferns in beds
To deck her mantle's edges;
A starry fringe of arrow-heads
Shines white among her sedges.

The very stars of heaven bend down
And in her depth's repeating,
Like golden clasps upon her gown
They move with her heart's beating.

And then the music of her tongue,—
That liquid laugh of water,—
She sings the very songs she sung
Of old when Daphne taught her.

So sweet she laughs, so undismayed
She glides past hill and hollow,
No wonder that through shine and shade
The footpath still will follow;

When sun and wind and bird all woo,
When stars stoop down above her,
What can a little footpath do
But follow her and love her?

And she may smile and jest, and vow
That he shall never find her,
May wreathe the mist about her brow
And never look behind her.

But where her leaping heart beats fast
With tumult all a-quiver,
Beneath the great elm-tree at last
The footpath finds the river.

No more to seek, no more to roam,
He springs to her embraces,
To find her fair breast all a-foam
With milk-white marriage laces.

An errant thing, a vagrant thing
Love may be, ever moving,—
A wild bird always on the wing,
Yet there is hope in loving;

And love may flee by night and day
Past airy height and hollow,
And ne'er be caught—but all the day
The winged heart must follow.

Who follows Love with single mind,
All loving things shall greet him.
And in some charm'd hour he may find
That love will turn and meet him.

HOW DO WE SLEEP?

The man who is kept awake by pain, or who suffers in any other way from lack of sleep, can usually obtain it by the use of a drug. Such sleep, however, is generally regarded as unnatural, and hypnotic drugs are avoided when possible. But now comes Mr. Raphael Dubois, a French physiologist, who tells us that all sleep is the result of drugging, the sleep producer being carbonic acid formed within the system. This substance, he says, which has been usually looked upon as only a waste product, is really the great automatic regulator of the organism, preventing violence in operation and sudden changes, and compelling us to take rest when we need it. Dr. Dubois has explained his theory in various publications, including a book entitled "Mechanism of Thermogenesis and Sleep in Mammals."

The following paragraphs are from a brief article by him in "Cosmos," July 26. Says Dr. Dubois:—

"By numerous experiments I have shown that the sleep both of animals and vegetables is a carbonic self-narcotism, resulting from their periodic growth, alternately by night and by day; and that the sleep of hibernation itself is but an exaggeration of ordinary sleep. A close study of hibernating animals has also enabled me to demonstrate the restraining influence of carbonic acid on heat-production, and to prove that it is the most admirable of heat-regulators.

"We know, in fact, that its antithermic power is considerable, and as its production increases precisely as the causes of heat-excess, such as muscular work, and, generally speaking, proportionately to oxidation. . . . there results a remarkable automatic compensation. . . .

"Everyone knows of the close relationships between work, heat-production, and fatigue, and the influence of this last on sleep; but, besides this, we can prove by experiments that fatigue is due to carbonic acid acting directly on the system, even when this has not used up its reserves of potential energy. We may show this by loading the organism with carbonic acid by breathing it mixed with air, or better, with oxygen. . . . At the end of a time, which varies with the proportions of the gaseous mixture and the state of the subject, there comes on a fatigue so great that the subject has the greatest trouble in standing upright in walking, as if he had made a long forced march. This is the sensation of fatigue that is well known to everybody; and yet the carbonic acid, instead of provoking a waste of reserve force, has, on the contrary, lessened its consumption, as is indicated by the sensation of cold and the tendency to chill that follows its prolonged inhalation. We have then, at the same time, economy by restraint of waste, and the production of a sensation of intense fatigue."

How can we explain this action of carbonic acid? Dr. Dubois believes that it is due to the acid's general anæsthetic effect on living matter. It is thus a wonderful automatic regulator of all the phenomena that have to do with life and energy, especially those that depend in any way on oxidation.

Carbonic acid, he says, is the counterpoise of oxygen, serving in all organisms to prevent sudden waste of power. It is this property that we make use of in extinguishing fires with it, although the mechanism is not the same in the two cases. At any rate, Dubois is sure that we ought no longer to consider carbonic acid as only a waste product, useless, if not injurious.

THE ANCIENT AND PRESENT STATE
OF THE
COUNTY AND CITY OF CORK.

BOOK I.

Containing a Natural, Civil, Ecclesiastical, Historical, and Topographical Description thereof.

By CHARLES SMITH, M.D.

Æquum est enim meminisse & me, qui discerem hominem esse, et vos, qui Judicetis ut si probabilia dicentur, nihil ultra requiratis. Cicero Univers.

In Two Volumes.

VOL I.

The Second Edition, with Additions.

Chapter I.—Continued.

Of all the Mac-Cartys of Carbery, the above-mentioned Florence Mac-Donogh was the most famous. He was a man of extraordinary stature, and as great policy; he had competent courage, and as much zeal as anybody for what he imagined to be true religion and the liberty of his country. He married Ilen, daughter and heiress to the Earl of Clancare (23), and, purely by his merit, dispossessed her bastard brother, Donald, of the name and title of Mac-Carty More, which he himself assumed, by the unanimous suffrages of Tyrone, the clergy, and the people: this is the more strange, for in Ireland they usually preferred bastard sons before daughters, in order to preserve the name and the family, as in the Roman adoptions, and to defend the country. For this marriage, without the Queen's licence, this Florence was sent to the Tower of London, where he was kept eleven years; and then, being set at liberty, he joined in Tyrone's rebellion.

The other clans of the Mac-Cartys, in Carbery, and their territories, were, first, the branch of Clancrimine, so called from Mac-Crimin, a sept of the Mac-Cartys, whose seat was at Ballynorohor, anciently one of the best castles in this county, which he justly forfeited, together with his life, for a barbarous murder by him committed, anno 1641. A second branch of the Mac-Cartys posessed a tract, called Glawnacrime, being the parish of Fanlobush, now Dunmanway, near which place they had their residence, in a castle lately demolished by Sir Richard Cox. This family was famous for extravagant hospitality, a practice formerly much applauded in this county. The last of this house was called Tiege O-Downy, who, besides the forenamed castle, had another, which is still standing, called Togher. A third branch of this family had the surname, or rather the sobriquet of Rabagh, i.e., the hospitable.

West of the last territory was another small tract in Carbery, called Clandonel-Roe's country; the Mac-Cartys also possessed it, as did another small branch of the surname, a little territory to the east of Dunmanway, formerly called Mac-Inganauras, though some give this last to the Collins's.

These were the chief Irish septs in this large barony of Carbery, which is the greatest in Ireland; nor could I hear of any other who possessed any considerable territory in it, except the O-Crowleys, who inhabited a tract called Kilshallow, which lay west of Bandon, on the river of that name. This family derived their descent from Diarmuid, of Mylurig, in Connaught. Their country, in old MSS., is described to have been woody and mountainous: and mention is also made of a smart skirmish happening in it between the Mac-Carty's of Carbery and the O-Learys of Muskerry, anno 1600.

I have already observed that Kinalmeaky was part of Carbery, as was also the modern barony of Ibawn and Barriroe, which, though divided by an arm of the sea, comprehends but one small barony. The tract called Ibawn, i.e., the fair territory, was, after the coming in of the English, wrested from the old proprietors, by Lord Arundel, commonly called Lord Arundel, of the Strand, and from him it fell to the Barrymore family. There are the remains of an ancient castle on the strand of Cloghnikelty, formerly called Arundel Castle (24), but now Rine Castle. Barryroe has its perfect name from a branch of the Barrys (25); but anciently it belonged to the O'Cowigs, who have been quite extinguished by the conquerors; yet there are some remains of them in a promontory, called Dun O'Cowig, which was fortified with a small old castle. They were originally descended from the O'Driscolls, before mentioned. There was also a sept of the O'Donovans in those parts, named O'Hea, whose residence was at a castle called Ahimilly, and they had a territory called Pubble O'Hea in this tract. The residence of the Barrys in this barony was called Rathbarry, which was a stately castle in its time; it is now called Castle-Freke, and is the seat of Sir John Freke, Bart. All this tract fell into English hands, anno 1642, being taken by Colonel Myn.

Another Irish sept, west of Carbery, are the O'Sullivans, who were distinguished into the names of O'Sullivan Bear, and O'Sullivan Bantry (26). Bear, probably, retains its name from the Iberi, beforementioned. Bantry (in ancient times named Bentraighe) was reckoned a part of Carbery, and is said to have its name from Beannt Mac-Farriola, a person descended from the O'Donovans and Mahonys. A son of his, called Bair Briver, possessed the small, rugged tract, called by the name of Minterbairr, being now the parish of Killegrohan. I find, in latter times, the O'Dalys had this territory, who were successively bards or poets to the O'Mahon and the Carew family. O'Glavin, who was also their termon, or steward, possessed a part of it. By these names, Daly and Glavin, I design the family, and not any particular branch of it. In Bantry Bay there is still a place called Adragoal, probably named from a clan of the Gauls or Celtiberi, who landed here. Ardgoal, or Ardgyle in Scotland, is the same name. A colony of the clan of Gaul, or Celtiberi, sailed over from Ireland to the western isles, and gave the country of Argyle, in Scotland, their name. They called the country Gael Albenich, from old Albania; and those of Ireland, Gael Erinich; both nations to this day retaining the same language, manners, and customs.

Kerricurihy and Kinalea are now one

(23) Donald Mac-Carty More, earl of Clancare (a territory in the county of Kerry), was created by Queen Elizabeth, anno 1566, having resigned his estate to her, and then had it restored, to hold of the crown of England, by fealty, after the English manner. He was, at the same time, created baron of Valentia, an island adjoining. Cambden says he was a man eminent, of great power in those parts, and a bitter enemy to the Fitz-Geralds, who dispossessed his ancestors, kings of Desmond, of their country.

In a manuscript, called a Breviate of the getting of Ireland, etc, in the College library, E. Tab. 3. N. 18., Mac-Carty More, of Desmond, and these following, are enumerated among the chief Irish captains of Munster. Mac Donogh, of Duhallow. O Donogh, of Ross, by Loughlean, in Kerry. O Donnōgh of Glanfleske. O Kief, of Drumtariff, in this county. Mac Awly, of Clan-Awly. O'Callaghan, of Clonmeene, in the same. O Sullivan-More, of Dunkerron, in Kerry. O Sullivan-Bear, of Dunboy, in this county. Mac Gillicuddy, of Doneboo, in Kerry. Mac Fyneen, of Ardentully, etc. These were all followers of Mac-Carty More; they brought into the field 60 horse and 1,500 foot. They, and all other of MacCarty's followers, with his own forces, were to be at the call of the earls of Desmond. Mac-Carty Reagh, of Carberry, could raise 300 footmen and 60 horsemen; his territory extended in length 50 miles, and in breadth 30 miles. Those following were his followers. O Driscoll, of Baltimore. Barry Oge Roe, and Barry-Oge, Oge, O Mahon, of Ardintenan, O Donovan, Mac-Patrick, O Crowley, O Muirian, etc. He was also subject to the call of the earls of Desmond.

(24) Spencer, in his view of the state of Ireland, observes that the lord Arundel, of the Strand, who was anciently a great lord, and had an estate of £3,500 per ann. was, in the reign of Queen Elizabeth, a tenant to the lord Barry, to whom he performed those services which were only due to the queen.

(25) The great part of this tract is now in the Barrymore family. In the Lambeth library, MS. X. X. fol. 25, are the lord Barry's titles to the lands of Barryroe.

(26) Vid. An inquisition concerning O'Sullivan's lands in Bear and Bantry, preserved among the MSS. of the Lambeth library X. X. fol. 13. Vid. also, an account of the particular forces of O'Sullivan in this part of the country, in the same library, manuscript X. X. fol. 105.

In a manuscript called a Breviate of Ireland, and the diversity of Irish in the same, preserved in the college library, E. Tab. 3. N. 8. wrote by Philip O'Sullivan Bear and presented to the king of Spain, anno 1618. by Florence, titular archbishop of Tuam; after O'Neill, and O'Donnell, the author sets down Don Dermitius O'Sullivan among the ancient Irish seculars in Ireland. This Dermod was then at Madrid, and assumed the title of earl of Bearhaven.

barony; the former was anciently called Muskery, Millane, and was possessed by the Mac-Cartys, but granted, after the conquest, to Richard de Cogan, as I shall show hereafter. It is, in old manuscripts, called Long a Gowganig, i.e., Cogan's Ship, and comprehended not only the tract now called Kerricurihy, but also the barony of Imokilly, in which last the Carews, soon after the English conquest, likewise settled. In Queen Elizabeth's time it went by the name of Kerry-wherry. The other part, called Kinalea, was anciently named Insovenagh; and being also a territory of the Mac-Cartys, was granted to Robert Fitz-Martin, by King John (27), anno 1208. But, in latter times, it was possessed by Barry-Oge.

Having thus far treated of the ancient tracts and septs of the maritime parts of this county, I now proceed to the inland territories. And first, of the large barony of Muskery, which still retains its ancient name, and was, according to the conquests of the Irish upon each other, sometimes of a greater and other times of a lesser extent. Kerricurihy, called, as before, Muskery Millane, being once a part of it, as was also Muskery Donegan, a tract lying round Baltimore. It was anciently a wild and wooden country, and so continued till the days of Cambden. The Mac-Cartys (28) were, for many years, the chief proprietors of it, and so continued long after the conquest of the English: the head of this branch being created Viscount Muskery, and Earl of Clancarty, which titles have been forfeited since the revolution.

The other Irish septs of Muskery were the O'Learys, who had a considerable territory in the west of this barony, called Iveleary, and many castles. Also the Swinys, Riardans, and Murphys, who were all followers of Mac-Carty. The modern barony of Barrets was also a part of Muskery, as was formerly the present barony of Barrymore.

The eastern extremity of Barrymore was called, in the English grants, the cantred of Olethan, also Ivelehan: part of it had the name of Coshbride, which territory extended into the county of Waterford, and there still retains its name. Besides the Mac-Cartys, who possessed the western part, which belong to Muskery, the O'Lehans, an ancient Irish sept, inhabited the eastern, whose chief seat was Castle-Lehan, now softened into Castle-Lyons. This country was granted, soon after the English came over, to the Barrys, who were for some ages called Lords Barry, of Castlelehan. The great, anciently called Arda-Neimhid, was also possessed by the same family.

The modern barony of Duhallow, in some old manuscripts Alla, is a large tract, of which Mac-Donough, a branch of the Mac-Cartys (29), was chief. He is, in several old chronicles, styled Prince of Duhallow, and lived in this country, with his followers, in great splendour, till the year 1641. His dependents were O'Kief, chief of Poble O'Kief, a country in the north-west part of this county; Mac-Auliff, chief of the Clan Auliff; and O'Callaghan, chief of the territory, called Poble O'Callaghan (30), west of Mallow, being the present parishes of Kilshanick and Clonmeene, where the chief sept of the O'Callaghans lived, and where a descendant of the family still remains. Mac-Donough's chief residence was at Kanturk, near which are the sumptuous ruins of one of his castles (31). Anno 13th of James I., letters patent were passed to Dermot Mac-Owen Mac-Carty, of the town and lands of Keantwirk, Lohort, and divers other lands, &c., containing the greatest part of the territory of Duhallow, with a chiefry and other duties and customs out of the territories of Poble O'Callaghan, Poble O'Kief, and the lands of Donough-Oge, with the royalties of all waifs, strays, goods of felons, court-leet, and court-baron, view of frankpledge, &c.; a weekly market and annual fair, with power to impark 550 acres, to have free chase and free warren throughout the said territory, and divers other ample privileges, to be held in free and common soccage of his Majesty's castle of Dublin. Dated at Dublin, June 6, 1615 (32).

The large tract, now known by the names of the modern baronies of Armoy or Fermoy, Orrery and Kilmore, and Clangibbon, was, before the arrival of the English, a principality of the O'Kiefs, called Fearmuigh, which, say the Irish antiquarians, is a contraction of Fera Muighe Fere, which Flaherty interprets viros Mogruthii Militis, and adds, this Mogruth was a Druid, who, for services to his prince, had those territories given him, vid. Ogygia, p 336, or, according to others, it is a contraction of Fera Muigh fene, signifying the husbandman's grassy plains, and thus Colgan calls it (33). The princes of this tract did sometimes so enlarge their territory, by conquest, that this whole country, in some Irish manuscripts, is called Fermuigh, the patron saint of which was, in ancient times, St. Molac (34), whose festival was on the 30th of January. But of this saint and his church, recorded in old manuscripts to have been so famous, there are now no traces here. The O'Kiefs of this country pretend to be descended from a brother of Feidlimid Eochaid, second son of Aongus, monarch of Ireland.

Anno 954, Donough Mac-Kief, King of Fermoy, commanded the Irish forces in an expedition against the Danes, under Kenedy, Prince of Munster, whose father, Callaghan, with his brother Duncan, were retained prisoners by them. Donough, with the assistance of an Irish fleet, pursued the Danes into Ulster, and, after an obstinate battle, rescued the prisoners, who were then on board a Danish vessel (35).

Keating mentions another prince of this territory, called Dubhagan, who was slain in a battle, fought by Flan Fiona, monarch of Ireland, assisted by the Leinster forces, against Cormac Mac Cullinane, King of Munster, in the plains of Magh Ailbhe, near Leighlin. This battle was fought about the year 908, in which King Cormac,

(27) Ware's Annals.

(28) I purposely omit giving a particular account of this branch of the Mac-Cartys, called the Clancarty family, in this chapter, as they will frequently occur in the historical part of this work.

(29) Vid. a note in the Lambeth library, manuscript X. X. fol. 15. concerning the several septs and lordships of the Mac-Cartys, of Carbery. Also the division of Duhallow, among the Cartys, X. X. fol. 43. 97.

(30) By an inquisition taken at Mallow, on the 25th of October, 1594, before Sir Thomas Norris, vice-president of Munster, William Saxey, Esq; and James Gould, Esq; chief and second justices of the said province, by virtue of a commission from the lord deputy and council, dated the 26th of June before, it is found, among other things, "that Conogher O'Callaghan, alias the O'Callaghan was and is seized of several large territories in the inquisition recited, in his demesne, as lord and chieftain of Poble-Callaghan, by the Irish custom, time out of mind used; that as O'Callaghan aforesaid, is lord of the said country, so there is a tanist, by the custom of the said country, who is Teig O'Callaghan; and that the said Teig is seized as tanist, by the said custom, of several plowlands in the inquisition mentioned; which also finds that the custom is further, that every kinsman of the O'Callaghan had a parcel of land to live upon, and yet that no estate passed thereby, but that the lord (who was then Conogher O'Callaghan), and the O'Callaghan for the time being, by custom time out of mind, may remove the said kinsmen to other lands; and the inquisition further finds, that O Callaghan Mac-Dermot, Irrelagh O'Callaghan, Teig Mac-Cahir O'Callaghan, Donogho Mac-Thomas O'Callaghan, and others, were seized of several plowlands, according to the said custom, subject nevertheless to certain seigniories and duties payable to the O'Callaghan; and that they were removable by him to other lands at his pleasure." In the reign of king James I. tanistry was condemned as a lewd and barbarous custom. Vid. Davis's Reports, p. 28, etc.

(31) Penes Comit. de Egmont.

(32) Upon the first of Feb., 1666, it was certified by the court of claims that sir Philip Perceval, knight deceased, had lent more money to Dermot Mac-Owen Carty alias Mac-Donough, upon the territories of Duhallow and manor of Kanturk, than they were worth; and that the said sir Philip was in actual possession of them, upon the 23rd of October, 1641. That the equity of redemption, which was of no value, was forfeited by the said Dermot's engaging with the rebels; and that sir Philip Perceval, bart, than a minor, grandson and heir of the said sir Philip the elder, was legally entitled to the said lordship and manor.

On the 20th of February, 18 Car. II. 1667, the said sir Philip Perceval, bart, passed patent for the said lordship and manor, to him and his heirs for ever.

On the 10th of December, 27 Car. II, 1675 the said sir Philip Perceval, bart, lord of Duhallow and Kanturk passed another patent for the said lordship and manor.

On the 15th of January, 36 Car. II, 1683, sir John Perceval, bart, lord of Duhallow and Kanturk brother and heir to the said sir Philip Perceval, passed another patent for the same. From whom the same descended to John, late earl of Egmont, etc, son and heir to the said sir John Perceval, bart, from whom it descended to John, now earl of Egmont, etc, lord of Duhallow and Kanturk, son and heir to the said earl. Penes Comit. de Egmont.

(33) Act. Sanct. p. 148.

(34) Ib. id.

(35) Keating, p. 548.

who was also Bishop of Cashel, lost his life.

Keating also says (p. 264) that this country was bestowed, by Fiachadh Muileethan, King of Munster, upon an eminent Druid, for delivering his army out of the power of his enemy. This fable is still believed and reported in this country, and all their antiquaries add it was given to this Druid for causing the sun to stand still, an hour or two, till the above-named monarch's foes gained the victory; and so by synderosis, they will have it called Fermoy. But this country was also named Armoy, i.e., the fresh field, and sometimes Urmagh, which has the same signification. This territory, after the conquest, was granted to Flemming, and by the marriage of his daughter, Amy, came to the Roches, or de Rupe, who were Lords Viscount Fermoy, and anciently Barons of Poolecastle, alias Castlelough; and all this tract is yet called Roche's country (36). Another part of the ancient Fermoy, now Condons and Clangibbon (37), was, after the conquest, granted to the Cantons, alias Condons, one of whom was called Baron of Ballyderawne, now a ruined castle, near the exit of the river Araglin. Orrery, after the English conquest, was possessed by the Barrys, from whom, in old records, it has been called Orriara-Barria. They had several castles in this tract, which they held till the general rebellion of 1641. The northern parts of it, near Limerick, were possessed mostly by the Fitz-Geralds till the same time.

(To be continued.)

NOTES AND QUERIES.

THE O'NEILLS OF COUNTY TYRONE.

(To the Editor "Dublin Penny Journal.")

Sir—Referring to the article on the O'Neills in the last number of the "Dublin Penny Journal," it may interest your readers to know that in the graveyard of Lower Langfield, near Drumquin old church and abbey, which was a branch of the old monastery at Omagh, there are two grave stones of the O'Neills, of ancient date—No. 1. "Here lieth the body of Fardoragh O'Neill, who departed this life March the 20th, 1733, aged 99 years." No. 2. "Here lieth the body of Charles O'Neill, who dyed Desember 8, 1739, aged 23 years." On No. 1 are the arms of O'Neill but the motto is illegible. Near this graveyard, in the townland of Kerlish, there was a castle of the O'Neills. It appears that some years ago descendants of this ancient family, who now live in Portugal, visited the neighbourhood to see the castle and tombs of their ancestors.—Yours truly,

T. W.

(36) It is said that Roche, who married the heiress of Flemming, first ingratiated himself, by killing one of the Condons, against whom Flemming employed him as his champion; and that he slew this Condon, by a cross-bow shot in the thigh; which part happened to be uncovered, by the rising up of his cuirass.

(37) The White Knight, otherwise styled Clan-Gibbon was descended from Gislebert, or Gilebert, called, by the Irish, Gibbon; the eldest son, by a second wife of John Fitzgerald, ancestor to the houses of Kildare and Desmond. From whom also descended Mac-Gibbon, of Mohawnagh. They had large possessions in this territory; a part of which is now the estate of the right hon the lord baron of Kingston, whose grandfather, sir John King, was September 4, 1630, so created by king Charles II. This first lord married Catherine, daughter to ir William Fenton, knt, and dame Margaret Fitz-Gerald his wife, sole heiress to the family called the White Knights, from whom the estate is descended to the present lord.

MORTALITY FROM THE BITE OF POISONOUS SNAKES.

By Charles H. Coe, in the "Scientific American."

The mortality throughout the world from the bite of poisonous snakes is unknown. From partial statistics, however, covering many years, some idea may be had of the number who met death in this terrible manner. India reports a death rate from this cause that is appalling to contemplate. There are many species of venemous serpents within her borders, but only five are especially destructive to human life. These are as follows:—The cobra de capello (Naja tripudians) or hooded snake; the hamadryad (Ophiophagus elaps); the krait (Bungarus caeruleus); the kuppur (Echis corinata); and the chain viper (Daboia russellii). The cobra is common throughout the country; its cast-off skin has even been found at an altitude of 8,000 feet in the Himalayan Mountains. The others are more or less common, according to locality. In a small division of this vast empire, containing only 13,855 square miles, and a population of 7,000,000 souls, more than 1,000 persons, according to the Report of the Commissioner of Burdwan, annually die from snake poisoning. When the extent of the country (1,560,159 square miles) and its immense population (nearly 300,000,000) is taken into consideration, together with the statement just made, it will not surprise the reader to learn that an average of 20,000 persons annually succumb to venemous snake bites in India alone. The actual number of deaths during the decade 1880-1890, according to the latest available statistics, varied from 18,670 to 22,480 per year. For many years past the Government of India has offered rewards, or "head money," for the destruction of venemous serpents. Notwithstanding the payment of large sums for this purpose, however, neither the supply of snakes nor fatalities from their bite seem to have decreased. During the above-mentioned decade the number of snakes (poisonous) killed varied from 212,776 to 578,415 annually. France has had a similar experience in this latter direction. In three departments, or counties, a premium of 25 centimes was offered for the destruction of vipers, which reptiles were responsible for many deaths. According to official reports, the number of snakes killed in one year (1864) was 1,934, while in 1890, 26 years later, 67,620 vipers were destroyed, or a total of 294,577 during the whole period. In both cases, instead of diminishing in numbers, the snakes seem to have actually increased under the bounty system. It has been stated that in some localities the people have resorted to breeding certain poisonous snakes for the sake of the rewards offered. The truth of this oft-repeated assertion is very doubtful, however, especially in regard to the former country, where the reptiles are so numerous that their capture is effected with little difficulty. In North and South Africa there are several highly venemous species, the most dreaded being the African cobra (Naja haja), the spitting snake (Sepedon roemachates), and the sheep stinger (Causus rhomblatus). Australia has about twenty poisonous species, five of which are extremely deadly. Among the latter are the brown-banded snake (Hoplocephalus curtus), the brown snake (Diemenia superciliosa), and the black snake (Pseudechis porphyriacus). Tropical America, including several islands in the West Indies, notably Martinique and St. Lucia, contains a number of pit vipers, the largest and most formidable known. The terrible fer de lance (Trigonocephalus lanceolatus) is confined to the islands, where a bounty has had little or no effect in diminishing its numbers. It is regarded with the utmost fear by the natives. The mortality from snake poisoning in Africa, Australia, and tropical America is not specially recorded. While it is known to be small in comparison to that of India, it is still considerable, according to the reports of travellers and notices in the public prints. The fer de lance alone, in the West Indies, is the cause of many deaths annually. In the United States there are four genera of venemous serpents, as follows: the rattlesnake proper (Crotalus), the copper head, and the moccasin (Agkistrodon), the coral snake (Elaps), and the ground rattlesnake (Sistrurus). Of the former there are several species, and at least two of the coral snake. The huge diamond rattlesnake (C. adamanteus) and the copperhead (A. Contortrix) are the most deadly. The former species of rattlesnake is undoubtedly the cause of more deaths from snake poisoning than any other in the United States. This is due to its large size (not infrequently seven feet in length and three inches in diameter), and to the great length of its fangs and the copious amount of venom injected into its wounds. There are no means of ascertaining the annual mortality from snake poisoning in the United States. It is not large, and fatalities are now mainly confined to the South and the West. In these sections the country newspapers contain occasional reports of deaths from this source. Perhaps the total number would not exceed fifty. Not a year passes without one or more deaths from rattlesnake poisoning in the State of Florida. Perhaps 30,000 would be a fair estimate of the world's annual death-rate from the bite of venemous snakes, notwithstanding the long and practically fruitless efforts of science to discover an antidote.

DOOM OF THE SPHINX.

IRRIGATION CAUSING FAMOUS EGYPTIAN MONUMENT TO CRUMBLE.

The present is a period of vanishing of monuments which have stood for thousands of years. The other day Venice lost one of her famous relics of past days, and many other buildings in the lovely Queen City of the Adriatic are threatened with destruction.

And now comes the news that an even more famous, an infinitely more venerable monument, is likely to disappear. It is said that the Sphinx, which has stood on the bank of the Nile since the shadowy days of the Pharaohs, cannot long withstand the crumbling occasioned by modern conditions in Egypt.

Since the British have been in control in Egypt they have altogether changed the face of the country. Land that was once desert is now smiling with verdure. Irrigation has reclaimed thousands of acres, and the great dam at Assouan will result in a marvellous increase in the size of the region under cultivation.

All this has resulted in so modifying the atmosphere of the country that the dry air which allowed the preservation of the Sphinx no longer exists. Everyone knows that the preservation of the monoliths in London and New York, however carefully they be watched, cannot be continued indefinitely, and it is said that the same trouble which caused so much discussion here in regard to Cleopatra's Needle is threatened in the case of the famous figure that has inspired so many poems and pictures.

The Sphinx was built before the Great Pyramid, somewhere about 4,000 years before Christ. It is a recumbent man-headed lion, 188 feet long, hewn out of a natural eminence in the solid rock, some defects of which are supported by a partial stone casing. There is a temple in front of it, but all efforts to prevent the sand settling over the building have failed.

In front of the breast of the Sphinx originally appeared an image of a god, the weather-worn remains of which may still be made out. The head of the Sphinx was a work of art of the highest type known to the Egyptians, and finished with the greatest care. It is now greatly mutilated, but, in spite of all its injuries, its calm, majestic, pensive expression still appeals to the most thoughtless of travellers.

Perhaps means may be found to avert the threatened ruin of this noble figure, but the battle between modern conditions and ancient monuments is one that usually results in only one way.

LITERARY NOTES.

The earliest references to pens (says "Great Thoughts") are probably those in the Bible, and are to be found in Judges v. 14, I. Kings xxi. 8, Job xix. 24, and Isaiah viii. 1. But these chiefly refer to the iron styles which cut out the characters in the tablets of limestone or soapstone. There is a reference to pen and ink in the third Epistle of John xiii. 5, which was written about A.D. 85, and as pens made in brass and silver were used in the Greek and Roman Empires at that time, it is probable that a metallic pen or reed was alluded to. In the Far East, and perhaps in Egypt, the camel's hair pencil was substituted for metal implements, but the quills of geese and crows were discovered to be more useful than either the reed or brush, and were introduced, it is thought, about A.D. 56.

✧ ✧ ✧

The first attempt to visualise Christian to the reader was made in the frontispiece to the edition of 1680, and Christian himself occupies but a small share of the page. The foreground is occupied by a portrait of the dreaming author, while in the distant background are the subjects of his dream. Christian, although small, is vigorously drawn setting out from the City of Destruction with his burden on his back. In 1681 appeared the first really illustrated edition, which contained thirteen copper plates—crude and ill drawn. In 1767 there was published an edition illustrated with woodblocks; these, too, were miserable productions, and quite unworthy of the book. The original frontispiece (of the 1680 edition) was again utilised, but it was considerably weakened by the process. It seemed, indeed, as though the publishers did not consider the book, in spite of the great demand for it, worthy of adequate illustrations.

✧ ✧ ✧

Among announcements of forthcoming books are no fewer than four from the untiring pen of Mr. Andrew Lang—a circumstance which almost lends colour to the allegation of the humorist who declared that Mr. Lang is not a person but a syndicate! Mr. Lang's record in the British Museum Catalogue is growing to remarkable dimensions; we find no fewer than 176 entries under his name. In the same connection may be recalled that a year or two ago Mr. C. M. Falconer, a Dundee gentleman, who had formed a large collection of Mr. Lang's writings, issued for private circulation a catalogue bearing the quaint title, "Catalogue of A 'Lang' Library," which comprised volumes in the possession of the compiler, besides others which should be in a complete collection of Mr. Lang's works. The catalogue enumerates 495 titles and embraces 658 volumes. Truly a "lang" list!

✧ ✧ ✧

There must be something in heredity, after all. Mr. Herman Merivale, who at ten years old wrote a play in which a cook poisoned a whole Royal family at once, tells us in his fascinating autobiography, just out, of a small niece of his who has lately embarked on a similar experiment. It is one of the plays which will never be seen on any stage, although, to judge by the sample discovered in the juvenile dramatist's room, it might be relied upon to produce no mean sensation. Here is a scene from Act I., as Mr. Merivale gives it in his book—

King Edward I. and Courtiers discovered.

A Courtier—My Liege, a gentleman awaits below.

King Edward—Oh, tell him to be d——d. I want my lunch.

Mr. Merivale adds the quite superfluous note that his niece is "very young and rather puritanic."

✧ ✧ ✧

The formation of a committee for the erection of a bust of Shakespeare at Festmere is fresh testimony to the world wide appreciation for the genius of Hamlet's dramatic creator. The site selected for the monument has a special appropriateness as directly facing the "Hamlet Terrace" of the castle of Kronborg, where the conversation of Hamlet with his father's ghost traditionally took place, and in the immediate neighbourhood the visitor is still shown not only "Hamlet's grave," but also "Ophelia's brook," so that Shakespearian associations in the neighbourhood are as thick as blackberries. They will presumably be sufficient to annul the unromantic propinquity of the railway station, near which the monument, as candour compels its promoters to assert, will have to be erected. Denmark knows more about Shakespeare, in all probability, than Shakespeare knew about Denmark, and it is refreshing to find a committee resolved, in spite of recent scepticism, to put up a monument to Shakespeare as the creator of the King's Ghost, and not to Bacon's ghost as the creator of Shakespeare.

✧ ✧ ✧

Literary fun is becoming delightfully frequent in "Punch." Last week's "Mr Punch's Sketchy Interviews" overtook Mr. Stephen Phillips.

"How do you do your work?" I asked. "The readers of 'Mr. Punch's Sketchy Interviews' are dying to know."

"I compose best on the typewriter," he said. "A Bar-Yost, free-wheel. I bought it cheap from the Orthopædic Hospital, which may account for some of the criticisms of my metre. It's a wonderful worker, good stepping action, but when it takes the bit between its teeth, I'm done. That's when those long soliloquies get in."

"Don't you get fearfully tired?" I remarked.

"Oh, yes, but then I take plenty of exercise. I adore ping-pong. But cricket is my true vocation. When things come to the worst, by which I mean when every theatre has its 'Ben Hur,' I shall take to cricket, like C. B. Fry, and describe matches from the pitch in blank verse."

"And have you no other relaxation?"

"Ah, well, an occasional burglar is very refreshing. I get quite slim with them. But when they corner me, I reason with them: failing that, I rhyme."

"And what is your new play to be called, Mr. Phillips?" I asked, as he held the door open and lifted one of his redundant feet in a valedictory spasm.

"Molasses; or the New Beerbohm Treacle," he said.

✧ ✧ ✧

The comments on the constitution of the British Academy of Letters, sarcastic and otherwise, that have appeared in the Press, would make a little volume. Mr. Andrew Lang is always amusing on the subject. "What we mainly admire in our New Academy," he remarks in "Longman's Magazine," "is the perfect success with which 'literature' (in the proper sense) has been excluded. Mr. Lecky, I think, is the only poet on the list." C. K. S., who printed in "The Sphere" his notion of how the New Academy should be constituted, remarks in the current issue of that periodical that he has received many letters in reference to his list. We can well believe it. C. K. S. adds—"I have no doubt that its personnel was very wrong, but it was the scheme of sections that I was really in love with, and I here I believe that I was right. It may be, as correspondents suggest, that Mr. Andrew Lang should be placed under Folk-lore, and that the names of Mr. Watts-Dunton and Mr. Edmund Gosse should have been added as representative critics. These are but details." Details, possibly, but detail of rather an interesting nature to Mr. Lang, Mr. Watts-Dunton, and Mr. Gosse.

✧ ✧ ✧

The methods of book advertisement over here, the "Academy" remarks, seem to be approximating to the standard of which even America is beginning to tire. The publisher of Miss Ellen Thorneycroft Fowler's new story, "Fuel of Fire," after telling us that the book is "full of life and movement and romance . . . a brilliant story of contemporary manners," and so on, proceeds to quote some "Wise and witty sayings" from it. Here they are:—

There are some things which are absolutely necessary to a man's well-being and peace of mind, and one of them is pointing out the faults of his female relations.

Love is the one disease that is the worse for being cured.

I don't see why, as the Irishman said, the reciprocity should be all on one side.

If I had wings and covered them, people would only say what a bad figure I had and how badly my clothes fitted; but if I had cloven feet and went barefoot, everybody would smile and pity rather than blame.

Falling in love is an ideal sort of thing; and if you fell in love with a person, and then found he was sordid and commonplace, it would be like seeing an angel and then finding the angelic robes were made of cheap calico.

This kind of advertisement, however, often defeats itself, for if the publishers have not done Miss Fowler grave injustice in their selections, all we can say is that they could hardly have done the book a greater disservice. We can see nothing in those five sentences either wise or witty; they are merely commonplace.

✧ ✧ ✧

No signature is appended to these delightful skits, says the "Academy," but guessing is inevitable, and we think that a passage like the following almost betrays the authorship—

You speak of my "kind wish to read your novel." Here, I fear, the pardonable enthusiasm of early authorship has carried you a little beyond the record. I have no copy of my former letter. My dear wife used to spend a good deal of her time in copying my letters into large volumes of MS. which were bound at the end of the year, and filed in the library. But the asthmatic wheezing (to which she was habitually subject was so much increased by the habit of perpetually poring over a desk as to become positively distressing to all around her, and (though I need hardly say that on other accounts I deeply deplored her loss) the cessation of this painful sound was an actual relief to my nerves; and of late years my letters have remained uncopied. I am, therefore, not in a position to state with precision the terms which I employed in my former letter, but, so far as I can recall them, they did not amount—certainly they were not intended to amount—to more than this, that, when your novel was completed, I should be willing (in compliance with your expressed desire) to examine—I would not say the ethical propriety, but rather the "convenableness"—of a particular chapter, with respect to which you yourself seem to be in considerable doubt.

✧ ✧ ✧

The "Pilot" has, from the first, had a liking for delicate satire, and "Mr. Woodhouse's Correspondence" now running in its pages is an amusing study of two fatuous persons, a neurotic young woman who proposes to lead a free and literary life, and is at present deeply anxious about Chapter 50 of her first novel (she is afraid she may have gone too far), and her god-father, whose present and past selfishness and general weakness are delightfully revealed to the reader, though not to his god-daughter, who, in her gratitude for the sympathy he has given her up to date, writes—

May I venture in my gratitude, to send you this little sonnet, which is addressed to you, and expresses my feelings better than any prose:—

TO MY GODFATHER, A. W. W.
In Thanks for . . .

Broken am I upon the Wheel of Life,
A Cistern of strange Forces—full of sap—
But thou hast acted as my Water-tap,
Cooling my Soul, and all its seething strife.
Sweet are the drippings of thy sympathy,
Like a great shadow in a weary land;
For when from out the Wilderness I cry,
Thou, thou alone, hast ears to understand.
So shall I conquer, holding by thy hand,
Since I am dowered with Love, and Fear, and Hate.
It is the Weak who sink; the Strong command,
For Man is Man and master of his fate,
And we too—like waves upon the Strand—
Will foam and break upon the Ultimate.

Do you care for Wordsworth, I wonder? If not, you may not like the line about the Water-tap. But I confess I adore Wordsworth's simplicity. I have always formed myself half on Wordsworth and half on Shelley; but, after all, however small one may be beside the great, one is in the end purely and simply oneself.

SCIENTIFIC TOPICS.

All patriotic Americans are disappointed to learn of the failure of the Baldwin-Ziegler expedition to the North Pole. This expedition, it will be remembered, started out with a most complete equipment. Money was not spared in the purchase of the explorers' outfit, which comprised the very best of all that modern science could suggest. The cause of Mr. Baldwin's failure to reach the North Pole is ascribed to the ice which blocked all channels through Franz Josef Land, and prevented the establishment of depots by steamers last fall. The breaking up of the ice early in June compelled the use of reserve supplies, and hence it was necessary to leave Camp Ziegler on July 1. However, as Mr. Baldwin puts it, he has been "baffled, but not beaten," from which we are led to expect that a second attempt will be made next year, which it is hoped will meet with better success. The chances are very favourable for another "dash to the pole" because of the enormous depots of condensed food which were established by means of sledges at important localities this year.

✧ ✧ ✧

The fitting out of the Scottish South Pole Expedition, which is to be carried out under the auspices of the Scottish National Antarctic Expedition, is rapidly approaching completion. The expedition is to be under the command of Mr. W. S. Bruce. The Norwegian whaling vessel "Hecla," renamed the "Scotia," purchased to carry the party, is now being reconstructed on the Clyde, at Troon, under the superintendence of Mr. G. L. Watson, the well-known yacht designer. The "Scotia" is a barque-rigged auxiliary screw steamer of about 400 tons register. New deck-houses are being built, a larger one aft and a smaller one forward divided into a laboratory and cook's galley. A second laboratory and a dark-room are being fitted between decks. The ship is being specially fitted to carry on oceanographical research, both physical and biological. Two drums, each, containing 6,000 fathoms of cable, for trawling in the deepest parts of the Southern and Antarctic oceans, are being taken. The expedition intends to follow the track of Weddell, and to explore the Ross Deep, working eastward from the Falkland Islands.

✧ ✧ ✧

Every spring the lighthouses of the United States are given a coat of whitewash of a composition which is enduring and able to withstand the attack, not only of the elements, but also the corrosive action of salt water. The east end of the White House, which bears the brunt of the strong moisture-laden winds of Washington, is annually coated with this wash. The wash is made as follows: Slake half a bushel of lime in boiling water, covering during the process to keep in the steam. After straining this through a fine sieve or strainer add to it a peck of common salt, previously dissolved in warm water. Three pounds of ground rice should then be boiled to a thin pasty mass, and, while hot, stirred into the above, one-half pound of Spanish whiting should also be added, and then one pound of glue, melted in a glue pot, should be put into the composition. After adding five gallons of hot water to the mixture, it should be allowed to stand for a few days, securely covered to keep out the dirt. It is claimed that this whitewash is very efficient if heated before applying. In order to make a careful estimate of the amount of wash needed, it must be remembered that a pint properly applied will cover a square yard.

✧ ✧ ✧

In many mountainous regions a steel rope railway constitutes the only means of transportation. On this slender support, and suspended 2,000 feet in the air, freight and passengers are daily carried. One of these aerial tramways was recently built by A. Leschen and Sons Co., of St. Louis, Mo., at Ouray, Colo. The line is 4,200 feet long and runs up 2,000 feet to the mouth of a gold mine. The line consists of two stationary sustaining cables, securely anchored at each end. The loaded buckets run on a rope 1½ inches in diameter, while the empty buckets return on a 1 inch rope. An endless steel wire rope ⅝ of an inch in diameter propels the buckets, an 8-foot sheave being used at the terminals of the line. The buckets are attached and detached automatically to and from the traction cable. The weight of the loaded buckets travelling down is sufficient not only to operate the tramway in gravity, but also to bring up supplies to the mine.

✧ ✧ ✧

M. Enginitis, in a paper read before the Academie des Sciences, describes a series of novel effects which he observed in the case of the spectra obtained by an electric spark passing between different metals. He finds that by introducing self-induction into the circuit the spectra are modified in a striking manner. In one case he used two poles of aluminium wire of 0.04 inch diameter, covered to within 0.1 inch of the ends with a small quantity of metallic sodium. The wires are connected to an induction coil and a spark is passed for a few seconds. By introducing into the circuit a series of solenoids, the self-induction may be given any desired value; the resistance of the circuit is kept constant at 3 ohms. Ordinarily the spectra of the spark contain the aluminium and sodium rays, but when the self-induction is increased the aluminium rays diminish in intensity very rapidly, while the yellow rays become stronger. A small coil 2 inches in diameter with a few turns of wire shortens up most of the aliminium rays, and on increasing the self-induction they almost disappear; meanwhile the sodium rays become more and more brilliant, and finally reach a remarkable intensity. In this case the sparks have a bright orange colour, due to the vapour of sodium, and the poles are surrounded by a halo of considerable extent. The values of the self-induction which eliminate the aluminium spectra are greater when the distance between the poles is increased, but in general diminish as the capacity of the circuit is greater.

✧ ✧ ✧

Other experiments of a like nature were made using sodium or potassium in connection with platinum, iron, tin, and other metals. In some cases the elimination of the spectra of one of the metals is difficult and not always possible; this occurs, for instance, in the case of a sodium-mercury combination. The elimination may also be obtained without the immediate presence of another metal on the same pole. In one case the experimenter used one pole of platinum and the other of mercury, contained in a glass tube; here the platinum rays were eliminated while the rays of the mercury were reinforced. Sometimes the mercury rays presented a curious appearance. Each of the rays was divided into two parts of different intensity. The most intense portion correspond to the mercury itself, and the ray passed briskly from one part to the other as if the spark-gap had been half filled with mercury vapour. It may be remarked in general that the metals whose spectra are diminished are those which give but a small quantity of vapour, while the metals whose spectra remain or are increased in intensity are very volatile.

✧ ✧ ✧

Several prizes have recently been awarded in connection with various contests organised by the Society for Encouraging National Industry in France for important discoveries in many ramifications of science. The prize of £80 for the invention of a cement capable of agglomerating diamond dust for mechanical purposes has been awarded, while £120 was given to the inventor of a steam superheater, which is considered to be a great advance upon any yet placed on the market. An offer of £80 for what is described as an important progress in the mechanical transmission of work is also made. A prize of £40 is offered for the practical utilisation of any by-product used in chemical processes which is now wasted, and medals are now offered for the publication of papers useful to chemical industry and metallurgy. Prizes are also offered for an apparatus suitable for domestic use, and capable of sterilising drinking water, and for an effective remedy for freeing the vine tree from an insect parasite which does great harm to it.

✧ ✧ ✧

During the last ten years (says "Cassier's Magazine") a great many mines have replaced animal haulage with compressed air motors, which lend themselves splendidly to the work desired. There are, in general, two systems—the low-pressure system, in which air is compressed to five or six hundred pounds; and the high-pressure system, with air pressure of 2,000 pounds and over. The former system can be used in large galleries or tunnels or drifts where the width is ample and the track reasonably straight. This permits a large receiver on the motor, 30 to 40 inches in diameter and from 8 to 16 feet long, to be handled with ease. The high-pressure system is used where the drifts are narrow or the curves on a small radius, permitting only a small wheel-base on the motor. Large receivers are, therefore, impracticable, and steel tubes must be used and charged with high-pressure air to get sufficient volume. Compressed air may be used cold on either of these motors, or the air may be passed to small tanks of hot water supplied to the motor at the charging stations. The air and hot water combination does almost double the work that cold air will do. These motors can carry sufficient air for any ordinary run desired, and haul tremendous loads. Two miles and return, with fifteen or twenty loaded cars, is not an extraordinary effort, and from the general results obtained, the cost of haulage is from one-half to one-third of the cost of the animal power. The air escaping from the exhaust of the motor engine adds to the ventilating effect in the mine, and the whole system harmonises thoroughly with the power outfit in the average mine.

✧ ✧ ✧

The Societe Nouvelle des Etablissements Decauville has devised a handy portable electric generator applicable for domestic purposes. It is convenient for lighting premises which cannot obtain the necessary current from central stations. The dynamo is driven by an oil or gas engine. The pipes delivering the liquid fuel, and those for the inlet and outlet of the cooling-down water, run under the flooring, at the foot of the engine. Adequately effective means are provided for the escape of the gases of combustion. The base-plate is cast in one piece, and is fitted with a two-cylinder engine, all the motive parts of which are cased in. Automatic lubrication is provided. The dynamo is mounted beside the engine, on the same base-plate. A compensating flywheel is placed between the engine and dynamo, forming an elastic coupling, which insures the independence of both the engine and dynamo shafts, and also regularity in the working. A noticeable feature of the apparatus is a contrivance for insuring fixity in the degree of light, whatever may be the number of lamps in service. The engine can be easily and quickly dismantled and transported, while it does not require much attention when running—two essential features of the invention. The cylinders are 3½ inches diameter. The oil to lubricate the mechanical parts is supplied from a hand pump, and the cooling water is delivered under pressure, a suitable tank fed by a pump forming part of the installation, to insure a regular supply. The generating capacity of these engines is sufficient to supply current for forty 16-candle power lamps. The switchboard contains an exciting rheostat, and is made for direct lighting.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

COUNTRY NEWS.

TRALEE, MAY 21, 1787.

Thursday night last, about ten o'clock, George Gun, jun., Esq., called out a party of 12th Light Dragoons, quartered here, with whom he set off for a place called Scortaglin, about fourteen miles from this town, for the purpose of apprehending one Ulick Roche, against whom there were informations given before Thomas Stoughton, Esq., that he, together with many others, assembled as Right or White Boys, on the night of the 17th October last, and set fire to a quantity of tithe hay and oats, on the lands of Dromultinmore, whereby twenty-five cart loads of the former and six carts of the latter were destroyed. He is likewise charged with being at the head of a party who, on the 20th of said month, burglariously entered a house on the above lands, in search of a tithe lease which the owner held, and on not finding it, with destroying some of the furniture. A few moments before Mr. Gun's arrival at that house, Roche received some intimation of his approach, on which he quitted his bed and took to the fields almost naked, but being closely pursued, was soon apprehended, and about five o'clock next morning was safely lodged in our gaol. It is unnecessary to remind the public, that to the indefatigable exertions of this spirited Magistrate we are chiefly indebted for the restoration of that tranquillity which at present reigns all over this country.

LIMERICK, MAY 24.

Thomas Burke, Henry Clarke, and Margaret Egan, alias Clarke, who robbed Mr. Daniel Molony at the corner of Bridge street of 53 guineas in money, a watch, and about twenty pounds worth of goods, have been apprehended and lodged in Galway Jail; they were pursued and identified by George Adams and Henry Grey, whose wife is in custody for receiving some of the goods.

DUBLIN, MONDAY, MAY 28, 1787.

A man of the name of L——ch, who lived in Smithfield, was arrested by two bailiffs on Saturday evening last, for a debt said to be of a trifling amount, and passing through a lane in their progress to the Marshalsea, one of the bailiffs discharged a ball from a holster pistol, which went through his body near the heart; the man instantly dropped, and it is reported that he afterwards expired. The excuse alleged for this violent action is that the man offered resistance, and refused to accompany the bailiffs. They have, however, been apprehended and lodged in the New Prison.

Friday morning Mr. Osborne, of the county Cavan, was stopped within three miles of Dublin by a single highway-man, who robbed him of his purse containing 64 guineas, a pocket-book with sundry orders for goods, and an old gold watch.

TUESDAY, MAY 29.

The next meeting of Parliament will be on the 12th January next, and Mr. Orde's system of education will be the first measure introduced in the House, when, contrary to the invidious assertions thrown out in the papers, the Roman Catholics will be comprehended in a liberal participation of the Act, consistent with the security and spirit of the Constitution.

On Friday night last, a fellow took the following unusual precaution to commit a robbery in Crampton court. Fixing his eye upon silver spoons and other articles of value in a window, he deliberately took off one of his garters, and fastening one end of it to the shop door, and the other to the side of the window, he effectually guarded against the door being opened; he then thrust his hand through the glass, and made off with a considerable booty. The person who happened to be in the shop, notwithstanding she was in a manner barricaded, contrived to give the alarm, and he was pursued and overtaken; the spoils were got upon him, and the garter upon his leg was found correspondent to that with which the shop door had been fastened.

Last night, at eleven o'clock, as Mr. Murray, of Winetavern street, and his wife, were returning from the Black Rock to Dublin on horseback, accompanied by a brother of Mr. Murray's on foot, they were attacked near the Circular road, on their way from Ballsbridge, by three robbers, who knocked Mr. Murray's brother down, and took from him ten shillings in silver; one of them clapped a pistol to Mr. Murray's head, and another made a pull at his watch, but only brought away part of the chain, after which they made off precipitately.

Mr. Daly's adherence to the custom of the London theatres respecting the taking of seats in the boxes, renders his conduct highly creditable; and it is with pleasure we find the most respectable frequenters of the theatre unite in paying due respect to this necessary regulation. The lodging of half-price can be of no inconvenience to such ladies and gentlemen who seriously intend favouring the theatre with their presence; and surely the precluding the ridiculous parade of these vain gentry, who have hitherto exhibited themselves as supporters of the drama, without spirit or inclination to render it a service, from indulging in so nonsensical and injurious a procedure, must, while it adds to the convenience of the public, be of a very lucrative advantage to the manager.

Yesterday the grand annual review of Volunteer Corps of this city took place in his Majesty's Phœnix Park, before his Excellency the Earl of Charlemont, Reviewing General, when they went through their different evolutions and manœuvres, with their wonted dexterity and discipline, during which they discharged thirty-six rounds of cartridges.

The eldest of the two fellows that had been capitally convicted on Friday last for robbery, was not eighteen years old; and though so young in age, they were both notwithstanding old offenders, having been several times before, within these three years past, committed to prison on different charges, but escaped either through neglect, or perhaps the mistaken clemency of their prosecutors. This, however, will not be any longer a cause of public complaint, as by the Act lately passed for the better collection of his Majesty's revenue, with respect to forfeited recognisances, those who give in bail to prosecute must do so, or else the sum will be required without delay, or even the smallest mitigation or reduction of the fine.

The Margaret, Flannigan, and the St. Anne, Butler, laden with a considerable quantity of manufactured goods from this port, pursuant to the new adjusted treaty of commerce and navigation with France, we hear arrived in Bordeaux, on the 13th and 15th of this month; all well.

WEDNESDAY, MAY 30.

The late unhappy accident which happened in consequence of an arrest for debt, naturally reminds us of the fate of Fanning, the constable, who was executed about thirty years ago, for shooting his prisoner on the way to a spunging-house. It is a pity that the right of a bailiff over the person of a debtor after caption, has not been clearly understood, as many fatal acts have been committed, from a mistaken idea, that the prisoner may be killed to prevent an escape. Our law gives no wanton power of taking the life of a subject in such cases, unless an attempt of rescue be made, with a force that might endanger safe custody. It seems strange, however, that the same law which would acquit twenty rogues rather than hang one honest man, should yet put a trifling pecuniary demand in competition with the life of a fellow creature. Why does it not also say, better the plaintiff should lose his debt than the prisoner be destroyed. Of many such inconsistencies is our law made up.

We have the pleasure of hearing that the price of mutton, and consequently every other species of butcher's meat, will get a very considerable fall in a few days, as numbers now sheering will be sent to market the next or the following week from all parts of the kingdom; after which we may expect a large and regular supply for the remainder of the year.

We hear that a labourer raising sand at a place called Sleevardahg, in the county of Wexford, struck against a hard substance, which being disengaged from the surrounding earth, was found to be an iron vessel, containing about two quarts; the mouth was covered with a thin plate of tin or iron, soldered quite round the edges. On opening the vessel a number of Jacobusses, worth twenty-five or twenty-six shillings each, appeared carefully lapped [illegible] leather, a crucifix marked T. D., and [illegible] fashioned gold ring, with a red stone in the form of a seal. The man was honest enough to bring the whole to his master, who generously rewarded him with half-a-guinea!

The fishermen in general from the nature and tendency of their petitions to Parliament, seem to think, that a preference being granted this session in favour of the quantity caught, more than on the tonnage of the vessels, will leave no encouragement for them to pursue their avocations, from a supposition of a similar failure with that which happened not many months since; but since the bounties are three times as great upon the take as they are upon the tonnage of the vessel, there is every reason to suppose that those crews which lay themselves out with diligence and attention for obtaining fish for the supply of home and foreign markets, will get much greater advantages by the present regulation than they could possibly obtain by receiving only the one-third duty on tonnage, which the course of a few months will make entirely evident to them, and instead of promoting smuggling, as is frequently mentioned, it will rather strongly tend to obviate and set it aside.

(To be Continued.)

IRISH MANUFACTURES.

A COUNTY ROSCOMMON PRIEST writes:—I feel grateful to the person who recommended me to try "Pigott's Preparation," since it seems to me to be really efficacious in strengthening weak hair and preventing the hair from falling off; whereas, so far as I can see, all the puffed hair preparations on the market, so far as the promoting of the growth of the hair is concerned, are simply frauds. I have tried several of them, and know by experience their utter valuelessness. In fact I had given up all hope that anything could arrest the continual falling out of hair; and, therefore, it looked as if I should have a clean, bald pate in a very short period. Thanks, however to "Pigott's Preparation," my hair has now stopped falling out, and is growing and increasing in quantity. I shall surely recommend "Pigott's Preparation" whenever opportunity arises; and I hope to see this valuable specific with as large a sale as those imported preparations, which are of no value compared with it, yet command, I am sure sales by the million. I trust the Cork International Exhibition will be the means of extending the fame of "Pigott's Preparation."

P.S.—If you should publish this eulogy, you may give my name to any inquirer who may call at your office.

CAUTION.—Pigott's Preparation (Lotio Crinalis) can only be had genuine direct from the Proprietors and Sole Manufacturers, J Pigott and Son Hair Specialists, 36 Marlboro' street, Cork. Post free, 2s 10d and 4s 10d per bottle.

RATES OF SUBSCRIPTION.

Vol. I., No. 29. DUBLIN: SATURDAY, OCTOBER, 18, 1902. PRICE ONE PENNY.

AN ANCIENT IRISH BOROUGH.

KILMALLOCK, CO. LIMERICK.

FROM THE "DUBLIN PENNY JOURNAL," 1832.

Giving the above picture, the "Dublin Penny Journal," 1832, accompanied it with the following description:—

A few years since, Kilmallock presented to a reflecting and imaginative mind a scene of singular, and we might add, intensely romantic interest—that of a noble town, walled, turreted, and filled with stately monasteries castles, and houses of cut stone, all ruined, silent, and deserted; some wretched peasants had indeed here and there taken up their residence in the corner of a tower or mansion, which, like a solitary figure in a mountain scene, only added to the effects of sadness and desolation. It was at this period that the prefixed sketch was made. Kilmallock has since assumed a different aspect: it has become again a scene of life and animation, and though it has lost much of its poetic and pictorial interest, it will give greater pleasure to the eye of the philanthropist.

Kilmallock has been a place of some distinction from a very remote period, and like most of our ancient towns is of ecclesiastical origin, a monastery having been founded here by St. Maloch in the 6th century, of which the original round tower still remains. It is said to have been a walled town even before the arrival of the Anglo-Normans, but at all events it became a place of great strength and celebrity under the Desmond branch of the Geraldines, and ranked as their chief town. Much, however, of its present ruined magnificence is of a period subsequent to the fall of that great family, as the majority of the houses are of the reign of the 1st James, and none of them earlier than that of Elizabeth, when stone mansions first came into use in the chief towns in Ireland. Many of the castles, and the gates, and the surrounding walls, are, however, connected with the Geraldine power.

Kilmallock has been designated "the Irish Balbec" by Dr. Campbell, a writer of considerable learning and some imagination; and this high-sounding epithet is not undeserved, if properly understood as applying only to a great assemblage of Irish ruins, as their magnificence will, of course, bear but little comparison with those of the Eastern city. These consist at present chiefly of a street of stone-built houses, frequently of three stories in height, and having windows and doorways of cut stone; the former have stone sashes called by architects, mullions, and label mouldings, and the latter are usually arched. These houses have also curious and grotesque spouts, and above the first storey, frequently an ornamented architrave.

There were anciently four great entrance gateways of lofty and imposing character,

of which two still remain; and there are also some smaller towers remaining in the surrounding town walls. Outside the town, and on the banks of the beautiful stream called the Cammogue, stand the ruins of two truly splendid monasteries, in which there are several curious and interesting sepulchral monuments.

Kilmallock has been in a state of desolation and decay since the time of the usurper Cromwell, when it was dismantled and otherwise greatly injured by the Parliamentary army. The recent return of population is fast hastening the devastations of time, and, excepting its ecclesiastical remains, in a few years it will have but little vestiges of its former splendour. Antiquarians as we are, however, we shall regret this change but little, if it brings industry, wealth, and peace to a spot that has been for a long period the dreary abode of wretchedness and want. Of its sufferings during the year 1817, when typhus fever raged so dreadfully in the south of Ireland, take the following anecdote from the interesting tour of the unfortunate J. B. Trotter—the truth of the circumstances here detailed may be relied on:—

"In one part of the ruins, where a fine arched side-aisle was very perfect, my guide showed some terror. I soon learned from him the cause. A person ill of fever had been left there the day before, lest he should communicate the infection to the family where he lodged. He was left to expire! His hollow voice plaintively implored some drink; I assured him he should have it, and be taken care of, and hope revived at the moment life was ebbing fast away. In another part of this monastery I saw a hat of a departed victim of fever exposed some time ago, and at our Inn I heard the following story:—An American gentleman, totally a stranger, well clad and of pleasing appearance, came a few months ago to Kilmallock. He went to no Inn, but wandered about the ruins, till at last entering them he was observed no more, and perhaps forgotten! He was ill, and fever burned in his veins; but where can a penniless and forlorn wanderer turn in a country where he is without friends or money? It happened that a gentleman was ill at the Inn, and required the attendance of a person to sit up every night. The Innkeeper's son performed this humane office frequently; and very early one morning, as the stars were fading at the approach of twilight, he walked out to the monastery to refresh himself with the morning air; he heard a murmuring noise of some human being. It was two or three days after the American gentleman's disappearance. He recollected this, and advanced—but can I go on? Extended on his back in a recess of a ruined aisle, the unfortunate stranger lay speechless and expiring! one hand clenched the mouldering wall, the other his hat. The young man, terrified and shocked, ran for assistance. On his return, this victim of misfortune was no more! Fever had arrested his steps."

We shall only add a hope that no future traveller may ever have it in his power to record such instances of the wretchedness and inhumanity of Kilmallock.

As Kilmallock was one of the Ancient Boroughs of Ireland, we take from Lewis's "Topographical Dictionary of Ireland" (1837) the account of it he gives:—

Kilmallock, an ancient corporate and post-town, and a parish, forming a liberty, in the county of Limerick, and province of Munster, 15¾ miles (S.) from Limerick, and 109½ (S.W.) from Dublin, on the high road to Cork; containing 2,834 inhabitants, of which number, 1,213 are in the town. This place, called anciently "Killocia" and "Kilmocheallog," derived its name from an abbey founded for Canons Regular by St. Mocheallog or St. Molach, in the beginning of the 7th century. Its early history is involved in great obscurity, and of its progress to that state of distinction and importance which, from the magnificence of its ruins, obtained for it, long after its decline, the appellation of the "Balbec" of Ireland, little is known. It appears to have been inhabited at a very early period by several of the chief nobility and gentry, and to have been a corporate town either by prescription or by charter, granted at a very early date, as its privileges as a borough are recited in a charter of Edw. III., by which that monarch granted to the provost and commonalty certain tolls and customs towards the repair of its fortifications. It was surrounded with a stone wall of great strength, fortified with mounds of earth, and having four gateway towers of lofty and imposing character, called respectively St. John's Gate, Water Gate, Ivy Gate, and Blosom's Gate, of which only the last is now remaining. In 1291, a Dominican monastery was founded to the east of the town, by Gilbert, son of John of Callan, Lord of Offaley, which was soon after amply endowed. A general chapter of the order was held in it in 1340, and it continued to flourish till the dissolution, when it was granted by Elizabeth to the corporation. The inhabitants obtained a grant of tolls for murage in 1482; and in consideration of the losses they had sustained in defending the town against the assaults of the enemy, they were again incorporated by Edw. IV., who also made the town one of the cities in which he established a royal mint. In 1483 it is enumerated among the principal towns in which a coin of Rich. III., then recently struck, was by Act of Parliament made current. During the wars in the reign of Elizabeth, the town was a principal military station of the English, and the garrison was frequently employed in the most important services. It was taken by surprise in 1568, by James Fitz-Maurice, who put the sovereign and several of the principal inhabitants to death, and burned the town, in order to prevent its occupation by the Lord-Deputy, who was marching against him from Buttevant. It was, however, restored by the encouragement of Sir Henry Sydney, Lord-Deputy, who left a garrison for its defence; and in 1572, Sir J. Perrot, the first Lord-President of Munster, compelled Fitz-Maurice to surrender, and to make his submission to the Queen's mercy in the church of St. Peter and St. Paul. In 1579, Sir W. Drury came hither with a force of 900 men, to oppose Sir John of Desmond with his Spanish and Irish forces, and issued a proclamation summoning all the nobility and gentry of Munster to repair to his standard. Sir W. Pelham, who succeeded him, also issued another proclamation to the same purpose; and Gerald, 16th Earl of Desmond, declining to obey, was declared a rebel unless he surrendered himself within 20 days, on failing to comply with which his vast estates, consisting of 570,000 plantation acres, were forfeited to the Crown, and the Earl and his Countess suffered the severest hardships, secreting themselves in the woods and mountains around the town. Sir Nicholas Malby, who succeeded to the command of the forces, leaving a garrison of 340 men here, pursued, with the remainder of his forces, the troops under Sir John of Desmond, whom he defeated at Manister-Nenagh; and in 1582 a detachment of the garrison attacked the Earl in his retreat at daybreak, slew his servants, carried off his provisions, and would have taken himself and his Countess prisoners, had they not escaped by concealing themselves in the river, immersed up to their chins behind one of its banks. In 1584, after the death of the Earl, Elizabeth granted the town a new charter, with some extensive tracts of land and various tolls and customs; empowering the inhabitants to elect a sovereign, to hold courts of record with jurisdiction not to exceed £20, to levy assessments for the repair of the fortifications, to grant licences for making spirituous liquors, and various other privileges, as ample as those of Kilkenny and Clonmel, with exemption from all taxes except those assessed by Parliament. In 1590, James Fitzgerald, who had assumed the title of Earl of Desmond, laid siege to the town, at the head of a formidable body of native Irish, but was compelled to retire by Sir Thomas Norris, Lord-President, assisted by the Earl of Ormonde; and in 1600, James, son of the late Earl, who had been educated in England, where he had been detained as a hostage, was sent over to Ireland by the English Government to destroy the popularity of the chieftain who had usurped the title. The young Earl was received with loud acclamations by the inhabitants of the surrounding country; but on his attending divine service at the Protestant church on the following day, these demonstrations of joy were changed into expressions of abhorrence and disgust. The garrison soon afterwards surprised and defeated the forces of James Fitzgerald, killed 120 of his party, and took all their arms, cattle, and horses. In 1642, the Irish army, under the command of Lord Mountgarret, Lord Purcell, and Garret Barry, took possession of the town, which in May of the following year was beseiged by Lord Inchiquin with a force of 700 men, but without success. The Earl of Castlehaven, Commander-in-Chief of the Irish army, in 1645 deposited all his military stores in this town, which afterwards fell into the hands of the Parliamentarians; and the fortifi-

cations were soon after dismantled by order of Cromwell; they were subsequently restored by order of the corporation, but were again destroyed by the Irish forces under the Duke of Berwick, in 1690.

The town is pleasingly situated on the western bank of a small stream called the Lubach, and its walls enclosed a spacious quadrilateral area, in which were several castellated mansions inhabited by noble and wealthy families. They were all built of hewn stone, and communicated by noble castellated gateways with the streets of the city, inhabited by the trading and commercial classes, of which only the foundations can now be traced. Considerable portions of the walls are still remaining; but of the ancient mansions and castles only two have been preserved, one belonging to the Earl of Buckinghamshire, and the other to the family of Godsall. In the centre of the present town is the noble castle with its gateway, through which the road, now diverted to the east, formerly passed, and in which the Earl of Castlehaven deposited his military stores; it is still in good preservation, and was before and subsequently used by the corporation, whose property it is, as an armoury and citadel. On the south-west is Blosom's gate, through which the Charleville road passes; it is in good preservation, and from it is continued the ancient wall, nearly perfect, for about a quarter of a mile. By charter of the 27th of Elizabeth, the corporation consists of a sovereign and an unlimited number of burgesses, of whom 12 form the council, assisted by a town-clerk, serjeant-at-mace, and other officers. The sovereign, who may appoint a deputy, is annually elected from the burgesses on the Monday after Michaelmas-day, by the council, and immediately on his election appoints 12 of the burgesses to be of the council for the ensuing year; and by this body all the corporate functions are performed. The sovereign is justice of the peace within the borough, and also one of the county magistrates, who have concurrent jurisdiction. The burgesses are elected by the council; there is no separate class of freemen distinct from them. The corporation continued to return two members to the Irish Parliament till the Union, when the borough was disfranchised, and the sum of £15,000, awarded as compensation, was paid to Richard Oliver, now Richard Oliver Gasgoigne, Esq. The church, dedicated to St. Peter and St. Paul, and formerly collegiate, is an ancient and spacious structure, built in various successive styles of English architecture, and consisting of a nave, aisles, and south transept, which have been roofless since 1567, when it was partly destroyed by Cromwell, and of a spacious and lofty choir, which is fitted up for Divine service. The nave is separated from the aisles by a series of massive square pillars, supporting lofty pointed arches, and the choir has an east window combining five lancet-shaped lights. In the aisles and transept are altar-tombs to the Fitzgeralds, Verdons, Healeys, Blakencys, and Coppingers; they are generally of the 17th century, and rudely sculptured; the figures are sunk, and the inscriptions in relief. In the choir is a handsome monument to the family of Coote, of Castle Coote. The exterior of the church is embattled, and at the west end of the north aisle is an ancient round tower, pierced with numerous windows, and differing greatly from others of that class. The remains of the Dominican monastery, situated on the banks of the Lubach, are extensive and beautifully picturesque; they consist of the lofty square central tower and the choir of the church, the former in a state of great dilapidation, and the latter tolerably perfect; the east window is of the lancet form, combining an arrangement of five lights, and the windows on the south side are enriched with delicate tracery; the choir is unrivalled for symmetry and elegance of design, and contains the broken tomb of the last of the White Knights, the representative of whom is the present Earl of Kingston; parts of the conventual buildings on the north are still tolerably entire. Close to the banks of the river are the ruins of the abbot's private residence, which after the Reformation was the residence of several of the sovereigns of the borough, and afterwards inhabited by the White Knights, in 1604. About half a mile to the north of the town are some ruins of ecclesiastical buildings, and the site of an ancient hospital for lepers is still called the Spital field. There are several traces of military encampments around the town, and great numbers of human bones have been discovered in the grounds of Mount Coote, which have been collected and interred near the spot where they were found, under a monument erected over them by the proprietor of the demesne. Kilmallock formerly gave the title of Viscount to a branch of the Sarsfield family, by whom it was forfeited in consequence of their adherence to Jas. II.

SONGS OF LOVE AND SPRING.*

(Words from the German of Geibel.)

I.—The Hero Spring.

The hero Spring for battle bound
Rides forth in martial manner,
A Royal rose on greenest ground
The blazon of his banner.

His sunbeam sword, fresh dipp'd in dew,
With tireless ardour flashes,
Till Winter's icy armour through
Victoriously it crashes.

And while from every hill and vale
Enraptured songs are ringing,
With herald note the nightingale
Above his helm is winging.

Then every heart at his appeal
Obeys a law immortal,
And though encased in triple steel
Must open wide its portal—

Must open wide in homage free,
And yield delighted duty
To her who hath Spring's heart in fee—
The queen of love and beauty.

II.—When Young Love Comes Knocking.

When with sap the vine's a-thrill,
Then expect the swallow.
When proud eyes with pity fill,
Love's not far to follow.

All the hearts of all the flowers
Love is now unlocking.
Nut-brown Maid, take heed to yours
When young Love comes knocking!

—Alfred Perceval Graves, in the "Westminster Gazette."

A GREAT ELECTRIC POWER PLANT.

A company has been organised in Los Angeles to build a large power plant on the banks of Feather River. This plant will be the largest electrical power development scheme yet undertaken or proposed in western America, and will rival that of the Niagara power plant. It will be located in Plumas County, Cal., from which point current will be transmitted to San Francisco, a distance of 180 miles. The water supply is to be obtained from the North Fork of Feather River, and impounded in two reservoirs of unusual size, one of which will cover 8,000 acres, and the other, in Butte Valley, a few miles distant, and some 250 feet lower, will cover about 2,000 acres. The watershed area tributary to these reservoirs is about 600 square miles, on which the most prominent elevation is Lawson's Peak, a region of perpetual snow. The average rainfall of that region for the last twenty years has been about 67 inches, and for the twenty years previous to that about 70 inches, with a range of from 33 inches as a minimum to 103 inches as a maximum. It is well known that Feather River is the largest tributary of the Sacramento, and only second to the Sacramento in discharge of any of the streams of the State, while the greater portion of the flow of the Feather comes from the watersheds tributary to the reservoir sites purchased by the new company. These reservoirs, when constructed, will be without parallel in the western half of the United States, and will be so designed as to equalise the flow of the stream available for power to about 1,500 cubic feet per second. From the main reservoir in Big Meadows it is proposed to construct a canal about 10 miles in length to the Butte Valley reservoir, the water being delivered into this reservoir, whence it will be carried along the edge of the canyon of Feather River by a series of tunnels for a distance of five miles to Mosquito Creek, where it will be given a vertical fall of 1,600 feet, producing a total of about 270,000 horse-power. The favourable character of the dam sites for these reservoirs and the absence of serious engineering obstacles on the conduits will render this enormous undertaking comparatively inexpensive and vastly cheaper per unit of power than any other power plant yet constructed in the West. It will enable the company to deliver the power, even at the long distance of transmission contemplated, in successful competition with other plants. When it is remembered that the total development of power at Niagara thus far has not exceeded 100,000 horse-power, a better conception of the magnitude of this new enterprise and its possibilities may be had. A corporation has been organised, to be known as the Western Power Company, with an authorised capital of 5,000,000 dollars, whose headquarters will be Los Angeles. The feasibility of transmitting electricity over 180 miles has been fully demonstrated. Only a short time ago the Bay Counties Power Company completed connections with San Francisco over lines of the Standard Electric Company, and is now transmitting power to that city via Oakland around the head of San Francisco Bay with a pressure of 40,000 volts over a distance of 223 miles.

PRINTING IN PERSIA.

Printing from type in Persia is not regarded with popularity. This country is at the present day entirely dependent upon lithography for the native production of books and journals—which are very rare. A short time ago a press with movable types was set up, and upon which a certain number of books was printed. The effort, however, met with no encouragement, and had to be abandoned. The unpopularity of type-printing in Persia is due to two principal causes: First, the straightness of the lines offends a Persian's artistic sense, and secondly, in printed books the character of the letters is entirely lost. The Persian reader prefers a well-written manuscript, and, failing this, he contents himself with a lithograph, which is usually the facsimile of the writing of some fairly good scribe.

DUBLIN'S OLD THEATRE ROYAL

(HAWKINS STREET).

HOW IT CAME TO BE BUILT.

SOME HISTORIC PERFORMANCES.

By H. CALCRAFT.

III.

Mr. Bunn retired at the end of three seasons, finding that the receipts would not enable him to meet his prescribed condition of £3,000 per annum rent. The theatre was then offered to Mr. Calcraft, at what appeared a tempting reduction, £2,000 annual payment; which sum was subsequently much modified; and, after an abortive attempt on the part of the lessee to purchase the entire interest in the property, finally resolved itself into a percentage on the receipts. Had it been on the profits, he would have made a more propitious bargain. Mr. Calcraft had no desire to grasp this truncheon of command. "It lay in his way," like Hotspur's insurrection, according to Falstaff, and circumstances induced him to pick it up. His views had pointed in a different direction; and far happier would it have been for himself and those belonging to him, had they ripened into reality. When the Vice-Chancellor decided the Covent Garden litigation in favour of Mr. Harris, he made his arrangement to place himself once more at the head of that important establishment. His intentions were to appoint Mr. Calcraft his acting manager and representative, with a large fixed salary, and other contingent advantages. But Lord Brougham reversed the decree; Mr. Harris retired for ever into the privacy of domestic life, and all these stately visions "vanished into thin air."

The public voice in general predicted success to the new lessee. There was a lull in politics, and trade had begun to revive. He entered on his task under very promising auspices. The Duke of Northumberland, the retiring Lord Lieutenant, sent him, with a complimentary letter, a handsome present, as a token of good will. His successor, the Marquis of Anglesey, was in the height of his popularity, just commencing his second Viceroyalty, and known to be a liberal encourager of the drama. Many abuses and incumbrances had been progressively swept away, although there still remained in that line, as David Gam reported to the French army at Agincourt, "enough to spare." His rent was low beyond former precedent; six years' experience had given him ample knowledge of his ground; he had diligently studied the tactics of his predecessors; his footing in society was established; he was supposed to be universally popular, and the press were enthusiastic in his favour. That powerful engine continued to support him steadily and effectively during a long series of years, with the occasional exception of one or two growlers of the nil admirari school—individuals who pass through life without an interval of enjoyment, more constitutionally lugubrious and discontented than Heraclitus, the crying philosopher, or than even Agelastus, grandsire of the rich Roman Crassus, of whom it is recorded by Cicero and Pliny, that he only laughed once in his life, and that upon seeing an ass eat thistles. An honest expression of independent opinion in the public journals is an invaluable auxiliary, and the more so when not influenced (as sometimes occurs) by undue obsequiousness on the one side, or blinding partiality on the other.

The resources of the manager depended much on success. His available capital was chiefly invested in health and industry—an active body with a vigilant mind; while his realised estate closely resembled that of Joseph Scaliger, which, according to his own account, all lay under his hat. But he went to work in downright earnest, and pushed aside many difficulties. Demosthenes pronounced that the three components of oratory were, action! action!! action!!! Montecuculi, the renowned opponent of Turenne, paraphrased this theory in application to war:—"Pour faire la guerre avec succes, il faut trois choses, L'Argent! L'Argent!! L'Argent!!! To which may be added, in reference to theatrical speculations, that three very essentials are, Capital! Capital!! Capital!!! It being always understood that, whether in battle or business, the sinews must be directed by ability and economy.

On opening nights, final retirements, and other incidental occasions, it has usually been considered popular and graceful to court the Muses, and to propitiate the public in measured hexameters. When Garrick left the stage he broke through this conventional formula. "I, too," said he to his last admiring auditory, "had meditated a poetical leave-taking, and turned my thoughts that way; but I found myself as incapable then of writing, as I should now be of uttering prepared sentences. The jingle of rhyme and the language of fiction would but ill suit my present feelings." It has often been asserted by disparaging cavillers, that the actor's art is entirely mechanical; that he is a mere machine—a mirror which reflects on the surface, without personal impression; and that the long habit of simulating character has made him a shifting Proteus, devoid of sensibility. According to these Zoili, he either understands not, or disregards the injunction of Horace:—

'Sivis me flere, dolendum est
Primum ipsi tibi: tunc tua me infortunia laedent."

If you wish me to weep for your misfortunes, you must begin by shedding tears yourself. It is recorded of Barry, in Lear, that his natural emotions so overpowered him that he became inarticulate, while Garrick, by only acting the passion of grief, retained all his power, and produced a superior effect. "You and your friend Murphy, sir," said he to Dr. Johnson, "talk so loud in the entrances, that you disturb my tragedy feelings." "Pooh, pooh, David," retorted Lexiphanes, "punch has no feelings!" A smart repartee is an irresistible temptation, and wit must have its fling; but be this as it may, it is a trying moment of practical life, to stand for the last time before an array of faces which have never turned towards you but with favour and encouragement, and to sever a tie which may have subsisted for a quarter of a century. It is also a severe test of equanimity to announce for the first time a decisive undertaking to the public, through whose agency alone you are to find success or ruin. Mr. Calcraft, on his appearance in his new capacity, following the example of responsible authorities, eschewel poetry, and addressed a crowded house in unpretending prose, and in nearly the following terms:—

Ladies and Gentlemen—After having for several successive seasons appeared before you as the representative of others, I now present myself in the somewhat novel character of my own ambassador. The situation is peculiar, but not without precedent. The Emperor Majorian personated his own envoy at the Court of the Vandal Monarch Genseric. But he stood alone amidst a host of enemies, while I on every side am surrounded by friends. The occasion on which I now come forward is the most important event of my life, and involves in its consequences all my future fortunes.

During the six years that have passed, since I first had the honour of appearing before a Dublin audience, the theatre has witnessed many changes, and gone through many vicissitudes. Before I speak of myself, permit me to do justice to the managers who have preceded me. Great exertions have been made by them, great expenses have been incurred, and great losses sustained. Each has displayed ample talent, zeal, and liberality; but the uniform conclusion has been failure and disappointment. Why, then, it may be asked, should I imagine myself capable of steering a vessel which has wandered from its course in far abler hands? I answer, the human mind is naturally sanguine in the vigour of life, and more disposed to surmount difficulties than to calculate their extent. The retrospect presents but little to cheer a new adventurer, and may argue presumption in him who embarks in so perilous and uncompromising a speculation. Let me emphatically disclaim all such feeling. Divested equally of arrogance, and despair, I rest my hopes of the result on better fortunes and improving times. Should I be enabled, through your liberal support, to place the national Theatre of Ireland on the proud pedestal of pre-eminence on which it ought to stand, I trust I may fairly then indulge in an honourable feeling of pride, in thinking I have succeeded where superior pretensions have failed, and that I have been permitted to conquer obstacles which proved too formidable for those who had hitherto grappled with them. Whether it is reserved for me to bend this bow of Ulysses, time only can determine; but to effect this object, I am aware I cannot slumber on a bed of roses, or expect to advance in an even progress on a well-trimmed lawn, without encountering a few thorns and brambles in my path. At every hazard, "I have screwed my courage to the sticking place;" my all is on the issue, and I will stand or fall, boldly and alone.

During the recess I have endeavoured to form a company, full and efficient in every department, comprising many artists who have long filled distinguished situations in leading theatres, and whose reputation will be confirmed, if sanctioned by your approval. I have also taken advantage of every moment of time, which my anxiety to commence the season permitted, to place the theatre in a state fitted for your reception. We have not yet been able to complete our preparations, but trust to do so in a few days, and to omit nothing that can contribute either to elegance or convenience. To the gentlemen of the upper regions—(here, loud cheers and laughter proceeded from the upper gallery, with cries of "Oh, boys, he's flattering us," "he has kissed the Blarney Stone," etc.)—I must now beg leave to address myself particularly. They will find that in the alterations they have not been forgotten, and that now for the first time they can both see and hear in full comfort to themselves. Gentlemen, your territories have been enlarged, and rendered much more com-

modious, and I am confident as there no longer exists either a necessity or a temptation, you will cease to feel any desire to encroach on the rights and privileges of the neighbouring potentates—(loud cheers and laughter from the gods). You will, I have no doubt, long enjoy in peace the otium cum dignitate you are thus provided with, and in which, during many a tumultuous session, I have often wished you were fully installed.*

The address terminated in the usual manner, expressing something about the deepest respect for public opinion, and a lively sense of favours to come. Mr. Calcraft was listened to with the most earnest attention, and frequently interrupted by loud applause. Let not the writer be accused or suspected of egotism for perpetuating these details. They have become historical documents, connecting a series of events, each growing out of the other, and telling a tale which would be imperfect without them.

It had often been asserted that a prominent cause of former failures was to be found in the system of exotic stars. The press loudly re-echoed this opinion, to which the new lessee yielded, backed, as it was, in some degree, by his own judgment, and the advice of counsellors whose name was legion. Accordingly, having expended at least one thousand pounds on repairs and decorations, he determined to stake his first season on the efficacy of a stock company, which included the following names:—Messrs. Vandenhoff, Sapio, Browne, Johnson, Rees, Calcraft, Montague Stanley, H. Cooke, King, Mathews, Gattie, Cunningham, H. Bedford, Maeder, Brough, Barry, Hamerton, Bland, W. Bennett, Stothard, Attwood, Coveney, Barnett, Duff, Shean; Mesdames W. West, H. Hughes, Pearce, Bland; Misses Betts, Barry, F. H. Kelly, Coveney, H. Eyre, Hamilton, Chalmers, Garbois, Milton, A. Crawford, etc., etc. Many of these performers before and since have occupied important positions with success in the principal London theatres. Such a company could not be collected together now, simply because they are not in existence. The highest war bounty ever offered would fail to enlist a similar corps dramatique, although heralded by royal proclamation, and accompanied by a flourish of more double drums and Jerico trumpets than Julien ever attempted to harmonise. These artists had been trained in the good old legitimate school, and had gone through a regular apprenticeship; whereas the young ladies and gentlemen, theatrical neophites of the present day, despise all schools, are much too self-dependent to profit by example, and expect to reach maturity all improviso, without study or training, by some Cadmean process of sudden creation. Vanity and self-approbation are besetting sins of the flesh in general, and, as it would appear, of theatrical flesh in particular. These feelings are fostered, fed, and strengthened by applause, and are weaknesses rather than positive crimes, hurtful to the proprietors, but scarcely detrimental to the general weal. Neither are they without the colour of high authority, for the wise king says, "There is nothing better than that a man should rejoice in his own works." Vanity is not only tolerably harmless, but also very comfortable. As Sancho Panza says of sleep, "It wraps one all round like a cloak." Lord Byron, who had been for several seasons on the Drury lane Committee of Management, accuses actors of hating each other with an intensity of detestation found only on the stage. The charge of the noble satirist is exaggerated. Professional jealousies have long been proverbial, but they are not more keenly exemplified in the children of Thespis than in other votaries of Apollo and Euterpe, in the followers of Æsculapius, and the disciples of Themis. While many voices are actively raised in the disparagement of actors, it ought in justice to be remembered as a well-known characteristic, that they are ever ready to assist their brethren in distress, and have hands "open as day for melting charity."

On winding up the balance-sheet of 1830-1, the ledger, that dumb but unanswerable evidence, showed a loss of £2,500! It was thus proved on full and fair experiment, that the stock company system was not the real one. This first season, which, from unusual circumstances, began much later than usual, comprised one hundred and eighty acting nights, during which thirty-three novelties were produced, many of them with all the scenery and appointments entirely new. The Lord Lieutenant gave three state commands, and four publicly announced patronages, which produced seven crowded houses. The Committee of the Musical Festival paid £530 for the use of the theatre, not being able to obtain either of the cathedrals, or any other building sufficiently large for their purpose; and Paginini, when the town was empty, received nearly £1200 for five concerts. During the winter an unlooked for incident darkened the horizon, which until then had been tolerably clear. On the first of February there commenced a heavy fall of snow, such as had not been witnessed in Ireland since the year 1814. The theatre was closed in consequence for four days, and the Lord Lieutenant's first state visit postponed. The loss sustained amounted to several hundred pounds, and turned the scale of the season, which never recovered itself after this misfortune. The attraction of the new opera of "Cinderella" was checked in the height of its popularity, and a general damp thrown on the business. During these four days no carriages could pass the streets; here and there a solitary pedestrian glided noiselessly along, and Dublin resembled a city of the dead. All was silence and suspended animation. Vast consternation was excited among the mecantile community, and bills were protested to an immense amount, owing to the non-arrival of the country mails with the expected remittances. The snow was not entirely removed for a fortnight.

Command nights in Dublin have always been, more or less, exhibitions of political feeling. An inveterate mistake, equally injurious to the theatre and to society, but one which neither argument nor coercion has yet been able to reform. Nothing can mitigate the rancour of party politics—

"Naturan expellas furca, tamen usque recurrit."

Overheated zealots seldom pause to reflect on the mischief they do to others, without any advantage to themselves. On the first command night of Lord Anglesey, the manager was assured by many anonymous and avowed warnings that his theatre would be torn down, and a riot take place, compared to which the "dog" and "bottle" rows, of historic notoriety, would sink into insignificance. Nobody pretended to assign a cause, or say why this should be, as all parties admitted that the noble Viceroy was universally and deservedly popular. But the riot was certain. Among other suggestions, the following note was anxiously penned by a celebrated barrister, dramatist, and political agitator, who was much interested in the result:—

9 Leinster street, Feb. 8th, 1831.

My Dear Sir.—I saw Lord Anglesey yesterday. He is evidently anxious to have a good reception to-morrow night. You should send plenty of orders. I think it will be of great importance to fill the upper gallery before the house opens. It is of great moment to your interests that Lord Anglesey should go often to the theatre. Therefore as a friend, I advise you to omit nothing in order to have him warmly welcomed, by which he will be much pleased. The upper gallery should be chiefly attended to. The note is written with good cause for doing so. I dread some disturbance which would greatly prejurice the interests of the stage. Orders! orders! orders!

Yours most truly,
RICHARD SHEIL.

The manager did not follow the course pointed out to him, which would have materially diminished his certain receipts, without counteracting the uncertain anger. As the event proved, the danger was quite imaginary. But he took his own precautions after a different plan, and all went off in what the London play bills used usually designate, "a blaze of triumph." It has been often and truly said, a theatre is a kingdom in epitome. Here is an instance to prove how much dramatic affairs are sometimes mixed up with the complex machinery of government. On the Continent the theatres are supported by public grants, and are employed as state engines to occupy the minds of the people with amusement, and keep them from brooding over mischievous combinations. Our legislators sneer and scoff when anything of this kind is suggested, and treat the whole subject with contempt. In Ireland the intended "ruction" of 1848 was, undoubtedly, kept down by the energetic measures of the Executive, and the loyalty of the well-disposed; but the engagement of Jenny Lind made all the world forget political agitation for the moment, and produced a very wholesome, well-timed, and social reaction. Superficial thinkers may laugh at the assumed importance of the Drama in serious affairs, but they would do well to study the question deeply before they dismiss it with a shrug of derision.

(To be continued.)

*To render this passage intelligible to the unitiated reader, it is necessary to explain that the Dublin galleries did not formerly, as now, run round the entire audience portion of the theatre, but were hemmed in on each side by upper boxes and slips called, Hibernice, lattices. On all crowded nights, particularly benefits, when more were admitted than the legitimate number, there arose a deafening cry of "Open the lattices." This confounded the performers, greatly annoyed the box and pit company, and established a perpetual casus belli between the gods and the manager.

THE RIVER AND THE MAIDEN.

To the river in the forest, shadowed from the
noonday heat,
Came a solitary maiden, there to rest and bathe
her feet;
And, while lingering, idly looking downward
into the blue stream,
Lo! the sleepy woods around her, seemed to
mutter in their dream—

"Linger, linger, gentle maiden; see'st thou not
how peacefully,
In the bosom of the river rests the shadow of
the sky;
Thou would'st break its glassy surface into ripples
spreading wide;
And the peaceful heaven no longer see reflected
in the tide."

With a tear upon her eyelash, looking round, the
maiden spake—
"Grieve not, oh! thou hidden murmur, grieve not
for the river's sake;
For, if thine appeal unheeding, I should lave my
feet therein,
Soon that shadow would return there, calm as it
had ever been!

"Yet I would that thou had'st whispered thus
into my lover's ear,
When this way we came together in the spring
time of the year:
'Trouble not the maiden's soul, for only once to
it is given,
With pure, unruffled course to flow, and take a
calm reflex of heaven!'"

OUR WEEKLY STORY

THE VIOLIN MAKER'S ADVENTURE.

BY FRANKLIN WELLES CALKINS.

Following a fancy that he had from boyhood, my friend, Delos James, became a violin-maker. He had excellent opportunities in Chicago, where he still lives, to master the intricacies of his art. At the end of five years he was able to sell his instruments. He then began to go far afield in search of woods—clear maples for the backs and sides, and the "steeliest" of seasoned spruce and pine for the tops.

Woods for making violins are for the most part imported from Germany and Italy. Delos James desired not only to avoid the expense of importation, but to widen his range of selection. He knew that the native woods of the United States are unequalled in quality and variety. He cherished the patriotic design of making a perfect violin wholly of American products. In this ambition he has of late attained a marked success.

About three years ago his violins began to be bought by concert players of note. Their resonance and excellent tonal quality, their beauty of outline, exquisite grain and varnish—of a creamy yellow—have given their maker an enviable reputation. The spruce of which their tops is made is American timber, of a quality unsurpassed at any time in the history of violin-making. Indeed, the wood should be perfect, for it cost him time, money, and great personal danger.

"I was despairing of finding any wood at home fit for fiddle-tops," he says, "when I saw certain specimens of yellow spruce in the Colorado exhibit at the World's Fair. Examination convinced me that this wood, if found rightly seasoned, would be what I desired.

"October found me searching the mountains of Colorado for Picea Engelmanni. I tested many logs, old and new, in buildings and out. I found some fairly good wood, but it had not just the grain and fibre I wanted. In November I started for Montana, where lumbermen told me there were better specimens of this spruce. On a branch railroad in Idaho I exchanged confidence with a lumberman whom I met on the train.

"'Seasoned spruce, you say, is what you're after?' this man said.

"'Yes.'

"He slapped me heavily on the knee. 'Stranger,' he asked, impressively, 'yaller spruce beaver-girdled, standin' in a dry valley for a hundred years?'

"'Yes, yes,' I replied, much interested.

"He gave my knee another stinging slap. 'Get off at the next station—coal station,' said he. 'Get Bill Lamhorn to carry you over to Gray's Flats. Bill used to run the stage over there. He's at Pay Pocket now and got a span of mules there. Bill 'll be sure 'nough tickled to carry you 'cross the mountains and fetch back your logs.'

"So I left the train at Pay Pocket, a mining hamlet among great, barren, glaring piles of mountains, covered with nearly a foot of new snow. Bill Lamhorn proved to be a big, hulking, good-natured fellow. The trip to Gray's Flats, twenty-five miles over the mountains, was easily arranged.

"Gray's Flats was a struggling log town, built originally in the midst of considerable placer-mines, but now, since the working out of pay dirt, degenerated into that anomalous aggregation called a 'cow town.' We put up at an old 'stage-ranch'—a big log building, with a heavy partition running lengthwise through the centre, and a dining-room and bunk-room of huge proportions. 'Jane Addles, Her Hotel,' read the sign.

"Jane told me that the house had been built ''way back in '59' by a Missourian named Jerry Harris, and that her brother and partner, Sam, lived on their horse-ranch seven miles below. I registered my name in the book she kept at her 'hotel.' During my three days' stay I learned little of the other inhabitants. Bill and I were away all day in the woods.

"We found the spruce abundant along the spring-fed streams of Gray's Fork, and here and there, close to some dilapidated beaver-dam, were girdled trees of long standing; but like most forest-killed trees, many of them were weather-beaten and damaged. However, with my rifle I killed a fine bull elk with noble antlers, and felt repaid for my trip.

"On our third evening at the stage-ranch we had a hearty supper of venison. Leaning back afterwards against the partition wall, I idly whittled for a toothpick, a splinter from the nearest peeled log at hand. The quality of this splinter attracted my attention. I had supposed the house was built of the abundant pine near at hand; but here was Picea Engelmanni seasoned for forty years! I went deeper with my knife, and shouted, 'Eureka!' I had discovered what I wanted!

"Sending for Mrs. Addles, I offered her twenty-five dollars for the log. The old woman saw that a board would serve perfectly in place of the log, and took my offer eagerly. I obtained two perfect sticks, each sixteen feet long, resin-seasoned and of a beautiful whalebone fibre. A splinter a foot long from either stick could be bent until the ends touched, and would spring back again with a snap good to hear.

"When Bill and I loaded my timber and trappings upon the sled next morning, the only person to bid us good-bye was Jack, the 'stable boss' and chore-boy. I gave him two silver dollars and a jack-knife for caring for our team and helping bring in the carcass of the elk. This Madam Addles readily accepted in payment of my board.

"When Bill and I had gone about half the way back over the stage-road, the stable-boy overtook us on his bronco, which was covered with foam. We were both walking beside the sled, and we halted as he pulled up alongside. The boy's face was flushed with excitement.

"'Mister,' he gasped, 'if you know a blind trail down these mountains, you'd better be hittin' it hard! They're after you!'

"'Who's after me?' I asked, much astonished.

"'W'y, it's this a-way, mister,' said he, earnestly. 'Ol' man Addles is come up from the hoss-ranch, an' he 'lows sure 'nough there's sculduggery in this log business. He says ol' man Harris, that built the stage-ranch, had a big roll o' money hid up somewhere when he wuz took crazy an' carried back to Missouri. An' now the ol' man an' Jane 'lows that you're a brother o' Jesse James, an' you've found out frum ol' Harris where his money wus hid. They says the roll wus in them logs, or mebbe is now, an' they're goin' to have it. They say it wus like your impudence to write your own name in the book! Ol' Jane wuz helpin' to load Winchester shells when I took my saddle—'lowin' that I wanted to jine the fracas—an' lit up the creek after my pony. There's a lot of 'em comin', mister; al'ays is when there's shootin' goin' on, an' they'll git you if you don't vamose sudden! I don't like that ranch, nohow, an' I'm goin' to Montany, over in Gallatin, where I belong. So long an' good luck to you!' and before I could catch breath in my astonishment, he put spurs to his pony and clattered away.

"Then I looked at Bill. He stood, reins in hand, regarding me with a fishlike stare. I saw at once that he was a coward at heart; fear and suspicion mingled in the muddy depths of his eyes. He would go with the crowd.

"I knew my case was desperate. Such men as I had seen at Gray's Flats were sure to shoot at sight when they went after thiefs, real or supposed. At the least, they would split my precious logs to kindling-wood.

"Then I heard the whistle of a locomotive in a canyon behind us. Instantly my decision was made. A railroad station was on the mountain below. I would shoot my logs down there—ride with them if possible; if not, follow as best I could.

"Suddenly Bill spoke: 'Reckon you'd better cut dust young feller.'

"I looked at him sharply; his eyes wavered. 'Bill,' I said, 'we'll both cut dust—snow dust, straight down off this mountain. Turn your mules off the road there and down with you!'

"'W'y,' said he. 'You couldn't go.'

"'But we will go!' I declared; and I pulled my rifle from its holster among my trappings.

'Without another word Bill obeyed, and we started down the mountain. We were upon a bald ridge, a huge, barren, sugar-loaf pile. The surface was tolerably smooth, and here and there a tuft of sage-bush plucking through the snow. The descent soon became steep—twenty-three degrees at least—and its seemingly endless length melted into shadowy depths below. It was as if we were letting ourselves down over the edge of a cloud.

"The mules braced themselves at every step. Bill held the reins stiffly, while I walked behind, holding the rope which bound the logs. We had advanced perhaps eighty rods when one of the mules slipped, fell in a heap, turned half-around, in its loose harness, and slid in front of the runners until the piled-up snow blocked its progress. Bill plied the whip smartly until I bade him stop. I knew nothing could budge the creature.

"The rumble of the distant train now came to my ears like the mutter of a storm; and then, as I scanned the mountain-front below, Bill spoke again.

"'They're a-comin', boss!' he said, pointing eastward with his whip. I looked and saw, a mile away, nine galloping horsemen outlined distinctly against the snow on the side of the ridge. They would catch us in twenty minutes.

"'Quick, Bill!' I commanded, 'take your axe and cut the sled-tongue close to the roller. Don't hit the mule!'

"While he obeyed, I drew from between the logs a couple of stout ironwood poles which he had cut for hand-spike timber. When his axe had finished work, I handed him a couple of ten-dollar bills, to pay for his time and his sled. He understood, pocketed the money, seized one of the poles and began working the sled away from the mule.

"I took a firm seat, with my legs hugging the logs, at the rear end of the sled, rifle across my knees and ironwood pole in hand. And then, giving my runners a final shove, Bill gave me a look of positive admiration.

"'Good-bye, boss,' he said, in a friendly tone. Death threatened behind and before, and I was glad of a kindly word, even from a man who thought me a thief.

"For a half-mile the mountain had a tolerably even slope. I waved my hand at Bill, and saw beyond him, turning from the stage-road, my pursuers, almost within gunshot.

"I soon left them far behind. My speed,

great from the start, must quickly have exceeded that of an express-train. My sled responded to the steering-pole well enough to keep it from sluing. It ran erratically when the surface was uneven, like an arrow when the descent was smooth.

"My flight quickly became breathless, tremendous, with a pelting shower of snow-dust and a fierce jerk and grind of runners upon bare spots.

"I must have dropped down the mountain a half mile in thirty seconds or less, and was going at lightning speed, when suddenly my sled slued, and I dropped downwards as if from a tremendous height. I had a sensation of extreme lightness—my brain grew dizzy, my hold upon the logs suddenly weakened. I was blown free by the very wind of my descent, and tumbled heels over head until I finally brought up, sprawled at full length upon my back, battered, dizzy and faint—half-dead, in fact.

"When I staggered to my feet I found myself upon the bank of a deep railway cut—the bank piled against the foot of an almost perpendicular height above. How I had escaped death and broken bones heaven only knows; I cannot tell.

"One of my logs lay across the railroad track; the other stood nearly on end in the first ditch. A shattered sled-runner lay against the ends of the ties. My valise had struck the end of the bank and burst. My gun and the elk's head were nowhere in sight. I never recovered them.

"Then, hearing the heavy rumble of a train I scrambled down into the cut and reached my log as the locomotive appeared around a curve two hundred yards away. Bruised and sore as I was, I could have rolled the log off the rails, but I concluded to take no chances in stopping the train. I waved my arms.

"It was a freight-train, toiling slowly upgrade, and the engine was easily stopped. The engineer blew signals, and the conductor and two brakemen came forward.

"'Don't you know any better,' the conductor asked, severely, 'than to try to bring wood down this mountain Why didn't you kick that log off the track? We've got to run back more than a mile now to get a start!'

"And then the hatless, tumbled individual before him told his story as quickly and succintly as possible. He was a reasonable man, and saw that I was neither a bandit nor a madman.

"'I can believe you,' he said. 'There are some funny folks on these mountains—funny with a gun. We'll take you and your logs on, and fool 'em.' He motioned to his brakesmen to lend a hand.

"The logs were quickly thrown into an empty coal-car. As I mounted the caboose steps with the conductor he turned his eyes towards the top of the height. 'See,' he said, 'yonder are some of your friends now—hot as a red waggon, I guess. Lucky you fell off the mountain just as you did!'

"I looked and saw three men standing upon a projecting point, gesticulating violently. Evidently they had arrived where they were in time to see, or guess, what was going on. We left them gesticulating, and ran backwards at a rattling pace to where the track was level.

"I flung myself upon the cushions of one of the long bench seats in the caboose. My bones had been badly shaken, and I needed rest. As we ground slowly up a steep mountain grade I told the conductor all about my trip to Gray's Flats. While we were talking a brakesman rushed in at the door.

"'Say,' he shouted, 'those fellows are after us, tearing along a ridge ahead They'll catch us in the gap, sure!'

"The conductor ran to the rear platform and down upon the steps. I followed and leaned out above his head, holding to the railing. We were in time to see the men, ten of them—Bill Lamhorn with his mules doubtless of the number—riding furiously on the slope of a ridge about a mile in advance. The conductor snatched off his cap and signalled to the engineer. The engineer gave a feeble jerk and our speed quickened slightly.

"'He's doing all he can,' declared the conductor, 'and if he doesn't keep her wide open when we reach down-grade, those fellows 'll ditch this train in the gap!'

"'They wouldn't dare!' I said, in astonishment.

"'Dare!' he repeated. 'Men from those mountains hold up trains and stages as a business, and those fellows think you've robbed them, and probably that the conductor of this train is in the deal with you now.'

'We went into the car and sat down. In a few minutes we reached down-grade, and then we began to go.

"The engineer must, indeed, have 'held her wide open.'

"Both brakemen now came inside the caboose. Going to a storage room in the rear, they hurriedly dragged out several thick mattresses and some blankets and flung them upon the floor.

"Do as you see us do; there'll be shooting if we aint ditched!' yelled the conductor. I nodded. We were now going like the wind. The caboose jumped and bounded as we struck the joints of rails or rough spots on the track. And still the train ran faster and faster, rocking and swaying so that we had to cling to our seats.

"We simply thundered down the mountain, we tore through cuts and canyons, crashed over bridges, ground, jumped, swung, and swayed. And high above all the uproar sounded a shrill, unearthly whistle—a continuous, sibilant scream of defiance.

"Few men get such two rides as those I had on that adventurous day. Just as I believed we were going off the track to finish in a grand wreck of kindling wood and iron, the train shot out into the open space and upon level track, and ran more evenly.

"'Down with you now!' shouted the conductor. My companions flung themselves upon their blankets and pulled the heavy seat cushions down to shield their sides. I did as they did, but none too soon; for mingling with the roar of the train and the scream of its whistle came sounds like the popping of corn in a covered kettle. Then came a crash of glass and a shower of splinters.

"It was all over in a breath. The whistle ended its scream in a series of triumphant toots. The train slackened its speed. We scrambled to our feet unhurt. Fourteen bullets had gone through the car. The men had been near, their guns almost touched us, and their bullets had ranged upwards over the seats.

"Will you try to have those men arrested for the damage done to your car?' I asked the conductor.

"'No,' said he; 'couldn't identify 'em. Wish they'd shoot the top off this old caboose,' he added, smiling cheerfully. 'Maybe the company would send out a decent car.'

"I rode with him into Montana and brought my timber home over the Northern Pacific. The wood is worth all it cost, but I shouldn't care to repeat the experience."

NOTES AND QUERIES.

UNIQUE BOOKS UNKNOWN TO BIBLIOGRAPHERS.

TO THE EDITOR DUBLIN PENNY JOURNAL.

Dear Sir.—The "English Literary Bookseller" for last couple of years is becoming quite an interesting and picturesque character.

"The Irish Bookseller" is not yet, in this respect, to the front, though he has had for many years a good hunting-ground for unique copies of books unknown to Bibliographers. I shall give a sample or two for your next issue, to be followed by five or six others "pour encourager les autres."

(1) "The Compleat Confectioner; or, the Whole Art of Confectionery Made Plain and Easy." By H(annah) Glasse, author of "Art of Cookery." Dublin: John Exshaw, 1742.

Mrs. Glasse, up to the publication of this letter, seemed a literary myth, her name being put in square brackets, and with note of interrogation, and described by Mr. W. Davenport Adams, in his "Dictionary of Literature" ("Eng. Authors and Their Works," Cassell), as a "Habit-maker," "a real or fictitious author," etc., and her works were attributed to Sir John Hill, Physician.

Though her "Art of Cookery" was a well-known book in Dublin in 1742, an Edition of it published in London in 1747 (folio) was and is called the First Edition, and sells for £30 or £40

Mrs. Glasse, in her dedication of this work "To the Housekeepers of Great Britain and Ireland," says: 'I have said nothing on Cookery, having already written fully on that subject in a work entitled 'The Art of Cookery Made Plain and Easy,' which, together with this book, I flatter myself will be sufficient to compleat the young and inexperienced ladies in every branch of housekeeping. I am, with the greatest respect, ladies, your most obedient humble servant—H. Glasse." (1742).

This clever lady, who made "habits" of "taste" and "skill" more durable than brass, will probably yet figure among our "Irish Worthies." Her mythical character is now dissipated, and her nationality being most probably Irish, it behoves the leisured and studious to find her a pedigree.

JAMES HAYES (Bookseller).

Ennis.

RIGHT HON. HUMPHREY FRENCH, M.P., LORD MAYOR OF DUBLIN.

TO THE EDITOR DUBLIN PENNY JOURNAL.

Can any of your readers give any particulars of the family, etc., of Humphrey French, who was Lord Mayor of Dublin in 1732, and M.P. for the city in 1733. His portrait is in the National Gallery.

E. I. F.

THE GIRL IN GREY.

An old man seared by age, with hoary locks,
With blinking, bloodshot eyes and halting gait,
Shading his straining gaze with palsied hand,
Stood by the porch to wait.

She whom he waited came not forth, so he
Dragging his weary limbs to batter'd door,
Enter'd the threshold of that stately pile
Whence she would come no more.

"Where art thou?" came in accents torn with doubt
That echo answered mockingly. And then
Throughout the empty desolated house
Deep silence reigned again.

The bow'd and broken figure on the stair
Made pause just where a dainty foot print lay,
Then stoop'd to kiss the spot whereon had stood
Erstwhile the Girl in Grey.

Long, long ago, for one brief fleeting pulse
Of throbbing day, upon that hallow'd place,
With wildly-beating heart as youth he stood
Entranc'd by her fair face.

Her perfumed breath and tresses swept his cheek,
Now wither'd by the cruel blast of Time;
Her dark and soulful eyes were raised to his
In tender glance sublime.

Now met him but the echo of that past
Eternal-buried memorable day,
And ne'er again, except in dreams, he saw
The lovely Girl in Grey.

—H.E.G., in the "St. James's Gazette."

AN IRISH WIZARD OF STATISTICS.

THE LATE MICHAEL G. MULHALL.

By W. J. CROKE, LL.D.

Michael G. Mulhall was the third son of Thos. Mulhall, a lawyer of St. Stephen's Green, Dublin. After his studies at the Irish College in Rome, he withdrew to South America, where he published the first English book known to have been printed in that continent and a handbook of the River Plate which went through five editions. In 1861 he founded the Buenos Ayres Standard, the first English daily newspaper printed in South America. He published the following works on statistics: "The Progress of the World," 1880; "The Balance Sheet of the World," 1882; "The Dictionary of Statistics," 1884, republished in 1887, in 1892, and again in 1899; "The Wealth and Industries of Nations," 1896; "National Progress in the Queen's Reign," published in 1887, and reissued on the occasion of the Diamond Jubilee of her Gracious Majesty in 1897.

From 1880 onward he was a constant contributor to the North American Review and to the Contemporary Review, and to Section F of the British Association. In 1884 he was elected to membership in the council of the association. He also attended the Anglo-American Scientific Congress which was held in the same year at Philadelphia.

I have copied these data, not from public sources of information, but from certain manuscript notes of my own, for Mr. Mulhall, who was always my good and warm friend, was once my victim; he submitted to a tiresome and curious questioning, and answered while I wrote out page after page of his recollections.

These pages, which I now consult and use for the first time, were headed with a different title, but they illustrate a very important thesis. Mr. Mulhall, they show, was a self-made man: one of the greatest of the kind, but withal one of the most typical; a student who rough-hewed out of journalism the means wherewith to satisfy those necessities of his nature by which he was to become "the wizard of statistics." Stumbling blocks proved stepping stones to a giant of his skill and courage. From being an ecclesiastical student at the Irish College in Rome, he passed to be a journalist in South America.

That, indeed, it was not merely in despite of his journalism that he eventually attained to pre-eminence in the statistical science, but on account of it, he avowed in this interview: "Being for twenty-five years editor of a daily paper, the first English daily paper in South America, the Buenos Ayres Standard, I felt the want of a dictionary of statistics. So giving up the paper, I set to work. The newspapers generally seem to appreciate the usefulness of the work. I made it my aim to produce a statistical dictionary where you could find everything. It was the only one in the language. It occupied me for nine years."

"That's your international work?"

"Yes, but all my works are international. Such also was 'The Wealth and Industries of Nations' which Longmans brought out in '96."

"Have you a machine for calculating with?" I asked, thinking of the valuable statistical machine invented by Senator Bodio, of Rome.

"I've no machine. I do all my sums myself. (He had the most prodigious memory and lightning facility in his mathematical exercitations.) Yes, it's great labour. Sometimes 500 sums in the rule of three have to be done for a single page of a book. The labour is much greater than the general public imagines. One may spend a week over a page. Outside of my books I've only written in the Contemporary and the North American. Each article averages ten pages. No such production ever takes less than three weeks of steady work at ten hours a day."

He was, however, well paid for his work in the periodicals, and last year he received the offer of a thousand pounds sterling for a review of a new work.

"And how do you set about your work?"

"I first get an idea into my head, and then I work everything out by comparison. Statistics, Jevons says, are chiefly useful for comparison. If not compared, with past or present data, they are merely piles of figures."

"But you cannot compare unequal things"

"Well, now, for instance. My test of crime is not the number of crimes committed, but the number of people in prison on one day, as compared with the number of people out of prison. I sub-classify the trials and convictions. But the results are unequal, and, therefore, I have recourse to a comparison of the figures thus arrived at with the total of population."

His "Dictionary of Statistics," as brought out with a supplement in 1899, is the largest statistical work ever published, and its comprehensiveness is curiously suggestive in regard to its author's methods of work. He by no means disdained to collect newspaper cuttings. He also confessed to me that when seeking principles of classification he was in the habit of passing through Dr. Johnson's 'Dictionary,' and taking each noun substantive and verb active, and setting them out as heads for and under which statistical matter might be discovered and arranged. Here the newspaper cuttings came into play. Or, taking tobacco for an instance, he explained how he made up the principal divisions of his knowledge of the weed. As to the outline and in the rough, he described it to be this:

"First, I calculate the production of tobacco, say in Italy, by the number of acres, which, in this country are under production, by what would be the average yield per acre; then I consider the estimate of the imports and exports of each province, and last of all the consumption. For example, Italy has so many tons; it consumes so much; it has a net total of imports as over exports," etc.

Thus much as regards his own methods of work as a statistician. With regard to the common opportunities of all students of the dry, fascinating science, he said:

"Every government brings out statistics in a more or less regular form. Italy does it in a complete and compendious way, its Annuario. Its statistical office is excellent."

On a previous occasion, many years before, and then again, he had described Senator Bodio to me as "the greatest statistician in the world"—a title which long before and afterwards was generally given to himself. He found it "very hard to explain" why there existed in England such a strong prejudice against Italian science and scientists.

"In Great Britain," he said, "every one does for himself, and God for us all. The Board of Trade, however, publishes a 'Statistical Abstract' yearly. For a long time the Royal Society refused to receive among its members anyone who belonged to the Royal Statistical Society (which, by the way, now languishes), as it denied that statistics constituted a science at all. The Royal Society is the 'blue ribbon' of science; it is probably the highest scientific distinction in Europe; higher than the Academy of France. Sir Robert Giffen is now a member of it.

"America spends very much more care over statistics than England does. It publishes annually a valuable 'Statistical Abstract of the United States.' This is more complete by far than anything which we possess in Great Britain, a larger book, and one touching on more subjects than any of ours.

"In Great Britain, population statistics are obtainable from the Registrar General at Somerset House; and again from the Agricultural Department; commercial statistics are given out by the Board of Trade. Ireland and Scotland however, stand apart. Help of the sort in regard to them may, none the less, be had from the Board of Trade, and from the Custom House while the Registrar General is provided with registers of every birth, death, and marriage in the United Kingdom.

"The American production, which we have mentioned, is one of the best, but they have no vital statistics, because they possess no register of births, deaths, etc. Nothing in the world can compare with their agricultural statistics."

"Do the various national statistical offices send you their respective publications?"

"Our own government does not; eight governments do, I think; those of the United States, Canada, Australia, Italy, Austria, and Switzerland do; I have to pay for those issued by our own government. They come to Killiney Peak (his country-seat near Dublin, and, with Rome, his ordinary place of residence of late years) in the poultry cart, which brings up the provisions for our house. On them and on the other materials, I work for nine or ten hours a day, every day, namely, from 8 to 12 and from 1 to 5, and I devote a few more hours to the same study at night."

"And as to your method of procedure?"

"I add to the data afforded by these official reports such other data as are to be found in 'The Statesman's Year Book,' 'The Almanach de Gotha,' and the works of certain continental statisticians."

But much of the basis of all his work, especially at the outset of his career, was, he averred cuttings from the despised and reviled newspapers of the entire world.

To my interruption made for inquiry at this point, he replied that he consulted hardly any American statistician, unless it were "Dr. Wright, an excellent statistician, the representative par excellence of the United States of America." Such is the entry in my notes, and I take it to refer to Carroll D. Wright, of Washington.

"What has been the special tendency, and what the particular characteristic of your work?"

"I will tell you. The great drawback in statistical science hitherto has been that each government or country worked apart. My task has been the study of international statistics, the comparison of country with country. The first who took up this branch of work was M. Bloch, about 1852, a Frenchman, as you know. Then a student named Neumann-Spaillart worked very successfully on the same lines. He died about 1888. His mantle has fallen on Juraschek, a very good man, another Austrian, who is the author of a survey of the industries of mankind, 'Ueber-sichten,' etc. Two others should be mentioned in this sphere of investigation—Meyer, now retired, who was official statistician to the Bavarian government, and Herr Engel, who was the official statistician to the King of Prussia, but who was dismissed from his charge after a quarrel with Prince Bismarck. He has since died. Engel was very strong on steam statistics, and on those affecting the condition and the cost of living among the working classes. There were in all but four, or perhaps only three, others of us who laboured in this province of statistics—Levasseur, Jaures, and myself. Levasseur does very good work."

Thus frankly and simply, as well as modestly, did he characterise and sketch his great life-work and describe its direction and aim. Of its success others have spoken in unmeasured terms of praise. Not the least grateful of all tributes was the universal recognition of his super-eminence which was freely rendered to him by the Press of every land that nourishes germs of culture. It would be easy, and even appropriate, to recite some of the compliments which created for him the reputation of being a magician rather than a calculator, a seer more than a statistician; to show the marvels of his high-wrought mathematics and the exactness of his reckoned foresight—as, for instance, his almost precise conjecture of what the latest American census would prove to be the population of the United States, but this and the like tasks should be performed with authority by others who are more than mere sciolists in statistics. I content myself here with reproducing in all possible exactness the notes which I made and which may approve themselves the sole revelation ever given by the retiring and modest scholar of the secret working of his half-miraculous power.

MONASTIC ANTIQUITIES OF IRELAND.

FROM GROSE'S "ANTIQUITIES OF IRELAND, 1791.

EXPLANATION OF THE FIGURES IN ABOVE PICTURE.

The picture given above is accompanied by a brief chapter entitled "The Monastic Antiquities of Ireland," in which Grose tells us that he gives the names and number of houses belonging to each Order that formerly flourished in Ireland, as they have been collected by Harris; for the late Mr. Archdall's Work is very defective in not having such a Synoptical Table; as there are many more than stated by Harris belonging to each Order.

	Houses.
Regular Canons of St Austin	... 220
Nuns of St Austin	... 65
Canons of St Victor	... 7
Knights Hospitallers	... 23
Præmonstratensian Canons	... 8
Crutched Friars	... 13
Trinitarians	... 1
Benedictines	... 9
Benedictine Nuns	... 5
Cistercians	... 40
Cistercian Nuns	... 2
Dominicans	... 40
Franciscans, or Grey Friars	... 70
Observantine Franciscans	... 9
Third Order of St Francis	... 37
Austin Hermits	... 24
Carmelites	... 20

It is no easy matter to be exact as to the number of Religious Foundations of each, because some of them were suppressed, and others consolidated, frequently according to the will of the Toparch in whose country they were situated.

The names of the Orders delineated on the above Plate, the number of each Figure refers to its respective Order.

THE ANCIENT AND PRESENT STATE
OF THE
COUNTY AND CITY OF CORK.

BOOK I.

Containing a Natural, Civil, Ecclesiastical, Historical, and Topographical Description thereof.

By CHARLES SMITH, M.D.

Æquum est enim meminisse & me, qui discerem hominem esse, et vos, qui Judicetis ut fi probabilia dicentur, nihil ultra requiratis. Cicero Univers.

In Two Volumes.

VOL I.

The Second Edition, with Additions.

Chapter I.—Continued.

Thus, having given an ample detail of the old Irish septs and ancient territories in this county, I proceed to lay before the reader an account of the grants made to the first English adventurers by the kings of England.

This kingdom being reduced to the power of the English, and publicly proclaimed so to be, King Henry II. distributed large possessions to the several adventurers who had assisted in the reduction of it. This monarch granted the whole kingdom of Cork to Robert Fitz-Stephen (38) and Milo de Cogan. The words of the charter are as follows:

"Henry, by the grace of God, King of England, and Duke of Normandy and Aquitain, and Earl of Anjou; to all archbishops, abbots, earls, barons, justices, and all his ministers and faithful subjects, French, English, and Irish, greeting. Know ye that I have granted, and by this charter confirmed, to Robert Fitz-Stephen and Milo de Cogan the government of my city of Cork, with the cantred which belonged to the Ostmen of the said city, which I retain in my own hands; to have and to hold them together during my pleasure ,and as long as they shall serve me faithfully. I, moreover, by this my charter, give, grant, and confirm to them and their heirs all the kingdom of Cork, except the said city and the before-mentioned cantred, which I retain in my own hands; to hold to them and their heirs, of me and my son John, and our heirs, by an exact division towards the cape of Saint Brandon on the sea-coast, and towards Limerick and other parts, and as far as the water near Lismore, which runs between Lismore and Cork and falls into the sea, by the service of 60 knights, to be performed thereout to me and my son John and our heirs; the service of 30 knights to be performed by the said Robert and his heirs; and the service of 30 knights by the said Milo and his heirs. Wherefore, I will and strictly command that the said Robert and Milo shall have and hold the government of the said city and cantred, in manner as is before mentioned: and that they and their heirs shall have and hold all the kingdom aforesaid, except the said city and cantred (which I retain in my own hands), from me and my son John and our heirs, by an exact division, as is above described; well and peaceably, freely and quietly, entirely, fully and honourably, in wood and in plain, in meadows and pastures, in waters and mills, in warrens, ponds, and fishings, in ways and paths, and in all other places and things belonging thereto; with all their liberties and free customs; so that from the aforesaid river that runs between Lismore and Cork, the whole land as far as Waterford, together with the city of Lismore, shall remain in my hands for the government of Waterford. Witnesses present: John, bishop of Norwich; Adam, bishop of Asaph; and Augustine, bishop of Waterford; Richard de Lacy, William Fitz-Adelm, my sewer, Hugh de Lacy, Hugh de Burid, Roger Fitz-Remsey, Maurice de Prendergast, Robert Dene, Robert Fitz-Eliodore Jeoffrey Poer, and Harvey de Monte Marisco. At Oxford."

This charter seems to be granted about the year 1177; for at that time, according to Hoveden (39), "the king came to Oxenford, and, in a general council there held, created his son John king in Ireland, by the grant and confirmation of pope Alexander."

Two years after, Fitz-Stephen and Cogan came to a partition of seven cantreds, which Giraldus Cambrensis (40), who lived at that time, thus describes: "Therefore, Dermod of Desmond (41), being brought to terms, and other powerful men of those parts, Fitz-Stephen and Milo divided seven cantreds between them, which were contiguous to the city, and which they then possessed in great security; three of which, eastward, fell to Fitz-Stephen's lot, and four, westward, to Milo's: the one had the fewer in his division because they were the best, and the other had the larger number because they were of worse quality. The government of the city remained in common to them both, and the tribute of the other 24 cantreds, which remained undivided, was to be equally distributed between them, when they should be brought under subjection." Cambrensis has left us but very imperfect accounts of the distribution made by Fitz-Stephen and Cogan to others, the death of Cogan, which happened in 1184, putting some stop to the undertaking. But the confirmation charters of King John, granted in the 8th year of his reign, afford some light in this matter; for he then "confirmed to William de Barry the donation made by Robert Fitz-Stephen (to Philip de Barry, his sister's son (42), and father of the said William, whose heir he was) of three cantreds in his lands of Cork, i.e., Olethan, with all its appurtenances, and of two other cantreds, i.e., Muscherie-Dunegan, and the cantred of Killede, by the service of ten knights, as the charter of the said Robert, which he had thereof, testified." Thus far the charter of confirmation, which agrees with the charter of Fitz-Stephen, except that the two cantreds of Muscherie-Dunegan and Killede, granted to Philip de Barry, are not mentioned therein by name; but he was to have two cantreds in the kingdom of Cork, such as should fall to him by casting lots. King John's charter of confirmation of Fitz-Stephen's grant to Philip Barry is enrolled (43) de anno 21

(38) Robert Fitz-Stephen was son to Stephen, constable of the castles of Abertiny and Pembroke, and Anne daughter to Rees Gruffdyth, prince of south Wales. She had been concubine to king Henry I., by whom he had a son Henry, father to Miles and Robert Fitz-Henry, who were also adventurers under Strongbow. Her second husband was Gerald ancestor to the Fitz-Geralds, by whom she had Maurice and William; which Maurice came into Ireland with Robert Fitz-Stephen, anno 1169 or 1170, and took Wexford, whereby a way was opened for conquering this kingdom. Robert had two sons, Radolph and Mereduk who died in Cork, March 14, 1179-80 greatly lamented, and was slain in 1185, with Milo de Cogan, the younger, who was some time Governor of Dublin, and joint sharer with his father in the kingdom of Cork between Waterford and Lismore, by treachery, having (according to Giraldus Cambrensis) but a little before married the daughter of Milo de Cogan.

This Robert Fitz-Stephen, after his father, was also Governor of Cardigan or Abertiny castle in Wales, and ancestor to the FitzStephens of this country, now extinct. He was the first Englishman that landed in Ireland in an hostile manner, with 30 knights, 60 esquires, and 300 foot soldiers, and after several successes, he was by king Henry II. together with Hugh de Lacy, Maurice Fitz-Gerald, his half-brother, and Robert de Bruce, made joint governors of Ireland.

(39) In vita Hen. II.

(40) Expugnanat. Hib. lib. 2., cap. 18.

(41) Mac-Carty.

(42) This Philip de Barry succeeded his elder brother Robert de Barry, who was the first man (says Cambrensis) that was wounded in the conquest of this kingdom, and was also the first who ever manned the hawke in this island. The same author gives a noble character of him, and says, "he was a man rather ambitious to be eminent, than to seem so."

This family hath afforded several eminent persons, besides the above Robert de Barry, viz., Giraldus Cambrensis, who in 1185, attended king John into Ireland, in quality of his secretary, and was Bishop of St David's, alias Mi'nevia in Wales, and refused the bishopricks of Ferns and Leighlin, in Ireland, which were then vacant. During his stay here he collected materials for his topography of Ireland, and his vatinical history of the conquest of it: but finished them in England. 2. Sir David de Barry, who was lord justice of Ireland, anno 1267. He subdued the Mac-Cartys in this county, founded the abbey of Buttevant, and enlarged the revenues of that of Ballybeg, founded by his grandfather, Philip de Barry. 3. Gerald de Barry, lord bishop of Cork, anno 1359. 4. James Barry, lord Buttevant (anno 1555.) 5. David viscount Buttevant, who did great service in Tyrone's rebellion, in 1601. 6. David, the first earl of Barrymore, who served against the Scots, anno 1639, and in the Irish rebellion of 1641, as will further be seen in the annals of this county.

There is an island, called Barry Island, on the S. W. coast of Glamorganshire in Wales; which, with a castle on the opposite shore, had their names from this family.

(43) Harris's Ware, p. 195.

Eliz., and Fitz-Stephen's grant is in the same roll; the former whereof bears date the 21st of Feb. regni Johannis 8vo (44). "He also granted to Adam de Rupe (or Roch) the cantred of Rosselihir, with all its appurtenances, save the demesnes of the bishop of that see, by the service of five knights; also to Richard de Cogan, the cantred of Muscrie-O'Millane, with the appurtenances, by the service of five knights, lying between the harbour of Cork and the port of Insovenagh, and 25 Knights fees, which he ordered to be set out to him in some other place, by the advice of Meiler Fitz-Henry, lord-justice of Ireland, and John Mareschall, by the service of 4 knights: saving to the king, and his heirs, the aforesaid harbour, and his own demesnes. Also, to Robert Fitz-Martin, 20 knights fees in the cantreds of Insovenagh, and 20 knights fees in some other place, which he ordered to be set out to him by the advice of Meiler Fitz-Henry, lord-justice of Ireland, and John Mareschall, and Philip de Prendergast, by the service of 4 knights, in full of all services." Lastly, he gave to two brothers, "Henry and Maurice Fitz-Philip, one cantred of land, in which Dunalahoth is situated, by the service of 5 knights."

In the reign of King Edward III., Thomas de Carew set up a title as heir to Fitz-Stephen, to all his share of that great estate. But by an inquisition taken at Cork, before Sir Anthony Lucy, Lord Justice, on the 31st of August, the 5th of Edw. III., it was found "that Robert Fitz-Stephen died seized of the moiety of the estate granted by King Henry II. to him and Cogan; and that the said Fitz-Stephen was a bastard, and died without issue of his body; that the claim of Thomas de Carew, asserting that he and his ancestors were heirs to Fitz-Stephen, could not be true, because the said Fitz-Stephen was a bastard, and died without heir of his body (45); and further, that the said Fitz-Stephen, in his life-time, enfeoffed Maurice Fitz-Thomas, before he was created earl of Desmond, of the castle and manor of Dunemarke, and the moiety of the estate granted to him by King Henry II. (46)"

(44) By an inquisition taken at Cork, before William de Rote, prior of the hospital of St John of Jerusalem, chief justice of Ireland, on the eve of St Bartholomew, 29 of Edward III. 1355, it appeared from the oath of Gerald FitzMaurice and others that it would not be the king's loss, nor to any others, if the king granted William Barry power to bestow one carucate of land, with its appurtenances, in Cleynboly, in the great island the the advowson of the church of Downgourney; and leave to John Barry, to give 20 parcels of land in Muscry O-Lethan, and Ibawne, and to John Fitz-Gerald, to give one carucate and half of land in Garanacor in Ibawne, and the advowson of the church of Rathratha, and two acres of land in Kylmide, in Kinaletha, with the advowson of that church, etc.

(45) A collateral branch cannot be heir to a bastard nor any one but the issue of his body.

(46) This title was again set up in the reign of queen Elizabeth, anno 1568, by Sir Peter Carew, who brought his cause before the lords of the council, and came to Ireland very welll recommended, being fully resolved to prosecute the recovery of this ancient estate; who, besides other lands in Leinster, laid claim to one half of the kingdom of Cork, viz. Imokilly, Tyrbarry, Muskery, Tyrcourcy, Carbery, Kinalmeaky, Collymore and Collybeg (two territories, near Skibbereen, in West Carbery); Ivaugh and Synnagh O-Donovan, Bantry, Bear, Minterbarry, Clandonogh, Cloigboigh, Iveragh, Kerrycurrihy, Clanmoris, Iragticonnor; (these two last in Kerry), Duhallow, and Coshbride.

This sir Peter Carew sent his agent, John Hooker, to Cork, where he had a solemn meeting with Mac-Carthy Reagh, sir Cormac Mac-Teig, lord Muskery, Barry-Oge, O-Driscol, O-Daly, and others. They proposed to advance 3,000 kine, with sheep, hogs, and corn in proportion for the present; and that if sir Peter would live among them, they would pay him an annual reasonable rent. Upon which Hooker took an house for sir Peter at Cork, and another at Kingsale. But as sir Peter was travelling to Cork, he fell ill at Ross, in the county of Wexford, and died there the 27th of November, 1575. Cox, vol. 1. p. 327.

(47) The Carews of Ireland are said, by Cambden and other genealogists, to be descended from Arnolph de Montgomery who built the castle of Pembroke, in Wales. He had the title of that earldom, and afterwards fortified his castle in the behalf of his brother the earl of Shrewsbury, in the time of his rebellion against King Henry I. They were both banished the realm, anno 1112; and this Arnolph being outlawed, the castle of Pembroke came to the crown. Odericus Vitalis, p. 573. (who was a monk of Utica, and a writer of the Norman history), says that he married Lafracoth, a daughter of one of the kings of Ireland, and their posterity took the name of Carew, from Carew Castle in Pembrokeshire.

Anno 3d Edward II, 1310, the king issued a precept to Maurice de Carew to distrain the lands of David le Barry, and Maurice Fitz-Gerald, for services and duties due to him, as lord of several of their possessions. Bibl. Lamb. L. fol. 38.

In the same place, may be seen a note of such lands as Thomas Fitz-Maurice held of Maurice de Carew, at the death of the said Thomas, which were forfeited to the king; but restored again to Maurice de Carew, anno 1312.

In the same library, there is a grant from John de Carew, lord of the manor of Castle-Cork, to Richard Fitz-Peter de Carew, of the custody of all the lands belonging to George Fitz-Adam, dated anno 1334. Ibid. fol. 23.

Anno 1340, the king issued writs to the sheriffs of Cork and Kilkenny, to possess John de Carew, of the manor of Clonmentach. Ibid. fol. 35.

Anno 1567, the possession of Castle-Cork and all other lands belonging to this family, in this county, were delivered into the hands of Richard, the son of sir Peter Carew, which amounted to near one half of the county, as appears from MSS. in the same place.

About this time, sir Peter Carew first petitioned sir Henry Sidney, then lord deputy of Ireland, and not only laid claim to a vast estate in this county, but also to the lands of Ballimaclethea, in Odrone against sir Christopher Chever; which petition, with sir Peter's answer, and the names of such lands as he claimed in this county, may be seen at large in the Lambeth Library. See also further concerning this claim, in the fourth book of this work.

(48) Hooker, p. 46. Manmer, p. 158. Brady, p. 369.

(49) Anno 1601, when sir George Carew, lord president of Munster, was in the west of this county, he and his army quartered at Dunemarke, a castle in Bantry bay; which the author of Pacata Hibern. calls Carew Castle, and says it belonged to the president's ancestors.

Anno 1304, an order issued to pardon Maurice de Carew £400 arrears, which he owed the king for his lands in Desmond, because he was serving the king in Scotland. Manuscript. in Bib. Lamb.

For want of male issue, the kingdom of Cork descended to daughters, and notwithstanding what was found by the abovementioned inquisition, which was much influenced by the power of Maurice Fitz-Thomas Fitz-Gerald, the first Earl of Desmond (47), a large part of this country came, by marriage, to (48) Robert de Carew and Patrick de Courcey, who enjoyed it, anno 20 Henry III., viz., about the year 1236. De-Courcey's part was afterwards subdivided among daughters, who were heirs general of that ancient family. The Carews were styled Marquisses of Cork, and built the castles of Ardentully, Dunkerron, and Dunemarke (49), in the west of this country; and others in Imokilly, to protect them from the natives. The chief men of this family, with many other English settled here, removed into England upon the breaking out of the civil wars between the houses of York and Lancaster, to the great prejudice of the English interest in this country. De-Courcey, who remained in Ireland, besides dividing his lands as portions to his daughters, lost many of them by force, and, in particular, the cantred and castle of Kilbritton, which were wrested from him by Mac-Carty Reagh, who, with numbers of the Irish, attacked the few English that remained in this part of the kingdom. Notwithstanding, this ancient and noble family enjoys a considerable estate to this day, in the barony called, from them, Courcey's country, and have constantly preserved their loyalty untainted, being never concerned in any rebellion against the Crown of England. Their ancient seat was, for many ages, at Dun Mac-Patrick, so called from Patrick de Courcey, who gave the name of Mac-Patrick to his posterity. This place, in ancient records, is said to have been a royal seat of the kings of Ireland, being called Duncearma. The Right Hon. Gerald de Courcey, the present Lord Kingsale, quarters the arms of Cogan, in right of the marriage with the daughter and heir of Milo de Cogan, the first grantee of the kingdom of Cork (50).

(To be Continued.)

(50) The ancient nobility in this county, in Henry IVth's time, according to a letter than said to be wrote by the inhabitants, were, the lord marquis Carew whose yearly revenue was £2,200 per ann. The lord Barnwell, of Bearhaven, who had £1,600 per ann. The lord Uggan, of the great Castle £1,500 per ann. The lord Balram, of Emforle, his revenue £1,300. Lord Courcey, of Kilbritton, his revenue £1,500 sterl. The lord Mandeville, of Barnhelly, £1,200 sterl. The lord Arundel, of the Strand £1,500 per ann.. The lord baron of the Gaurd, £1,100. The lord Slinie, of Baltimore, £800 sterl. per ann. The lord Roche of Poole Castle, his revenue, besides havens and creeks, (which the letter takes notice all the other lords had), £1,000 per ann.

This letter says that the king had all Barry Oge's estate by forfeiture, worth £1,800 sterl; and desires that those lords and the Irish may be bound over, upon pain of life and goods, not to make war upon each other, by which the country was brought to destruction, and the Irish who were formerly drove to the mountains of Glanerought, were now returned, and became stronger than the English, of whom only the lords Roche, Courcey, and Barry then remained; and requests that proper persons may be sent over to command the English, and quiet the country. See the letter, at large, in Campion, p. 94. Sir Richard Cox, vol. 1. p. 162. says this letter was wrote in Henry VIth's time, anno 1449. But I have seen a letter from archbishop Usher, to the lord Courcey, dated at Drogheda, Dec. 12, 1626 (of which I took a copy), wherein the primate says, this letter was wrote in Henry IVth's time, and gives an account of the lords Courcey mentioned in several ancient records, which he furnished lord Kingsale with, on occasion of a dispute between that lord and sir Dominick Sarsfield, who was created viscount Kingsale by King Charles I., but was obliged afterwards to change his title for that of Killmallock.

LILLITHE.

She sleeps a dreamless sleep, my stricken flower;
Her life went out like the soft breath of rose
Or lily in its gentle evening close:
She died as violets die—my fragile flower.

The tender snow-drop nestles on her tomb,
And tearful evening-buds infold, in closing,
The latest struggling ray that gilds the gloom,
To warm the sod where my love lies reposing.

And watchful spirits through the summer air,
In bird-like forms, and hues of glorious dye,
Wing to their tuneful requiem for the fair,
And kindred joy that's perished from the eye.

THE HEAT OF THE SUN.

By PROFESSOR JOHN TROWBRIDGE.

The sun is so constantly before us that we do not often stop to consider what an enormous object it is, and what an immense amount of energy it is pouring forth every second. If the sun were a hollow ball and the earth were placed at its centre, the moon could still revolve at its distance of two hundred and thirty-nine thousand miles around the earth inside this hollow ball.

Indeed, its path would be little more than half-way between the centre of the earth and the sun's surface, which would be four hundred and thirty-three thousand miles from us, if the earth were placed at the centre of the hollow ball which represents the size of the sun. We shall see that the sun is hotter than electric arc light, which melts all known substances, and one of the greatest questions which puzzles scientific men is to account for the work which this heat does in the vast regions of space; for only the two-billionth part of it produces trees and grass and supports the life of creatures on this earth.

One of the best ways of realising the intense heat of the sun is to use a burning-glass or a lens and concentrate the heat rays on a piece of paper. One can thus speedily burn a hole in the paper.

Not long since, an old felt hat was discovered to be on fire in one of the laboratories of Harvard University. How the fire could have started in the hat was a great puzzle, for it was on a table apparently removed from every object which was combustible, and the only other object on the table was a peculiarly shaped water-bottle. The mystery was soon solved. When the afternoon sun shone into the laboratory room the water-bottle collected the sun's rays and concentrated them like a burning-glass on the hat.

Sometimes one discovers black spots on leaves of trees which are caused by the drops of dew concentrating the rays of the sun. These drops are also little burning-glasses. It is an interesting experiment to make a lens out of ice, and burn a piece of paper by means of rays which have passed through such a cold body.

We can similarly concentrate the heat of the sun by mirrors. The best form of mirror is similar to that which is placed behind the headlight of a locomotive. This mirror is not flat; it has a curved surface and it can bring the sun's rays of light to a focus—the very place where the headlight is placed. This headlight sends its rays to the curved mirror, which in turn sends out a straight beam of light along the track in front of the engine.

When such a mirror is turned to the sun it sends a straight beam into the mirror and, as we have said, this beam is brought to a focus where the light is placed. Thus the sun produces a light at the focus of the mirror, and if the mirror be large enough, can melt every known substance at the focus—can burn an iron nail like a match.

From experiments with large mirrors, we know that the heat of the sun must be capable of melting all known metals, and glass and porcelain; for the sun must be even hotter than the focus of the largest mirror we can construct, since the wall exposed to a blazing fire cannot be hotter than the fire itself.

It has often been proposed to use the great heat of the sun to propel vehicles. It is said, "Why can't we mount mirrors in such a way that they will concentrate the heat of the sun on a boiler placed at the focus—just where the headlight of an engine is placed? The heat in the boiler could be converted into steam, and this steam could be used to propel the vehicle. With a suitably constructed flying-machine the sun might lift us above the surface of the earth and draw us to himself across the ocean of space."

If this were possible, we should be frozen to death when we left the warm atmosphere of the earth, and we should be burnt up when we got as near to the sun as the moon is to the earth.

It may seem very singular that we should be frozen to death as we approach nearer the sun until we get within a certain distance, and that our bodies should then be burned as if in a fiery furnace. Once, in ascending a mountain in Switzerland, at a height more than twice that of Mount Washington, my face was badly burned, although my body felt very cold, and I should have been frozen to death if I, thinly clad, had remained long at this altitude. Thick woollen garments act just like the atmosphere of the earth. They retain the heat and prevent its rapid loss by radiating away into space.

The heat grows more intense as we approach the sun. At first the rays radiate very rapidly after they have struck, so to speak, the human body. When we approach quite near the sun the intense heat cannot be radiated away fast enough to prevent the complete burning of all known objects and their conversion into vapour.

The atmosphere surrounding the earth acts like a blanket in keeping the earth warm, by preventing the rapid radiation of heat into cold space. This atmosphere extends to a distance, certainly, of five hundred miles above the earth, but it is extremely thin at such a height, and a body at the height of five hundred miles would quickly lose the heat it receives from the sun.

The sun, too, has an atmosphere which probably extends to the enormous distance of two hundred thousand miles from his surface. This atmosphere is also like a blanket, and it hinders the radiation of heat from the hot interior of the sun. If this blanket should grow thinner the earth might grow intolerably hot; or if it should become thicker, ice might gather over the whole surface of the earth.

Perhaps slight changes in the depths of the sun's atmosphere can account for the periods of intense heat which sometimes visit the earth. Certainly a better knowledge of the changes in the sun's atmosphere is of the utmost importance to us all.

It is well to stop and think what would happen if the atmosphere about the sun should suddenly become more intense. The roar of the city, the sound of birds in the country, the movement of fish in the streams, the trains rushing over the country—all the noise, the melody, and the movement might cease, and a deadly frost descend upon the whole earth.

One of the great mysteries in regard to the sun's heat is its constancy over a great period of years. The sun shines to-day just as hot upon the Egyptians labouring in the field as it did upon the Egyptian who laboured four thousand years ago in building the pyramids, and whose mummy is now, possibly, one of those in the British Museum. We find it impossible to keep even a small fire burning with constancy or perfect steadiness on the surface of the earth. The only way to keep a steady source of heat is by means of electricity.

I have lately constructed a storage battery of ten thousand cells, which is, I believe, the largest battery at present in the world; and it has enabled me to obtain some measures of the heat of the sun and of the stars.

The cells are little glass jars, each with two strips of lead which are separated from each other by rubber bands, and the cells are charged, or filled, so to speak, with electricity by sending a current of electricity from a powerful dynamo machine through the entire battery for several hours. When the battery is fully charged, a flaming discharge of electricity three feet in length can be obtained between the wires connected to the end of the battery, and it is highly dangerous to touch the wires connected to the battery unless one wears rubber gloves.

Thirty of my cells will produce an electric light similar to the arc light on the street. In this light metals are raised to a white heat. A rod of iron can be burned by it as readily as a piece of wood in a fire. This heat is measured by the quantity of electricity which flows and which produces the arc light.

Now, the heat given out by the glowing thread or filament in the Edison lamp depends upon the quantity of electricity which we can force through it. We must have a certain pressure to force this quantity through the resistance of the carbon thread. We can measure very accurately the quantity of electricity if we know the resistance of the thread, and at the same time we can estimate the heat given out by the filament. If we substitute a strip of platinum for the carbon in an Edison lamp we know that when it is red hot it has a temperature of about nine hundred degrees centigrade, or sixteen hundred and fifty-two degrees Fahrenheit, and when it is white hot and at the point of melting it reaches the temperature of seventeen hundred degrees centigrade, or three thousand and ninety-two degrees Fahrenheit.

Suppose we keep the platinum red-hot, however, by the current from thirty to forty of our little cells, we know that we have a course of heat of about nine hundred degrees centigrade.

Let us then move a very delicate thermometer two or three feet away from this strip of platinum and read its rise in temperature. Let us do the same with an electric arc lamp, and move the thermometer until it shows the same rise as it did from the effect of the heat of the platinum strip; we shall find it to be at a much greater distance away from the electric arc.

This method has been employed with very delicate instruments, and the heat of the electric arc has been found to be in the neighbourhood of three thousand six hundred degrees centigrade. If now by the same method we compare the heat given out by an electric light with the heat given out by the sun, we arrive at the result that the temperature of the surface of the sun is about eight thousand degrees centigrade.

We cannot put a thermometer into the electric furnace or into the sun, since the thermometer would be instantly melted in the furnace, and we cannot fly to the sun to try the experiment on its surface, but we can oppose them to each other and measure the heat which they can produce at different distances. At the temperature of three thousand six hundred degrees centigrade every known substance is melted—even porcelain seems like melted wax—and it is supposed that the sun's surface is composed of boiling carbon.

There is still another method of estimating the heat of the sun and stars by means of electricity and the spectroscope.

The human eye unassisted cannot analyse the light of the electric arc or that of the sun. A very simple apparatus, however, will enable us to decide what metal is being heated in the electric arc and what metals are present in the sun. Instead of one of the two spectacle lenses of an ordinary spectacle, suppose that we had a glass prism in front of one eye—in fact, a spectacle made of one prism instead of two glasses or lenses.

If now, adjusting this new form of spectacle to our noses, we should look at a distant street arc light, we should see the arc light spread out into a coloured band of light—the so-called spectrum—with red at one end and violet at the other. Moreover, by a proper adjustment, we should see this spectrum crossed by

bright lines, and these bright lines can tell us what metals are being heated in the electric light, for each metal has characteristic lines.

In this form of spectacle we have, in fact, what is called a spectroscope, an instrument for analysing the colour given off by substances subjected to very great heat.

When we gaze at any flame or light through a prism the practised eye can estimate the heat or temperature of the light by the character of the spectrum.

We can tell, for instance, by looking through a prism at a furnace, whether it has reached the right temperature to produce a certain grade of steel. We can tell whether one star in the heavens is hotter than another. Thus, you see, we dispense with the necessity of touching the hot object by means of a thermometer or with the necessity of leading a wire across the space to the hot star.

Some very sanguine persons, reasoning from analogy, believe that just as we are beginning to measure heat across millions of miles of space, we may some day be able to measure sensations from those distant worlds which are throbbing around us but are yet unrecorded.

When we direct our spectroscope to the sun we perceive a singular arrangement of dark lines which cross the band of light produced by the prism through which we gaze. These lines indicate that certain metals are present in the sun. Let us see if we can produce a similar arrangement of lines by burning substances in the electric light.

I have tried the experiment with carbon, and careful study of the resulting spectra shows that carbon is present in the sun, and that the temperature of the sun where the vapour of carbon is present is not far from that of the vapour of carbon in a very powerful arc light.

The electric arc seems to the eye, and also to the eye assisted by the spectroscope, closely to resemble the sun. It produces the greatest heat which is possible for us to produce on the earth. If we confine it in a box made of slabs of lime we have an electric furnace. In this furnace all metals are melted into vapour, glass is melted like wax, and diamonds of very small size have been made by the application of the intense heat of this furnace to carbon.

There is still another phenomenon of the heat of the sun which we can study by the great storage battery I have constructed. In the case of a total eclipse of the sun we perceive singular rose-coloured flames darting from the surface of the sun and rising to thousands of miles above its surface.

These great flames are always rising and falling, but the intense white light of the sun prevents our seeing them every day. It is only when the moon shuts out the dazzling light of the sun that we see a portion of these flames rising behind the black disk of the moon.

The spectroscope shows that these flames are due to hydrogen gas; for when the spectroscope is directed to these flames we see a red, a green, and a blue line, and the photograph of the spectrum of the flame shows lines in the purple and violet portion. All these lines can be produced by discharging a certain quality of electricity through hydrogen gas.

Here, again, with our large storage battery we can measure the quantity of electricity which we send through the hydrogen in order to produce the spectrum hydrogen which is seen in the flames of the sun. Knowing this quantity we can estimate the heat it can produce in the gas, and we can then form an idea how hot these flames are on the surface of the sun. Perhaps few persons realise, when they stand beneath the electric arc light which is so commonly employed to light the city's streets, how interesting and mysterious that light is. We have seen that it is the nearest imitation of the light of the sun which men can produce; indeed, it can be said to be the sun's imitation of itself.

Thousands of years ago the sun's light and heat produced on the earth's surface great ferns and palms, which in some convulsion of nature were buried in the earth and turned into coal. Then the coal was dug up by man and converted into carbon rods, which again produced light and heat which had been stored up by the sun for so many thousand years.

We have studied the sun by the aid of this imitation of himself, and have endeavoured to form an estimate of the heat of the sun; and we find by means of electricity that its temperature is not far from that of the electrical furnace, in which there is boiling carbon, the heat of which cannot be far from six thousand to eight thousand degrees centigrade. If the moon should come as near to the sun as it now comes to the earth, two hundred and thirty-nine thousand miles, it would be melted like wax and converted into vapour.

BEFORE THE DAWN.

The night is calm, the sky is clear;
  The birds are silent, and the flowers,
Fresh with the heavy summer dew,
  Dream out the solitary hours.
Then, still be every whisper, lest
  The sleep of any living thing
Be broken, for in every breast
  Some little world is habiting.

The lark dreams of the coming light,
  And sings and soars in the pure air:
The flowers interpret their delight,
  With their soft odours everywhere.
Oh! endless worlds, both great and small!
  Oh! mighty depths of heaven and space,
Into my heart I take ye all,
  And give to all a resting-place!

Thy eyes are filled with tears, although
  A double sense of peace and rest
Makes all my senses to o'erflow
  With love for all things that exist—
But now the stars wax pale; and soft
  The daylight comes. Yet dream and sleep!
The sky is blue, and clear aloft—
  And my heart's peace is calm and deep.

INDIAN FALSE FACES.

The fondness of the American Indian for masks or false faces goes to prove that secret societies exist among the red men as among the whites. According to Iroquois belief, certain spirits, whose entity is comprehended in ugly visages, have the power to inflict bodily ailments and to cause diseases to afflict their people. To counteract their evil designs, the Society of the False Faces is maintained among the pagan Iroquois, in order to appease the evil spirits from whom they take their name, as well as to effect a charm against disease and to cure others. When a candidate is initiated into this strange society, the chief False Face thus addresses him: "Brothers, listen! Now you must know that we did not make this custom. The beginning is from Niyoh, our Creator, who is above the false faces. A member of the False Faces must go about among the people in the spring and fall to keep them from sickness, and must visit sick people at all times when called upon. This is all I have to say." Whereupon the new member replies: "I will act according to the ancient customs as advised by the leader of your Society, of which I am now a member." In a report made to the New York University in 1852 Lewis H. Morgan thus describes the workings of this curious order: When any one was sick with a complaint within the range of their healing powers, and dreamed that he saw a False Face, this signified that he would be cured. A feast was then prepared, the False Faces appeared, and, led by a female leader, marched in Indian file, each one wearing a mask and carrying a turtle shell rattle in the hand. On entering the house of the invalid, they first stirred the ashes upon the hearth and then sprinkled hot ashes over the patient until his head and hair were covered, followed by some manipulations over him ending with the sick person marching around the room with his queer visitors, so efficacious was the cure. The mysterious callers were then presented with food, which they took away and ate in secret, as they never unmasked themselves before the people. Among the simpler complaints which the False Faces claimed to cure were nose bleeding, toothache and sore eyes.

A LONG DELAYED PATENT CAUSE.

The report of the Special Master in Chancery in the suit of John E. Dubois against the Mayor, Aldermen, and commonalty of the city of New York has been filed in the office of the Clerk of the United States Circuit Court. This is the last step in a case which has been before the courts for the last eighteen years. John Dubois was the inventor of a caisson which, it is alleged, Roebling made use of in building the Brooklyn Bridge. The patent expired in 1884. A suit was soon after commenced against the city of New York for damages. Dubois began action against other municipal Corporations, his cases being classified among lawyers under the general title of "Dubois v. the Cities." The case of Jarndyce v. Jarndyce, of which Dickens has written picturesquesly, is no more involved than that of Dubois v. the City of New York, or more characteristic of the law's delay. In December, 1884, the demurrers to the complaint filed by the Corporation counsel were overruled. Then began the taking of testimony. Three years were then consumed by the complainant alone. Meanwhile J. Dubois died, leaving his entire estate, which consisted partly of these causes of action, to his nephew, J. E. Dubois. In 1888 the State passed a statute empowering the cities of Brooklyn and New York, and Dubois, the legatee, each to select a referee. For five years the referees sat. In 1893 they at last handed in a report adverse to Dubois. Then the referees started an independent action in the Pennsylvania Federal Courts for the purpose of recovering the large sums due to them for services. In 1897 the Pennsylvania Federal Courts decided the statutory reference illegal and unauthorised, and the referees' report therefore void. As a result, ten years' legal labour went for nothing, and the case had to be retried. For a year the cause was allowed to slumber peacefully. Then new associate counsel was engaged. When two years had elapsed, dissensions sprang up among complainant's lawyers, with the result that the courts were called upon to decide what fees were to be received by the associate counsel. The Master's report which has now been handed in is simply devoted to this question of fees, and does not in any way affect the patent litigation itself. Yet its scope is prodigious, for no less than 700 typewritten pages are needed to state what each counsel shall receive. When the patent cause itself will be decided no one can foretell.

PLUCKING OSTRICH FEATHERS.

Ostrich farming is now a paying industry in California. How successful it is in the Southern portion of that State may be gauged from the fact that about £150,000 capital is now invested in it, and that the annual output of feathers is worth about £20,000. In August the gathering of the feathers attracts many visitors from the towns to the ostrich farms to watch the process of plucking. When the time comes a man carefully examines the flock, and picks out those birds whose feathers are ripening, groups them into dozens, and pens them in, so that they cannot run about and injure their beautiful plumage. When the plucking time comes, the bird is enticed into a narrow, dark, passageway. The entrances are then closed and the bird thus imprisoned. A cloth bag is thrown over the creature's head. Then the plucking begins. Three men, perched upon platforms without the pen, reach over the board enclosure and with curious scissor-like appliances pluck off the feathers. Whatever wounds a bird may receive are immediately dressed. The tail feathers are pulled and not cut, simply because they reproduce better than other feathers of the ostrich. While the plucking is in progress the ostrich keeps up a dismal roaring. Were it not for the staunch construction of the pen the creature would kick the boards into splinters. The first plucking is the most valuable. For that reason the older ostriches are kept simply as breeders.

LITERARY NOTES.

It has been stated in the "Athenæum" that Ibsen's letters are, with his sanction, being prepared for publication.

✧ ✧ ✧

In the fourteenth report of the Deutsche Orient Gesellschaft, Prof. Wilamowitz-Molnendorff gives an interesting account of a Greek papyrus discovered in a sarcophagus during the excavations at Abusir. It contains the greater part of the "Persians" of Timotheus, the poet, singer, and composer, of whose works only a few fragments were known, although his name has survived. The poem includes a notice of the battle of Salamis, the last verses containing the author's name.

✧ ✧ ✧

The large and sensible class of readers that seeks in its novels not so much "human documents" or science or philosophy as wholesome recreation, may be glad to be reminded that last Saturday was Miss Braddon's birthday. If, as Thackeray pleaded, the author who excites and interests you deserves your benedictions, the blessings about Miss Braddon's path should be full and fervent, for few writers have ministered to this human need with a more fertile industry. And, unlike Dumas, Miss Braddon has no "devils" to help.

✧ ✧ ✧

In a few days a house, possessing some amount of literary and historic interest, will come under the auctioneer's hammer—viz., Tooting Hall, the well-known residence of Daniel Defoe at Tooting. It is said that in one of the back rooms Defoe wrote "Robinson Crusoe," but on the other hand, in his "History of Tooting," Mr. W. E. Morden says the house was not built until more than half a century after Defoe's death. That Defoe lived at one time in Tooting is undoubted, although he died in Finsbury, and is buried in Bunhill Fields, in the City-road.

✧ ✧ ✧

The venerable German poet and dramatist known as "Robert Waldmuller," celebrated his eightieth birthday at Strehlen, near Dresden, on September 17th. He deserves recognition in these countries as the interpreter of Tennyson to the Germans. His translation of "Enoch Arden," published in 1867, has reached a thirty-fourth edition, while that of "In Memoriam," under the apt title of "Freundes-Klage," published ten years later, has seen five editions. His real name is Charles Edouard Duboc, and, though he is a German by birth, his family originally came from Havre.

✧ ✧ ✧

It is a pity, by the way, that Defoe is not more studied for the sake of his pure and undefiled English than he is, and it would be a happy circumstance if the sale of his house could be utilised to give a fresh impetus to the reading of his works. Gentlemen in search of a style—there seems to a great many of them just now—might do a great deal worse than turn to the pages of the man who could always say in plain words exactly what he meant, and who, without the help of any "fine" writing, managed to produce one of the greatest romances ever penned.

✧ ✧ ✧

In addition to the introduction to the facsimile of the Shakespeare First Folio, as originally designed for the first volume which the Clarendon Press is issuing, Mr. Sidney Lee has also drawn up a census of extant copies of the Folio. This census is to be issued with the volume in a separate cover, and will have an introduction of its own. In this Mr. Lee traces the pedigree of many historical copies of the Folio, and shows the gradations which the price has gone on increasing. In the census returns, which are arranged in four classes, particulars are given of the size, history, and present condition of all the copies which research has brought to light. More than a hundred copies have thus been minutely described for the first time, in addition to those familiar to bibliographers, either as belonging to well-known libraries, or as having figured in recent sales. A detailed index will accompany the census.

✧ ✧ ✧

Mr. Justin M'Carthy has at last completed the history of the reign of Queen Anne, on which he has latterly been engaged, and, the final proofs having been passed for Press, publication may be expected very shortly. This will extend the field of Mr. M'Carthy's historical work over a period of some 200 years, and with the "History of the Four Georges and William IV.—written in collaboration with his son—and his own now classical "History of Our Own Times," will form the chronicle of no fewer than seven reigns—those of Anne, the Four Georges, William IV., and Queen Victoria.

✧ ✧ ✧

"I have bought the 'Idler.'" Mr. Robert Barr told an interviewer the other day, "and I hope everyone else in England will do the same. It will cost you a simple sixpence; I paid a good deal more." He does not say how much, but otherwise his foreword about the new-old "Idler" is most informing. Editors, Mr. Barr reminds us, always recognise the commercial value of a list of established names. He hopes, therefore, to present his readers with articles and stories by Tom Smith, Dick Jones, and Harry Robinson, when these writers brace up and let him have something worth printing. The truth, he adds, is that he does not care a rap for a great name, and he would rather print a good story by the unknown Polly Perkins of Paddington than a poor yarn from the German Emperor of Berlin. On the other hand, he has no prejudice against a great name, but it is the man and woman of the future, the clever writer at present unknown, whom he is after.

"THIS IS MY BIRTHDAY."—SHAKESPEARE.

IVAN TURGENIEFF, October 4, 1818.

A Russian—a Russian of the Russians.—Kipling.

And yet how different is Toistoy.—Walkley.

The Russian tongue may fix facts in the mind.—Kipling.

No one will treat with indifference the principle of race.—Beaconsfield.

If the poor and humble toil that we have food, must not the high and glorious toil for him in return that he may have light, have guidance, freedom, immortality?—Carlyle

Zeal doth warrant the tenour of my book.—Shakespeare.

The Czar! Pooh! I slap my fingers.—Kipling.

An exile, O brave sir.—Shakespeare.

Let it be clearly understood that the Russian is a delightful person.—Kipling.

—The "Daily Chronicle."

✧ ✧ ✧

The entertaining exercise of "spotting" mistakes in the works of well-known authors is pursued with zest by the correspondents of "The Saturday Review." It is particularly interesting to hear of lapses from accuracy in the novels of Thackeray, whose knowledge of the world we live in, as distinct from that of the man of letters, was so extensive. Mr. F. F. Montague, however, finds him tripping in several cases in addition to those already referred to in this correspondence. He says:—

In "Pendennis" (Vol. 2, p. 267) he speaks of "Mahemet's soldiers cutting off the heads of all prisoners who would not acknowledge that there was but one prophet of God." Of course, Mahometans admit other prophets besides Mahomet [illegible]m, Noah, Abraham, Moses, and Christ—and Thackerary should have known this as he has read his "Decline and Fall" ("The Newcomes," vol. I., p. 47), where Gibbon deals with the matter in his usual manner of solemn sarcasm.

In his "Codlingsby" Thackeray burlesques Disraeli as translating Christchurch Meadows into Cambridge ("Burlesques," p. 20), but in "Vanity Fair" (vol. I., p. 374) Jim Crawley tells his cousin his troubles at the "little-go," while Jim was from Oxford (p. 370), and "little-go" is (I understand) "at the other shop," as Jim himself says in the same chapter of Senior Wranglers.

The smeller-out of inaccuracies thus proceeds to the following curious point:—

Chaplain Sampson could not have been lawfully arrested for debt ("The Virginians," p. 352) during his attendance on Divine service (as the law books say eundo morando et redeundo). An old bird such as he was would have probably known this much of the law, and would hardly have accepted the situation with the resigned remark, "At whose suit, Simons?"

The pedigree of Barry Lyndon's horse, "Bay Bulow, by Sophy Hardcastle out of Eclipse" ("Barry Lyndon," p. 232) would, I fancy, make "racing men" grin. In the argot of the turf a colt is described as by its sire out of its dam, and Thackeray's reversal of the usual order is certainly quaint.

✧ ✧ ✧

This autumn Messrs. Smith, Elder and Co. will publish "Matthew Arnold's Note-books," with a preface by his daughter, the Hon. Mrs. Wodehouse. The originals are the slender work-a-day note-books which Matthew Arnold carried in his pocket, not only using them to jot down accounts, engagements, examination notes for his official visitations as School Inspector, and lists of books to read in the current year, but also filling the blank spaces with citations from authors he had been reading—citations curiously characteristic of the man and his work. The present publication does not draw upon all the material, which ranges from 1852 to 1888, the year of Arnold's death, but gives the literary entries of every fifth year. These passages are printed in the form and order of the original, repetitions only in the same year being omitted. Thus the little volume is at once compendious and characteristic, and ought to appeal to the many admirers of Arnold, both as a revelation of his thoughts and methods, and as the last work which can be associated with his name.

✧ ✧ ✧

A Paris correspondent of the "Athenæum" sends the following:—I learn from authorised sources that the Vatican after long negotiations has succeeded in buying the Barberini collections for the very moderate price of half a million lire (£20,000). This, of course, does not include the famous picture gallery, a single picture of which—for instance, the Albert Durer or the Guido Reni—would fetch easily £6,000. The collection of antiquities contains some remarkable inscriptions, and a unique collection of engraved bronze cists found at Palestrina (Prænestе) on the extensive lands belonging to the Barberini family. Two years ago Prince Barberini sold to the Louvre for 6,000 francs (£240) a fine Roman ivory panel. The library is one of the finest in Rome. So far as I could ascertain in 1900 from an inconvenient manuscript catalogue, the 60,000 printed books are valuable and well chosen. The collection of MSS. numbers over 8,000 volumes, and contains priceless treasures, such as autograph letters of Bembo and Galileo; a Latin translation of Plato, with marginal notes by Tasso and his father; 400 letters from Peiresc to Cardinal Francesco Barberini; books annotated by Manutius the younger and Scaliger, etc. The Greek and Latin MSS. are also very remarkable, and contain interesting palimpsests. The collection of historical documents made for Cardinal Fr. Barberini by Grimaldi, Aleandre, Holstenius, Suaresius, Doni, and others are of great importance for the history of Roman archæology in the beginning of the seventeenth century; they contain, for instance, several thousand Latin inscriptions. I also noticed a fine series of Armenian MSS. The MSS. have all been classed and catalogued by a learned priest named Pieralisi, who is still alive, though now very old. The library is only open once a week, on Thursdays from 9 to 3. The Vatican will be universally congratulated in this important addition to its already unrivalled collections.

SCIENTIFIC TOPICS.

What is said to be the largest and heaviest anchor ever made was recently forged at the Charlestown, Mass., Navy Yard. It weighs over eight tons and cost nearly £400. It is fifteen feet long over all, and 9 feet 6 inches wide over the points. The palms are 32 inches wide. The cable for this anchor is unique also, as regards weight, each link weighing 60 pounds; 360 fathoms (2,160 feet) of it are to be supplied.

✧ ✧ ✧

It has been announced that Ernest Ruhmer, of Berlin, has succeeded in carrying on a telephonic conversation, the impulses having been transmitted along a ray of light. The facility of a light beam to carry sound was first discovered by Alexander Graham Bell, the inventor of the telephone, while he was at work on some features of the telephone, over twenty years ago. He abandoned experiments on this line, as the discovery seemed to have little or no practical value.

✧ ✧ ✧

A great deal is done in Norway to improve and preserve the provisions produced in the country, and to procure a market for them abroad. The fisheries represent one of Norway's chief industries, and quantities of fish are sold at very low rates, particularly during summer. One way in which these are utilised is by means of an invention which quickly dries and pulverises the flesh of fresh fish. The resulting product, called fish flour, is easy to transport from one place to another, and has great nutritive value.

✧ ✧ ✧

Over fifty species of fish never before known to scientists were discovered by the United States Fish Commission steamer in the Hawaiian waters. Most of the specimens were hauled from depths to which the light of the sun can never penetrate. Still the fish were equipped with eyes, from which the scientists of the party inferred that they saw by phosphorescence. At a depth of 1,500 fathoms a rare specimen only four inches long was captured.

✧ ✧ ✧

The American Park and Outdoor Art Association has compiled some interesting statistics which show what great strides have been made in improving the appearance of the large cities of the United States. Fifty years ago no municipality in the United States had reserved a single acre of land for park purposes. Last year there were in cities of more than fifty thousand population 2,360 parks and squares with a total area of 59,717 acres, the valuation being £106,314,390. In the entire United States there are about 75,000 acres of park land, for the improvement and maintenance of which at least £2,200,000 are spent annually.

✧ ✧ ✧

A power plant is now in operation utilising the water from the Cauvery Falls of India. The current is being carried ninety miles away, and there made use of in gold mining. The difficulties attending the erection of this plant and the transmission line were enormous, nearly all of the material being conveyed to the point by trained elephants or on the backs of mules and bulls. A path had to be cut through a jungle, infested by fierce animals, serpents, and dangerous insects. One of the most serious difficulties to overcome, notwithstanding these terrors, was the superstitions of the natives, who regarded the river as sacred, and with great difficulty could be induced to work on the project.

✧ ✧ ✧

The electro-chemical industry of the United States has grown up since 1890. But its growth has been rapid in that decade, indeed, so rapid as to make serious inroads on the older processes. As an example of this movement may be cited the electric production of calcium bisulphide. The substance is made by one of the most ingenious chemical applications of electricity. The process in question is the invention of Edward R. Taylor, and was put in operation in 1900. The process is continuous, the current being regulated either by the amount of conductive carbon introduced into the furnace or by reducing the working surface of the electrodes by partially submerging them in the molten sulphur.

✧ ✧ ✧

A comprehensive estimate of the amount of sand removed from the estuary of the River Mersey at Liverpool to maintain an open channel for the largest American liners is afforded by the last annual report of the Mersey Dock Board engineers, which shows that 28,000,000 tons of sand have been removed by dredging from the Mersey River, and 35,000,000 tons from the estuary channels since the operations were commenced, ten years ago. During the past year 27,000 cubic yards of material were dredged in the vicinity of the new river entrances to the deep-water docks. A much larger amount of general engineering work has been carried out in the docks during 1901 than during any previous year, the expenditure for the twelve months being nearly £1,500,000.

✧ ✧ ✧

Professor J. B. Harrison, Government geologist at Georgetown, states that diamonds have been found in three districts of British Guiana—in the north on the upper waters of the Barima River, on the Barima River about Ianna, some 60 miles to the south-east, and in the Upper Mazaruni basin, in a district which, so far as geological indications go, may extend over the tract of country between the head-waters of the Mazaruni and Peruni rivers, though up to now all discoveries have been made about the basin of the Putareng River. There is also the Omai district on the Potaro, a tributary of the Esequibo River, which lies in a southerly direction from Georgetown. This wide diffusion of the gem shows that the chances of enlarging the area in which it may be mined are favourable. The diggings at present are confined to the Putareng and Potaro districts. There are a dozen companies either mining or prospecting in the first-named district, and others are being formed.

✧ ✧ ✧

The Government of New South Wales has received tenders for the new huge bridge that has been designed to span the harbour of Sydney, and which when completed will rank as one of the finest bridges in the world. The structure is to be 3,000 feet in length, not including approaches, and the latter are not considered in the estimates for the bridge itself. The tenders, which are as follow, are remarkable for their variation:—Joseph Bentley, Leeds, England, £7,720,474; Alexander Findlay and Co., Motherwell, Scotland, three tenders, ranging from £1,523,837 to £1,661,865, William Arrol and Co., and Head Wrightson and Co., £1,711,688; the Cleveland Bridge and Engineering Company, Darlington, England, £1,794,118; Compagnie de Fives, Lille, France, £3,050,750; E. and C. Bridge Company, England, three tenders ranging from £1,666,000 to £1,943,875; J. Stewart and Co., Sydney, six tenders ranging from £1,112,859 to £1,933,194; Gilbert Weaver, Sydney, £1,775,207; Heaning and Hildebrand, New York, £2,000,000.

✧ ✧ ✧

The recently launched seven-masted schooner Thomas H. Lawson will probably receive the most remarkable canvas equipment ever prepared. Eighty-three thousand square feet of duck will be used. Of this quantity, 43,000 square feet will be employed for the twenty-five sails of the vessel, while the rest will be utilised for sail covers and awnings. Three tons of pure manila beltrope made from special stock have been used in making the ropes. When it is considered that the sails will be subjected to an enormous strain, it becomes evident that special precautions were taken in designing particularly strong fastening devices. The thimbles are retained in place by wire cringles instead of sewn tar rope. The clew rings are said to be unusually large and heavy. Eight thicknesses of heavy duck were put into the clew patches at the corners of the sails.

✧ ✧ ✧

The utilisation of petroleum for fuel and other commercial purposes is being more widely adopted, comparatively speaking, in the little European State of Roumania than in many other larger and more important countries. Nearly all the sugar mills, distilleries, gas works, hospitals, and manufactories in Roumania now use petroleum refuse as fuel, as well as the State railway, upon which it is employed largely for the locomotives. During the last two years the price of British coal, which was formerly almost exclusively used in the manufactories, has mounted to about £2 per ton,. Considering that the heating effect of petroleum residue is about one and a half times that of coal, and taking the price of coal at £2 per ton, the comparative value of petroleum residue is equivalent to £3 a ton. The average price of residuum, however, is about £1 12s, and crude petroleum £1 8s per ton. It is proposed to hold a Petroleum Congress at Bucharest in 1903. Before this Congress will be laid geological maps of Roumania, showing the petroliferous zones, worked and unworked; maps showing the salt, lignite, coal, and quarries existing in the country; tables explaining the growth and development of the petroleum industry, a series of geological sections of the most important works and soundings, analyses of the chemical and industrial properties of the petroleum, photographs of the chief refineries and workshops, a series of geological sections of the valleys, plans of injectors in service for the use of petroleum as a combustible as employed by the Roumanian State railways and navigation societies, and a map showing the geographical position of Roumania in regard to other countries, buyers of petroleum, the means and cost of transport, besides other matters of importance bearing on the subject of petroleum.

✧ ✧ ✧

The British Government is carrying out the first complete geodetic survey of South Africa. According to the recent report issued by the Royal Astronomer at the Cape, the geodetic arc of meridian has been carried to the Zambesi. The country near the Zambesi Valley has proved the most difficult for surveying. The observing season is a very short one, as transport from Salisbury cannot begin until the rain ceases in March. In many places grass 6 feet in height was encountered, and as the natives commenced to burn it in July, the smoke caused a cessation in the work, as it was impossible to carry on the observations under such conditions. In the past season's work progress was most seriously delayed by difficulty in procuring oxen for transport. The original plan was that the reconnaissance and beaconing parties should start some weeks in advance of the observing party, but this became impossible because of the delay in transport equipment. Heavy clearing work and ray-cutting had to be done in some places, and progress in reconnaissance and beaconing could not be made to keep pace with the observing. At the more Northern stations first the waggons and the carts had to be abandoned, and all transport had to be done by native carriers. As the result of these delays, two, perhaps three, of the stations south of the Zambesi yet require to be occupied with the geodetic theodolite. In the interval between the work of the last two seasons the wires used in measuring the base near Salisbury were recompared at the Royal Observatory, the measurement of the angles from the Salisbury base to the main triangulations was completed, and signals were exchanged for longitude of Salisbury. The operations northward from the Zambesi will involve an entirely new departure. Observers and supplies will be landed at Chinde and carried up the Zambesi beyond Zumbo, when transport by native carriers will be organised.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

DUBLIN, WEDNESDAY, MAY 30, 1787.

The respectable appearance of our Volunteers, at the annual review last Monday, is a proof that the people do not think a slight intermission of husbandry and manufacture of the least detriment to the public good, when a prudent and necessary regard for both is involved in their unanimity and perseverance in that glorious cause, which, under God, was the original of their declared right of free trade and constitutional independence. The Volunteers can surely never forget that most true of all political maxims, that power and liberty are only secured by the same means by which they were obtained; they must reflect with horror on the difficulties to which they might be exposed by a dereliction of their establishment; they will, therefore, keep their arms bright, improve in discipline, and show themselves in constitutional force as often as business will permit.

The House of Lords, like the House of Commons, was on Monday shut against all strangers, and no one admitted even below the bar. The reason of this regulation is said to prevent those crowds from entering, which were formerly so great as to be in some degree an encroachment upon order.

Four debtors were yesterday committed to Newgate, in consequence of a riot and attempt to escape on the preceding evening from the City Marshalsea.

The Church-Wardens of St. Bride's, on behalf of the poor widows in the Alms-house of that parish, return their sincere thanks to Mr. Sheriff Fleming for a leg of mutton, a breast of veal, five plaices, three pound of butter, and eight 4-penny loaves, which that active magistrate seized on Saturday last.

DUBLIN, WEDNESDAY, JUNE 1,

Yesterday morning his Grace the Duke of Rutland set off on a party of pleasure to Lambay, attended by several gentlemen.

Owing to the large orders for horses from the Continent, and the promise of an approaching plentiful year of hay, cattle were never known so dear in this kingdom as at the fair of Fieldstown on Monday last, common car horses bringing from £15 to £20 each.

Yesterday two young gentlemen who were shooting in the gardens of Mr. Reilly, of Drumcondra, being remonstrated with on account of their doing much injury to the crop, one of them called to the other to fire at Mr. Reilly, which he directly complied with, and not only wounded Mr. Reilly but his son also very dangerously. One of the party was soon after taken and committed to Kilmainham by Justice Graham; the other, however, effected his escape, after making several efforts to rescue his companion.

The combination now existing among the journeymen hosiers is likely to be productive of some inconvenience to the masters of that branch; several of whom being obnoxious to the men, are in continual danger from the treats and menaces perpetually sent them; and, indeed, they seem determined to put those threats in execution, for one night this week, a number of those deluded people set fire to the shop of an eminent hosier on Ormond quay; the front door, the counter, and great part of the floor and partition were burnt before the discovery was made; it was at length happily put a stop to without any other damage; and Wednesday several of the combinators were taken by the Police and committed to the New Prison, which, it is hoped will deter any others from the like practices in future.

We feel a peculiar pleasure in acquainting the public that the health of Mr. O'Neill's (of Shanescastle) lady has been reinstated. Amiable in private and beneficent in public life, her recovery must afford general satisfaction, and her return to this country will bring along with it blessings and comfort to the poor in her neighbourhood.

COUNTRY NEWS.

CORK, MAY 28.

On Wednesday, the 23rd inst., William Murry was apprehended by Rowland Sharp, Peace-officer, for robbing the late Sir John Conway Colthurst's factory, at Ardrum, in this county, of four pair of cards, value six shillings, and for attempting to steal fourteen pounds of cotton; he was committed to the county jail by Jos. Capel, Esq. And on this day, Mr. Sharp also apprehended Robert Bouce, of Glinney, blacksmith, on a capias, for highway robbery, and lodged him in the county jail.

DUBLIN, SATURDAY, JUNE 2.

By accounts from the Northern parts of the kingdom, we find that the spirited manufacturers of that province are preparing to send large quantities of the middle-priced linens to the ports of France, from an almost certain hope, nay, an absolute confidence, of finding a ready and advantageous sale for that species of our staple manufacture. It must, indeed, afford satisfaction to every real well-wisher of the true interest of his country to reflect that such a spirit already pervades our manufacturers; wrich patriotic example will no doubt spread in a short time through the whole kingdom, the beneficial and salutary effects of which will be very soon most sensibly experienced by all orders and ranks of the people.

Wednesday morning last the daughter of an eminent shopkeeper near the Hay Market, about five years old, being sent with a nosegay to a neighbour a few doors off, was trepanned by one of those numerous female kidnappers who infest this city, and would have been carried away, if a sedan chairman who knew the child and hearing her cries, had not flown to her rescue. The woman attempted to escape, but the populace, whose active zeal need not be doubted on such occasions, took the business into their own hands, and tying a rope under her arms, dragged her to the river, where she received a severe ducking before they suffered her to depart.

This morning one Walsh, who had been charged with robbery, and was locked up in St. Andrew's Watch-house, made his escape by breaking through the roof.

By a letter from Clonegall, dated May 28, we learn that on the night before, about the hour of eleven o'clock, as Mr. Simon Lacy was going home in company with two lads, his cousins, he was waylaid by Wm. Farrell and Lawrence Farrell, both of Clonegall, brothers; the former was armed with an iron bar, the latter with a bayonet fixed in a pole. Mr. Lacy had no idea of such a plot being laid against his life and was unarmed, as were also his cousins. As soon as he approached one of the assassins, Lawrence Farrell, made a stab of the bayonet at his neck, but he perceived his design, opposed his arm to the weapon, and received in it a most desperate wound. Wm. Farrell immediately advanced and made a blow of the iron bar at him, which he fortunately escaped, and calling on his cousins to save themselves by flight, he ran off. The savage barbarians then fell on his cousins, one of whom received a dangerous wound in the thigh, but providentially preserved his life by concealing himself under a hedge; the other, less fortunate, a boy not quite 14 years of age (son to the late Mr. John Codd, Clonegall), they seized, and vented on him all their vengeance. One of the villains broke his skull with the iron bar, and the other drove the bayonet through his temple. Having left him for dead and weltering in blood, the inhuman monsters immediately fled the town, and have not since been heard off.

The man who was shot in Smithfield is not dead; but Strong and Darby, the two bailiffs-setters who had seized him, are confined in the New Prison to await the issue of their trial.

Previous to the late attempt to fire Mr. Potter's shop, some of his journeymen sent home ten stocking-frames, and refused to work for him under certain rates, as did the journeymen of many other employers the same. On Thursday the combinators had a meeting in a field near Crumlin, to consult on the further progress of mischief.

The fellow who had made his escape from the cart at the time the convicts were sending off from the jail for transportation, was committed to the New Jail for a robbery he attempted on the Lots leading to Ringsend; and a boy of about 15 years of age that had been turned out of the dock on Friday last, for want of evidence, was again committed to prison for an attempt to pick a gentleman's pocket in Capel street.

A dispute having arisen on Tuesday evening last between two persons of the names of M'Gowran and Law, prisoners in the New Jail, they agreed to box, and instantly carried their purpose into execution, when the former was killed on the spot.

COUNTRY NEWS.

CORK, MAY 26.

On Saturday last the Right Worshipful Samuel Rowland, Esq., Mayor of our city, accompanied by the High Sheriffs, Aldermen, Common-Speaker, Burgesses, etc., etc., waited on the Right Hon. Hugh Carleton, Lord Chief Justice of his Majesty's Court of Common Pleas, and Recorder of our city, to congratulate him on his arrival here, and on his late appointment, when the Right Worshipful the Mayor addressed him in the following manner:—

"My Lord Chief Justice.—Peculiar circumstances of very allowable delicacy preventing the Deputy-Recorder from attending in his place, the pleasing task devolves on me to express on behalf of the Corporation, now assembled, their very sincere congratulations on your advancement to the high appointment of Lord Chief Justice; a station which, as you have atttained solely by your own merits and professional abilities, must consequently reflect an high honour on our city, and from your upright discharge of your duties, I am happy to say the public will derive the greatest benefits."

To which the Lord Chief Justice replied:—

"That he was most highly flattered by the Mayor's address, expressive of his and the Corporation's approbation of him; and hoped to conduct himself in the office to which his Majesty had been pleased to appoint him, in such a manner as to merit a continuance of their favourable opinion."

DUBLIN, MONDAY, JUNE 4.

His Majesty has been pleased to appoint James Arboin, Esq. son-in-law to Mr. Paul Seguin, late of this city, merchant), Consul-General for the kingdom of Great Britain and Ireland at Bordeaux.

(To be Continued.)

RATES OF SUBSCRIPTION.

"DUBLIN PENNY JOURNAL."

Post free to any part of Ireland, Great Britain, Australia, New Zealand, Canada, United States.

Twelve months, 6s 6d; Six months, 3s 3d; Three months 1s 8d.

Printed and published for the proprietors at 90 Middle Abbey street, Dublin, by W. F. Dennehy, to whom all cheques and money orders should be made payable.

Dublin Penny Journal

A Magazine of Art, Archæology, Literature, and Science

Vol. I., No. 30. DUBLIN: SATURDAY, OCTOBER 25, 1902. PRICE ONE PENNY.

THOMASTOWN MONASTERY, CO. KILKENNY.

FROM GROSE'S "ANTIQUITIES OF IRELAND," 1791.

The following description of the historic edifice depicted above is taken from Grose's "Antiquities of Ireland," 1791:—

Thomastown is a very ancient town, being built by Thomas Fitz Anthony, who accompanied Henry II. in his Irish expedition. It is in the barony of Gowran on the river Nore, and eight miles from Kilkenny. There are no indisputable documents to assure us that a Dominican monastery was erected here, and yet Burke, the histriographer of that order, has adduced some evidence not destitute of probabilty. He says that in the year 1720 there was a meeting in Dublin of the fathers definitors of the order. Edmund Burke, Peter M'Dermot, Patrick Diamond, and Stephen M'Egan, where Thomastown is expressly mentioned as wanting a superior to superintend the Dominican convent there. He adds, that at a general meeting of the order at Rome, A.D. 1656, the Irish Dominican convents amounted to forty-three from which if Thomastown was deducted there would be but forty-two.

The present church is part of the old monastery; in the ruins of the latter is a large tombstone, which tradition says covers the body of a giant.

This view was taken from an original drawing by J. G. Brien, in the collection of the Right Hon. William Conyngham.

The following additional particulars regarding Thomastown Monastery are given

in the "Parliamentary Gazetteer of Ireland," 1844:—

"We are informed by Mr. Archdall," says Mr. Brewer, "that, according to tradition, there was a Dominican convent at this place, concerning which foundation the reverend author of the Monasticon could not find any authentic account. This page of the Monasticon, as is observed in the manuscripts of the Chevalier De Montmorency, is of a very surprising character, since Mr. Archdall must have had before him the authority of Dr. Burke, Bishop of Ossory (Hiber. Dominicana, p. 337), exhibiting the fact of such an institution at Thomastown. But, if lettered information were not sufficient, a visit to the place in question could not have failed to move the scepticism of this author. The ruins of the abbey comprise five beautiful pointed arches, forming one side-aisle, together with several windows. The chancel constitutes the present church, and is far from being an inelegant specimen of the pointed style of design. The pillars are quadruple, each capital varying from the other in its ornamental particulars. The door is of a correspondent likeness with the arches, and more than usually lofty. The west window is of the narrow style that prevailed in the time of Henry III. Beneath the building is a crypt or subterranean chapel. There are many sepulchral monuments among the remains of the abbey, including the part now used as a parochial church. Several of these are of the 16th and 17th centuries; but such as bear any pretensions to antiquity are so shamefully mutilated that they could not be described without great difficulty and labour. The most curious monumental relic consists of the figure of a man, represented in gigantic proportions. This figure was dug from the ruins of the abbey church, and is believed to have formed part of an ancient tomb belonging to the family of Denne of Grenane, in the vicinity of Thomastown. Several of the monumental stones appear to have commemorated priors or superiors of the convent.

THE WANDERER.

(From the Spanish of Samaniego. By M. G.)

Oh distant Spain, my fatherland,
Can I e'er forget the time
I wandered 'neath the sunny clime,
Along the glorious Ebro's strand?
Fair land, where figs and almonds grow,
Land where abounds the luscious grape,
Where hangs the citron's tempting shape,
And in the sunlight roses grow!

Afar I wander with my lute,
From house to house, in search of alms,
For bread to still my hunger's qualms;
Yet no one heeds my prayers mute.
How cold they scan me, and how sad,
Not one kind word to cheer my heart;
But blows and scoffs become the part
Of the famished Gypsy lad.

See, dark clouds gather o'er the sun,
And hide it from my yearning view,
Alas, my heart they darken too,
And cause my tears afresh to run.
The merry songs my mother taught
Before she died, I sing no more.
Oh, God, to see my native shore—
This is my prayer, my constant thought!

Ancient Boroughs of Ireland

From Lewis's "Topographical Dictionary of Ireland," 1837.

CARRICKFERGUS.

CARRICKFERGUS, a seaport, borough, market and post-town, and parish, and a county of itself, locally in the county of Antrim, of which it was the ancient capital and is still the county town, 88 miles (N.) from Dublin, containing 8,706 inhabitants. This place, which is of great antiquity, is by some writers identified with the ancient "Dun-Sobarky" or "Dun-Sobairchia," according to Dr. Charles O'Connor from a prince named Sobairchieus, who made it his residence; but the correctness of this supposition is doubted by others. It is thought to have derived its present name, signifying "The Rock of Fergus," early in the 4th century, from Fergus Mac Erch, a chieftain of Dalaradia, who established the first Irish settlement on the opposite coast of Caledonia. An ancient triad quoted by Dr. O'Conor, records that St. Patrick blessed a tower or stronghold of the Dalaradians, in which was a well of miraculous efficacy, called "Tipra Phadruic," "The Well of St. Patrick." It is uncertain at what period the castle was originally erected; the present structure, from the style of its architecture, was evidently built soon after the arrival of the English. John, Earl of Morton and Lord of Ireland, was here in the lifetime of his father, Hen. II. (from whom John De Courcy received the grant of all the lands he might conquer in Ulster); and his despatch to the King, dated at Carrickfergus, in which he mentions his having taken the castle, is still extant among the manuscripts in the library of Trinity College, Dublin, and is written in Latin. This castle, with subsequent additions, is still remaining, and is justly considered one of the noblest fortresses of that time now existing in Ireland. De Courcy having fallen into disgrace with the succeeding English monarchs, his castles and possessions in this county fell into the hands of the De Lacy family, who, becoming tyrannical and oppressive, incurred the anger of King John. During the contentions which arose among the English settlers, after they had established themselves in the country, this place suffered so much that Hugh de Lacy the younger, who, on the restoration of his family to the royal favour, repaired the town and strengthened it by the introduction of new settlers, has even been regarded as its founder. In 1234 Carrickfergus is mentioned as one of the haven towns of Ulster; but from that period till shortly after the commencement of the 14th century, little of its history is known. The De Lacys, again becoming obnoxious to the English monarch, and the Lord-Justice Mortimer being sent against them with a considerable force, they made their escape into Scotland, and invited Edward Bruce, the brother of the Scottish monarch, to invade the country, and become their king. Accordingly, in 1315, Bruce embarked 6,000 men at Ayr, and, accompanied by the De Lacys and several of the Scottish nobility, landed at Wolderfirth, now Olderfleet, where, being joined by numbers of the Irish chieftains, he routed Richard de Burgo, now Earl of Ulster, who had been sent against him; and having slain several of the English nobles and taken many of them prisoners, advanced to lay siege to the castle of this place. During the siege, Thomas, Lord Mandeville, who commanded the garrison, made a sally on the assailants, whom he repulsed at the first onset; but, being recognised by the richness of his armour, he was felled to the ground by the blow of a battle-axe and instantly killed. The garrison, disheartened by the loss of their commander, agreed to surrender the castle within a limited time, and on the appointed day, 30 of the Scottish forces advancing to take possession, were seized as prisoners, the garrison declaring that they would defend the place to the last; but for want of provisions they were soon obliged to surrender. Bruce, having secured Carrickfergus, advanced to Dublin, and arrived at Castleknock, within four miles of the city; but finding the citizens prepared for his reception, he entered the county of Kildare, and advanced towards Limerick, laying waste the country with fire and sword; on his retreating towards the north, he was attacked near Dundalk by Sir John Bermingham, who defeated the Scottish forces and killed their leader. King Robert Bruce arrived soon after with a strong reinforcement, but on learning the fate of his brother, returned to his own dominions, and thus terminated an enterprise which had thrown the country into a state of unprecedented desolation.

After the evacuation of the country by the Scots, Carrickfergus again reverted to its former possessors; but the desultory warfare carried on at intervals for successive ages in the north of Ireland, during which its strength and situation rendered it the centre of operations, subjected it to many severe calamities. In 1333, William, Earl of Ulster, was assassinated here by his own servants; and his countess, with her infant daughter, fleeing into England, the O'Nials, the original lords of the soil, immediately succeeded in expelling the English settlers, and for a time retained possession of the place. In 1386 the town was burned by the Scots; and in 1400 it was again destroyed by the combined forces of the Scots and Irish. In 1481 a commission was granted to the mayor and others, to enter into a league with the Earl of Ross, Lord of the Isles, who had usurped the sovereignty of the Hebrides from the Scottish crown. In 1497 the town and neighbourhood were visited by famine; and in 1504 it was resolved that none but an Englishman should be entrusted with the custody of its castle, or with that of Green Castle, in the county of Down. The town continued for many years to be a stronghold of the English, and even when the English Government was so reduced as to be scarcely able to maintain a standing army of 140 horse within the English pale, the castle still remained in their possession. In 1573 the corporation addressed a remonstrance to

the Lord-Deputy Fitzwilliam, representing that one-third of the town was then in ruins; and, in the summer of the same year, it was still further desolated by fire. In this state it remained for many years, though the Earl of Essex landed here with his train, on taking possession of the government of Ulster, to which he had been appointed; and though Sir Henry Sidney, the succeeding lord-deputy, gave the English council a forcible representation of its deplorable condition, in the account of his northern expedition, two years afterwards. The particular events by which it was reduced to this state of desolation are detailed in a "Discourse of Knockfergus," preserved among the Cottonian manuscripts in the British Museum, in which its calamities are ascribed to an early quarrel with Bryan Balloughe, chieftain of the adjoining territory of Claneboy, whose son and successor continued to harass the inhabitants till they were compelled to purchase peace by consenting to pay an annual tribute; to the repeated devastating incursions of the Scots; to the continued depradations of the O'Nials and Mac Donnels, and to various other causes. The Lord-Deputy, Sir Henry Sidney, made great efforts for the improvement and security of the town, but so greatly were the resources of the townsmen reduced that, in 1581, Lord Grey, then deputy, found it necessary to issue an express edict prohibiting them from paying to the Irish lord of the country the tribute hitherto paid to the successors of Bryan Balloughe, and called, in that document, "Breyne Balaf's Eric."

The extensive privileges enjoyed by the inhabitants of this place, and the protection afforded by new fortifications, soon caused an increase in its population and importance. On the breaking out of the war in 1641, Sir Henry Mac Neill was to have surprised the town, but was defeated by the vigilance of Col. Arthur Chichester, the governor; and it now became one of the principal places of refuge for the Protestants of the neighbouring counties. In 1642, the town and castle were, according to agreement, delivered up to General Monroe, who, having landed with 2,500 Scottish auxiliaries, to carry on the war against the Irish, made this place his headquarters till 1648, when he was taken by surprise in the castle, and sent prisoner to England by General Monk, who was, by the Parliament, appointed Governor in his place, and awarded with a gratuity of £500; and in the year following, the castle, which had been surrendered to the Earl of Inchiquin, was reduced for Cromwell by Sir Charles Coote. In 1666, the garrison mutinied, seized the castle and the town, and acted with such desperate resolution that the Government, alarmed at their excesses, sent the Earl of Arran, son of the Duke of Ormonde, by sea, to reduce them; and the latter nobleman marching also against them with the few forces on whose fidelity he could rely, the mutineers, after some resistance, surrendered; 110 of them were tried by court-martial, of whom nine were executed, and the companies to which they belonged were disbanded. In the early part of 1689, an attempt was made by the Protestant inhabitants of the neighbourhood to take this fortress, which was then held by the troops of Jas. II., but without success; in the course of the year, however, Schomberg, William's general, invested it with a large force, and the garrison, after having exhausted all their ammunition, surrendered. In 1690, William III. landed here to take the command of his army; and from this time the town was undistinguished by any historical event till the year 1760, when it was attacked by the French, under the command of Thurot. The gates were quickly closed, and though General Flobert, who led the assault, was wounded, the garrison, consisting only of one hundred men, was soon obliged to capitulate for want of ammunition. The country people, however, supported by reinforcements from the interior, rose on all sides to repel the assailants; and on the approach of an English squadron, which had been despatched on the first intelligence of the projected invasion, the French, after supplying themselves with provisions and water, hastily reembarked, taking with them three of the principal inhabitants, who were afterwards found on board the commander's ship, when she struck to the English off the Isle of Man. In 1778 the celebrated Paul Jones appeared off the town, but did not land, contenting himself with the capture of an armed vessel that had been sent to attack him. In 1785, his present Majesty, when lieutenant on board the ship of Commodore Gower, arrived in the bay; on which occasion the Carrickfergus volunteers solicited the honour of forming a bodyguard for his Royal Highness, which was courteously declined.

The town is situated on the north-western shore of Carrickfergus Bay, or Belfast Lough, along which it extends for nearly a mile, comprising three portions, the town within the walls, and two suburbs called respectively the Irish and the Scottish quarters, the former situated to the west, along the road leading to Belfast, and the latter to the north-east, along the road to Larne and Island Magee, and inhabited by the descendants of a colony of fishermen from Argyle and Galloway, who took refuge here from the persecutions of 1665. The town within the walls was formerly entered by four gates, of which only the remains of the North, or Spittal gate, now exist; of the walls there is yet a considerable portion on the north and west sides in a very perfect state. The castle, which is in good preservation, and during the disturbances of 1798 was used as a state prison, is situated on a rock projecting boldly into the sea, by which it is surrounded on three sides at high water; this rock is 30 feet in height at its southern extremity, and declines considerably towards the land; the outer walls of the castle are adapted to the irregularities of its surface; and the entrance is defended by two semicircular towers, with a portcullis and machicolation above. In the interior are barracks for the reception of two companies of foot and a few artillerymen. The keep is a square tower 90 feet high, the lower part of which is bomb-proof, and is used as a magazine: in the third storey is an apartment 40 feet long, 38 feet wide, and 26 feet high, called Fergus's dining-room. The well in this tower, anciently celebrated for its miraculous efficacy, is now nearly filled up; a quantity of old iron was taken out of it many years since, from which it may have derived its medicinal properties. The castle was formerly governed by a constable, who had very extensive powers.

The incorporation of the town as a county of itself is ascribed by tradition to King John; the shrievalty was held jointly with that of the county of Antrim. But although it existed as a separate county long prior to the time of Elizabeth, the charter of the 11th of her reign is the earliest on record containing such incorporation. Its boundaries are described in this charter and in one of the 7th of Jas. I., with a reservation of the castle and its precincts, together with the ancient liberties and royalties appertaining to it, and of sites for a session-house and prison for the county of Antrim; but the latter charter excluded from the county of the town certain lands which had been granted and confirmed to the corporation by charter of the 44th of Elizabeth. The franchise now acknowledged is stated to differ from both, and to be in conformity with a riding of the franchises made by the corporation in 1785. In 1810 it was decided, on an issue tried at the assizes, that the lands of Straid and Little Ballymena, described by the charter of Elizabeth as being within the boundary, but not within that marked out by the charter of James, though still belonging to the corporation, are not within the franchise. This is probably a borough by prescription: the earliest notice of the existence of a corporation is in the record of a commission dated 1274, in which year the Scots landed on the neighbouring coast to assist the O'Neills against the English. Hen. IV., in 1402, on the petition of the mayor and three burgesses, released them, for one year, from the payment of the annual rent of 100s. for the customs, to aid them in rebuilding the town, which had been burned by his enemies. Queen Elizabeth, in the 11th of her reign (1569), on a representation of the inhabitants that had lost their letters patent in the disturbances and persecutions of rebels and enemies, by which they were deprived of the enjoyment of their franchises, granted a charter of incorporation conferring on them, besides several special immunities, all such other privileges and jurisdictions as the corporation of Drogheda possessed; and ordaining that they should hold the borough of the King, as of his castle of Knockfergus, at an annual rent of 10s., payable half-yearly, until the fortifications should be repaired and a grant of lands made, and then at a rent of £40 per annum. The grant of lands was conferred by charter of the 44th of Elizabeth, founded on an inquisition issued to ascertain the quantity which had previously belonged to the corporation. James I., in addition to the charter of the 7th of his reign, before noticed, granted

others in the 10th and 20th, the former of which is now the governing charter, and the latter created fourteen persons and their successors a corporation, by the style of the "Mayor, Constables, and Society of the Merchants of the Staple." In the "new rules" of the 25th of Chas. II., for regulating corporations in Ireland, it was ordained that the appointment of the mayor, recorder, sheriffs, and town-clerk should be subject to the approbation of the Lord Lieutenant and Privy Council.

The corporation, under the style of "the Mayor, Sheriffs, Burgesses, and Commonalty of the Town of Carrickfergus," consists of the mayor (who is an alderman), 16 other aldermen, two sheriffs (who are burgesses), 22 other burgesses, and an indefinite number of freemen, assisted by a recorder and town-clerk (who is also clerk of the peace), two coroners, three town-serjeants, a water-bailiff, sword-bearer, and other officers. The charter of the 10th of Jas. I. granted a guild merchant within the town, and ordained that all the merchants should be a corporation, by the name of the "Two Masters and Fellows of the Guild Merchant of the Town of Knockfergus," the masters to be elected annually from and by the merchants of the guild, on the Monday after the Feast of St. Michael, with power to make by-laws and impose fines. The guilds now remaining are those of the Hammermen, Weavers, Carters, Tailors and Glovers, Butchers, Trawlers and Dredgers, Hookers, and Shoemakers or Cordwainers, incorporated at different periods; but their restrictive privileges in trade have been abandoned as impolitic or useless, and they are now kept up only in form. The charters of Elizabeth and James confirmed to this borough the right of sending two representatives to the Irish Parliament, which it continued to exercise till the Union, since which period it has returned one to the Imperial Parliament.

The mayor (as also his deputy or vice-mayor) is a justice of the peace within the town, and is further (without mention of the vice-mayor) constituted a justice of the peace throughout the county of the town, being empowered, with the recorder, to hold courts of session and gaol delivery: he is admiral of the liberties, which extend northward to Fair Head, and southward to Beerlooms, about 40 miles in each direction, with the exception only of Bangor and the Pool of Garmoyle; and may issue attachments against ships and cargoes, or against persons on board, for the recovery of debts wherever contracted: he is also a magistrate for the county of Antrim, and he or his deputy is judge of the Tholsel court; he is appointed "custos rotulorum" of the county of the town, and is escheator, master of the assays, and clerk of the market; and the charter empowers him to grant licences for ships coming to the port, upon entering, to buy or forestall merchandise, and also for the salting of hides, fish, &c.

The Franciscan monastery which formerly existed here was founded in 1232, and became of so much importance that, in 1282, a general chapter of the whole order was convoked here: it stood within the walls of the town, and its site is at present occupied by the gaol for the county of Antrim. Immediately to the west of the town was the Premonstratensian priory of Goodburn or Woodburn, on the western bank of that stream; it was dedicated to the Holy Cross, and its foundation is attributed to a member of the family of Bisset, which quitted Scotland about the year 1242, in consequence of the murder of the Duke of Athol. Adjoining the eastern suburb was the hospital of St. Bridget, said to have been founded for the reception of lepers; the lands adjoining the site are still called the Spital parks. To the north of the town, a well, now called Bridewell, marks the site of another hospital dedicated to St. Bridget. Several silver coins of the reign of Hen. II. have been found about the castle. There are numerous barrows or tumuli scattered over the face of the county of the town, of which some have been opened and found to contain rude urns, ashes, and human bones; the largest of these, which are chiefly sepulchral, is called "Duncrue," or the "fortress of blood." At Slieve-True is a cairn, 77 yards in circumference and 20 feet high; a little towards the west of the same mountain is another, of nearly equal dimensions; and about a mile to the north-east is a third, exactly similar. In several places are artificial caves, probably intended as places of concealment. At a place called the Friars' Rock are traces of small circular buildings, supposed to have been friars' cells; and about two miles north-west of the town are the ruins of two churches, called respectively Killyan, or Anne's Church, and Carnrawsy. Among the distinguished persons born here may be noticed Bishop Tennison, and Richard Kane, a general in the army of Wm. III.

(To be continued.)

TRY AGAIN.

BY C. A. S. DWIGHT.

If at first you do succeed,
Try again!
Life is more than just one deed;
Try again!
Never stop with what you've done,
More remains than you have won,
Full content's vouchsafed to none;
Try again!

If you've earned a bit of fame,
Try again!
Seek a still more honoured name,
Try again!
Sit not down with folded hands,
Cramp not hope with narrow bands!
Think what prowess life demands!
Try again!

If you've won on lower plane,
Try again!
Life is more than one campaign;
Try again!
Send your guidons to the fore,
Strive to seize one standard more,
Still ungained are palms galore:
Try again!

If at first you do succeed,
Try again!
For future harvests sow the seed,
Try again!
Rise with sacred discontent,
Realise that life is lent
On highest searches to be spent:
Try again!

OUR WEEKLY STORY

A FOOL'S PARADISE.

BY ETHEL GODDARD.

Alice Hillas sat in her dainty, costly, bric-a-brac boudoir, and she matched her surroundings to absolute perfection, for she was herself a dainty, costly, bric-a-brac woman. Jewels, charms, trinkets gave a motif of pretty inutility to her attire, just as Parisian trifles lavishly scattered gave her boudoir a look of dangerous fragility; and truth to tell, little Alice Hillas's life was quite in keeping with her boudoir and her attire, for useful she was not and could not be. She was petite, golden-haired, blue-eyed, very sweet, indeed, to the eye, but the delicately coloured face, the little cherry lips, the softly rounded chin were more suggestive of a Greuze child-face than of the countenance proper for a woman.

As Alice sat in her boudoir that morning the sweet blue eyes were red, which more than ever suggested the child face, the child intelligence.

When the door opened sharply Alice started, and when a tall, dark man, powerful in build but weakly handsome in face, came towards her, tears again welled to her eyes, and her lips trembled, though for ten minutes she had been schooling herself to bravery, because "Bert" did not like to see her cry. Tears were assuredly very far from Hubert Hillas's dark eyes, and it did not seem probable that his drooping moustache hid any effeminate trembling of the mouth when Alice, held in his arms, forgot all thought of bravery and cried with childish abandonment.

"Bert—Bert," she gasped between her sobs. "I can't bear to let you go away from me to this horrible war."

Her husband was furtively glancing over the little golden head at the china clock on the mantelpiece; he was evidently hurried; he was also evidently bored.

"Alice, little girl," he said, "cheer up now, you mustn't give way like this. Look here, dearie, I have something for you, just let me get at my pocket. Now see here, it is a miniature of me. I thought you would like to have it. It isn't bad either."

"Oh, Bert, Bert, dear, it was good of you. I will kiss it every night, and think of you, I shall be so lonely. Promise me, Bert that you will kiss my photograph before you go to sleep; promise me, dear."

"Yes, girlie, yes. Now I must go; look at the clock. One kiss. Now cheer up, little one." He was gone, and Alice was left to cry alone.

Upstairs a discreet housemaid, engaged in tidying "Master's things," locked into a secret place a photograph of a dainty little Greuze lady in evening dress, "for" the discreet housemaid said to herself, "if mistress was to find that master had forgotten her photograph she'd cry her eyes out, and no mistake."

Meanwhile Hillas, the hurried, was located in another boudoir, this time not one filled with bric-a-brac and redolent of pastilles. He was standing before another woman, and this time there was distress in his eyes, and he did not appear to be in a hurry. There was no third person to comment upon the extraordinary resemblance between Hubert Hillas's wife and the woman before whom he now stood with such an unmistakable expression of gloom, but London had long ago noted that resemblance, and had testified to its strangeness by naming Mrs. Mortimer and Alice Hillas, Hubert Hillas's Jekyll and Hyde. Gwendolyn Mortimer had just Alice's golden hair, dainty shell-pink colouring, and glorious blue eyes. She, too, was petite in figure, but the

Greuze-like babyishness of expression was not to be seen on Gwendolyn's face, a difference, however, which London was not quick to see.

She held one hand out towards Hillas; she seemed to be putting some constraint upon herself. He looked frankly miserable as he took the small white hand, and there was no hint of anxiety as to time in his dark, troubled eyes.

"Gwen," he said, "Gwen, I don't want to go away and leave you."

"You must go, though, and the leaving me is not the point to be thought of. How did you leave poor little Alice?"

"Oh, Alice. Crying her eyes out, just as her sort of woman always does in emergencies."

"Listen. I want to tell you now before you go that we cannot ever meet again."

"Why not? What on earth do you mean, Gwen"

"I mean that it is not fair to Alice, that it is not right that you and I should meet so often. Alice does not know of it, and it is deceit to her. You must promise me that you will not try to see me again when you come back, my friend."

"Promise you that! No, not that, for I cannot. I must meet you, talk to you, see you. Is it not hard on me that I should be bound to have no friends simply because I have a wife—such a wife, a little doll, whom I, fool that I was, thought I could love for ever?"

"Yes, and she thought you could, too. Thought you could love her as she loves you."

"Well, I do not love her, and we are wasting time talking of her; I want to talk about ourselves, not about Alice."

"That is just why you must not come to see me any more. Can you not understand? You do, you must. You know, I am afraid everybody does, that my husband and I—well, I need say no more. I know, too, about you and Alice; but that is worse, because there is one loving one in that story. Now, I think you must see why we cannot meet any more. I was mad not to think of it before, but it was good to have a—friend."

"Yes, Gwen a friend, and you are a friend to me. Why should we banish ourselves? Gwen, this is nonsense. I think you are sorry that I am going. Perhaps something may be worrying you, too, and putting this notion into your head; but put it away, our friendship can harm nobody."

"You must promise me"? she was very pale, her lips were trembling.

"I can't."

"Be brave; just say yes."

"Gwen, Gwen, your friendship means a lot to me. Don't ask me to give it up because of——"

"Because of your wife. Yes, I do ask it. It is the first favour I have asked of you; it may be—the last."

She laid her hand on his arm and looked at him beseechingly. It was plain even to Hubert Hillas's somewhat dull perceptions that Gwendolyn felt keenly on the point. For the first time he looked at the clock, and saw that he had little time left.

"You can refuse to see me, of course," he said, "and I could not stand that from you. Gwen, if you are sure you think it right I will promise. Think well now, it means a lot to me. Are you sure?"

"I am."

"So! I will not come again. Give me your photograph. You promised it."

Gwendolyn was glad to go to her small photograph cabinet; it gave her some time to hide from his glance whilst she got her lips and eyes into better control.

She gave him the photograph then, and when he took it he kissed it. He was suffering that afternoon very keenly, almost as keenly as poor little Alice, who was sitting at home crying for the man who was standing in the boudoir of another woman, with tears in his eyes.

They joined hands for one long moment, gazing into each other's eyes, and then Hubert Hillas went away to fight, while Gwendolyn Mortimer stayed to think.

From the very day on which Hubert left, Gwendolyn devoted herself almost fervently to Alice. It had come to her one night in a flash that she was doing a wrong to Alice by her friendship for Hillas. She knew how barren was poor little Alice's mind of anything which could do more than momentarily attract a man, and she reproached herself with having perchance in her conversations with Hillas, in her ready sympathy for and comprehension of him, put at a disadvantage his wife with her doll-like smile and laugh. In her piteous longing to make restitution she visited Alice, comforted her, talked to her with aching heart of Hubert, always of Hubert. In those conversations it was more than ever forcibly impressed upon Gwendolyn's heart why she had sent Hubert away with those hard words of permanent parting, for it then came home to her even more fully, that in her heart she had wronged Alice Hillas, and that Hubert had done so, too. She knew that she had by the way in which every mention of Hubert's name seemed to stab her heart, and the more fully she realised the fact the more did she strive to make a late restitution, to one who never guessed that she was injured. Alice clung to Gwendolyn because of the gentle sympathy which she lavished on her, albeit that sympathy was for a thing unguessed by Alice.

Weary days those were for Gwendolyn Mortimer, when she was constrained to listen to Hubert's letters, Hubert's praises, the whole tale of Hubert's doings, weary days, and they extended themselves slowly to six weary months. Then one morning Gwendolyn and her husband sat together at breakfast, he silent, absorbing the contents of the newspaper; she, silent, too, thinking of the man who had come to be such a power in her life.

"Oh—oh!" ejaculated William Mortimer, suddenly, "heavy list of casualties. D——n tough chop; I wish you would speak to the cook. Let me see. Gad, Alice Hillas is a widow, pretty widow, too. I suppose she'll be inconsolable for a while. Sounds Irish that, like a bull. Eh! what!"

Gwendolyn's cup had fallen to the ground, and, being of some value, was, of course, broken into fragments; at the moment Gwendolyn felt as though her life were in much the same state.

Immediately after breakfast she went to Alice, poor little, crying, incoherent Alice, with her red eyes and her soaked handkerchief. Alice with her confused reminiscences, her many tales of "Bert," her conjectures as to how he died, her sobbing hopes that he had not wanted her too badly.

Until night Gwendolyn sat with the sad little child-faced widow, and then she went home again, free at last to think of herself, to realise fully, bitterly, what it all meant to her. Nobody would sympathise with her, nobody would guess her trouble; it was on Alice that the cards of condolence were left, to Alice that the words of pity were spoken. Gwendolyn had no sympathy, no pity save only the cruel, cutting, commiseration called self-pity, and she knew that a priceless thing had been taken from her life, that she as well as Alice was left desolate. Still her work of restitution went on; it had to go on, though every evidence of Alice's confidence in "Bert's" perfect love for her was a fresh stab, a fresh reproach. In those days Gwendolyn grew very tired, but she felt that she was doing right, that she was making atonement, and she felt, too, a great unselfish joy that Alice need never know, that she might still live in her pretty paradise.

Then came a day when, as usual, the two women sat together, talking of Bert, and Alice for once made a statement of interest.

"Gwen," she said, with tear-filled eyes, "do you know d-dear Bert's kit has come home, it will be here to-night, and, of course, I must unpack it and go over all h-his things. It will be awful; imagine, Gwen, imagine if there should be blood-stains! It is three months now since he was killed, and all the stains may be there. Oh, Gwen, Gwen, what shall I do?"

Those words sent Gwendolyn home just as lonely and depressed as usual, and with an additional pain of terror in her heart. The photograph, her photograph, it must come home with the kit! It would be worse than blood-stains to poor little Alice Hillas; it would do away with all the good of her piteous atonement, it would leave her open to reproaches, and it would desecrate that secret chamber of her heart. Gwendolyn slept but poorly that night, for Alice had told her she would unpack the dead man's kit next day, and she knew that next day the secret of the past, the secret of dear comradeship between her and one in the silent land would be known to the very one who should never have guessed it.

That night the discreet housemaid who was charged to leave all things in readiness for next morning's unpacking, violated her conscience by opening "Master's" locked wardrobe and burning the photograph of the dainty Greuze-faced lady which lay therein; "for," she reasoned, "the poor gentleman's gone, and where's the use in makin' mischief?"

Next afternoon Gwendolyn sat restless and miserable in her boudoir, tormented by the thought that Alice must know her secret, that her pitiful attempt at reparation was rendered void. Just as the time arrived when those tormented by conscience are wont to light the lamps, the door of the boudoir was thrown open.

"Mrs. Hillas, ma'am."

"Oh!" there was a catch in her breath; she looked furtively at Alice, and for once left her to originate a remark.

"Oh, do let me sit down," the little woman said. "I am so tired. I have been at B-Bert's kit all day."

Yes, there was a tone of strained intensity in Gweldolyn's voice; she leant forward eagerly. Was Alice acting?

"Oh, Gwen, it was awful"—sobs interrupted the words—"it was awful, and the, the stains."

"Yes, yes?" the voice was hard now from anxiety.

"And, Gwen, the queerest thing, the—the saddest thing, d-dear Bert had made the mistake so m-many people have made, you know. He took your photograph away instead of mine. He must have taken it in mistake for the photograph of myself that I g-gave him; I know my c-copy disappeared, and I thought that boy who was so wild about you had taken it. Oh, Gwen, if dear B-Bert had only known that he was k-kissing your face instead of mine, in that lonely Africa, he would have g-gone mad, p-poor fellow."

Gwendolyn Mortimer sang praises for the kindly strength of the fences round one Fool's Paradise.

DUBLIN'S OLD THEATRE ROYAL

(HAWKINS STREET).

HOW IT CAME TO BE BUILT.

SOME HISTORIC PERFORMANCES.

By H. CALCRAFT.

IV.

During the summer of 1832 the dreadful scourge of cholera first lowered on the Irish metropolis. The onward, unerring march of the destroying pestilence had been long predicted; but when the blow fell, everybody was paralysed, and taken as if by sudden surprise. Some of the measures at first adopted, such as publishing daily a list of cases when the mortality was at its height, were ill calculated to allay the general apprehension. It is not to be wondered at that such a heavy visitation produced a most baleful effect on the second and third seasons, and turned the thoughts of many entirely from lighter amusements. Then began to spring up political and controversial animosities, with renewed vigour, from a temporary cessation. Monster meetings, to promote unanimity by clamour, and pacification by club-law; conciliation quarrels and national grievances, interminable as a lease on lives renewable for ever; with voluntary subscriptions, coerced much after the fashion in which the one-legged beggar in Gil Blas levied charity from road-side passengers. These, and many other local difficulties, shadowed themselves out in palpable outline, and soon began to assume substantial "form of pressure." To the ordinary obstacles of a dramatic campaign elsewhere, must be added in Dublin a liberal per-centage of formidable indigenous barricades, of peculiar home construction.

On the 14th of March, 1831, Mr. Young, who had always deservedly been a great favourite, took his leave of the Dublin audience, in the character of Hamlet; and on Friday, January the 6th, 1832, Edmund Kean made his last appearance as Octavian, in the now obselete play of "The Mountaineers." He was engaged for the following season, but a contrary fiat issued from superior authority, and he returned no more. On the occasion of his final benefit, on the preceding Monday, January the 2nd, he performed an Olio, compounded of five acts, selected from different plays of Shakespeare—an illegitimate and detrimental experiment, calculated to inflame receipts, but to diminish reputation. During his last engagement, he sometimes failed from exhaustion and general debility, but the bright effulgence of genius now and then burst forth, and triumphed over decaying powers. On this particular night, although tired and beaten down by sickness, he wound up with the third act of "Othello," in a style that no other actor ever approached. It resembled the last ray of the setting sun, or the expiring burst of a thunderstorm. He electrified the audience, and reminded them of his best days, when his startling originality and epigrammatic force produced an entire revolution in preconceived opinions.

In September, 1836, Madame Malibran de Beriot was engaged for six nights. The announcement produced a most extraordinary sensation, and the box-office was literally besieged every day during the hours it was open. The operas intended to be performed were—"La Somnambula," "The Maid of Artois," and "Fidelio." Templeton, who had supported the unrivalled cantatrice with much credit at Drury lane, was secured as the tenor; other auxiliaries were engaged, all the necessary preparations were in train, and the manager indulged in a golden dream of profit. He was rudely awakened by this most unexpected communication from M. de Beriot:—

Manchestre, le 15 Sepembre, 1836.

Mon cher Monsieur.—I'eprouve le vif chagrin de devoir vous envoyer le present certificat. Mad. de Beroit est tres gravement malade et se trouve dans l' impossibilite absolue d' aller a Dublin. Son etat de souffrance est tel qu'elle ne peut quitter le lit. Croyez mon cher monsieur a tout le regret que j'eprouve de ce facheux contretemps, et recevez l'assurance de ma parfaite estime.

C. DE BERIOT.

Mosley Arms' Hotel.

Mr. Calcraft, struck with consternation, but little foreseeing the fatal catastrophe so immediately impending, hurried over to Manchester, and communicated the result to the public, in the following advertisement:—

THEATRE ROYAL, DUBLIN.

Mr Calcraft regrets extremely to be under the painful necessity of stating to the public, that having, on Thursday, received a letter from Manchester, informing him that Madame Malibran de Beriot had been suddenly seized with alarming illness, and was unable either to finish her engagement there, or come to Dublin, he immediately repaired to Manchester, when the accompanying certificate was placed in his hands by the medical gentlemen whose names are signed to it:—

Manchester, 10 o'clock, Sept. 16, 1836.

Madame Malibran de Beriot has passed a restless and distressing night, and the symptoms of her complaint require confinement to her room. It is our decided opinion that Madame Malibran de Beriot cannot undertake the voyage to Dublin without danger to her life. We think it necessary to add, that from the nature of her complaint, there is no probability of her being able, for some considerable time, to resume the duties of her profession.

S. A BARDSLEY, M.D.
JOHN HALL, M.D.
H. T. WORTHINGTON, Surgeon.

Mr. Calcraft regrets further to add, that in consequence of the very precarious state of Madame Malibran's health, he is, at present, quite unable to say when her engagement in Dublin can be resumed.

The gentlemen whose names are appended to the certificate were among the most eminent practitioners in Manchester, and were not then apprehensive of a fatal result. Had the patient been left in their hands all might have ended differently. In a few days more, and in the same week when she should have appeared in Dublin, the news arrived that the fair and gifted vocalist had closed her earthly career, cut off suddenly in the full bloom of youth, fortune, and professional reputation. She sank under exhaustion, produced by exertions beyond her physical capabilitiy; and as was generally believed, by the mistaken treatment of her own foreign physician, in whose skill she had the most unbounded confidence. Malibran was undoubtedly one of the greatest artists the world has ever produced. It is difficult to say whether she excelled most in acting or in singing, in comedy or in tragedy. There was a reality, an identity, an intensity in all her theatrical assumptions which have never been equalled. Enthusiastically devoted to her art, her mind was in a perpetual fever of excitement. To her may be aptly applied the impressive lines of Dryden:—

> A fiery soul, which, working out its way,
> Fretted the puny body to decay,
> And o'er inform'd the tenement of clay.*

The untimely death of Madame Malibran proved a heavy blow to the Dublin manager. He had effected the engagement with much difficulty, and after long correspondence. His expectations were raised to a flattering extent, and the expenses incurred were very serious. Then followed the most unwelcome operation of refunding the large sums received at the box-office, and paying the performers, expressly retained, whose services were rendered unavailable.

It is not the intention here to enter into a minute analysis of Mr. Calcraft's long period of managerial sovereignty, which may be reserved for another occasion; but merely to give, as is stated in the heading of the article, a cursory glance at a few leading incidents. The viceroyalty of the Marquess of Normanby stands forward among the enlivening episodes which brighten a long series of gloom and discomfiture. During four years the noble Marquess and his accomplished lady, by unremitting public patronage, and marked private attention, did everything that their powerful influence could effect, to promote the interests of the lessee, and support the national stage of Ireland. Among other delightful reunions, they gave suppers after the performance, to which the habitual frequenters of the theatre were specially invited. Their state visits were more frequent, and better attended, than any in the annals of Hawkins' street. Temporary or casual objections never kept them away, and they endured the political ebullitions of the gallery, or the interruption of a fight in the pit, with undeviating good humour and equanimity. Almost the last public act of Lord Normanby, on his recall, was a farewell command, the concluding one of three in less than half a season, the aggregate receipts of which nights exceeded £1,000. Even those most violently opposed to the viceroy in opinion on public matters, acknowledged his unequalled suavity of manner and unvarying kindness of disposition. The humble tribute of gratitude is offered in sincere respect, and in remembrance of favours never to be forgotten.

Early in the season of 1839, the successful play of "Richelieu," by Sir E. Bulwer, was produced, and acted by the stock company, without auxiliary aid. The author happening at that time to be on a visit to Dublin, was present at the first representation, and when recognised and greeted by the audience with enthusiastic applause, acknowledged the compliment in a graceful reply. On the following morning his satisfaction drew forth the following letter, highly complimentary to the manager and his company:—

My Dear Sir.—I cannot resist the pleasure of repeating to you the gratification I had in your performance of "Richelieu," and my surprise at the splendour and correctness of your decorations and arrangements. I shall be sincerely glad if it repay you. I take at the same time a liberty, which I am sure you will not misconstrue, in pointing out one or two situations that I think may produce a heightened effect, by a simple alteration in the grouping. In Act 3rd the production of Julie, by Richelieu, to the amaze of Mauprat, aways produced a great effect at Covent Garden. This was not so much the case last night—because Mauprat did not throw into his attitude sufficient surprise and consternation. He

* Absalom and Achitophel.

I shall here only take notice that (as Sir John Davis (53) observes) Maurice Fitz-Gerald, the first Earl of Desmond, raised the greatness of his house by Irish exactions and oppressions; so Gerald, the last Earl, reduced it to nothing, by the same means, and at length fell into open rebellion, where he perished, with numbers of his followers.

When this last Earl was attainted, September 25, 1582, he was possessed of a prodigious estate in the counties of Kerry, Cork, Waterford, Limerick, &c. His lands, extending 150 miles, and containing 574,628 acres of English measure, on which were many strong castles; he was lord of the regalities of the county palatine of Kerry, lord of Imokilly, in this county, &c. (54) He had a great number of vassals, and of his kindred and surname, above 500 gentlemen; raised coin and livery, shragh, &c., upon his tenants, through all the county of Limerick. He had all wrecks of the sea, through all the ports and creeks of the county of Kerry; 13s. 4d. out of every fishing-boat in the port of Ventry and Ferreters island. It was asserted that he was able to raise, at a call, 600 horse and 2,000 foot; all which possessions were utterly forfeited, and by Act of Parliament vested in the queen and her heirs; as were those (55) of his confederates, a great part of which were restored to them, as to Patrick Condon, and the white knight, their countries; also a considerable quantity to several of the Fitz-Geralds and others. The rest of the forfeitures were divided into seigniories, and granted, by letters patents, to several English knights, esquires, and gentlemen, who were called undertakers, from those grants, and their being obliged to perform several conditions mentioned in the queen's articles for the plantation of this province, an abstract of which is as follows:

"All forfeited lands (56) were to be divided into manors and seigniories, containing 12,000, 8,000, 6,000, and 4,000 acres each, according to a plot laid down. The undertakers to have an estate in fee-farm, yielding for each seigniory of 12,000 acres, for the first three years, £33 6s. 8d sterl., viz., from 1590 to 1593, and from Mrch., 1593, £66 13s. 4d. sterl., and rateably for every inferior seigniory, yielding, upon the death of the undertaker, the best beast as an heriot. To be discharged of all taxes whatsoever, except subsidies levied by parliament. Bogs, mountains, &c., not to be included till improved, and then to pay ½d. for each English acre. Licence to the undertakers to transport all commodoties, duty free, into England, for five years. That none be admitted to have more than 12,000 acres. No English planter to be permitted to convey to any meer Irish. Every owner of 6,000 acres to impart 600 for the breeding of horses, &c., and the other seigniories a rateable proportion. The head of each plantation to be English, and the heirs female to marry none but of English birth; and none of the meer Irish to be maintained in any family there.

"Each freeholder, from the year 1590, to furnish one horse, and horseman armed. Each principal undertaker for 12,000 acres to supply three horsemen and six footmen, armed, and so rateably, for the other seigniories; and each copy-holder, one footman armed. That for seven years to come they shall not be obliged to travel out of Munster upon any service; and after that time, no more than ten horsemen and twenty footmen, out of one seigniory of 12,000 acres, and so rateably; and such as serve out of Munster to be paid by the queen.

"That the queen will protect and defend the said seigniories at her own charge (57) for seven years to come. All commodities brought from England for the use of the same seigniories to be duty free for seven years. The acres to contain 16 feet and ½ to the perch, after the manner used in England. Dated 27th of Jnue, 1586, 28 Eliz."

The plot of the queen's offer for the peopling of Munster.

"For a seigniory, containing 12,000 acres, the gent. was to have for his own demesne 2,100 acres. Six farmers, 400 acres each. Six freeholders, 10 acres each; and lands to be appointed for mean tenures (of 50, 25, 10 acres), 1,500 acres; whereon 36 families, at least, must be established. The other seigniories, of 8,000, 6,000, and 4,000 acres, were laid out in the same manner and proportion. Each undertaker was to people his seigniory in seven years."

Notwithstanding no person was to be an undertaker for more than 12,000 acres, by the above articles, Sir Walter Raleigh procured a warrant of privy seal, dated Feb. 3, 1585-6, granting him three seigniories and a half in the counties of Cork and Waterford (the lands mentioned therein may be found in the history of that county) (58), and accordingly letters patent were passed, dated the 16th of October, 29 Eliz., 1586, granting the said three seigniories and a half to Sir Walter Raleigh (59), in the counties of Cork and Waterford.

(To be Continued.)

Edwin D. Brainard, a well-known inventor, mechanical engineer, and architect, died at his home in Pittsfield, Mass., on July 9. He was seventy-three years old, and his death was directly due to a shock sustained a week before. He was the inventor of the Brainard cold storage system, which has been installed all over the world for the purposes of refrigeration, which was the means of carrying his name far and wide.

---

the barony 30 years, and was himself slain, anno 1556 by Dermot Mac-Teig Carty, lord Muskery. He left issue two sons and three daughters. The eldest daughter was married to Mac-Carty Reagh, the second to lord Roche, and the third to the said Dermot Mac-Teig, lord Muskery. Thomas, the eldest son, soon died after his father's murder, leaving issue Thomas Oge, who was also slain; but James, his second son, lived long after. He brought the Italian forces to Smirwick, in Kerry, and was slain by the son of William de Burgo, alias Bourk, anno 1579, for which his father was created lord baron of Castledonnel. By this rebellion, the barony of Kerricurihy became forfeited to the crown, by act of parliament, 28 Eliz. cap 7.

(53) Historical Collections.

(54) Anno 1418, the manors of Moyallow, Broghil, and Kilcolman, were assigned to Maurice, son of Thomas, the 6th earl of Desmond, by his uncle James, who usurped the earldom.

(55) The following persons were, by an inquisition held at Shandon Castle, in Cork, September 9, 1588, found to be concerned in the earl of Desmond's rebellion, and were most of them attainted by act of parliament, Patrick Condon of Cloghleigh, esq; sir John Desmond, knt; John Piggot esq; sir John Fitz-Gerald, knt, sir James FitzGerald, knt, Edmund Fitz-Gerald Fitz-Gibbon, of Curribehy, Edmund Power, of Ballyinn Donnough Mac-Cormac Oge, of Loughfaily, Dermot Oge O-Leary, of Carrignecuragh, Richard Fitz-Garret of Drumada, Dermot Mac-Edmund Oge, of Bantry, Teig Mac-Edmund Oge, of the same, Conogher Mac-Daniel Mac-Rory, of the same, Teig Mac-Daniel Mac-Rory, of the same, Teig Roe Mac-Fineen of the same, Dermot Mac-Fineen, of the same, Eugene Mac-Fineen, of the same, Daniel Mac-Conogher Mac-Mahony, of Rossbrin, Maurice Fitz-Gerald, of Carigoline Ulick Barret, of Curribehy, Cormac Mac-Carty, David Mac-Gibbon, of Coshnekily, Maurice Fitz-Edmund Garrett of Rathcourcy, John Fitz-Garret Mac-Shane, of the great Wood, Gibbon Roe Mac-Shane Oge, of the same, Conogher O-Mahony, of Castlemahon, Rory O'Donohoe, of Ross-Donohoe, John Barry, or Barrygoran, James Mac-Conogher, of Drumbeg, James Fitz-John, of Poulinkerry, John Fitz-David Condon, of Kilbree, Richard Fitz-David of Rahenisky, Fineen Mac-Art, of Downbolloge Gerald Fitz-Richard, of Ballynaclashy, Art Mac-Donnel Mac Art, of Glanprehan, Thady O-Keif, of Knockaregan, Edward Barry, of Bragoge, Richard Magner, of Castle-magner John Fitz-Edmond, of Ballymarter, John Fitz-James Fitz-Edmond, of Tymacinague, Garret Fitz-Rich Richard Fitz-Morris, of Ballintemple, John Fitz-Garret, of Dromada, Martin Fitz-Richard Fitz-Gibbon of Curribehy, John Fitz-Edmond, of Ballycrenan, Patrick Callaghan, of Clonmeene, Richard Rynferk, of Rinkinfecky, Garret Fitz-John alias Mac-Robinson, of Ballymacudy, John Supple, of Ightermuragh, Fordorough Mac-William Mac-Brien, of Kilnatoragh, William White, of Whites-island, Edmund Fitz-William Oge, of Garran-James, Richard Mac-Morris of Lisquinlan, Gerald Supple, of Ightermuragh, Thomas Mac-Carty of Kilbolane, Theobald Roch, of Creg, James Gare, of the island of Inchydonny, Tieg Muirian, of Owny O-Mulrian. In the same inquisition the manor of Glyn, alias Cullin, the castle, and 30 currucats of land of Cloghroe, the island of Inchydonny, and the ancient corporation of Ballynemony, were found to belong to the queen.

The same jury inquired into the death of James Barret of Barret's country, and made a return thereof.

They also presented the names of all persons whom they suspected were apt to work mischief, and were ill-disposed to the government. They also made a return of all the abbies and religious houses, which were in this county, and became annexed to the crown. They presented the names of such persons in this county as held lands of the queen, by knights service in capite; and died, leaving their heirs in minority, with the quantity and value of all such lands. They returned all such as alienated their lands without license; also, on account of lands concealed from her majesty in this county, which fell to the crown by escheat, attainder, suppression of abbies, and who were then in possession of them. At the same time there is another presentment of the grand jury of this county, showing how, in what manner the earl of Desmond's rents were paid, and a list of all the Irish poets, chroniclers and rhymers that were in this county. All which presentments are preserved in the Lambeth library according to a catalogue of them among the MSS in the library of Trinity College, Dublin.

The chief lords and gentlemen in this county, in Queen Elizabeth's time, were, besides those above mentioned, the earl of Clancare, the lord viscount Buttevant, the lord Muskery, the lord viscount Roche, of Fermoy, Courcy, lord baron of Kingsale and Ringrone, the Bishops of Cork, Ross, and Cloyne, Sir Warham St Leger, Sir Fineen O-Driscoll, Sir Owen O Sullevan, O'Donovan O'Callaghan Mac-Auliff; also the Barrets, Condons, Barry-Oge, the Barrys, Cartys, Flemmings (Skiddys) Meaghs, Waters, Giraldines, Russels, O'Kiel, sir Owen Mac-Carty Reagh, the seneschal of Imokilly, etc.

(56) Manuscript in Lismore.

(57) This article was not performed.

(58) Page 44.

(59) Sir Richard Cox says by mistake (led into it by the above-mentioned articles) that sir Walter Raleigh had but 12,000 acres granted him: but the contrary appears from the privy seal, and letters patent above-mentioned, which remain in the castle of Lismore.

SUBMARINE BOATS.

BY COMMANDER J. D. JERROLD KELLEY.

Last year the success claimed for the French submarine boat, "Gustav Zede," revived abroad the public interest in a war type which, with strange alternations, has been the hope and the despair of the nations open to maritime attack. All the sea powers have, at one season or another, experimented with it, and all save one are keenly awaiting the verdict. Great Britain alone waits undisturbed, for, defiant as of old and certain of her matchless fleet she watches the new development with critical scorn.

Curiously enough, France seems to think that submarine navigation is a new and French idea; but its practicability was first established over two hundred and fifty years ago, and with such promise that its pursuit has furnished to eager minds an allurement that neither failure nor ridicule has been able to destroy.

The first submarine craft of which we have any definite knowledge was built by Cornelius Van Drebbell, a Hollander, who made some curious experiments under the Thames in 1624 with a diving-boat that was propelled by a dozen oars and carried as many passengers. His secret perished with him, and it is certain that he knew how to purify the air in his vessel, to dive and come again to the surface at pleasure, and to propel the boat with fair speed either on the surface or below the water.

American inventors were busy with the idea very early in our history. Bushnell, of Connecticut, in 1775, constructed a boat which Washington described in a letter to Jefferson as "a machine so contrived as to carry the inventor under water at any depth he chose, and for a considerable time and distance, with an appendage charged with powder, which he could fasten to a ship and give fire to it in time sufficient for his returning, and by means thereof destroy it."

MECHANISM OF BUSHNELL'S BOAT.

The external shape of the boat bore some resemblance to two upper tortoise-shells of equal size joined together, and its interior was of sufficient extent to carry one operator and to afford pure air for about thirty minutes' submersion. On the outer shell over the rudder, a large powder magazine was transported. This could be exploded by clockwork at any time within twelve hours. The magazine was secured in place by a wooden screw, with which it was also connected by a stout line. When the operator reached the keel of the enemy's ship he was expected to force this screw into the plank, then to detach the magazine, and hurry his boat out of harm's way.

After numerous experiments in Long Island Sound, Bushnell made an attempt to destroy the British warship Eagle, then lying off Governor's Island in the harbour of New York. When he reached a position under the ship, he attempted to attach his magazine, but the screw struck a bar of iron. In seeking another place, he drifted away from the ship and was unable to find it again. Determined to test the explosive value of his invention, he cast off his mine, and "an hour afterward," writes Holland, "the magazine exploded some distance from the ship, throwing up a huge column of water, greatly to the consternation of those on board, who were unable to ascertain the cause of so singular a phenomenon."

Robert Fulton borrowed Bushnell's idea, and in 1801 experimented successfully with a diving-boat, which was propelled by two parallel screws and ascended and descended by means of vertical screws. He experimented with it at Rouen, Havre, and Brest, and being satisfied with the correctness of his theory, went to Paris and built a new diving-boat. With this boat, called the Nautilus, he made some interesting experiments in the Seine; and in 1801, at Brest, he remained with it in the water for three hours, moving in all directions at will. In August of that year he carried a cubic foot of compressed air, which enabled him to remain under water for four and one-half hours. But as he and his invention received no practical encouragement abroad or at home, it was not further developed by him.

In 1851 a shoemaker named Phillips launched in Lake Michigan a cigar-shaped boat, forty feet in length and four feet in diameter. This machine was very crude, but in the course of a few years he had so far perfected his arrangement for purifying the air, that on one occasion he took his wife and children and spent a whole day in exploring the bottom of the lake. He is said to have carried a six-pounder smooth-bore gun in the bow, and to have fired shots from it into hulks anchored for the purpose. Later it was recorded of Phillips that he made a descent in Lake Erie, near Buffalo, and never reappeared.

Many other experiments were made both here and abroad, the most successful being those of a Russian mechanic, who, in 1855, perfected a diving-boat in which he remained under water for eight hours. The greatest impetus given to the development of the type was the result of the part played by submarine craft in the Civil War. In 1864 the most notable of these, a boat named the David, sank the United States ship Housatonic off Charleston harbour.

This submarine boat was built of boiler plates, and shaped like a cigar, and was propelled by eight men at a speed of about four knots an hour. When advancing to attack, the top was just on a level with the water. Three trial trips were made, but each time she sank and failed to rise, and in each instance her crews were suffocated before they could be rescued. On the fourth trial she ran safely out of the harbour, but although successful in blowing up the Housatonic, she was drawn into the vortex of the sinking ship, and her gallant crew perished.

Up to the end of the Civil War, the underlying theory demanded a boat that could approach a ship on the surface of the water until it was almost within the radius of discovery. Its duty then was to sink, and when under the ship to place a torpedo, and then, after moving to a safe distance, to explode it.

But as modern warfare developed, ships could no longer anchor during bombardment, nor as a rule could they attempt to force channels and make a direct attack at night or day, because of the mine-fields and of the watchfulness of the vedettes and torpedo-boats, and as a rule blockades were maintained at distances impossible in the sail period. Hence a new type of submarine boat was demanded, in which certain qualities were essential.

ESSENTIALS OF A SUBMARINE BOAT.

The construction had to be water-tight and strong enough to resist great pressure; it had to be supplied with sufficient air; and the stability of the boat had to be determined carefully, for the conditions submerged were exceedingly different from those existing in a boat floating on the surface. Other qualities deemed essential were good engine power; a capacity to travel relatively long distances; rapid diving power to avoid gun attack; manoeuvring power to descend or ascend quickly; a size not too great to forbid working in shallow water, and a possibility of delivering attacks from a distance. A battery of small, but, good, guns was considered of value, and, most important of all, pilots had to be able, when submerged, to scan the horizon and to steer a true course without being discovered by the enemy.

Many of these qualities have been secured, but the one which yet seems almost unrealisable is the power to tell, with accuracy, the direction in which the boat is going after it has sunk beneath the surface of the water.

Mr. Holland, the inventor of the best diving-boat so far tried in this country, declares that in all save a few of the most modern types the intention of the designers was to steer the vessel by sight while under water. Formerly he was of the opinion that steering by sight while submerged was quite practicable, and thought it would be a simple matter to find the most vulnerable point in the bottom of a ship to which the torpedo could be attached. A few submerged runs soon convinced him that under water some guide other than vision, must be found to direct a boat's movements.

Until 1881 experience with submarine boats had been so limited that more difficulty in steering a straight course by compass while submerged than while moving on the surface was hardly expected. "I had no suspicion," Mr. Holland states, "that my boat could not be steered perfectly, until after making about half a dozen preliminary dives to adjust the automatic apparatus. Having become doubtful of the reliability of the compass, I had it carefully compensated, and then made a trial submerged run in New York harbour, heading the vessel toward a point which I knew was about twelve minutes' run distant. The boat dived at an inclination of fifteen degrees; and it was noticed that when she again reached a horizontal position the compass needle had swung around a complete circle, and vibrated a good deal before coming to rest. The boat was then discovered to be about 90 degrees off her course.

"It was steered again in the proper direction, and then inclined upward at a sharp angle to find whether the action of the compass would be as erratic while rising as while running downward. One end of the needle dipped to the bottom when beginning the ascent, and remained there during the rise. When the boat approached a horizontal position, a few feet below the surface, the needle swung round as violently as it has done during the boat's descent, and then came to rest again at a point that indicated the boat to be far off the true course.

"As it appeared quite clear that the run was not made in the direction intended, and that about one mile must have been covered from the start, ten minutes having already passed, the boat was brought to the surface of the water just in time to prevent her from running on rocks that lay about 20 yards straight ahead, and 60 yards down from the starting point. The boat had started to run over one mile up-stream, and the mile run ended 60 yards down-stream, with the boat heading exactly opposite to her original direction."

It is this lack of power to direct the course accurately that renders the possibility of complete success with a submarine boat doubtful. To attain this, various devices have been used, such, for example, as the camera lucida, which is carried in a tube projecting above the surface; but when this instrument is used to assist in determining the direction, it must be withdrawn immediately, lest the enemy shall be able to locate and destroy the vessel. Some modern submarine boats bring their turrets to the surface for a short time to enable the pilot to lay his course. Others claim to have secret processes. But no known method has so far proved trustworthy.

Nordenfeldt made many experiments in 1885 with a cigar-shaped steel boat. Her behaviour

ought, in fact, to be startled to the other end of the stage. His sword should fall from his grasp—and, above all, full room should be left for the Cardinal to stand in plain view between the two parties, as he pronounces the words—"Lo, my witness!"

Secondly, Act 4th, when the Cardinal, supposed to be dead, reappears, as Mauprat is to be dismissed, your courtiers ought again to express much more dismay and astonishment. I do not know if your scene admits of your coming down the middle of the stage, but you were a little too long in coming last night, and were in the midst of the courtiers before they perceived what all the rest of the audience did. The alarm and astonishment at his resuscitation, make the effect of that situation. At your swoon at the close of the act, I think you will find it more effective to omit—"Heaven save my country!" The theatrical point is at the hysterical triumph of—"How pale he is." Act 5th. I think, considering that Richelieu has been represented by Julie and Joseph as dying or nearly so, it would be better for you to mark your weakness by leaning on Joseph at your approach, and during your speech to the King. In the same scene your group again want to be admonished as to astonishment. They ought to take more interest while the secretaries tell the news of Portugal and Charles I.; turning to each other with surprise at each piece of news. Joseph does not exactly time the "Fall back, Sir, it is your turn now." He should say it before Baradas advances so near to the King, and from the back of Richelieu's chair. In a previous part of this scene, when Baradas says—"Hence to the headsman," the announcement "His Eminence the Cardinal Duke," etc., should follow directly. There was too much pause between.

I have already spoken about softening De Beringhen. He is not meant as a fop or buffoon, Frenchman. I may also add, as a small point, that Mauprat, in the first scene, ought to wear black, as Julie observes that he wears "sable." If you keep his dress, she had better say that he wears crimson. By the way, there was an effect Macready makes which you either softened or abridged last night in this scene, though I think you might use it to advantage. While the lovers are kneeling to the King, you turn to receive the felicitations of the courtiers. But at Covent Garden they form themselves into a lane, and Richelieu passes haughtily down it, with the consciousness and enjoyment of recovered power, as they bow obsequiously to right and left. This is all I venture to suggest to you, and I do so with the less scruple, inasmuch as the very points I now mention, we had the greatest difficulty with in the rehearsals at Covent Garden—viz., the grouping. This may excuse what I have said. Will you do me the favour to send the enclosed order, for twelve copies of "Richelieu," to the agent of Messrs. Saunders and Ottley (Mr. J. Cumming), with my compliments, as a very slight mark of the pleasure they afforded me.—Very truly yours,

E. LYTTON BULWER.

Morrison's, Nov. 29th, 1839.

The reader will remark in this letter the anxiety of the author that all the minute points of his play should be effectively brought out, together with his perfect insight into the mechanism of the dramatic art, and the details of stage arrangement. These are, perhaps, the most valuable qualities with which the writer of plays can be endowed. Many possess active imagination, inventive genius, and the poetic faculty of expression, but the want of practical knowledge often renders their best efforts ineffective. Sheridan Knowles and Sir E. Lytton Bulwer unquestionably rank foremost in the list of living dramatists. Of the two, we should be inclined to assign the first place to Knowles. He has written longer, and more frequently. No modern play, on the whole, can compete with "The Hunchback" or "Virginius." But Sir E. Bulwer has produced three dramas of great popularity, "The Lady of Lyons," "Richelieu," and "Money." It is much to be regretted that he does not increase the number.

The ancient Romans were accustomed to distinguish their fortunate days by a white stone. In the history of the Dublin Theatre, the 20th of June, 1841, should be marked by a black one. That evening witnessed the last performance of Tyrone Power, when the crowded building re-echoed such peals of merriment as have never since been heard within those walls. In all my long experience, I know no actor who so thoroughly carried an audience along with him with such untiring spirit, such unflinching humour. He was then in the full tide of his popularity and attraction, and drew as much money to the treasury as any visitor on the list. He was engaged to appear again early in the following season, but that anticipation was not permitted to be realised. At the time when his bright career was so suddenly and fatally brought to a close, he was worth a clear thousand a-year to the manager of the Dublin Theatre.

In 1841 commenced the first series of Italian Operas on the grand scale, which, on more than one occasion, combined the talents of Grisi, Mario, and Lablache, efficiently supported in every department, and wound up to the unparalleled sensation produced by Jenny Lind and Catherine Hayes. A taste for the highest order of musical excellence was thus established, and the public appetite fed to an extent which it will be difficult to emulate, and impossible to exceed. Whatever difference of opinion may exist as to the decline of other branches of the art theatrical, music has reached an apex of excellence in these latter times. which it never achieved before. The days are gone never to return, when the announcement of a single name, such as that of Catalani, or Pasta, in two or three detached songs, crowded a theatre from cellar to roof-tree—when a single ballad opera, without additional chorus or orchestra, would run for fifty nights; and a comedy by Colman, Reynolds, or Morton, on which nothing was expended, comprised novelty enough for an entire season. The upholsterer, the mechanist, the scene-painter, and the property-man are becoming front-files among the leading dramatis personæ. More money is now expended on accessorial appendages than sufficed formerly to purchase the talent of a Garrick, a Siddons, a Kemble, or a Kean. Whether this system is overdone—whether it is in itself good or bad, wholesome or pernicious—is a question open to endless discussion, with as little prospect of finality, as that of Reform in Parliament. But most certainly it is inevitable, and must be persevered in by all managers who are sufficiently wise in their generation to go with the times, instead of hopelessly fighting against them.

Then let not censure term our fate our choice,
The stage but echoes back the public voice.

The modern demand for lavish expenditure is, at the same time, coupled with another antagonistic condition, not easily reconciled—cheap prices. You are expected to produce the best article in the market, and to be satisfied with little or no remuneration. This principle applies more potently in the leading theatres of England and Scotland, than it does in Ireland. It has never yet been observed that the Dublin public pause to consider the price, if they fancy the commodity. They will pay cheerfully for what they like, but are not to be tempted by the reduction of a shilling, if the proffered entertainment has no charms for them. The "sons of freedom," who never disburse at all, are generally the first to complain. The paying public are the real critics and true patrons of the drama. They come predisposed to be satisfied; they put their hands in their pockets with merry hearts, and draw them out to be incessant in applause. A large complimentary list operates as a damper on the general cheerfulness of the audience, and as a drag-chain on the manager's exchequer.

Our article is getting lengthy, which warns us to conclude. We shall, therefore, sum up with a brief synoptical statement, not viewed through the attractive prismatic variations of a kaleidoscope, but in the homely, unromantic form of calculated figures. During the twenty-one years expiring in 1851, six hundred and four new pieces were produced, being an average of twenty-nine in each season. There were expended, in alterations, repairs, improvements, and additional stock, £11,250; in payments to Trinity College, £10,400; for insurance, £5,800; for the service of "stars," as they are technically called, £86,923; and for law and litigation, £3,600. From this short bill of particulars it will appear that the principal beneficial interest has been derived by the ground landlords, the leading performers, the insurance companies, and the solicitors; leaving an imperceptible residue to the representatives of the patent, and their working engineer, the lessee. The latter may solace himself with the philosophic consolation of our ancient friend Dogberry, "I am one that has losses too!" But they are not unaccompanied by some balancing advantages. They have impressed on him salutary habits of reflection—have indurated some troublesome sensibilities—have satisfied him that evils which "cannot be eschewed must be embraced;" and, above all, they have taught him the inestimable price of individual friendship, and the fleeting value of popular applause. The curtain has fallen, the last note of the finale has been played, and he retires from the scene of many anxious labours—many fruitless triumphs; leaving the field to other speculators, as high in hope as he was in the dawn of his undertaking, ere "time had thinned his flowing locks," or the remorseless visitations of gout had checked his activity.

[The End.]

A LITTLE SERMON.

WEALTH.

Ye friends to truth, ye statesmen who survey
The rich man's joys increase, the poor's decay,
'Tis yours to judge how wide the limits stand
Between a splendid and a happy land.

Proud swells the tide with loads of freighted ore,
And shouting Folly hails them from the shore;
Hoards even beyond the miser's wish abound,
And rich men flock from all the world around.

Yet count our gains. This wealth is but a name
That leaves our useful products still the same.

—Oliver Goldsmith.

INTERESTING DISCOVERIES.

A Berlin message states that the German Oriental Society has been most successful in its explorations at Abu-Sir in Egypt, and most interesting finds will be distributed among the Berlin Museums during the course of this month. One of the most important discoveries is a perfectly preserved mummy of Jen Em Jechivet, the High Priest of the Temple, who died about two thousand years before Christ. The body was found in a family vault, which also contained the remains of his priest and reader and their wives. Only three tombs of such an age have been found in good preservation during the last century, and this is the first time that the contents have been brought safely to Europe. Jen lay in his coffin enveloped in a brown linen shroud, just as he was placed there four thousand years ago. In accordance with the fashion of the time he has small side whiskers and a longer tuft on his chin, and his eyes are made to appear unnaturally long by means of the careful application of rouge. The wig, which is large and parted down the middle, has a bluish tint verging on green, and must originally have been the colour of lapis lazuli, in imitation of the hair worn by Egyptian gods. The mummy was lying slightly on the left side as Egyptians sleep to-day, and the head rested on a support such as is still in use in the Soudan. The eyes are turned towards the rising sun. Two staffs were found beside the body, and a little wooden statue.

ANCIENT IRISH SOCIETY.

THE IRISH FIGHTING CLANS.

THE O'CONORS OF OFFALY.

By Rev. F. R. MONTGOMERY HITCHCOCK, B.D.

ALL RIGHTS RESERVED.] [ALL RIGHTS RESERVED.

PART I.

The O'Conors of Offaly claimed descent from Cathaor More or Cahir the Great, King of Leinster and Monarch of Ireland from A.D. 120 to 123. This potentate is known in connection with a curious document—a will, which is given in the Book of Leacan and has been translated by O'Donovan in the Book of Rights. Although Cahir had thirty sons, the names of ten only are mentioned in the will. Of these, Ros-failghe, or Ros of the rings, from whom the O'Conors Faily trace their pedigree, was the eldest. His valiant father addressed this prince as "my fierce Roe, my vehement Failghe," and bequeathed to him Leinster, ten swords, ten shields ornamented with gold and silver, and ten golden goblets. The descendants of this Ros Faily were called Hy Faily, or descendants of Faily, and gave their name Offaly to the eastern portion of what is now known as King's County, and parts of Kildare and Queen's County, districts that contain extensive remains of previous civilisations in the shape of Cromleachs and Cairns, sepulchral mounds and fortified raths. The ancient historians of Ireland tell us that a great battle was fought at Slieve Bloom between the Fomorians and the Nemedians, and at Geashill Hereman and Heber Fionn, the sons of Milesius, fought for the supremacy, and Heber fell to find his son Conmaol—the first of the Connors—an avenger of his father's cause. For the scene of Heber's defeat witnessed the discomfiture of Hereman's army and the death of Palpa, his son.

To descend from the clouds of myth and legend to the lowly plains of truth and reality, we find the O'Connors Faily ruling in the 14th century at the green mound of Cruachan—now Croghan—where the fair Eile, daughter of Eochy Feileach and sister of the warlike Meave, Queen of Connaught, used to preside in the first century. The bard O'Herrin alluded to this stronghold of the O'Connors in his lines:

> The Lord of Offaly, a land of mirth,
> Not known to the poets,
> Is O'Connor the mainstay of the green plain,
> Who rules at the green mound of Cruachan.

This will is also celebrated by Spenser in his "Faerie Queene." The history of the O'Connors once they emerge from the mists of romance is the record of feasts of broil and battle. The year 1305 was, by all accounts, a disastrous one to this fighting clan. Near Grasshill Castle, their neighbours, the O'Dempseys, had defeated them with great slaughter, and Sir Pierce Birmingham completed the work by treacherously putting to death O'Connor Faily, his brother and his heir the Caloach O'Connor, whom he had invited to his castle at Carbery—the ruins of which are in excellent preservation. But the clan was mustered again, and burning to wipe out this deed of shame and barbarity, hurried to attack the Birminghams, who were in great force in the district around Monasteroris, but were again defeated. Forty years passed, and these bloody memories were fading from the minds of the O'Connors, when a representative of their foeman's house was expelled from Connaught by Edmund Burke, and was forced to throw himself upon the mercy of the O'Connors, and found what seems never to have been refused to friend or foe, refuge and hospitality.

It would seem that the fighting clan had began to give trouble to the English settlers in Meath by harrying and plundering their lands and cattle. One day in the year 1385, Murrogh O'Connor, the Lord of Offaly, had led his kerns and fenia across the borders of his territory, and after spoiling the English, were returning with much booty. But the men of Meath were not long in assembling, and under the leadership of Nugent and others followed hard after their wild and stalwart foemen, who were able, as Froissart says, to overtake and pull a horseman off his horse, but who were retiring leisurely with their plunder. In the level but boggy country around the hill of Croghan they were overtaken and compelled to give battle to their pursuers. Though superior in strength and agility, the badly armed kerns were no match at close quarters with the mailed and helmeted Normans, and many of them fell. Still retreating, and fighting as they retreated, they hoped to put the bog between them and their foes. But there was naught but disaster for the fighting clan that day. Behind them were the English cavalry, around them an impassable bog, and before them a narrow causeway or tochar, across which the road to safety lay. And in their efforts to cross, numbers of them were slain by the enemy or smothered in the bog. This was the battle of Tochar Cruachan Bri Eile.

In 1394, Richard the Second landed at Waterford with 30,000 foot and 4,000 horse, and the O'Connors of Offaly with other Irish septs submitted to him in the hopes of getting favourable terms. Richard received their submission graciously, and entertained the native in Dublin Castle. He then left the country as he believed in peace, appointing Roger Mortimer, his cousin, as viceroy. But Mortimer quarrelled with the King of Leinster, Art M'Murrough, and was defeated and slain in Kilkenny by the chiefs of Leinster, with whom were ranged a strong body of the fighting clan. Emboldened by this success, the O'Connor of Offaly returned to his own country and made preparations to avenge the defeat he had suffered at the pass of the bog. Receiving information that a strong force of the English were marching to plunder his country and the seat of his ancestors, he took a wide detour, and by forced marches was able to get them in the rear, and clinging closely to them eventually made their forces converge towards the causeway that had been so fatal to his own men some years before. In the battle that ensued, the invaders were defeated with the loss of many men and horses, and the Tochar Cruaghan again devoured more people than the sword devoured. Three years afterwards the son of O'Connor succeeded in inflicting a smart defeat on the Earl of Kildare—the hereditary foe of his people—who was taken prisoner and handed up to Murrough O'Connor, who succeeded in repeating the experiment a few years after at Killucan. From this date, the O'Connors became formidable foes of the English, and such of their own countrymen who ventured to oppose them. Their forays were bolder and more extensive. Up to the very walls of Dublin they came, and Cahir O'Connor carried off a Lord Justice who was Lord Deputy of Ireland in 1439, and for whom a heavy ransom was paid. But the Fitzgeralds of Kildare were also growing strong, and they cast longing eyes on the pastures of Offaly. In 1459, Con O'Connor was defeated by the Earl of Kildare, but his warrior soul was nothing daunted by this reverse. For he spent the next two years in collecting an army, and then entered Meath with a thousand horsemen, all helmeted, fearless, and undismayed, and harassed the country far and wide. But agreeable words and even more agreeable gifts bought off the ruthless invader, and the English then began to plan a thorough extermination of this constant thorn in their side. John Fitzgerald, who was said to be "the best and most renowned general of the English," marshalled his forces in Kildare, and the Deputy, Thomas, Earl of Desmond, arranged to meet him in a certain place with the Dublin army. But Con was on the alert, and completely frustrated his enemy's plans by attacking the men of Kildare before they were joined by the Deputy and his soldiers, and defeating them with much loss. The next day he followed up his advantage by giving battle to the army that was marching from Dublin, and fighting them on his own terms, succeeded in putting them to rout.

But as we frequently find in Irish history, family quarrels were effectual where foreign combination was unavailing. The clan that was so powerful when united, lay completely at the mercy of their foes when divided by internal disputes. The beginning of the feud which eventually divided the O'Conors into the Queen's O'Connors and the Irish O'Connors may be said to date from the murder of Cahir O'Conor Faily. The latter chieftain, who is described as "a general entertainer of learned men," and "a distinguished leader among the English and Irish," was attacked near the monastery of Monasterois, which had been founded by Sir John Birmingham for Franciscans and called after

DISPATCHING THE SURPLUS POPULATION.

his Irish name—Mac Feoris—for even in those early days there were English settlers who became more Irish than the Irish themselves, the Clanricarde Burkes even adopting Irish names—McWilliam Eighter and McWilliam Oughter—and affecting Irish dress and customs.

Within sight of the consecrated walls and hallowed ground of the Abbey which the hereditary foe of the O'Conors had built nearly two centuries before, the head of the tribe was slain by his own relations, the sons of Teige. This was in the year 1511.

The seed of dissension thus sown bore a bitter fruit in the family of the reigning prince of Offaly. Brian and Cahir were brothers. Of these, Brian O'Conor seemed to have been the elder, and therefore the heir. They do not appear to have been loyal or affectionate to one another. However, Brian, undisturbed by this family disagreement, arranged with the O'Moores and O'Carrolls to invade the English Pale. But the English were prepared, and managed to surprise O'Conor. Finding that resistance was hopeless, the chief retreated with all haste, leaving a strong force in his castle of Monasteroris, and in order to cause a diversion in his enemy's plans, made a dash for Westmeath, where he employed himself in devastating the farmsteads of the English settlers. But Surrey, the Deputy, following up his advantage, besieged the Irish garrison in Monasteroris with such vigour and skill, that though it was "the strongest hold within the Irishry," they were fain to escape under cover of night. After this partial success, Surrey withdrew his forces to the capital, and the O'Conor was left at peace to prepare for another campaign—the ugliest, perhaps, in the annals of Irish history. This Brian had married Lady Mary Fitzgerald, a daughter of the Earl of Kildare, who died in the Tower of London in 1535. And when Thomas, the next heir to the title and estates of Kildare—commonly called Silken Thomas—raised a foolish rebellion to avenge his father's wrongs, Brian and his followers were among his principal auxiliaries. Silken Thomas was completely crushed, and paid the penalty of his temerity by being executed in London, and his friends were scattered but not subdued. For we find that Surrey, the Lord Deputy, had to go again into Offaly to bring Brian to his senses. But this time there is a traitor in the camp—Brian's own brother, Cahir. He knew the weak places in Offaly, and accordingly leads the foreign host at once to the castle of Bragnet, the garrison of which offered but faint resistance, as Cahir had a confederate behind the walls whose treachery placed the defenders altogether at the mercy of the assailants. The fortress was seized and the garrison secured, all but Cahir's man being led out for immediate execution.

The following day the traitor led his enemies against his brother's chief fortress of Daingean, the name of which is cognate of the English dungeon and donjon. The erection of this old castle of Daingean is recorded by the Four Masters as having taken place in 1546. But they were evidently alluding to a later fortress, built after the events to which we are referring, when the headquarters of the O'Connors consisted of a huge circular mound in the midst of a marsh and almost surrounded by the bog of Allen, and to make approach more difficult, artificial obstructions had been carefully placed in the only accessible places. But Cahir's knowledge again proved of untold advantage to the English, and the military were led over the gushing bog and sinking morass up to the very vallum of Dangen, which was immediately stormed and taken, Brian not waiting to learn the result. In gratitude to Cahir for his precious services, the English Governor transferred to him the lordship of Offaly, from which Brian was duly deposed.

In connection with the taking of Dangen, it is interesting to read that the English lost their only piece of ordnance, and at once sent a message to the Governor beseeching him "to be a mean to the King's highness that there may be another sent thither with speed, or his Grace's Deputy can't prevail against Irishmen which have garrisons."

The brave Brian was not, however, discomfited by the loss of his title and possessions, and he had the apparent audacity to venture into the Pale and demand the restoration of his rights. But his cool request was not granted, while his brother Cahir was created Baron of Offaly and made tenant to the Crown. Exasperated by his bad luck, Brian once more had recourse to arms, and getting assistance from his friends in Connaught he marched into his own lands and defeated his brother, who was taken unprepared and drove him out of the country. The English court were greatly vexed by this upset to their plans. A very strongly-worded letter was written by Lord Chancellor Cromwell, Wolsey's friend, to Lord Grey urging him "eftsoons to handle that matter of

O'Connor's with such dexterity as he may be hanged as a terrible example to all Irish traitors." The writer went on to say "the expulsion of him (O'Connor) was taken very well, but the permission of him to have such a scope to work mischief . . . was neither wisdom nor good precedent. Redubit, my lord, in the just punishment of his traitorous carcase. And let his treason be a warning to you and to all who have to do for the King's Majesty there, never to trust a traitor after, but to use them without treaty after their demerits."

(To be Continued.)

NOTES AND QUERIES.

A QUESTION OF LINEAGE.

"The Editor of the "Dublin Penny Journal."

Manor House, Dundrum, Co. Dublin.

Sir.—Can any of your readers kindly give particulars of the lineage of Julian Dunn, widow of John Pagett, of Carlow and Graigue, Queen's County, whose will was proved in 1706. Was this lady a daughter of the Dunn's of Brittas, and when did her death take place?

WM. JACKSON PIGOTT.

AT THE SHIP'S SIDE.

Sing not so merrily, O little bird!
My heart is sad to-day;
Sing not so loudly of thy happy loves,—
My love has gone away.
Laugh not so blithely, dancing ocean waves!
I ne'er shall smile again;
Break not in tender kisses on your strand,—
Love's kisses bring but pain.
Beam not so brightly, O thou pitiless sun!
My life has set in clouds;
Cast not such golden floods o'er earth and skies,—
Black night my spirit shrouds.
Bloom not with mocking beauty, O ye flowers!
He called me fair as you;
But beauty cannot bring a lost love back,
Or make a false vow true.
O bird! O waves! O sun! O flowers! I know
Ye would not be so gay,
Could ye but look one moment in my heart,
And see it break to-day.

SAUNTERER.

The etymology of the word Saunterer is extraordinary enough, and somewhat romantic. In the times of the Crusades, the military spirit and religious enthusiasm of the age combined powerfully to impel men of all classes in England to press forward to the Holy War, as it was termed. A still further inducement with many was the rich and fertile country in which they expected to settle, when they should have expelled from thence the enemies of God, and they accordingly hastened to sell their lands and possessions, preparatory to setting out to join the expedition. Being thus without abode or home, they naturally threw themselves upon the hospitality which at that period was readily afforded, especially to those who declared themselves enlisted under the banners of the Cross. A frequent reply then to an inquiry as to the destination or object of any one who seemed to loiter or wander about, and to have no settled occupation or residence, was, in the Norman language of the day, that he was on his way a la Sainte Terre (to the Holy Land). From this phrase so often repeated, or else, as some have suggested, from the fact of so many having sold their property, and being therefore sans terre (without land or home), gradually grew the epithet of saunterer, now commonly applied to one who is seen idling, or, to use an expressive Irish term, "stravaiging" about without any apparent object or employment.

O'G.

THE ANCIENT AND PRESENT STATE OF THE COUNTY AND CITY OF CORK.

BOOK I.

Containing a Natural, Civil, Ecclesiastical, Historical, and Topographical Description thereof.

BY CHARLES SMITH, M.D.

Æquum est enim meminisse & me, qui discerem hominem esse, et vos, qui Judicetis ut si probabilia dicentur, nihil ultra requiratis. Cicero Univers.

IN TWO VOLUMES.

VOL I.

THE SECOND EDITION, WITH ADDITIONS.

CHAPTER I.—Continued.

Besides a considerable estate, which came to Maurice Fitz-John Fitz-Gerald, by his marriage with Juliana, heiress to John, Lord Cogan of Belvoir (51), which I take to be Bellvelly in the great island Robert Fitz-Geoffry Cogan granted to James the seventh Earl of Desmond, all his lands in Ireland, being half this county (of which he possessed himself, by virtue of a letter of attorney, dated the 12th of June, 1438), to the further prejudice of the Carew and Courcey families. The Earl married in Connaught, and brought the Ne Sheehys into this county, which he retained as his life-guard, a sept afterwards very eminent both in this and the county of Limerick. The Earl, by the aid of James, Earl of Ormond, whose family he had assisted against the Talbots, obtained a patent, in 1444, for the government or custody of this county, together with those of Limerick, Waterford, and Kerry, in which he was suffered (during the government of Richard, Duke of York, who was his gossip, and of Thomas, Earl of Kildare, his kinsman) to raise upon the King's subjects the Irish impositions of coign and livery, cosherings, bonnaught, &c. Notwithstanding these illegal extortions, he procured licence to absent himself from all future Parliaments, only sending a sufficient proxy in his room; as also to purchase whatsoever lands he pleased, by what service soever they were held of the Crown. Thus, by these and other usurpations upon the liberties of the people, this family came to be the most powerful subjects of their time, and gained large possessions, not only from the natives, but also from the English, many of whom, rather than undergo such exactions, quitted the country, and had their estates seized by Desmond and his followers, who were very numerous in this county (52), as well as in Waterford, Limerick, and Kerry.

(51) This Maurice was the only son to John Fitz-Thomas, by his first wife. He married Johana, or Juliana daughter and heir to John, lord Cogan, of Belvoir, who brought into the Desmond family the estate of Carigoline, Carigrohan, Castlemore, Mallow, Rathgogan, etc. His second wife was Matilda de Barry. Those lands were mentioned, with many others, in an inquisition, taken from the 3d of Edw. III. 1310, by which Juliana de Cogan enfeoffed him in the said lands.

Stanihurst, in his description of Ireland, printed 1586, in Holling. Collect. p. 37, says that Maurice FitzThomas, a Geraldine, was created earl of Desmond anno 1300; but falsely, for he was created in 1329, as appears by his patent, dated at Gloucester. He made the following verses for him.

Eavsi tandem, jactatus fluctibus altis
Et precor in portu fit mea tuta ratis.

(52) Gerald Fitz-Gerald, grandson to the above-mentioned earl, and youngest son to Thomas, the eighth earl (who was beheaded at Drogheda for his unjust exactions, according to Davis, or, according to Russel's history of this house, which I have in manuscript, by the malice of king Edward the IVth's queen, for advising the king not to marry her), built the castle of Mocollop, upon the borders of this country and that of Waterford, and was the founder of the family of Coshbride, a territory in both counties.

He was knighted and married the daughter of Maurice, lord Roche, viscount Fermoy; by whom he had James, his heir, and Thomas, the father of John who built the castle of Kilmacow, lately fallen to ruin. There were many of the Fitz-Geralds' castles in this tract, near the river Bride; those in this county are Mogeely, once a seat of the earls of Desmond, of which hereafter. Also Connough built by Thomas Fitz-Gerald Roe, eldest son of James the fifteenth earl of Desmond, by a daughter of Maurice, lord Roche, from whom his father was divorced upon pretence of being too near of kin. This Thomas did not concern himself in the rebellion of his relations; but lived peaceably in his castle of Connough, where he died, anno 1593, and was interred among his ancestors, in the Franciscan abbey at Youghal. He had issue by Ellis, daughter of Richard Poer, lord of Curraghmore, three sons, James, John, and Gerald and one daughter, Margaret, who was married to Donald Mac-Carty Reagh, who lived at the time of the revolution.

As this sir Thomas was set aside by his father, upon pretence of his being illegitimate, the earldom fell to Gerald, who was the eldest son by a second wife, and daughter to lord of Ely O-Carrol; so that Thomas had only the barony of Kilnataloon and the manor of Castlemore, near Cork, assigned to him. Vide a grant of lands from James, earl of Desmond, to this Thomas, in the Bodleian library Laud. fol. 27.

After Desmond's rebellion was over, the eldest son of sir Thomas took up arms, joined O-Neal, earl of Tyrone, in his rebellion, and was afterwards known by the name of the Sugane earl of Desmond of whom I shall give a further account, in the third book of this work.

The Fitz-Geralds of Castle-Martyr, formerly called seneschals of Imokilly (being so appointed by the earls of Desmond, who were lords of this of this barony), derived themselves from a second son of Maurice, knight of Kerry, fourth son of John Fitz-Thomas Fitz-Gerald who was murdered at Callin, in Desmond, by MacCarty. This estate was given them by their cousin Thomas Nappah, which they enjoyed till the rebellion of 1641, when it was forfeited by Edmund Fitz-Gerald. Sir John Fitz-Edmond, of Cloyne, was also descended from the house of Desmond.

The whole barony of Kerricurihy was given to sir Maurice Desmond by his brother James, the 15th earl of Desmond. This sir Maurice murdered James FitzMaurice (who was a little before, returned out of England, to take possession of the earldom upon the death of his grandfather, Thomas Meale, earl of Desmond), in the barony of Fermoy, as he was going to the county of Limerick. This sir Thomas of Desmond possessed

at sea was excellent. Steam was used as the motive power, and by an ingenious arrangement its necessary pressure was retained during submersion, when the combustion in the boiler had entirely ceased. This was secured by the employment of a large reservoir, or hot-water cistern, which was placed in the fore part of the boat, and was connected with the boiler. Before reaching this auxiliary cistern the steam was made to pass through a number of tubes, thus gradually raising the temperature until the pressure in boiler and reservoir was the same.

The ordinary combustion was carried on while at the surface, but when about to dive the furnace doors were closed, the combustion was stopped, and the steam given off by the hot water in the boiler and cistern was used, and with such efficiency that the engines could be kept going for several hours. The boat dived through the agency of vertically acting screws, a few revolutions of which would send her under water, while the arrest of their motion would bring her to the surface.

THE HOLLAND BOAT.

Passing by the Peacemaker, or submarine monitor, which underwent trials on the Hudson in 1886, and whose peculiarity was the employment of an interchangeable boiler in which hydrocarbon fuel or caustic soda was used, we come to the specimen of the Holland submarine boat which was recently completed, and declined by the Government after very searching experiments, pending the construction of a new boat, the Plunger. This craft has a length over all of 85 feet, a diameter of 11½ feet, and a displacement of 154 tons. The guaranteed speed on the surface was to be 15 knots, awash 14 knots, and submerged 8 knots. She is propelled by triple screws operated by steam when on the surface, and by electric storage batteries and a 70 horse-power motor when under water. Her armament consists of two expulsion tubes and five Whitehead torpedoes. The steering and depth and control are accomplished by a secret automatic apparatus. She has a steel armour turret four feet high to protect the pilot and the smoke stack, and the hull will be covered by three feet of water when an attack is to be made, as a protection against rapid fire and small arms.

The French have been particularly active in their experiments with submarine boats. In 1863 Admiral Bourgeois made many trials with a boat called Le Plongeur, and achieved such success that he is said to have received an order for three hundred boats from the Russian Government, fifty of which were delivered. Spain was equally active, notably with the Peral type, but none of these, except, perhaps the Goubet, excited so much public interest as was aroused by the achievements claimed for the Gustave Zede.

THE INVENTIONS OF GUSTAV ZEDE.

The first submarine boat built by Zede was named Gymnote, and was laid down at Toulon in 1886. To all intents and purposes she was nothing more than a huge Whitehead torpedo, and her dimensions were as follow—56 feet in length, 5 9-10 feet in diameter, and a displacement of about 30 tons. Horizontal rudders enabled her to dive and to rise to the surface. She was driven by an electric motor of 55 horse-power, the current of which was supplied by a storage battery sufficient in capacity to run the vessel for four or five hours. The speed was about seven knots when submerged and nearly nine knots on the surface.

Water-tight compartments placed fore and aft secured the required buoyancy, and the air necessary for the respiration of a crew of four or five men when the boat was submerged was carried in reservoirs. Detachable ballast which could be released from the interior of the boat was carried along the keel.

The trials of this boat were so satisfactory that Zede determined in 1890 to build one of a similar type, but of larger dimensions. This vessel, originally named the Sirene, is now the famous Gustav Zede. Her dimensions are as follow—length, 147 feet; diameter, 10 75-100 feet; displacement, 260 tons. It has been found, however, that these dimensions are too great, and in the proposed boats they have been much reduced. The hull is shaped like a cigar, with long and sharply pointed ends, and its model conforms to the earlier patterns of the Whitehead torpedo. On the surface a maximum speed was maintained of 14 knots, and when submerged a speed of 8½ knots is claimed. A torpedo discharge tube is located in the nose, and lies in the fore and aft of the boat, and a supply of Whitehead torpedoes, containing a charge of 220 pounds of guncotton, is carried. Ten men constitute the crew.

For over a year experiments were carried on with alleged results which, if true, are most promising. One of the most successful was the attack made by the Zede upon the French battleship, Magenta, which was made both while she was at anchor and under way. A very reasonable suspicion exists as to the fairness of the trial, for it is stated that the evolutions of the Magenta were not such as would have been attempted during hostilities.

Later the Zede ran from Toulon to Marseilles, a distance of about forty miles, and behaved, if all reports be true, in a very good manner. After reaching Marseilles the accumulators were still sufficiently charged to enable the boat to make the return trip to Toulon, thereby proving that their capacity is equal to a continuous run of from seventy-five to eighty miles.

A new French vessel is to be an improved Zede, and while her radius of action will be greatly enlarged, her dimensions are such as more than satisfy the demands of submarine warfare. She is to be called the Narval.

The boats heretofore described are intended for war purposes, but the Argonaut, invented by Simon Lake, represents a type intended solely for the exploration of sea-shallows and river-beds. The boat is thirty-six feet long, and is shaped generally like a cylinder, although the stern is very sharp and the bow very bluff. The hull is mounted on three wheels, one acting as a rudder on the surface and a guide-wheel when running on the bottom. Two wheels are carried at the bow. The interior of the boat has a middle room, in which the machinery and other apparatus are placed. At the forward part of this space is an air-lock, which gives entrance to the driver's room without causing the air pressure to be reduced. When the boat is resting on the bottom, the explorers can leave the working-room by means of a water-tight trap door.

SONG.

They will not come to gild again
The skies of our advancing day.
Those youthful fancies, fond and vain,
That early tracked its joyous way:
Then why with cold
Disdain behold
The bliss that youth so soon must lose;
Ah! wherefore scorn
The blush of morn,
Since noon can boast no lovelier hues?

The blossom ne'er regains the bloom
That envious Summer robs it of;
Our hastening year hath only room
For one short spring of hope and love:
If Winter's blight
Must cloud its light,
And wither all the charms it brings,
Then why despise
The flowers we prize,
Since earth can yield no fairer things!

When pensive age hath dimmed our eyes
To all but calmer faith and truth,
We shall not mourn that brighter skies
Once decked the sun-rise of our youth:
Then not with cold
Disdain behold
The bliss that youth so soon must lose:
Ah! never scorn
The blush of morn,
Since noon can boast no lovelier hues!

HOW RAIN IS FORMED.

Professor Cleveland Abbe, in the "Weather Review," explains the formation of rain as follows:—With regard to the formation of rain we accept the principle developed by Espy, namely, that rain comes from clouds formed by the cooling of ascending currents of moist air. This cooling is due primarily to the fact that when the air ascends by any natural process it also expands, and, therefore, pushes the surrounding air aside. But push and expansion means that work is being done. The expansion of steam in a cylinder pushes the piston ahead and does the work of the engine, but this work is done at the expense of the heat in the hot steam, and the latter cools just in proportion as the work is done. We ordinarily say that the internal heat of the steam is converted into visible work, or the potential energy of pressure is converted into kinetic energy of motion. Just so with the rising air; it expands, does work and cools at a rather rapid rate as it rises (one degree Fahrenheit for 185 feet). If it rises until it cools to the temperature of saturation at which it can hold no more moisture than that which is carried up with it, then condensation begins, and haze and cloud becomes visible. But in this condensation the latent heat of the condensed moisture is given out, thereby preventing the air from cooling as rapidly as it has hitherto done. It therefore now begins to cool less rapidly and to ascend more rapidly.

The radiation of heat from the upper surface of a cloud at night, or the absorption of the sun's heat in the daytime, has less influence when the ascending air rises rapidly than when it rises slowly. The latter case occurs in our extended rainstorms, especially those over the ocean, where the clouds often travel at the rate of 100 miles an hour, and the individual particles of air appear to rise relatively very little, possibly a mile in that distance, but, of course, rolling over and over each other as they proceed. The laws of cooling and of the formation of cloud in such ascending currents as occur when a broad layer of air flows from the ocean landward over a range of mountains are well known. There is no doubt but that a little mixture goes on at the boundary of the ascending air between it and the neighbouring air, but, on the other hand, this is too small a matter to explain the formation of rain on the outside of a cloud, and on the other hand, it does not occur at all in the interior of a cumulous cloud where the rainfall is heaviest. Just how the particles of cloud happen to come together, or to grow into big drops, has not yet been clearly explained, but in general we know that only a small proportion, possibly one per cent., of all the moisture in a cloud comes down as rain, while the rest of the cloud evaporates and disappears.

WHERE WOOD ENGRAVING ORIGINATED.

Much controversy was at one time excited about the country that could claim to have originated wood engraving. A very simple process was known to the Egyptians for the production of stamps, and it has been asserted that the Chinese printed from blocks of pear tree as early as the tenth century. The independent origination of the art has been generally credited to Germany among modern nations. In the Cologne district a St. Christopher, which has often been reproduced, was cut in 1423, a St. Sebastian in 1437, and a Madonna has been dated 1418. Playing cards were, however, in use in France in the middle of the fourteenth century, and the figures were impressions of wood blocks. It is allowable for France to dispute the priority of Germany, and many attempts have been made to claim the art as due to French enterprise. M. Henri Bouchot, of the Bibliotheque-Nationale, now declares that a part of a block with a representation of the Crucifixion on it has been discovered in a country town of France. The costumes are evidently those worn in the middle of the fourteenth century, and it is assumed that the wood block belongs to some time between 1340 and 1350.

LITERARY NOTES.

Miss L. MacManus, the brilliant Irish historical novelist, has arranged for the publication in book form at an early date of her fine story of the Cromwellian era in Ireland, entitled "Nessa."

✧ ✧ ✧

Bodley's Library celebrates this week the three hundreth anniversary of its opening day. Sir Thomas Bodley was conscious that he was the right man for the part of founder, having "some kind of knowledge, some purse ability, great store of honourable friends to further the design, and special good leisure to follow the work." His confidence has been abundantly justified, his library being now the largest in the world, not being a national or royal institution.

✧ ✧ ✧

Sir Herbert Maxwell's literary activity is also remarkable. The latest work from his pen is an exhaustive Life of George Romney, the great English portrait-painter. The work, which will be issued by Walter Scott, at a popular price, is embellished with twenty full-page reproductions of Romney's pictures (including the famous Lady Hamilton portrait), and a photogravure portrait of the painter himself.

✧ ✧ ✧

The death of Mr. Lionel Johnson, who was found unconscious in Fleet street on last Monday week, puts an end to a career of which much was hoped. He was a brilliant scholar at Oxford; he showed promise of being more than a minor poet, and after he came to London he did a good deal of spasmodic critical work, which had as much of the stuff of literature as any analytic writing of recent years. He always showed the keenest sympathy with Ireland and her people. But his body had never the vigour of his mind, and it had been clear for some years past that his life must be a short one. His friends will greatly feel the pity of it.

✧ ✧ ✧

The 23rd ult. was the anniversary of the death of one who was not only amongst the very greatest of British men of letters, but assuredly one of the most lovable characters that adorns the history of literature in all ages. Just seventy years ago, "about half-past one p.m. on the 21st of September," to quote his son-in-law's beautifully simple description of the last scene at Abbotsford, "Sir Walter breathed his last, in the presence of all his children. It was a beautiful day—so warm that every window was wide open, and so perfectly still that the sound of all others most delicious to his ear, the gentle ripple of the Tweed over its pebbles, was distinctly audible as we knelt around the bed, and his eldest son kissed and closed his eyes."

✧ ✧ ✧

It was 1832, the year of the great Reform Act, and it was surely an interesting and appropriate coincidence that the great leader of the Romantic movement, the sympathiser with Jacobitism, the thorough friend of George IV., the wizard who made the middle ages live again and idealised the rapidly vanishing semi-feudalism of the Highlands, should have passed away at the very moment when the old political order was changing, yielding place to new ideals of which Jeremy Bentham was the prophet, who by the by died just three months earlier than Sir Walter himself. The death of Scott thus marks a period of sharp transition in the political history of Great Britain, while in literature his disappearance from the scene practically coincided with the opening of the Victorian period. Carlyle had not yet come to London, Tennyson had just published his first two volumes of verse, Thackeray had recently left Cambridge, Newman was preparing for his memorable tour in Italy with Hurrell Froude. These were the men to whom the immediate future belonged, and the buds of their genius were just bursting into blossom when the author of "Waverley" was laid to rest in Dryburgh Abbey.

✧ ✧ ✧

Never has a more splendid homage been paid by one great man of letters to another than in the eulogy uttered by John Ruskin on Sir Walter Scott. "What good Scott has in him to do," says Ruskin, "I find no words full enough to tell. His ideal of honour in men and women is inbred, indisputable; fresh as the air of his mountains; firm as their rocks. His conception of purity in woman is even higher than Dante's; his reverence for the filial relation as deep as Virgil's; his sympathy universal; there is no rank or condition of men of which he has not shown the loveliest aspect; his code of moral principle is entirely defined, yet taught with a reserved subtlety like Nature's own, so that none but the most earnest readers perceive the intention; and his opinions on all practical subjects are final; the consummate decisions of accurate and inevitable common sense, tempered by the most graceful kindness."

✧ ✧ ✧

Now that "Amelia," in three volumes, and "Tom Jones," in four, have been added to the Temple Fielding, three more volumes will complete the very charming set. "I have been Tom Jones (a child's Tom Jones, a harmless creature) for a week together," David Copperfield tells us, and many book lovers who are now growing old can say the same thing. That Dicken's admiration for his distinguished predecessor in fiction was thoroughgoing is shown by the Christian names he chose for his son, now the popular K.C. Indeed (as Forster records), the novelist at first meant to call his sixth son by Oliver Goldsmith's name, but changed it to Henry Fielding's "in a kind of homage to the style of work he was now bent on beginning"—the same story of Copperfield of which mention has just been made.

✧ ✧ ✧

White's "Natural History of Selborne" has been (says the "Westminster Gazette") such an inspiration for more than one generation in the direction of studying nature that we hope the Selborne Society may succeed in their desire to acquire the house where Gilbert White lived. Gilbert White was a country vicar who lived a quiet life and loved the Nature around him in all its varied forms. He might be called the pioneer of field naturalists, for he noted everything he saw. He was an observer rather than a scientist, and his contributions, particularly to the knowledge of bird life, were interesting and useful, and did an immense deal to stimulate the desire to know more of the secrets of what we call the animal kingdom. With all his watchfulness, however, Gilbert White was inclined to believe in the old idea that swallows hibernated at the bottom of ponds. This idea was so prevalent a century ago that, as Mr. Oliver Pike tells us in one of his charming sketches of bird life, Dr. Johnson spoke of the habit of swallows flying round and round in September until they became "conglobulated," and then dropping in a mass under water to wait in the mud for the next spring.

✧ ✧ ✧

A late and interesting sidelight on the character of Edgar Allan Poe is afforded by an interview with Alexander T. Crane, who was for eighteen months Edgar Allan Poe's office boy. It was published recently in "The Sunday World Herald" of Omaha. Mr. Crane is in his seventy-third year, and lives in Harrison County, Iowa. He says that Poe was the "gentleest, truest, tenderest, and 'knightliest" man he ever knew, and he was his "boyish idol, just as his memory is the pride and glory" of his declining years. When Mr. Crane was sixteen years old he secured the place of office boy and mailing clerk of "The Broadway Journal," of which Poe was editor. He says that "Poe was a quiet man about the office, but was uniformly kind and courteous to everyone, and with congenial company he would grow cheerful and even playful."

✧ ✧ ✧

The poet came to the office at 9 in the morning and stayed until 3 or 4 in the afternoon, working during that time steadily and methodically. Mr. Crane once wrote a poem while working for Poe, which he submitted to him, and which the poet advised him to send to the editor of "The Youth's Cabinet," who published it. The old man is very indignant when he recalls how biographers detracted and defamed his idol. He says that Poe was a gentleman in every sense of the word, that "he was honest, generous, kind, and true," and that, although he tried to drown his sorrows in the cup, "he could never have been anything but a gentle, tender, loveable man, a thousand times to be pitied, but never to be condemned." Mr. Crane does not agree with Poe's biographers that the poet sold the manuscript of his "Raven" for ten dollars to buy medicine and food for his wife, because Poe came into the office of the "Broadway Journal" one day in winter with the actor, Murdock, and called all his employes to his desk to hear the great elocutionist read his first poem, and in the next issue of the "Journal" the "Raven" was given the place of honour.

✧ ✧ ✧

A correspondent of the always interesting American "Dial" gives the very curious history of the barbarous word "sockdologer," which is an Americanism for the finishing stroke in a fist-fight. The word, it seems, is a ludicrous transposition of the vocal elements of the word "doxology." Some wag noticed that the singing of the doxology dissolved the worshipping concourse, the purpose of the assembly being fulfilled; if the purpose was a fight, the finishing blow dissolved the ring of spectators and abettors. He avoided the possible irreverence of a direct comparison of the different meetings by a comical metathesis of the sounds of "d" and "s," as the Yankee farmer invoked the use of a stout needle upon the object of his wrath instead of pronouncing an eternal doom. "Sockdologer" answered the purpose as well as the more solemn word.

✧ ✧ ✧

A correspondent of the "Westminster Gazette" has sent that journal the "Confessions" which M. Zola wrote a few years ago in a lady's album, and which was published about six years ago in the "Revue Illustree." Here is the translation:—The distinguishing feature of my character—I do not know. The quality I prefer in a man—Kind-heartedness. The quality I prefer in a woman—Tenderness. My favourite quality—I do not know. My principal failing—I do not know. My favourite occupation—Work. My dream of happiness—Doing nothing. What would be my greatest misfortune—To be in doubt. What I should like to be—Always in good health. The country in which I should like to live—The one in which I am living. The colour I prefer—Red. The flower I prefer—The rose. The animal I prefer—All. The bird I prefer—All. My favourite prose authors—Those who see and express clearly. My favourite poets—Do. My favourite painters—Do. My favourite composers—Do. My favourite heroes in fiction—Those who are not heroes. My favourite heroines in fiction—Do. My favourite heroes in real life—Those who earn their bread. My favourite heroines in real life—Do. The drink and food which I prefer—Not to drink, and to eat sparingly. My favourite names—The simplest. What I most detest—Not to understand. The historical characters I most detest—Traitors. The military feat I most admire—That of the common soldier who dies without knowing what for. The reform I most esteem—The one which would make all men happy. The gift of nature I should like to possess—Eloquence. The way I should like to die—Suddenly. The present state of my mind—But! I don't know. The faults which inspire me with most indulgence—All, when one regrets them. My motto—Nulla dies sine linea.

SCIENTIFIC TOPICS.

The only musk ox in captivity in America died recently at the New York Zoological Gardens. There is only one other musk ox in captivity, and that one is to be found in the Zoological Gardens of Hamburg, Germany.

✧ ✧ ✧

Prof. A. E. Wright, of the Army Medical School at Netley, has published the results obtained by anti-typhoid inoculation. It is demonstrated, so it is said, that fewer cases and fewer deaths occurred among those inoculated than among those untreated.

✧ ✧ ✧

A handsome monument will be erected to the memory of Matthew Baldwin, the founder of the Baldwin Locomotive Works, in Philadelphia, which recently completed its 20,000th locomotive. It will take the form of a bronze effigy on an imposing base, and will be placed in a small park which belongs to the city, but which faces the offices of the company.

✧ ✧ ✧

The steamship "Colonia," the largest of all cable vessels, reached Esquimault on September 13, having on board 3,450 miles of cable. The cable steamship "Anglia" is to meet the "Colonia" at Honolulu. The "Colonia" will lay her cable from Bamfield Creek to within 100 miles of the Fanning Island, where the end will be buoyed and moored. The connecting link will be laid by the "Anglia."

✧ ✧ ✧

Charles E. Yetman, a Western telegraph operator, is the inventor of a machine for sending telegraph messages by a typewriter. The idea, to be sure, is not new; nevertheless Mr. Yetman is said to have made some important improvements. His invention consists of a typewriter and telegraph instrument combined. The latter is so arranged that, by striking a key, the Morse letters are plainly and accurately produced. Wires connect the machine with the telegraph line.

✧ ✧ ✧

Prof. Lucien M. Underwood, of Columbia University, and Dr. N. L. Britton, of the New York Botanical Gardens, as well as other scientists, have been investigating the flora of New York State, and have discovered a new plant, or rather a new variety of an old plant. Near the salt beds of Syracuse, N.Y., they found specimens of the Cissa marina, which by no means conformed to the well-known species. The new form has been named Cissa marina Syracusana.

✧ ✧ ✧

A stone of granite to the memory of John Fitch, who was identified with the early history of the locomotive and the steamboat, has been erected in Warminsted township, Bucks County, Pa. The stone was presented to the Bucks County Historical Society by Edward Longstreth, of Philadelphia, and that organisation placed it on the spot where Fitch is said to have conceived the idea of propelling carriages by power. He worked on this thought for a while, and abandoned it to devote his time to a boat driven by power. The latter experiments were commenced in 1781. The memorial is nine feet high, and two feet square at the base.

✧ ✧ ✧

Up to the first of May there have been fifty-seven patents granted in the United States covering wireless telegraphy or the parts of the instruments used in the transmission of messages by the wireless systems. The first was granted to A. E. Dolbear on October 5, 1886. Thomas Edison received the third patent in this line, and he had another patent issued in 1891. The first one issued to Marconi was in July, 1897, and since that time he has taken out eleven others, the last of which was dated July 11, 1901. Tesla has taken out seven patents in this field of invention.

✧ ✧ ✧

Prof. Reginald Fessenden, the inventor of a system of wireless telegraphy with which the United States Government is experimenting, has announced his intention of resigning his position in the Weather Bureau early in September, and soon after that the company which has been organised to exploit his invention will be ready to engage in commercial business. Stations equipped with his instruments will be located along the Pacific coast at an early date, and will be used in the dissemination of the weather reports through that part of the country.

✧ ✧ ✧

For twenty-five years the indefatigable Catholic priest, Father Delattre, has been engaged in archæological researches on the site of ancient Carthage, and now reports what he declares the best find made during this period. It is a white marble sarcophagus, 2.09 metres in length, partially covered with designs, that on the lid being a relief portrait of a woman, of rare artistic beauty. The sarcophagus belongs to the Punic period, and is the work of a Greek artist. It is now regarded as the piece de resistance in the well-stocked museum of the Peres Blancs in Carthage. The find was made in the necropolis near Ste. Monique.

✧ ✧ ✧

The collection of physical apparatus which was left by the late George M. Hopkins, has been given by his widow to the Adelphi College, of Brooklyn, New York, with a few exceptions, notably his optical lantern with its various attachments, with which he performed interesting experiments on the rare occasions when he could be induced to give public lectures. This has been given to his friend, Prof. W. LeConte Stevens, Washington and Lee University, Lexington, Va. The apparatus for the Adelphi College was selected from the collection by Professor W. C. Peckham.

✧ ✧ ✧

Capt. Charles C. Dickinson, of the General Land Office at Washington, D.C., is the inventor of a lifeboat and a new means of launching such craft, which was given a successful trial from the deck of the steamer "Kent" recently. The boat is made of steel, and with the exception of the middle is covered with a rounded top. At each end is a water-tight compartment large enough to accommodate several persons. Entrance to these compartments is secured through doors which are closed to keep out the water, and which are supplied with heavy glass to permit those inside to see out. These shelters are ventilated by funnels, which are so arranged to close automatically in case of the capsizing of the boat. The craft is so weighted that it will always right itself in the heaviest sea. The new system of launching does away with any gear or tackle or davits. The keel of the boat rests on a cradle so connected with rollers that on being slightly elevated the boat with its occupants shoots out of the cradle into the water. The tests given at Washington were successful in every particular.

✧ ✧ ✧

Victims of pulmonary complaints have hitherto been compelled to make inconvenient journeys to the higher altitudes in search of the pure rarefied air which is known to be so beneficial to them, but as far as the United States are concerned this is no longer necessary. It has been discovered that the air from limestone caves has all the characteristics of that of the mountains. This discovery has just been made use of in the location of a sanitarium near one of these caves, and the air for the institution is supplied from the underground caverns. This establishment is at Luroy, Va., and the system of ventilation is arranged so that each room gets its own supply direct from the cave. The aid of these caverns is of a very uniform temperature, and remarkably pure and free from all germs and dust particles. In the warmest weather the doors of this institution are kept closed, and a comfortable temperature of 75 degrees is maintained in spite of one of 90 or more encountered outside.

✧ ✧ ✧

D. H. W. Wiley, Chief of the Division of Chemistry of the United States Department of Agriculture, will open in the autumn, under the authority of Congress, a kind of laboratory boarding house for the purpose of testing the effects of various preservatives, colouring matters, and food admixtures upon normal healthy persons. The young men in the scientific bureaus of the Agricultural Department will be drawn upon first, and after them the resident college students of the city of Washington. Dr. Wiley intends to ascertain the relative harmfulness of various substances as a part of the movement towards pure food legislation. The effect of borax on foods has not been quite definitely determined. The German Government contends that American borax-treated meats are harmful, although its own medical authorities oppose that view. Dr. Wiley contends that the small amount of boric acid used in curing meat is not harmful. His experiments wil either substantiate or refute that belief. Each boarder is to keep a diary and record of all facts concerning himself He is to eat only what is set before him, and, in accordance with Scriptural injunction, is to ask no questions, for the sake of his conscience, if not of his stomach. Every boarder will be weighed upon rising in the morning. His temperature will be taken. A careful account of the water consumed and of the food eaten will be kept. Since it would be difficult even for a hardened boarder to eat "doctored" food continuously, a "relaxation" diet of thoroughly pure food will be served half the time.

✧ ✧ ✧

Shipboard, if it offer no other especial advantages for photography, provides unique oportunities of photographing clouds, according to the October number of "Travel." Insects, birds, plants, and shells we can collect and preserve for close inspection in museum cases, but the clouds can neither be preserved in spirits nor pressed and dried between paper, but the various distinct forms may easily be photographed, and thus our knowledge of clouds and their portents be gradually increased. We should soon begin to distinguish between the nimbus and cumulus, the cirrus and stratus forms, each of which is associated with certain weather conditions, and are usually the precursors of particular changes. Unless a film is being used, a "backed" plate is to be preferred. Then unless the clouds be very heavy and lowerig, an aperture of F. 22 or F. 32 and 1-25th of a second exposure on a moderately rapid plate should be correct. For the very finest results, no doubt, a yellow screen of the right destiny should be placed in front of or behind the lens and an orthochromatic plate used.

✧ ✧ ✧

The Agricultural Department has begun a series of exhaustive investigations into the matter of cold storage. There are a number of mysterious manifestations which take place in a cold storage warehouse, and the Government agents are endeavouring to ascertain the why and wherefore of these. For instance, it has been often noted that one lot of fruit will keep in fine condition for many months, while another immediately near will rot in a comparatively few days. This is particularly true of peaches. It has also been noticed that some peaches lose their delicate flavour very quickly in cold storage, while others are not affected in the least. In order to get at the facts, an agent of the Agricultural Department has been assigned to take a specimen carload at Fort Valley, Ga., and to make careful observation of the manner of picking, and to follow the fruit through the various stages through which it must pass on its way to a cold storage plant in Jersey City. Here the fruit will be watched carefully during its prolonged stay by the same agent, who will make a detailed report of his observations. The same programme will be carried out with other shipments of peaches as well as other fruit.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

DUBLIN, MONDAY JUNE 4, 1787.

Early on Saturday morning Mr. Justice Graham, attended by a party of the 4th Horse, surprised in their beds Patrick Weston and several other persons at Worganstown, who were charged before him with felony, riots, rescues, and with having beat, stabbed, and dreadfully wounded four men; and when the villains thought them dead they put them into a deep ditch, and threw straw over them. There are now six of those persons in Kilmainham Jail waiting their trials next Commission.

Saturday evening the jury of the Manor of Grangegorman, in their perambulation, stopped two maid servants, who had been sent for bread to a neighbouring baker's, which upon examination proved to be deficient in weight; they accordingly seized the bread, and desired the girls to return to the baker and demand their money, which he absolutely refused giving; but we are happy to inform the public that the jury are determined to publish the name of the baker, together with all who shall hereafter be found so offending.

The endowed schools in this kingdom have already undergone a considerable alteration in consequence of Mr. Orde's proposed system of education; boys have been taken in on the original foundation, whereas before the Minister took an active part in this business, none were suffered to enter without payment, and thereby the humanity of the original donor was totally defeated.

Various are the complaints of the citizens of not being regularly supplied with pipe-water. In former summers there was some colour of reason for such scarcity; but now, when the Grand Canal supplies the Basin so copiously, it must be owing to the neglect or drunkenness of the turn-cocks and other inferior officers employed by the Pipe-water Committee.

The descent of the pavement in Dame street, between Sycamore alley and Eustace street, is so extremely sudden on the south side, that hardly an hour of the day elapses without the fall of a carriage, car, or saddle horse, by which the feeling of the inhabitants are continually put to the most painful trials.

DUBLIN, TUESDAY, JUNE 5.

Yesterday evening six pieces of ordnance were conveyed from the arsenal in the Castle Yard to Chapelizod Barrack, preparative to the grand review of the Royal Irish regiment of artillery in the week ensuing.

This evening there will be a masqued ball and elegant supper at the Rotunda, where the nobility and gentry will appear in fancy dresses entirely of Irish manufacture, and we hear the Rotunda will be lighted with beautiful lamps of a new construction.

Yesterday being the anniversary of his Majesty's birthday the flag was displayed on Bedford Tower; the great guns at the salute battery in his Majesty's Park the Phœnix were fired three rounds, and answered by vollies from the regiments in garrison, which were drawn out in the Royal-square at the barracks. At noon there was a very numerous assembly of the nobility and other persons of distinction, of both sexes, at the Castle, who appeared in great splendour to compliment his Grace the Lord Lieutenant, before whom an Ode, set to music, was performed. In the evening a play was given by his Grace to the ladies; and at night there were bonfires, illuminations, and all other demonstrations of joy throughout the city.

Many persons imagine that such vessels as arrive from Oporto, or any of the other ports of Portugal, freighted with the wines of that country, will be either obliged to have them entered at the Custom House at the old duties, or otherwise wait the determination of the Treaty now pending, or perhaps already concluded, with the Court of Lisbon; but if they consider for a moment that Ireland has been so far admitted into the Metheun Treaty (still subsisting), as to be allowed the privilege of sending her woollen goods to her Most Faithful Majesty's dominions in Europe, and that in consequence an Act has been recently passed for lowering the Portuguese wine duties to the old rates, which agreeable to the tenour of that Act, took place immediately after its getting the Royal assent on the 28th of last month, it must be incontrovertibly evident that the wines will be entered in future at the old rates, without any impediment, obstacle, or delay whatever.

On Wednesday night last, a number of fellows pursued a gentleman down Cope street, and on the idea of some given insult, cut him with swords in a very inhuman manner; and late on the same night, a poor waiter was attacked by two ruffians in Anglesea street, about the hour of twelve at night, and being stripped almost naked, was left in that condition, while not a policeman was seen to aid the cries of assistance.

DUBLIN, THURSDAY, JUNE 7.

Considerable advantage will arise to the city from licensing and badging porters, as in the case of fraud or negligent delay on their side, they will be easily known, and as easily punished. When these men were screened from detection by an almost undiscoverable obscurity, their impositions on strangers particularly were numerous; but being now brought to a state of responsibility, and under the control of the Police Commissioners, we flatter ourselves that there will be a discontinuation of their long practised pranks.

The late additional clauses to the police laws of this metropolis, and which will take place in a few days, are evidently calculated for the most useful and salutary purposes, but particularly those regarding hackney coachmen, chairmen, porters, penny-boys, etc., etc., whose insolence and impositions had long been universally and justly complained of by the citizens.

Tuesday last his Grace the Duke of Rutland gave a most sumptuous and elegant entertainment to the Right Hon. the Lord Mayor and Board of Aldermen at the Castle.

From the facility with which the debtors may break out of the City Marshalsea, it is hoped that either that place of confinement may be rendered more safe than it is at present, by proper repairs and an addition at the entrance into the yards from the hatch-ways, by way of proper strength and security; or else that a new building for that purpose be erected as speedily as possible. The attempt that has been made for an escape by the prisoners the last week, and their being so near succeeding in the same, and also the riot of December last, in which the whole jail would have been demolished were it not for the military being so opportunely called in, are striking instances of the necessity of immediately adopting one of those expedients that have been proposed, otherwise more daring efforts for escape will be frequently made.

The seaports of France were opened on the 10th of last month, by a Royal edict, for the admission of British and Irish manufactures, pursuant to the treaty of navigation and commerce concluded between his Majesty and the French King.

The masquerade on Tuesday night, at the Rotunda, though not so crowded as that given before, was on the whole very entertaining. If we might judge by the number which sat down to supper in the banqueting-room, they composed little less than 400. The entertainment was excellent, the wines being the very best in kind. Though some characters were well supported, wit was the scarcest commodity in the room. Dancin gcommenced after supper, and all departed about six in the morning.

The ball and supper given on Monday last at the Mansion House was really splendid beyond conception; the Lady Mayoress's situation must, however, have been vastly distressing, from the numbers who intruded themselves there, unasked, and so crowded those who her Ladyship had sent cards to, that many people of the first fashion were for want of room obliged to go away. Strange it is that people have not better behaviour.

On Tuesday, the 29th ult., a party of the Stradbally Volunteers apprehended two robbers at the races of the Great Heath in the Queen's County, and safely conducted them to Maryborough Jail. They are charged on oath with breaking into the dwelling-house of Mr. Mulhall, near the town of Stradbally, and robbing it of cash and other articles.

DUBLIN, FRIDAY, JUNE 8.

As agriculture so materially depends on population, and as the sinews of a nation's prosperity rest on its "bold peasantry," we cannot but deeply deplore that within these seven years past, no fewer that 4,000 Irish servants of both sexes have emigrated to America.

Wednesday, about one in the afternoon, a gentleman walking in the Phœnix Park, near Sir John Blaquiere's wall, was met by two fellows armed with a cutlass and a horse-pistol, who robbed him of a pocket-book bound in green vellum, containing paper of no great value, a sapphire ring set in gold, a plain silver watch, and thirteen shillings in change. As no person appeared during this transaction the villains escaped by running towards the Range-wall adjoining the high road.

DUBLIN, SATURDAY, JUNE 9.

We hear with the utmost pleasure that the manufacture of earthenware and other species of pottery will shortly be attempted in several places in the Northern parts of this country; there is no doubt but such efforts will meet with a degree of success beyond the present expectancy of even our most sanguine wishes. It is from public-spirited individuals we must expect that this kingdom can possibly arrive to real opulence and prosperity, and that a proper advantage will be taken of all the internal treasures with which this island so peculiarly abounds, and from whence so many solid, permanent benefits might undoubtedly flow.

Two fellows who were accomplices in the burglary and robbery of a shoemaker's shop in this city, and for which two others are now under sentence of death, were apprehended on Wednesday last near the Tholsel, and lodged in the New Prison. It is remarkable that the young men who are to suffer in a few days entrusted the others with the spoil, who disposed of it to their own advantage, and their unfortunate and misguided companions became the wretched dupes of the others fatal advice.

Yesterday the first lodgment was made in the stores of the new Custom House, being a quantity of port wine, out of one of the three vessels lately arrived laden with that commodity. This noble edifice contains sufficient room for storage for all the import which we can successively hope for in this kingdom, the whole in Royal security, and so cheap, as must ever make it the interest of the merchant to deem it a material benefit.

BAGGOTSRATH CASTLE,

AN OLD COUNTY DUBLIN FORTALICE.

(From GROSE'S "ANTIQUITIES OF IRELAND," 1791).

BAGGOTSRATH CASTLE
AND THE
BATTLE OF RATHMINES.
CO. DUBLIN.

GENERAL JONES'S ACCOUNT OF THE ENGAGEMENT.

LISTS OF THE PRISONERS TAKEN AND MUNITIONS OF WAR CAPTURED.

A CURIOUS OLD DOCUMENT.

The old fortalice above depicted once stood between Leeson street and Baggot street Bridges on the east side of present Grand Canal. Dublin readers will remember that a reproduction of it was erected at Leeson street Bridge at the time of Queen Victoria's last visit to Ireland to mark the spot where the royal entry into the City of Dublin proper began. It's history is thus given in Grose's "Antiquities of Ireland":—

In the 48th Edward III., A.D. 1374, there is an order for removing William Fitz William from the custody of the manor and castle of Baggotsrath, and giving them to the Bishop of Meath. The family of Fitz William came into Ireland with King John, and had large possessions in the city of Dublin, their principal castle and residence being at Merrion A branch of the family was seated at Baggotsrath, 1527, and it still continues part of their estate. This castle is remarkable for a defeat of the King's troops near it in July, 1649, of which Borlase and Cox give the following account. Jones, the Parliamentarian General, possessed Dublin, which the Marquis of Ormonde was desirous of taking. He encamped at Rathmines, but that being too distant to prevent Jones's cavalry from grazing, it was judged proper to seize Baggotsrath, which adjoined their pasture. Major General Purcell was sent on that business, with directions to fortify it, and he had with him 1,500 foot and engineers. Had this been executed, the city would have been straitened on every side, as Lord Dillon was on the northern part of it with 2,000 foot and 500 horse. Purcell was to secure the castle, and throw up strong entrenchments in the night; and the Marquis, to favour his operations, kept his men under arms. In the morning when the Marquis visited Purcell, he found very little had been done, the latter

in excuse pretending he was misguided and had not time, when in fact he and Edmund Reilly, the titular Archbishop of Armagh, had betrayed the army. The Marquis went to repose after his nightly fatigue, expecting no movement from the city; but in this he was deceived, for Colonels Reynolds, Venables, and Hunks, the day before, had arrived from England with 600 horse and 1,500 foot, and ample supplies of money and ammunition, the garrison were encouraged to make a sally, and they soon retook Baggotsrath Castle; this brought on the fatal battle of Rathmines, in which 4,000 men were killed and 2,517 taken prisoners, all the artillery and baggage, and 200 draft oxen, and the King's party effectually ruined. Part of the castle still remains, and the entrenchments about it can easily be traced. This view, from an original drawing by Barralet, is in the possession of the Right Honourable W. Conyngham.

Amongst the contents of a curious old volume in our possession, comprising a number of pamphlets of two centuries and a half ago, we have found the subjoined, which gives General Jones's own account of the Battle of Rathmines:—

Lieut-General Jones's
LETTER
To the Council of State,
Of a Great
VICTORY

Which it hath pleased God to give the Forces in the City of Dublin under his Command, on the Second of this instant August, against the Earl of Ormond's and the Lord Inchiquin's Forces before that City.

Together with the List of all the Prisoners and Ammunition taken, and the Narrative of Captain Otway, who was in the Fight.

London, Printed for Edward Husband, Printer to the Parliament of England, August 11, 1649.

Right Honourable,

THE Lord hath blessed this your Army with good success against Ormond and his, for which God's most holy Name be ever glorified. The account of that service is thus briefly: On the first of this instant, the Enemy began his approaches to this place more than formerly, and that night was Ormond, Preston, and the chiefest of that Army, at a Work begun at Baggotsrath, about a quarter of a mile hence Eastward of the City, upon the Sea, thence they purposed to run forward to our Trenches on the Land-side, and to raise their Forts towards the Water, for hindering the landing of those supplyes and Forces expected. They had before cut off the water running from the higher grounds into the City, whereby our Mills had been driven, and in their present work would they have cut us off from all forage for our cattle: To this end was that very night, a Brest-work by them made crosse the high-way, neer Baggotsrath, whereabouts was the onely grazing-place left for us. As for the Castle of Baggotsrath, I caused it to be before demollished, so it was not capable of a Garrison, foreseeing what our prejudice might be in their possessing it.

On Thursday the second, we discovered a party of the Enemies, drawn to Baggotsrath, about fifteen hundred foot, besides horse. We found a necessity for removing them, and that speedily: and seeing the nearness of the Enemies camp at Rathmynes (less than a mile from Baggotsrath), where they might be readily relieved with greater force as occasion might require; therefore did I advance with so much a greater strength, about twelve hundred horse, and four thousand foot.

The Enemies work at Baggotsrath we soon entered, yet not without strong dispute: most of the Enemies foot were slain and taken, their horse having deserted them after the first charge.

Our horse and foot pursuing their advantages, we became at last wholly engaged with their whole Army, whom after two hours fight, we totally routed.

We slew on the place, and in the chase, about four thousand, and have two thousand five hundred and seventeen prisoners, most of them Inchiquines English, and of our run-aways. We got one whole Cannon, three Demi-Cannons, one long square gun, carrying a ball of twelve pound, one Saker-drake, and one Morter-piece (all these brass), and some Trayn-carriages, and about two hundred draught Oxen for the Trayn.

The strength of the Enemy was by themselves since acknowledged Nineteen thousand; Ormond narrowly escaped: Of our men there are not twenty missing, many wounded. The greatest loss fell on the horse, wherein my Regiment hath much suffered, which I humbly desire may be considered, together with my former losses in the same kinde in former Services, and therefore that larger Recruits may be given me: To which end I have employed thither this Gentleman Captain Otway, one, faithand forward, whom I make bold to recommend unto your favour.

This whole work is the Lord's doing, and it is marvellous in our eyes: By whose especial providence it was that we should thus engage, we our selves at first not so far intending it: Neither did the Enemy expect our so doing; nor would they have willingly engaged with us, if it might have been by them avoided, they reserving themselves for the coming up of Clanricard with his Connaught forces about Three thousand, and the Lord of Ardes with his Seven thousand Scots, all ready for marching; Inchiquine also being looked for, who had the week before gone towards Munster, with two Regiments of horse, for appeasing some stirrings there by Owen Roe, raised in his absence. Never was any day in Ireland like this, to the confusion of the Irish, and to the raising up the spirits of the poor English, and to the restoring of the English interest, which from their first footing in Ireland was never in so low a condition, as at that very instant, there not being any one considerable landing place left you, but this alone, and this also (without this the Lord's timely and most gracious goodness and providence to us) almost gone.

Yet is not all this any ground of Security whereby may be kept back or delayed the Supplies designed us; for most of our Garisons are yet to be taken in, and the Enemy to be speedily followed, that they recover not (which they yet may do to a considerable number) and that they either possess not themselves of this harvest, or hinder us of it. For our selves as at present, we are not in condition to prosecute this great Victory as we should and would, wanting pay for our men, and necessary provisions, which would be now made over to us speedily and plentifully, this being the time, and the occasion being now offered for a full ending of this War, by its vigorous prosecution, the opportunity whereof is not to be in any case omitted; besides the security therein rendered to your affairs there, whereunto all these movings might have been dangerously carried, as they were by Ormond and his Party intended. All which I leave to your most wise consideration, and as ever, remain

Your Honors most faithful Servant,
MIC: JONES.

Dublin, Aug. 6, 1649.

PRISONERS TAKEN THE SECOND OF AUGUST, 1649.

Field-Officers—Col. Christopher Plunket, Earl of Fingal; Col. Richard Butler, the Lo. of Ormond's brother; Lieut-Col Michael Searl Adjutant-General; Lieut-Col Aldworth, Lieut-Col Standley, Lieut-Col Tho. Fortescu, Lieut-Col Jesper Taaff, Lieut-Col Gerard Lieut to the Fuiseers, Major Roger Garland, Major Oliver FitzSimons, Major Comin, Major Henry Littell Major Charls Norwood, Major Riddar, Major to Col. Blunt; Major Fleetwood, Sergeant to the Fuiseers; Major Shalop, Sir George Bingham, Baronet.

Captains.—Daniel, Leston James Fleming, Dunn, Geoghegan, Henry FitzGerald George Cusacke Christopher Barnewell, Balthazar Newgent William Whittly, Harbert Lewis, Petty, Cosby, Jackson May, Graynier, Thomas Bourke, Daniel MacNemara, Pierce MacKee, Fergus Mageins, Thomas Pluncket, Povey Morris Harbert Townsen George Darcy, Milemay, Ofield, Aymes, Roger Flangherty, Ben Pierce, Arthur Asten Dun, FitzGerald Dillon, Capt-Lieut James Wade, Capt-Lieut Dawning Barret, Capt-Lieut Foacks Capt-Lieut John Alexander, Barth. FitzGerald Holmes, Cornee, Reformadoes. 41.

Lieutenants—Robert Coyne, Arthur Reynolds, William Dallon, Robert Lack, Nicholas Raw, Francis Coyn, Richard Andrewes, John Crisp, Tho. Whitely, James Gislyne, Henry Moss William Merrill, Paul Symons, Math. Brown, Edward Coates, Rich. Bestworth, Thomas Power, Clement Greene Francis Hill, Thomas Hill, Foxe, Barret, Hamilton, Searle, Alexander, Illwell, Mever, Gibs Harris Browne, Nevet, Andrewes, Street, Roe, Reynolds, Thomas, Towsen, Lock Barnes, Gilborn, Fay, Ross Dempsey, William Bourk Dutton, Thomas Darcy John Pollet, Garret Harbert, John O Teige Miles Bourk, Walter Hussey John Andrews, George Welsh, Richard Plunket, Carbery Higgin, Thomas Pierce Edward Dowdal, Garret Reeves. 58.

Ensigns—Henry Colepease, Southwood Nicholas Mayl, William Jewel Simon Pordon, William Sanderson William Pope, William Crosby, Peter Bulkley, Harbert Whitefield, Morton Vaughan, Henry Leigh, Robert Dreakin, George Green, Henry Bannester, George Giles, Samuel Floyd, Robert FitzGerald, Edward Jans, Palyn, Dickson Lillies, Langford, Willonton, Bradley, Rogers Brisby, James Ennis, Peter Walsh, James Finis, Richard Mealey, Patr. Bolan, Michael Taaff Patr. Boy Key, Mortogh Mac Hary, Owen Mahony, Jo. Tirrel, Edm. Mullegan, Daniel Kevanagh, Daniel Wyer, Tho. Street, Peter Smith. 42.

Cornets.—Williams, Jolliff, George Mettam, George Borray. 4.

Quartermasters.—Jones, King, Smith James Woods, Edmund Stacy, Bleckwal. 6.

Troopers.—Mr Lewis Richards Mr John Salman, Mr Henry Wilkinson, Mr Griffith Cox Mr Edward Heald Mr Gore, Mr Richard Bealing, Mr Baggot, Franci. Witherington, Mr Miles Gyncks (Gent.) 10.

Robert Hamilton, Minister, ten servants, six gunners, John Bellew, Lieutenant of the Ordnance the Clerk of the Store, six Trumpets six Chyruigions, ten belonging to the Train of Artilery, sixty-nine Sergeants, twenty Drums, fifty-six Corporals.

Fuiseers.—William Pets, William FitzGerald, John Farling, William Dowdal, Rich. Maudsley,

Matthew Simple, Betrel Vaughan, William Rowlandson, Captain Hooker, William Boyce, John Gulston, Edmund Pooley, Edward Garing, John Bryers Thomas Tobe, John Jennings, Tho. Barrow, Christopher Sherman, William Blake, William Hopkins, Edw. Jones John Williams, Pete. Cropper, John Jackson, Robert Calvect, Ralpt Goodwin, Robert Pain, Gerard Russel, Richard Ellis, Tho. Ellison, William Dextet, Henry Finch, Robert Dalvin Thomas Stanly, Francis Needham, Robert Dalligeed, Mat. Cardy, Mat. Righby, Morris Nangley, Nicho. Allen, Tho. Kemp, Henry Booker Peter Bogerd, Dennis Lord, Robert Gardner, Edward Gore Robert Gneens, John Farehurst, Thomas Farrer, Christopher Perkenson, William Windesler, Halliwary, Brasse, George Moor, John Murfy, Stephen Foxmist.

A List of Artillery, taken from the Irish at Ramnies, the second of August, 1649.

One brass Cannon, weighing seven thousand three hundred twenty one pounds, her length ten foot, her bullet weighing forty-four pound.

One brass Demi-Cannon eldest, weighing five thousand four hundred twenty eight pound, her length eleven foot and an half, her bullet weighing thirty two pounds.

Two brass Demi-Cannon of one mould, each weighing forty four hundred, their length nine foot and a half, their bullet weighing twenty six pound.

One square brass Demi-Culverin, weighing two thousand eight hundred pound, her length eleven foot four inches, her bullet weighing twelve pounds.

One small brass Saker-Drake, weighing six hundred pound, her length four foot and a half, her bullet weighing six pounds.

One brass Morter-piece, weighing nine hundred and twenty seven pounds, her shell weighing one hundred pounds.

Ja. Molyneux Mr. Gunner.

Two thousand one hundred private Soldiers, whereof six hundred Irish, the rest being of Inchequines party, and have taken up arms for the Parliament, promising faithfulness. These had quarter on the surrender of the Castles of Rathgar and Ramaynes whither for gaining conditions, they had betaken themselves.

More Prisoners taken.

William Cunningham, a noted Rebel. Mr Buggot, Deputy Pay-master. Mr John Harbert, servant to the pretended King, who landed at Galway about six days since with the King's household-goods.

Slain.—Sir William Vaughan, Sir Edward Verney, Lieutenant-Colonel Daniel, brother-in-law to the Lord Taaff. Colonel Gerrard. Lieutenant-Colenel Matthews, brother-in-law to the Earl of Ormond, Major Bretain, Lieutenant-Colonel Beverly Usher.

Captain Otway, the messenger that brought this despatch who was an actor in that service, further relates, that the enemy marched away with such haste as they left their whole camp, which was very well furnished of all provisions of victual, store of wine, silks and velvet, scarlet and other cloth both woollen and linen, and some money, all the cattle left in the quarters about Dublin as they found them there.

The enemy hath quit several garrisons upon their marching off, viz— Manouth Naas, Donahadee, and Richardstown.

Wednesday the eighth was appointed to be a of thanksgiving in Dublin for this great victory.

Thursday Lieut-General Jones intended to march out aga - with his army towards Drogheda.

FINIS.

OPINIONS.

Ralph's:

I wish that girl had been a boy!
I hoped a boy would move next door,
For girls are always prim and neat;
I know she'll be a bore!
She will not want to wade or run,
She'll never, never catch a ball,
Nor climb a tree, nor fly a kite—
Girls are no fun at all.

Winifred's:

Oh, I'm sorry he's a boy!
Two girls could have such splendid times
At sewing doll-clothes, playing tea,
Or reading tales and rhymes.
Of course he'll hit me with his ball,
And make a dreadful lot of noise,
And play at soldiers all day long
There is no fun in boys!

MARION BEATTY

WORKING IN MOSAIC.

HISTORY OF THE ART.

THE VATICAN FACTORY.

Leo XIII.'s present of a mosaic to the President of the United States recalls the controversy that waged during the last century over the artistic value of mosaics made to deceive the eye as oil paintings. It also recalls the fact that the mosaic factory of the Vatican has a practical monopoly of the best work of this kind, and that attempts by other countries to rival Rome in this respect have been futile. The Vatican factory is one of the sights of Europe. In it mosaic work is brought to the very highest point of perfection.

The first mosaic of which mention can be found among the Romans is that which Sylla had made at Praenestum, 170 B.C., and which formed the pavement of the Temple of Fortune. Mosaic work must then have become a matter of everyday luxury for the opulent Roman, for, just as we might read of an English General hauling his bath tub in his peregrinations on the veldt, Suetonius tells us that Julius Caesar took along with him in his campaigns a mosaic pavement to adorn the floor of his tent.

At the beginning of the thirteenth century mosaic work was revived in Italy and used with fine effect for the decoration of churches. But the great revival came with the Renaissance. The desire to render the pictorial masterpieces of that period imperishable by copying them had much to do with this revival. The artists and the materials were at hand.

There was at that time in existence in Venice a school of mosaic workers, which had been founded for the decoration of the Church of St. Mark. Clement VIII. called the best artists of this school to Rome and put them in charge of the decoration of the cupola of St. Peter's. Under this Pontiff and his successors mosaic copies were made of the best works of Laufranco, Perugino, Sacchi, Romanelli, Raphael, Domenichino, Guercino, and others. Some of the mosaics have as many as 10,000 different shadings, and are so finished as to be with difficulty distinguished from oil paintings.

The number of workmen in the Vatican factory varies from 20 to 50. Good mosaic artists are hard to get. This is accounted for by the fact that most important pictures are done in sections by different workers, that they involve long years of labour, and that good artists usually prefer other fields of exertion, where achievement is more prompt and individual reputation more easily acquired.

The reproduction of a large picture in mosaic requires infinite care, as the purpose is to give the illusion of an oil painting. As has been said, the work is divided into pieces among several artists. Care is taken that the lines of division do not fall on the delicate parts of the painting. As far as possible the picture is cut in sections on horizontal lines.

The basis of the picture may be wood, marble or metal. For the big pictures designed for St. Peter's slabs of pepperino stone are used. The stone is covered with plaster, and on the plaster a sketch of the picture is made. Within the lines of the sketch the plaster is partially scooped out and a section of the hollow thus formed is filled in with mastic and oil. The artist now begins to apply the smalts. He picks them out from strands, resembling printers' cases, in which they are disposed according to colour and shade; he fashions them with hammer and chisel to the shape required, and inserts them in the soft mass. When the entire picture has been filled in and hardened, the work of polishing begins.

A layer of wax is first applied to prevent the edges of the smalts from cracking under the rubbing. Sand of diminishing degrees of coarseness is first used, then emery powder. The surface is then washed and rubbed with linen cloths, and final polishing is done with red earth from Naples.

Thus composed and polished, the mosaic has not yet the aspect of an oil painting, for the mastic shows in its natural colour through the interstices of the smalts. A long and tedious encaustic process follows. Colours melted down in wax are applied with the point of a hot iron to cover up and give the desired shade to the mastic joinings. When all the parts of the picture are completed they are fastened to the church walls by means of clamps, and the different segments of the picture are united on the spot.

At Venice a much more expeditious method is often adopted. The sketch of the picture is drawn in reversed fashion on a cardboard and coloured. Smalts corresponding to the colours on the cardboard are gummed face against it. The whole is then set in the mastic, the cardboard is adroitly removed, and the mosaic picture revealed.

This method has the advantage of cheapness and rapidity, but being composed by a merely mechanical process it leaves no room for the real art of the mosaist. The prevalence of mosaic pictures put together by this system is no doubt largely responsible for the severe criticisms that are often heard regarding the decadence of modern mosaic work. Needless to say, it is never employed in the Vatican factory.

After the Fabrica Vaticana come the mosaic factories of Paris and St. Petersburg, the latter forming part of the imperial glass manufactory. But in almost all cases it is Italians who do the fine work, and mosaic composition has for the last 500 years remained a distinctly Italian pursuit.

One branch of the art, the decoration of rings, brooches, bracelets and other articles of jewellery with mosaics, has, in the hands of Italians, reached an amazing degree of perfection.

Leo XIII. has shown a watchful interest in the Vatican factory. It was something in the nature of a revolution when he took the artists from their traditional work of reproducing religious subjects of the Renaissance period and gave them themes of modern style, such as the picture he has sent to President Roosevelt.

PHOTOGRAPHING ANIMALS AND BIRDS.

Ross Limited, the well-known opticians and manufacturers, of high-class photographic apparatus, are issuing an interesting little illustrated pamphlet devoted to an examination and description of the Ross Prism Binoculars, which, as compared with ordinary binocular field-glasses, Mr. Charles Dixon points out, have the advantages of possessing higher power of magnification, much more brilliant definition, a larger field of view, longer range, and a greater degree of illumination and penetration. The gain which all these advantages mean to the close observer will be at once apparent, and in the pamphlet referred to the especial utility of the prism binoculars for those who are engaged in watching and recording the movements and habits of animals and birds, which would otherwise be beyond the range of human vision, is enlarged upon in an interesting manner. In recent times photography has been employed in like manner for portraying birds, insects, and the smaller animals, the photographer carefully watching and stalking his subject, or laying in watch, all of which means the expenditure of a great deal of time and the exercise of unlimited patience. And whilst, therefore, such a branch of photography will not appeal to most, yet there are those who, during a sojourn in the country, might systematically photograph wild life in a manner which would constitute a valuable contribution to the records of natural history.

The discovery of nitre deposits in Death Valley has started a rush to the perilous regions. Five hundred men are waiting at Ballarat for information as to which portion of the desert is the best for prospecting. It is said that the deposits are as rich as those of Chile.

FRANCE IN NORTH AMERICA

THE RELICS OF HER FORMER DOMINION.

BY D. W. PROWSE.

France in the eighteenth century had great possessions and vast possibilities; in India, Pondicherry is all that now remains of that vanished dream of eastern empire. In North America her dominion extended from ocean to ocean. With her great military powers she threatened the very existence of the English. To-day the sole remnant of New France in the North America are two rocky islands, St. Pierre and Miquelon, off the coast of Newfoundland. All the interests in the little archipelago, rests in the former. Miquelon has no harbour, and only a few hundred inhabitants. St. Pierre is a gay, bustling little town, a veritable bit of old France. The apple-cheeked women with their Normandy caps, the creak of the ox cart, the fanfare of the town crier's bugle, all remind one of the vividly picturesque Brittany, and the lovely Norman vales.

Its name, St. Pierre, appears in the early maps, and the little island has an ancient history. In its more modern annals the story of this small colony is a fragment of the history of old France, a Liliputian reproduction of that eventful and tragic story. The little island, like the Mother Country, had its revolution, its reign of terror, its tree of liberty, its Jacobin club, and, under the empire, a miniature coup d'etat. The whole was on the smallest possible scale, a veritable tempest in a teapot.

This diminutive French settlement has suffered from storm and tempest, fire and sword; it has been cast down and utterly demolished by the elements and the English over and over again. It speaks well for French energy that, after all its vicissitudes, it is to-day, for its size, as active and lively a little seaport as exists in America.

It was first occupied by the French as a permanent possession in 1662. In 1703 it came into the possession of the English under the Treaty of Utrecht. In 1763, by the Treaty of Paris, it was ceded to France, and a considerable portion of the Arcadians, who refused to take the oath of allegiance in Nova Scotia, settled in the colony. In the tremendous upheaval of 1789, the revolution was felt even in distant St. Pierre. There was a general assembly and a committee of notables. The governor and even the prefect apostolic were smitten by the Republican fever. There were probably not yet more than three or four hundred inhabitants in the island, yet, in true Gallic fashion, they constituted themselves into an assembly general, and had officers with high-sounding titles. They formed a committe of defence, and all were full of martial ardour. The next day an English frigate came into the Roads, and all the inhabitants, without firing a shot, were captured and deported to France. It turned up several times as a Jack-in-the-box. At the breaking out of every war the English took it, and when peace was proclaimed restored it. In the Waterloo year it was finally restored to France by the second Treaty of Paris. The whole population of the colony is put down as 6,200, but out of this number 1,033 are transient, sailors and fishermen. The permanent residents are about 5,000; 1,400 are natives of France, 722 are English. there are 247 functionaries and their families to govern this immense possession.

The energy shown by the French in prosecuting the cod-fishery is something remarkable. The year of the Peace of Amiens, 1802, they repaired their buildings, and 2,000 fishermen caught 100,000 quintals of fish, an average of 50 quintals per man, a notable example of their indomitable push and perseverance under difficulties. The operation of the colonial Frenshmen at one time was on a gigantic scale; there were probably over 30,000 engaged in the fishery, and the result of the voyage nearly equalled the whole English catch in New Foundland, 1,000,000 quintals, worth nearly 5,000,000 dollars. Since that time, notwithstanding the heavy bounties, the French fishery has been a failing industry. The trade of St. Pierre, which in 1885 was valued at over 20,000,000 francs, fell in 1892 to 8,500,000 francs, and the catch of fish fell from 46,240,817 kilogrammes in 1886 to 22,098,071 in 1892.

The really important business of France in New Foundland are the fisheries, employing some 7,000 or 8,000 men, and the largest number of men and greatest tonnage employed come every year from France. The vessels are chiefly owned and manned in the channel ports, more than half sailing from St. Malo and Granville. Other Frenchmen go out in steamers to work at the shore fishery, and in Pierras Banken there are smaller vessels, chiefly schooners. Next comes the shore fishery, which is carried on pretty extensively both from St. Pierre and Miquelon. The French shore business is the smallest and least important of all, employing only 458 hands, and of these more than half are lobster fishermen and canners.

One of the most important and profitable industries of St. Pierre is smuggling. Louisburg, in the old colonial times, was, and in the little French colony it the present day is, a veritable smugglers' den Canada suffers most by the contraband trade. It is calculated that half the spirits consumed in Lower Canada pay no duties to the Dominion Government. Great efforts have been made by Canada and New Foundland to put an end to the illicit traffic, but all in vain. Schooners are captured every now and then, the cure denounces the detestable business, which is so demoralising to his people; still it flourishes, and it will continue to flourish whilst the Government of France refuses to permit the residence of an English consul at St. Pierre. Every nation in the world can have its representative in the little island, only England, the one Power most interested in St. Pierre's trade, is refused. The big schooners that take the liquor from St. Pierre leave ostensibly on a fishing voyage. There is no clearance, no manifest of the cargo, no papers to show what she has aboard. The modus operandi for smuggling in the gulf of St. Lawrence is a very ingenious one, and nearly always succeeds. The larger vessel, with the contraband aboard, does not venture into Canadian waters. She meets her consorts, generally three small crafts, at an appointed time and rendezvous in the entrance of the gulf, or of Cape Breton, or on the Labrador shore, the smaller vessels proceeding to the north coast, and when well up the river the liquor is transshipped into boats or sometimes into farmers' carts. All the inhabitants of the Lower St. Lawrence are in league with the smugglers.

By the Treaties with England it is strictly enjoined that St. Pierre was not to be fortified, and there was only to be a guard of 50 men for police. But all this is evaded. The colony possesses a complete military organisation, and on the fete of the Republic it turns out in grand imposing array, artillery, engineers, and infantry. There is no cavalry. There are only about 1,000 male inhabitants in the island who are capable of bearing arms, and who would come under the conscription; but all turn out, and when the men-of-war are at port they co-operate with the colonial militia.

The ox-cart, symbol of French conservatism and of the provincial ways of old France, still remains at St. Pierre. The little colony could not, however, forever continue insensible to the rush and go and influence of Canadian and American ideas; at last she has been bitten by the tarantula of modern progress, municipalism. There is now a system of electric lighting, gas and water have been put in, and there is extensive telephonic communication. In St. Pierre taxation has thus been largely increased. The little town is no longer a free port; her revenue has to be augmented to meet the ever-growing expense of town improvements.

LIFE'S LESSON-BOOK.

On every lettered page we read
Some lesson clearer than the old,
Limned as in ancient missal-books,
Blood-red and gold.
The purple parchment of our fate writ o'er
With strange mysteriousness of treasured lore.

How tenderly just here and there,
Above the straightness of black lines,
A saint-face from the margin glows,
A halo shines!
And midst the maxims all so hard and stern
Hope's gentle finger points to help us learn.

For learn perforce we must herein
Of joy, and of the use of pain,
Of how not running aimlessly
The prize to gain,
And where around Earth's pettiness to find
A chaplet of undying flowers entwined.

AN OLD-TIME TUAM TRAGEDY.

The Mall House, Tuam, was once the scene of a barbarous murder—that of an aged clergyman by his servants (says the "Tuam Herald"). It was at first thought it was the act of robbers, but ultimately the real perpetrators were discovered, and great indeed was the general sense of relief when it was discovered that the awful deed was done by no one in the place, but was the sole act and inspiration of the servants of the unfortunate man's own household. To add to the ghastly barbarity of the crime if possible the day selected was perhaps the most awful that could suggest itself to the villains who committed it. The cold-blooded massacre of the poor man on a Good Friday of all the days of the year, and the quiet, unconcerned apathy with which the criminals who remained on in the place, with the wages of their crime under their eyes, all these circumstances show an advance in barbarous cruelty and inhumanity not often equalled in the red records of murder. No stain of the dark deed attached to the town or any inhabitant of it, for the servants were not natives of the place, and indeed introduced a crime into the place which went out with them, and found no growth or sustenance in the soil. At the early part of the last century a family named Burke lived in the Mall House, but the particular race is now extinct. There was a certain member of them, a Major Burke, well known in his time some fifty years ago as a sportsman and a hospitable, good-hearted fellow. After Dean Echlin they were the most noted occupants of this historic house. Its ivy covered walls and handsomely picturesque appearance are familiar enough to the people of the place to require any minute descriptions. It is a three-storey slated house with steps leading to the hall door, and looking directly on to the grounds of the Protestant cathedral. The Mall, whereon it stands, is somewhat fallen away from the position it once occupied as a fashionable quarter of the town. Some of its houses are unfortunately gone into ruins, yet but little would make the place as cofortable and snug as ever it was in the days of our grandsires, and the Mall has many old cherished memories associated with it to make us all wish to see it again what it once was.

OUR WEEKLY STORY

INGAR, THE DYNAMITER.

By MONTGOMERY E. M'INTOSH.

The "Keel Ridge," on the Messaba, that extraordinary range where iron ore is scooped out of the ground with steam-shovels—a process that all miners bred to a right notion of the underground workings must ever regard as irregular—came a young Swede, Ingar Nelson, when the range was new. He was a grinning penniless giant of twenty, anxious to find work. No men were needed at the mine, but there was enough for him to do in the town, where every day he saw a fresh crop of flimsy buildings springing up, on streets from which the stumps had not been grubbed.

The stout and willing Ingar was presently a man sought after. His hand was turned to every manner of work, from building a house to making Fifth Avenue capable of being travelled by waggons. Up to the time of his advent the avenue had been open to foot-passengers only, because the inhabitants had been too busy with other matters to clear out the stumps and boulders. Fifth Avenue, so named by a surveyor who had once visited New York, began at the mine hill and ended in a cedar swamp, and was destined to be lined throughout its length with miners' supply stores and saloons.

One day Ingar visited the mine, and watched the men at work there make ready for a blast. He retired with them when the danger-signal sounded from the power-house whistle, stood perlexed while the foreman put the electrical firing apparatus in readiness, and when the knob was touched, was a little shaken and entirely puzzled by the instant, decisive detonation in the mine. Back in the drift again, the litter of riven ore, torn from solid walls, made an impression on the youth that was not to be blotted out.

"I tank she bane good stoff!" he exclaimed with satisfaction, when shown some of the yellow compound that had demonstrated such power to split stone and iron.

It was at this time that Ingar took the contract for digging a cellar beneath the store of Peter Baird. Peter had been in such a hurry to begin business that he built his store first, and arranged for the excavation of the cellar afterwards. Ingar did pretty well with the digging, until he came to a boulder so big that it was beyond the strength of man or beast to get it out.

Peter Baird's disgust was extreme, but he was reassured by the contractor. "I fix um," said the laconic Ingar. Mr. Baird was busy for a time after that, and when next he saw Ingar, that herculean Norseman had just emerged from the cellar. Ingar lighted his pipe and went across the street to see how Andrew Larsen was getting on with his new meat-market.

At this point Peter Baird went into the storage shed back of his main building to fill an oil-can that had been sent in from a prospector's camp, and this was a lucky circumstance.

In the twinkling of an eye the store was rent and shaken as if a very Vesuvius had broken loose under it, and in one or two more twinklings M'Hale's bar-room, on the opposite street corner, suddenly spilled men out of every door. That was where the largest piece of the stone struck.

When his employer cautiously approached the shattered store, very white as to face and with knees not to be depended on, Ingar gravely explained the eruption that had just taken place. In disposing of the refractory boulder he had wished to put his newly acquired knowledge of explosives into effect. From a supply store he had obtained a miner's "stick" of dynamite, which looks very much like a tallow candle, and with it the necessary fuse and fulminating caps. With these it was his design to shatter the stone and surprise Mr. Baird—a statement that caused loud laughter and cheers.

"You done it, me boy, you done it!" yelled Pat M'Hale, who had just arrived, loudly demanding to know whom he had to thank for dropping three hundred pounds of very ordinary stone upon his premises. Even Peter Baird slapped Ingar on the back and called him "a bird," but the Swede never knew what he meant.

Ingar had placed the dynamite under the boulder, attached cap and fuse, and then applied the match. He had a notion that when he returned he would find the stone conveniently broken into small pieces, like the ore at the mine, and his chagrin was keen that the explosion should have made such a mess of the building. He did not make the statement at that time, but secretly held the opinion that it would have been a successful operation had he used only half the "stick." Mr. Baird patched up his store and ordered a new stock of crockery.

After that the supply of men were not disposed to sell Ingar dynamite. One day, however, he purchased some for the declared purpose of blowing out stumps, at the same time engaging in solemn terms not to employ any of the dangerous substance in the course of cellar-digging.

Ingar had lodgings at a large boarding-house on the outskirts of the town, where miners and other workmen were quartered, and in walking down the street with his formidable purchase, he thought of a particularly offensive stump on his landlord's premises. This stump, remnant of a giant pine, so firmly rooted that it had resisted all ordinary methods of extraction, was a nuisance and an eyesore.

Ingar recalled perfectly that the force of dynamite was expended vertically, for he had proved this to his satisfaction in Baird's cellar, where the stone certainly went upward and exhibited no tendency toward horizontal movement. Reasoning thus, it was clearly safe to blow up the landlord's stump, which must infallibly be lifted, broken, and dropped upon the neighbouring vacant land.

This, like the other attempt, was to be a surprise, and owing to the impressive size of the stump, and to guard against failure, Ingar placed two sticks under it.

That stump was blown squarely through the boarding-house, from side to side, and Ingar, who had retreated to a safe distance to watch the explosion, fled from what he believed to be a scene of death. Fate had ordained, however, that at the supreme moment the landlord and his wife should be in the kitchen, engaged in a high altercation with the cook, and no one was in the front of the house, which was the part devastated by the meteoric stump.

In the instant of shock, the cook departed in a cloud of dust, and refused to go near the place again, because she suspected the landlord of having arranged the whole affair with a view to getting rid of her without payment of wages due. So she sent a lawyer to collect the money, and the landlord engaged the same legal gentleman to arrange a settlement of the damage with Ingar.

The honest lad, who had striven so earnestly to emulate the American spirit of enterprise, was now called Ingar, the Dynamiter. The merchants would trust him for anything else, but with respect to explosives they regarded him as a dangerous theorist, and he could not buy dynamite in any store on the range.

In spite of all this it was another sort of experience that gave the Norseman lasting fame. It happened one day when the new powder-house had just been completed, on a spur of the mine hill and among the only trees that had been left standing on the "location."

Some Italians were engaged in transferring the powder and dynamite from the temporary premises to the new storehouse, and one of them carelessly left the door of the new building open.

Coming up the hill, the men had to turn a ledge of rock before they could see the new magazine, which was covered with corrugated iron and fresh-coated with red paint. On the first trip up, after the careless man had left the door open, they came upon a sight at which every man turned white.

Through the open door, not a hundred feet away, serenely examining the deadly stores strewn all about, was Master Norman Roberts, aged six years, son of the mine superintendent. His sister, toiling up the path and calling his name, explained the child's presence there

Master Norman, at the moment when he was discovered, had possessed himself of some dozens of fulminating caps, which he thought were excellent playthings, and had scattered the bright brass liberally on the floor.

The situation was desperate. Within the space of a few feet were hundreds of pounds of every sort of high explosive, from ordinary "giant" to the most terrific combinations of nitro-glycerine. The concussion of an exploding cap, of the sort with which the lad was playing, meant death and destruction to every soul on the hill.

The Italian who first got a view of the situation went down upon his knees—somewhat gingerly, to be sure, for he had seventy pounds of dynamite in his hands. A dozen men huddled together behind him, afraid to startle the boy by a sound, lest they might hasten the moment when those childish feet would annihilate them, and not daring to run because they knew they could not get away from so much dynamite. Besides, there was the superintendent's little boy.

Ingar Nelson, swinging up the hill path on his way to the power-house, where his brother now worked, saw the shrinking group and hurried to them. One of the foremen delegated to watch the filling of the powder-house had recovered himself enough to signal frantically to Norman's approaching sister. She astonished by the earnest pantomime and not divining the cause, stopped on the hillside and ceased to call her brothers name.

Ingar understood the instant he arrived, for he knew somthing about dynamite now. He stopped a moment, and scratched his head. The circumstances did not seem to favour conversation, and besides, Ingar was rather a taciturn man; so after an instant's pause, in absolute silence, he tiptoed steadily toward the open door.

Little Norman had his back turned to the interested spectators of his play, and was joyously tossing his new-found playthings about. The men in the path bent forward until their trembling fingers almost touched the ground. One cannot avoid some nervous agitation when he approaches a baby who is playing with fulminate among cases of nitro-glycerine, and the palms of Ingar's hands were moist before he made many steps.

Softly he stole to the door. Norman was babbling merrily and thinking it all fine fun, when he was suddenly gripped by the back of his waist. A powerful arm raised him, struggling and crying with fright, and held him high above the dangers with which the floor was spread. Then Ingar, tossing the tiny figure upon his shoulder, pranced down the hill, relieving the tension of his nerves by giving such cheerful whoops that Norman concluded it was all a lark.

Twelve crouching figures straightened, and twelve voices made so much joyful noise that all surface work at the mine was suspended,

while the day shift came to see what the clamour meant.

He is Ingar the Dynamiter still, but the name is not without honour.

He was the first man to show that something could be made with a market-garden in this far northern land, and if you will drive out on the Iron Mountain road, on a summer day, you will doubtless behold his honest blue eyes surveying you across a domain of potatoes and cabbages. Superintendent Roberts never rides that way without a friendly greeting for the man whose mettle was so well tested, and he always gets a hearty answering halloo, delivered by Ingar, Mrs. Ingar, and little Ingar—the last an eminently robust sprig of the Viking stock, already somewhat expert in the use of the hoe.

THE WINTER DREAM.

A dream of beauty; of the laugh of waves
And the bright rushing of a swollen brook;
Its bursting into light from sunless caves
Under the network of a woven nook,
Which moss-grown roots, entwined and roofed with green,
Spangled with shining stones and starry sheen!
Silent and dark within its shadowy rest
The water lay, scarce heaving underneath
The drooping brake-leaves or the trailing wreath
Of lady-fern, and moss upon its breast;
Yet, with a murmur rather felt than heard,
That told the faint heart of the fountain stirred.

A dream of spring-time; of the sunny light,
And the swift melting of the mountain snows;
Of earth's awakening from the winter's night,
When hearts grow calm, and half forget their woes.
A dream of beauty; of the arching trees
Heavy with blossoms, and the cool, fresh breeze,
Curling the foam-wreaths in the brook's bright spring,
Silent no longer; with the pleasant gush
Of gurgling waters, and the frequent rush,
Clearing the air of many a golden wing,
And the low rustling in the leaves o'erhead,
And the soft sunlight through the branches shed.

A spot of solitude; yet legends tell
Of years long past, when many a joyous throng
Came to the silence of that brook-cleft dell,
And woke its echoes with light daugh and song:
Now, carvings rude on every ancient trunk,
Time worn, and in the swelling bark half sunk,
Bear record still of each forgotten name,

That once was music to some kindred heart,
Guarded and cherished as a thing apart;
But now, alas! for constancy and fame!
Vainly these faithful oaks their memory save,
Whom human love hath yielded to the grave.

Yet the bright waters spake not of decay,
Nor earthly shadow, nor the blight of grief;
There was no sorrow in the graceful sway
Of the fair drooping willow's silver leaf,
Nor in the fragile blossom lightly flung
From the tall may-tree that the fount o'erhung,
On the swift stream, and floating silently
'Mid the long grass and mimic islets there,
Freighted with dew-drops and with perfumes rare:
What king could boast a richer argosie?
Yet was it fleeting as that idle dream
Of the cool fountain and its sparkling stream.

The vision fled with summery sight and sound,
And the stern real ruled the heart at will:
The calm dead grandeur of the mountains round—
The kingly river in his fetters still.
Winter and storm; the city's mighty mart;
The ceaseless beatings of its guilty heart—
These were instead, and darker, gloomier yet,
Towered the sky, unlit by moon or star:
What roused the vision of that stream afar—
That dream of light, with all its vain regret?
A pale and faded leaf of feathery fern,
That erst had dropped above that fountain's urn.

Ancient Boroughs of Ireland

From Lewis's "Topographical Dictionary of Ireland," 1837.

CHARLEVILLE.

CHARLEVILLE, an incorporated market and post-town (formerly a Parliamentary borough), in the parish of Rathgogan, barony of Orrery and Kilmore, county of Cork, and province of Munster, 29 miles (N. by W.) from Cork, and 114¼ miles (S.W.) from Dublin; containing 4,766 inhabitants. This town, so named in honour of Chas. II., is of comparatively recent origin, having been founded by Roger, first Earl of Orrery and Lord-President of Munster, in the year 1661. That nobleman erected a magnificent mansion here for his own residence, in which he kept his court of presidency, and by his influence obtained for the inhabitants a charter of incorporation from Chas. II., dated May 29th, 1671. Charleville House was burnt by the Irish under the command of the Duke of Berwick, in 1690, and by his order, after he had dined in it. In 1691, Col. Lumley came to this place on the 18th of August, with a party of soldiers, when the enemy posted here fled, leaving many of their men killed and wounded. Captain Massey, who had been left behind, fired his pistols at the soldiers of William's army; and he and a cornet, being taken prisoners with protections in their pockets, were hanged as deserters. The town is situated on the mail coach road from Cork to Limerick, near the border of the latter county, and on the north-east side of an elevated tract, from which stretches an extensive plain of rather cheerless aspect.

By charter granted in the 23rd of Chas. II., to Roger, Earl of Orrery, erecting his lands into a manor, this town was made a free borough, and the inhabitants were incorporated under the designation of the "Sovereign, Bailiffs and Burgesses of the Borough of Charleville." The charter conferred upon the corporation the privilege of returning two members to the Irish Parliament, which was regularly exercised till the Union, when the borough was disfranchised, and the £15,000 awarded as compensation was paid in moieties to the Earls of Shannon and Cork. The sovereign, or his deputy, is usually appointed seneschal of the manor, the greater portion of which extends into the county of Limerick; and as such he holds a court of record, the jurisdiction of which extends to the determination of pleas not exceeding £200 late currency: the proceedings are according to the usual course of common law, and actions are commenced either by arrest of the person, attachment of the goods, or serviceable writ; and under the Act of 7th and 8th of Geo. IV., cap 59, he has also a civil bill jurisdiction. Petty Sessions are held in the town every alternate Monday, by the county magistrates. The court and market-house is a small, plain building on the north side of the main street. At Belfort, near the town, is a spring of remarkably pure water, with a slight mineral tinge; it is held in great veneration by the peasantry, who resort to it in great numbers. John Macdonald, commonly called "Shaun Claraugh," an Irish poet, resided here for several years, and was buried at Ballysally, near the town.

(To be Continued.)

BOON FOR THE SIGHTLESS.

HOW THE BLIND CAN READ ONE ANOTHER'S WRITING.

A novel method for enabling the blind to read letters written by the blind has just been perfected by a Frenchman, Professor M. Dussaud. The process is so exceedingly simple that educators interested in the blind, who have waited long for a method whereby the blind may carry on a correspondence one with the other, will not wonder why M. Dussaud's plan was not thought of many years ago.

A method of enabling persons deprived of their sight to write in the same manner as they read has been vainly sought for during the past seventy years.

The Braille alphabet, designed to enable the blind to read, consists of eighty-two signs obtained by the varying combinations of six dots. These are stamped in relief on the paper, and the blind person reads them by passing his fingers over the surface. To reproduce these signs so that they can be read in their turn, the sightless writer drives a stylus into the paper and so makes a depression—that is to say, he writes these signs on the back of the sheet, so that they come out in relief on the front. Therefore, he has to write these signs the reverse way, as engravers do. In this way it will be seen that writing for the blind under present conditions offers many difficulties, for he has to learn his alphabet twice over—once to read it and in a reverse manner to write it.

He has only the combination of six dots to work with, and therefore he has to write an "e," for example, so as to read an "l," and so on. This is a maddening process. M. Dussaud employs a metal regulator divided into compartments carefully aligned. At the bottom of each compartment there are six holes, and this regulator is placed on the paper. Underneath the paper another regulator is placed corresponding to the top one, but having six points, which stick up into the six holes of the one on the top.

The blind person drives his stylus into the necessary holes to form a letter, but in place of making a hole he forces together the two regulators, and so the letter is produced in relief by the points of the regulator underneath driving the paper up through the holes of the one on the top. He, therefore, can write directly characters which can be read. The same method is applicable to writing figures or music, and it has brought about a real revolution in the lot of the unfortunate beings who are deprived of the sense of sight.

An amount of money has been raised in America sufficient to guarantee the success of the scheme to establish a John Fritz medal, to be awarded yearly to the originators of the most useful scientific and industrial achievement. An effort is being made by the projectors to make this a distinction not second to Bessemer's gold medal awarded by the Iron and Steel Institute. The medal will be awarded by a committee representing the American Society of Civil Engineers, the American Institute of Mining Engineers, and the American Society of Electrical Engineers. A year's deliberation is necessary before any award shall be made, and the sanction of three-fourths of the committee must be had. The eightieth birthday of John Fritz will be observed in New York on October 31 by a dinner which will be participated in by the leading mechanical and electrical engineers of the country.

ANCIENT IRISH SOCIETY.

THE IRISH FIGHTING CLANS.

THE O'CONORS OF OFFALY.

By Rev. F. R. MONTGOMERY HITCHCOCK, B.D.

ALL RIGHTS RESERVED.] [ALL RIGHTS RESERVED.

Part II.

This was sound advice, and it would have been well for the English governor had he acted upon it. But the O'Conors were as cunning as they were warlike. After successfully harassing the invaders' flanks, they returned without the guidance of Cahir through the wild tracts and dense forests of country which was utterly unknown to them, but every inch of which was known to him. The wily Bryan took advantage of the heavy rains, when the Deputy was practically powerless to put in a plea for immunity, and was granted a safe conduct to Dublin. Of this permission Bryan took advantage in order to obtain an interview with his brother Cahir, and became duly reconciled to him, and together with him laid deep plots for the recovery of their dominions. But their funds were well-nigh exhausted, and they had little means of carrying on the war with any hope of success, and at last were reduced to make overtures to the much-exasperated but too confiding Deputy, Lord Grey. The meeting took place at the ford of Kinnegad, the English forces drawn up on the north side of the stream, and the clansmen, full of fight and courage, lining the southern bank, the boundary of the dominion of Offaly, for which they were ready to die at a moment's notice.

The result of the interview was eminently satisfactory, according to Lord Grey's version, the said Bryan greeting him "with humble reverence, submitting to the King's highness, confessing his offences, and did utterly refuse (resign) all his title in Offaly, and in all black rents and fees that can be had of the King's subjects." In a word, Bryan promised to be a good and quiet boy again, and pay all due reverence and farm the land as a tenant of the Crown, and was pardoned and reinstated. Cahir, who had received the land from the King as his tenant, naturally, even though a traitor himself, resented this worse than "punic faith," and withdrawing his forces retired to a strongly fortified house. But Bryan now proved the traitor. With evident satisfaction, he led the English on the trail of his brother, and at last ran him to earth in one of his strongholds. It is said that the place was so closely besieged that the refractory Cahir with difficulty escaped, and only in his shirt. But the fugitive, seeing the folly of further fighting, gave in with a good grace and was received with favour again by Lord Grey, who thus missed the opportunity of making the O'Connors "terrible examples to all Irish traitors," as the King's Highness desired.

But the O'Connors could not remain quiet. Two years after (1546) we find them invading Kildare and plundering Clane and Carberry with the O'Kelly's, whose lands, then called Caellan, are now included in the county of Kildare. In retaliation, the English invaded Offaly. Thereupon Bryan, with the O'More's of Leix, burnt down the town and monastery of Áthy (Ath-brodain—the bloody ford), which was then one of the keys of the marches of Kildare. The Lord Justice then proclaimed the O'Conors traitors, and sent letters to their allies to leave them and be pardoned. This they did, and O'Conor, left alone, fled to Connaught, where he was attacked and deprived of a great quantity of his supplies by some of the Irish who were friendly to the English. In the meantime Sir William Brabazon had overrun all Offaly, and erected a castle at Dangan, the name of which was afterwards changed to Phillipstown, in honour of Queen Mary's consort. While the English Lord Justice was securing his country, Bryan O'Conor was trying to levy forces to attack him. And feeling himself sufficiently strong to do this, the next year he crossed the Shannon with his clans, but on his march to Leinster they melted away, evidently alarmed by the fact that none of their ancient allies had rallied to the banner of the O'Conors. Bryan was, therefore, forced to submit. But this time he had no mild Lord Grey to deal with, but a resolute and determined man, who brought him to England "at the mercy of the King."

Several years after, this firebrand was released at the entreaty of his daughter, Margaret. This young lady, whose natural charms were enhanced by all the accomplishments of the age in which she lived, courageously faced the perils of a voyage across the channel and a journey through England to the Court of Queen Mary, who, in consideration of her connection with the great English family of Kildare and her religion, admitted her to an interview. The heroic daughter pleaded her father's cause with such eloquence that Mary, very unwisely—from the English point of view—allowed Bryan to return to his native land.

The inevitable consequence of O'Conor's return was that the country was in a blaze again, and on this occasion the O'Maddens, the Moores, the O'Molloys, and the O'Carrolls assisted the O'Conors in carrying fire and sword through Offaly and the neighbouring districts. All the hostile septs rose like one man, and directed their operations principally against the Irish who were loyal to England, and the English settlers in Offaly, which by this time had been made shire land.

But on this occasion Norman cunning proved superior to Celtic wit. Near Athbrodain, "the bloody ford," where the men of south Leinster had defeated Carmar Cas, King of Munster, in the second century, rises a solitary hill of some elevation which had long been associated with the traditions of south Leinster. Upon its brow is found an ancient rath, circular and made of earth and of considerable extent and height. Here was held in olden times the Naasteighan—the assembly of the states (the beginning of the word still being perpetuated in the name Naas)—on this "Hill of Carmen." Upon the summit of the rath were sixteen conical mounds, on which the elders sat, while all around them lay the pillar stones and other emblems of their druidical religion. To this rath the Norman settlers, who had been given the country which had been taken by royal warrant from the native tribes, invited the principal chiefs and prominent men of the septs they wished to dispossess. And suspecting nothing, the O'Conors, O'Carrolls, O'Moores, O'Molloys, O'Dempseys, and O'Dunns came in large numbers, and presumably unarmed, on New Year's Day, 1577. Not one, it is said, lived to see another day of that year or returned to their homes, for when peaceably debating, they were surrounded by horse and foot and massacred. And the Hill of Carmen became known as the hill of decapitation, or Mullagmast.

The O'Conors found it hard to raise their heads after this cruel and cold-blooded massacre. But again the hostile chieftains owed the restoration of their lives and lands to the good offices of a woman, the ladies of the fighting clans showing as much superiority in the arts of peace and piety as their husbands did in the art of war. For Lady Mary O'Conor protected the young Earl, last scion of the Kildare family, in the forest wilds of Offaly, and Elizabeth was ultimately induced to restore the titles and lands of this ancient family to him.

Some years afterwards (1583) occurred a strange event in the annals of the O'Conor sept, which is related by Cox in his Hibernia and Anglicana, and which recalls the scenes of single combat which was so frequent in the highland clans of Scotland. It was a dispute between two of the O'Conors. Conor Mac Cormack O'Conor stated that Teige Mac Gillpatrick O'Conor had treacherously and foully murdered some of his followers. Teige, it would appear, belonged to the O'Conors who were ranged on the side of England in the stormy times of the sixteenth century, and had been only too glad to wreak vengeance on the Irish O'Conors for their extermination of his relations. And when accused by Conor before the English court, challenged his opponent to decide the dispute by mortal combat. The challenge was accepted, and the next day was appointed for the contest. When the hour for the fray was come, the two combatants were accommodated with seats at the opposite ends of the inner court of Dublin Castle. Sir Henry Wallop and Adam Loftus, Archbishop of Dublin (Lords Justices) were the judges, and there was a large sprinkling of the military element present, attracted by the remarkable character of the proceedings. The pleadings were then

read, and the oath was solemnly administered to the litigants, each of whom swore that his quarrel was just. Secretary Fenton and some attendants then approached Teige, and he was stripped to the shirt and searched to see if he carried a dagger. Conor was likewise stripped and searched. And the examination having proved satisfactory, their respective patrons armed the combatants with sword and target—the weapons selected by Teige. At the given signal—the sound of the trumpet—the combatants dashed into the lists and began the battle that was to end fatally to one or both. Teige very soon showed his superiority. He was a perfect master of his weapons, and his greater strength and coolness gave him a decided advantage over the fierce and unguarded rushes of his opponent. Three times Teige's sword passed under the shield of Conor, and pierced his body. Exasperated by the wounds, which increased instead of abating his fury, Conor madly threw away the weapons which had served him so badly, and rushing like a wounded tiger at Teige, seized him round the waist in order to throw him. But the poor fellow was already weakened by loss of blood, and Teige struck him mercilessly again and again on the head, and he fell to the ground stunned. His victorious adversary then cut off his head with his own sword and laid the ghastly offering before the justices, who must have witnessed with horror his terrible contest that would recall to them the harrowing scenes of the Roman amphitheatre.

In 1597 we again find the O'Conors in the field. There is a celebrated pass in Westmeath, a dangerous defile through a wood, which is now called Tyrrellspass, from a victory Tyrrell and O'Conor won over the English forces in this place. This Captain Tyrrell was a dashing officer of O'Neill's army, then fighting in the north. But O'Neill hearing that his territory was to be invaded by a large army from the Pale, despatched this enterprising lieutenant with a small body of men to Leinster to cause a diversion and to prevent the Anglo-Irish of the midland counties joining the army that was marching north. In this Tyrrell was successful, for a strong force who had mustered in Mullingar with a view to join Lord Deputy Burrough, at once turned their attention to Tyrrell, whom they hoped to ambush. But O'Conor Faily, a warrior of great personal bravery and skill, had joined Tyrrell, and together they devised a plan which if successful would simply annihilate their enemy. Tyrrell placed half his men under O'Conor in the hollow of the road, and waited for the attack, which was not long delayed. Retreating slowly so as to induce the enemy to press hot after him, Tyrrell succeeded in drawing them into the ambush. Then at a given signal, O'Conor and his men leaped out of their hiding-places, and Tyrrell returned, and the enemy, attacked in front, on the flanks, and from the rere, were hewn down to a man. O'Conor himself displayed prodigies of valour in this fray. It is said that from the constant use of his heavy sword, his hand swelled so much that the handle of the weapon had to be filed through before his hand could be released from the guard.

The clan now had it all their own way, for the ill-fated Essex proved as incompetent to dislodge this fighting clan from their strongholds as he was incapable of managing Ireland. With that unthinking obstinacy which persists in adopting the same hard and fast methods and tactics of warfare that have ever been found to be unavailing when dealing with a cunning though undisciplined foe, and in a strange country, Essex continued to hurl weighty cavalry into impassable marshes, where they lay completely at the mercy of their enemy. Without intelligence of the fighting clan's whereabouts, without knowledge of the country they were fighting over, although equipped with the best weapons and artillery of the age, the flower of the English host found a grave in the bogs and woods and passes of Offaly. The Earl completely lost his head, and ordered his brave but badly handled troops to be decimated for their cowardice.

We have no time to moralise on such a monstrous and unsoldierly action, for we must hasten to conclude our sketch of the fighting clan.

The last we see of this famous sept is in a hot encounter with the English of Meath and the other O'Conors and the Connaught men under Owen O'Conor. The latter were suddenly attacked by Calvach O'Conor as they were plundering a small town, and not expecting a fight, were taken completely unawares. It was indeed a case of a hundred flying at the rebuke of one, for it would appear that the Calvach had only a few men at his heels when he came upon the spoilers. An incident is said to have occurred at this juncture which shows that the Irish grasp of a grimly humorous situation was then as now racy of the soil. As the Calvach rode into the town which was being plundered by the kerns of Connaught, a man who had borrowed a cauldron from him ran up and said, pointing to one of the spoilers who was carrying off a great cauldron on his back, "There is your cauldron. You can have it back and the man who is carrying it." "I accept it," said the Calvach, "where it is," and hurled a stone at it, which caused so much noise by striking against the bronze that the spoilers fled, for in the confusion of the moment, they thought themselves surrounded and fled precipitately. The night alone put an end to the slaughter that followed, and the O'Conors returned in triumph with the chief relic of Connaught—the Buacach Phatraig, or mitre of Patrick. The last action we find recorded of the clan is the invasion of Offaly and the burning down of many of the castles of Offaly, in revenge for which the Lord Justice went down to Offaly, "with many harrows, great iron rakes, and a great deal of scythes and sickles, and cut and destroyed the crops of the country, ripe and unripe." This was in 1600. After this cruel action, the fighting chiefs and their fighting clan disappear as a clan from history.

O'Diomosaigh or O'Dempsey, of Clanmaliere, became the head of the race until 1688, when he, too, was removed.

Individuals now and again emerge from the general obscurity that has "lowered upon their house," evincing the splendid military qualities of the warrior clan which have not been diminished by untoward circumstances or unkind fortune. Killeigh Abbey, founded by St. Sencheall, who died in 550, was and is the favourite resting place of those who boast the O'Conor name. This the most warlike of the O'Conors established for Franciscan Friars. There Murrogh O'Conor, the bravest of the O'Conors, who had taken the sheriff of Meath prisoner, was interred after gaining "the victory over the world and the devil." There Margaret, "the best woman of her time in Ireland, for it was she who gave two general entertainments of hospitality in the one year to the poor," was interred. There Fionnguala, daughter of Calvagh O'Conor, the most beautiful of the O'Connors, took the veil and lived for forty-nine years "in a chaste, honourable, pious, and devout manner." There in the cemetery of the church of the field that nestles under the long ridge, Cill-achaidh-droma-fada, repose all that is mortal of the princes and princesses of the fighting clan of the O'Conors of Offaly.

[The End.]

NOTES AND QUERIES.

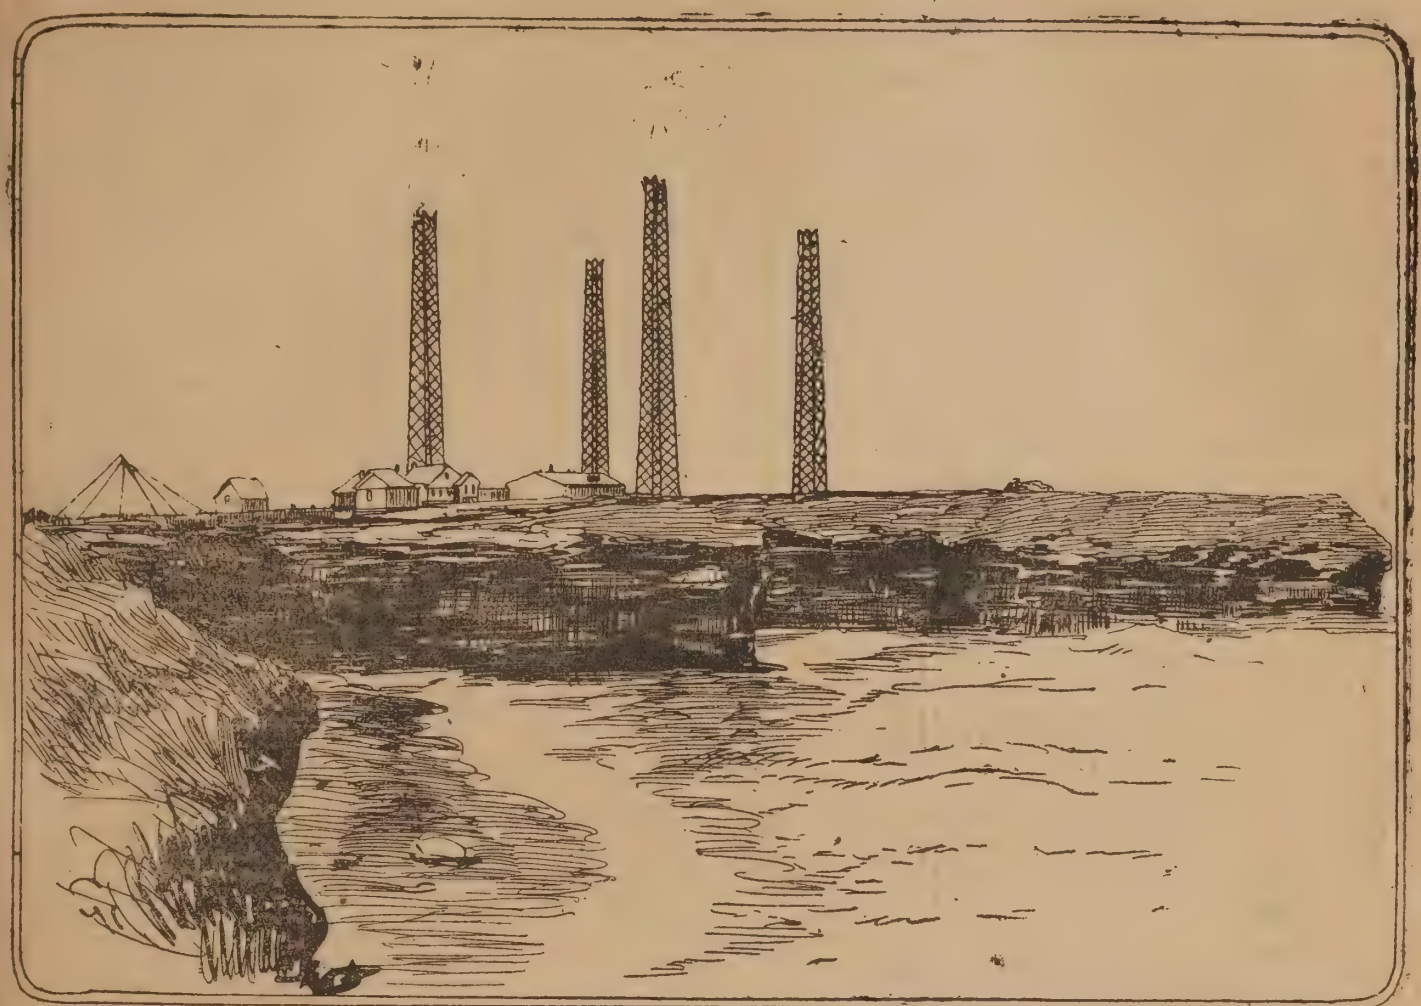
Sylvester.—The book you have is of course many years out of print and is now somewhat rare. To pick up a copy you should enlist the services of some of the second-hand booksellers who make a speciality of old books of the kind. Its price would run from a couple of guineas to five or six according to the state of plates, and the condition of the letterpress and binding—Ed., D. P. J.

LAST WORDS.

(Adapted from the Provencal of Bonaparte Wyse).

By M. Raymond.

Woodland ways run riot in flower;
Sunbeams revel in golden shower:
But I—I come to die,
To breathe my latest sigh;
For wearied and worn am I
Of life and its bitter sweets,
Its lies and vain defeats,
Its vainer struggles and empty cheats.



Brave blossoms bloom and shy buds cower;
Sunbeams stream into shadiest bower:
But I kiss the lips of Death,
Death, that with icy breath
The one word of comfort saith,—
The one consoling word
By sad humanity heard,—
And silence follows, deep, unstirred.

No storm-flecks now in the bright sky lour;
Red bend the roses; white lilies tower:
But death—death—how it tolls,
The word that alone consoles
Poor fainting human souls!
For elusive as shadows that loom
Vaguely through mist and gloom
Are all other words of delight and doom!

Violet-breathings the valleys endower;
Sunrays fall and flood each hour:
But I—on earth's broad breast
I lay me down to rest,
In Provence loved first and best,
Where the hills are perfumed with mint,
The blue waves dimple and dint

And the glancing sunbeams gleam and glint.
Riot, O! woodland-ways into flower!
Revel, O! sunbeams, in golden shower!
But—for me is over life's peril and power;
For me has tolled life's compline-hour!

THE MARCONI WIRELESS TELEGRAPH STATION

AT GLACE BAY, N.S., AS SEEN FROM THE ATLANTIC.

[In the above Picture the Wires from the Receiving House to the Aerial Towers do not appear. In the other Picture on page 490, these Wires are shown.]

WIRELESS TELEGRAPHY.

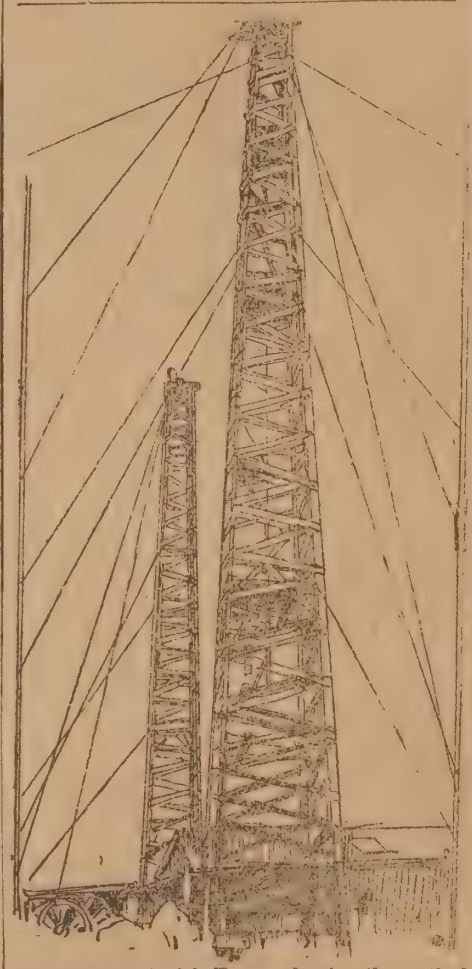
THE MARCONI STATION AND INSTRUMENTS IN NOVA SCOTIA.

By a Visitor.

Halifax, N.S., Sept., 1902.

Two eminent inventors have during the past summer been making Nova Scotia the scene of their experiments, aiming to effect things that shall revolutionise the world. At his station at Glace Bay, Mr. Marconi has been striving to perfect his wireless telegraphy apparatus, while at his summer home on Bras d'Or Lake, Professor Graham Bell, the deviser of the telephone, has been dabbling in the possibilities of a flying machine. Two such inventions as these, if made to be of practical use, would obviously have a profound influence on the destinies of mankind.

In view of the wide interest taken in Mr. Marconi's invention, I recently visited Glace Bay, with the object of securing photographs of the station and the instruments it contains. The station is situated on a rugged part of the Cape Breton coast, at almost the extreme eastern bound of the island. It comprises some suitable, but not very costly, buildings, including a receiving house, and there are four lofty towers of steel, from the summits of which overhead receiving wires are yet to lead to the receiving house. One of these towers is 210 feet high. Similar structures will exist at other stations, and it is from the level of the tops of these that the electric vibrations will proceed from one station to another. The site has been selected with good judgment, and the work done there is expected to be decisive as to the practical avail of wireless telegraphy.



Mr. Marconi was absent at the time of my visit, but his personal friend and chief of staff, Mr. Vyoyan, to whom I presented my letters of introduction, received me cordially and talked freely on the great subject which he and his employer have nearest at heart. I was allowed to take pictures of the exterior of the station, but not of the interior of the receiving room, the most important part of the plant. During Mr. Marconi's absence, nobody is permitted to enter this apartment except Mr. Vyoyan. It appears that the new instruments installed there embody some novel processes, one of which enables the transmission of a message which can be received only by the station to which it is directed. These instruments are not yet perfectly adjusted, and they will be carefully guarded from prying eyes until they have been tested and made thoroughly adequate and patents on them have been granted. Should Mr. Marconi succeed along this line, he will have cured a defect that threatened to be fatal to the commercial value of his system. Secrecy in the transmission of despatches by wireless telegraph has not hitherto been possible.

Any receiver adapted to the purpose, within the radius of the sender's efficiency, has been able to catch the message as well as the instrument for which it was intended. Mr. Marconi has been endeavouring to specially "attune" senders to receivers, so that communications can pass only between instruments fitted to each other. It is supposed that he has now hit upon the correct method, and is simply trying to improve his mechanism.

In response to my questions, Mr. Vyoyan stated that the delay in commencing operations was due to Mr. Marconi's anxiety to have his system thoroughly tested before offering it to the public, and to the experiments he had been conducting in his efforts to preserve the integrity of individual messages. Mr. Vyoyan said that these experiments had been most successful, and the last serious objection to the wireless system would have been overcome when a public test was made. Mr. Vyoyan would neither affirm nor deny the rumour that messages had already been exchanged between his station and the wireless station at Cornwall, England, but in view of the experiments which have been conducted, it is safe to assume that the rumour is correct. He gave an emphatic denial to the statement that the delay in the completion of the station was intentional, or that operations were being suspended until such time as the Marconi Wireless Telegraph Company's stock could be unloaded on the public. He did not think that there would be any public exchange of messages across the Atlantic until late in the present year. The Glace Bay station, he informed me, is subsidised to the extent of 80,000 dollars by the Canadian Government, and for this concession Mr. Marconi contracts to convey transatlantic messages for the public at the rate of ten cents a word, and Government and Press messages at five cents a word. The new instruments are expected to receive and transmit at the rate of at least one hundred words a minute.

Asked as to what actual proof there existed beyond Mr. Marconi's own assertion that a message had been sent by the wireless system from England to Newfoundland. Mr. Vyoyan stated that Mr. Marconi had an assistant with him at the time and that this assistant as well as Mr. Marconi himself affirms that the letter "S" was received distinctly several times. He instanced besides the recent exchange of messages between the steamship "Philadelphia" at sea and the station at Cornwall, a distance of 1,551 miles. At that distance messages regarding the condition of the weather at the respective points were distinctly exchanged. A greater achievement, however, he claimed, was the exchange of messages (at the time of the King of Italy's visit to Russia) between the Italian warship "Carlo Alberto" at Kronstadt, Russia, and the Cornwall station, a distance of 1,400 miles, 800 of which was over land. This, on account of the land resistance, was held by Mr. Marconi to be equivalent to 4,000 miles over sea. Mr. Vyoyan also called attention to the fact of the late exchange of "marconigrams" directly across Spain, between the Italian warship "Carlo Alberto," which is at Cadiz, and the wireless station at Poldhu, Cornwall. He said it was anticipated that a commercial line would before long be in operation between Italy and England. King Victor Emanuel has placed the "Carlo Alberto" entirely at Mr. Marconi's disposal for conducting experiments between England and America. Mr. Marconi has been on board that vessel himself for some time and will sail on her to Glace Bay and later to Cape Cod, where he will make tests of wireless telegraphy with Italian stations.

A late despatch from Rome stated that Mr. Marconi declared that he had completely solved the problem of sending wireless messages over a distance of more than 1,500 miles, and that he was confident that communication would be established between Europe and America in the near future. Mr. Vyoyan made a still more emphatic statement, saying: "So confident

Close view of Aerial Tower, showing the method of carrying receiving wires from the receiving house to a height of 210 feet.

is Mr. Marconi of the complete success of his wireless telegraph system, that he contemplates erecting at once another station in Cape Town, South Africa, and that messages will be exchanged between that point and the Canadian station direct, as easily as between the Canadian station and England." It is evident that if the inventor's full expectations are realised there will be no use for, at least, any additional ocean cables.

I called Mr. Vyoyan's attention to the recent Associated Press despatch alleging that Mr. Marconi was not the inventor of the system that bears his name, and that the man to whom the credit belonged was Marquis Luigi Solari. Mr. Vyoyan said the report was grossly exaggerated. Mr. Marconi never had laid claim to the discovery of wireless telegraphy, but he did claim the credit of putting it to practical use. He meant unquestionably to give to give Solari credit for a minor invention, patented under his own name, but beyond that there was no truth in the Press despatch. Solari was a warm, personal friend of the inventor's, and had been associated with him in his early experiments, but he had nothing whatever to do with the discovery of the Marconi wireless telegraph system.

My visit to the Marconi station was supplemented by a call on Professor Graham Bell, which required a not very long journey from Glace Bay. The summer residence of Professor Bell is situated on a neck of land running into the beautiful Bras d'Or Lake, about seven miles from the pretty village of Baddeck, Nova Scotia. If the Professor's idea was to seek seclusion, he has certainly found it there, among the hills of Cape Breton Island and out of the beaten track of the ordinary tourist. There, for the last five years, during the summer months, he has been experimenting, and the goal to which he is looking forward is the construction of a dirigible flying-machine. There are two large laboratories erected on the grounds, and the impression one has on first entering them is that they are big play-houses for boys, for they are both filled with hundreds of kites of all shapes and sizes and in all stages of construction. A glance, however, at the air current diagrams on the walls and the complicated models on the tables soon convinces one that behind all this is a scientific brain that is slowly, but surely, solving the problem set before it.

Professor Bell's theory of a flying-machine differs from that of modern aeronauts, inasmuch as he claims that the kite principle is the only one by which the air can be successfully navigated, and it is along this line that he is conducting his experiments. It was the appearance of one of these combinations of kites (constructed in cylindrical shape, about ten feet long and five feet in diameter at the centre), flying in the air and apparently rising and falling at the will of the operator that gave rise to the rumour that Professor Bell had at last completed the construction of his flying machine. This, however, is not the case. The inventor's plans are very little advanced beyond the initiatory stages, and it is understood that three or perhaps four years more will elapse before the results of his experiments are given to the public.

It is perhaps an unfortunate thing for science that Professor Bell is now a wealthy man; otherwise he might work a little harder at this project of his. At present he appears to devote to it but a little of his spare time. The Professor guards his models with the utmost care, and will not permit the picturing of them at present. He is apparently a firm believer in the eventual success of aerial navigation.

THE ANCIENT AND PRESENT STATE

OF THE

COUNTY AND CITY OF CORK.

BOOK I.

Containing a Natural, Civil, Ecclesiastical, Historical, and Topographical Description thereof.

By CHARLES SMITH, M.D.

Æquum est enim meminisse & me, qui discerem hominem esse, et vos, qui Judicetis ut si probabilia dicentur, nihil ultra requiratis. Cicero Univers.

In Two Volumes.

VOL I.

The Second Edition, with Additions.

Chapter I.—Continued.

The other undertakers and grantees in this county were besides Sir Walter Raleigh,

To Sir Warham St. Leger	6,000 acres.
Hugh Cuff, Esq.	6,000 acres.
Sir Thomas Norris	6,000 acres.
Arthur Robbins, Esq.	18,000 acres.
Sir Arthur Hyde	5,574 acres.
Fane Beecher, Esq.	12,000 acres.
Hugh Worth, Esq.	12,000 acres.
Thomas Say, Esq.	5,775 acres.
Arthur Hyde, Esq.	11,766 acres.
Edmund Spenser, Esq.	3,028 acres.
Sir Richard Beacon, in Cork and Waterford	6,000 acres.

The grants in the counties of Kerry, Limerick, Tipperary, and Waterford were also very great. Some of the undertakers encroaching upon the loyal Irish, a proclamation was issued to restrain them. In the year 1602, Sir Richard Boyle purchased all Sir Walter Raleigh's grants (60), and not only those, but also a great part of Beecher's seigniory, on which he built the town of Bandon, and so stocked and planted the county with English that, on the 30th of August, 1611, there were reviewed, at Tallow, by Sir Richard Morrison, knight, vice-president of Munster, and the other commissioners authorised for that purpose, a troop of 30 horse, mostly gentlemen and freeholders, completely armed, besides 186 pikemen, 356 armed with shot, 6 halberts, besides drums, trumpets, &c., in all 550, being English tenants, planted on the seigniories granted to Sir Walter Raleigh by Sir Richard Boyle, afterwards Earl of Cork (61). And on the 30th of August, 1622, there were reviewed before his Majesty's commissioners at Bandon-bridge, being part of the seigniory granted to Fane Beecher, Esq.; a troop of 66 horse, well armed and mounted, commanded by Captain Andrew Kettleby, and 564 foot, well armed and trained, commanded by Captain Anthony Stawell, Captain Herbert Nicholas, Captain Richard Crofts, and Captain Anthony Skipwith, with five lieutenants, five ensigns, six serjeants, and six drums. Among whom were 125 English tenants, who had leases for 200 years, and several freeholders, all tenants to Sir Richard Boyle, the first Earl of Cork.

On the 5th of September, the same year, there were (62) reviewed at Tallow, by the same commissioners, 235 horse, in four troops, well mounted, armed, and disciplined, commanded by Sir Robert Tynte, Knt., Sir John Leake, Knt., Captain Robert Gore, and Captain Roger Carew, with 20 other officers, lieutenants, cornets, &c.; also 754 foot, in eight companies, commanded by Captain Richard Smith, Captain Thomas Mansfield, Captain John Strongman, Captain Richard Joliff, Captain Anthony Southwell, Captain John Oglethorp, Captain Gregory Segar, and Captain Gyles Bernard, with lieutenants, ensigns, serjeants, drums, &c., among whom were 18 freeholders and 30 copyholders, all tenants to the Earl of Cork, and by him planted on the seigniories purchased from Sir Walter Raleigh.

The great services performed by these forces and their descendants, under the Lords Dungarvan, Kinalmeaky, and Broghil, sons to the said Earl, upon the breaking out of the rebellion, will appear hereafter.

The long continuation of the civil wars in this country, from the year 1641 to the year 1660, very much weakened the English interest in it: but the loss was in a great measure repaired by the officers, soldiers, and adventurers, who began to settle in the country: the chief of whom, as I find them signed to a declaration, published at Cork, February 18, 1659, antecedent to the restoration of King Charles II., were Colonel Ralph Wilson, Lieutenant-Colonel John Widenham, Lieutenant-Colonel Benjamin Lucas, Lieutenant-Colonel A. Barrington, Lieutenant-Colonel Francis Foulk; Majors William Wade, William King, N. Purdon, Richard Goodwyn; Captains Andrew Ruddock, J. Wakeham, Geoffry Dillon, James Manferghe, Robert Russel, John Nicholls, Sampson Towgood, Thomas Cullen, D. Coghlan, Hump. Hartwell, Thomas Lucas, Will. Pope, Will. Hartwell, John Friend, Christopher Perkins, etc., besides several officers, who had afterwards their debentures alloted them in this country. What also contributed to strengthen the English interest in those parts, and weaken that of the Irish, was, that numbers of the latter, who had estates in this county, were transplanted into Connaught, and had lands assigned them there.

In the year 1666 the militia of this county were commanded by the following gentlemen, under the Earl of Orrery, then lord-president of Munster: Anthony Woodbiff, Esq.; Emanuel Moor, Esq.; Mr. Francis Armitage, Mr. Robert Harris, Captain Robert Gookin, Lieutenant George Syms, Mr. John Langton, Mr. William Baldwin, Captain Richard Hull, Lieutenant Thomas Beecher, Cornet Bryan Townsend, Mr. Edward Townsend, &c., officers of horse. The foot officers were: Captain John Freke, Captain John Giffard, Captain Richard Townsend, Major Boyle Hull, Lieutenant Francis Beamish, Mr. Richard Hutchins, Lieutenant John Giffard, Lieutenant Curtis, &c. Lord Orrery, in a letter to the Duke of Ormond, takes notice that the militia were all in excellent order, and well disciplined. They were undoubtedly as well officered as any militia since their time, most of the commanders having served in the civil wars. In August, 1666, the Duke of Ormond, Lord Lieutenant, made a progress through this county, and was escorted by the horse militia of each barony, who made a fine appearance, the earl of Orrery and chief gentry of the country being their officers.

In the year 1667, the militia of the city of Cork consisted of 600 foot and 60 horse, all ready for duty (63).

In the year 1681, they amounted to 500 foot and two gallant troops of horse, and might have been much larger if there had been a demand. Those in the county at that time consisted of 1,600 foot, and 26 independent troops of horse, though the whole barony of Muskery (a small part excepted) was in the Earl of Clancarty's hands, and occupied by his Popish tenants.

Anno 1691, when Sir Richard Cox was sent, by the lords justices, to govern this county and city, and the militia thereof, notwithstanding many Protestants were dispersed and lost to the country, Sir Richard raised, in three weeks, eight complete regiments of dragoons, and three of foot, which 11 regiments contained 6,000 men. This militia defended a frontier of 80 miles against the enemies forces, made irruptions into their quarters, and brought off a booty worth £30,000. Besides, when the siege of Limerick was formed, 1,000 of them guarded the important pass of Killaloe, as appears from General Ginkel's letters of thanks to them, where their courage, fidelity, and diligence are applauded.

I forbear to mention the number of the militia taken at the last arrays, anno 1746, as they do not much exceed those in 1691; whereas one might reasonably expect at least five times the number. For the cause of this decrease of the Protestant interest in this county, I refer the reader to an excellent pamphlet, called "Season-

able Advice to Protestants, &c." published anno 1746.

Chap. II.

Of the Bounds, Extent, Length and Breadth of this County.

This county is bounded on the E. by that of Waterford, on the W. by Kerry, on the N. by Limerick and a small part of Tipperary, and on the S. by the Ocean.

The Land's-end of England bears S.E. from the harbour of Cork, at about 120 miles distance, or 40 leagues.

Its greatest length, from E. to W., is from the harbour of Youghal to the mouth of Kilmair river, 110 English, or about 93 Irish miles. Its greatest breadth is, from the extremity of the old head of Kinsale to Charleville by an exact measurement, 56 English or near 44 Irish miles. But the difference of latitude is but 45 miles English.

This county is situated under the same parallel of latitude as several of the most southern counties in England. The city of Cork is in the latitude of 51 deg. 46 min., and its longitude from London 8 deg. 30 min. Yet most of the tables lay it down one degree more westerly.

The county of Cork is, by much, the largest in Ireland; nor is there any shire in England that exceeds it in magnitude, except that of York. Sir William Petty, in his political anatomy of Ireland, says: "this county seems, in respect of people's and parishes, to be one-eighth part of the whole kingdom; there being other counties in Ireland not above a twentieth part of the county of Cork."

This county, upon the plantation of Munster, about the end of Queen Elizabeth's reign, was proposed to be divided into two parts. King James I., in a letter to Sir Arthur Chichester, dated Jan. 30, 1613, proposes "that Cork should be divided into two counties." But the project was, at that time, opposed by the first Earl of Cork. It was again renewed in the late Queen Anne's time; but the interest of the Earl of Burlington, who was likewise joined by the Lord Chancellor Brodrick on this occasion, put a stop to the design.

There are in this county four large walled towns, viz., Cork, Youghal, Kinsale, and Bandon; besides eight others that send members to Parliament, viz., Cloghnakilty, Baltimore, Mallow, Charleville, Castlemartyr, Middletown, Donneraile, and Rathcormack; and several other market towns, as Inniskean, Skibbereen, Castlelyons, Macroomp, Bantry, Killworth, Kanturk, Newmarket, &c. Its extent along the sea-coast being very large, contains ten excellent harbours, besides a great number of creeks, which I shall describe in a particular chapter. This situation gives the inhabitants of the sea-coast a great advantage by fishing, which affords employment to a good number of hands, and enables them to hold the coarse ground near the sea at great rates, especially in the W. of the county.

It is a general saying that there is more good land, and more bad, in this county than in any other in Ireland. Of the latter there are very great tracts, not only hilly, but in some places mountainous and barren, which, nevertheless are abundantly supplied with provisions by the neighbourhood of the sea, and the industry of the inhabitants; for this county abounds in fish and flesh; fowl, wild and tame; corn and cattle; butter, wool, hides, tallow, frieze, leather, woollen and linen yarn; and of late the linen manufacture begins to flourish in some places, particularly at Dunmanway, Inishonane, &c., where it is in a very thriving way. It has been also planted at Anagh, Timoleague, and other places, where, for want of proper management, it again lost footing.

Thus, this county is plentifully stored with all kinds of game, for hawking, fishing, and fowling. Nor is it defective in honey or fruit, great quantities of excellent cider being made in it of late years. The firing is, generally, turf, cut in bogs, five or six foot deep; but the seaport towns, for the most part, use coal from England, although considerable quantities of this substance have been discovered in many parts of the country.

This county is extremely well watered, not only with some very considerable rivers, of which I shall give an account in a distinct chapter, but also with innumerable rivulets, brooks, springs, and fountains. The whole county contains 1030581 acres.

It is dividd into the following baronies: Imokilly, Youghall (liberties), Kilnatalloon, Barrymore, Muskery, Barrets Cork (city and liberties), Kinalea, Kerricurrihy, Kinsale (liberties), Courcies, Kinalmeaky, The Cantred of Kilbritton, Ibawne and Barriroe, West Carbery, East Carbery, Bear and Bantry, Duhallow, Orrery and Kilmore, Mallow (liberties), Fermoy, Condons and Glangibbon.

(To be Continued.)

HYMN FOR A CHILD.

BY LAURA E. RICHARDS.

God gave me a little light
To carry as I go;
Bade me keep it clear and bright,
Shining high and low.
Bear it steadfast, without fear,
Shed its radiance far and near,
Make the path before me clear
With its friendly glow.

God gave me a little song
To sing upon my way;
Rough may be the road, and long,
Dark may be the day;
Yet a little bird can wing,
Yet a little flower can spring,
Yet a little child can sing,
Make the whole world gay.

God gave me a little heart
To love whate'er He made;
Gave me strength to bear my part,
Glad and unafraid.
Through Thy world so fair, so bright,
Father, guide my steps aright!
Thou my song and Thou my light,
So my trust is stayed.

Whilst ordinary starch is the most businesslike and serviceable, mountant, a ready-made paste for photographs, which will keep well, is likely to be most often used. A satisfactory mountant recommended by Dr. Liesegang is made as follows:—Calcium nitrate, 20 gr.; dextrine, 80 gr.; cold water, 2 oz.

A PANTHER'S LOST BREAKFAST.

"You may go over and spend the day with Aunt Lyddy," said Mrs. Mayfield to her daughter Mary. "I'll be back by sundown, sure, and if you're here by five o'clock you'll be likely to find me. Or you can stay all night with Aunt Lyddy, if you want to. It's too bad Cousin Mildred should have been taken down sick while your father and Tom are off with the cattle. But I'll have to go to her for a day, anyway."

"Well, good-by, mother," said fourteen-year-old Mary. "I guess I can take care of myself. I don't believe I shall go to Aunt Lyddy's, either—that is, unless I get scared some way."

"It's kind of lonely; I guess you'd better," said Mrs. Mayfield, as she started to walk to the cabin of her married cousin, three miles away through the woods.

In that remote part of Michigan there were then only five families within ten miles of the Mayfields', and the neighbours seldom saw each other except on Sundays, when they all met at the little rough-board church in the valley. Each household led an isolated and self-sufficient life; but when any woman or girl was left entirely alone she felt herself to be almost as completely deserted as was Robinson Crusoe.

Mary busied herself with some household duties for a while after her mother left. Then she went out and fed the few clamorous hens, and gave her pet lamb a basin of milk. "It is so lonesome! The woods are so still, all round, that it almost seems as if I could hear the wild creatures moving in the brush. What if a bear or a panther should hear my lamb bleating in the barn-shed and come after it? I wish the little thing would keep still. Doxie, Doxie, what makes you cry so? There, pet, come out here for a little while, and see if you won't feel better."

Mary went into the shed and brought the lamb out in her arms. The little creature hushed its cries at her touch, but it began restlessly sniffing the vaporous, odorous, early morning air. Dew still decked the grass; the shadow of the eastward-wooded hill fell across the pasture and the barn-yard with a twilight effect. The sunbeams had reached the house, however, and Mary moved instinctively towards the patch of brightness, with the trembling lamb in her arms.

"Why, Doxie, I never knew you to act so before!" she cried. "What makes you so frightened, pet? Why, why——"

As the lamb struggled in her arms, Mary looked apprehensively around; was it for fear of something behind her? One backward glance; then, with a shriek, she fled towards the house.

Crouching and crawling on top of the barn-yard fence was a great, tawny beast, with cat-like head, gleaming eyes, and a long tail that lashed nervously to and fro, as the animal advanced. Mary had heard so many stories and descriptions of the panther that, although she had never seen one before, she knew this beast in a moment.

Her heart was in her mouth as she sprang for the open kitchen door with the lamb clutched to her bosom. Bewildered with fright, she did not close the door behind her, but sped upstairs and into her own chamber, dropped the lamb on the bed, slammed the door, and threw herself, panting and trembling, against it.

In a moment she realised how foolish she had been to neglect the door below, for she heard the big cat bound into the kitchen and come sniffing up the staircase, slowly and doubtfully. It could climb a tree like a squirrel, but it may have thought the staircase too suspiciously easy.

"Oh! what shall I do?" sobbed poor Mary, wringing her hands. "I can't keep him out of here! He'll break down this thin door in a minute, and eat me up, and Doxie, too!"

Her eyes fell on the narrow window of the chamber, high up in the gable, looking out

over the roof of the kitchen. She snatched a chair, ran to the window, climbed up, opened the sash, and was about to go out on the roof when the lamb bleated. Mary looked back.

"Poor little Doxie, you shan't be eaten up!" she cried, bounding back to the floor with every nerve tingling. She caught the lamb, sprang back to the chair, climbed up, and put her little pet out on the roof, just as the sound of fierce, rending claws came from the door. With a prayer in her heart that God would keep the panther back just a minute longer, she grasped the casement outside, and began to draw herself painfully through the window.

The space was very narrow—so narrow that she had to turn sidewise in order to squeeze into it at all. For a little while it seemed as if she could not get through, but she let her breath out, shrank as small as she could, and with a frantic effort that nearly tore her dress off, wriggled through and drew down the sash behind her. As yet she had not heard the panther enter the chamber, and she dared not look back to see if he were there.

How strange it seemed to be sitting out there in the broad morning sunshine, with the frightened lamb nestling in her lap, and the chimney-swallows circling around her head, the woods so peaceful, the little pasture sparkling with the dew, all outdoors so serene, so indifferent, and yet that dreadful panther in the quietness of the house seeking her life!

Suddenly Mary's heart leaped madly, and she clutched Doxie with a grip that made the lamb bleat with pain. She saw the panther crouched by the well-sweep, looking up at them. He had stolen out to the barn-yard.

The well-sweep! And the panther beside it! What if he should climb it? The great stick of timber from which the bucket was hung reached from the earth, where its box of stones weighed down the larger end, to a point over the well, within six feet of the edge of the kitchen roof. Suppose the panther should climb the sweep? Could he reach a point from which he could leap to the roof, before his weight should cause the balanced timber to tip the other way?

The crouching cat moved even more swiftly than Mary expected. With a light, lithe spring he grasped the sweep just below the point where it fitted into the crotch of the upright post. Then he began to climb quickly upward.

The girl trembled and shivered and stared, bewildered, at the blazing, hungry eyes and creeping form. The roof was her last refuge. Should the famished panther reach that, nothing but help from outside could save her life.

The beast was ascending more slowly. He seemed now to suspect the sweep, for he stopped frequently and sniffed the timber in front of him before resuming his slow and careful creeping. He passed the upright post, and still the heavily-weighted lower end of the sweep remained upon the ground.

The panther began to crouch lower, and gripped the timber more firmly with his claws. He was getting ready to spring.

But he did not leap when he prepared to do so. It seemed to occur to him that he could run lightly along this seeming branch and spring from very near the end of it. He rose higher and came on as a cat trots on a fence. Mary, staring, shrieked and shrieked. Then, suddenly, the bucket-end of the sweep went down with a rush. The weighted end went up; the surprised panther pitched head first, clawed desperately, trying to keep his hold, and did not wholly lose it and his balance until he was directly over the well. Then into the well he pitched, headlong.

Down he went, with a scrambling clatter. Then Mary heard a hollow-sounding splash, twenty feet below the ground surface, as the beast went head foremost into the water. For several minutes there was a great tumult in the well—an unearthly screaming, a frantic dashing and churning of water, and scratching at the rock-walls. But all was quiet, and the trembling girl began to draw full breaths again, long before an hour had passed.

The forenoon was far advanced, however, when Mary ventured to pry up her chamber window and slip back into the house. Taking Doxie with her, she stole down stairs, and closed and barred the heavy kitchen door. Then, feeling sick and faint, she lay down on the lounge, and presently fell asleep, exhausted by the nervous reaction.

The next thing she heard was a knock at the kitchen door, and her mother calling:

"Mary! Are you there, child? Let me in!"

As soon as she heard her daughter's story, Mrs. Mayfield went and looked into the well. Down in the gloom, projected slightly above the surface of the water, was something—she could not tell what. She let down the bucket, but it struck a solid mass, and could not be dipped. "I declare, Mary," she exclaimed, "I believe your panther is actually drowned in the well!"

May laughed nervously. "He is either drowned," she said, "or went through to China, for he certainly didn't come up again."

L. W. Lawrence.

SOME REMINISCENCES OF THE WAR OF INDEPENDENCE IN SOUTH AMERICA.

The following reminiscences of one whose father took a prominent part in the South America War of Independence under Bolivar may be of interest to the readers of the "Dublin Penny Journal," especilally as the Wrights mentioned in them were of Irish origin:—

"In the navy, too, of Columbia there were several English officers who served with distinction, and took part in several encounters with the enemy; and particularly in the celebrated action which was fought on the 24th July, 1823, on the lake of Maracaibo, under General Padilla, with a squadron of three brigs, seven schooners, and twelve gunboats; opposed to the Spanish flotilla under Brigadier Laborde, consisting of fourteen large schooners and fifteen smaller ones. There were 770 soldiers recently embarked in Padilla's squadron, and about 1,000 in Laborde's. After a most desperate action, with the vessels almost touching one another, in which two of the enemy were blown up, Padilla gained a most splendid victory. Eleven of the larger class of the Spanish vessels were captured; the flecheras (small schooners), escaping into part of Maracaibo. Laborde fought at a great disadvantage, preferring to receive the attack of Padilla's vessel while at anchor, for which he paid dearly. Of the English officers, Captain Chitty, who commanded Padilla's gunboats was highly spoken of, in the official report of the action. But, like too many others, he is long since dead. And of the surviving English officers who were with Padilla on that glorious occasion, we don't know of more than two: General Leonard Stagg, who was first lieutenant of one of the vessels, and Colonel Richard Wright, who was captain of marines of another. The first mentioned, Stagg, had been formerly a midshipman in the British Navy, and served as such in H M's ships, Magicienne, Redwing, Malta, and Wasp, previous and during the American War with England; and who, having continued in the service of Columbia, came round Cape Horn to the Pacific in 1830 in the frigate Columbia, as second captain, and served afterwards under Commodore Wright as captain of the ship, and in the course of the year, was promoted to the rank of post-captain. Afterwards in September, 1833, Stagg was made a general of Brigade; and, finally, having married a daughter of the President, General Floris he had to share for a time the fate of his father-in-law, being exiled for some years after the revolution of 1845; but again returned to the country, as we have already said, with the other proscripts in 1860. The other officer of whom we spoke, Captain Wright, who fought on the lake with Padilla, went to the South in 1829 as lieutenant-colonel at the close of the Peruvian war, and was made full colonel in the following year; and then served in the Republic of Ecuador on the staff, and again as governor of the province of Loja for some length of time; and was afterwards named consul-general of the Republic in London by President Rocafuerte; and, seeing the course which events took after 1845, he re-ingrafted himself on the old tree, taking the additional name of Warren, et en suite, getting married to one of England's fair daughters. Commodore Wright fought in all the battles of independence and was in Pantwons de Naugor, Boyaca, Carabobs, etc etc. He came out as lieutenant of the Rifles, and was made captain in 1819, after the battle of Boyaca. In after years, in February, 1824 he was made post captain, with the appointment of Commodore of the squadron of the south, and hoisted his broad pennant on board the Chimborazo a brig mounting sixteen 18 pound carronades, and two long twelves. During this year (1824), while Bolivar was with the army in Peru, Wright according to reserved orders he had received, was on the coast with seven transports provisioned, and in communication with Bolivar so as to be in readiness at a moment's warning, to proceed to any given point or port, to receive the army on board (or what might remain of it), in case of a reverse. At that period many persons in office thought that Wright was squandering away his time in idleness, and expressed themselves so; not knowing that he was then watching the movements of the army, as it were, and in direct correspondence with the general-in-chief. After the battle of Junin, Wright received instructions to proceed to Callas, and to place himself under orders of Admiral Guise, in case the Spanish ship of the line, which was expected in the Pacific, would come. Shortly afterwards an express came from the Admiral with the advice of the Asia's having arrived and Wright proceeded immediately to join him with his little squadron. Guise's force was very inferior to that of the enemy, having only the Prueba, a frigate of 42 guns and a small Peruvian schooner with one long gun mounted amidships; with Commodore Wright's little vessels, the Chimborazo brig, a 12-gun schooner, and a ship which had been a merchantman mounting 14 guns of light calibre, while the Spanish squadron consisted of the Asia, 72 guns, the Achilles, 20, and three other armed vessels, one of them a ship of 700 tons. An action was fought, however, off Callas in October, but without any result; as the Spanish Commodore, or Brigadier, tacked and stood into port again with all his vessels. The Chimborazo was nearly sunk, however by the Asia, in trying to single out the Achilles; but the latter could not be prevailed on to separate from the Asia, although her commander had a fair opportunity to fight the Chimborazo alone as the latter had to tack and stand in towards Callas, to raise the side in which she had received the shot-holes between wind and water, so as to be enabled to plug them.

Commodore Wright had been formerly a midshipman in the British Navy, and served as such in H. M's ship Newcastle. He served on board this frigate during the war between the United States and England, under the command of Lord George Stuart, and was on the coast of North America in that ship, and at one time in the blockade of Boston.

LITERARY NOTES.

Mr. John Lane announces for this season a volume to contain a selection of Mr. William Watson's poetry made by the poet himself. A new novel by Mrs. John Kane, entitled "Kitwyk," is also among the announcements of the firm.

✧ ✧ ✧

The will of the late Mr. Philip James Bailey has been proved at £407. The smallness of the sum, perhaps, is not remarkable, says a contemporary, when we remember the devotion of the author to his one work; but it suggests the old reflection that literature is often its own only reward.

✧ ✧ ✧

Mr. George Gissing, who is a sound authority on Dickens matters, has, in his abbreviation of Forster's "Life," preserved as far as possible the autobiographic matter of the original. Here and there Mr. Gissing has substituted critical remarks of his own for Forster's, and the biographer no longer writes in the first person.

✧ ✧ ✧

Readers of George Eliot have a treat in store for them. The programme for the new volume of the "Leisure Hour," which commences with the November number, contains an announcement of interest. The Rev. William Mottram—a cousin of George Eliot, and a grand-nephew of Adam and Seth Bede and Dinah Morris—is to tell us something about the originals of these famous characters. Dinah Morris especially is, we understand, to figure largely in the promised series of papers, which will throw light not only on these famous characters, but on the Evangelical life and teaching which formed the inspiration of the great novelist at her best.

✧ ✧ ✧

A "literary working man" defends Marylebone's refusal of the public library offered to it by Mr. Carnegie in these terms: "Do people really want free libraries? The ordinary man reads little but the halfpenny papers, while his womenfolk are more than satisfied with trashy novelettes. For those who desire a higher form of literature, is it not a fact that that the best novels of the day can be obtained for 4½d; and, as no one places these paper-covered books on his shelves, but passes them on to friends, do they not often serve as a circulating library?" These arguments cut both ways, nevertheless, Marylebone's obstinate refusal is becoming interesting. One would like to get a deeper explanation of an altitude which is so consistent and immovable as to add to the mysteries of London.

✧ ✧ ✧

Mr. Hill's estimate of the probable pecuniary rewards of a career in journalism, as put before his students, may interest others. Unless the journalist, he said, invented something which hit the public taste, or successfully reproduced, with slight variations, something which somebody else had made a "hit," journalism would give him only decent bread and butter. As a reporter he may begin with £150, and after five years earn from £250 to £300 a year. For a sub-editor Mr. Hill puts the limits as between £150 or £200 and £400. In a more responsible position the journalist might attain to £500 or £600; as a leader-writer receive from £500 to £800; and as an editor from £1,000 to £2,000. The pay in the United States, he said, was better, but the work harder, and the cost of living so much higher as to neutralise the advantage.

✧ ✧ ✧

It was said of Mr. Gladstone by critics both friendly and hostile to his peculiar genius that that genius would have fitted him to play the part of a great ecclesiastic even better than that of the great politician. And it is certainly interesting that the man who stood in the world's eye for so long as the responsible ruler of the British Empire should leave as his most characteristic monument a library predominantly theological. At the opening this week of St. Deiniol's Library, Lord Spencer cited Mr. Gladstone's stand for Bradlaugh's case in the Commons as a proof of his courage. It was equally a proof of his anxiety to be just, nay generous, to any cause which was not the cause of his friends. Only, as Lord Salisbury has protested, trustees (as statesmen are) have seldom the right to be generous at the expense of their trust.

✧ ✧ ✧

The couplet found in a stolen book—

Don't steal this book for fear of shame,
For in the book is writ the owner's name—

which was quoted in one of the London police courts a few days ago, is neither original nor complete. The rhyme, which has been long and universally in use amongst school children, runs thus:—

Don't steal this book for fear of shame,
For in it's writ the owner's name;
For if you die the Lord will say:
"Where is that book you stole away?"
And if you say you do not know,
The Lord will cast you down below.

In boys' schools the concluding rhyme has usually been more definitely lurid.

✧ ✧ ✧

There is a revived tendency nowadays amongst the writers of verse to endeavour to present a single idea or thought in the form of an aphorism. The scheme presents obvious difficulties, for it implies the definite thought or idea. From a volume of verse entitled, "The House Builders," by Mr. M. B Williams, we extract the following:—

Naked came the world to God,
"Clothe me, Lord, ashamed am I."
Quoth the good Lord, "Poetry,
Be thy robe and mystery."

Victory, not defeat,
Is treacherous to the feet.

To a rich world you've come
Make it your home
Nor fly to other scenes!
Beyond's a dream,
And this is what it seems.

✧ ✧ ✧

William Allen Butler died at his home in Yonkers last month at the ripe age of 77. He was one of the most distinguished lawyers in this country, and for more than fifty years held a record for integrity and ability in the practice of his profession that has been equalled by few men. He was a jurist who in his less busy moments turned to literary work, and it is safe to say that after his name as an able member of the New York Bar has passed into history, he will be well remembered as the author of a poem which, originally written to amuse himself, in 1857, has continued to amuse people the world over ever since. "Nothing to Wear" appeared in "Harper's Weekly" originally without a signature, but later on it became known that Mr. Butler was the author, and Miss Flora M'Flimsey, who (remarks an American contemporary)

The last time we met was in utter despair,
Because she had nothing whatever to wear.

will be in the hearts of us all for many a day to come.

✧ ✧ ✧

Miss Jane Barlow's Donegal sketches, now appearing in the "Pilot," show (says a literary journal) once more their author's remarkable gifts of vision and condensation. It is all very simple and unobtrusive, but the true fibre of life is there. After describing the interior of a cabin Miss Barlow writes:—"But the jewel of the house was the fire on the hearth, a pyramid of blossom-like white and pink, with a ruby glowing at its core. . . Nevertheless the "banati" apologised for her fire, on the grounds that the sods were not yet properly dry." Says the old widow, "Glory be to goodness, it's a very pleasant thing to have one's plenty of turf." It hardly needs knowledge of Miss Barlow's particular district to recognise the intimacy of her work; but to those who have that knowledge every line recalls some memory or impression.

✧ ✧ ✧

Much has been written of late about the inaccuracies of authors. The inaccuracies of readers would be quite well worth collecting. Mr. Andrew Lang has named a number. "For many years—nay, still perhaps—(he writes) the world thought that Mr. George Meredith was the late Lord Lytton, and that Mr. Matthew Arnold was the author of 'The Light of Asia.' A lady told me that 'The Light of Asia' was Mr. Matthew Arnold's best poem, and I replied that to my taste Sir Edwin Arnold would ever be most remembered for his 'Scholar Gipsy.' A gentleman, it is said, thanked Mr. Henry Jones for the pleasure which in boyhood he had derived from 'Darnley,' 'Gowrie,' and other romances by Mr. G. P. R. James. I have known a judge of this realm converse with the Poet Laureate under the impression that he was Mr. Austin Dobson."

✧ ✧ ✧

Talking of the vicissitudes of accuracy, we heard a story the other day, remarks the "Globe," on the best authority, which shows under what conditions of haste and distraction much journalistic work is done. On the death of Mr. Bret Harte a most capable journalist was suddenly called upon to write an appreciation of the author of "The Outcasts of Poker Flat." Full of other thoughts which he could not altogether cast off, he sat down, wrote his article, and sent it to the printer. When it came back in proof he was appalled to see that he had written a column and a half about—Mark Twain. Time pressed: what was to be done? He altered all the book-titles, and the article went in!

✧ ✧ ✧

The "Dial" prints a thoughtful and well-written article on "Literary Cosmopolitanism." The writer (the "Academy" remarks) quite justly takes notes of the fact that modern literature is not so self-contained as it was a century ago, that it has incorporated tendencies and ideas outside its national borders, and become more typical of universal life than of provincial life. The influence of America in this direction he naturally considers strong; too strong, we think. That the counsel of Emerson encouraged us to broaden our view is true enough, though the active influence of Emerson upon English thought might easily be overrated. That the American translations of Goethe and Dante provided us with "a wholesome incentive to deal more seriously with the masterpieces of foreign literature," we take leave to doubt. The interest in Goethe and Dante in England was quite wide and sincere without the aid of translations, and though translations increased their readers they hardly did much for true appreciation, except perhaps, in the case of Cary's translation of Dante, which the "Dial" writer appears to have overlooked. And sometimes he asks questions which need never have been put, as thus: "May it not . . . . . be urged, and plausibly too, that each race or nation has its own peculiar genius, and that this genius will bring forth its finest fruits if left to develop in accordance with the principle of its own being." Of course, the whole history of literature proclaims the fact. When the writer set down the following, however, he was on sure ground:—

French literature alone remained until the eighteenth century in a condition of comparative isolation from outside influences, and has, ever since the times of Rousseau and Voltaire and the author of De l'Allemayne, preserved its indigenous characteristics and kept his own counsel more completely than the literature of any other modern nation.

That is perfectly true, and though French literature is now showing signs of outside influence it still remains astonishingly, and even painfully, French.

SCIENTIFIC TOPICS.

It has been announced from Copenhagen that an American syndicate has made an offer of £120,000 for the rights of the company controlling the Poulsen telegraphone, as well as any interest in the new company.

✧ ✧ ✧

After a lapse of thirty years the estate of Samuel F. B. Morse has been distributed pursuant to a decree of the United States Supreme Court. The gross estate of the inventor of the telegraph amounts to 524,000 dollars. The management of the estate has cost so much that, after deducting expenses, there was left for final distribution only 346,000 dollars.

✧ ✧ ✧

Cornelius Vanderbilt recently made a personal test on the Manhattan Elevated Railway of New York of a smoke-consuming device for locomotives in which he is interested. The inventor of the device is W. S. Hughes, of Philadelphia. It is said that the test proved how feasible it is to do away with the smoke nuisance on locomotives.

✧ ✧ ✧

A Russian specialist has decided that, contrary to the general opinion, electric light plays less havoc with the eyes than other forms of artificial light. He bases his deductions on the fact that disease and damage to the eye are proportioned to the frequency of the closure of the lids. He found that the lids close in a minute 6.8 times with candle light, 2.8 times with gas light, 2.2 times with sun light, and 1.8 times with electric light.

✧ ✧ ✧

A recent number of the Bulletin of the French Physical Society contains a note on a new "electric valve" for transforming reciprocating currents into direct currents, due to M. Nodon. This "valve" is based on the property, discovered by Buff in 1857, that an aluminium electrode plunged into an electrolyte offers a great resistance to the passage of a current in which it is the anode. The efficiency of M. Nodon's apparatus, as measured by a wattmeter, reaches 75 to 80 per cent

✧ ✧ ✧

The General Telegraphic Department of Germany has tested the octuplex system of typographic telegraphy invented by the late Prof. Rowland, of Johns Hopkins University. The Government will test the apparatus on all lines between Hamburg and Frankfort. It is claimed that the octuplex system will enable 18,000 words per hour to be sent over a single wire by 20 operators. The system now most widely in use is the Hughes, by which only 2,200 words per hour can be sent.

✧ ✧ ✧

Captain Chevallier's electric target is meeting with marked success in France. At a recent contest held in Rouen five targets were used. So large was the number of entries at this contest that it was impossible for all the contestants to participate. From the 12th to the 28th of July 68,072 shells were fired with the French army-gun, model of 1899, calibre 8 millimeters, a test which surely speaks well for the durability and efficiency of the device. The electric target has been installed at Peronne for the purpose of testing French and foreign guns.

✧ ✧ ✧

One of the contemporaries of Singer and Howe, Mr. James H. Whitney, died in Boston on August 28th at the age of 80. Mr. Whitney was one of the first generation of prominent promoters of the American sewing machine industry. His interest in the business began in the interval between Howe's invention and the succeeding era, when Singer and Wilson put the Howe and Bachelder principles in practical shape

✧ ✧ ✧

Some of the residents of the town of Spencer, Mass, proud of the distinction which that place bears in being the birthplace of Elias Howe, jun., the inventor of the sewing machine, have erected an 18-foot sign along the tracks of the Boston and Albany Railroad, which announces this fact to the passengers in bold letters which cannot avoid being seen by the passengers in the fastest trains which pass over that road. The sign reads as follows:—"Down in the valley below, Elias Howe, jun., the inventor of the sewing machine and an illustrious son of Spencer, was born in 1819." After the words "Down in the valley," a huge hand points to the birthplace of the inventor.

✧ ✧ ✧

C. Henry Wernle, an inventor and maker of delicate mathematical instruments, died recently at his home, No. 2650 Bockius street, Philadelphia. He was born in Germany, and came to this country when a very young man, and for fifty years had been employed by the United States Government at the Frankford Arsenal. Many of the instruments now in use at that institution were of his invention and manufacture and his secret of tempering fine and delicate instruments is said to have died with him, for he repeatedly refused to impart it to others.

✧ ✧ ✧

It is announced that the speed trials on the Berlin-Zossen railway will be resumed next year, and in the meantime work has been begun on another train especially constructed for the purpose. This train will have a number of remarkable innovations. In the first place, it will be covered entirely with a series of metal plates resembling somewhat the scales of a fish, and these, it is thought, will reduce the matter of wind resistance to a minimum. This was found to be a more serious factor than had been anticipated, and is supposed will prove the keynote of success. Another innovation to be tried will be a conduit running along the top of the train to carry the smoke to the rear.

✧ ✧ ✧

The alligator is said to be practically extinct in the Southern States of America. To Dame Fashion may be attributed his passing away. The demand for shoes, satchels, and pocket-books of alligator skin has been such within the last ten years that natural history students will probably soon be compelled to visit our museums and zoos to hunt up the creature, which has unjustly earned an evil reputation as the terror of the Southern swamps. Mr. J. Knight Perkins, of Kalamazoo, thoroughly searched the southern portions of the country for 14 foot alligators. In all New Orleans he could but find one alligator 10 feet long. He discovered that even little alligators from 4 to 8 inches long had disappeared from the market.

✧ ✧ ✧

A novel steam generator has been devised by Mr. Henry Braby, an Australian inventor, wherein the requisite water tubes are bored lengthwise through flat copper blocks of 3 inch or more thickness, the ends of the holes being connected by semi-circular bends so as to form a continuous tube from one side of the block to the other. The blocks are so arranged that the hot gases from the furnace pass around a lower one, beneath a second and around this beneath a similar series of tubes in the cast-iron top of the boiler. The water is fed into the iron tube, where it becomes heated, then it passes successively through the top and bottom series of copper tubes, and enters a receiver as steam under a pressure of 100 pounds or more. It is claimed that, for the same power, this generator occupies only a tenth of the space of a multitubular boiler, and is only one-fourth the weight, while it cannot be exploded, is self-cleaning, and it can be heated to 100 horse-power capacity in ten minutes.

✧ ✧ ✧

Various schemes have been suggested from time to time for the practical utilisation of the power exerted by the brisk lake breezes for which Chicago is famous among other things. The latest in this line is the invention of Charles Wondries, of that city, who recently gave a public demonstration of a device invented by him. He makes use of the draught of a high chimney, and for the purpose of exhibiting his machine, placed it in an abandoned stack at Riverside, a part of Chicago. Despite the fact that the chimney was declared unsafe, quite a number of persons ventured inside to witness the operation of his machine. A strong west wind was driving at the time, and it blew into the opening of a canvas chute at the base of the chimney. It was carried up with increasing velocity until it reached the top, where it was directed against the blades of two wheel fans, which in turn drove a large flywheel. The power produced is said to depend on the height of the chimney. Wondries says he has been driving a sewing machine at his home for six months by this means, using a very small stack.

✧ ✧ ✧

With the approaching completion of the second power house of the Niagara Falls Power Company, and the construction of another great power plant on the Canadian side of the river, the development of the energy of the Falls is proceeding at something like the rate which was predicted many years ago at the time of the inauguration of the first Niagara Falls plant. The old station of the Niagara Falls Company contains ten 500 horse power turbines, giving an aggregate of 50,000 horse power. This will be developed by eleven turbines, operating eleven generators, each unit, as in the old house, being of 5,000 horse power capacity. The new wheel pit is 178½ feet deep, 18½ feet wide, and 464 feet long. It is excavated out of the solid rock, and discharges into the great tunnel which was driven to serve as a tailrace for the first power house. The total length of the new power house is 560 feet, and its width is 70 feet. At its completion the plant of the Niagara Falls Power Company will be the largest in existence, having a total of 105,000 horse power, which is more than is actually developed by any of the great power houses in New York city, although some of the latter, when completed, will exceed this figure.

✧ ✧ ✧

The Canadian Niagara Falls Power Company has commenced work on its new plant, which will be located in the Victoria Park, about 1,500 feet above the Horseshoe Falls. Its general features will be similar to those of the American plant, its discharge tunnel opening through the cliff at the foot of the Horseshoe Falls. The power will be transmitted to Toronto and other Canadian cities that are within economic range, and to factories located on the Canadian shore. In view of the large ultimate output of the plant, and to secure economy of space and reduction in cost of development per horse power, it was decided to use units of the great capacity of 10,000 horse power each. The frequency will be 25 cycles, and the generators will be wound for 12,000-volt three-phase current. In addition to the economy of space, there will be other advantages in the use of such large units, such as simplicity of operation, owing to the reduction in the number of units and the reduction in the cost of maintenance. For the present three generators have been ordered of the General Electric Company. They are of the internal, revolving-field, vertical-shaft type. The speed of revolution will be 250 per minute, and as result the generator will be relatively small, its extreme diameter being 19 feet. The weight of the revolving portion of the machine is 141,000 pounds. It will be a considerable step from the 2,300-volt, two-phase of the American plant to the 12,000-volt, three-phase current of the Canadian plant; but this high voltage was selected because of the economy in distributing to power users located near the power house. For long distance transmission to different Canadian cities, the voltage will be raised to 22,000, 40,000, or 60,000 volts.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

DUBLIN, SATURDAY, JUNE 9.

Yesterday evening, between four and five o'clock, a young robber (who had been discharged from Newgate the morning before), had the audacity to go into the apartments of a lodger in Bride street, took a silk cloak, and was proceeding to plunder a beaufet of some articles of plate, when fortunately he was overheard by a lady in an adjoining room, who instantly came out and seized the villain, found the cloak concealed upon him, which after some struggle he threw in her face, and was attempting to make his escape down Ship street, but was overtaken, and soon after committed to Newgate by Alderman Sheil.

DUBLIN, TUESDAY, JUNE 12.

Saturday last, in the course of the argument of a case which was postponed until the Monday following, Lord Earlsfort observed that some of the gentlemen of the bar had stated theirs to be a case of compassion. In that particular case he had received letters from persons of consideration, pointing out circumstances of commisseration as to the object whom they recommended. Every application of this sort, he observed, was an insult upon the judicial situation, and if attended to, would be an infraction of the oath which he had taken as a judge; he, therefore, once for all, thought it necessary thus publicly to declare that if any application of the sort was made to him in future, he would acquaint his brother judges thereof, and have the person committing such an offence laid by the heels.

The above declaration coming from so high an authority, must give the public singular pleasure, as it clearly evinces that neither station or rank in life can possibly warp the unbiased integrity or justice of the present learned sages on the bench.

Wednesday last the Earl of Claremont, President of the Royal Irish Academy, waited on his Grace the Lord Lieutenant, at the Castle, with a memorial from the Academy, soliciting possession of the Navigation House. His Lordship was attended by the following members of the Council:—Rev. Dr. Kearney, Rev. Dr. Stock, Rev. Mr. Hall, Rev. Mr. Elrington, Dean Hamilton, Dr. Percival, and J. C. Walker, Esq.

At the late examination held in the University, the following gentlemen obtained Scholarships:—Smith, Magrath, Stanton, Fay, Prior, Ormsby, O'Flanagan, Gabbot, Vanhomrigh, Maturin, Donovan, O'Callaghan, Millekin, and Casey.

It is with unfeigned satisfaction we are informed that orders have actually been received here for some of our manufactures, to a considerable amount, in consequence of the Commercial Treaty with France, which goods are to be shipped for Bordeaux by the first vessels.

DUBLIN, MONDAY, JUNE 11.

Thursday morning a noted robber, well mounted, was discovered in Smithfield, by a gentleman from the county Louth, who had him immediately apprehended and lodged in the New Jail; at the time of his discovery, he was bargaining for dry cows, and pretended to be an eminent grazier from the county Westmeath.

The building of the new county gaol on Gallows-hill, Kilmainham, goes on with spirit. the wall of circumvallation is begun on the most solid and permanent construction.

Yesterday morning, between three and four o'clock, some fellows found means to enter the stores of Mr. Power, Inn-keeper, in Thomas street. out of which they took several articles of value, and made their escape undiscovered.

The stores in the new Custom House, at least such as are ready, not being sufficiently capacious to contain all the Portugal wine in the three ships lately arrived here from Oporto, one of them has come up to the old Custom House for the purpose of discharging her cargo there.

Friday evening last, as Mr. Kelly, confectioner, in College Green, and the person who carries on the hosiery business in the same shop with him, were passing Santry-wall, they were attacked by a gang of villains, who attempted to stop the carriage they were in, some having got before and others on each side; however, Mr. Kelly and the other, having brass ink-bottles in their pockets, with the greatest presence of mind pulled them out, and presenting them at the villains who attempted the side windows, swore they would instantly blow their brains out, whereupon the robbers (retreating themselves) called to those before to make off, as the men in the carriage were well armed, which they thought proper to comply with, and the carriage proceeded to College Green without further molestation.

Bloody Bridge, we hear, is about to receive a thorough repair, as well as Ormond Bridge, immediately after which the rebuilding of Ringsend Bridge will be commenced; all which expenditures will fall infinitely heavy upon the citizens of this metropolis.

Last Saturday night John Purdon, of Brenanstown, Esq., together with a lady and gentleman, were stopped and robbed on Still-organ road, the former of a gold watch, three guineas and some silver, the lady of a silver watch, and the other gentleman of a pinchbeck watch, with all which the villains got clear off.

TUESDAY, JUNE 12.

Not only the publicans will be obliged to make an affidavit that they will neither sell their porter for a higher price than threepence halfpenny a quart, nor accept of any presents directly or indirectly from the persons of whom they buy their malt liquor, but the brewer must likewise make oath that he will not make any presents to his customers on account of purchasing his beer or ale, and that a specified quantity of good malt will be made use of in brewing, in proportion to each barrel of ale, etc. Thus it may be very naturally expected that the Irish malt liquor will soon be of a superior quality to any hitherto brewed in this country. This very necessary arrangement has been entirely owing to the wisdom and penetration of the Right Hon. the Commissioners of his Majesty's Revenue.

FRIDAY, JUNE 29.

A curious idea has entered the heads of some publicans to evade the new regulation. They have persuaded themselves into an opinion that they may break their quart without breaking their oath, and accordingly sell porter only in pints, for which they demand 2d. each. The genius who discovered this salvo must have much merit as a casuist, and it will be greedily adopted by the worthy fraternity. It is true two pints make a quart, and they have sworn not to sell a quart for more than 3½d., but then they never swore not to sell a pint less than 2d., ergo what is not positively prohibited may be safely ventured upon; and thus their oath, like the will in Swift's "Tale of a Tub," may be construed to any purpose. Such are the advantages of an elasticity of conscience.

It is impossible to hear a recital of the barbarous attacks which have been lately made upon the property of Mr. Hackett, of the county of Kilkenny, without shuddering to think that, in a Christian country such things could possibly be perpetrated. It seems that a gang of ruffians first began their attacks upon this worthy gentleman by attempting to run away with his daughter, an only child; however, on their failing in that, they in one night robbed him of upwards of £2,000 worth of live stock; they afterwards planted cannon before his door, in order to terrify him. and on one of his women servants appearing at a window, she was shot dead; and so lately as the 22nd of this month (whilst Mr. Hackett was in the city, striving to take some steps in order to secure his life and property from their attacks), a gang of them broke open his dwelling-house, stables, and out-offices, and plundered him of every thing they could carry off, even to his wines and spirits. The principal ringleader of this group of villains was apprehended by the police, in a house in Great George's street, a few days ago, and was rescued from them by a number of persons, one of whom, however, was, through the vigilance of the police, afterwards apprehended and lodged in the New Prison; but on an affidavit being made, that from his state of health, confinement might endanger his life, he has been enlarged, upon giving £3,000 bail, to stand his trial for the rescue. Another of this gang of miscreants has also been apprehended, and now lies in the New Prison.

National industry and population have no doubt considerably increased within these last ten years. Cottons, calicoes, muslins, counterpanes, and several other articles of elegant and useful manufacture, brought to a state of perfection, are carried on very extensively in different parts of the kingdom, which formerly were imported from the other side. It was also deemed highly unfashionable to wear the fabrics of this country, but they are now bought by people who move in the highest spheres of life. A very few years more, it is to be hoped, will occasion a much greater revolution in the opinion of the inhabitants of Ireland; and so far from being prejudiced against its native manufactures, a decided preference will, in all probability, be given to such, above any others whatever, and, of course, ample employment will be found for our artists and mechanics, who are not inferior in genius and execution to those of any other part of the world.

SATURDAY, JUNE 30.

One P——, who was lodged in the Four Courts Marshalsea by Laurence Hacket, Esq., of Sportville, in the county of Kilkenny, for a debt of three hundred pounds, found means yesterday of making his escape from the prison in woman's clothes.

The strictest attention is paid to the New Jail by the inspector and some other gentlemen who frequently visit that place of confinement. The loaves sent in are all weighed and examined by them previous to their being distributed among the prisoners, and all complaints are heard, and if founded in truth and justice, speedily redressed. The Marshalseas will undergo the same accurate examination for the effectual reform of all abuses, and to prevent rioting and dissipation, and whatever else may have a manifest tendency to corrupt the morals and health of those who may be confined in such places.

Rev Richard Powell acknowledges the receipt of 2 guineas from Amb. Leet, Esq., towards the Sunday Schools in Saint Catharine's Parish, being part of a fine levied by him for playing cards on the Sabbath Day. N.B.—numbers admitted were, last Sunday, 632 males, and 348 females.

THE GRAND PARADE, CORK,

AS IT WAS IN 1830.

The late splendid improvements in the City of Cork have despoiled the Grand Parade of some of its honours: it was decidedly the noblest avenue, the Sackville street of Cork, until the opening of the New street, which connects the western road with one end of the Parade. Its rival possesses more regularity in the architecture of the houses, and, perhaps, for that reason, constitutes a less picturesque subject. The houses of the Grand Parade are of all sizes, proportions, and even colours. A handsome equestrian statue of one of the Georges claims the solitary honour of being the only specimen of the statuary art exposed to view in any of the public walks. Around are seen, in constant occupation, an economic species of covered carriage, called Travellers, drawn by one horse, and placed under an excellent and well-observed discipline. In front the Lee flows past the royal figure, bearing on its bosom the votaries of pleasure setting out upon aquatic excursions, and one of the children of industry pushing along his cumbrous boat while yet the flowing tide permits him.

THE KEEN OF THE SOUTH OF IRELAND.

ILLUSTRATIONS OF AN ANCIENT CUSTOM.

By LECTOR.

I.

So far back as 1844, Thomas Crofton Croker, the father of Irish folklore (who was a Cork man by birth), published in London, in which city he had long been resident, "The Keen of the South of Ireland, as Illustrative of Irish Political and Domestic History, Manners, and Superstitions." This little volume, which was brought out by the Percy Society, of which Croker was one of the founders, has now become exceedingly scarce, so that the portion of it here reproduced will probably be new to most of our readers, whilst the "Keen" itself, like many another custom of our forefathers, is now practically a thing of the past. That Croker was one fully capable of ingratiating himself with that class of the people whence he derived his knowledge on the many specimens he has translated of the "Irish Keen," is evident from the lines, from the Irish, which one David Murphy addressed him, as here subjoined, the Irish original of which and of the "Keens," hereafter given, are now probably lost beyond recall:

O! well-fed scholar of the cheerful face,
How neat your hand to plane and polish verse is!
To English turning with a silken grace,
The branchy Irish that so sweet and terse is.

Early and late once proudly sang the bard,
The glowing strains his busy brain created;
And surely on such honeyed fame 'twas hard
That none his valued stores should have translated.

But Erin's long-neglected minstrelsy
Thy skill will save, nor shall it be neglected,
A merry champion has it found in thee,
Who seeks to make our country's name respected.

Ceangal:

Go on! and prosper, make a glorious gleaning,
I pray the Fays may aid you in your "Keening."

"The name, Keen," writes Croker, "is the English form of 'Caoine,' an Irish word described in Dr O'Brien's Irish Dictionary as 'the Irish lamentation for the dead,' according to certain loud and mournful notes and verses, wherein the pedigree, land, property, generosity, and good actions of the deceased person and his ancestors are diligently and harmoniously recounted, in order to excite pity and compassion in the hearers, and to make them sensible of their great loss in the death of the person whom they lament."

Quoting further from O'Brien, "Caoine" was anciently and properly "Cine," which almost equals in letters and pronunciation the Hebrew word Cina, which signifies lamentation or crying, with clapping of hands, lamentatio planctus, ploratus, as in 2 Samuel, 1., 17, and in the plural "Cinim," lamentations as in Ezekiel, ii., 10. In Welsh "Kuyn" is a complaint. According to the Jesuit, Manoir's Armoric Vocabulary, "Queini" signifies to bewail or moan; and "Quinean," a moan or lamentation; whilst Lloyd, in his "Archæologia Britannica," explains "Caoine" as a sort of verse used in elegics or funeral poems, and sometimes also in panegyrics and satires."

As in the case of many other things appertaining to ancient Ireland an Oriental origin is ascribed to the Keen, but this is a point on which Croker does not dwell very much; and confines himself chiefly to calling attention to the great similarity existing between Irish and Abyssinian funeral ceremonies, which latter also include a kind of Keen.

As a vehicle for conveying the sentiments of the heart, the Keen, continues Croker, seems to have been completely misunderstood in England from the time of Queen Elizabeth to the days of Victoria. Take, for instance, Stanihurst's statement as to the manner of Irish burial: "They follow the dead corpse to the grave with howling and barbarous outcries, pitiful in appearance, whereof grew, I suppose, 'to weep Irish.'" In like manner John Wesley records in his "Journal," under date of May 31st, 1750, that he was greatly shocked at the Irish howl which followed the reading of the service at a funeral which took place at Rathcormac, whilst he was there on that day.

The very different kind of effect produced in an Irishman's mind by the Keen is described in the following extract, reproduced by Croker, from the "Dublin Penny Journal":—"The first time I ever heard this funeral cry I was greatly struck by it owing perhaps in some degree by it coming on me quite unexpectedly. I was riding along an unfrequented road in one of the most retired parts of the county Meath; I well remember it was a lovely morning early in spring; the trees were rapidly assuming their most brilliant clothing of green, there was a genial warmth in the air, the sun shone out brightly, and the lively songs of the birds added their animating influence at once to cheer and tranquillise the feelings; and I sauntered on in that delightful state of mind, which one enjoys when all the cares and anxieties of life for a few short moments are forgotten, one is engaged, in drinking in a variety of indefinable, but yet highly pleasurable emotions from every quarter. A faint, wailing sound so wild and indescribable, that it seemed something unearthly, came floating on the light morning breeze, but so indistinct and faint from distance, that it was repeated more than once before I could be quite certain that it was more than mere imagination. However, I heard it again and again at intervals of a few seconds, the sound becoming each time more distinct as I approached the quarter whence it came, or the wind bore it a little stronger towards me. From a sort of murmur it swelled out into a full tone, and then died away into silence. I knew nothing it resembled so much as the sounds of an Æolian harp, as they rise gradually in strength, and then sink into softest cadences. At length reaching a turn in the road, I perceived at some distance a vast crowd of people advancing towards me, and stretching along a considerable extent of ground; part of them only was I enabled to see, the remainder were concealed by the windings of the road. In the front, where the crowd was most dense, I distinguished by their cloaks (several of which being scarlet, gave a highly pictorial effect to the group), twenty or thirty females, and in the midst of them a bier carried by men, who were occasionally relieved by others of those nearest to them. I soon perceived that the funeral song was begun by some of these women that it was gradually swelled by the voices of the remainder, and the men joined occasionally their deeper tones. The effect of the whole was most striking, and had something even grand in it; the song was guttural, but by no means monotonous; and the contrast with the bright and joyous spring morning may not have rendered it more melancholy and lugubrious, I know not, but it certainly struck me as the most singularly plaintive and mournful expression of excessive grief that could well be imagined. As I drew nearer I perceived the persons who composed the cortege were affected by very different feelings indeed. Some few of those who followed close to the coffin were evidently overcome by the most heartfelt and poignant affliction. Some of the women especially gave way to the most unrestrained and vehement expressions of the liveliest sorrow, weeping loudly, throwing up their hands, and clapping them together, or striking them violently against their bosoms. It occurred to me involuntarily that it was no small trial of the true pathos of this ancient melody to see that it bore with undiminished effect so close a juxtaposition with the real demonstration of genuine and unartificial grief; indeed I fancied at times that some of them, even in the utmost abandonment of their sorrow, joined in the wail of the other women who, by their undisturbed countenances and unagitated demeanour, pointed themselves out as the professional Keeners, who assisted on the occasion.

As soon as the foremost persons came up to me, I raised my hat for a moment, and turned my horse's head about, aware that it is deemed unlucky if any person meeting a funeral passes it without turning back to accompany it at least a short distance. I am always anxious to yield to such prejudices as this among my countrymen; it costs not much trouble to show some slight respect for their feelings, and I think one is especially called on so to do upon such occasions. It has always appeared to me that trifles like these serve greatly to draw together the bonds of charity and friendly feeling between the different classes in this country, which, it is to be lamented, are often heedlessly and rudely broken through by many who, unobservant of mankind, know not that it is one of those immutable laws inherent in our very nature, and nowhere of more force than in the bosom of our warm-hearted countrymen, that a far deeper feeling of gratitude and affection is engendered by an expression of sympathy or participation in either sorrow or joy, than by laboured kindnesses which in truth are often felt as absolutely oppressive.

By reining in my horse, I gradually allowed the whole crowd to pass me by, though it seemed to be almost interminable; I was astonished at finding that it extended probably along upwards of a mile of the road, and consisted of not less than two thousand people. I then resumed my journey, and in a few minutes the intervening ground had the entire procession from my view, and the funeral wail gradually became distant, and at last totally died away. I subsequently learned that the deceased was a very extensive farmer, claiming to be a descendant of one of the old native families who derive their lineage from the ancient princes of our land; that he had just terminated a long life, spent from his childhood on his paternal inheritance, in constant intercourse with the poor peasantry, by whom he was much beloved, not only in consequence of his ancient descent, but from his having had the character of exercising lavishly the hospitality of the olden time besides possessing pre-eminently in his own person many of the other virtues and qualities which stand highest in the estimation of our countrymen."

It is an interesting fact that the famous John Philpot Curran, who from his infancy was familiar with the language of his country, and in his youthful days took especial pleasure in constantly mixing in the social meetings of the peasantry (in his native county Cork), has been known to declare that he derived his first notions of poetry and eloquence from the composition of the hired mourners (or keeners) over the dead. The remarkable influence of the keen of his native South on Curran is alluded to more fully in the following extract (taken by Croker from the "Memoirs of Curran," by W O'Regan 1817), which describes it will be remembered the Ireland of a century ago, rather than that of the present time:—"The wakes in the country parts of Ireland present an odd assemblage of different characters and of different passions. The real genius of the people is nowhere so well or so openly displayed as at those nightly meetings. It is a theatre, in which tragedy, comedy, broad farce, match-making, speech-making, etc.—all that is bizarre and comical—develope themselves with a freedom truly fantastic. Here the scenes are shifted with a rapidity of change, and an unrestrained succession quite surpassing any other drama. The transitions from the deepest and most impassioned tones of sorrow to mirth and humour, are as quick as thought. There is a melancholy in their mirth, and a mirth in their melancholy, which is often found to prevail in their music, which was a character impressed on national sensibility by successive changes of ill-fortune; and as no one passion is permitted to continue very long, they mingle and vary like shadows of light and darkness, playing upon the surface of a sullen stream. At one of these national carnivals, where the common excitements of snuff, tobacco, and whiskey, and the fruits of plundered orchards (1) were abundantly supplied, Mr Curran felt the first dawn, the new-born light and favourite transport, which almost instantly seized upon his imagination, and determined his mind to the cultivation and pursuit of oratory. It was produced by the speech of a tall, finely-formed woman with long black hair, flowing loosely down her shoulders, her stature and eye commanding, her air and manner austere and majestic. On such occasions nothing is prepared; all arises out of the emotion excited by surrounding circumstances and objects, and if Corinne has been highly celebrated by Madame de Stael, this woman has found in Curran a eulogist not surpassed by the French novelist, a recorder not less national, certainly not less touching. Some of the kindred of the deceased had made funeral orations on his merits; they mea-

(1) Orchards were much more numerous in Ireland a hundred years back than is now the case.

sured their eulogies by his bounties; he was wealthy; his last will had distributed among his relations his fortune and effects; but to this woman who married without his consent, to her, his favourite niece, a widow, with many children he carried his resentment to the grave, and left her poor and unprovided for. She sat long in silence; but at length, slowly and with a measured pace approaching the dead body from a distant quarter of the room, with the serenest calm of resignation, laying her hand upon his forehead, she paused; and whilst all present expected a stormy expression of her anger and disappointment, she addressed these words to him:—Those of my kindred who have uttered praises and poured them forth with their tears to the memory of the deceased did that which by force of obligation they were bound to do. They have been benefited; they have, in their different degrees profited by that bounty which he could no longer withhold. He forgot in his life the exercise of that generosity by which his memory might now be held regarded and embalmed in the hearts of a disinterested affection. Such consolation however, as these purchased praises could impart to his spirit I could not by any impiety tear from him. Cold in death is this head; not colder than that heart when living, through which no thrill of nature did ever vibrate. This has thrown the errors of my youth and of an impulse too obedient to that affection which I still cherish into poverty and sorrow, heightened beyond hope, by the loss of him who is now in heaven, and still more by the tender pledges he has left after him on earth. But I shall not add to these reflections the bitter remorse of inflicting even a merited calumny; and because my blood coursed through his veins I shall not have his memory scourged or tortured by the expression of my disappointment, or of the desolation which sweeps through my heart. It, therefore, best becomes me to say his faith and honour in the relations of life were just and exact; and that these may have imposed a severity on his principles and manners. The tears which swell my eyes are those I cannot check, but they rise like bubbles on the mountain stream; they burst never more to appear."

After referring to the curious custom which existed amongst the peasants of the county Cork in 1810 of dyeing their stockings black upon the death of a relative or friend, an alteration of colour which was effected by steeping them for some days in bog water, Crofton Croker relates how his own attention was first called (in 1813), to the Irish Keen: "In the summer of that year (1813), I visited with Mr Joseph Humphreys (a Cork Quaker friend of his), the lake of Gougane Barra, in the west of the county Cork. The object of our little tour was to witness what is called the Pattern, held on St John's Eve, when many thousands of the peasantry assembled there for the purpose of piety and mirth, penance and transgression. . . . We reached the lake about 5 o'clock in the afternoon of the 23rd June, and spent between four and five hours in observing the proceedings and ceremonies used by the pilgrims upon and about the

"Green island in lone Gougane Barra,
Whence Allua of songs rushes forth like an arrow."

Having satisfied our mental craving, we felt it necessary to attend to our bodily appetites, and for this purpose adjourned to a tent, where some tempting slices of curdy Kerry salmon had attracted our notice. In this tent, with the exception of about half an hour we remained located from half-past seven in the evening until two o'clock the following morning, when we took our departure for Cork. After discussing the merits of the salmon, and washing it down with some of Beamish and Crawford's porter, we whiled away the time by drinking whiskey punch, observing the dancing to an excellent piper, and listening to the songs and story-telling which were going on about us.

As the night closed in the tent became crowded almost to suffocation, and dancing being out of the question, our piper left us for some other station, and a man, whom I learned had served in the Kerry militia, and had been flogged at Tralee about five years before as a 'White Boy,' began to take a prominent part in entertaining the assembly, by singing Irish songs in a loud and effective voice. These songs were received with shouts of applause, and as I was then ignorant of the Irish language, and anxious to know the meaning of what had elicited so much popular approbation, I applied to an old woman near whom I sat for an explanation or translation, which she readily gave me, and I found that these songs were rebellious in the highest degree. Poor old King George was execrated without mercy; curses were also dealt out wholesale on the Saxon oppressors of Banba the Blessed (i.e., Ireland); Buonaparte's achievements were extolled, and Irishmen were called upon to follow the example of the French people.

Upon the conclusion of one of these songs, the old woman, who was a native of Bantry, observed to me: 'Well, if God is just and good to us, we may live to see the end of that old schemer, Moriarty and his tr'ason songs, as we did of that poor boy, Florry Sullivan;' and she proceeded to tell me some particulars about Sullivan, of which all that I now recollect is that he was her nephew, and was hanged about 15 years before, 'for nothing in life, no harm at all, only for singing a song that was not one quarter so bad.' Another old woman who sat near us, confirmed this by nods of assent, looking at me and nodding expressively, as much as to say, 'I know all this to be true; perfectly true,' and she then began reciting or rather murmuring, with a monotonous modulation of voice, about a dozen Irish verses, clapping her hands and rocking her body backwards and forwards between each verse. I asked my translator to explain the meaning of what the other old woman said. She told me hat it was a 'Keen' which Florry Sullivan's mother had composed on him; and from her dictation I noted a translation of three of the verses in my scrapbook, which I now accurately transcribe:

"Cold and silent is thy bed. Damp is the blessed dew of night; but the sun will bring warmth in the morning, and dry up the dew. But the heart cannot feel heat from the morning sun; no more will the print of your footsteps be seen in the morning dew on the mountains of Ivera, where you have so often hunted the fox and the hare, ever foremost amongst the young men. Cold and silent is now thy bed."

"My sunshine you were; I loved you better than the sun itself; and when I see the sun going down in the west, I think of my boy and my black night of sorrow. Like the morning sun, he had a red glow on his cheek. He was as bright as the sun at mid-day; but a dark storm came, and my sunshine was lost to me forever. My sunshine will never again come back. No, my boy cannot return. Cold and silent is his bed."

"Life-blood of my heart—for the sake of my boy I cared only for the world. He was brave: he was generous; he was beloved by rich and poor; he was clean-skinned. But why should I tell what every one knows? Why should I now go back to what never can be more? He who was everything to me is dead. He is gone forever; he will return no more. Cold and silent is his repose."

"Having mentioned this 'Keen' to a lady," continues Croker, she requested a copy of it for her album, and with the bad taste of a schoolboy, as I then was I attempted to improve upon some, and to embellish other expressions. Several versifications, however, were made by various hands, some of which gradually found their way into the poets' corner of local periodicals and newspapers, long since defunct. A versification of mine appeared in the "Morning Post" in 1815, forwarded to that paper without my knowledge by Mr Sainthill, then of London, but afterwards of Cork; and this Keen, having attracted the notice of the poet, Crabbe, the latter wrote a letter to Mr Sainthill, in which he thus refers to it: "Thank you, too, for the translation from the Irish Lamentation: it is pathetic I agree; and the more because there is none of the Christian consolation, none of the meeting again in some quiet country, though quiet is not the heaven of such heroes. But this is all unqualified grief; and certainly more deeply melancholy on that account. I doubt much if it would be improved by any versification. It is verse; at least it is in a certain degree measured. The sentences are all of nearly equal length; and the close is uniform. No, I do not think it improvable."

"The notice bestowed upon the Keen thus accidentally procured, induced me to make enquiries for a professional Keener, from whom I might procure more than the fragment; but I did not till May, 1818, succeed in finding a true representative of the expiring race of Bardic Ireland. This woman, whose name was Harrington (2) had come from the south-west of the county Cork. She led a wandering kind of life, travelling from cabin to cabin about the country; and though in fact, subsisting upon charity, found everywhere not merely a welcome, but had numerous invitations, on account of the vast store of Irish verses she had collected and could repeat. Her memory was indeed extraordinary; and the clearness, quickness and elegance with which she translated from the Irish into English, though unable to read or write, was almost incredible. Before she began to repeat, she usually mumbled for a short time, probably the commencement of each stanza, to assure herself of the arrangement, with her eyes closed, rocking her body backward and forward, as if keeping time to the measure of the verse. She then commenced in a kind of whining recitative; but as she proceeded and as the compositions required it, her voice assumed a variety of deep and fine tones, and the energy with which many passages were delivered proved her perfect comprehension and strong feeling of the subject. But her eyes always continued shut, perhaps to prevent interruption to her thoughts, or her attention being engaged by any surrounding object. From the 'Keens' which I took down after this woman's recitation, literal translations of four were published in 'Researches of the South of Ireland: (London, 1824)..

In November, 1818, Mr Croker left Ireland, and with the exception of a short excursion in the summer of 1821 did not revisit it until the spring of 1825, when he made enquiries after Mrs Harrington. He was told that she was four or five years dead; but, added the woman, who gave him this information, "There was a gathering of all the 'Keeners' of Munster at her funeral, and they all, to be sure, keened their best, for the loss of their queen, as one might call Mrs Harrington, and one strove against the other, and above them was a widow woman, one Mrs Leary, that none of them could come near."

Croker eagerly sought, he tells us, an introduction to Mrs Leary, which, however, was not accomplished until 1829, when, after paying her expenses from Bantry to Cork, and promising her a new shawl, she was induced to attend him and to recite "Keens" and odd talk for him.

She had a peculiarly sharp and quick expression of countenance—exactly the reverse of Mrs Harrington who was far more dignified and solemn in her manner. Mrs Leary's memory was much less retentive; but her utterance was wonderfully rapid. It was evident that Mrs Harrington adopted an artificial system for the arrangement of her thoughts, as also that she had studied the "Keen," as a poetical composition, and possessed to a certain extent a cultivated mind; but Mrs Leary appeared to recite completely independent of memory, and her extemporaneous verses, which in cases of breakdown, she fluently supplied always appeared to me to be far superior to those [illegible] learned and attempted to repeat. She seldom succeeded in getting beyond three or four verses; but if urged to proceed would improvise interminably.

(To be continued.)

(2) The Harringtons are still numerous in and around Castletown-Berehaven.

THE IMPORTANT POINT.

Stories which illustrate the Scotch habit of thrift are constantly coming to light. There was one which greatly amused the late William Black, and which his biographer, Sir Wemyss Reid, says he was fond of relating. It is a story within a story, and although one part of it is old, the rest is not. Somebody was telling a Scotchman a tale which he had just been reading of a certain Eastern potentate who, having taken offence at the doings of his Grand Vizier, had ordered him to be put to death. The victim knew he must die, but he wished to die comfortably. He was aware that his master's chief executioner was very proficient, and could despatch his victims not only with swiftness, but with no appreciable suffering. Accordingly he sent for the executioner and offered him a large sum of money on condition that he would put him to death without pain. The executioner promised to do his best, and the Grand Vizier went to his doom in a frame of pious resignation. Instead of to receive the fatal blow, he was conscious that the sword of the executioner was whirled about his head, but he felt nothing. "How is this?" he said. "You undertook for a large sum of money to put me to death instantaneously and without pain, yet you are only playing with me and prolonging my misery. Do your work quickly!" Thereupon the executioner stepped up to the condemned man and offered him a pinch of snuff. The Vizier took the pinch of snuff and sneezed, and forthwith his head tumbled from his shoulders. This is the story which, according to Mr. Black, was told to a fellow-countryman of his. The Scotchman listened, and at the end said, "Well?" "Well!" repeated the interlocutor. "What do you mean?" "I'm waiting for the finish of the story," said the Scot. "But you've got the finish," said the other. "Don't you see, the executioner was so clever that he cut the fellow's neck in two without letting him feel it?" "Oh, aye. I kent that weel enough, but that's not the point. What I want to know is, did the executioner get the money?"

ANTRIM AND ITS ANTIQUITIES.

ROMANCE AND HISTORY.

By W. J. R.

In the hope of encouraging tourists to go further afield, perhaps you will allow me space to offer a few remarks which may serve to illustrate how we abandon, unintentionally, I say, some of the most delightful rural spots, and pass them by as beneath notice, although pregnant with interests of a varied kind. In these golden days when the great "boom" is in vogue, the tourists cannot resist the temptation of visiting the Emerald Isle. The expansion of railways opening up new vistas hitherto unexplored, and the numerous hotels springing up here and there, betoken that there is an awakening. Still, there is room for more improvements. Has it ever occurred to the directors of the various railway companies to reduce pro rata fares to other places that have the disadvantage of being only inland towns. The experiment is worth a trial, and may help to quicken these towns and leave them no longer out in the desert. Peruse any of the daily newspapers during the summer months, and what do you invariably find—advertisements galore relating to the different seaside places. Then turn to the news department, and it contains further enlightenment, concerning the large crowds who frequent and promenade the beaches of Bangor, Portrush, Whitehead, Larne, and countless other seaside places, without doubt beautiful spots for pleasure-seekers to inhale the fresh sea breezes. These places, and many others, are "boomed," and rightly so, beyond compare, and as a natural sequence (how could it be otherwise?) thousands flock to them, while their less fortunate neighbours are left almost without a stranger within their gates. Are not some of our

QUAINT INLAND TOWNS AND VILLAGES

equal, if not superior, to many of our seaside places? Does it pay the tourists to neglect them altogether? If not, surely, to say the least of it, some of them deserve a fleeting visit, and I am quite confident visitors will receive equal, if not better treatment, better accommodation, and all other concomitants, and that, too, at a much more moderate figure. In a word, it has paid tourists before now to go further afield and seek out for themselves these rural haunts, affording, as they do, new interests, unheard, unuttered, and unsung. Let us, for the convenience of brevity, choose one such town as a standard to go by, say, the historic and picturesque town of Antrim—formerly the capital of the county bearing the same name. The town is pleasantly situated on the beautiful and fertile valley of the Sixmilewater—the Ollarbha of our ancient Irish poems and romances, once written Amhuin-na-Fiodh, and pronounced Owen-na-Fio, meaning the "River of the Woods." The origin of Sixmilewater originated by the English soldiers, chiefly the Earl of Essex's men, who were quartered in Antrim. They received all their supplies and ammunition from Carrickfergus, and had to make their way back as best they could to Antrim, which was their depot. When they arrived at the river it was midway—that is, six miles from Carrickfergus, and they had yet to march six more before reaching Antrim, and thus we have to this day the English interpretation Sixmilewater: not a bad one after all. The town is also situated close to the shores of

LOUGH NEAGH,

immortalised in Moore's well-known lines—

"On Lough Neagh's banks where the fisherman strays,
When the clear cold eve's declining,
He sees the Round Towers of other days
In the waves beneath him shining."

Fishing, boating, and bathing give it the appearance of a seaside place. Lovers of golf will find an 18-hole course beside the crystal waters. There are some beautiful walks and drives in the neighbourhood which would require too much space in describing. For the present I shall not mention any of them in particular, but incidently touch on them when swiftly gliding over to other subjects. A nice walk is to visit the

ROUND TOWER

at Antrim, about half a mile beyond the railway station. The perspective is superb. The tower is situated in a gentleman's demesne, known locally as the "Steeple." In addition to the Round Tower is the Witch's Stone, remarkable for the tradition ascribed to it. Miss Ann Trim, after completing the "most perfect" Round Tower in all Ireland, eclipsed her work by alighting from the top, fell on the stone, and made two impressions, which are to be seen to this day. It would be presumption on my part to fritter away space in elaborating on this ancient building, seeing that so many eminent writers have written such excellent dissertations on the subject. But being the "most perfect" specimen in all Ireland, little wonder we pause to survey it in all its weird grandeur and sublime loneliness. It cannot fail to awaken thoughts of emotion. For a long period the original town, with its great monastery and church, all were supposed to have converged close to the Round Tower. When excavating in the immediate neighbourhood, it is nothing unusual to turn up fragments of human remains, which help to vindicate the theory of a once populous district. Not far from here is Holy Well, where the devout pilgrims used to congregate. What a contrast and substitution: instead of a sacred shrine a big asylum has recently been erected in this quiet haven of retreat. The original town only commenced to fall gradually into decay with the advent of the new English and Scotch settlers, who came over here during Queen Elizabeth's reign. For a long while the native Irish did not look upon them with a friendly eye, and they had many feuds before reconciliation eventually was made amongst them. It behoved the new settlers to plant themselves in the modern town. The natives styled it Gall Antrim, meaning the town of the foreigners. So that we may safely infer from that what is now known as the town of

ANTRIM

was originated by the settlers. No doubt its site and situation was chosen for strategical purposes, because when they were hard pressed by the native Irish they could take to the "ships" which were anchored on Lough Neagh, and others of them could find refuge in Antrim Castle. Those were the troublesome days, when the town was walled in, with gates at the chief entrances. Not a vestige of these walls now remain. The present town consists of one main street and several small side ones, giving it an air of antique quaintness. The houses and shops are principally all modern, and few if any are very old. The business of the town is conducted in a quiet and unobtrusive manner. For its size the hotel accommodation is good, and there are outward and visible signs of extensions and improvements in that direction. The most ancient ecclesiastical is

THE PARISH CHURCH OF ANTRIM,

which is of great beauty and remarkable antiquity, and occupies a unique position in the town. Almost without intermission Divine Service has been conducted in it for over 300 years. Its long array of incumbents, the families of distinguished persons who met to worship here, are now beyond recall, and many of them are laid to rest beneath the shadow of the church. Of the elaborate and beautiful artistic stained glass windows one in particular is worthy of more than passing note. It is to be seen in the Massereene transept. The date of it is unknown, but is of considerable beauty and remarkable antiquity, probably brought from the Continent by a former Viscount Massereene, or it might have been taken from some ancient ecclesiastical building now extinct. It consists of two squares filled with coloured glass. The upper square has in the centre the figures of the Virgin and Child. The former is depicted standing, bearing a crown and holding a sceptre. Above her head is a cross, with the letters M.A.R. On the left is S. Hieronimus (Jerome), with a double cross wand, and on the right is S. Carolus, with Bishop's mitre and crozier. In the centre underneath is an angel preaching from a pulpit, with beneath it a three-fold flower springing from a single stalk—an emblem of the Trinity, or, if we accept it in the double sense, it gives it a two-fold meaning—the Trinity and the Irish emblem three-leaf sprig (shamrock). The lower square sets forth the martyrdom of S. John the Baptist. There are eight figures in it. In the background is Herod feasting with his lords; in the foreground the Baptist kneels with his hands joined in prayer, while the executioner with a two-handed sword is about to behead the Saint. Close beside stands Herodius holding a charger to receive the Baptist's head, and another woman stands beside her. The figures are magnificently pourtrayed in a very life-like manner. There are some splendid monuments inside the church, to the loving memory of the Massereene family. They are indeed

EXQUISITE WORKS OF ART

by eminent sculptors, and the least that can be said, they are well worth seeing to those who are admirers of the beautiful art. Around Antrim Church is the churchyard, in which there are many interesting tombstones, and many illustrious persons are buried there. Let me cite a few:—Lewis Clotworthy, Sir Hugh and his son, Sir John, first Lord Massereene; Sir John Skeffington, second Lord Massereene; Owen O'Connolly (the discoverer and informer of the Rebellion in 1641), the Revs. James Cunningham, Thomas Gowan, Wm. Adair, John Rankin, John Abernethy (who knew the system of creation better than most men of the nation); also Rev. John G. Holmes and George V. du Noyer, the geologist. It is computed that more than 10,000 persons are interred in Antrim churchyard. In a hasty survey such as this, we can only touch upon the fringe of so interesting a subject. Every step you take leads up to something new to divert attention, and I could have added a great deal more. The esteemed rector, Rev. M. F. Collis, B.D., has given a most interesting account of the church in vol. iii., parts 1 and 2, 1896-97, in the "Ulster Journal of Archæology." It was written on the occasion of the tri-centenary of the Church's usefulness. The Communion Plate has been in use for 200 years. It was the gift of Madame Abigail Parnell in the year 1701. The church has been enlarged and beautified on several occasions. The lofty embattled tower and octagonal spire was erected in 1816 at a cost of £1,500, borrowed from the Board of First Fruits. So much has been devoted

to Antrim Parish Church that I must be very brief when dealing with the other denominations, not with any degree of disrespect or disparagement as regards any or all of them, but rather to bring my remarks within reasonable bounds. The Presbyterians are a very numerous body in the town and district, and possess no less than two places of worship. One of them has the distinction of having just two ministers, although established since 1850. The Roman Catholics, Methodists, and Unitarians have one place of worship each. Quakers were a very numerous body here at one time. So far as I know none now in Antrim cling to that faith. In looking up the "Calendar of Documents Relating to Ireland" mention is made of a castle here so far back as 1215. The original site or ruins of it are all buried in oblivion. But not so as regards the present

ANTRIM CASTLE,

which was erected in 1610, and took about three years to build. Sir Hugh Clotworthy had a covenant with the Crown, and this was part of the stipulation—to build a castle, to maintain on the lands English and Scotch men, and to have them all fully equipped with weapons of warfare. This was coeval with what is known as the "Plantation of Ulster." This venerable mansion of the noble families of Clotworthy, Foster, Skeffington, and Massereene recalls to memory many an interesting episode in Irish history. Romantically situated in a sequestered vale on the left of Owen-na-View, or Sixmilewater, close to Antrim Bay, it has been a mute witness of a thousand and one stirring scenes of the past—events of paramount importance. First the settlement, and then the rebellion of 1641. The discoverer of the plot was Owen O'Connolly, who resided with Sir Hugh Clotworthy, in Antrim Castle. The Puritan Rebellion, the Usurpation, the Restoration, the Revolution, and the Rebellion of 1798 have all passed in panoramic succession before those ancient embattled walls. The earlier inhabitants of Antrim Castle did not sleep on beds of roses; they were subject to many and very great dangers. Where is there a castle in all Ireland that has not connected with it some fairy tale or legend? Antrim Castle is no exception. In days of yore many travellers passing through the town of Antrim might have noticed a figure in solid stone, representing one of that noble race of animals, now almost extinct, known as the Irish Wolf dog. There was a

DEEP AND UNFATHOMABLE MYSTERY

attached to it. How it came there, and why it was so placed, as if bent on the "look out" towards Lough Neagh? The legend is still handed down, and runs thus—"Lady Marian," the fair and beautiful daughter of Sir Roger Langford, was deeply in love to Sir Hugh Clotworthy, and they decided in the face of every opposition to join in holy wedlock. After the honeymoon, Sir Hugh was obliged to be absent for days and nights doing service for his King and country. On such occasions Lady Marian, to dispel the feelings of loneliness, took long walks along the green banks of the river, enjoying the cool and refreshing breezes. The long branches of trees formed beautiful archways from bank to bank, filled with innumerable feathered songsters, and their melodious notes, blended with the ripplings of the still waters, gave forth delicious sounds. A scene of such splendour almost baffles detion. She was charmed with the delightful scenery. Suddenly she heard a snarling growl, and was terribly frightened at the sight of a large wolf, with wide open jaws and eyes of fire ready to annihilate her. In her awful terror she fell in a swoon. During this time a faithful wolf dog intervened. It was something appalling witnessing two ferocious animals trying to conquer each other. The sight of the Irish wolf dog, panting and bleeding, soon aroused "Lady Marian," and she next beheld the wolf stretched out dead. With unbounded gratitude and a woman's tenderness she brought the suffering animal to the castle, and with her own hands bandaged up its wounds. It was for ever afterwards her dumb guardian. A fitting monument of such a noble deed deserves to be kept in great remembrance, and so long as the emblem remains about the castle the Massereene family will reign supreme, but woe betide that fatal day should some thoughtless and indifferent person carry it away! The grounds are beautifully laid out and richly furnished with seats and arbours, from which extensive views of the magnificent lakes are obtained. In this quiet haven alone with nature what could be more enchanting If the traveller should be privileged to visit Antrim Castle the stately "Oak Room" will command his highest attention and admiration, which contains

TROPHIES AND RELICS,

not alone of the Irish House of Commons, but also curios of intrinsic value. The Castle has been the home of many eminent and illustrious men in different walks of life. It has undergone many changes and vast improvements, but ceases to be—

"Like a sentinel keeping watch
O'er the valley's shining lands."

To deal adequately with the town's historical associations would alone fill pages of history. It is difficult to make a selection from the long roll of eminent men and women, who in the bygone days of the 17th, 18th, and 19th centuries made Antrim their home. We shall select a few:—Sir John Clotworthy, Owen O'Connolly, Rev. John Howe, M.A., Archbishop King (he was born in Antrim), Rev. John Abernethy, W. A. Bryson, Professor Hull (born in Antrim), George V. du Noyer, Sir James W. Hogg, Rev. George Macartney, LL.D., who was for 51 years vicar of Antrim. He was a noted personage during those troublesome times of 1798. Was a magistrate, and the first to give information to the Government on the alarming state of the north-east corner of Ireland. It consists of papers seized by a magistrate in a distant part of the Co. Antrim, and they were mostly all published in p. 552 foot note). I have condensed my remarks to the town and vicinity. By going still further afield these remarks could be greatly augmented, so for the present I shall say finis.

I might add, in conclusion, that I have encountered several books containing pictures of Antrim, and they were mostly all published in London. On the other hand tourists from England and elsewhere, speak very highly of the town, the inhabitants, the courtesy and kindness they received everywhere, returning with pleasant and happy recollections of their sojourn in Antrim.

LONGING.

Of all the myriad moods of mind
That through the soul come thronging,
Which one was e'er so dear, so kind,
So beautiful as Longing?
The thing we long for, that we are
For one transcendent moment,
Before the Present poor and bare
Can make its sneering comment.

Still, through our paltry stir and strife,
Glows down the wished Ideal,
And Longing moulds in clay what Life
Carves in the marble Real;
To let the new life in we know,
Desire must ope the portal;—
Perhaps the longing to be so
Helps make the soul immortal.

—James Russell Lowell.

At the Carlsbad Convention a new cure for scarlet fever was announced. The honour for this discovery must be credited to Dr. Moser, the assistant physician at St. Ann's Hospital for Children, at Vienna. The cure consists in the utilisation of a serum. During the last two years it was said that this serum has been tried on 400 patients, with a decrease of mortality to nine per cent.

OUR WEEKLY STORY

OUR EARTHQUAKE EXPERIENCES.

By Sewell Bartlett.

The Mount Saint Elias coast of Alaska is a vast mountain ridge, rising directly from the ocean to a height of nearly twenty thousand feet. In grandeur there is little in the world to surpass it, whether it is seen from the deck of a vessel at sea or from miners' camps near it. But it is a gloomy, desolate coast, and dark banks of cloud and heavy mists often veil the peaks from view.

As the mountain is still slightly volcanic, earthquake shocks are naturally expected; but during the eleven weeks, from June 15th to September 2nd, which we spent there, prospecting for platinum, we heard nothing from the subterranean forces. Then, early in the morning of September 3rd, there was a very distinct shock, which lasted for several seconds; but we had nearly forgotten it by the following Sunday, when there occurred the appalling phenomena which I shall try to describe.

At this time we were living in a tent with an oilskin cover at the margin of the moraine of a large glacier which extends from Disenchantment Gorge to the bay of the same name, and we had our tools and prospecting kit about us there, as is usual in such cases.

As it was Sunday morning, we were not intending to do any prospecting. I had not yet bestirred myself, but Crosby had crept out to kindle a fire, and Robertson was yawning over the task of repairing his canvas jacket, when he felt a shock as if some giant, standing below, had struck upward with an enormous sledge-hammer against the earth beneath us. Robertson was thrown forward prostrate, and Crosby pitched headlong into the tent. For a moment I seemed stunned, but I found myself on my feet, and heard Crosby calling out, "What's that?"

The rumble and vibration which followed answered clearly enough.

"It's another earthquake," said Robertson.

The sounds ceased, and we proceeded to get breakfast as usual. A thick mist shut down. There was no wind, but we heard the waves of the sea breaking heavily on the shore below.

While we were taking our coffee in front of the tent another earthquake occurred; and thenceforward, until noon or past, quake followed quake at intervals of from five to ten minutes. Crosby counted forty-five distinct shocks, each followed by a strange reverberatory roaring in the direction of the mountain, as if vast cliffs were falling.

Crosby believed that an eruption was occurring. "If only the fog would rise we should see lava streams!" he said. "It wouldn't surprise me if cinders and stones soon began to fall."

About one o'clock the fog lifted a little, so that we could look out on the bay, but the mountains behind us were still shrouded down to their bases. Then, as suddenly as the report of a carbine, we were all three thrown flat again by another of those terrific upward shocks! It was much worse this time, and when we attempted to regain our feet, the

earth was rocking up and down in a manner beyond belief.

It was impossible to keep one's feet. We reeled and pitched against each other. Skip, our hound, whined and stretched himself out at full length. At one instant the bay would seem to rise as if about to be poured on the land, but the next moment it would seem to be down in a vast hollow. The noises were indescribable. The glacier, the foot of which was in the bay beyond us, was splitting and crashing down into the water, with reports like peals of thunder; while the sea, all white and foaming, roared as if a heavy wind were blowing.

Murmurs and groaning noises seemed to rise from the ground underneath us. Strangest of all were the detonations, or else echoes, from the mountain-side. Awful volumes of sound rolled down from the gorges and ravines.

"It is merely an earthquake—a severe one," Crosby said. We were not at all terrified, yet we knew there was some danger of being overwhelmed by the sea, or swallowed up by fissures in the ground.

"We had better get back from the shore, I think," Robertson said; and during the interval of quiet which ensued, we struck our tent and began transporting our kit and tools to the top of a higher ridge, three-quarters of a mile inland. We made the two trips which were necessary to carry everything at a run. It was fortunate we hurried, for at a little past two o'clock another terrific shock occurred, which continued for nearly ten minutes, and which was followed by a tidal wave that mounted the moraine to a height of forty feet or more, and brought up enormous fragments of the ice broken from the glacier and afloat in the bay.

A tremendous rushing, roaring noise made us look toward the mountain. Water had broken loose from its barriers upon higher ground. A torrent several hundred feet in breadth swept down a ravine four or five hundred yards to the west of where we now were. The moraine where we had been camping was flooded. The noise of the boulders which the water rolled down with it was like the grinding and squealing of a long train of freight cars on a winter morning.

Rain soon began falling heavily. We hauled on the oilskin cover and kept as dry as we could in the tent, the ropes of which were tied to the stumps of little spruce trees. I can hardly describe the strange sensation when the earth gives those sudden jolts from beneath, and then squirms to and fro like some great reptile underneath. The tent twisted and shook over our heads, and on all sides the trees were cracking and falling.

It was a very strange night that we passed there. Yet at last I fell asleep, but dozed only fitfully, for I was frequently awakened by fresh shocks, or by the roar of falling cliffs.

Toward morning the glacier, a mile away, was profoundly affected; noises like those of a violent thunder-shower issued from it. The entire vast mass of ice, twenty miles in length and a thousand feet thick, appeared to be rent and torn by the rolling of the earth beneath it. I could never have imagined anything like it. It seemed to me as if primeval chaos had come again.

Shortly after dawn there was an interval of quiet, except for the occasional crash of falling rocks in the direction of the mountain. As the shades of night departed, we saw that nearly all the forest around us was prostrate, looking as if a hundred tornadoes had traversed it in every direction.

"Look at the bears over there!" Crosby said. There were four of the creatures standing together—large Saint Elias grizzly bears, rather lighter in colour than the grizzlies of Oregon and California.

It was plain they had gone out on the mossy flat ledges to escape from the falling forest. They sat up like great dogs, close together, and appeared satisfied that they had found the safest spot there was.

I took my field glass and watched them for some time. Great, grey, clumsy brutes as large as cows, they sat there motionless, and seemed to be dazed by the earthquake. Through the glass I could see them blink.

"There's another joining them!" Crosby exclaimed. A fifth bear had emerged from the brushwood and ambled out on the mossy tract.

We made shift to prepare breakfast, but a shock occurred while we were eating it, which split the ground a few yards back of the tent, making a gaping crack two feet or more in width. Again the glacier was convulsed, the tremendous crashes continuing for ten minutes or more. Hundreds of forest trees on the slopes of the mountain fell.

Soon afterwards we saw that a sixth bear, a black one, had joined its gray congeners in the open.

There was nothing that we could do to better matters, and we remained there, waiting and listening throughout the day. Other shocks occurred during the afternoon. Toward night mists shut down again, and the tremors became more severe and frequent. At about five o'clock two more cracks opened transversely across the wooded ridge where we had tied our tent. The whole surface there appeared to be in danger of collapsing.

"I believe those bears have chosen the safest place," Robertson said. "It is probably a flat, solid ledge over there, and may stand it.'

He and Crosby made their way over to it and immediately returned to urge the removal of the tent there.

"But those bears?" I said.

"They will not trouble us," replied Crosby. "They are nearly frightened to death! They seem cowed."

We again moved camp hastily, and established ourselves just at nightfall in the moss plot near the seaward side. The bears were farther away, distant perhaps two hundred yards from us. There were now nine of them assembled in a squad. They kept close together, as if for companionship in their terror, or else because some instinct taught them that the solid, flat ledges were the safest places.

It was impossible to drive tent-pins here, on account of the rock beneath the moss, and we placed loose stones on the loops of the lines. But shortly after nine o'clock, a shock brought the tent down upon us, and after that we sat on the moss with blankets and oilskins wrapped about our shoulders. Until midnight the shocks recurred every few minutes, and the frightful jarring of the ledges beneath was, if anything, worse to endure than the rocking of the forest land.

Above the rumble of earth, too, we began to notice another strange sound, which proved to be the moaning of those bears. When the heavy, first jolt deep in the earth occurred, they roared outright, and during the jar and vibration that followed it, moaned and whined continuously, and the sound of their moaning was the strangest which I ever heard. Evidently there was little danger of the bears attacking us. They were too much frightened to be hungry.

From midnight to seven o'clock of the next morning no shocks occurred, but a little after seven, when it had become light, there was a very heavy quake. Eleven bears had by this time reached the place, and we noticed that simultaneously with the roar of fear which each one uttered, it threw its body prone on the moss with outstretched paws, and remained in that position until the jarring ended, when it got up slowly. Our dog behaved in the same way.

Skip must have scented the bears, but he paid not the slightest attention to them. In the same way, none of us felt like shooting the bears; it seemed as if we were fellow-creatures, threatened by a common danger.

During that day the shocks grew lighter and more unfrequent, and had almost ceased by evening. The next morning we found that the bears had gone, and, taking their departure as a sign that the convulsions had ended, we set off ourselves to walk along the coast to Yakutat—if, indeed, any Yakutat remained.

Everywhere on our way were signs of the devastation wrought by the earthquakes. Miles upon miles of forest lay prostrate; cakes of ice as large as churches lay thirty feet above the tide mark. Enormous rocks had been tumbled about like footballs; cliffs had fallen, and on all sides along shore gaping cracks had opened in the earth.

On reaching Yakutat we found the place almost deserted. Most of the people had fled to the high lands in the rear of the village, and were living in tents. Many of the houses had fallen, and nearly all stood awry or had to be braced up with props.

A QUEER HOSPITAL.

By Carolyn Wells.

There's a hospital down on Absurdity square,
Where the queerest of patients are treated with care.
When I made them a visit I saw in a crib
A little umbrella who had broken his rib.

And then I observed in the very next bed
A bright little pin who had bumped his poor head.
They said a new cure they'd decided to try
On an old needle, totally blind in one eye.

I was much interested, and soon I espied
A shoe who complained of a stitch in her side.
And a sad-looking patient who seemed in the dumps
Was a clock, with a swelled face because of the mumps.

Then I tried very hard, though I fear 'twas in vain,
To comfort a window who had a bad pane.
And I paused just a moment to cheerily speak
With a pale cup of tea who was awfully weak.

As I took my departure I met on the stair
A new patient, whom they were handling with care.
A victim perhaps of some terrible wreck—
'Twas a squash who had fatally broken his neck.

PHOTOGRAPHY IN IRELAND.

Whilst north and south and east, wherever one travels, the ubiquitous hand camera is seen carried by tourists of both sexes, I was struck with its rare appearance lately, during a week or two's sojourn in the south-west of Ireland, says the writer of Photographic Notes in the October "Travel." It may have been mere coincidence, but I only remember to have seen two hand cameras all the time, and I never saw either of these actually used. Before going thither I tried to gather some idea of the character of the country in Counties Kerry and Cork. Of course the views of Killarney are familiar, also the chief buildings in the City of Cork, but I could find no graphic clue to what the surrounding country was like before visiting it, clearly showing that there is a comparatively untrodden field here for the photographer. And having now made its acquaintance, I do not hesitate to say that its picturable possibilities (I use the term picturable in preference to picturesque, the latter not always meaning that the scene in question will lend itself to the making of a pleasant picture) are unlimited, and fine as it all was in June and early July, and landscape becoming ripe and more mature must certainly be finer in late summer and early autumn; whilst the figure studies one might secure amongst the natives living on the hillsides above Bantry Bay would be wonderful, quite irrespective of season. For serious photographic work I should say that Eccles Hotel at Glengarriffe would form the best centre. There are the shores of the bay, the rugged hill slopes, the wild moorland higher up, the glen foliage of sub-tropical luxuriance, and the inhabitants with their cabins of extraordinary primitiveness. Travelling is easy, and neither it nor living is very costly. The west of Ireland deserves more attention from the photographer, and, indeed, from the touring community generally.

THOMAS O'CONNELLAN.

A GREAT IRISH COMPOSER AND BARD.

By Rev. J. F. LYNCH.

Professor O'Connellan (I. Trans. Os. Soc., vol. v., pp. 163-4) says: "Several eminent performers on the harp flourished in the last century, many of whom were composers of music. The melodies of Torloch O'Carrolan are well known and appreciated; but we have it from the best authorities that he largely copied from his predecessor, Thomas O'Connellan, and that many of the airs which are ascribed to the former were actually composed by O'Connellan.

Thomas O'Connellan was born at Cloonymahon, in the county of Sligo, and died about the year 1700. It is said traditionally that the composed upwards of five hundred airs, but few of them are now known to the public. To the most of these melodies he composed songs, for he was also a good poet. He was the author of the following airs:—"The Jointure," "Little Celia Connellan," "Love in Secret," "Ta dha 'Liam Daibhis ann sa n-ait so," or "Planxty Davis"—which is known in Scotland as "The Battle of Killicranky"—"The Breach of Aughrim"—also known in that country as "Farewell to Lochaber"—"If to a Foreign Clime I Go," "Gentle Mild Maiden," and that beautiful air, that spirit of Irish melody—"Realta na Maidne," or "The Morning Star," otherwise called the "Dawning of the Day," and published in Bunting's music.

If we are to judge by the following poem, O'Connellan's performance on the harp must have been of a superior order, and equal to the description given by Cambrensis of the Minstrels in his time. The original Irish poem which is given in Hardiman's "Irish Minstrelsy," was composed by a contemporaneous bard, but the author's name has not been ascertained. The following is an English version of it which appeared in the old "Dublin Penny Journal":—

THE ODE TO THE MINSTREL BARD, O'CONNELLAN.

Wherever harp note ringeth
Ierne's isle around,
Thy hand its sweetness flingeth,
Surpassing mortal sound.
Thy spirit music speaketh
Above the minstrel throng,
And thy rival vainly seeketh
The secret of thy song.

In the castle, in the shieling,
In foreign kingly hall,
Thou art master of each feeling,
And honoured first of all!
Thy wild and wizard finger
Sweepeth chords unknown to art,
And melodies that linger
In the memory of the heart!

Though fairy music slumbers
By forest-glade, and hill,
In thy unearthly numbers
Men say 'tis living still!
All its compass of wild sweetness
Thy master hand obeys,
As its airy fitful fleetness
O'er harp and heartstring plays!

By thee the thrill of anguish
Is softly lulled to rest;
By thee the hopes that languish
Rekindled in the breast.
Thy spirit chaseth sorrow
Like morning mists away,
And gaily robes to-morrow
In the gladness of thy lay!

It does not appear to have been known to Professor Owen Connellan that Thomas O'Connellan died at Bourchier's Castle, beside Lough Gur, when on a visit to Mr Bayly, agent to the Earl of Bath, and was buried close to Teampull Nuadh, or "New Church," at south side of Lough Gur. The people point out O'Connellan's grave, a little to the north-east of the church, and just outside the wall of the burial ground attached to the church. This church was built about the middle of the seventeenth century by the Countess of Bath, for Sir George Bourchier, General under Sir George Carew of the army of Munster in the time of Queen Elizabeth, was second son of the Earl of Bath, and received a large grant of land in Lough Gur district. Dineley, who visited Lough Gur about the year 1685, gives some particulars of New Church. The Holy Communion plate of this church is still in use in Knockaine Church, and there is an inscription dated 1679, setting forth that it was the gift of the Right Hon. Rachael, Countess Dowager of Bath. The church was termed "New" in contrast to the old church of Killalough, or Church of the Lake," built by the Earl of Desmond. The site of this church of Killalough, marked by a small mound, is a little to the east of the causeway leading to the Caislean Dubh, or "Black Castle," and the high hill to the south is named Hill of Killalough from this church.

Some of the old people have told me that the site of the oldest church at Lough Gur was not far from the Bullan or Rock Basin of the Druids near Bourchier's Castle, and situated between the Bullan and Carriggal, or "white rock." All these things appear on new Ordnance Map except the site of the old church of the Irish period, which I could not find. When the remains of O'Connellan were borne to the grave, the people say that a banshee stood on Carraig na g colur, or rock of the doves or pigeons (Irish colur is cognate with Saxon culver, dove or pigeon, which occurs in Spenser's "Faerie Queene"), and sang the death-song of O'Connellan. Carraig na g Colur is a high rock on Knockadoon, and is marked on new map. James Coleman, of Lough Gur, professes to be able to give the tune of the death-song which at Lough Gur is called the banshee's tune.

The beansidhe of Lough Gur appears to have been Ane; for in an elegy by Pierse Ferriter, of Tralee, on one of the Fitzgeralds, we read:—

Ane from her closely hid nest did awake,
The woman of wailing from Gur's voicy lake.

In "The Poems of Egan O'Rahilly," p. 202, Ane also appears as a banshee:—

Do ghuil Cliodhna trid na sgeulaibh,
Do ghuil Una a n-Durlas Eile,
Do ghuil Aoife a siog-bhrog Fheidhlim,
Is do ghuil Aoibhill sigh-bhean leith-chraig.

Do ghuil go truagh an Ruachtach caoille,
Do ghuil Aine a n-arus Greine,
Do guileadar ocht n-ochtair air aon loch,
Do ghuileadar airre an Charrainn 's an t-Sleibhe.

Cloidhna wept because of the tidings;
Una wept in Thurles of Eily;
Aoife in the fairy mansion of Feidhlim;
And Aoibhill, the banshee of Carriglea.

The slender Roughty wept piteously,
Aine wept in the dwelling of Grian;
Eight eights wept together on the same lake;
The fairy maidens of Corran and of the Sliabh wept.

I do not know why O'Rahilly says that Ane wept in the arus, or pailis, of Grian, for in the local tales the people do not connect Ane with Pailis Greine (Pallas Grean), which is a hollow moat about 170 paces in circumference at bottom, and 80 paces at top; the oblique height of Mota Greine, as it is now called, is about 34 feet, but it was formerly much higher, and there was a small castle of the O'Briens on top of it, and the mother of Mr. Joseph Cahill, of Cahirconlish, saw some of the stones of the castle on top of the moat. Dr. Joyce ("Irish Names, ii., p. 242, et seq.) gives a legend of Pallas Gream, but Grian of Pailis Greine was a sun goddess, and in the Latin "Tripartite Life of St. Patrick," Grian, the name of this district, is explained by sol, "the sun," and Cnoc Greine (Knockgream) means hill of the Sun, and Gleann Greine means sun glen, and Dr. Joyce is incorrect when he says that Knockgrean does not mean hill of the sun. On Knockgrean (the name of the range) there is a mound now called Suidhe Finn, or "Seat of Finn," and the hill of the mound is called Knockseefin (Cnoc Suidhe Finn), and on Knockgrean there is also a rock called Carraig an eithig, or "rock of the lie," said to have been cast thither by Finn, but the Carraig an eithig, beside Lough Gur, was cast by Donn Firinne Sun worship in Ireland is referred to in the Confession of St. Patrick, and the worship of the sun appears to have been the prevailing worship in Ireland when the early Christian missionaries reached the Irish shores. Colonel Wood Martin ("Traces of the Elder Faiths") considers that Ane was a moon goddess, and there is much to be said in favour of this view. Keating (Dr. Joyce's edition, p. 123), says that Brian, Iucharba, and Iuchar, "three gods of the Tuatha De Danann" (children of Dealbhaoth, p. 125, but in "Children of Tuirenn," sons of Tuirenn) were the sons of Danann, or Danu, and that it is from Danann the Tuatha De Danaan were named, and the Kerry Paps, Da Chich Dhanann, or Two Paps of Dananna or Danu. In O'Donovan's Supplement to O'Reilly, p. 572, we read: "Ana the mother of the Irish gods, said to have been one of the Tuatha De Dananns." "Ana i mater deorum Hiberniensium ro ba maith din ro biatadhsi na dee; de cujus nomine Da chich n-anainne iar Luachair nominantur ut fabulaverunt." "Cormas's Glossary." Here Cormac terms the Kerry Paps, Da Chich n-Anainne, while Keating names them Da Chich Dhanann, consequently Danu, the real nominative case of Danann and Ane, Ana, or Anu of Anainne, must be identical, so that Ane, mother of the Irish gods, and Danu, from whom were named the Tuatha De Danann ("Tribes of the goddess Danu"), are the same. Professor Rhys ("Hibbert Lectures," p. 89) says: "There remains the associate of Cernunnos on the Saintes monument, where she is represented sitting in the ordinary way near to the cross-legged god: she has a cornucopia, which implies that she was regarded there as a benignant goddess; but beyond that one knows nothing about her, not even whether she should be regarded as identical with the goddess standing on the other face of the stone. But with one or both of these goddesses may, perhaps, be compared a divinity that figures in the Irish and Welsh pedigrees of the gods. Her Irish name was Danu or Donu, genitive Danann or Donann, also written with nd for nn. The consonaltal declension was always liable to be replaced; so we have Donand and Danann used in the nominative, whence a new genitive, Danainne, was sometimes made. (See O'Donovan's note, "Four Masters," A.M. 3500, A.D. 1124.) She is treated as a goddess par excellence, in Irish dea, of which the genitive had various forms, such as de, dee, dea, and dae. So the Irish gods, who are reckoned her descendants, are promiscuously called Tuatha De Danaan, "the tribes of (the) Goddess Danu," Tuatha Dea or Dei, "the Tribes of (the) Goddess," and Fir Dea, "the Men of (the) Goddess."

In Welsh her name takes the form Don, and the gods descended from her are accord-

ingly called "the Children of Don." Professor Rhys says that Beli the Great, son of Mynogan, was regarded by the Welsh as Don's husband. Billingsgate, London, that is, gate of Billing, Bellin, Belin, Belli, Bel, or Bile was named from the Celtic sun god, or rather god of light, Belin or Bile or Bel ("Names and their Meaning," p. 217). Spenser ("The Faerie Queene," ii., x), says:—

Donwallo dyde (for what may live for any?)
And left two sonnes of pearless prowesse both,
That sacked Rome too dearely did assay,
The recompense of their perjured oth;
And ransackt Greece well tryde, when they were wroth,
Besides subjected France and Germany,
Which yet their praises speake, all be they loth,
And inly tremble at the memory
Of Brennus and Belinus, Kings of Britany.

In "Lights and Shadows," p. 251, we read: "In the justly celebrated Welsh Triads, Hu Gadarn, or 'the mighty' (Irish Hu Mor), is said to have mnemonically systematised the wisdom of those people whom he led west from the summer-land. The Kymry of Britain and the Kimbri of the Continent were all one people; and Belinus, the King after whom Billingsgate, Billingshurst, etc., are named, was brother of Brennus. . . . Their father was Dyfnwal-Moel-Meod (bald-mute Dyvnwal, one of the mythic legislators mentioned in Triads, and equivalent to Irish Domnall or Donnell; Spenser's Donwallo, or 'great deep' ('Hibbert Lectures,' p. 449), is said to have been the first King who wore a crown of god. He gave privileges to temples, cities, and ploughs, and to highways, that whosoever had need might retire thither and be safe. He is said to have founded what has since been called Bristol, which he called Caer Odor. . . ." The "Calendar of Ricart" tells us that "Bryn, or Brennus (Irish Bran), his son, builded Bristowe (probably Brinstown, that is, hill-town of Bran, and set it upon a little hill, and then Bryn repaired home over sea." Bryn's figure and that of his brother, Belinus, may be seen on the south side of St. John's Tower, Broad street, Bristol. Two miles from Bristol there is a place called Stanton Drew, or "stone town of the Druids, with three circles of stones half buried, having fallen down; near the church there is a cove, ten feet by eight, formed of three large stones, in which some of the Druids are supposed to have sat to administer justice, while others taught the young people, and others again offered up the daily sacrifice." Belinus is also stated to have built a city where London now stands, named Caer Troia (Spenser's "Troynovant," or "New Troy"). Compare the tales of the building of old Troy, Rome, and Emain Macha.

In "Smith's Smaller Classical Mythology," p. 84, we read: "The native Italian deities, who corresponded to Apollo and Artemis, were Janus (or Dianus), and Diana (or Jana), the god and goddess of light (from Dies). Di and J are equivalent to one another, and to the Greek Z. The Germans are mistaken in supposing that the Latin J was pronounced (like theirs) as Y. Etymologically, and probably originally, Janus is nearer to Zeus than to Apollo; and Diana is the equivalent of Dione, the ancient consort of Zeus." It appears that the old inhabitants of the district of Rome were a race akin to the Celts, for Corssen, the celebrated philologist, says that the name Rome (Srouma or Rouma) means stream or river city, and is derived from the Celtic sru, or ru, a river, or stream, the name having been applied to city from being built beside the river Tiber, which, I may add, is also a Celtic name, meaning water or river. In Irish there is word Ane or Aine, meaning brightness, and is probably from same root as Ane, or Danu, and consequently it is highly probable that Ane, Ana, Danu, or Don, the chief goddess of the Celtic pantheon, is identical with Juno, that is, Diana, Dione, Juna (and perhaps Dana, or Ana), the old Italian goddess, made wife of Zeus, the old god of light, of the Sanskrit speakers, Greeks and Romans, and whose correspondent in ancient Ireland was Dagda, or Decet, from same root as Zeus and Jupiter.

The Rev. S. Baring-Gould has informed me that he has found traces in Brittany of the cult of Ane, who in "Cormac's Glossary," is termed, "Mater Deorum Hiberniensium," and Professor O'Beirne Crowe ("Religious Beliefs of the Pagan Irish," "Kilkenny Journal," third series, p. 319), gives a quotation from an old Irish document in Trinity College, Dublin, to the effect that the prosperity of Munster, greater than that of the other provinces, was due to the worship of Ane in Munster. I am putting together some notes on Clidna and Teite, in which I hope to be able to prove that Clidna and Teite figure at a very early period in Greek mythology.

NOTES AND QUERIES.

FIAL.

TO THE EDITOR DUBLIN PENNY JOURNAL.

Sir—The Rev F R M Hitchcock in his article on "The O'Conors of Offaly," makes mention of some old names, which are of great importance, but in this letter I shall only deal with the name of the hill from which the parish of Croghan is named.

Lewis says that the hill of Croghan, clothed with verdure, is celebrated by Spenser in his Faerie Queene, and forms a very striking object in a very flat district, and he also says that the surface of the parish of Croghan is overspread with bogs. In the Franciscan Liber Hymnorum, quoted by Dr Stokes in "Lives from Book of Lismore," the hill of Croghan is named Cruachan Bri Ele in Ui Failge, or Offaly, and the bog north of the hill is named Moin Faichnig, or "bog of Faichnech." In Calendar of Oengus, p. lxxvi, it is stated that the church of the great Bishop Mac Caille, who set the veil on Brigit's head, is in Cruachan Brig Eli in Ui Failge. Mr Hitchcock has told us that Ros Failge means Ros of the Rings but in our Irish tales we often meet with double names, such as Ailell Aine, and in some tales Failge, from whom were the Ui Failge, is regarded as a personal name and not an appellative of Ros, and in this case Failge must be explained in the same way as we explain Aine in the name Ailell Aine. Failge, at any rate, whether it means rings, or light, or district of light, is an extension of Fal, which means ring or light and it is possible that the two meanings may be combined, and we may then explain the symbolism of the ring in the Irish tales as having reference to light regarded as a ring encircling the earth, while the Lia Fail, or Stone of Light (in one tale called "heart of Fal"), must have been a round stone as symbol of light, and this alone disposes of the claim of the Westminster stone to be regarded as the Lia Fail. Dr Joyce explains Cruachan Brig Eli, and to the cognates of Bri, or Brig, which he has given, may be added the German berg, Armenian berj, and Zend barezant. Dr Joyce does not, however, throw any light on the name Eile, or Ele, but the following passage from Silva Gadelica, p. 512, explains the form of the name. "Fial, daughter of Eochaid Feidlech; a qua Cruachan Bri Eile (Fheile) in Leinster, was wife of Dathi Mac Fiachra." We thus see that eile is really Fheile, the genitive case of Fial. In Edinburgh Dinnshenchas, p. 62, it is stated that Fir and Fial, a boy and girl, were the twins (Emain) of Macha, wife of Crunn, from whom Armagh (1) was named. Emain means twins, and it was from the twins, and not from the Eomuin Macha, or brooch at the neck of Macha that the old royal city of Emain was named. Cloann, wife of Eochaid Feidhlech is also stated to have had at one birth a daughter, named Clothra, and three sons, named Nar, Bres, and Lothur. Bres, Nar and Lothur are in the Irish tales named Na tri Finneamna, or "the three white twins," and in Mac Liag's poem (Trans. Os. Soc., vol. v.), are connected with Tlachtga. The tale of the birth of Lughaidh of the red stripes, son of the Three White Twins, is a mythological tale like that of Lughaidh mac na d tri Con. In Dr Joyce's "Irish Names," vol. 1, p. 166, there is given a tale of Fial, the wife of Lughaidh, son of Ith, from whom was named the river Feale or Fial, in Kerry. Dr Joyce (Irish Names, vol. 1, p. 136), tells us that Eile, the seventh in descent from Cian, was the ancestor of the tribes called Eile or Ely, who gave names to several districts in Muma, or Munster, such as Ely O'Carroll, Ely O'Fogarty, now Eliogarthy. In the Genealogy of Corca Laidhe, the tribes named Eile or Ely are said to have been so-called from Eile, the daughter of Eochaidh Mac Luchta, from whose one red eye, Dr Joyce tells us, Loch Dergdherc, or "lake of the red eye," now Lough Derg, was named. Eile, daughter of Eochaidh Mac Luchta, has also no doubt to be referred to the name Fial, for Eile is really Fheile, the genitive case of Fial utilised as nominative. I have referred to the custom of the old Irish of forming the nominative case from the genitive, and in preferring this genitive form to the nominative case. In Silva Gadelica, p. 544, it is stated that Muma and Eithne, sometimes written Ethlend, were the daughters of Onga, wife of Eochaidh Feidhlech, and sister of Cloann. From Muma, a very important name, the province of Muma, now Munster, was named. The writer who composed the tale of Fial, wife of Lughaid, supposed that the name meant modest.—Yours faithfully,

J. F. LYNCH.

(1) In the Dinnshenchas of Ard Macha, or Armagh, the place is said to have been named from each of the Machas, who were an old Irish triad, and Dr Joyce's explanation of Armagh cannot be accepted. The Irish Emain is cognate with Sanskrit Yama, Zend Yima, or "Twin," a combination of male and female principle.

"UNIQUE" BOOKS UNKNOWN TO THE BIBLIOGRAPHERS.

TO THE EDITOR DUBLIN PENNY JOURNAL.

(2) [Kelsall, Charles]. A Letter from Athens, Addressed to a Friend in England. (A Poem of 38 pp.—notes 58 pp). Brds, large quarto, L. P., printed by T Bensley, 1812, on thick vell. paper, margin 2½in.

"Some shaft 'gainst which Antigonus reclined,
To cull the fruit of Neno's steadfast mind."

That the most interesting book written by Charles Kelsall should be published anonymously, and should have escaped the scrutiny of the Bibliographers, at a time when Athens was a resort for English and Continental literary men and travellers, appears, at first sight, incomprehensible, especially as it contained two beautiful plates by Anker Smith, A R A, after H Howard, R A, and an exquisite engraving by C Wilkin, of the then famous "Ravenna Medal" (Portrait of Demosthenes). This book bears externally the rare engraved label of the "Ipswich Book-Club" (1812), and the Ex-Libris of Mr Thos Green, of Ipswich, and was, though bearing no inscription, presented by the author to the Club.

JAS. HAYES, Bookseller,
Ennis.

MID OCEAN WIRELESS TELEGRAPH STATION.

A scheme is on foot for utilising wireless telegraphy in a mid-ocean post office and signal station. It is the intention to permanently moor, at a point 110 miles west of the Lizard, a ship which will be equipped with a search-light and a complete set of Marconi apparatus. As the water at the point selected will involve the use of a mooring chain 400 or 500 feet in length, the weight of which would prevent the bows from riding buoyantly over the heavy seas, the vessel will be provided with a hawse-pipe placed in the keel of the foremast. The search-light is to have a vertical beam for the purpose of illuminating the clouds and enabling the floating post office to be picked up at night from a distance of 60 miles or more. As the vessel will be located in the fair way of the English Channel, it will be advantageously placed for the distribution of orders sent from shore by the owners of vessels which are passing in or out of the Channel. Thus a ship coming in from the west or from the south could be directed as soon as it picked up the station, to proceed either to Liverpool, Bristol, or an English Channel port. By this means pilotage and port dues would be reduced, and, of course, there would be a considerable saving of time. The vessel will serve as a floating station, which can be approached in any state of the weather, and picked up for wireless communication. The value of this form of post office is expected to be very great. Moreover, lying at the junction of the three great thoroughfares of British and Continental marine traffic, the station should prove particularly valuable in salvage work.

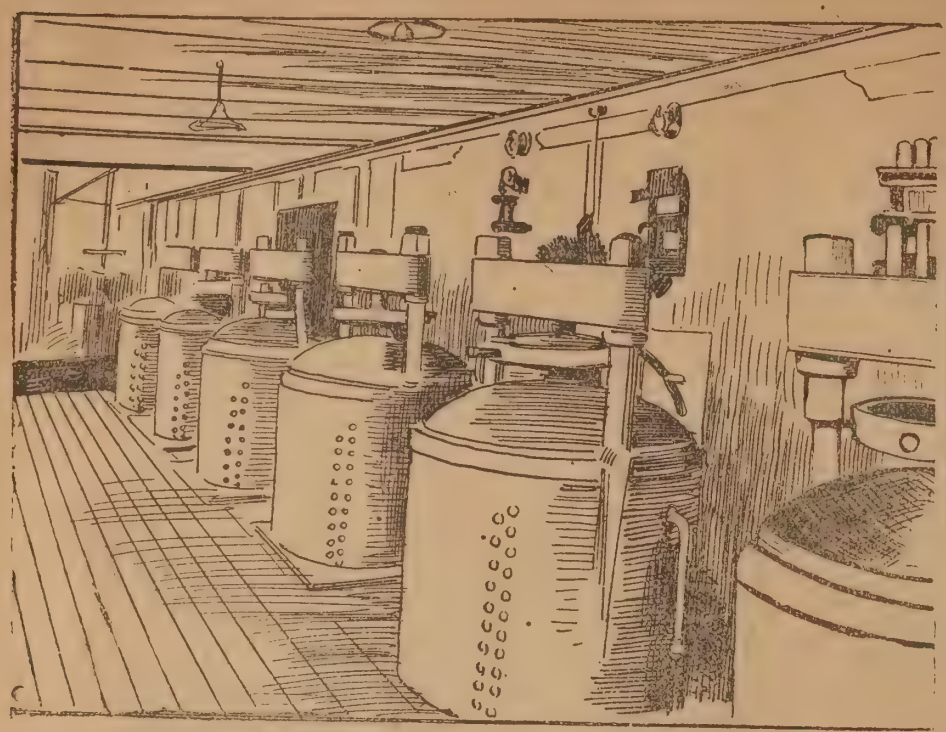
THE ELECTRICAL MANUFACTURE OF PEAT FUEL.

THE PLANT AT STANGFJORDEN, SHOWING THE PIPE-LINE.

IRELAND'S BOGS.

HOW THEY MIGHT BE UTILISED.

A NORWEGIAN EXAMPLE.



The coal strike has brought us face to face with one of the most difficult economic problems of recent years (says a writer in the "Scientific American"). Compelled to pay about 25 dollars per ton for anthracite and outrageously exorbitant prices for soft coal, the fact has been forced home that we have relied too much upon one kind of fuel. Texas is just now producing unlimited quantities of oil, but there is no way of shipping it cheaply at present to the Eastern States. Artificial fuel cannot be produced in sufficient quantities to meet the sudden large demand. We must perforce grudgingly burn either dearly bought hard coal or install smoke-consumers and burn soft coal. Coal and oil are not the only fuels in the world. The bog lands of Europe and North America contain a wealth of good peat, practically untouched. The great moors of Austro-Hungary, France, Germany, Great Britain, and Ireland could easily be made to supply a larger contingent of fuel than they do at present.

It is quite natural that technical experts make ever-increasing efforts to bring about the utilisation of such immense natural supplies. The manufacture of peat-moss litter and of turf-dust has already been developed to a very remarkable extent, and the use of suitable kinds of peat for making textiles and hygienic articles, as well as the production of peat-molasses feed, etc., promises an increasing importance of the peat industry. However, the significance of all these efforts and of the successes which have been attained is placed far in the background, if compared with the importance of the peat after it has been worked into peat-fuel, and, above all, after it has been transferred into peat charcoal.

It is generally known that pressed peat has been in use for many years as a fuel. It is true that the heating efficiency thus obtained has been small, since the crude peat itself contains but from 30 to 50 per cent. of carbonaceous matter, and about 160 kilogrammes of machine-made peat have to be used for producing the heating effect of 100 kilogrammes of coal, while the space required for storing 160 kilogrammes of peat is three and one-half times larger than that occupied by 100 kilogrammes of coal. However, by transforming the raw material into peat-charcoal a heating efficiency is obtained equal to that of coal, and nobody can foretell as yet the various purposes, especially the technical purposes, for which the fuel thus produced may be utilised.

It must be admitted that not all kinds of peat are equally well adapted for the manufacture of a valuable peat-charcoal capable of proving a successful competitor. The latter possibility depends entirely, on the one hand, upon the situation of the moor intended for the manufacture of peat-charcoal, and on the other, upon the physical and chemical qualities of the bog-peat which has to be carbonised. If a peat-bog is remote from means of transportation by rail or water, the expenses of bringing the peat from the moor and of shipping the coal will render the price of the peat-charcoal higher than that of the article obtained from peat-bogs which are more advantageously situated. A peat-bog, the situation of which allows the peat to be freed by water by a more thorough, as well as natural, and consequently inexpensive method, will offer better prospects of profit than peat-bogs having no outlet for the water; the latter yield very moist peat, so that more expensive drying plants have to be erected if the protracted air-drying process which would hinder the development of the works to a very considerable extent were not employed. It will readily be understood that the question as to the physical and chemical quality of the peat, which has to be used, is of the same importance.

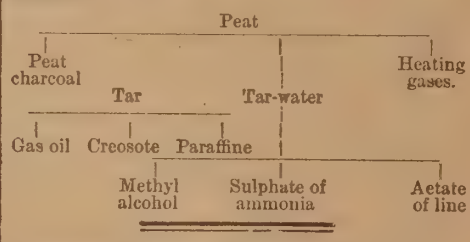
Notwithstanding all the favourable chances for utilising and selling peat-charcoal, and in spite of the fact that the high price of bituminous coal, and, above all, of charcoal, increases from year to year, the rational utilisation of the peat-bogs is as yet in an embryonic condition. This remarkable state of affairs is explained by the fact that the methods for carbonising peat, which have been hitherto in use, were far too expensive. All kinds of drying apparatus and a lage variety of oven constructors have been used without, however, increasing considerably and permanently the output of the plant. This increase is the more indispensable for rendering the peat carbonising works profitable, as the period during which they may be operated, without interruption, can be estimated at from 200 to 240 days per year at the most. A new process for carbonising peat yields better results. It is the invention of P. Jebsen, of Dale, Norway. The process has been in actual operation for three years in the peat-charcoal works of the inventor at Stangfjorden, Norway, with entirely satisfactory results. According to the invention, the partially dried peat-briquettes are carbonised in hermetically closed retorts by electric heat, it being possible to heat several retorts at the same time with one dynamo machine,

THE RETORT-ROOM IN THE STANGFJORDEN PLANT

The dynamos are driven by water power with the aid of turbines. This process allows the peat-blocks to be carbonised with a proportionately much shorter time and with much more uniformity, while the peat-charcoal produced consists of a dense, very compact black mass showing the structure of peat. The specific gravity of the carbonised fuel in the broken condition is about 0.3, and the theoretical calorific value about 7,000 to 7,500 thermal units. The peat-charcoal produced according to the Jebsen process burns well. It ignites readily throughout, spreads rapidly an intense heat, and yields but little soot. The ash is similar to that of bituminous coal; it does not affect, to any considerable extent, the fuel which is not yet consumed, neither will it cover the fire and prevent it from burning, like the ash of ordinary coal and of lignite. The analysis of Jebsen's peat-charcoal, made by the Royal Norweigan High School in Christiania, gave the following mean composition:—

	Per cent.
Carbon	76.91
Hydrogen	4.64
Oxygen	8.15
Nitrogen	1.78
Sulphur	0.70
Ash	3.00
Moisture	4.82
	100.00

The power required for carrying out the Jebsen treatment at Stangfjorden is derived from five 80-kilowatt dynamos direct coupled to five turbines of equivalent—128 horse power. The power generating installation was provided by Schuckert and Co., of Nuremberg. The wet peat is brought to the factory direct from the bog by water, in lighters of about 100 tons capacity. The boats are discharged by aid of mechanical power, and the peat is submitted to the first drying and pressing operation. This is carried out in a 5 horse power press, which can turn out 2,500 pressed blocks of peat, each measuring 60 by 8 sentimetres, per hour. The average weight of dried peat in each of these blocks is 2 kilos.



The briquettes of pressed and partially dried peat are next loaded into trolley shelf waggons specially designed for tunnel drying by an American company. Each waggon carries, when fully loaded, 140 of the wet briquettes arranged on ten shelves. The trolley waggons are pushed, when loaded, into the cooler end of the drying tunnel. The air draught which passes through the tunnel is set in motion by fans electrically operated, and is heated by the waste gasses from the retorts. The air has a temperature of 90 to 100 deg. C. at the top end of the tunnel where the waggons emerge, and one of 40 to 50 deg. C. at the lower end where they enter. As the waggons pass up the tunnel, the peat is, therefore, submitted to a gradually increasing temperature. The drying plant at Stangfjorden comprise one hot air stove, three electric fans, two tunnels, and 102 shelf waggons; 1,000 of air-dried peat blocks can be produced per day. The waggons with their charges of dried peat are next taken on tram rails direct into the retort house, and are emptied directly into the retorts.

The retorts are upright cylindrical vessels of iron, about 2 metres in height and 1 metre in diameter. Each retort has a removable cover, and a discharging hole below, and is in addition provided with gas exit pipes and a pressure gauge. The retorts are provided with spiral resistance coils of special construction, and the blocks of peat are built up in actual contact with these, until the retort is entirely filled with a pigeon-holed mass of peat, in the centre of which the heating agent lies. The top cover of the retort is now clamped down, and the electric current connections are made. Losses by radiation are minimised by lining the retorts with asbestos. The peat yields three products when submitted to this electrical heating in closed retorts. The gaseous products pass away by openings in the retort cover, and after scrubbing are employed for heating the air used in the drying tunnels. The tarry liquid condensed in the gas pipes and in the scrubbers contains tar oils, ammonia, and other compounds, and if the plant and technical skill are available, may be worked up for these products on the spot.

The peat fuel remaining in the retort after the carbonising operation is completed is allowed to cool down to 130 deg. C. before opening the retort, and is then discharged direct into waggons running beneath the retorts. The peat-fuel produced at the Stangfjorden factory is shipped direct to Bergen, where it is said to meet with a ready sale. The average yield of 100 kilos of the air-dried peat at Stangfjorden is as follows:—

	Per cent
Peat-fuel	33
Peat-tar	4
Tar water	40
Gaseous products	23

The diagram below shows the products which are obtained from the peat by dry distillation:—

PHOTOGRAPHY OF SOUND WAVES.

Mr. H. S. Allen, of the Blythswood Observatory (Scotland), has been carrying out some interesting experiments in connection with the photography of sound waves and other disturbances of the air. The method of striae devised by Toepler more than thirty years ago makes it possible, by suitable optical arrangements, to render visible disturbances in which the refractive index differs but little from that of air. In working this method for photographic purposes the source of light and its image must be of finite width, and the adjustments made so that a certain fraction of the width of the image falls on the screen, while the light from the remaining portion passes through the lens and gives rise to a uniform field. In these circumstances the upper part of the region of greater density appears against a light field, and the sensitiveness of the method depends on the relative proportion of the light stopped by the screen, and the light that enters the lens. One of the most striking applications of the method is the photography of sound waves—waves of compression set up by sudden electric discharges. The compression in one of these waves is considerable compared with that due to an ordinary musical sound. Attempts made to photograph the train of waves due to a musical note were successful, as were also efforts to secure a record of the notes from a shrill whistle, and a siren blown by a pair of foot bellows; but a number of photographs were obtained of the wave font of a train of waves from the oscillatory discharge of a condenser through a circuit possessing self-induction. In the latter case only the first wave front was secured; but although the attempt to photograph a train of waves was also in this case a failure, the result was not without interest, as it brought out very clearly the difference in character between the first discharge and the surgings that follow it when the spark is an oscillatory one. Several photographs were taken to show the formation of a vortex ring of heated air, from which it is seen that the air appears first of all to issue from the orifice in the form of a column, but the tail is gradually left behind, while the whirlpool motion of the head is accentuated. The appearance of some of these photographs showing vortex motion, as well as those of atmospheric disturbances caused by the burning of a spirit lamp and of a gas jet, resemble the published photographs of the nebulae of the heavens.

Ancient Boroughs of Ireland

From Lewis's "Topographical Dictionary of Ireland," 1837.

CLOGHER.

CLOGHER, an incorporated market and post-town, a parish, and the head of a diocese (formerly a Parliamentary borough), in the Barony of Clogher, county of Tyrone, and province of Ulster, 7 miles (W.) from Aughnacloy, and 82½ (N.W. by N.) from Dublin; containing, with the towns of Augher and Five-mile-town, and the village of Newtown-Saville (all separately described), 17,936 inhabitants, of which number 523 are in the town. This place is said to have derived its name from a stone covered with gold, which in pagan times is reported to have made oracular responses. The "Clogh-or," or "golden stone," was preserved long after the abolition of paganism; for M'Guire, Canon of Armagh, who wrote a commentary on the registry of Clogher, in 1490, says "that this sacred stone is preserved at Clogher, on the right of the entrance into the church, and that traces of the gold with which it had been formerly covered by the worshippers of the idol called Cermaed Celsetacht are still visible." There is still a very ancient stone lying on the south side of the Cathedral tower, which many believe to be the real Clogh-or. It appears to have some very ancient characters engraved on it, but is evidently nothing more than the shaft of an antique cross of rude workmanship, of which there are several in the ancient cemetery. Clogher is called by Ptolemy "Rhigia" or "Regia"; and according to some authors St. Patrick founded and presided over a monastery here, which he resigned to St. Kefteun when he went to Armagh, to establish his famous abbey there; but according to others, it was built at the command of St. Patrick in the street before the royal palace of Ergal, by St. Macartin, who died in 50 , and from its vicinity to this place both the abbey and the town appear anciently to have been called Uriel or Ergal. In 841, the abbot Moran Mac Inrachty was slain by the Danes. In 1041 the church was rebuilt and dedicated to St. Macartin. In 1126 the Archdeacon Muireadhach O'Cullen was killed by the people of Fermanagh. Moelisa O'Carrol, Bishop of Clogher, in 1183, on his translation of the Archbishoprick of Armagh, presented to this abbey a priest's vestments and a mitre, and promised a pastoral staff; he also consecrated the abbey church. Bishop Michael Mac Anstair, in 1279, exchanged with the abbot the episcopal residence that had been built near the abbey by Bishop Donat O'Fidabra, between 1218 and 1227, for a piece of land outside the town, called Disert-na-cusiac, on which he erected another episcopal palace. His immediate successor, Matthew Mac Catasaid, erected a chapel over the sepulchre of St Macartin. In 1361 the plague miserably afflicted Ireland, particularly the city of Clogher, and caused the death of the Bishop. In April, 1395, while Bishop Arthur Macamaeil was employed in rebuilding the chapel of St. Macartin, the abbey, cathedral, two chapels, the episcopal residence, and 32 other houses, were destroyed by fire; but the Bishop applied himself with unwearied diligence to the rebuilding of his cathedral and palace. In 1504 another plague ravaged Clogher, and caused the death of the Bishop. Jas. I., in 1610, annexed the abbey and its revenues to the see of Clogher, by which it was made one of the richest in the kingdom. Between 1690 and 1697, Bishop Tennison repaired and beautified the episcopal palace; and his successor, Bishop St. George Ash, expended £900 in repairing and improving the palace and lands, two-thirds of which was repaid by his successor. Bishop Sterne, in 1720, laid out £3,000 in building and other improvements of the episcopal residence, £2,000 of which was charged on the revenues of the see.

The town is situated on the river Blackwater, the source of which is in the parish, and consists of one row of 90 houses, the northern side only being built upon. Some of the houses are large, handsome, and well built with hewn stone, and slated. The episcopal palace is a large and handsome edifice close to the cathedral, on the south side of the town, and consists of a centre with two wings: the entrance is in the north front by an enclosed portico, supported by lofty fluted columns . It is built throughout of hewn freestone, and standing on elevated ground commands extensive views over a richly planted undulating country. Its erection was commenced by Lord John George Beresford, Primate of Armagh, while Bishop of Clogher, and completed by Lord Robert Tottenham, the present Bishop, in 1823. Attached to the palace is a large and well-planted demesne of 566 acres, encircled by a stone wall; and within it are the remains of the royal dwelling-place of the princes of Ergallia, a lofty earthwork or fortress, protected on the west and south by a deep fosse; beyond this, to the south,, is a camp surrounded by a single fosse, and still further southward is a tumulus or cairn, encircled by a raised earthwork. The market is on Saturday; the market-house was built by Bishop Garnett. Fairs for live stock are held on the third Saturday in every month. The market was granted to the Bishop by letters patent dated April 20th, 1629; he was also authorised to appoint two friars and receive the profits of the market and fairs. The old fairs, which are supposed to have been granted by the charter, are held on May 6th and July 26th.

At the solicitation of Bishop Spottiswood, Chas. I., in 1629, directed that, "for the better civilising and strengthening of these remote parts with English and British tenants, and for the better propagation of the true religion, the Lord Lieutenant should by letters patent make the town of Clogher a corporation." This was to consist of a portreeve and 12 burgesses, to be at first nominated by the Bishop; the portreeve was afterwards to be elected on Michaelmas Day, by and from among the burgesses. No freemen were created, and the Bishops appear to have connected a burgess-ship with each of the stalls in the Cathedral. Prior to March 29th, 1800, the Bishops had nominated the Members of Parliament for the borough without opposition, and the seneschal of their manor had been the returning officer; but at that time the Irish House of Commons resolved that the limits of the borough were co-extensive with the manor, and as the freeholders of the manor had tendered their votes in favour of two candidates, they were declared by the Irish Parliament to be duly elected, and the Bishop's nominees were unseated. At the union, the £15,000 granted as compensation for abolishing the elective franchise was claimed by the Bishop, the Dean and Chapter, and Prebendaries of the Cathedral, and the Rev. Hugh Nevan, seneschal of the manor; but their claim was disallowed and the money paid to the Board of First Fruits.

(To be Continued.)

THE HARVEST MOON.

White as an ivory shield in a rosy sky,
The harvest moon
Passes with noiseless footsteps, and is gone by.

An owl, upon mousing bent, with a doleful cry
Hovers and is forgot, as at height of noon
The night is forgot when we see Fear eye to eye.

A stoat slinks round where the rustling reeds stand high,
The wind in the reeds awakens a lonely tune,
And into our dreams the eyes of the cold stars pry.

The face of the world is changed as when Death draws nigh
The faces of men are changed; there stands in the sky
The harvest moon.

—Nora Chesson.

STORIES OF FLOWERS.

God not only gave to men the necessaries of life, but he lavished all that would please the eye and delight the taste, and we find flowers over all the earth—in the valleys, and high up on the mountains. Speaking of the beauty of the lilies, our Lord said that Solomon in his glory was not clothed like one of them; and men in all ages, appreciating this great gift of God, have mingled the flowers with their joys and their sorrows.

There is a great variety of wild flowers, but not till our day have the garden flowers been so cultivated and so multiplied. It is said that the Japanese are the oldest gardeners; they have two feasts of flowers during the year. In the spring everyone is seen carrying branches of double cherry blossoms, which bear no fruit; and in the fall is the feast of chrysanthemums. The Japanese women are taught by a regular professor how to arrange flowers, and their rooms are hung each month with hangings to match the flowers then in bloom.

The ancients did not know many flowers. In the middle ages the learned Albert the Great, after speaking of medicinal and aromatic plants, mentions only the rose, the lily, the violet, and the ancholia. Later we find the gillyflower, and, in the fifteenth century, the pink made its appearance. The rose seems to have been always a favourite. Charlemagne ordered it to be cultivated on his farms. By an old law a wreath of roses was the only dower a young girl could claim from her parents.

Upon the discovery of America a great number of flowers were imported into Europe. The tulip for a time played an important part. The first one made its appearance in Germany in 1559, but it was in Holland that there was a real craze for it. Exorbitant prices were paid for vari-coloured ones, and one man even gave a castle in exchange for certain valuable bulbs.

THE ANCIENT AND PRESENT STATE OF THE COUNTY AND CITY OF CORK.

Containing a Natural, Civil, Ecclesiastical, Historical, and Topographical Description thereof.

By CHARLES SMITH, M.D.

Æquum est enim meminisse & me, qui discerem hominem esse, et vos, qui Judicetis ut fi probabilia dicentur, nihil ultra requiratis.
Cicero Univers.

In Two Volumes.
VOL I.
The Second Edition, with Additions.

BOOK II.

Containing the Topographical Description of this County, including the City of Cork.

CHAP. I.

A Topographical Description of the Towns, Villages, Churches, Seats, &c., in the Baronies of Imokilly and Kilnatalloon, with the Town of Youghal.

In describing this county, I shall begin with the eastern extremity, the barony of Imokilly (1), a pleasant, fertile tract, neither encumbered with mountains, nor entirely a level, but for the greatest part consisting of two fair valleys, one extending from Cork harbour to the sea, the other running parallel to it, being a pleasant vale, extending from Middletown to Youghal. These valleys are divided by rising grounds, no less fruitful than the plains below them, affording in many places several pleasing landscapes of the seats, improvements, and plantations in the lower grounds, and several vistas between the hills, terminated by the ocean, the harbours of Cork and Youghal, and the high mountains of Tipperary and Waterford. The valleys abound with limestone, useful to the husbandman for manure, and to the architect for building; not only making excellent lime, but it is, in several places, of so close a texture, and stained with such an agreeable mixture of colours, as grey, dove-colour, white, chocolate, &c., that, when properly manufactured, few marbles are more beautiful.. This barony is terminated on the W. by Cork harbour, on the S. by the sea, having its whole length embellished with creeks, bays, and fine strands; the eastern side is washed by the Blackwater and Youghal Bay; and a range of hills divide it, on the north, from the baronies of Kilnatalloon and Barrymore. Thus, having a proper soil for tillage, and such an easy convenience of manures and water-carriage, it is properly the granary of the city of Cork; for, besides supplying its inhabitants with corn, it furnishes them with fish and flesh, and, in particular, with as fine fatted veals as any in this kingdom.

I have already taken notice of its being anciently inhabited by a people, called, by Ptolmey, the Vodii, which signifies persons inhabiting a woody territory, and is also the literal meaning of the Irish word Imokilly. The town of Youghal, formerly Ochill, had also the same derivation. From whence one may more than conjecture, that this tract, even down to the very sea, was anciently a forest.

Whoever the first persons were that visited this coast, either the Phœnicians or ancient Britons, they seem to have named it from the appearance it made as they sailed by it; which was not very unlike the picture drawn by Virgil, in the 7th Æn. If we may resemble the Tiber to our Blackwater river:

Atque hic Æneas ingentem ex æquore lucum
Prospicit: hunc inter fluvio Tiberinus amæno
Vorticibus rapidis, and multa flavus arena
In mare prorumpit: variæ circumque supraque
Assuetæ ripis volueres, et fluminis alveo,
Æthera mulcebant cantu locoque volabant.
Flectere iter sociis, terræque advertere proras
Imperat; and lætus fluvio succedit opaco.

The Trojan from the main beheld a wood,
Which thick with shades and a brown horror, stood:
Betwixt the trees, the Tiber took his course,
With whirlpools dimpled; and with downward force
That drove the sand along, he took his way
And roll'd his yellow billows to the sea.
About him and above, and round the wood
The birds that haunt the borders of his flood;
That bath'd within or bask'd upon his side,
To tuneful songs their narrow throats apply'd.
The captain gives command, the joyful train
Glide through the gloomy shade, and leave the main.

—Dryden.

The large extended strand of Youghal, as far as the lowest ebbs uncover it, and probably much farther, is no other than a common turf bog, covered over with sand and pebbles; from whence not only good turf is dug every season, but also great quantities of timber trees, as fir, hazel, &c., are found (2). Some years ago, a skeleton of a monstrous animal was discovered on this strand; I saw one of the shoulder-bones in Youghal; it is 3½ feet long, and weighs above 100 weight. The remainder of the skeleton, and (as I am informed) another of the same kind, lie still buried in the strand; but I could hear of nobody that knew the very spot they were buried in. When they were first discovered, it happened to be a very low ebb; but the sea soon flowing over the place, covered it up with sand and gravel, so that it could not be again readily found. These bones lay in a turfy soil, not far from the surface. They undoubtedly belonged to some fish of the cetacious kind, which seems the more probable from their being thick, short, and ponderous; and not to an elephant or land animal, as was conjectured by those who discovered them. About eighteen years ago, this strand was entirely divested of all its sand and gravel, and, being left quite bare by violent high winds, great quantities of roots of various trees then lay exposed to view. The sea has greatly encroached on this part of the coast, and is likely to gain more ground, as the land within the strand lies low and flat. At the entrance of the harbour of Youghal may be seen the remains of the foundation of a mill standing on a rock, which shows that the ocean has greatly exceeded its limits on this shore. A considerable tract of ground was lately banked in, by a vast buttress, built of very large stones, at the charge of the Earl of Burlington, whose estate it is; but the sea being very tempestuous hereabouts, especially with S.W. winds in winter time, no mound that art can form seems to be capable of resisting its fury. Near Ring-Point, several large horns were dug up in this strand(which belonged to the moose deer) by Mr. Hayman, near Youghal. This strand, to the land, is terminated by a large, extended bog, which was continued, before it was encroached upon by the ocean, a great way beyond the lowest ebb.

Clay Castle, on this strand, is a very bold, sudden rising ground, or rather a small promontory, composed of a loose, sandy clay, which has also been encroached upon by the sea very considerably within these few years. This hill stands about a mile S.W. from the town of Youghal, and affords a very entertaining scene to the curious naturalist; for the pieces of the bank, which break off and are washed down by the sea, are, by degrees, petrified into a very hard, firm grit, as solid as any stone. This grit, which is a species of freestone, is composed of a mixture of fine sand, and a yellow loam or clay, tempered by the sea water, which beats against the hill. I have taken up several pieces, half clay, half stone, and the sand adhering thereto. The hill seems perfectly dry, nor is there any spring in which this petrifying quality can reside; but whatever it be, it seems to exist entirely in the clay (3).

(1) It contains 24 parishes viz. Killeigh, Clonpriest, Kilmacdonough, Ardagh, part of Dungourny, Dungardonovan, Garrivoe, Boghlane, Kilcredan, Ichtermurragh, Ballyouterough, Mogeely, Ballynacorra, Inchenbaky, Inchy, Corkbeg, Aghada Garrane, Cloyne, Ballintemple, Kilmaghin, Titeskin, Rostillian, and Chore-abbey. In it are 200 plowlands, and 49,479 Irish plantation acres.

(2) Mr Charles Merret in the philos. trans. N. 223. p. 343, says that in Lincolnshire, they dig great roots of trees out of the sands at low water, near a mile from the shore, which he takes to belong to fir; the bark smelling aromatic like that wood.

(3) The same kind of petrification has been observed at Harwich, in England, where the washing of the cliffs discovers a bluish clay which tumbling down, in a short time turns into stone: there some pieces may be seen that are new fallen, as soft as the clay in the cliff; others, that have lain longer, crusted over and hard, but if opened and broke, the clay still soft in the middle; others, that have lain there longer petrified to the heart, and with those the walls of the town were, for the most part, built, and the streets

Wood and several other things dawbed over with this clay are also petrified on the spot. An ingenious gentleman sent me an account that he had a formed stone resembling a petrified mushroom, which was found on this strand. At the extreme point of Ring, which terminates this shore to the S.W. is a most extensive point of view from which may be seen a great part of Youghal bay, and the coast as far as to Ardmore-head, in the county of Waterford; as also Ballycotton bay and island. The rocks which terminates this barony towards the sea are partly limestone; and others are of a slaty kind, some of which prove very good slates.

Youghal is the most considerable town in this bareny; it is called by foreigners, Jokile and Youkelain; in Latin, Ochella. The liberties of this town contained 5,120 Irish plantation acres. They are now taxed in common with the barony of Imokilly. It was incorporated (4) by King Edward the 1Vth, in the second year of his reign, by the interest of Thomas, the great Earl of Desmond, who, the following year, 1463, was made Lord Deputy of Ireland. This family had, formerly, a great interest in this town; for they not only erected the collegiate house, but also founded two religious houses adjoining to it. King Richard III., in the second year of his reign, granted several privileges to this corporation, as did also King Henry VII., Queen Elizabeth, and King James, for the reparation of their walls and other public places.

The religious houses founded in this town were two, one at the north and the other at the south end of the town. That on the N. was founded, an. 1628, by Thomas Fitz-Maurice Fitz-Gerald, for friars preachers, who, according to friar Clin (in his annals), seated themselves here on the 5th of the cal. of August, 1271. This house, upon the dissolution, was granted first to William Welsh, afterwards to John Thickpenny, for a term of years, and then to Sir Walter Raleigh (5), in fee farm, who sold it to the Earl of Cork.

The fourth abbey was founded by Maurice Fitz-Gerald, in the year 1231; or, according to Hollingshead, in 1229; and was, in 1460, reformed to observant friars, being before that time conventuals of the Franciscan Order. The occasion of its establishment is said to be thus. This Maurice was building a castle in the town, and while they were at work about the foundation, the workmen, on the eve of some festival, came and begged a piece of money from him to drink his health. The Earl ordered his eldest son to give it; but he, instead of obeying his father's directions, abused the workmen, which his father was so concerned at that, instead of carrying on the castle, he erected a house of grey friars, took upon himself the habit, and died here in the 80th year of his age, ann. 1256 (6). This house, according to Ware, was the first Franciscan friary in Ireland. Wadding says that several religious men were interred here (7).

The church was rebuilt and beautified by Thomas, Earl of Desmond, soon after the erection of the college. It is a large Gothic structure, the nave being about 45 yards long and 22 broad, adorned on each side with six Gothic arches. The chancel has been for some years uncovered, the east window of which is very fine, being in the ancient Gothic taste. On the N. side of the church stands a square tower, about 50 feet high. On the N. side of the chancel window is a very old tomb, without date; there are two ruined chapels on each side of this chancel, and another W. of the church.

On an ancient monument, in the N. chapel, is this inscription:

D. O. M.
Domino Petro Miagh.
Civi Consuli Prætori Yocholensi Justitiæ
Cultori pietatis amatori publicæ utilitatis zelatori.
Marito suo unice dilecto uxor Philisia Nagle
Mæsta posuit sumptibus viri Petra tegit Petri cineres.
Animam Petra Christi, sic tibi divisit utraque Petra Petrum.
Vixit An. XLIII. vita functus VIII. Cal. August. MDCXXXIII.

(To be Continued.)

generally paved. Taylor's hist. and antiq. of Harwich, enlarged by Dale, p. 101, 102.

Allen in his nat. hist. of chalybeat and purging waters, p. 106 refers the production of those stones to a vitrolic juice in conjunction with the loam, because the common copperas stones are plentifully found on Harwich coast. Where the cliff was gravelly, these stones lay very thick, as well as where it was loamy.

Taylor adds, p. 104, "That the water which distills from under the cliff, petrifies wood as well as clay; and says, a large piece, sent from thence, is reserved in the repository of the royal society."

Upon the river Done, near Aberdeen, in Scotland, doctor George Gordon informs us that a little below the bridge near the river's mouth, there is a bank, the face of which is broken down, and it is full of stones, which one would think were in fieri; they are all rather round and oval, of different sizes, the faces of most of them are broken off, they are soft and will easily rub down with the hand, they are of different grits and colours and are made of different sands and clays, mingled together. The clay is soft, both to the hand and taste, in some places white and in others gray though in some places the sand and clay are hardened to the consistence and colour of such oval stones as we usually see in the fields; but where they are at the softest, the bed that each stone lies in is always hard and of another grit and colour. Philos. Transact. (N. 176, page 157.

The above petrification of Clay Castle, in many respects agrees with that of Harwich cliff, except that there are nether copperas stones found on the strand, nor are there any springs issuing out of the cliff so that the cause of those petrifications seems as yet to be quite in the dark.

(4) This town was then incorporated, and governed by a provost and burgesses, who had a grant of the custom, called cocquet, for the reparation of their walls, etc. An account of which custom was to be yearly rendered to the two burgesses and not to the king's exchequer. The town was to be one of the petty limbs of the cinque ports of Ireland and to enjoy all the liberties of any one of the king's cinque ports of Ireland. From the exemplification.

(5) By patent, dated Dublin, 3d Feb. ann. Eliz. 29th with their seigniories and a half of land, forfeited by the earl of Desmond. This priory was granted at the rent of £12 19s 6d sterl., payable at Easter and Michaelmas, with a proviso, that the act passed at Limerick, anno 33, Henry VIII for lands given by the king, shall not be prejudicial to this patent.

Signed A St. Leger. MS. at Lismore.

(6) Some place the death of this Maurice, a year before, and others later. He is said to be a very valiant knight a pleasant man, and inferior to none in the kingdom, having lived all his life with commendation; but was suspected to have a hand in the death of the earl marshal Richard, with Robert de Burgo, and others.—Cambden's Ann.

(7) This south abbey was granted by letters patent, to George Isham, dated June 16, ann. 39 of Eliz with 10 acres of ground, together with St Ann's chapel, and one acre near the same, with the town and villages of Rathnolan.

I find another grant of this house, by letters patent dated at Dublin, 13 Sept. primo Jacob I. to sir James Fullerton, knt. muster-master general, clerk of the cheque, and one of the privy council together with the chapel of St Anne, and a park, called John Mahowny's park, at £12 sterl. He sold his title in this house, and the abbey of Molana to sir Richard Boyle, knt, for the sum of £219 6s 8d Irish.

Anno 1630, this town contributed, quarterly, towards the maintenance of the army the sum of £27 sterl., of which the earl of Cork's tenants paid only £3 13s, his being privileged lands. The N. and S. abbeys, as well as the college lands being exempted from taxes, or quartering soldiers.

MS. at Lismore.

PRINTING FOR THE BLIND.

Mr. J. W. M'Laren, Edinburgh, has patented an invention which will, he says revolutionise the printing of blind books "in a manner comparable only to the difference between the printing of Caxton's Press and the speedy printing of the present day." By this invention the present laborious and costly punching of brass plates is entirely superseded. Mistakes in setting and author's corrections can be effected in an instant, a matter impossible in the older system. The printing, too, is more regular. The most important result claimed for the invention, however, is that the speed of printing is more than fifteen hundred times accelerated by this method. "For every perfected sheet turned out by the older method," Mr. M'Laren says, "my invention will turn out 1,500 copies, and this with an infinitely more regular result." A sheet of blind printing accompanies the circular sent by the inventor. He tells us it was worked from the machine at the speed of 2,000 copies per hour, and that thirty-two pages or more of similar size, and at the same speed, can be printed at one impression. The number of blind persons in Great Britain and Ireland is between thirty and forty thousand, and is has been suggested that a weekly newspaper of twenty pages might be published at a cost within the reach of all, to be circulated over the whole of the British Isles, and to be followed, should it prove a success, by a daily paper.

AMERICA'S FASTEST BATTLESHIP.

For the first time in its history the American Navy possesses a battleship with a speed of 18 knots and over. This distinction belongs to the new "Maine," which, on August 23, was sent over the Cape Ann course for her official speed trials. The contract calls for a speed of 18 knots an hour on a run of four continuous hours. The lowest speed on any stretch of the trial was on a 6-mile leg on which she averaged only 17.35 knots an hour, while the fastest stretch was made at a speed of 18.9 knots. The result was that the mean speed developed, disregarding tidal allowances, was announced as 18.3 knots an hour. These figures, however, were made by the builders of the boat, and are subject to correction when the official results are made known. Although the "Maine" has slightly exceeded her contract speed, the result for an American warship was rather disappointing, for the reason that their battleships have been accustomed to exceed their contract trial speeds by a knot or more when steaming over the Cape Ann trial course. Thus, the "Oregon" made 16.8 knots an hour, or 1.8 knots more than the contract speed; the "Iowa" showed an advance of 1.1. knot, and the vessels of the "Alabama" class are 1.1½ knots faster than their trial requirements. On the other hand, the trial of the "Maine," unlike those of some of her predecessors, was carried out under normal conditions as regards coal and stokers, and, therefore, the speed achieved is more likely to be maintained when this vessel is in regular service than that of vessels whose trials were run under abnormal conditions.

LITERARY NOTES.

There is probably no living Frenchman who has so wide and profound an acquaintance with English literature and English history as M. J. J. Jusserand, who has just been appointed French Ambassador at Washington in succession to M. Cambon. Perhaps his most important work is his "Literary History of the English People," which is to be completed in three volumes. A translation of the first volume has been published by Mr. T. Fisher Unwin, and the second volume is nearing completion.

✧ ✧ ✧

Leeds has been called the City of Libraries, and it would appear, from the thirty-second annual report just issued, that it deserves the honourable appellation. In addition to its fine Central Libraries, with 65,317 volumes for reference and 43,150 in the lending department, it has nine day branch libraries and thirteen evening branch libraries, besides numerous branches for juvenile readers. The total stock of books numbers 212.396, after the withdrawal during the past four years of 32,000 worn out or otherwise unserviceable volumes. The total issue for last year was 988,710 volumes, and the attendances in the news rooms 1,662,000.

✧ ✧ ✧

Each of the "Just-So-Stories" has an accompanying set of verses. To "How the Camel Got His Hump, the following wholesome jingle is appended:—

The Camel's hump is an ugly lump
Which well you may see at the Zoo;
But uglier yet is the hump we get
From having too little to do.

We climb out of bed with a frouzly head
And a snarly-yarly voice.
We shiver and scowl and we grunt and we growl
At our bath, and our boots and our toys. . .

The cure for this ill is not to sit still,
Or frowst with a book by the fire;
But to take a large hoe and a shovel also,
And dig till you gently perspire. . . .

I get it as well as you—oo—oo—
If I haven't enough to do—oo—oo!
We all get hump—
Cameelious hump—
Kiddies and grown-ups too!

✧ ✧ ✧

It is stated that Mr. George Douglas Brown, known to the literary world as "George Douglas," the author of "The House with the Green Shutters," has left many unpublished manuscripts, including two almost completed novels, and an essay on Hamlet from a new point of view. They are left in charge of his publisher, Mr. John Macqueen, and they will shortly be put in order for publication. A very interesting and intimate account of Mr. Brown, written by his friend Mr. Andrew Melrose, will be found in the October "Bookman." Mr. Melrose corrects the story that Brown did not greatly value the novel which made his name known, and was a little surprised at its success. He was not that sort of man at all.

✧ ✧ ✧

Mr. Melrose says something about the essay on Hamlet. "As a talker," he says "Brown was the most vital of any man I ever met. When all other subjects had been exhausted there still remained Shakespeare. His exposition of Hamlet, which I hope will be given to the world soon, was in substance recited to me three years ago in a fortnight's holiday which we spent at the seaside together. Yet he had not a sheet of MS. before him. I believe this will be found one of the most strikingly original and profound expositions of Hamlet that has ever been written. It will make secure the position as a thinker which Brown by his single work might have held precariously." It appears that another visit of three weeks to Mr. Howard Spicer's home, the one literary subject talked of the whole time was Hamlet, and to Mr. Spicer, too, Mr. Brown practically recited the whole of what is now the complete exposition. Mr. Brown, we are told, was also a student of Mr. Meredith and of Balzac, and, as an Ayrshire man, had Burns by heart.

✧ ✧ ✧

Here is an extract from a letter of Charles Dickens, unearthed by the "Publishers' Circular" from its own columns forty years ago:

That is a very horrible story you tell me of. I wish to God I could get at the parental heart of ——, in which event I would so scarify it that he should writhe again. But if I were to put such a father as he into a book, all the fathers going (and especially the bad ones) would hold up their hands and protest against the monstrous caricature.

I find that a great many people (particularly those who might have sat for the character) consider Mr. Pecksniff a grotesque impossibility; and Mrs. Nickleby herself, sitting before me in a solid chair, once asked me whether I really believed there ever was such a woman.

So ——, reviewing his own case, could not believe in Jonas Chuzzlewit. "I like Oliver Twist," says ——, "for I am fond of children. But the book is unnatural; for who would think of being cruel to poor little Oliver Twist" Nevertheless, I will bear the dog in my mind, and if I can hit him between the eyes, so that he shall stagger more than you or I have done this Christmas, under the combined efforts of punch and turkey, I will."

✧ ✧ ✧

The contributor to the "Academy" continues:—Here is a list of modern authors who have made their reputations by means of short stories. In every instance the books named have, I believe, sold remuneratively. In most instances they sold prodigiously, and in most instances when the author has turned to novels his reputation has suffered a decline:—

Rudyard Kipling—"Plain Tales," etc., etc.
J. M. Barrie—"A Window in Thrums," etc.
Ian Maclaren—"Beside the Bonnie Brier Bush," etc.
Arthur Morrison—"Tales of Mean Streets."
S. R. Crockett—"The Stickit Minister."
Mary E. Wilkins—"A Far-away Melody," etc., etc.
George Egerton—"Keynotes."
Henry Harland—"Grey Roses," etc.
H. D. Lowry—"Wreckers and Methodists."
W. W. Jacobs—"Many Cargoes," etc., etc.
Murray Gilchrist—"The Stone Dragon," etc., etc.
"Zack"—"Life is Life."

This list is far from complete. And here is a list, also far from complete, of authors whose reputations, both popular and artistic, owe more than a little to their short stories:—

Thomas Hardy—"Wessex Tales," "A Group of Noble Dames." "Life's Little Ironies."
Henry James—"The Madonna of the Future," etc., etc.
Joseph Conrad—"Tales of Unrest."
Eden Phillpotts—"Down Dartmoor Way," "The Striking Hours."
H. G. Wells—"The Plattner Story," "The Stolen Bacillus," "Tales of Space and Time."
A. T. Quiller-Couch—"Noughts and Crosses," "The Delectable Duchy," "Old Fires and Profitable Ghosts."

If these lists do not prove that short stories will sell, will be appreciated, and will make popular reputations, when they are clever enough, then nothing will.

✧ ✧ ✧

Rawlinson's "Herodotus" has, for so many generations of students, been regarded as a classic, that it may come to some as a surprise that the author survived until last week. Canon Rawlinson, of Canterbury, who, together with his brother Sir Henry Rawlinson and Sir G. Wilkinson, produced this well-known book more than forty years ago died on Monday week, within a few weeks, it is said, of his ninetieth birthday. He was elected a Fellow of Exeter College, Oxford, sixty-two years ago; was Camden Professor of Ancient History in the same University forty-one years ago, and has been Canon of Canterbury for thirty years. "The Five Great Monarchies of the Ancient Eastern World" soon followed after the "Herodotus," and that was followed in turn by "The Sixth Great Oriental Monarchy, or the Geography, History, and Antiquities of Parthia," "The Seventh Great Oriental Monarchy, or New Persian Empire," and a "History of Ancient Egypt." Just 20 years after his first history of Parthia, he contributed the volume on Parthia to the popular series of "The Story of the Nations." Canon Rawlinson was also an industrious contributor to Smith's "History of the Bible," "The Encyclopaedia Britannica," "The Speaker's Commentary," and many other similar undertakings.

✧ ✧ ✧

The 'mistakes of authors" provide a perennial fund of entertainment. A correspondent of the "Daily News" informs us that "Victor Hugo, in his 'Travailleurs de la Mer,' alluded to the Firth of Forth as the 'Premier de Forth,' having confused the word 'Firth' with 'first.'" Victor Hugo's real blunder (says the "Manchester Guardian") is more complicated than that. In part II., book 1, chap. 5, of that wonderful epic of man's contest with the primitive forces of nature Hugo writes on "the secret collaboration of the elements." Among the instances of terrible cataclysms which he there accumulates, he mentions that 'at the moment when we write these lines (1864-5) an equinoctial gale has just demolished, on the frontier of England and Scotland, the cliff Premiere des Quatre, First of the Forth." It is fairly clear that he not only made a bad shot at the meaning of the Firth of Forth, misled by a false phonetic analogy, but was also under the impression that the Firth was a rock—perhaps the Bass.

✧ ✧ ✧

The most interesting errors of authors are those which do not appear in the books of reference. Among these one may place that of a minor historical novelist who lately made his mediaeval hero draw his trusty horn-book from his pocket in order to jot down a few memoranda. As bad a slip was made by Macaulay when he spoke of those readers who, few and weary, are "in at the death of the Blatant Beast." It is curious that the critics who above all others loved to reprove the unfortunate author who blundered in fact should himself more than once have shown how easy it is to blunder on a gigantic scale. We all remember Sir George Trevelyan's humorous account of Macaulay's agony when he opened the "Edinburgh Review" and discovered that, by a slip of the pen, he had declared that it would be unfair to estimate Goldsmith's powers by such a mere "pot-boiler" as "The Vicar of Wakefield." His horror at having to "pose before the world for three mortal months in the character of a critic who thought 'The Vicar of Wakefield' a bad book" was so great that he wanted Napier to publish a special edition of the 'Review" to put him right, although he had finally to be content with a prominent entry in the next number's list of errata. In spite of such a warning, Macaulay took delight in pointing out the blunders into which "poor dear Goldy" fell when he tried to write history, natural or civil. His "Animated Nature" simply swarms with "all the most absurd lies which he could find in books of travel about gigantic Patagonians, monkeys that preach sermons, and nightingales that repeat long conversations."

✧ ✧ ✧

It must be confessed that, to a taste less severe than Macaulay's, the "lies" in question do, as Bacon thought they might, "ever add pleasure." Goldsmith's work, though hardly to be commended to the young naturalist in search of guidance, is much more readable than the "Cambridge Natural History." It must be remembered that the scientific conscience was hardly awake in his day. Even the sturdy moralist Johnson allowed that there was no reason why the author of such a book as the "Animated Nature" should take pains to test the accuracy of his statements. If he once began to make experiments, thought the doctor, life would be too short for him to get his book written. Goldsmith was always ready to take advice which shortened his toil.

SCIENTIFIC TOPICS.

The first Pacific third rail system was opened in August. The road extends between Riverside and Van Asselt, California, for a distance of about six miles. Throughout the trial spin a speed of fifty miles an hour was made.

✧ ✧ ✧

The island of Guam was recently visited by many earthquakes. Some of the shocks were violent; indeed, so violent that the Government buildings have been badly damaged. A tidal wave destroyed a large part of the crops and caused much suffering among the islanders. Commander Seaton Schroeder has telegraphed that the total damage amounted to 45,000 dollars to Government property.

✧ ✧ ✧

In order to encourage the study of science among women, the American Association for Promoting Scientific Research Among Women has offered two prizes of 1,000 dollars each for the best papers prepared by women One is for the best work based on independent laboratory research in biological, chemical, or physical science, and the other on any scientific study. The chairman of the prize committee is Miss Ellen H. Richards. of the Massachusetts Institute of Technology, Boston.

✧ ✧ ✧

The United States Coast and Geodetic Survey has published a very handsome and serviceable map showing the lines of equal magnetic declination and of equal annual change in the United States for 1902. The lines of equal magnetic declination or isogonic lines are given for every degree, and are based on a new observation up to July 1, 1902. The lines of equal annual change of the magnetic declination pass through all the lines where the annual change is of the same amount.

✧ ✧ ✧

A woful cry is going up from the representatives of all the ologies, and one hears nothing but a doleful wail about shrinking incomes and curtailing of operations. Take the Palestine exploration fund, for example. Here the secretary laments a decrease of the society's income by nearly one-third within the past three or four years, and he attributes this in a great part to the war, the absence of so many of the most influential and wealthy officers, and the corresponding anxiety of their families.

✧ ✧ ✧

An experimental four-hundred feet drop of the Philadelphia City Hall tower elevator recently proved that the safety air cushion device installed will probably prevent any serious accident. Within the short distance of 84 feet the speed of the car was reduced from 2½ miles a minute to zero. In the car were placed eggs, delicate incandescent light bulbs, and rats. When the car reached the bottom most of the eggs were in found in good condition, the incandescent light bulbs were intact, and the rats alive and well. The trip was made directly under the Penn statue, 372 feet 9 inches above the bottom of the shaft. The particular safety device used is the Ellithorpe safety air cushion.

✧ ✧ ✧

The French Naval Department is constructing a new type of submarine boat, the invention of Lieut. Boulin, commander of the submarine "Triton." This craft is entirely different in its general design from all existing submarine war vessels, inasmuch as it is practically a submersible armourclad. The boat, which is of much greater dimensions than the present submarines, resembles a small cruiser, is propelled exclusively by steam power, and is replete with powerful quick-firing guns. When submerged it is not entirely obscured beneath the water, but the upper portion of its funnel is shown above water, and this, being painted grey, is visible only at short distances. To attack, the boat emerges from the water, launches its torpedo, discharges its guns, and again descends into the water, leaving only its funnel to be fired at, the water forming an excellent protection to the hull, which is built of chrome steel. This vessel is to be constructed at Cherbourg, and will cost £80,000.

✧ ✧ ✧

An attempt is being made in England to revise the standard of weights for commercial purposes. The suggestion is to create new weights of 50 pounds, 25 pounds, or 20 pounds, 10 pounds, and 5 pounds avoirdupois, respectively, to run concurrently with the hundredweight series of weights. The corn, cotton, and tobacco trades have adopted the cental system, but it is necessary to make up the cental to use the 56-pound, the 28-pound, the 14-pound, and the 21-pound weight. If two sets of weights are used, one based on the hundredweight and the other on the cental, confusion can be avoided by making the new weights, or otherwise plainly distinguishing between the two series of weights. This new system is averred to be imperative in order to accelerate and make British trade easier than it is with the antiquated system of hundredweights, quarters, and pounds. The proposal is being enthusiastically supported, and there seems every possibility of its coming into vogue.

✧ ✧ ✧

The many accidents recently from fast speeding in France have caused Mons. E. Hospitalier to give, in "La Locomotion," some interesting facts as to the inertia of a 2,000-pound automobile travelling at the rate of 75 miles an hour, and the braking power required to stop it. Calculation shows the inertia of the vehicle to be no less than 60.000 kilogramme-meters, or the same that it would have if it fell a distance of 196 feet, the height of the towers of Notre Dame Cathedral. This energy is equivalent to that of a complete train on the Paris underground railway, travelling at its highest speed of 21¼ miles an hour. When a brake is applied capable of a resisting effort of 551 pounds per ton at the rim of the wheels, the retarding power of this brake is, during the first instants, equivalent to 113 horse power. The mean power developed by the brakes while they are applied reaches nearly 60 horse power. And all this terrific strain is transmitted through the frail pneumatic! The wonder is that the tyres stand up as well as they do, and that accidents caused by their bursting are, comparatively, so few and far between

✧ ✧ ✧

The first results of the experiments made by Dr. Woodbury, for the purpose of ascertaining the bacteriological condition of the air of eNw York city, have been given to the public. At various points, selected to give strong contrasts, gelatine-coated plates were exposed for one-half hour at curb level and six feet above the curb. The micro-organisms thus collected were transferred to the usual culture medium and allowed to propagate. Exactly what the germ colonies contain has not been definitely ascertained; that they carry enormous numbers of disease germs goes without saying. But it has at least been established that the air near the curb level is much more heavily laden with what is grimly called "rich bacterial flora" than that six feet or more above the sidewalk. It is, therefore, evident that unclean streets are most unsafe playgrounds for children. A plate exposed for one half-hour in clean, residential streets with well-swept asphalt pavements, shows five isolated pinhead colonies after an enlagement of 700 diameters; whilst one exposed for the same length of time under precisely the same conditions of hour and weather, in an East Side street flanked with crowded tenements—from the windows of which tons of refuse are daily thrown—shows nearly 10,000 colonies, some as large as a thumbnail.

✧ ✧ ✧

While roads in the United States have been treated with crude oil to lay the dust and render them compact, in Italy the same end has been attained by using gas tar, and the experiments which have been made seem to be quite successful. Mr. G. Rimini, the district engineer at Lugo, near Ravenna, has published an account of the application of gas tar to some sections of the public road in that locality. He uses it in two different places on the provincial route near Lugo, where the circulation is very active. The first portion treated measures 40 feet long and 10 feet wide, and the second 750 feet long and 13 feet wide. In spite of the prolonged dryness, the results of this treatment have exceeded the expectations, and the surface of the road has become very hard and compact, so that it is difficult to pierce it. There is no dust, and the rainwater flows off without penetrating, and thus there is no mud formed. The colour of the soil become that of a very dark sand. It is not necessary to treat the whole surface of the road, but only a band in the middle about 12 feet wide. As to the cost of the treatment it is estimated at only £19 4s. per mile. M. Rimini is making observations of the two sections thus treated before applying it on a larger scale.

✧ ✧ ✧

The straits to which New York city was put by reason of the coal strike gave birth to a most curious occupation. When coal began selling at 10 dollars a ton a Bridgeport wrecking company decided that it was about time to begin the work of mining Long Island Sound. According to the "New York Tribune," the method of water mining is quite simple. The wreck of a coal barge is first located by means of the Lake submarine boat. Two boats—"wreck-finders," as they are called—are run out to the territory where the coal wrecks are supposed to be. In each boat about a mile of inch rope is contained. As the boats run alongside each other the ends of the ropes of each boat are spliced, making a continuous rope two miles long, and thereby lashing the two boats together. The wreck-finders then travel in opposite directions for about half a mile, and thereupon run parallel to each other. The rope is paid out through a ring in the end of an iron pole projecting over the stern. After sufficient rope has been reeled off, two 300-pound weights are run down the rope from the sterns of each boat. Rapidly sinking to the bottom, these weights hold the rope a short distance from the ground, so that it forms a sweep half a mile long, and is bound to catch anything that may come in its way.

✧ ✧ ✧

When the sweep rope catches the boats are stopped, the drums reversed, and the rope wound up. The boats travel towards each other until they are almost over the point where the sweep rope is caught. A sounding is taken, and the lead carefully examined for traces of coal. Sometimes the lead tells nothing. A harpoon is then sent down the rope. If it sticks there is wood to be found far down in the water. If the harpoon is pulled up with its end blunted, iron or rock may be expected. A diver is now sent down to explore the find. He estimates the quantity and quality of the coal discovered, and decides whether it should be taken out by buckets or by suction pump. Sometimes the diver fastens a floating buoy to the wreck, and the sweep boats proceed on their way, looking for more coal cargoes that have sunk. Now comes the turn of the lighters. By means of derricks or suction pumps the coal is raised to the surface. Not infrequently a coal wreck is found where the lighter can be worked full of coal in half a day. Indeed, a wreck that will not fill the hold of the lighter in a day is not considered much of a find. A hundred tons of coal recovered in this way is deemed a fair day's work. When it is considered that a number of coal barges are sunk during every heavy storm on Long Island Sound, it will be readily seen that the business is profitable even in times when there is no coal famine.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

DUBLIN, SATURDAY, JUNE 30.

A new branch of manufacture is now rising in this kingdom, and promises to be brought to the highest perfection under the encouragement of the Linen Board; this is the making and finishing threads in imitation of Dutch threads, fully white. By this means the large sums formerly sent to Holland for such threads will be saved to the kingdom, and many of our own poor employed in so very useful a manufacture; particularly beneficial, as it will tend to have all our Bone-lace made at home, and rendered fashionable, by coming at a cheaper rate than that imported from the Austrian Netherlands, French Flanders, Valenciennes, Dieppe, Havre, and Honfleur, which in former times was a most expensive import to this kingdom, it being customary for bridegrooms of opulence to wear on the wedding night about £300 worth of lace on his cap, which next morning was the perquisite of the bride.

WEDNESDAY, JULY 4, 1787.

The Company of Undertakers of the Grand Canal, it is said, have in contemplation before they begin the prosecution of their North West line, to make a cut of communication between their present navigation and the River Boyne; a work that must eventually prove of the utmost utility, as it will add a communication with the interior parts of the counties of Meath and Westmeath, to the extensive one this navigation has already effected.

The expected collater communication of the River Boyne with the Grand Canal, will be attended with this particular conveniency (independent of the advantages resulting from a more extended communication with the country parts), that there will be no want of water in the navigation, even after a long series of dry weather, which very possibly might be experienced before the junction with the Shannon may be effected, and which, indeed, has been already the case. We may, however, anticipate that in time the far greater part of the kingdom will be connected with ramifications and cuts from the several navigable rivers, by which they will be united, and all of them have an inlet to the Grand Canal by their being thus joined to each other.

As a circumstance that has given rise to much political speculation, we must mention that houses of rendezvous have been opened on George's quay for the reception of sailors. In time of profound peace this is a circumstance rather unusual. It is only meant to raise about an hundred, that are wanted to man some of his Majesty's ships.

Mr. Cardiff has laid down the keel of a ship of 350 tons burthen, which, when completed, will be undoubtedly the largest vessel ever built in Dublin. It is thought she will not be long building, as Mr. Cardiff has a large supply of seasoned timber in his yards.

As the present warm weather may be productive of many diseases, particularly the malignant, putrid, and inflammatory kind, in this populous city, an eminent member of the healing faculty advises the following regimen of general diet—viz., to avoid all excess in eating, drinking, or exercise, to dine about the cool of the day on cold roast meats with salad and vinegar, which greatly resists putrefaction, and may be plentifully used; strong punch, or heady malt liquors should be drank very seldom, and in small quantities; to avoid the night dew and evening damps, which, instead of refreshing, corrupt the blood, and prepare the body to receive every infection that offers. These easy rules are the most likely, under God, to promote and continue health, in the warmest or most uncertain weather.

The new officers called Inspectors of the turnpike roads throughout the kingdom, have entered on their employments, which were to commence the 24th of June.

REWARDS FOR KILLING VERMIN.

For an otter, 5s; for a weasel, 1s; for a cormorant or kite, 6d; for a scalcrow, or magpie, 3; for a rat, 1d. The heads to be produced, and an affidavit to be made before two magistrates.

PENALTIES OF THE LAW AGAINST STEALING DOGS.

Stealing any dog, or harbouring him, knowing him to be stolen, for the first offence, 10s or one month's imprisonment; for the second offence, 20s or three months' imprisonment; for the third offence, six months' imprisonment; poisoning or destroying any person's dog, three months' imprisonment.

THURSDAY, JULY 5.

The turnkey of the New Prison having received information that the young man, who is charged with stealing or selling a great number of sheep, the property of the Right Hon. the Secretary of State, intended to effect his escape in woman's clothes, he in consequence loaded him with irons to prevent any further attempt of that kind—he has an effeminate appearnce and a pale, smooth face, which no doubt would have been very favourable to his design.

It is a singularity in the will of Admiral Moore, who died a few days ago, near the Blackrock, that he ordered his body to be buried at low-water mark. He was a man of opulence, and so attached had he been to a marine character, that from the turret of his garden the naval flags of England were always been flying, and in particular a flag for Sunday. The influence of his friends should be exerted to rescue his remains from the various revolution of the tides, and deposit them in peace on the better security of terra firma.

Some time since a large quantity of turf was brought to the Canal stores, and left at the doors of all buyers at 1s 10d a kish, estimated at 500 pounds weight. This is evidently cheaper than coals, as a bag generally sold at that price only weighs 128 pounds. Notwithstanding the difference of duration and bitumen in the quality of both, it is very evident that the advantage, for convenience and profit, lies in favour of the turf, particularly as the green bog of Clashabawn is not more than eighteen miles from Dublin, the quality rich in fuel, and of an extent that cannot easily be exhausted.

It has been wondered at why the Canal Debentures are about to be lowered from six to five per cent, but the wonder must cease when it is known that the Canal Company is for lowering the interest on the one hundred and five thousand pounds that have been raised. If a junction can be obtained with the great rivers Shannon and Boyne, no object ever appeared in Ireland of more essential consequence.

FRIDAY, JULY 6.

Yesterday an action for assault and battery was tried in the Exchequer, before the Lord Chief Baron Yelverton and a special jury, wherein a Mr. Dwyer, late a Fencing-Master, was plaintiff, and Denis O'Brien the elder, Esq.; Denis O'Brien the younger, and Connor O'Brien, and others, were defendants. When after examining a number of witnesses on both sides, the jury withdrew, and in about twenty minutes brought in a verdict for the plaintiff, with £1,000 damages and 6d costs against the three O'Briens, and acquitted the other defendants.

Tuesday, at morning tide, one of the largest sturgeons ever remembered, came up the river of Ross, in the county of Wexford; it measured six feet seven inches from nose to tail, and was of an enormous bulk in the waist. On opening the stomach, about twenty pounds weight of different kinds of small fish were found, together with an enamelled gold ring, on which were the letters I. C., 1778.

By a comparison of the market prices throughout the principal towns of this kingdom, we find the rates of mutton and beef much the same, from 3d to 4d the pound, except in Waterford and Kilkenny, where they are averaged from 2½d to 3d, and potatoes at two-pence the stone. Butter in general at 6d the pound in coarse casks, and fresh butter from 8d to 9d. This shows that the prices in Dublin is not exhorbitant in proportion to the rest of the kingdom, and the late timely rains, with the succeeding warm weather, give a promise of a plentiful season.

Yesterday morning, at one o'clock, Mr. Justice Graham, accompanied by a troop of the Green Horse, surprised in his bed James M'Nally, of Rush, who stands charged before that Justice with treason and murder, but eluded justice a considerable time, owing to the lawless neighbourhood of Rush. He is now safe in the New Prison awaiting his trial at next Commission.

SATURDAY, JULY 7.

Yesterday evening four porters on George's quay, having engaged to unload a Danish vessel at an under-rate, a number of their companions, fired with resentment, attacked them and the ship's crew in a most wanton and outrageous manner, killed one of the sailors, cut and abused another so shockingly as to afford no hope of his recovery. A party of the police immediately took four of these desperadoes into custody, and brought them in a boat to Aston's quay; but on attempting to land them, they leaped into the water, by which one was unfortunately drowned, a second escaped, and the other two were retaken and lodged in the New Prison through the activity of Alderman Exshaw.

We hear that an excellent and abundant salt mine has lately been discovered in the county of Louth.

TUESDAY, JULY 10.

One of the persons who had been wounded in the late affray or riot on George's quay is since dead, and another of them is in a very dangerous condition. The real cause of the quarrel originated from two men out of the Liberty going, without the permission of the old standers of the respectable fraternity of porters, to the Quay to earn a livelihood for themselves and families.

On Saturday night last Mr. Thomas Finny apprehended in Green lane, Clontarf, three noted robbers, at the imminent risk of his life, having but one pistol. They had robbed Lady Southwell a few nights before, and the breeches of a poor servant in the neighbourhood was found on one of them, which he had taken from under the man's head the preceding night; they were all lodged in Kilmainham Jail. Such an act of resolution in an individual, totally unaided, deserves the thanks of the whole neighbourhood.

The houses and buildings in Blackmore yard and Turnstile alley are taken down, for the purpose of clearing the area whereon the new front to the House of Commons is to be built.

BULLOCK CASTLE.

AN OLD COUNTY DUBLIN FORTRESS.
From GROSE'S ANTIQUITIES OF IRELAND, 1791.

We are indebted to the "History of the County Dublin" (Dublin: Thom & Co., 1902), by that eminent antiquarian, Mr. Elrington Ball, for the following account of Bullock, its castle, port, and town, and the historical events connected therewith:—

The Castle of Bullock, to which a modern house has been attached, forms a conspicuous object on the road from Kingstown to Dalkey. It stands between the road and the sea, and overhangs a creek, now converted into a harbour. Mr. J. H. Parker, C.B., an eminent authority on Gothic architecture, who inspected the Castle in 1859, formed the opinion that it was a structure of the twelfth century. He says that it is built of plain and rude masonry, and that in plan it is a simple oblong. The lower storey is vaulted throughout, and the rooms in it, he thought, were probably used as a store-house. Above the vault, the Castle is divided into two unequal portions. In the larger division there are two principal rooms, one over the other, with small, round-headed windows and doorways; each of these rooms is provided with a fire-place, and there is a garderobe in a turret at one corner, and a small closet in an-

other, with a staircase between. The smaller division of the house is divided into three stories, above the vaults, probably for bedrooms; there are no fireplaces, and the windows are square-headed. The two ends of the building are higher than the centre, but, in Mr. Parker's opinion, it is all part of one design and was built together; the battlements are in the form of steps. Under one portion of the castle there is an archway, probably used to pass from one courtyard to another, and there were, when Mr. Parker made his inspection, remains of a bawn, as well as of a tower, which has since disappeared, but which stood about 100 yards from the Castle on the Dalkey side (1).

Bullock was doubtless known in times long prior to the English settlement as the site of a rocking-stone, which stood on its lands near the Castle, until the destructive hand of man removed it, at the beginning of the nineteenth century. The Castle, as we have seen, in the history of the coeval edifice at Monkstown, was built by the Cistercian Monks of the Abbey of the Blessed Virgin Mary, near Dublin, and was erected by them to protect the fishery, which rose to such great proportions under their auspices, on the portion of the lands of Carrickbrennan known as Bullock. In return for the encouragement and protection which they gave to the fishermen, the monks exacted a toll of fish from every vessel using the port, and in the fourteenth century this custom gave rise to litigation between the Abbey and the fishermen, in which the Abbey was successful. The land immediately round the Castle, as in the case of Monkstown, was retained by the monks in their own hands, and, in 1312 the enemies of the King carried off from the grange of Bullock corn and other property belonging to the Abbey. There was frequent opportunity at Bullock for the extension of the hospitality for which the Order was famous, and many a traveller, doubtless, found a resting-place within the Castle. There, probably, the boy Lord Lieutenant, Prince Thomas of Lancaster, son of Henry IV., on his arrival from England in the chilly month of November in the year 1401, partook of refreshments, and there Henry VIII.'s Solicitor-General for Ireland, Walter Cowley, spent a night on his arrival from London, in March, 1539, with money of the State in his charge (2).

At the time of the dissolution of St. Mary's Abbey there were on the lands of Bullock, a portion of which was covered with firs and underwood, besides the Castle, two houses and six cottages. The town appears to have been strongly guarded with walls, into which at least one tower was built, and to have contained a church. Two tenants, Patrick Bermingham and John Gaban, were in occupation, and the tithes, which were payable in fish, were leased to Richard Edwards. After the suppression of the Abbey, the Castle and its lands were leased by the Crown in 1542, in consideration of the surrender of Powerscourt and other neighbouring lands, to Peter Talbot, of Fassaroe, near Bray. Thirteen years later, on St. Andrew's Day 1555, Talbot met a violent death, possibly while protecting his property from a party of kerns, such as we find some years later waging war at Bullock against the militia; and his son being then only an infant, his possessions were for a time in the custody of his son's guardian, Christopher, twentieth Baron of Howth, known as the Blind Lord (3).

At the beginning of the seventeenth century, the town contained as many as thirty houses. The Castle was in good repair, but the tower was ruinous. The port continued to be used occasionally by other vessels besides fishing craft. In 1559 the Earl of Sussex, then Lord Deputy, landed there, and in 1633 a Dutch ship, while lying under the walls of the Castle, was taken by a privateer called "The True Love," commanded by Captain Thomas Gayner, who claimed to have letters of marque from the King of Spain—an occurrence which gave rise to international difficulty. During the sixteenth century, the Castle and the lands had been assigned by the Talbots to members of one of the great Dublin mercantile families of the day, the Fagans, whose principal residence was Feltrim, near Swords, and whose ancestors had been amongst the earliest English settlers; and we find amongst the members of the family in possession of Bullock, Christopher Fagan and his younger brother, Richard, each of whom filled the high position of Mayor of Dublin (4).

When the great rebellion broke out in October, 1641, the eldest son of Richard Fagan, Mr. John Fagan, was in occupation of the Castle, and, whether from compulsion or inclination, appears, from depositions afterwards made, to have rendered the rebels much assistance. One of the first efforts to reduce to obedience the neighbourhood of Dublin was made at Bullock, and it was the scene of cruel retaliation for the outrages which had been committed. A month after the rising, a party of soldiers under the command of Colonel Lawrence Crawford, an officer of more courage than judgment, descended on the village, and, finding that the inhabitants on their approach had put to sea, the soldiers pursued them in boats, and threw them—men, women, and children, to the number of fifty-six—overboard. All through that winter the southern part of the County Dublin remained at the mercy of the rebels. Shortly before Christmas, John Fagan came from Feltrim to his Castle of Bullock, and, according to the evidence of his servant, finding no provisions ready for him, went on to Carrickmines Castle, which belonged to his relatives, the Walshes. It was the headquarters of the rebels, and to it he sent, subsequently, from Bullock supplies of fish and a small cannon which had been on the battlements. In the following March, Carrickmines Castle was levelled with the ground, and a few weeks later another descent was made on Bullock, this time by Colonel Gibson's regiment, and some of the men found there were killed and others brought prisoners to Dublin. The Castle was then seized by the Crown, and a garrison of soldiers were maintained in it until the Commonwealth was established in Ireland. At first the garrison was in charge of Colonel Crawford, but on the cessation with the Irish he joined the army of the Parliament in England, and a Captain Richard Newcomen succeeded him. In Newcomen's time the garrison consisted of seven non-commissioned officers and sixty men, under command of himself, Lieutenant Valentine Wood, and Ensign Arthur Whithead, the weekly charge for the soldiers being £7, and for the officers £1 3s. In 1644 the defences of the Castle were strengthened by the construction of a rampart, furnished with three cannon, which were conveyed to Bullock by boat under a military escort, and the erection of a guard-house. The estimated cost of this work, which appears to have been exceeded, was £25; brick was the material used, and masons, carpenters, carters, and labourers, who were fed from the regimental canteen, were employed (5).

At the time of the Battle of Rathmines, the authorities of the Parliament had friends at Bullock, and the garrison had probably joined their forces. During the Commonwealth, Bullock, owing to the anchorage of the warships near it, was, like Dunleary, a place of importance, and soldiers, doubtless, were kept in the Castle. In 1656 Captain Richard Roe who was buried at Lusk, died there, and in 1659, Captain Abraham Aldgate, who was reprimanded for giving assistance to Edmund Ludlow, and who pleaded lack of intelligence to understand the marvellous changes of the time, fled thither on horseback from Dublin, and took refuge on his ship. The inhabitants were not left without religious consolation, and in 1658 the Rev. Nathaniel Hoyle, B.D., a Fellow of Trinity College, and afterwards a prebendary in Emly diocese, was paid £100 a year by the Parliament for acting as minister of Bullock (6).

At the time of the Restoration, Bullock was stated to be "a fair, ancient town of fishing;" its slated Castle and bawn were in good repair, the haven was accounted a safe one, and there was a population of fifteen English and ninety-five Irish, inhabiting some twenty houses. John Fagan had died shortly after the rebellion, in 1643, and had been succeeded by his grandson, Christopher Fagan. The latter had been of service to the Royalist Army in the latter years of Charles the First's reign, and, on the Restoration, was restored as an innocent Roman Catholic to all the family possessions, including the Castle and lands of Bullock, and the revenue from chief fish, tithe fish, customs, and fish and corn tithe. The Fagan family, however, did not long remain in possession, as Richard Fagan, who succeeded his father, Christopher Fagan, on his death in 1683, was, after the Revolution, attainted for treason at Swords, and his property all confiscated. Bullock and its lands were sold by the Crown and purchased for £1,750 by Colonel Allen, of Stillorgan, afterwards the first Viscount Allen, whose representative, the Earl of Carysfort, is now the owner of the soil. The Rectory and tithes were at the same time given to augment the vicarages of Kill-of-the-Grange and Stillorgan, then under the charge of the curate of Monkstown, and possessing no church of their own (7).

So far back as the time of Charles I., there had been a revenue officer at Bullock, and, after the Restoration, one Jenkin Hopkins applied for that position. In the beginning of the eighteenth century the office was no sinecure, and, in addition to his duties with regard to the revenue, the officer had to watch the illegal exportation of recruits for the French service. A detachment of soldiers was, in 1731, sent to Bullock, to prevent the embarkation of men thus enlisted, and only arrived in time to find that "the wild geese," to the number of forty, had flown the preceding night, in company with some French officers. The prevention of smuggling led often to serious rioting, and in 1735 a great battle took place at Bullock, in consequence of a seizure of a quantity of brandy and tea, and one of the revenue officers was wounded and two of the smugglers killed. In 1743, a Mr. Anthony Robinson filled the position of riding officer at Bullock, and displayed much activity in seizing whiskey concealed in churns, as well as chocolate, seal skins, and tortoise shell, which were being brought from Galway to Dublin (8).

One of the principal residents at Bullock in the Restoration period was Mr. Kenelm Livinglyhurst who was buried in 1685 in the chancel of Dalkey church, and on the purchase of Bullock, in 1703, by Colonel Allen, a Mr. Simon Young was the tenant. Subsequently the whole of the place was held under the Viscounts Allen by Mr. John Watson, a gentleman who exhibited much benevolence and humanity to his poorer neighbours, and to shipwrecked mariners, and who occupied a comfortable house, which he had built under the shelter of Bullock Castle. His son, Mr. James Watson, a popular and clever young man, was killed in 1760 while attending horse races at Bray, by a blow from the loaded handle of a whip. A writer of the period says that the house was remarkable for the beauty of its situation, especially during a storm, when the waves dashed against the rocks and fell back in cascades, sending clouds of foam over the roof, but that it was still more remarkable for the hospitality and politeness which reigned within, and which made it the meeting-place for all the well-bre dpeople of the neighbourhood.

Over the rocky country by which Bullock was surrounded, foxhounds in those days often pursued their game, chasing Reynard through Bullock and across the open land known as Monkstown Commons, which lay between Dunleary and Monkstown, into the shrubby woods for which Glenageary was famous. The ancient town of Bullock, though much decayed, still exhibited at that time a complete walled town in miniature, and contained remains of a church as well as of the tower. A quay of hewn stone had been built, and, towards the close of the eighteenth century, the town contained a number of cabins occupied by fishermen, who found a ready market in Dublin for the cod, haddock, herrings, crabs, and lobsters which they caught. At the beginning of the nineteenth century a lifeboat was placed there, but owing to the difficulty attending its launching, it was only capable of use in the finest of weather. As the century went on, Bullock was more and more superseded by the modern Kingstown (9).

IRISH LACE.

Now that Irish lace is pre-eminently fashionable it is interesting to know that Queen Victoria in her girlhood days was instructed in the art of Limerick lace-making, to the great pride of the Irish world who taught her. For this lace a fine crochet needle is used. Irish lace was always a favourite dress trimming of the late Queen. Lacemaking has been in many cases a favourite royal handiwork. Queen Elizabeth, during her stormy youth, gave some of her weary hours to "ye weaving of laces," and Marie Stuart, one of the most deft in embroidresses, solaced her imprisoned hours, we are told, with "pearling," pearling being the Scotch name for a fine edging lace. Catherine of Braganza, Charles II's neglected Queen, introduced Spanish lace into England, and William's Mary encouraged Flemish lacemakers to settle in that country.

IRELAND AND AMERICA.

IRISH TOWN AND COUNTY NAMES REPRODUCED.

It may be interesting to give some figures and names, showing what Irish-America really means. The city of New York contains more Irish than Dublin, Cork, and Belfast combined; the city of Brooklyn contains more Irish than Galway and Waterford put together; there are more Irish in Boston than in Dublin, and more in Philadelphia than there are in Belfast. But it is in the Irish names in America that the greatest proof is evinced of the devotion of the Irish exiles to the old land. There is an "Ireland" in Alabama, another in West Virginia, another in Indiana, and another in Minnesota. There are three "Hibernias," situated in Florida, New Jersey, and New York. There are five "Erins," scattered through the states of Georgia, New York, Tennessee, Texas, and Wisconsin. There is an "Irishburg" in Virginia, and "Irish Ridge" in Ohio, an "Irish Ripple" in Pennsylvania, an "Erina" in Nebraska, "Erin Shades" in Virginia, and "Erin Springs" in Indian Territory. The names of Irish provinces are illustrated by Munster in Illinois, and Munster and Ulster in Pennsylvania. In New York there is an Ulster Park, an Ulsterville, and an Ulster County. There are 17 Dublins in the States, 18 Waterfords, 9 Tyrones, 7 Limericks, 5 Clares, 4 Mayos, 4 Sligos, 3 Corks, 3 Wexfords, 6 Antrims, 9 Derrys (four of which are called Londonderry), a Roscommon, King's County, a Queen's County, a Galway, a Wicklow, a Longford, a Kilkenny, a Kildare, a Donegal, a Carlow, a Monaghan, and an Armagh. There are twelve places styled Avoca, and six places called Avondale in honour of Parnell. There are also several places called after Parnell himself.

There is a Garryowen in Iowa, a Tullamore in Illinois, a Rathdrum in Idaho, an Achill in Roscommon County, Michigan; a Ballina in California, a Doneraile in Kentucky, a Strabane in Dakota, an Ardee in New York, and Tennessee, a Kinsale in Virginia, a Kincora in New Jersey, a Tara in Iowa, a Navan in Iowa, and another in Michigan, a Queenstown in Maryland and one in Pennsylvania; while there are 12 towns called Westport, 4 towns called Newry, 30 towns called Newport, a Valencia in Kansas, another in Pennsylvania, 4 places called Ennis, 4 called Kilgore, a Kilmichael, a Kilmanagh, a Lismore, a Lisburn, and 11 Bangors. There are 10 places called Belfast, a Boyne in Michigan, a Bandon in Minnesota and in Oregon, a Lurgan and a Fermoy in Pennsylvania, a Nenagh in Wisconsin, an Athlone in California and in Michigan, a Bray in North Carolina, a Clontarf in Minnesota, a Dungannon in Ohio, a Drumcliffe in Maryland, a Cookstown in Georgia and in New Jersey, a Boyle in Kansas and in Pennsylvania, a Ballyclough in Iowa, 10 places called Banbridge, five called Coleraine, a Green Isle in Minnesota, 2 places called Green Island, 25 Milfords, and 5 places called Adair.

Almost every state in the Union has counties called after the famous Irish-Americans of Revoluntionary fame. There are two counties, eight towns, and several lesser places called after Jack Barry, "the father of the American Navy," who was a County Wexford man. Charles Carroll, of Carrollton, has 13 counties, 58 towns, and 20 lesser places called after him. Mad Anthony Wayne, another Irish-American hero, has 15 counties, 58 towns, and 15 lesser places named in his honour. In honour of John Hancock, who was the first to sign the Declaration of American Independence, there are 10 counties and 18 towns. It would be almost impossible to enumerate the towns and places named after "Old Ironsides," Parnell's grandfather. The "Starktowns" are also very numerous, some in honour of General Stark and some in honour of his wife, "Irish Molly Starks," as she was always lovingly described, who took her husband's place when was killed at the gun, and remained in command of the gun till the end of the war. She was created captain for bravery in action, but never lost the title of "Irish Molly." In honour of O'Brien of Machias bay fame, there is an O'Brien county, In Iowa, and an O'Brien in Glynn County, Georgina. In honour of Patrick Henry we have 10 counties and 18 towns. There are towns and counties ad libitum called McDonough, Sullivan, McCracken, Calhoun, O'Brien, Emmett, Meagher, Dougherty, Murphy, etc. Phil Sheridan has no fewer than 3 counties and 17 towns named in his honour: while there are several Corcorans, Burkes, Shields, Kearney, Cleburn, Mulligan, Moran, Lynch, Kelly Malone, etc.

SOME FAMOUS SLIGO DUELS OF A CENTURY AGO.

We take from Archdeacon O'Rourke's admirable "History of Sligo, Town and County"—in which it is hard to know whether the author's erudition or his industry and research are the more to be admired,—the following interesting section:—

DUELLING.

Sligo has been always too noted for this relic of barbarism. Five counties of Ireland—Tipperary, Galway, Mayo, Sligo, and Roscommon—being particularly interested in this practice, sent delegates to Clonmel, in 1775, to draw up a code of laws for the regulation of affairs of honour, which, being duly enacted, were addressed to all the fire-eaters of Ireland as "The Practice of Duelling and Points of Honour settled at Clonmel Summer Assizes, 1775, by the Gentlemen Delegates of Tipperary, Galway, Mayo, Sligo, and Roscommon, and prescribed for general adoption throughout Ireland." To make sure that no one could plead ignorance of these laws, it was ordered that a copy of them should be always kept in gentlemen's pistol cases.

This "law" gave dignity and a species of legality to the proceedings of duellists, to which the example of the first lawyers and statesmen of the kingdom lent additional sanction. Attorney-General Fitzgibbon fought Curran; Scott, Chief Justice of the King's Bench, fought Lord Tyrawley; Egan, Judge of the County Dublin, fought half a dozen people, including Curran; the Chancellor of the Exchequer, Isaac Corry, fought Henry Grattan; Lord Norbury was so practised at the pistol, using it against everyone who came in his way, that he was said in his day to have "shot up" to the bench; and, in short, there was hardly a single high official connected with the bench, the bar, or the castle, at this time, who had not to reckon affairs of honour as regular incidents or rather duties of his office.

While Galway gentlemen preferred the sword in these affairs, the pistol was the usual weapon in Sligo, at least in the encounters which took place within the last hundred years or so. Passing over the "hostile meetings" which occurred in the county before that period, when they were more frequent than later on,* the following is a list, though not a complete one, of the County Sligo duels of more recent times, and of those who fought them:—

1. Philip Caech Percival and Hyacinth O'Rorke. The affair arose from informations which Mr Percival, as magistrate, took against O'Rorke, who resented the proceeding. They fought at Kilcat, near Chaffpool, in the parish of Achonry, and O'Rorke was shot dead on the spot. A small carn of stones was raised, and still stands, where he fell.

2. The most famous duel which has taken place in the county is that between Messrs. Fenton and Hillas. In its origin, its attendant circumstances, and its result, it attracted exceptional notice; and still, vivid as the traditions about it have always been, they are in great part apocryphal, thus supplying a new proof of the utter untrustworthiness of mere oral tradition in regard to the details of remote transactions.

It is commonly thought that Mr. Oliver Burke, in his Anecdotes of the Connaught Bar, shares the opinion that the dispute arose about a question of barrister's fees, Mr. Hillas being supposed to be a counsellor, as Mr. Fenton was an attorney, whereas the fact is that the unfortunate affair was connected with a wreck which took place on the Tireragh coast, quite close to the residence of Mr. Hillas, who was a military man, a Major in some force, and not a lawyer at all. A report having been sent by a Father Burke to the Major about a vessel in distress, the latter hastened to the shore, went on board the ship, and exerted himself so humanely and effectively, that the magistrates who sat to investigate the salvage claims—Mr. Wynne and Colonel Irwin—attributed "chiefly to his humane and spirited conduct the saving of the crew and the vessel"—the captain being already drowned.

While Major Hillas was thus engaged, Mr. John Fenton came on board, and an altercation soon occurred between them, of so warm a nature that Fenton threatened to throw Hillas into the sea. The matter even proceeded so far that Mr. Fenton sent the Major a challenge, but no hostile meeting followed on this occasion. It was two days after this when Mr. Thomas Fenton, accompanied by the Castletown yeomanry, arrived, and, in spite of all opposition, took charge of the wreck—a proceeding which annoyed and irritated Major Hillas so much that, in speaking of it afterwards in the salvage court, he made use of the offensive language which brought him the challenge from Thomas Fenton.

The hostile meeting came off in Kilmacowen, John Fenton acting as second to his cousin, while Major Hillas was attended by Captain Ferrall, a noted duellist, assisted by Loftus Jones and Jack Taaffe. Ferrall, however, being old, between seventy and eighty years of age, as well as lame, Loftus Jones took on himself most of the second's duties or functions. John Fenton, who acted all through "secundum artem," and with consummate skill and coolness, placed his cousin on the ground, put the pistol into his hand, "squared" him, as the phrase is, and moved his arm so as to protect his own person and to cover that of his adversary; while Hillas, all this time, was left very much to shift for himself, the multitude of seconds being unlike the multitude of counsellors in ensuring safety—and rather illustrating the old adage, that what is everybody's business is nobody's business. Fenton was the first to fire, Hillas firing nearly at the same moment, after which he dropped down dead.

Messrs. Thomas and John Fenton were indicted on the 21st March, 1816, in the Crown Court of Sligo, before Judge Fletcher for the murder of John Hillas, the court, as might be expected, being crowded to its utmost capacity. The witnesses examined were James Moffatt, Loftus Jones, Dr. Armstrong, Robert Ormsby, Mr. Wynne, and Dr. Carter, and the proceedings were dull and languid, as the conclusion was a foregone one. In his charge to the jury, Judge Fletcher was so one-sided, and so hard on poor Hillas, as to feel the need of making some apology, and added that "he had, perhaps, entangled himself on the subject more than he ought." The jury having retired from the box, just after the Judge had pronounced the duel to be "as fair a one as ever was fought,"† came back in a minute

* "About the year 1777 fire-eating was in great repute in Ireland. No young fellow could finish his education till he exchanged shots with some of his friends or acquaintance. The first questions asked as to a young man's respectability and qualifications, particularly when he proposed to a wife, were, 'What family is he of? Did he ever blaze?' His fortune was the last inquiry, because the reply was seldom satisfactory. Tipperary and Galway were the ablest schools of the duelling. Roscommon and Sligo had many professors, and a high reputation in the leaden branch. There was an association in the year 1782, a volunteer corps, called the 'Independent Light Horse.' They were not confined to one district, but none could be admitted but the younger brothers of the most respectable families. They were 'hilt and muzzle' adepts. And that no member might set himself up as greater than the other, every member of the corps was obliged, on entering, to give his word of honour that he 'covered his fortune with the crown of his hat,' and had exchanged shot or trust before he was balloted for. Most counties could then boast their regular point of honour men, to whom delicate cases were constantly referred. Lord Norbury was supposed to understand the thing as well as any gentleman in Ireland, and was frequently referred to by the high circles."—Blackwood's Edinburgh Magazine, Vol. XXXIV., pp. 588-9.

There was such an epidemic of duelling in France in the time of Henry IV., that in the space of sixteen years (1590-1606), "no less than 4,000 lives were sacrificed in duels."—"Essays of an Octogenarian, Vol. I., p. 384, where authorities are quoted.

Thirty-five years ago, any one who wished to see a duel, had only to visit the fosse of the Paris fortifications in the early morning, when he was pretty sure to witness more than one affaire, the parties engaged belonging generally to the army, as commissioned officers, non-commissioned officers, or privates, who all three alike, took this way of settling their disputes.

† Some others do not appear to have been as satisfied as Judge Fletcher of the fairness of the duel. We read in Hamilton's "Only Approval Guide," containing the Royal Code of Honour, p. 119, the remark, "Mr. Thomas Fenton, when acting as the second of his relative, John Fenton, was accused of having unfairly stood too long conversing with his principal; because, while standing between the parties, he enabled John Fenton to look over his shoulder, and take deliberate aim at Major Ellis (Hillas), who fell at the first shot."

At page 239 of the "Only Approved Guide," the author makes the following additional remarks on this duel: "Messrs O'Ferrall and Fenton, who acted as seconds in the case of Major Hillas and Mr John Fenton, squared the principals, in order to present the smallest possible objects. Major Hillas threw off his coat upon the ground, and appeared with light black sleeves attached to his waistcoat, evidently with a view to present the less conspicuous object to his adversary.

"The reason that Major Hillas had black sleeves attached to his waistcoat was to make his bulk

or two with a verdict of acquittal. It is right to state that in the proceedings of the trial, the duel was admitted on all hands to be a fair one; while great commiseration was expressed and felt for the unfortunate deceased, whose "friends" were much to blame for his tragic end. In addressing a crowd assembled to witness the duel, Mr. Hillas observed, "I am sorry the mistaken laws of honour oblige me to come here to defend myself, and I declare to God I have no animosity to any man or woman on the face of the earth."

What an opening here for a peacemaker, if a peacemaker could be found in such a godless gathering, to make up the quarrel; but poor Hillas's "friends"—Captain Ferrall, who was mixed up all through his long and discreditable life with these cursed "affaires;" Jack Taaffe, who was following so constantly in the Captain's courses; and Loftus Jones, who was never known to have a hand in peace-making, or in anything else that was good, instead of desiring a reconciliation, wished rather for an encounter, just as the demoralised Roman populace longed for the bloody scenes of the amphitheatre. This precious trio were more guilty than John Fenton of the murder of their friend. In connection with duels, more than under any other circumstances, one has reason to say, Save me from my friends.

3. Rev. Mr. Gethin and Harloe Phibbs had a hostile meeting at Magheraboy, near Sligo.

4. Rev. Mr. Duke and Mr. Holmes.—They exchanged shots in Doorla, near Lacagh, in the parish of Kilmorgan. Mr. Duke was near having a meeting with a Mr. Fenton, too, but friends interefered and prevented matters from going to extremity.

5. Dr. Coyne and Dr. Carter.—They met at the Five Mile Bourne, when Coyne was wounded in the knee.

6. James Gilmor and Captain Irwin.—The meeting took place in the garden of the house in which Mrs. St. Leger now resides on the Mall. Both were hit—Irwin in the body, the ball passing through, and Gilmor in the hip; and both lived to a very advanced age, Gilmor being 86 at his death, and Captain Irwin 80.

7. Messrs. Phibbs and Cross fought at the Cartron Hill.

Messrs. Flanagan and MacDermott had a meeting at Rosses Point.

8. Jack Taaffe and Major Bridgham.—They fought in the yard of the chief hotel in Boyle. Taaffe was a great favourite with the humbler classes, and a "bete noir" with the gentry, who, it is said, egged on Major Bridgham to provoke him, and, when he escaped the Major's pistol, had him indicted and tried at the Summer Assizes of 1818, in Sligo, for arson, at that time a capital offence. Before the trial, they thought to commit him to gaol, but Robert King Duke and Gowan Gilmor, Esqrs, bailed him in £1,000 to appear at the Assizes. They strained every point to secure a conviction, going, it is said, the length of suborning false witnesses for the purpose. Suborned or not, the witnesses certainly swore false, as eventually appeared. There were two trials. In one of them, Jemmy Jordan, a confidential man of Jack's, and an alleged accomplice, was indicted for conspiring to burn Kingsfort House. The unfortunate man was convicted, and sentenced to be flogged through Ballymote—a punishment which he underwent, and underwent without flinching, throwing up his hat at the close of it, and cheering for Jack Taaffe under the nose of Bridgham, who was present and was taunting Jordan for his connection with Jack.

The people always admired Taaffe: first, because he was eccentric, and they generally love eccentricity and originality; and, secondly, because he was a thorn in the side of their enemies, the Bucks and Buckeens of the county, with his well-known maxim, which he kept always dinning into everyone's ears, "Jack Taaffe cares for no man;" but after his acquittal he was a greater popular idol than ever.

Taaffe's enemies, it is said, took their measures so cleverly, that they were confident of a conviction; but they were out in their reckoning, for when the trial came on, it was clearly proved that the witnesses perjured themselves, so that the prosecution forthwith collapsed ignominiously—to the great mortification of the wire-pullers and to the unbounded delight of the people. And to make his vindication more triumphant, the witnesses who had sworn against him, came forward in the chapel of Ballymote on the occasion of a jubilee, and confessed before the assembled congregation that they had perjured themselves.

Messrs. Kelly and Plunket, of Roscommon.—They fought in the Black Field of Doorla, in the parish of Kilmorgan. Hunted by the authorities from other places, and having got out of their reach at the Black Field, they turned in, measured ten paces, and exchanged shots, Kelly receiving a wound in the shoulder. It is told of Plunket, who was a Catholic, that before going to the ground he got some holy water in a roadside cabin, when he said to his friends, "I now defy Kelly and the devil." The poor fellow showed his faith even while violating a formidable ordinance of his Church.

11. Counsellers Casserly and Baker.—The duel came off at the Five Mile Bourne, where they were arrested after one exchange of shots. They were brought before Mr. Gowan Gilmor, a magistrate, to give securities for keeping the peace; and when he, at a loss for a word, as he was taking the informations of the police, asked playfully some one near him, "What shall I say? Shall I say 'for stealing a sheep?'" "No," says Casserly, "but for firing at a sheep.'"

12. Counsellors Walker and Ramsay.—Both being engaged in court on opposite sides, Walker took offence at an observation of Ramsay's, and then and there wrote something on a bit of paper, which he slipped quietly across the court to the Counsellor. The incident would hardly have been noticed only that Mr. Walker, after despatching the paper, fell off in a swoon. The weakness proceeded from exhaustion, and not from lack of courage, for on the following morning, when the duel came off, Mr. Walker exhibited great coolness and nerve.

13. John Patrick Somers and Captain Fawcet.—They fought on Camphill bleach green in presence of considerable numbers. The reckless Somers was ill able to keep his feet on coming to the ground, having been up all the preceding night, gambling, it is said, and drinking. Though hit at the first shot, he cried out, "Another pistol;" but Captain Fawcet's friend would not hear of it, and took away the Captain, saying, "We must not fight a wounded man." There was near being bad work after the duel, for the friends of the respective parties could hardly be prevented by the police from attacking each other.

14. Henry Griffith and Mr. Kelly, of Galway.—They fixed on Doocastle for the meeting, but as a large crowd had assembled there, they agreed to move off to a spot near Tubbercurry. Here, too, there was a mob, so that the principals and their seconds drove away to Streamstown, in the parish of Achonry, where the duel took place, and without casualty of any kind.

15. Attorney Moffett and Mr. Murphy, editor of the "Sligo Journal," the occasion of quarrel being some remark of the "Journal," which Moffett supposed to be personal and disparaging.

16. Counsellor James Wynne, a member of the Hazlewood family, and Mr. John Martin. They fought at Cleveragh. Within a few minutes of the appointed time, Collector Wynne, who was on the ground, complained that Mr. Martin, who had not yet arrived, was keeping them waiting, when Mr. —— Wood, father of the late Mr. Tom Wood, quietly rejoined, after looking at his watch, "Never mind, he has yet four minutes, and if he be not up to time, I will take his place, and Counsellor Wynne will not be disappointed."

17. Messrs. Charles Sedley and Edward Howard Verdon fought at Magheraboy. Mr. Sedley's second on the occasion was his brother, Mr. James W. Sedley.

---

appear the smaller. There is another mode of lessening the object to be fired at, which is thus described by a military officer who has written on the present subject: 'By advancing the foot and inclining in the act of presenting, the body will be lowered some inches, and many is the good or the bad head that has been saved by it.'

"In the cast of Major Hillas and Mr Fenton, spud stones were placed to mark the distance, and prevent the parties from advancing towards each other."

Mr. Frank Buettner, who was the victim of an unnecessary operation at St. Alexis' Hospital, Cleveland, recently, and who died a few hours after the surgeons had completed their work, was one of the oldest and most prominent of the German residents of that city. He had been identified with most of its public enterprises, and his private charities were numerous. He was the devoted friend and constant benefactor of St. Alexis' Hospital, and contributed largely towards the erection of the institution. The manner of Mr. Buettner's death made it particularly deplorable. A severe attack of laryngitis seized him so suddenly that Mr. Buettner believed he had choked from swallowing a set of artificial teeth. An X-ray examination apparently showed the teeth lodged in the œsophagus. An operation was decided upon. After the doctors had operated for two hours the missing teeth were found in Mr Buettner's bedroom. The patient never rallied.

A RENAISSANCE ECHO.

Comprehension of the pre-Raphaelite movement has always been prejudiced by the name which the brotherhood adopted. To the unthinking or unread it has seemed to imply a reproach upon Raphael, the best beloved of all the race of painters. Nothing was further from the intention of the brotherhood. It was after Raphael that art exaggerated a distinction of its own essence. It began to worship form as the superior of spirit. Before the age of Raphael expression was deemed superior to form. In Raphael the two were so co-ordinated as to be indissoluble. No one can contemplate the Sistine Madonna and demarcate the beauty of the form from the heavenliness of its import.

The great painters who preceded Raphael were pre-eminently expressionists. They subordinated form to import. The charm of beauty in the Madonnas before Raphael was almost wholly spiritual. After the decadence of the renaissance spirit form superseded expression in art, and mere sensuousness was debilitated at last into spiritual vacuity. It was against this debilitation that the pre-Raphaelite movement protested.

The pre-Raphaelite movement was a sincere attempt to reinstate spirit as superior to form alone in art, but also to co-ordinate beauty and soul as Raphael did.

The leader of the pre-Raphaelite brotherhood was by descent three-fourths a fellow-countryman of Raphael. Dante Rossetti was born in London in 1828. His father was an Italian refugee. Heredity counted decisively in his career. His father was a poet, a custodian of ancient art in Naples, and a devotee of the great Dante. Dante Rossetti's mother was the daughter of an Italian professor who had been secretary to the poet, Alfieri, and who had translated Milton's poems. Dante Rossetti developed intellectually on a nutrition composed of classical, mediaeval, and modern culture. The authors who most influenced his career were Dante, Homer Coleridge, Scott, Keats, and Browning.

It is not singular, therefore, that the pre-Raphaelite movement was an echo of the Renaissance. It presents the same conflict between the pagan antique and the mediaeval Catholic, which the great movement of the fifteenth century organised and developed into the glory of art and the promotion of a nobler and purer standard of both achievement and taste.

At fifteen years of age Dante Rossetti quitted the school where he had learned Latin, French, and a beginning of Greek and entered upon the study of the art of painting, his proficiency in which soon secured for him admission to the school of the Royal Academy, in whose antique section he rapidly became distinguished. In 1848 Rossetti co-operated with John Everett Millais, William Holman Hunt, fellow-painters; Thomas Woolner, sculptor; James Collinson, Walter Howard Deverell, Frederic George Stephens, and William Michael Rossetti, his brother, in forming the pre-Raphaelite brotherhood.

Certain principles were adopted as constitutional in the brotherhood. Wherever nature was to be used the study was to be sincere. A particular scene was to be chosen not for literal but truthful depiction. Pagan sensuousness was to be reprobated. Therefore although study from the life was to be deemed indispensable to accuracy, the undraped was never to be exhibited. For the promotion of the precedence of spirit over form the same model was to be repeatedly used in order that there should be a more determined concentration upon the spiritual import the picture was to convey. Expression was to predominate over form.

The first work exhibited by Dante Rossetti was entitled "The Girlhood of Mary, Virgin." It contains four figures, the Virgin, her parents, an angel and a dove, symbolising the Holy Ghost. The dominant idea is that the Virgin has become fit to be the mother of the deity. She is represented embroidering from a lily, the emblem of purity, set upon six volumes, each inscribed with the name of a special virtue. It will be remembered that woman's peculiarly fit industry which combines art with utility, embroidery, is also suggested in the Sistine Madonna by the embroidery on the sleeve of the Madonna's robe. The presence of the lily in the Rossetti Madonna not only was symbolic of purity, but an assertion of a dogma of the pre-Raphaelite brotherhood that art should be sincere, that portraiture, ideal or concrete, animate or still life, should be directly from the natural model.

The pre-Raphaelite movement was literary as well as plastic. Every picture painted by Dante Rossetti is a poem. Every poem by Dante Rossetti is a picture. His artistic faculty exerted itself habitually doubly. He projected in verse and colour simultaneously.

In both his verse and painting there is abundant proof that the leader of the pre-Raphaelites was a devoted Raphaelite. The "Blessed Damozel" was written by Dante Rossetti before he was 20, and by many deemed the most exquisite poem in the English language, is Raphaelesque. If one may apply the term architectonic to a poem, it must be admitted that the "Blessed Damozel" owes not a little to the Sistine Madonna.

Such lines as—

"The wonder was not yet quite gone
From that still look of hers;"

and these appear to have been derived from Raphael's Madonna of Saint Sixtus:

"It was the rampart of God's house,
That she was standing on;
By God built over the sheer depth
The which is space begun;
So high, that looking downward thence
She scarce could see the sun.

"It lies in Heaven, across the flood
Of ether, as a bridge.
Beneath, the tides of day and night,
With flame and darkness ridge
The void, as low as where this earth
Spins like a fretful midge.

"From the fixed place of Heaven she saw
Time like a pulse shake fierce,
Through all the worlds. Her gaze still strove
Within the gulf to pierce
Its path; and now she spoke as when
The stars sang in their spheres."

One of the earliest works which the pre-Raphaelite brotherhood undertook was an embellishment of walls in Oxford. In the fervour of their enthusiasm for pictorial effect they forgot to add an adhesive to their colours, and their work wholly faded. There is not a trace of it remaining. The wall of sentiment upon which the pre-Raphaelite brotherhood toiled in England was not properly prepared to retain their noble spirit. It has not, however, wholly faded from English art and literature.

A revised edition of Dante Rossetti's poems, with omissions, would be worthier his aims and achievement. His pictures are now esteemed the most beautiful ever produced by a native English artist.

OUR WEEKLY STORY

AN IMPERIAL JOKE.

FROGERE AND PAUL OF RUSSIA.

FROGERE had been a comic actor of very great celebrity, in Paris. He went to Russia, where he became the favourite and the intimate associate of the Emperor Paul. Easy and pleasant, however, as was the friendship which for so long a time subsisted between these two eminent personages, it did not happen that the player was provided with leisure and opportunity for considering the important question, whether it be altogether prudent or safe to make very free indeed with an Emperor of all the Russias?

At supper one evening, at the emperor's table, some one present took occasion to pay the illustrious host a compliment at the expense of Peter the Great.

The emperor, turning to Frogere said, "This is really robbing Peter to pay Paul: 'tis hardly fair, is it, Frogere?"

"Quite the reverse, sire," replied the actor; "for the reputation your majesty will leave behind you will hardly tempt anyone to rob Paul in return." Now though this was almost as good a thing as one need wish to say, it somehow happened that his majesty did not appear to be in the least tickled by it; and as his majesty did not condescend to honour it with his imperial laugh, no one else could presume to notice it by such a symptom of approbation. In fact the joke with all its merit was a total failure; at which nobody was so much astonished as the perpetrator of it himself.

After a short time the emperor withdrew, and the company separated. Frogere retired to his own apartment. He was anything but happy in his mind. His jest had fallen flat; and such a mishap to a professed joker is as serious a calamity as the failure of a commercial speculation to a merchant. But to what strange cause could he attribute its ill success. The joke was a good joke, there was no denying it; and, were it otherwise, the emperor was not so squeamish a critic, but that he had laughed heartily at many a worse. He thought, and thought—and thought again; but since his cogitations availed him nothing (he being still unable with all his sagacity, to discover what could have occasioned his failure), he got into bed, and like a wise man as he was, fell fast asleep.

It was the middle of a Russian winter. In the dead of the night, Frogere was aroused by a loud knocking at his chamber door. He arose and opened it, and greatly to his astonishment, an officer, accompanied by four soldiers armed to the teeth entered the room.

Frogere, having no reason to expect such a visit, naturally concluded that the officer (an old acquaintance of his, who had the honouur of being of the emperor's party on the previous evening), had mistaken his room for that of some other person. Alas! he was speedily convinced there was no mistake, but that the untimely and alarming visit was indeed to him: the officer exhibited the emperor's warrant for his arrest, and immediate banishment to Siberia!

The effect produced on poor Frogere by this terrible announcement may—to use a phrase less remarkable for its novelty than for its convenience upon occasions of this nature—"may be more easily conceived than described." The idea of a trip to Siberia had shaken firmer nerves than his. He wept—he screamed—he knelt—he tore his hair. What crime had he committed to draw down upon him so heavy a punishment? Could he not obtain a short delay? Of a day—a few hours only—merely, then till he could see the emperor, that he might throw himself at his feet? His supplications were in vain: the emperor's commands were precise and peremptory; and if ever there was an absolute monarch who allowed his mandate to be trifled with, certainly it was not the Emperor Paul. All that the unfortunate man could obtain from the officer, who was his friend, was just sufficient delay to throw a small quantity of clothes and linen into a trunk; and having done this, he was led forth.

A carriage, guarded by a sufficiently strong body of cavalry, was in waiting, and more dead than

alive, the prisoner was lifted into it: a soldier armed with a brace of pistols, and a sabre drawn, taking his seat on each side of him. The officer having seen that the windows of the carriage were carefully closed, so as to prevent the prisoner's communication with any one from without, headed the cavalcade, gave the word, and they started, at a brisk trot, on their formidable journey.

How long they travelled till they made their first halt he knew not, for he was in total darkness, and his guards were dumb to all his inquiries: they were strictly forbidden to speak to the prisoner, and few Russian soldiers are so much in love with the knout, as to disobey orders: but reckoning time by his sighs and groans, and lamentations, it seemed to him an eternity.

At length the carriage-door was opened. It was broad day; but he was not long permitted to enjoy the blessed light of the sun, for he was instantly blindfolded, and in that state led into a miserable hovel. Here the bandage was removed from his eyes, and he found himself in a small room, the windows of which being closed was dimly lighted by a solitary candle. Some coarse food was placed on a rough wooden table, and signs were made to him that he should eat. But a few hours ago he was revelling amidst the splendour and enjoying the luxuries of a palace, princes the partakers of his pleasures, a mighty potentate his boon companion. Now—disgraced; a banished and forlorn man; a wretched shed for his resting place; his fare so little tempting, he would not yesterday have offered it to a starving mendicant; surrounded by faces which, for the sympathy he would have implored, struck hopelessness down into the very bottom of his heart as he did look upon them; a traveller on a dreary, journey, which when ended no tongue would say him "welcome;" nor should his soul rejoice as he should utter "here will be my dwelling!" Siberia! In that one word seemed to be concentrated all of human suffering; as he wildly paced the mud floor of the comfortless apartment, no sound escaped his lips, save only Siberia—Siberia!

That extremes meet is somewhat a trite observation. A trifling incident converted the agony of despair—and such was poor Frogere's—into a paroxysm of joy. The officer who commanded the escort entered the hovel, attended by an estafette. Frogere had not seen him since he got into the carriage on the previous night, nor was he aware that he had accompanied him so far on the journey. He was the only person of the whole number the unfortunate man was acquainted with, and the appearance of a familiar face was to him in his present unhappy situation a source of happiness unutterable. He was about to rush into the arms of his quondam friend, but a slight movement of the hand, and a look of withering sternness, sufficiently convinced him that such a demonstration of friendship was not very cordially desired by the other party. He prepared to speak, but a finger on the lip constrained him to silence. The officer went towards the light, and sealed a packet which he held in his hand; and having delivered it to the estafette, to whom he enjoined the utmost possible speed, he ordered the guard to post themselves outside the door. Being left alone with his prisoner, and having again made a sign of silence,

"Frogere," said he, in an under voice, "Frogere, here we part; the officer who will take charge of you to the next station is in attendance. Tell me—what can I——And yet I hardly dare; the emperor's commands are not to be disobeyed with impunity; and should it be discovered that I ——No matter: to serve an old friend I will run the hazard of my disobedience. Tell me, then, what can I do for you on my return to Moscow?"

The luckless Frogere burst into tears, and instead of replying directly to the friendly inquiry, he indulged in wild exclamations on the severity of the punishment for a crime the nature of which he had yet to learn.

His companion looked at him in amazement. "Yet to learn! Are you mad, Frogere? Surely you are; and you must have been (as we all thought you) mad last night, or you never would have ventured that bitter sarcasm"—and he added in a lower voice—"the more keenly felt as it was not altogether destitute of truth."

"Good Heavens! and is it for a trifle like that that I am to be"——

"This is no time, Frogere, to waste in words: mine is the last friendly face you are likely to see for the rest of your long journey. The emperor, as you well know, is implacable in his resentments; you cannot hope for pardon; so make up your mind to bear your punishment like a man, and tell me what I can do for you at Moscow."

But the mind of the traveller was too bewildered to think upon any other service which his friend might render him, than the only one which his friend (like many other friends on trying occasions), declared to be exactly the one he could not perform for him: it was to intercede in his behalf with the emperor. It was impossible—but for any thing else, he would "raise Heaven and earth"—go through fire and water," etc, etc etc. And, truly, there were many other modes of service open, not the least important of which was the disposal of his property—for not one particle of it (saving the wearing apparel already mentioned), had he been allowed to take with him. He had money and some valuable jewels: and provided nothing to his disadvantage should come out on the examination of his papers, it was possible that those might escape confiscation. In that case had he many friends or relations in France to whom he wished they might be transmitted? In the event of a contrary result to the scrutiny, a vast deal of trouble would be saved to him and to his heirs for ever. No; he could think of nothing, he could think of nobody: his mind was all engrossed by the calamity which had befallen that one hapless member of his family who was at that moment on the high road to Siberia; nor was it capable of entertaining any other idea.

"Then," said his friend, "I must think for you, and I must act for you. Should your property, as I have said escape confiscation, I will deposit it in safe hands, and on your return you can claim it."

"My return! am I not banished for life? Is there, then, a hope that"——

"For life!" interrupted the officer; "do you imagine you are banished for life! Ha! ha! ha! No wonder, then, you are so grieved at your departure. No, my dear friend; and happy am I to be the means of pouring consolation into your bosom. Courage, courage my dear Frogere! 30 years are soon over, and then"——

"Thirty years!" groaned the luckless jester.

But there was no farther time for conversation; the fresh escort was in readiness; and the eyes of the victim having been bandaged as before, he was replaced in the carriage. His friend at parting kindly pressed his hand, and placing a small sum of money, whispered, "You will find this more useful on your arrival at the place of your destination than you are now aware of. Courage! Farewell!" The blinds of the carriage were again carefully closed, the word to proceed was given, and away went the cavalcade, much faster than was agreeable to at least one of the party.

A Frenchman is proverbially the gayest creature in the universe, and blessed with greater aptitude than the native of any other country to accommodate himself to disagreeable circumstances. His language, too, furnishes him with a set of phrases admirably calculated to assist his philosophy, when assailed by the common misfortunes to which poor humanity is liable. He loses his umbrella or his wife; his dog is stolen, or his ladylove is unfaithful; he is caught in a piece of knavery or a shower of rain, and he is speedily reconciled to the event by an "allons puisque"—or a "c'est une petite contrariete," or "un petit malheur;" (if either or all of these should fail), by that last refuge of heroical endurance, the infallible "ca m'est egal." But a "Thirty years in Siberia," albeit it makes a promising appearance on paper as a title for a new book, is something more than petite contrariete, and is not by any means egal; so that poor Frogere, finding that one of these modes of consolation applied to his peculiar case, and no other source of comfort occurring to him, he unconditionally surrendered himself to despair, and in silence unbroken but by his own unavailing lamentations; for his guards were again debarred of speech, either to their prisoner or to each other.

At length they stopped. He underwent the same ceremonies as before: his eyes were bandaged; he was led out of the vehicle; and when he was permitted the use of sight, he found himself in another miserable hut, drearily lighted by the flickering glare of two or three burning twigs of the fir-tree. Here another coarse repast was presented to him; and when he had partaken of it the escort was relieved by a party of fresh men, and again was he hurried forward on his journey. But upon this occasion the sound of no friendly voice met his ear—all were silent—all were strangers. As nearly as he could guess, he had travelled three nights and three days, with occasional halts, always attended by similar circumstances, when, on the night of the third day, again they halted. His eyes were bound; but instead of being allowed to walk, he was carried in the arms of his guards till he found himself placed on a wooden bench. Here he was left for several minutes, wondering why the bandage was not removed as usual. Presently he heard an indistinct whispering. Footsteps approached him, his hands were suddenly seized and bound together. He tremblingly asked the reason of this proceeding. No answer was returned. Rapidly, but silently, the upper part of his dress was loosened, and his neck laid bare. His heart sank within him. He began to doubt whether it was intended he should end his mortal journey by taking so cold a place as Siberia in the way. A word of command was given, and he heard the clank of musketry. The word was given to march! He was carried forward in the arms of four men; and as they proceeded he heard the regular tramp of many footsteps before him and behind.—Halt!" He was placed on a seat—his hands were unbound—the bandage was removed from his eyes—and he found himself—at the very same place, at the very same table, in the same apartment where he had cut his unlucky joke, the same persons being present, with the emperor at their head!

His wild look of terror, astonishment, and doubt, was greeted with a loud shout of laughter—and Frogere fainted. This had been a sort of Tony Lumpkin's journey, for he had merely been driven backwards and forwards the distance of about half a dozen miles on the same road; and though computed by the standard of his own melancholy sensations the time had appeared much longer, he had, in fact, been absent for but little more than four-and-twenty hours—the emperor, in disguise, being present at each of the stoppages. Though this was but a trick, the anguish and sufferings of the object of it were real; and the consequence was a severe illness from which it was long before poor Frogere recovered. It was, on the whole, a piece of pleasantry which, however humorous it may be thought in conception, few would have had the heartlessness to execute but an Emperor Paul.

Some time after this the player was supping with the merry monarch, whilst at the same hour a trick was preparing of which himself was to be the butt. Not long had they separated when the palace was alarmed. Frogere, with several others, rushed to the emperor's apartments, and there lay the imperial joker—a murdered corse!

A VERY HOT RIVER.

At one point in the Yellowstone, a stream of clear, cold water flows through the park, receiving in its course the scalding boiling springs of that region. The boiling water, as it reaches the cold stream, flows for a considerable distance along one bank before the waters finally mingle and become one in temperature. Into this spring of boiling water insects, bugs, toads, grasshoppers, and the like are continually dropping, and thus losing their lives, and all such insects are, as a matter of course, swept into the cold water stream. Now in the cold water of this stream a number of hungry trout are continually skirmishing along the edge of the hot water, taking good care not to venture too close, for the purpose of snapping up and devouring the insects brought down by the hot water, and which happen to float over into the cold water, or near enough the border for the trout to pick them up, so that it is possible for a fisherman sitting on the bank to catch a trout with hook and line, draw him two feet from where he took the hook and boil him good and done, all in the same stream and without ever lifting the fish from the water. The fisherman would, of course, have to have a scoop net to remove the boiled trout from the water, for otherwise the head would pull off, leaving the body in the water. But, barring this, it is within bounds of truth for one to say that the Yellowstone is the only place on earth where it is possible to catch and cook a fish in the same stream.

Ancient Boroughs of Ireland

From Lewis's "Topographical Dictionary of Ireland," 1837.

CLONMEL.

CLONMEL, a borough, market and assize town, and a parish, partly in the barony of Upperthird, county of Waterford, but chiefly in that of Iffa and Offa East, county of Tipperary and province of Munster, 23 miles (W. by N.) from Waterford, and 82½ (S.W. by S.) from Dublin; containing 20,035 inhabitants, of which number 17,838 are in the town. This place, of which the origin is ascribed to a period prior to the invasion of the Danes, is supposed to have derived its name from "Cluaine-Meala," signifying in the Irish language the "plain of honey," in allusion either to the character of its situation and the peculiar richness of the soil, or to the valley in which it stands being bounded by picturesque mountains that afford honey of fine flavour. It appears to have been the capital of the palatine liberty, as it now is of the county of Tipperary; and is probably indebted for its early importance to the patronage of the Butler family. According to Archdall, a Dominican friary was founded here in 1269, but by whom it is not known; and the same author states that the Franciscan friary was also founded in that year by Otho de Grandison, though the date inscribed upon it is 1265: this friary was reformed in 1536, by the friars of the Strict Observance, and having been surrendered to the crown in 1540, was, with its possessions, three years after, granted in moities to the sovereign and commonalty of Clonmel and the Earl of Ormonde: its church was esteemed one of the most magnificent ecclesiastical structures in the country. In 1516, the town, which was surrounded with walls and strongly fortified, was besieged and taken by the Earl of Kildare; and during the civil war of the 17th century, having been garrisoned for the king by the Marquess of Ormonde, it was attacked by Cromwell in 1650, with his army from Kilkenny; but was bravely defended by Hugh O'Nial, a northern officer, who, with 1,200 of his provincial forces, maintained it with such valour that, in the first assault, not less than 2,000 of the besieging army were slain, and the siege was turned into a blockade. After a resolute defence for two months, the garrison, being without any prospect of obtaining relief, secretly withdrew to Waterford, and the inhabitants surrendered upon honourable terms: the town remained in the possession of the Parliamentarians till a short time prior to the Restoration, when it was retaken by the Royalists. At the Revolution, the town, which was held by partisans of Jas. II., was abandoned on the approach of William's army to besiege Waterford.

It is situated on the banks of the river Suir, in a beautiful and fertile valley bounded by picturesque mountains, and on one of the two main roads from Dublin to Cork, and that from Waterford to Limerick. With the exception of that portion which is built on islands in the river, it is wholly on the northern or Tipperary side of the Suir, and is connected with the Waterford portion by three bridges of stone. The principal street is spacious, and extends from east to west, under different names, for more than a mile in a direction nearly parallel with the river; the total number of houses, in 1831, was 1,532.

In 1667, the plan of Sir Peter Pett for introducing the woollen manufacture into Ireland was carried into effect by the Duke of Ormonde, then Lord Lieutenant; and, in order to provide a sufficient number of workmen, 500 families of the Walloons were invited over from Canterbury to settle here. The manufacture continued to flourish for some time, but at length fell into decay, in consequence of the prohibitory statutes passed by the English Parliament soon after the Revolution, and is at present nearly extinct. A factory for weaving cotton has been established by Mr. Malcolm, which at present affords employment to 150 girls; he has also an extensive cotton factory at Portlaw, in the county of Waterford.

The corporation is of great antiquity, and probably exists by prescription. Numerous charters have at various times been granted since the reign of Edw. I.; that under which the borough is now governed was granted in the 6th of Jas. I. (1608), and, under the title of "The Mayor, Bailiffs, Free Burgesses, and Commonalty of the Town or Borough of Clonmel," ordains that the corporation shall consist of a mayor, two bailiffs, twenty free burgesses (including the mayor and bailiffs), and a commonalty, with a recorder, chamberlain, town-clerk, and other officers. The freedom was formerly obtained by nomination of a burgess to the common council, a majority of whom decided on the admission; but at present the rights of birth, extending only to the eldest son, apprenticeship to a freeman within the borough, and marriage with a freeman's daughter, are recognised as titles to it. The borough returned two members to the Irish Parliament till the Union.

Of the town walls, which encompassed only what is now the central part of the town, on the northern bank of the river, there are only very imperfect remains: the entrance was by four principal gates, of which only the west gate, which has been lately very substantially repaired and forms an ornament to the town, is now standing; and of the various towers by which they were defended, there are three remaining near the churchyard. Near the western end of the town are the ruins of the church of St. Stephen, and in the southern suburb are those of the church of St. Nicholas. Some trifling remains of the ancient castle may still be traced in what is now the office of the Tipperary Free Press. In the neighbourhood are the ruins of several castles, and traces of encampments or Danish forts; at Gurteen is a cairn or druids' altar: and near Oakland is a holy well, called St. Patrick's well; also the ruins of an ancient chapel, in which are several large stones bearing inscriptions. About half a mile to the south-east is a chalybeate spring, resorted to medicinally; and near the south suburb is another of similar kind, but not much used. The Rev. Laurence Sterne was born here in 1713; and Bonaventura Baro, or Baron, who wrote numerous works during a long residence at Rome, where he died in 1696, was also born here. Clonmel gives the titles of Earl and Viscount to the family of Scott; the father of the present Earl was the Rt. Hon. John Scott, the celebrated Chief Justice of the King's Bench in Ireland, who was created Baron Earlsfort in 1784, and was advanced to the Viscounty of Clonmel in 1789, and to the Earldom in 1793.

(To be Continued.)

NOTES AND QUERIES.

TO THE EDITOR DUBLIN PENNY JOURNAL.

My Dear Sir.—In reading a file of your journal, I have been particularly interested in a series of reprints of documents bearing on the career of John M'Dermott, of Roscommon. It will give me great satisfaction if you will inform me through your "Notes and Queries" column, or by letter, where I can get any additional facts regarding this interesting character.

I would particularly like to know his age at time of his execution, and the place of his burial.—Very truly yours,

F. R. PETRIE,
319 E. 6th street, Plainfield, N. J.
U. S. A.

[The matter to which Mr Petrie alludes was published in "Glimpses of the Past," in our issues of May 10 and 24, June 21, and July 26. These paragraphs told the story of the trial of John Mac-Dermott for riot and burglary at Castle Tenison, County Roscommon, in June 1793, and the last paragraph simply chronicled the fact of his execution at the Commons, Kilmainham. We shall gladly publish any supplementary information our readers may be able to give.—Ed. D. P. J.]

TO THE EDITOR DUBLIN PENNY JOURNAL.

Seaforde, Co. Down,
November 2, 1902.

Dear Sir—Would you or any of your readers kindly give me any information about the lineage of Robert Hoey, of Dunganstown Castle, county Wicklow, who was born about 1750. Perhaps there is a county history of Wicklow. If so, could you tell me where it could be obtained?—Yours faithfully,

HENRY R. MILES.

TRUFFLES.

The secret of the growth of truffles, which remained so long a mystery to botanists, was discovered by a French scientist, the Duc de Lesparre. The question of how truffles grow has hitherto escaped all research; in future their cultivation will be possible. The truffle may thus become a condiment at least relatively cheap, and, although it is somewhat heavy and indigestible, it possesses very savoury and nutritive properties, and its reproduction in large quantities is likely to have considerable influence on cookery in France and in every other country. The Duc had been studying the question for some years, and finally came to the conclusion that the truffle is a mushroom. The next problem was to find how it germinated. After several years of observation and experiment he concludes that the seed-cells, three or four in number, are enclosed in little bags. These must first be opened by insects or by decay, like the pods of plants. Then the seed-cells are transported by insects and deposited upon the leaves of trees, which seem to be as necessary for their growth as they are for parasites, such as the mistletoe, for instance. On the leaves of certain trees the germination begins, the spores being male and female, as in the stamens and pistils of plants. The fecundated spores then fall to the ground, work their way under the earth with the rains or by being trampled upon, and there the truffles develop at leisure. The Duc de Lesparre has demonstrated that soil is not necessary to this fecundation, and that, with care the spores can be cultivated above ground. He has also discovered a certain number of species of trees on whose leaves the seed-cells can be propagated.

A SAN FRANCISCO CHINESE NEWSPAPER.

INTERIOR OF CHINESE COMPOSING ROOM SHOWING ENORMOUS SIZE OF FOUNTS.

In roaming through the famous Chinatown of San Francisco, its lanes and alleys, the stroller will perhaps observe over a narrow door a mystical sign, and beneath it the words Chung-Sai-Yat-Po, the daily newspaper; and if curious he may ascend the narrow stair and reach the editorial and other rooms of one of the several Chinese papers published in this Chinese-American city. Little Canton, as it is sometimes called. This paper was first started as a weekly, but was finally changed to a daily, and is now an influential organ of what might be termed the Americanised Chinese, or the New Chinaman. as the editor is a Chinese minister of the Presbyterian Church, a man of high cultivation from the American standpoint. He is the Rev. Ng Poon Chew, and one of his literary advisers and aids is John Fryer, LL.D., who fills the chair of Chinese Literature at the University of California; but the typesetters, the clerks, in fact all the employees, are Chinamen, some of whom are graduates of American schools. In the business office and editorial room there is little to attract the attention. American desks and chairs and telephone are the appliances of the workers; but when the visitor enters the composing room, a high, cheerless, brick-wall-enclosed room, he is confronted with the fact that here as well as elsewhere in China things are upside down. In a word, the typesetter is quite as important a factor as the editor; at least such is the impression gained by the obsevrer who faces the extraordinary cases of the Chinese compositor.

The American typesetter is obliged to be familiar with twenty-six letters, ten figures, and a few signs and symbols, as periods, dollar marks, etc., but the Chinese compositor must be familiar with eleven thousand characters of this archaic language, about which Professor R. K. Douglas says: "Every word is a root, every root is a word. It is without inflexion or even agglutination: its substantives are indeclinable, and its verbs are not to be conjugated; it is destitute of an alphabet, and finds its expression on paper in thousands of distinct symbols."

It is needless to go into a description of this marvellous language to explain the difficulties of the Chinese compositor; but one illustration is sufficient. Certain sounds often stand for several hundred words, the difference, often vital to an intelligent presentation of an idea, depending on certain diacritical marks accompanying each word. There are thousands of these symbols which are engraved, each one representing a type, but a well-regulated newspaper will require eleven thousand characters; if others are needed, they are made in the office. A font of type in the Chinese language requires eleven thousand spaces, and in the large and spacious racks

here shown each word instead of each letter, as in English has a place for itself. There is also a peculiar grouping or classification of symbols into groups to further facilitate the mental labours of the type-setters. Thus in the immediate vicinity of the symbol for fish would be found the symbols for scales, net, fins, tail, gills. This simplifies the labour, which in any event must be so strenuous that it is evident that the compositor's end of the Chinese newspaper should, if perfect justice ruled, be the highest paid.

The compositor is a staid and dignified individual, and as he slowly walks from symbol to symbol, picking up those which he requires with provoking calmness, the American compositor might well wonder when the work would be completed; and to set up the limited type required for a small four-page daily paper the constant labours of eight or nine skilled Chinamen are required for twelve or thirteen hours the entire work in every department being the antipodes of the rush and whirl and marvellous celerity of the modern American publication.

When the paper is set up, it is printed on an American press, but the type, the symbols, are all made in China.

There are three other newspapers published in San Francisco besides the one described—the "Chinese World," the "Oriental News," and the "Commercial News." Nearly all have some special object in view. Thus the "World" is a reform paper, virtually the organ of the Empire Reform Association, a club or society which is very influential in Chinese circles in San Francisco, and said to include a fourth of the entire population. The "World" opposed the Boxers, is pro-American in its ideas; its editor is Tong Chong, a friend of the late missionary, Mr. Masters; a man of high culture and many attainments, who has, by the aid of the society, of which he is secretary, attempted to reform the entire Chinese nation. He hopes to accomplish this by educating the people up to a point where they will overthrow the Manchu power seated in the Empress and with the Emperor upon the throne literally open China to reforms of all kinds. Tong Chong has found that even in America the path of the reformer is not over a bed of roses, as having aroused the enmity of the Manchu party, or that of the conservatives of the Chinese, the ultra-intolerants of reform, he has been confronted with the mailed hand of China more than once; and finally unable to reach him directly, his relatives in China were thrown into prison, charged with his crime—a lever by which the Empress hoped to change the policy of the Chinese-American journal, which is virtually the organ of the muzzled Emperor of China. Native journalism in China is still in its infancy, so far as perfection of appliances is concerned, yet the Pekin Gazette is the oldest newspaper known, having begun publication nearly one thousand years ago; so long in the past that the "original copy" has disappeared; but the many modern newspapers published in the great cities of China suggest that the beginning of a new era has dawned.

THE KEEN OF THE SOUTH OF IRELAND.

ILLUSTRATIONS OF AN ANCIENT CUSTOM.

By LECTOR.

II.

Through Mrs Leary's instrumentality, Croker informs us, he subsequently became acquainted with an old man named Murray, who styled himself "a land-surveyor and philomath," who had some knowledge of the Irish language. From these oral sources and from three or four manuscripts, for which he was indebted to Dr Lee of Hartnell, Sir Lucius O'Brien, and Sir William Betham, were formed the selection of "Keens of the South of Ireland," which Mr Croker published under that title, as stated at the head of this paper, from which it has been exclusively compiled. Several of these "Keens," such as "The Convict of Clonmel," "The Lament of O Gnive," and the "Keen for O'Sullivan Beare," all three versified by J J Callanan, Dr Sigerson's version of "Felix M'Carthy's Keen for the Loss of His Children," Dr Geoffrey Keating's "Exile's Farewell," and "The Miseries of Ireland," "The Keen on Maurice Fitzgerald, Knight of Kerry," and the "Keen of Sir John Fitzgerald, son of the Knight of Glin," have been reprinted at various times, in the last instance in the Cork Archaeological Journal but the following specimens of the Keen are of Croker's own versification, and form probably more typical samples than those above enumerated, of this now extinct Irish mode of lamentation:

THE FAIR KEEN ON EDMUND WALSH AND ARTHUR LEARY.

This Keen, or rather dialogue, obtained from Mrs Leary by Croker, relates to a farmer named Edmund Walsh, who about the middle of the 18th century was hanged and beheaded at Cork for for the murder of his neighbour and gossip, Arthur O'Leary. Walsh, though a married man and the father of two children, had become entangled with a woman named Fahey, who urged him to murder his wife so that he could marry her. He actually went so far as to enter her room with a razor; but the sight of his children sleeping quietly deterred him from accomplishing the act. Though still incited by Fahey, he rushed forth from the house, and while engaged in a violent altercation with her on the high road, Arthur O'Leary happened to pass. Thinking that he must have overheard sufficient of their conversation to criminate him, Walsh wrenched a bar from the gate, and following Leary, struck him a violent blow on the back of the head, which felled him to the ground. Whilst he was consulting with his paramour as to the disposal of the corpse, the parish priest came up; and after him, too, Walsh rushed madly, intending to kill him likewise, so as to prevent discovery. But the priest, roused by his furious demeanour, stuck spurs into his horse, and plunging into the Ownabuoy, or Carrigaline River, escaped by swimming it across. "Ah!" you have escaped me," shouted Walsh in Irish, "God is good to you to have inspired you to ride with blessed spurs. For the skin of my neck has been tanned to-night to make leather for the spurs of the devil." which last remarkable sentence afterwards became a idiom in the district.

The priest believed that he had become suddenly deranged, and so it was reported next morning, Leary having left his home for a few days to attend a fair, and a week elapsing without tale or tidings of him, the rumour gradually spread abroad that he must have been murdered. It was finally arranged that a pack of foxhounds should be utilised for the discovery of his dead body, and on the appointed day "every man and boy in the six parishes gentle and simple, assembled at the hunt which was given out for Arthur Leary." His remains were found by the dogs in what is locally termed "a double ditch," in which they had been thrust with merely a few loose stones and sods placed over the entrance. The coroner's inquest revealing the fact that the money Leary was known to have about him was still in his pockets, so that the crime was not due to robbery, suspicion now fastened on Walsh, as the murderer of his gossip.

On Walsh being brought into the presence of his victim the corpse was said to have gushed out blood at the ears and nose. Walsh was immediately made prisoner, sent to Cork, tried at the ensuing assizes, found guilty on the evidence of Mary Fahey, who turned approver, and pursuant to his sentence was hanged at Gallows Green, and his head spiked on the south gaol of Cork.

Some years after the murder of her husband, the widow Leary met Walsh's daughter at the Fair of Carrigaline, when the following Keen or dialogue took place:—

Mrs Leary—"Is not that Ned Walsh's daughter
In the cloak blood-money bought her?"

Walsh's Daughter—"Yes, I am she, Ned Walsh's name
Is one that makes me feel no shame;
Yes, I'm his child—though you have seen
My father hanged at Gallows Green!
The Lord be good unto his soul,
It was no horse or cow he stole;
Nor was it for arrears of rent
That Edmund Walsh to gaol was sent."

Mrs Leary—"If not for these, it was for worse;
Your father had the country's curse.
By him was killed the best of men;
He, at one blow, made orphans ten,
And changed to grief their infant mirth,
Beside the mournful widow's hearth;
One heavy blow with bar of gate
My heart at home made desolate.
Huntsmen and hounds at break of day
Went forth to search all Kinalea;
And by the dogs Arthur found,
Not fairly buried in the ground;
But his bruised body headless thrown,
Like carcass that no friend would own;
Murdered he was by gossip's hand
For whom he would have staked his land."

Walsh's Daughter:—"Small would have been the wish of ground,
When no one need for Walsh be found;
My father had so much of pride,
Ten thousand deaths he would have died,
Before a favour he would take,
Or ask a boon for friendship's sake,
A blow in passion that was given,
Through Christ may mercy find in heaven."

Mrs Leary—"If I had silver and had gold,
As much as in this fair is told,
I'd give it all, and think I'd be
A gainer, could I Arthur see.
My two best cows, the gown I wore—
Aye, all I had—I'd freely give
To see again my husband live."

Walsh's Daughter—"Alas! alas! my father dear,
No sign he showed of guilt or fear,
When on the car I saw him bound,
I saw the rope his neck around;
And on a spike I saw his head,
When he was sleeping with the dead.
His corpse in Templebready lies,
Keened by the white-winged seagulls' cries."

(Templebready stands near Campden Fort at the entrance to Cork Harbour, to which its dismantled church forms a prominent landmark.)

KEEN ON MR. HUGH POWER.

(This Keen whose author was said to be one Edmund Wall, was obtained by Croker from Murray the old itinerant surveyor, before-mentioned. Its subject, Hugh Power, was "one of the brightest men in Munster and the champion of all sorts of learning, who lived mid-way between the siege

of Limerick and our times, at a place called Knockastocaune (the Hill of the Stake) east of Castle Lyons, and north of the River Bride, in the Co. Cork.")

"Last night to my sorrow,
I heard through my dreaming
The voice of the Woman (i.e., the Banshee).
Of Fate sadly screaming;
Around me they flitted,
With mourning and weeping;
And the loss of my comfort
I knew through my sleeping.

I found it this morning
My best friend was taken.
From the stock of the Powers
The best limb had been shaken—
Hugh, the manly in heart,
And the princely in sp'rit,
Who, from lofty descent
Did these virtues inherit.

O Death! you're my ruin,
My woe and distraction;
You have crushed all my hopes
By this cruel action,
As a hive full of honey,
My heart you have rifled;
And within it all joys,
Like bees, have been stifled.

O Death! you have robbed me,
And taken my treasure;
You've made me a bankrupt
For ever in pleasure;
You've struck down and trampled
My prop and protection,
And left me the victim
Of grief and dejection.

The darning of needles
Red-hot I'm enduring,
Through my heart's inward core,
Without hope of curing,
Through my lungs and my liver
I feel my disaster;
Where's the doctor can cure it
With physic or plaster?

Hugh, the lov'd son Pierce,
Who for bright conversation
All scholars exceeded
Of this learned nation.
Seven weeks at one sitting,
Without thought of tiring,
I could hear your discourse
In silent admiring.

There's grief and confusion
Both above us and under,
In the voice of the Heaven
That speaks with its thunder.
In the fall of the waters
Tumultuously rushing
Through their deep furrowed channels
So furiously gushing.

The earth that we tread on
To its centre doth tremble,
At the cry, that no cry
Of this earth doth resemble;
For the Keen of the dwellers
Of dark Cairn Thierna
Has reached Una's palace
On misty Knockfierna.

With the gush of the night-wind
So dolefully sweeping
To Knocklienah and Cashel
Is carried the weeping;
Thence onward it travels
To high Knockahannah,
Till the accents of wailing
Reach gray Slievenagranna.

From her rocky bed starting,
The hag of the mountains
With her shrill voice wakens
Hill-cries beyond counting,
Loud and long is the screaming—
The land's in commotion,
Till the full song of Death
Is spread over the ocean.

In its caves and recesses,
For Hugh there is mourning,
The deep moaning of waves,
And their heavy returning,
Comes back on Cairn Thierna
With mighty sound swelling,
Where the Women of Fate
Have their mystical dwelling.

When raising their voices
Beyond all believing,
They send forth their wild shrieks
Of uttermost grieving;
For Hugh was their neighbour,
And he would not vex 'em
By the crossing of straws,
Or sad tricks to perplex 'em.

Hugh Power was of horsemen
The best and the boldest;
He heeded not weather
The wettest or coldest.
At the tail of the hounds
When horn ceased sounding,
Over hedges and ditches
Away he went bounding.

From their dens and their burrows
Fox and badger he'd follow;
No man was his equal
At giving the hallo!
To a field of true sportsmen,
As the view it was cheering,
To see Hugh's red jacket
Among them appearing.

Hugh Power was a dealer
In wine, to small profit;
For he gave more away
Than he ever sold of it.
His house was a refuge
To the harper and poet;
But why need I tell this,
When all men must know it?

Hugh's death is a great blow
To science and knowledge.
The Latin he'd construe
With the head of a college;
The wit of the English,
Of Irish the sweetness,
No one understood with
His critical neatness.

Where now is the music
That dwelt in his finger?
What so oft has made me
Delighted to linger?
From three strings of catgut (the double bass)
More sweetness he'd saw out,
Than fror forty a harper
Could manage to claw out.

Then the pipes so melodious,
He made them quite speaking;
And not like an old sow—
Now grunting—now squeaking.
No churn of his labours,
Without once reposing,
He'd play for the asking,
The tunes of your choosing.

Who now will be foreman
Of Conogh's Quarter Sessions,
To visit with justice
All lawless transgressions.
The poor man his equal,
Will not find another,
Who'd bring in as guilty
His father or brother.

Many great lords and chieftains
To him were near cousins;
I could number them up
By the scores and the dozens.
There was Sarsfield the Valiant,
Who bade William defiance,
And the Lord Barrymore,
Of the grand Castlelyons.

The proud Duke of Ormond,
Of the lofty Kilkenny,
Lord Power, and the Roches,
Of Creg, and of Renny;
The Chief of the Barretts,
With the Smiths of Molanna,
And the Lord Grandison,
Of the lovely Dromana.

The Condons of Cloughlea,
That was sold by a piper;
May he caper in hell,
To his tune, the false viper;
And the honest MacDonough,
The Lord Cahir and MacCarties,
And the Cusheens who bullied
All men and all parties.

Pierce Power has this morning
My heartfelt compassion;
In the hunt with his brother
Again he'll not dash on,
Hugh's wife has no husband;
Her children no father,
But the corpse round whose coffin
With loud cries they gather.

Hugh's greatness and glory
Lies fallen and humbled,
Like the stronghold of Erin,
To silent dust crumbled.
Again can I never
For friend or relation
Feel anguish so bitter,
As on this occasion.

(The Cairn Thierna above-named, is a fairy-peopled hill near Fermoy. Knockfierna is a mountain in the county Limerick. The crossing of straws is an allusion to the superstition that two straws put across the fairies' path caused them to stumble. Cloughlea Castle in the grounds of Moorpark, the seat of Lord Mountcashel, which was betrayed in 1649.)

(To be continued.)

NEST BUILDING FISHES.

It is generally supposed that fishes take no care whatever of their young, leaving them entirely to the attention of nature; but the fact is much otherwise with many species. The most remarkable point, however, regarding certain fishes is, that the males do the care-taking, and not the females.

If you will go out any time during the month of August, in this latitude, you will see in streams and ponds big catfish of the common sort, each one accompanied by a swarm of small fry. In each case the old one is a male, and he is engaged in taking care of his offspring. If an intruder comes near the catfish will dash at him and drive him away.

It has been known for a long while that catfishes had this way of guarding their youth, but only lately has it been ascertained that it was the papa fish which did the care-taking.

Some time back there was a pair of catfish in one of the aquaria at the building of the Fish Commission in Washington. At spawning time eggs were laid, and one of the parents kept watch over them, not permitting the other parent to come near. The young were duly hatched and thrived, being cared for in this way until they were big enough to look out for themselves.

In their native ponds and brooks you will find large broods of young catfish as big as three-fourths of an inch in length remaining together in schools, each school accompanied by the male. Sometimes he will swim slowly along the centre of the young ones, and at other times alongside.

In laying their eggs the parent catfishes select a spot where the water is quiet, if possible, protected by aquatic plants, and there they make a nest, perhaps eight inches by six, including the spawn.

The nest has a soft outer envelope, and over it the male hovers, forcing fresh water through the mass by rapid vibrations of his fins, until after about a week the young are hatched.

Sometimes the male catfish takes care of its young in a still more peculiar manner. There is a kind found in the sea, the eggs laid by which are as large as a small bullet. These eggs are found in the mouths of the males, which do this to protect them.

After the eggs are laid the parent catfish takes them into his mouth, and keeps them there until they are all hatched, when they go out and take care of themselves.

But this method is not confined to catfishes. There are found in Africa and South Africa a species which resemble the sunfish of our own streams. These "cichlids," as they are called, are also plentiful in Texas and Palestine. They are often found with their cheeks fairly bulging with young.

In the Sea of Galilee the cichlids are so numerous that the miraculous catch of the time when Saint Peter fished there might be repeated any day, it being the manner of these fishes to move about on the top of the water in solid masses, covering many square yards, and making a noise like that of rain pouring.

THE ANCIENT AND PRESENT STATE OF THE COUNTY AND CITY OF CORK.

By CHARLES SMITH, M.D.

Æquum est enim meminisse & me, qui discerem hominem esse, et vos, qui Judicetis ut si probabilia dicentur nihil ultra requiratis. Cicero Univers.

In Two Volumes.

VOL I.

The Second Edition, with Additions.

BOOK II.

Containing the Topographical Description of this County, including the City of Cork.

CHAP. I.—Continued.

Containing the Topographical Description of this County, including the City of Cork.

The south wing was formerly called the chauntry of our Blessed Saviour. It was purchased from the mayor and corporation of Youghal by the Earl of Cork, March 29, 1606. By which deed he was not to molest the ancient burials in this place. He repaired the chapel, and in his lifetime erected an handsome monument for his family, according to the taste of those times, in marble and alabaster. On this monument are the effigies of this nobleman, lying at full length, on his left side, in armour, his head supported by his left hand, and below are figures of nine of his children, with the dates of their births on the pedestals, thus: 1. Roger Boyle, natus 1 August, 1606. 2. Richard Boyle, natus 20 October, 1612. 3. Galfridius Boyle, natus 10 April, 1616 (He was drowned in the college well in this town). 4. Lewis Boyle, natus 23 Martii, 1619. 5. Alicia Boyle, nata 20 Martii, 1607. 6 Sarah Boyle, nata 29 Martii, 1609. 7. Letitia Boyle, nata 23 April, 1610. 8. Joana Boyle, nata 14 Junii, 1611. 9. Catherina Boyle, nata 22 Martii, 1614.

Over the effigies of the Earl is this inscription, on a black marble:

"Richardus Boyle miles, dominus Boyle baro de Youghal, vicecomes Dungarvan, comes Corcagiensis, dominus summus hujus regni Hiberniæ thesaurarius et de privato consiolio domini regis tam Angliæ quam Hiberniæ, ex antiquissima Boylorum familia Herefordiensi oriundus, qui patrem habuit Rogerum Boyle armigerum, matrem itidem generosam Joanam Nayleram et solo cantiano profectam, cum duas sibi invicem junxisset uxores, primam Joanam filiam & cohæredem Guilelmi Appesly armigeri, nulla superstite prole; alteram preclare secundam Catherinam natam domini Galfridi Fentoni equitis, regiæ majestati hoc regno a secretis, postquam varios pro republica cepisset labores, nec immeritos honores, conscendisset, ipse jam septuaginta septem annos natus, ac mortem indies imminentem expectans sibi & posteris suis, hoc prosuit monumentum sacrum memoriæ.

Ipse de se,

Sic posui tumultum, superest intendere votis,
Parce animæ, carnem solvito, Christe veni."

Beneath this inscription are these following:

"Hicjacet corpus reverendi patris Johannis Boyle, sacræ theologiæ doctoris, episcopi Corcagiensis, Clonensis & and Rossensis, ac fratris majoris natu Richardi comitis Corcagiæ, &c., qui obiit decimo die Julii, anno Dom. 1620. ætatis suæ 57.

Hic etiam jacent sepultæ Elizabetha & Maria Boyle, hæc Richardi Smith militis, illa Piercii Power armigeri uxor, ambæ sorores predicti Richardi domini Boyle Corcagiæ comitis.

Hic jacet prænobilis David dominus Barry, procomes Buttevant, primus comes Barrymore, commissione regia pro gubernatione Momoniæ, primo designat. heros, prinlipi & coronæ Anglicanæ fidelissimus, de republica durante Hibernicorum rebellione optime mærens, verreque christianæ religionis cultor præcipuus, qui obiit 29 die Septembris 1642. annoque ætatis suæ 38."

Around the above marbles are several escutcheons of his children, near which are the following inscriptions:

Towards the top,

"Richard earl of Cork married two wives, the first Joan, one of the two daughters and coheiresses of William Apsly, esq., who died in travel of her first son, which did not survive her. The second wife was Katherine, the only daughter of Sir Geoffry Fenton, knt., secretary of state in Ireland, by whom he had issue seven sons and eight daughters."

"The lady Margaret Boyle, eighth daughter of the earl of Cork, died, and lieth here intombed."

On the right side, issuing from the above inscription, in the manner of a genealogical table, are the following:

"Sir Richard Boyle, knt., son and heir apparent of Richard earl of Cork, married Elizabeth, eldest of the two daughters and coheiresses of Henry lord Clifford, earl of Cumberland, and hath issue,

"Sir Lewis Boyle, knt., lord Boyle, baron of Bandon-bridge, and lord viscount Boyle, of Kinalmeaky, second son of Richard earl of Cork, married the lady Elizabeth, daughter of sir William Fielding, knt., lord baron of Newenham Padox, viscount Fielding and earl of Denbigh. Slain in the battle of Liscarrol, Sept. 3, 1642 (8)."

"Sir Roger Boyle, knt., lord Boyle, baron of Broghill, third son (14) of Richard earl of Cork, married the lady Margaret, daughter of Theophilus, lord Howard of Walden, earl of Suffolk."

"Francis Boyle, esq., fourth son of Richard earl of Cork, married Elizabeth, daughter of sir Robert Killigrew, knt., late vice-chamberlain to Mary queen of England."

"Robert Boyle, esq., fifth son of Richard earl of Cork."

"Roger Boyle, eldest son of Richard earl of Cork, being a scholar at Deptford, in Kent, died there the 10th of October, 1615, and there lies intombed."

"Geoffry Boyle, third son of Richard earl of Cork, died young, on the 20th of Jan., 1616, and lieth here intombed."

To each of these inscriptions are escutcheons (those who were married) impaled with the arms of their ladies, with proper differences for the several sons; and on the left hand are the underneath inscriptions, with the several coats of arms of his daughters, impaled with the bearings of their husbands:

"David, lord Barry, lord viscount Buttevant, first earl of Barrymore, married the lady Alice Boyle, first daughter of Richard earl of Cork."

"Robert, lord Digby, baron of Geashil, married the lady Sarah Boyle, second daughter of Richard earl of Cork, being then the widow of sir Thomas Moore, knt., son and heir to Garret lord Moore, lord viscount of Drogheda."

"Colonel George Goring, son and heir to sir George Goring, knt., lord baron Goring of Hurst-Pierpoint, married the lady Lettice Boyle, third daughter of Richard earl of Cork."

"George Fitz-Gerald, earl of Kildare, married the lady Joan Boyle, fourth daughter of Richard earl of Cork."

"Arthur Loftus, Esq., son and heir of Sir Roger Jones, knt., vice-treasurer, and treasurer at wars in Ireland, married the Lady Dorothy Boyle the sixth daughter of Richard Earl of Cork."

"Sir Arthur Loftus, knt., son and heir of sir Adam Loftus, knt., vice-treasurer, and treasurer at wars in Ireland, married the lady Dorothy Boyle, the sixth daughter of Richard earl of Cork."

Charles Rich, esq., second son of Robert, Lord Rich, of Leeze, Earl of

(8) In a letter to M. Marcombes, his son's tutor, directed to Geneva and dated 18 Jan., 1639, the earl of Cork says, "On St Stephen's day my son, Kinalmeaky was married, in the king's chapel in court to the lady Elizabeth Fielding, daughter to the countess of Denbigh. The king gave her in marriage unto him, and the queen presented her with a jewel, valued at £1,500, which the king, with his own hands put about her neck, and did the young couple all honour and grace."

In the same letter he says "My daughter Dungarvan was speedily delivered of a boy; and on the 12th of December, it pleased the king's majesty to christen the child, by the name of Charles, being assisted by the marquis of Hamilton and the countess of Salisbury. Your friend Broghil is in a fair way of being married to Mrs Harrison, one of the queen's maids of honour; about whom, yesterday, a difference happened, between Mr Thomas Steward the earl of Berkshire's son and him, which drew them into the field: but, thanks be to God, Broghill came home without any hurt and the other gentleman not much harmed: and now they have clashed their swords together, they are grown good friends. I think, in my next, I shall advise you that my daughter Mary is nobly married, and that at the spring I shall send her husband to keep company with my sons at Geneva."

(9) Third son then living when the monument was erected. Geoffry, the third son, being dead, was left out of the number; and yet, under his effigy he is called the third son, as he really was.

Warwick, married the lady Mary Boyle, the seventh daughter of Richard earl of Cork."

On the top of the monument are these lines:

"Precatio viventis.
Quam patre, quam prole, & gemino quam conjuge faustam
Fecisti, o faustam fac faciendo tuam."

Under which is the effigy of the Earl of Cork's mother, Joan Naylor, lying on her left side, her arm leaning on a bible. She is habited in the dress of the times; on her head is a large straw hat, and she has a Queen Elizabeth's ruff and fardingale, all of alabaster painted over. And on each side of the Earl are the effigies of his two wives, the one at his head, the other at his feet, in a praying posture, also in alabaster, placed in two niches, supported by pillars of a reddish marble.

On the south wall is a cartouch of white Italian marble, to the memory of the first Earl of Orrery, with this inscription:

Memoriæ sacrum
Rogeri Boyle, primo comitis
De Orrery, et Baronis
De Broghill;
Qui dum vixit multis pariter et fummis
Honoribus et officiis fungebatur;
Mortuus vero summo cum viventium luctu
Obiit decimo sexto
Die Octobris anno Domini 1679.
Annoque ætatis fuæ 59.
De quo non hic plura requirat lector,
Quoniam omnia de ingenio et moribus,
vel ex fama,
Vel ex operibus, deignoscere possit.

In the same chapel there is an ancient tomb, on which are the effigies of a man and woman lying at full length. At the feet is this inscription:

"Here lieth the bodies of Richard Bennet, and Ellis Barry, his wife, the first foundress of this chapel, which being demolished in the time of rebellion, and their tomb defaced, was re-edified by Richard, lord Boyle, baron of Youghal, who, for reviving the memory of them, repaired this tomb, and had their effigies, cut in stone, placed thereon, anno domini 1619."

On a stone in the same chapel, part of the inscription being covered by a wall, are these lines:

(10)—Lord president of Munster, an. dom.
(10) Lord president of Munster, an. dom. 16.
Munster may curse the time that Villers came,
To make us worse, by leaving such a name:
Of noble parts, as none can imitate,
But those whose hearts are married to the state.
But, if they press to imitate his fame,
Munster may bless the time that Villers came.
16—

On a flag stone, near the rail of the Communion table, is this inscription:

"Here lieth the body of John Fitz-Gerald, of the Decies, who departed this life, the first of March, anno dom. 1664. Also here lieth the body of Katherine, his wife, daughter of the lord John Power, baron of Curraghmore, who departed this life the 22nd of August, anno dom. 1660. Who were removed by the earl Grandison, their grandson, to his vault in the chancel, anno 1736. And here also are interred his two daughters, the ladies Anne and Katherine Villiers. Also his son, the right honourable William, lord Villiers, who died the 16th of December, 1739."

On a pillar, near the W. door, is this inscription:

"Near this pillar lieth interred the body of John Perry, esq., who departed this life October 29, anno dom. 1712, in the 51st year of his age. He was a native of this town, and, by an early application to business, acquired a very considerable fortune in the island of Antigua, and other foreign plantations. By his last will, among several other charitable legacies, he bequeathed to the poor of Youghal £300 sterl. the interest thereof, or the produce by purchase, is to be yearly distributed, May 29, at the church door of the said parish, as the lord bishop of Cloyne shall then nominate and appoint. Be merciful after thy power, &c."

I cannot quit this church without taking notice that it is as well filled on the Sabbath day as any parish church in Ireland. There are also in this town one Presbyterian and one Quakers' meeting-house. Not far from the church is the college, which was repaired and beautified for a dwellinghouse by the first earl of Cork, but most of it at present is in a ruinous condition. Near it stands an alms house and free-school, founded by the same nobleman. The first, for six poor widows, who have each of them lodging, firing, and £5 per annum. The schoolmaster has £30 a year salary. The Earl of Cork procured letters patent, and licence of mortmain, for these endowments, as well as for his alms-house and schools at Lismore and Bandon, which bear date 19 of Feb., 1613. Near this is another alms-house, built by Mr. Maurice Ronayne, of Dlaughtane, in the county of Waterford, for the support of six poor widows, who have a small stipend allowed them. Mr. Thomas Croker bequeathed £4 a year, to be distributed every St. Thomas's day; and Mr. John Spence also left £20, to be yearly distributed to the poor of this parish for ever, anno 1690.

This town from south to north is about an English mile long, consisting, mostly, of one street, intermixed with new and old houses; this street, towards the south end, is crossed by an high square tower, called the clock gate, from one being underneath, and a clock placed thereon; so that it is divided into upper and lower. The upper, which is the greater part, extends north, and the base town (as Cambden calls it) to the south. The whole is situated on the side of a hill, on an arm of the sea, with a tolerable good harbour before it. The walls on the west side extend the entire length of the town, ranged along the hill; they are flanked with some old towers which, with the wall, were weak and ruinous till lately repaired, as were also the gates. On the side of the hill, beneath the town wall, are a range of pleasant gardens that considerably add to the beauty of the prospect which the town makes from the opposite side of the river. Most of these gardens are well stored with various kinds of fruit, which, lying open to a good exposure, ripen early; so that these lines of Mr. Thomson may be here justly applied:

——— The funny wall,
Where autumn basks, with fruit empurpled deep,
My pleasing theme continual prompts my thought.
Presents the downy peach; the shining plumb;
The ruddy, fragrant nectarine; and dark,
Beneath his ample roof, the luscious fig.
The vine, too, here, her curling tendrils shoots;
Hangs out her clusters glowing to the south,
And scarcely wishes for a warmer sky.

House rent is very low, and good provisions cheap; so that people of a moderate fortune may live here very comfortably.

The entrance into the bay is dangerous to strangers, there being a bar that cannot be passed till half flood. Towards the sea the town is defended by a small fort or block-house, mounted with cannon; near it is a mole for shipping, and a quay to load and discharge goods; adjacent to it stand the exchange and custom-house: Over the former the town council meet to transact the affairs of the corporation. The revenue here is managed by a collector and other proper officers; but of late years the trade of this port is very inconsiderable, being mostly confined to vessels trading to Bristol with woollen yarn. It is said this town formerly rivalled the city of Cork in trade, and considering its situation on a fine navigable river; and its commodious harbour, where ships are no sooner almost under sail than in the ocean, it is surprising its commerce should be in so declining a state (11). There is at present a manufactory of earthenware here, which they begin to make tolerably good.

(To be Continued.)

THE CROMWELLIANS AROUND DUBLIN.

Mr. MacArthur writes:—In addition to the report given last week of the events connected with the progress of the Cromwellians near the Irish capital, we have also an account "published by authority" in 650, in London, and entitled, "A History or brief Chronicle of the Chief Matters of the Irish Warres, with a perfect Table, a List of all the Victories obtained by the Lord Generall Cromwell, Governor of Ireland, and the Parliaments Tories under his Commands there," we have the openirg of the events leading to the Battle of Rathmines given, "Captain Norway, with a party of the horse from the Lord Lieutenant and some additional horse of Dublin sallyed out and killed 40 of Ormond's men and took Mr. Eliot (who was afterwards hanged), and Captain Barkerfield, with other prisoners. August 2nd—Lieutenant-General Jones sallied out of Dublin and took Baggotsrath from the Marquess of Ormond. Afterwards, the same day, he routed their whole body, save only some horse that were then gone with the Lord Inchequeen towards Munster, at which time 4,000 of Ormond's men were slain by two hours' fight, and 2,517 taken prisoners. There were also taken 8,000 armes, 100 colours, 7 pieces of ordnance, 200 draught oxen, 500 tents, divers carriages, boardes, boxes, trunks, great store of treasure and merchandise, which was in their tents." The report then mentions on the following day the taking of the garrison of Rathgar "after that he took in Ramaines (Rathmines), then Rachfarnham (Rathfarnham) also was taken by him." Next came a raid on Maynooth, and "the garrison at the Naas," and General Jones came back to the capital and took "the Phœnix, the strong house of the late Earle of Strafford, near the City of Dublin," and the garrisons of Drumconragh (Drumcondra), and Decbragh (Cabra). Cromwell landed at Ringsend a few weeks after and made his camp at Crumlin. Henry Cromwell being made the Commander-in-Chief in Dublin, and later on was appointed by his brother Richard, Lord Lieutenant.

(10) Sir Edward Villers, knt, was lord president of Munster, anno 1624. He died September 7, 1626.

(11) Anno 1698, according to capt. South's account, there were in his town, 40 seamen, 114 fishermen, and 46 boatmen; whereas Cork had but 183 in all. Among those in Youghal, were 135 papists. Phil. Trans. numb. 261. p. 591.

LITERARY NOTES.

Mr. Elliot Stock, of Paternoster row, London, has recently brought out a publication which has much interest for Irish readers. It consists of a collection or calendar of documents relating to the Blake family or clan, which has been compiled by Mr. Martin J. Blake, B.L., of Lincoln's Inn. Mr. Blake has performed his task in a most admirable manner. The volume contains a series of papers relating to the Blake family extending over close on three centuries, namely, from A.D. 1315 to A.D. 1600. The documents in question number no less than 173, and all of them attest in the most convincing manner the extent of the territorial possessions of a clan, the heads of which must have been men of no ordinary capacity and repute.

✧ ✧ ✧

One of the most interesting portions of the book consists of certain records of the fifteenth and sixteenth centuries, containing the probate grants of wills issued by the Ecclesiastical Court of the Archdiocese of Tuam. One of Mr. Blake's discoveries is a writ of Henry VI. setting out an Act of the Irish Parliament during the reign of King Henry IV.—A.D. 1402—which does not appear in any of the modern editions of the ancient Irish Statues, and which prohibited "forcible entry" on land. The writ in question, curiously enough, was directed against an ancestor of our last Viceroy, Earl Cadogan. This was one William Blake, a merchant of Galway. It appears that in 1810 a Miss Honoria Louisa Blake, the fifth daughter of Joseph Blake, of Ardfry, county Galway, who was tenth in lineal descent from the aforesaid William Blake, married George, third Earl Cadogan, the grandfather of the present Lord Cadogan. Mr. Blake's most useful work contains numerous ecclesiastical documents of the fifteenth and sixteenth centuries, among which may be noticed an appointment to the benefice of the parish of Kilmacduagh by the delegate of Denis (O'Cahan), Bishop of Kilfenora; a mandate by the Ecclesiastical Court of the Archbishop of Tuam, directing the Municipal Court of Athenry to carry out a decree of the Ecclesiastical Court, "in virtute sancte obediencie et sub penis quicbus decet canonicis"; a power of attorney from Sir John Rawson, Knight, Prior of the House of the Hospittallers of St. John of Jerusalem at "Kilmaynan, near Dublin," to Stephen, son of James Lynch, of Galway, to collect all rents and tithes belonging to that hospital in Connaught. The work, which is illustrated by photographic reproductions of numerous documents, should be on the bookshelf of every student of Irish history.

✧ ✧ ✧

Professor Saintsbury, in the first volume of "The History of Criticism" (of which another volume is now imminent), describes "Demetrius" as on this question of style "not far from the kingdom of heaven," by which it may be presumed he means the excellent literary ideals of the old "Saturday Review." Demetrius is, in fact, a stickler for style as distinct, though not separable from substance, and a champion of prose rhythm—"that other harmony of prose." Professor Roberts's translation may be commended to the most modern and least classical of readers, for it is full of sound maxims still curiously pertinent. Nor is the learned editor unaware of, or indifferent to the latest doctrines. He finds Stevenson's essay on style more like Demetrius than anything since the days of the classical writers on rhetoric, and quotes with approval M. Anatole France's dictum that the vice of "ecrire trop bien" is the worst vice of all.

✧ ✧ ✧

We have heard lately of a school for journalists, with courses of lectures on the "Ethics of Reviewing;" but there is as yet I think no special school for critics. One school for critics at least is open for "improvers." Besides the classes of literature, there are the classics of literary criticism. And in this relation one must specially commend the good work that is being done by Professor Rhys Roberts, of Bangor. His admirable edition of "Longinus on the Sublime," and of the "Three Literary Letters of Dionysius of Halicarnassus," have been already, it is not too much to say, warmly welcomed by learned Europe. He has followed them up with a similarly learned edition, with translation, introduction, notes, and bibliography of "Demetrius on Style," just issued by the Cambridge University Press; and in a foot-note herein he promises next to turn his attention to "Theophrastus on Style," to collect the chief fragments, and to review the scattered references made to the work in antiquity.

✧ ✧ ✧

What should be done with the houses associated with the names of our great men? (asks a literary contemporary). The question has been answered satisfactorily in regard to Carlyle's birth-place; it has not been answered so satisfactorily as we could have wished in regard to Lord Leighton's house, but time is on the side of the living. The proposition to purchase Gilbert White's house at Selborne has been very well received, but the sum required, over £8,000, is comparatively large, and a suggestion has been made that the place, when secured, should be rendered self-supporting. As there is more space available than would be required for a museum or any such definite memorial of White, it is proposed to turn the remaining rooms to the purposes of a boarding-house under the control of a competent manager. The idea is ingenious, and there seems no reason why it should not work out well, though some sort of selective principle would have to be employed to secure suitable guests. Is the membership of the Selborne Society sufficiently large to ensure a paying clientele for the boardinghouse plan? Or only subscribers to the purchase fund, or such guests as they might recommend, might be admitted to the shelter of Gilbert White's old roof.

✧ ✧ ✧

A writer in the current issue of the "Academy," whose object it is to refute the notion that the short story does not flourish in these countries, gives some interesting statistics regarding the output of literature of this class. "Starting," he writes, "without any theory of my own in regard to the public taste for or against short stories, I recently asked the editors of certain leading magazines and a leading fiction syndicate to tell me how many short stories they had published during the last twelve months. The figures with which I was courteously furnished are as follows:—

"Pall Mall Magazine	63	short stories.
Strand Magazine"	62	,, ,,
"Pearson's Magazine"	67	,, ,,
"Harper's Magazine"	88	,, ,,
"Tillotson's Newspaper Syndicate	200	,, ,,

Such statistics, while they indicate strongly the existence of a thriving short-story industry in Grub st., do not precisely prove that the public in passing that though all magazines print short stories in every number, some magazines will have nothing to do with serial stories."

✧ ✧ ✧

It seems rather late in the day to establish a Dickens Society, but, nevertheless, such a society is now in existence. On Monday week last it held its first meeting at Anderson's Hotel. The object of the organisation, we are told (remarks the "Academy"), is to unite in a bond of friendship all true lovers of Charles Dickens. Well, we should have thought that the bond of friendship might very well have been left as it was. Beyond the satisfaction of a monthly dinner we hardly see what this new society is to do for its hero or the world. Its object, says "Household Words," is inspired by a "desire to extend the power and influence for good which his writings have had throughout the English-speaking world, and to give those who acknowledge that power and influence the opportunity of meeting each other, so that they may combine in spreading that love of humanity in all its phases which was the keynote and firm foundation of Dickens's writings." But no society, we imagine, will ever make much difference either to the reading or influence of Dickens. He was essentially a writer of popular appeal, and needs this kind of exploitation less than any man who ever wrote. "Above all," said Mr Hall Caine, "Dickens stood for the love of God." That is a generalisation which does not appeal to us. It might be applied with equal force to fifty novelists, but the sentiment of Dickens made the assertion obvious, and so it was made.

✧ ✧ ✧

Mr. Booth Tarkington, the Indiana novelist, announces (the "Academy" remarks) his intention of signalising his entrance into the State Legislature by promoting a Bill providing for an annual literary prize contest, the State to name the judges and award the prizes, amounting to 500 dollars a year. The Chicago "Tribune," which prints the full text of the proposed Bill, furnishes also some interesting comments upon it from Indiana authors. James Whitcomb Riley and Mrs. Mary Hartwell Catherwood, it seems, favour the plan, believing it would tend to bring literature in America under such governmental recognition as is given the profession of letters in most other countries. General Lew Wallace, on the other hand, thinks that "Indiana literature would be out of place appended to the tail of a Legislature. Better leave it entirely to its own independent effort." In this opinion George Barr M'Cutcheon and Charles Major concur. George Ade—Indiana authors are many—sardonically suggests that it would be better to make the experiment in some other State than Indiana, where "every third man, woman, and child is an author in some stage—embryonic, active, or retired." Why not try Massachusetts? he suggests.

✧ ✧ ✧

Mr. Tarkington has at any rate provoked the newspapers to discuss his fantastic scheme more or less seriously. The "New York World" makes light of Mr. Tarkington's plans. "Bounties on beets are one thing," it declares; "bounties on books quite another." It continues: "Reasons why the book crop of Hoosierdom should not be stimulated by a State subsidy system are so numerous that we only mention a few. First, the crop is already large and amply rewarded by an appreciative public consisting of not less than 30,000,000 readers eager for good reading. Second, the average legislator of Indiana, or any other State, is not a competent judge of good literature. Third, 500 dollars is a preposterously paltry sum wherewith to fertilise the literary soil of a great State like Indiana; it would not pay the judges two dollars a day for the time they would require to give to the reading of the 'copy' that would be sent in." "Harper's Weekly" regards the proposition more seriously: "In these days when a multitude of publishers are holding out money inducements of the first order for all creditable literary work, an author with a good saleable manuscript is little likely to 'tie it up' in a State competition on the chance of winning a paltry hundred dollars and the doubtful glory of a 'blue ribbon' bestowed by a State Legislature. In which case the awards would be simply to 'the best submitted' not to the best literature produced in the State; and with none of the star producers 'in the running,' the honour of winning would be reduced to the minimum." "Whatever else may be said of Mr. Tarkington's Bill," declares the "Atlanta Journal," "it gives convincing proof of his interest in his profession and his earnest desire to promote it. If it should become law and result in developing another Booth Tarkington, its passage would be abundantly justified."

SCIENTIFIC TOPICS.

Dr. Gatling, famous for the gun that bears his name, has devised a motor plough driven by a gasoline engine. The truck is said to be constructed like the trucks of traction engines, except that the steam boiler is displaced by a strong platform on which is mounted the motor connected wit the traction gearing. A set of disk ploughs is attached to this truck, and these ploughs can be made to run at any depth or any angle required. It is esaimated that with this machine one man can plough from thirty to thirty-five acres in one day.

✧ ✧ ✧

The Baltimore and Ohio Railroad Company has built four miles of line in Pennsylvania, which is believed to be the crookedest railroad in the United States. This little road will extend from Boswell, Pa., to Friedens on the Somerset and Cambria branch of the Baltimore and Ohio. The air-line distance is about five miles, but the peculiar conformation of the country makes it necessary to loop a number of hills in order to get an easy grade. The new road doubles on itself four times, and at one point, after making a loop of about five miles, the road comes back to within 300 feet of itself on a grade 50 feet lower.

✧ ✧ ✧

In view of the vast extent of the plant and operations of the United States Steel Corporation, it will come as a surprise to many people to learn how large a proportion of the production of iron and steel of the United States is still turned out from mills and forges other than those included in the great steel trust. According to figures published by the American Iron and Steel Association, out of a total production in 1901 of 28,887,479 tons of iron ore, 43.9 per cent. was produced by the United States Steel Corporation, and the balance by individual firms. From this ore there was produced 15,878,354 tons of pig iron, of which 42.9 per cent. was the output of the corporation's furnaces. The total production of Bessemer and open-hearth steel ingots and castings in the same year was 13,369,611 tons, 66.3 per cent. of which was produced by the United States Steel Corporation. They also produced 59.9 per cent, of the steel rails, 62.2 per cent. of structural shapes, 77.6 per cent. of the wire rods, and 50.1 per cent. of a total of all rolled products of 12,349,327 tons.

✧ ✧ ✧

Sawdust in cake form appears to have been used as fuel in Germany with rather promising results. United States Consul A. L. Frankenthal, writing a short time ago from Berne, Switzerland, says that the sawdust cakes are octagon-shaped, 6½ inches long, 3½ inches wide, and three-quarters of an inch thick, weighing about half a pound each. In the district surrounding the factory where these cakes were made the schools were heated by them, the combustion leaving very little ash and proceeding without a large flame. No binding ingredient is said to be used, the sawdust being simply dried and pressed into the desired briquette shape, and owing thus to the absence of tarry or oily substances there is no smoke in burning. The weight of such a briquette indicates the heavy pressure under which it takes its shape, and the edges look like polished oak; in fact, it is heavier than a piece of hardwood of the same size. The demand created by the popularity of the fuel exceeded the supply of sawdust obtainable in the vicinity of the factory, and shiploads were, therefore, procured from Sweden, and cartloads from distant manufactories. Sawdust, which previously could be had for the asking, commanded a market price as soon as it was known that a certain factory could make use of it. Even then it was profitable to manufacture the briquettes; but, unfortunately, the factory was destroyed by fire, and operations came to a standstill. Making sawdust briquettes of this kind would, therefore, seem to be wort inquiring into further.

✧ ✧ ✧

A ten-thousand-acre rice plantation, which cannot be irrigated under the system of surface canals now used, is to be equipped at an expense much less than that at which water can be supplied through such canals in more favoured sections. Wells are to be bored, an abundance of water being obtainable at a depth of fifty feet or less in any portion of the rice belt, and the water drawn by electrically-operated pumps. Each farmer will have his own well, and will be independent of his neighbours and of drought, thus insuring an uninterrupted cultivation and a constant crop of rice. A centrally located power plant will supply power for the wells, rice mill, harvesting machinery, trolley lines, warehouse trucks and equipment, lights for the plantation roadway, store, and dwelling houses, and possibly heat in winter time as well as the means of cooking all the year round. Prof. Knapp, president of the National Rice Growers' Association, which has just closed its session in New Orleans, has long held that a solution of the costly plan of canal irrigation—receiving water supply from rivers and bayous—would be solved by the pumping process, and be followed by an increase of 100 per cent. in the rice output in Louisiana and Texas within five years.

✧ ✧ ✧

The city of Bahia, which is situated on the coast of Brazil, South America, has a population of about 200,000 in habitants who are housed in 17,000 dwellings. The water supply for these people has been furnished by a local company ever since 1852. It is brought from the near by mountains, and thus far the expenditure for the works, including the pipe system, fire plugs, etc., has amountd to £300,000. According to the "Municipal Journal and Engineer," the supply is not adequate to the needs of the city, and for a long time negotiations have been going on between the company, and the city for the purpose of increasing the supply. The monopoly has been renewed for a period of forty-five years, and some valuable franchises and privileges have been awarded the company. On the expiration of the contract the city will have the option to buy the company's plant at the valuation of expert engineers. Every dwelling in Bahia must use water, and the municipal officials of the city regulate the price. For the average dwelling for 422 quarts a day, five pence is charged; twenty-one quarts of water is furnished to the public fountains and hydrants at a low price. The improvements contemplated by the company will cost in the neighbourhood of £120,000, but owing to the financial crisis prevailing in Brazil, the company has been unable to obtain the money required to complete the water system, and, therefore, desires to sell its plant and privileges. The price asked is £220,000. It is estimated that the earning power of the water works, when completed in accordance with the new contract, will be £60,000 a year, and the company purchasing its rights will doubtless be awarded a contract for establishing a drainage system in the city, and for furnishing the houses with sanitary plumbing.

✧ ✧ ✧

An interesting letter on "the Spider at Work" appears in an American contemporary. It is from Mr. W. T. Hollis, of Rison, Arkansas, who writes:—Spiders are very shy and work mostly at night. Hence my efforts were fruitless for a long time. Finally I captured a spider, and confined him in a glass jar. I fed him bountifully, and gave him such attention as to quiet his fears. Often I would take him out into the open air and observe his actions. If it were cool, damp, or windy weather, he would reluctantly leave his quarters. But if it were warm, dry, and calm, he readily came forth, and his excited, eager actions gave evidence of the possession of that innate love of liberty peculiar to all animated creatures. On such occasions he was ever upon the alert to escape. I carried him upon my hat or walking cane, held out horizontally. He would attach a web to the cane and then drop like a flash in order to escape. I always anticipated him and thwarted his plans. He would hang by the webb, which he knew would sustain his weight, until I rescued him. I am satisfied that he estimated the distance to the ground, and that he would have succeeded in escaping had I not raised the cane. He would climb up his web and at the same time roll it up. Often I saw him take up a web, roll it into a pellet or ball and store it away, presumbably for future use. He seemed to shrink from sunshine, preferring a dense shade, and refused to work while the wind was blowing.

✧ ✧ ✧

His actions were most interesting when I would cast a living fly into his quarters. Cautiously he would approach it, dexterously capture his prey, and bind him. I believe, with bits of web formerly used and stored away. In favourable weather he would raise his head and turn to every point of the compass. Whenever I approached a bush he would become excited. I have always believed that spiders depended upon currents of air to transport their cables, but I lacked the proof. Finally my patience and perseverence were rewarded. One day, about four o'clock in the afternoon, when the thermometer stood at about 85 degrees in the shade, and the air was so calm that I could not feel any current, although there was a slight movement in the air from north-east to south-west, I selected a place about 12 feet from a wire fence with green bushes in the rear. Here I had the benefit of the sunlight to observe my spider. His actions proved that he appreciated the favourable situation at its true worth. Poised upon the end of my cane, he set his spinneret in motion. I could see the web floating away with every undulation, glistening in the sunlight as it went on directly to the wire. When it caught the spider stopped immediately. His subtle sense of touch told him of his success. Forthwith he began to haul away on his cable until it was taut and fastened to the cane. Then he went over the tight web like one who loves liberty and values time. I thought he had earned his freedom, and likewise that I had gained the information which I so much desired.

✧ ✧ ✧

A commission of Belgian army officers has recently tested a new automobile tractor which is to be used in the Congo region over the Songololo-Popokabaka route, which was laid out by Commandant Carton with 300 native labourers. The vehicle weighs 3.3 tons empty and will carry a 2-ton load, or packages of the type usually made up for Central Africa, weighing 65 to 75 pounds each. The tyres of the rear wheels are 16 inches wide. Control of the vehicle is easy, and a speed of one mile in 8.3 minutes is reached. The principal tests were made at Ensival, and the vehicle covered a distance of 13 miles, the steepest grade being 14 per cent. In these trials 5.5 gallons of an alcohol and gasoline mixture in equal proportions were consumed. The consumption was about 0.4 gallon of combustible per mile with a load of 5 tons gross, or 2 tons net, making a cost of 6½d. per ton-mile of gross load, or 1½d. for net load. The distance from Songololo to Kwango is 180 miles, this being the route to be covered, and allowing a speed of 3 miles an hour during 10 hours per day, it would require six days to make the single trip. The round trip will, therefore, require about two weeks, counting the time of loading and unloading, or per year the vehicle can make 24 trips. If this automobile is found to work successfully on the road, there is no doubt that others will be added, and it is estimated that six of these tractors would transport at least 150 tons annually, which would be a great benefit to the traffic of the region.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

TUESDAY, JULY 10.

A man, under sentence of transportation, was transmitted from Castlebar Jail, in the county Mayo, to the New Prison in Green street, in order to be sent off with the convicts. The jailor came with him in a hack-coach, and upon his being brought into prison, and the prisoners hearing from whence he came, a universal cry of "Scotch Andrew" was echoed from every side; but on their being informed by the person who came along with him that they were entirely mistaken in the man, and that Scotch Andrew would shortly arrive, they at length desisted from their clamour. All villains as they are, they would not wish to herd with so great a one, nor perhaps would his life be safe among them.

The best consequences must ensue from the researches ordered to be made by the Dublin Society for clays, fossils, and minerals. There are three miners employed in this business, who make a return of their discoveries; by these means the Fuller's Earth has been found, though a vein had been some years since opened in the county of Antrim. Various specimens of different ores and fossils are in the hands of Mr. John Clarke, of Lazer's hill, found in the mountains of Wicklow, and fine samples of copper and lead ores have been sent up from the county of Tipperary, which being smelted, afford the highest prospect of advantage.

The fatal catastrophe of a certain wealthy lottery-office keeper on Saturday is attributed to a gloomy fit of actual insanity, as he was deprived of his senses about sixteen years since, but afterwards recovered, until the late unfortunate return. His property is estimated at upwards of £30,000. He was a man of an harmless and friendly character, and put an end to his being merely from an abolition of reason.

THURSDAY, JULY 12.

Last Monday the Right Hon. the Earl of Altamont, with his new married lady, arrived at the Hon. James Brown's house in Sackville-street, from London. Lord Howe has accompanied the noble pair, and intends residing here for some time.

Lord Viscount Howe is an English as well as Irish Viscount, but neither he nor his father ever took their seats in our House of Lords.

The building of the new Courts of Justice on the Inns-quay advances so rapidly, that it is expected the pile will be completed and fit to do business in before the end of the next year.

Extract of a letter from Stradbally, dated the 7th instant.

"A most melancoly and much lamented accident has happened to Dudley Alexander Sydney Cosby, Esq. son of Thomas Cosby, of Vicarstown, in the Queen's County, Esq.—This young gentleman, being on a visit at Gillen, the seat of Mr. Armstrong, in the King's County, went to bathe but being most unfortunately seized with some fit, as is supposed, while in the water, he immediately sunk, and was not found for an hour afterwards. Every possible method had been tried for his recovery, which skill and modern experience could suggest, but all indeed to no effect. This young gentleman bore a most amiable and truly respectable character, was universally beloved and esteemed, and promised to be an ornament to his country but, alas! he was snatched in the very bloom of health and youth, to an untimely grave. He was nearly related to Commodore Cosby, and also to Lord Sydney."

We learn that the Corporation of the town of Drogheda had provided a most sumptuous and elegant entertainment for his Grace the Duke of Rutland, the Right Hon. the Speaker of the House of Commons, and several of the Nobility and Gentry, yesterday, and that the Corporation presented his Grace with the freedom of that ancient and loyal town. This testimony of regard and approbation, coming from so respectable a body, is a strong proof how much they feel themselves advantaged by the wise and prudent administration of the Duke of Rutland.

WEDNESDAY, JULY 11.

Tuesday at the Police-office in Clarendon street, a coachman was fined five shillings on the complaint of Nicholas Gay, Esq, for having but one glass in his coach, and that without a string, and no check string, and the whole odiously dirty.

Yesterday Mr Sheriff Fleming gave an elegant entertainment at the Tholsel, to a number of the nobility, gentry, and eminent citizens.

Same day General Petit gave a sumptuous entertainment at his house at Kilmainham. Almost all the nobility and gentry in town were present, and the elegance of the tables could only be equalled by the splendour of the guests.

TRALEE, JULY 5.

Within these few days, a considerable quantity of brandy, tobacco, whiskey, etc, were safely lodged in his Majesty's stores; seized by the active and spirited conduct of Mr Swan, Inspector of Excise, assisted by a party of the 12th light dragoons quartered here. Smuggling has not these many years received so severe a blow.

A few nights ago a number of fellows were assisting to carry off the goods of a tenant of Mr John Patton, Inkeeper in Portglenone, when Mr Patton rose out of bed to prevent them, and received several stabs of which he has since died. His wife, in endeavouring to save her husband, also received a wound, of which we hear she is dangerously ill.

CORK, JULY 9.

Last Thursday night, Mr Tobias Gerald Fehrman and Gerald Philip Fehrman were stopped and robbed by four men armed, about three miles from this city, on the Kinsale road; the former of his watch and buckles, two shirts and two pair of stockings, and the latter of his shoe-buckles and three shillings.

DUBLIN, THURSDAY, JULY 12.

Tuesday last, the Quarter Sessions for the city of Dublin was opened before the Right Hon the Lord Mayor and Denis George, Esq, Recorder, and a new Grand Jury sworn, when Mr Recorder, in a most able, learned, and concise charge, recommended the Grand Jury the strictest œconomy in granting presentments of the public money, and a rigid inquiry into the defaulters and such parishes as were in arrear. He requested their most vigilant attention to be directed against all such traders or manufacturers as appear to be in combination, the spirit of which has been too fatally extended, and if not timely checked must prove the bane and ruin of the commercial interests of this country. He was pleased to pay a handsome compliment to the High Sheriffs for the respectable Grand Juries they had returned to the Court, to discharge the important duties of that office, and concluded with advising them to investigate every accusation that came before them, that no person might be put on his trial on a slight or or frivolous charge. The Sessions Court afterwards adjourned till to-morrow, for the trial of prisoners.

Yesterday examinations for perjury were lodged against seven of the publicans of this city, for selling porter at more than at the rate of threepence halfpenny a quart, contrary to their oath, as prescribed by the act last session. It is hoped this timely example will serve as a warning to others, and teach them not to sport with the sacred obligation of an oath.

We are informed that a number of men of opulence have it in serious contemplation of establishing manufactories of gauzes, muslins, etc, at Athlone, in imitation of those of Paisley, which from a dirty village has within a few years become populous, industrious, and wealthy, beyond any other part of Scotland. This patriotic undertaking promises success, as Athlone is the most central situation in the kingdom, and a cheap part of the country.

FRIDAY, JULY 13.

Amongst the company who honoured John Traile, Esq, High Sheriff of the Co. Dublin, with their presence at dinner yesterday, at Kilmainham, were the Right Hon Luke Gardiner, Richard Talbot, of Malahide, Esq, Thomas Baker, of Corduff, Esq; and Sir Henry Echlin, Bart, a gentleman who formerly possessed a fortune of near £5,000 a year in the Co. Dublin, but who has been absent from this kingdom for upwards 20 years.

Notwithstanding the notice given by the Commissioners of Police in the papers, several unthinking young persons annoyed the passengers in different streets last night, by throwing squibs, etc. We must observe, however, that these nuisances were not so general as on the former nights. To the timely notice given by the Commissioners, must it be attributed that no disagreeable accidents occurred, and for this mark of attention to the accommodation of the citizens, they are in a very eminent degree entitled to their thanks.

Very great quantities of woollen goods have been bought up for the Portugal market, and entries of them will appear in the course of a few days. Flannels have risen in price in consequence and are very scarce. All that appeared at the fair of Drum last week, remarkable for woollen goods, were purchased in a very short time, at very smart price.

The Portugal market is peculiarly calculated for several of our light woollens, and there is no doubt that they will be favourably received there. The orders that have already arrived are very extensive and numerous, and it is thought our traders will scarcely be able to answer them. It is customary with ministerial advocates to depreciate this trade as insignificant; but this circumstance verifies an observation, which we have often and long since made, that if the interdiction was taken off our commerce by the Court of Lisbon, and the trade once established, employ would be given our manufacturers, and market ensured for the sale of our fabrics, from which wealth and profit must certainly accrue.

SATURDAY, JULY 14.

A visitor of this city congratulates the inhabitants on the splendour of its appearance and rising consequence. That noble edifice, the new Custom House, the Law-offices, the Four Courts, the new buildings in North Great George's street, Dame street, and Harcourt street, and the intended bridge, etc, are incontestible proofs of its rising grandeur. Upwards of 150 passengers of rank and consequence have landed here from foreign parts within this fortnight; and the encouragement given by the nobility and gentry to works of genius and the fine arts, induces the possessors of each to resort to Dublin, as the second place of reward in his Majesty's dominions. A novel production particularly struck this gentleman's attention, the celebrated Mrs Ames, an English artist, lately arrived here, possessed of uncommon excellence in painting profile likenesses on glass, in a quick and surprising manner, and the merit of her performances, like Pope's idea of Virtue, "need only be seen, to be admired."

BELFAST, JULY 13.

On Tuesday, at three o'clock, General the Earl of Charlemont, attended by his Aids du Camp, Sir A Stewart, and Richard Dawson, Esq, arrived in town, under the escort of the Belfast Light Dragoons. His Lordship was saluted by the Artillery Division of the Belfast Volunteer Company, with 19 guns; the Belfast Volunteer Company having been also drawn up to receive him. On Wednesday morning the troops marched to the ground under a heavy rain, which continued without intermission till they returned in the evening. In consequence of the extreme inclemency of the weather, his Lordship ordered each line to pass him in half quick time, and after a general salute, to march off the ground. It is impossible to form a good estimate of the marching of the several corps, considering that it was performed under such discouraging circumstances; from appearances it seemed likely that their discipline is this year fully equal to what it was the preceding one. The General remained during the whole time exposed to the incessant beating of the rain; affording an animated example of true military spirit to the several bodies of Volunteer Troops under his care in this kingdom.

DALKEY CASTLES.

A GROUP OF OLD COUNTY DUBLIN FORTRESSES, AS THEY WERE A CENTURY AGO.

From GROSE'S ANTIQUITIES OF IRELAND, 1791.

We again draw upon Mr. Elrington Ball's "History of the County of Dublin" (Dublin: Thom & Co., 1902) for the account of the Castles of Dalkey and the history of the interesting locality in which they are situate:—

The modern Dalkey occupies the site of a fortified town, which began to decay some 400 years ago. Its port was, in mediæval times, not only the Kingstown of that age for travellers, but also the place of disembarkation for merchandise coming to Dublin, and the ancient town, which contained seven strong castles, was used as a safe place of storage for the goods until the merchants found it convenient to remove them to Dublin. Only two of the seven castles now remain—one forms portion of Dalkey Town Hall; the other is a fairly complete ruin. They were inspected by Mr. J. H. Parker, C.B., at the same time as Bullock Castle, and are, in his opinion, buildings of the same era. He describes the one since converted to the use of a Town Hall as a plain square tower-house, or castle, with a solid parapet and small windows. At the south-west corner, a staircase is corbelled out, and on the north side there is a garderobe turret, while from the parapet a chimney and small bartizan project. The second castle, then in the same condition as at present, he describes as similar to its companion; but from the fact that its battlement is in the form of steps, he considered it to be a building of somewhat later date. It is provided with a staircase, which is carried through the vaulted lower storey in the thickness of the wall, and then leads into an octagonal turret, and in the upper room there is a fireplace and garderobe (1).

(1) "Observations on the Ancient Domestic Architecture of Ireland. in "Archæologia," vol. xxxviii., p. 162.

Dalkey has a history, like Bullock, before its castles were built, and, until the beginning of the nineteenth century, rock monuments, dating from the time of the primitive inhabitants, were to be seen near the town. One of these, a cromlech, surrounded by a circle of upright stones, stood upon Dalkey Common; the other, a great rock, known as Cloch Tobair Gailline, or the Rock of the Well of Gailline, overhung a sacred wall on the top of Dalkey Hill. During the eighth century, Dalkey was the scene of a battle between two Irish tribes, and Forgartach, son of Niall, King of Ireland, fell by the hand of Cinœth, son of Ingalach, on its plain. Doubtless, the Danish invaders frequently landed at its port, and by them the Irish name of the place, Delginis, or Thorn Island, was changed to Dalkey, which is Scandanavian in its origin. The English disembarked, so far as is known, near Waterford and Wexford, but in 1171, while the Irish were besieging them in Dublin, a detachment of the Irish force was stationed at Dalkey, to guard its port, where the Irish expected their Danish allies to land. After the Conquest, Dalkey was granted by Henry II. to Hugh de Lacy, Constable of Dublin, but was soon given by the latter to the see of Dublin. The Archbishops proved themselves worthy of the trust, and under them the town rapidly developed. The right to hold a market in Dalkey every Wednesday, and a fair on the Feast of St. Begnet, the patron saint of the place, was granted to them, and at the same time power was given to them to levy tolls, to be applied to the improvement of the walls of the town and harbour, similar to those enforced in Dublin. Subsequently a fair which had been held at Powerscourt was transferred there. The town was ruled by a provost and bailiffs, who had also authority over the port, and who were sometimes appointed by the Archbishop and sometimes by the Crown. As regards the inhabitants, information is but meagre, and is only derived from the records of the Priory of the Holy Trinity, which had charge of the spirituality of Dalkey, and owned some property in the town. In 1326, John Kendal, who supplied the Priory House at Kill-of-the-Grange with fish, was the tenant of the Priory at Dalkey, and a holding at Dalkey on the west side of the church, "looking from the sanctuary," which was given in 1320 by Alice, wife of John de Dundrum, to Andrew Fitz-Richard, on his marriage to her daughter, as well as premises surrendered in 1394 by Nicholas Pyn, and others leased in 1439 by John Talbot, Lord of Feltrim, probably became portion of its property (2).

The port of Dalkey became more and more used as ships increased in size and found the navigation of the Liffey impossible. To its port was consigned, in 1244, a cargo of deer, to stock the Royal Park at Glencree, and at its port, in 1303 and 1323, ships to convey reinforcements and arms and provisions for the expeditions against Scotland, were ordered to assemble. In legal proceedings, with respect to duty on wines, in 1305, it was proved that ships were obliged to discharge portion of their cargo at Dalkey, before attempting to cross the bar of Dublin, and in 1306 it was found that wine for the King, which proved of inferior quality, had been landed there from Bordeaux, and re-shipped to Skinburness, in Cumberland—a port much used during the Scottish wars—and that to this circumstance, entailing a prolonged voyage on stormy seas from Michaelmas to Epiphany, the deterioration o fthe wine was due. Travellers of high position were constantly arriving and departing. In 1359, the officials of Dalkey were ordered to allow a Spanish ship to depart, which had been detained for the conveyance of the Prior of the Priory of St. John of Jerusalem, who was then Lord Chancellor of Ireland. In 1384 John Penrose landed at Dalkey, on his arrival as Chief Justice of Ireland, a position from which he was afterwards promoted to the English Bench. In the following year Philip de Courtenay, Lord Deputy of Ireland, disembarked there, as did two years later Sir John de Stanley, an ancestor of the Earls of Derby, who was appointed Lieutenant of the Marquis of Dublin. In 1414, Sir John Talbot, Lord of Furnival, and afterwards Earl of Shrewsbury, landed there on his arrival as Lord Lieutenant. In 1427 and 1431, James Cornwalsh, Chief Baron of the Exchequer, who was "barbarously and cruelly" murdered in the Castle of Baggotrath, landed there, after spending, on both occasions, six months in England, on business of the State. And in 1488, Sir Richard Edgecombe, after he had accepted homage on behalf of the King from the adherents of the pretender, Lambert Simnel, sailed from Dalkey, having been escorted from Dublin by the Archbishop, judges, and nobility. The constant passenger traffic had disadvantages as well as advantages. A pestilence, which devastated Ireland in the fourteenth century—killing, in Dublin alone, in four months, 14,000 persons—is said to have broken out at Dalkey, whither it was conveyed by some passenger from the Sister Isle, and, doubtless, almost depopulated the town (3).

During the fifteenth and sixteenth centuries, Dalkey rose to its greatest importance. It was able to contribute 200 men-at-arms to the county levy, and, in addition to weekly markets, seven fairs were annually held. To a traveller coming over Killiney Hill on a fine summer's day, a pretty picture then presented itself, as the town with its busy port broke upon his view. Its walls, its castles, and its church stood out clearly in the sunlight, and beneath them the blue water in the sound crowded with shipping. It is one of the fair days, and as the traveller enters the town he finds himself in an animated scene. The streets are crowded with persons intent on business. Here is a Chester merchant, just arrived with produce from the English markets, anxious to sell; there is one of his Dublin brethren equally anxious to buy. Along the causeway from the sea, carts continually arrive, laden with merchandise to await in the Castles convenient transport to Dublin, and from a barque which has just entered the omng there hurries on horseback a messenger of State with despatches for the Lord-Deputy, while several other passengers follow.

The records of the Priory of the Holy Trinity continue to afford information about the town. At the beginning of the sixteenth century, the Priory received from Johanna Waring, widow of Peter Bartholomew, and their daughter, gifts of land, and from James White, Chaplain of Dalkey and Archdeacon of Armagh, a house within the town. In the latter half of the century, the Chapter of the Cathedral, as the Priory establishment had then become, leased various premises, including eight houses, to Henry Walsh, of Suttonstown, who assigned them subsequently to Alderman Walter Ball, of Dublin, and a holding on the west side of the church to Thomas Morgan, who undertook to build a thatched house and to supply the Dean, when in residence at Dean's Grange, with fish. St. Mary's Abbey had also property in Dalkey, which, after the dissolution of that house, came, like Bullock, into the possession of Peter Talbot, of Fassaroe. Travellers still continued to use the port, and it was the one generally chosen by the chief governors. In 1534, Sir William Skeffington; in 1548, Sir Edward Bellingham; in 1553, Sir Anthony St. Leger; in 1565, Sir Henry Sidney, whose crossing was delayed for two months by contrary winds; in 1584, Sir John Perrot; and in 1599, the Earl of Essex, landed there; while in 1558 the Earl of Sussex selected it as the place of embarkation for the expedition against the Scottish invaders in Ulster. It was also still used for merchandise, and in 1599 the Master of the Rolls, who engaged in the manufactory of hats and tapestry was allowed to export wool from the port of Dalkey, in exchange for the materials he required for "these mysteries" (4).

The close of the sixteenth century marks the disuse of Dalkey, and the adoption of Ringsend as the port of Dublin, and from that time the town lost its importance commercially, and soon became ruinous. The principal residents then were the Morgans and the Dongans. The latter were ancestors of the Earl of Limerick, who was attainted by William III., and were sons of John Dongan, Remembrancer of the Exchequer, who was leased, in 1586, by the Chapter of Christ Church Cathedral, a moiety of a castle in Dalkey. Later on Sir John Dongan, a grandson of the Remembrancer, and Henry Walsh, were the chief inhabitants. Amongst other owners

of property were the family of Barnewall, of Shankill; of Fagan, of Bullock, who succeeded to Talbot's property; of Bee, and of Kernan. In the time of the Commonwealth, only one of the seven castles was habitable, and the population was returned as three English and forty-one Irish, inhabiting thirteen houses. Captain Richard Newcomen, who has been mentioned in connection with Bullock, was then the owner, but after the Restoration, besides Christ Church Cathedral, we find the Fagans, the Walshes, the Dongans, and the Wolverstons of Stillorgan, who had succeded to the property of the Barnewalls, in possession. Subsequently, the Duke of York, afterwards James II., Viscount Fitzwilliam, and Sir Henry Talbot acquired property in the town (5).

At the beginning of the eighteenth century, on the sale of the Irish estates of Jas. II., the possessions of that sovereign at Dalkey were bought by Colonel Allen, of Stillorgan, now represented by the Earl of Carysfort. Some years later, Eustace Budgell, one of the writers of the "Spectator," was a resident at Dalkey. He was a cousin of Joseph Addison, under whose wing he came to Ireland, where he was appointed Under-Secretary of State, and, subsequently, Accountant-General, with a seat in Parliament as member for Mullingar, a position which he held for only a few years. About the middle of the century the owners of Dalkey were Mr. Bull, Sir William Mayne, afterwards Baron Newhaven, son-in-law of the second Viscount Allen; and Mr. Baldwin, who held under Christ Church. Amongst the residents was Mr. Peter Wilson, a well-known bookseller, and publisher of the Dublin "Almanac" or "Directory' of his day, who wrote a charming description of Dalkey and its neighbourhood, to which reference has already been made. He says that in the year 1770 the town comprised, besides the venerable ruins of the castles and of the church, some good houses, and about twenty cabins, which "served indiscriminately for the owners, their cattle, and their swine." Within his recollection the street, owing to its rocky surface, had been impassable for carriages, and difficult for a horse to traverse, but it had been levelled, and the old road which ran on the north side of the town was then only used on the occasion of funerals. Of the castles, six, which were known as the Goat's Castle (now forming part of the Town Hall)), the House Castle, the Black Castle, Wolverston's Castle, Dongan's Castle, and Archbold's Castle, remained. The House Castle had been converted into a dwelling by Mr. Robert Barry; the Black Castle had been made into a billiard-room; two more were inhabited by publicans; the fifth was a stable, and the sixth formed part of a cottage. The lead mines on the lands of Rochestown had been originally worked by a firm which had its smelting houses on Dalkey Common. These had been sold, in 1757,, after some hundred tons of lead ore had been raised, and were re-opened, about the year 1780, by Messrs. Darcy and Knox, but were soon again in the market. A cotton factory, which in 1781 was totally destroyed by fire, had also been established in the town, on the ground belonging to Mr. Watson, of Bullock.

At the close of the eighteenth century, the principal inhabitants were Sir John Hasler, Chamberlain to the Lord Lieutenant; Mr. William Macartney, father of Sir John Macartney, of Rochestown, who had represented Belfast in Parliament for many years; Mr. John Patrickson, and Miss Charlotte Brooke, authoress of "Reliques of Irish Poetry." There was then a scheme to build a crescent of houses, and to construct a bathing-place, as well as to make the present road from Kingstown to Dalkey, but building to any extent did not commence until some thirty years later, when speculators were attracted to Dalkey in hope of finding gold, and found wealth, not in ore, but in the value of the building sites (6).

JUST NOW.

Again upon the grid appear,
In garb that's awe inspiring
The heroes of the football game,
Still greater fame desiring.
They've guards on shins and ears and nose,
Their suits are thickly padded,
And to their aspect thus made fierce
Big mops of hair are added.

They line up on the measured field,
Where doughty foes they're facing,
They bend their backs, the ball is passed,
And then there's wildest racing.
The foemen meet in fearful shock,
And on the ground go sprawling—
The fellow with the ball beneath,
All others on him falling.

They're disentangled one by one,
And those with broken faces
Are sent off to the hospital,
While others take their places.
Again they run, again they fall,
More bones are dislocated;
Off goes another ambulance
With load it had awaited.

Again they're filling in the ranks,
For there are many daring
To brave all risks in hope that they
Will in the fame be sharing.
They pass and run, they punt and grab,
And through the line go boring,
And feel that they are well repaid
When triumph they are scoring.

The rooters yell till they are hoarse,
Some in their frenzy raving,
While kerchiefs and chrysanthemums
The pretty girls are waving.
The victors proudly stalk away
Amid a storm of cheering,
And nurse their bruises till again
They're on the grid appearing.

HOW INDIA INK IS MADE.

Christian Mangold in the "Farben Zeitung" describes the process for making India ink, which is translated for the National Druggist as follows:—

"As fuel for the production of the black, Chen-Ki-Son-en used a very fat oil, derived from Dryandra cordatal, and, along with it, hemp seed. The oil was submitted to a preliminary process which consisted in warming it up in contact with rasped redwood (Guinea wood), sandal-wood, almonds, grains of gardenia and appoponax, and then drawn off into bottles and stored for a long time. In the preparation of the black, the manufacturer used small earthenware bowls, which he filled with the oil, and furnished with a wick made of rush. Thus prepared, the little lamps were stood in clusters of from eight to twenty, on a tile placed in the bottom of a shallow vessel, filled with water. Above each lamp hung an inverted funnel of earthenware, glazed on the inside, which served as the collector of the soot.

"The first step in the production of the ink consists in mixing the soot with glue. The latter consists of gelatine from skins (glue) and isinglass, in the proportion of one part of the former to nine parts of the latter. Of this mixture, one part is used to every two parts (by weight) of the soot. The glue used in this mixture must be cleared or purified most carefully. Then there is added a tincture prepared out of a wide range of ingredients. Most manufacturers use, in making it, a decoction of aconite, Auchusa tinctorea and Butea frondosa. A little camphor is added to the tincture, and in some kinds of inks a little musk. The main value of the tincture, from all appearances, consists in the tannic acid existing in the plants, which hardens the glue. The mixture of soot, glue, and the other ingredients is pressed through a wire sieve, and then kneaded into little balls. These, wrapped in cloth, are put into a tightly closed porcelain pot and warmed up in a water bath. From this they pass into a mortar, where they are pounded with powerful blows for hours and hours.

"When the material is reduced to a homogeneous, impalpable powder, it is subdivided into portions and made into sticks. Each stick is then beaten with a hammer until it is perfectly smooth; the sticks, one by one, are moulded into a certain form and then put away to dry. The drying process is an important stage in the manufacture, and attention to detail is as necessary in the mixing, or, indeed, any other of the stages. Each stick is wrapped in a very thin, soft paper, and laid on layers in a box. They are so arranged as not to touch each other, and when a row of them has been put in, the space between them is filled with fresh, but well dried rice straw ashes. The ash must be changed and renewed many times a day, each time the half being taken away and fresh ash added. When, at length, the material is thoroughly dry, each stick is freed from dust, etc., and rubbed with a stiff brush until the surface shines with a half-polish. It is now slightly rubbed with a cloth slightly moistened, and a final polish is put on with an agate burnisher."

THE ROTATION OF URANUS.

Everybody who takes an interest in astronomy is aware that the two outermost planets of the solar system, Uranus and Neptune, are believed to rotate backward, that is, in a direction contrary to the rotation of all the other members of the system. But the evidence that they do thus rotate is indirect, such, for instance, as the fact that their satellites revolve backward in their orbits. Recently, however, Henri Deslandres of the Meudon Observatory has applied a method of determining the direction of rotation by spectroscopic observation, which gives direct evidence that in the case of Uranus, at least, the rotation is really backward. The method is based on the inclination of the lines in the spectrum of a rotating body, and resembles that by which a few years ago Professor Keeler demonstrated the motions of Saturn's rings. It is to be applied next to Neptune.

THE KEEN OF THE SOUTH OF IRELAND.

ILLUSTRATIONS OF AN ANCIENT CUSTOM.

By LECTOR.

III.

KEEN ON SIR RICHARD COX.

(This Keen was versified by Croker from the literal translation of Mrs Harrington's original Irish version which she furnished him in 1818. But instead of being composed on the great Sir Richard Cox, the historian and Lord Chancellor of Ireland, as he at first supposed, Croker was subsequently of opinion that its subject was really his grandson, who was also a Sir Richard Cox. The late Rev Sir George Cox, a prolific writer (who died in 1902), claimed to be the last descendant of the Cox family of Dunmanway.)

"My love and my darling, though I never was there,
An account most exact have I had of your kitchen,
Brown roast beef the cook would continually bear;
The black boilers were never without a good flitch in.

The cock of the beer-barrel never ceased flowing,
And should there of strangers walk in a whole score,
No person would ask them, whence coming, where going?
But place them at the table without a word more;
And there they might eat of whatever they pleased
Nor would they in the morning be with a bill teased.

"My love and my friend, through my light morning slumbers,
I dreamed that your castle fell into decay;
That no one remained in it, out of the numbers
That once were its pride—all had vanished away.
The birds they sung sweetly no longer; and leafless
The shrubs were. No porter replied to my knocks.
Our loss the dream told me that we were left chiefless,
That our horseman had perished—the noble Squire Cox.

"My love and my darling was nearly connected
With O'Donovan, Lord Clare, and Cox of the blue eyes,
And with Townsend of White Court—this day's the selected,
Yet none I see coming, of those I expected,
To mark with a green sod the grave where he lies."

(According to Bennett's History of Bandon, 1869, the Bernards (the ancestors of the present Earl of Bandon), like the Coxes, seem to have acquired a partiality for the Irish Keen, for it is stated by Bennett that on the death of Mr Bernard in Dublin, on the 7th of July, 1790, "his body was brought from that city, and interred at Ballymodan Church (Bandon), an account of the expenses attending which is still extant; comprising the supplying fresh horses at the various stages on the way down and of the payments made to "Keeners." Fresh relays of these Keeners met the funeral at specified places, and took up the "Keen" from the previous lot, who returned to their homes. In this way the lamentation was kept up unceasingly day and night, from the moment the coffin was taken out of the house where Mr Bernard died, until it was entombed at Bandon, which must have occupied at least a week, if not more.)

THE AFFADOWN FISHERMAN'S KEEN FOR HIS SONS.

(The original of this keen was the lamentation composed by a man named O'Donoghue of Affadown or Roaring Water, West Cork, for his three sons and son-in-law, who were drowned. The versification here given is not, however, that of Croker, but of a lady whose initials were E. F. (possibly Mrs Ellen Fitzsimons, daughter of the great Daniel O'Connell.)

"O loudly wailed the winter wind, and the driving sleet fell fast,
The ocean billows wildly heaved beneath the bitter blast,
My three fair sons ere break of day, to fish had left the shore;
The tempest came forth in its wrath—they ne'er returned more.

"Cormac, 'neath whose unerring aim the wild duck fell in flight,
The plover of the lonesome hills, the curlew swift as light;
My first-born child, the flower of youth, the dearest and the best!
O would that thou wert spared to me, though I had lost the rest.

"And thou, my handsome Felix, in whose eye so dark and bright,
The soul of courage and of wit looked forth in laughing light;
And Daniel too, my fair-haired boy, the gentle and the brave—
All, all my stately sons were 'whelmed beneath the foaming wave.

"Upon the shore, in wild despair, your aged father stood,
And gazed upon his Daniel's corse, too late snatched from the flood;
I saw him pale and lifeless lie, no more to see the light;
And cold and dumb and motionless my heart grew at the sight!
My children, my loved children! do you know my bitter grief?
Look down upon your poor old sire, whose woe knows no relief.

"The sunshine of mine eyes is gone, the comfort of my heart;
My life of life, my soul of soul, I've seen from earth depart!
What am I now? An aged man to earth by sorrow bowed.
I weep within a stranger's home; alone e'en in a crowd,
There is no sorrow like to mine. No grief like mine appears.
My once blithe Christmas is weighed down with anguish and with tears.

"My sons, my sons! abandoned to the fury of the waves!
Would I could reach the two who lie in ocean's darksome caves,
'Twould bring some comfort to my heart in earth to see them laid;
And hear in Affadown the wild lamenting for them made.

"O would that like the gay 'Wild Geese' my sons had left this land,
From their poor father in his age to seek a foreign strand;
Then might I hope the Lord of Heaven in mercy would restore
My brave and good and stately sons some time to me once more."

(The "Wild Geese, i.e., the Irish Brigades in France.)

THE WIDOW LANE'S KEEN FOR HER DAUGHTER.

(The following lamentation was composed towards the close of the eighteenth century, by a poor widow, who resided near Bandon on the death of Betty Lane, her only daughter, a celebrated rustic beauty. A melancholy tradition states that a Mr Henry Beamish paid particular attention to the unfortunate girl; and at an interview one morning spoke to her of marriage, when he offered to pay the rent of her mother's cabin as hinted at in the second and third verses. A quarrel appears to have subsequently taken place between the lovers; and on that very evening Betty Lane was discovered hanging from a tree in a neighbouring plantation, having probably committed suicide. The popular belief, however, was that Beamish caused her to be murdered, and had bribed his groom with three guineas to decoy her into a lonesome place, and there hang her. This is alluded to in the sixth verse. The phrase, "guns wrapped in straw," refers to the peasantry being obliged to secrete their firearms, and after depositing the lock in some secure place, greasing and wrapping up the barrel in straw or hay-bands.)

"My pet, my darling,
My gentle housekeeper,
For whose death full of sadness
I'm this day a weeper.
Your long yellow tresses,
'Twas a comb and hot water
Kept them in nice order,
My beautiful daughter.

"But Henry, the faithless,
'Twas he who betrayed thee;
'Twas his cruel deceit
That a lifeless corpse made thee;
'Twas he who admired them,
Your tresses so yellow,
As he spoke of the rent
To me, the base fellow.

"The rent of your cabin,
'Twas easy to pay it,
If you look in the depth
Of my pocket you'll say it.
But what's gold or silver,
From all we love parted;
And left weak and lonely,
To die broken-hearted?

"Yet though there's a strength
That the feeble may borrow,
Like the flash of despair,
From the black cloud of sorrow.
Revenge will I have,
Should I fail in a halter;
I'll try a true gun,
And its aim shall not falter.

Ah, Henry, you black rogue
And limb of the devil,
The day that you're hanged
That day I will revel;
I'll have thousands to dance
And to drink, and be frisky,
And to speed you to hell
With huge bumpers of whiskey.

"My curse on that villain,
Who took from his master,
A bribe of three guineas,
To cause my disaster.
I'll hunt as a ferret,
His fate I'll determine,
And hang him, though hanging's
Too good for such vermin.

"Ask ye where are my people,
The true and the trusty?
Are their guns wrapped in straw,
Or their swords, are they rusty?
They but hide for a little,
And wait for my telling,
Till they've laid my poor child
In her last silent dwelling.

Then will follow the season,
The time of my pleasure,
When my cup of revenge,
Shall be filled brimming measure.
When my friends and my faction
Around me shall rally,
And drive the destroyer,
As a wolf from the valley.

"The summer is coming,
And with it is bringing,
Fine crops, God be praised,
For the hemp that is springing!

But I pray to His throne,
That the rope now is making,
Which before the year's gone
Will be Henry's life-taking.

KEEN OF YOUNG RYAN.

(This Keen was translated by Croker from the original obtained by him, in July, 1821, which appears to have been an address from a mother to the Keeners who were hired to attend her child's funeral, and was delivered probably as the procession was about to depart from her house to the burial ground. The name of the subject of this lamentation was said to be Ryan, and judging from the allusion to the river Dowr, he was presumably a resident of East Cork, where this river runs. It breaks out from a rock a mile south-east of Castlemartyr, having taken its rise near Mogeely, and then flowing underground.

"Maidens sing no more in gladness
To your merry spinning wheels;
Join the Keeners' voice of sadness,
Feel for what a mother feels!

"See the space within my dwelling,
'Tis the cold, blank space of death!
'Twas the Banshee's voice came swelling
Slowly o'er the midnight heath.

"Keeners, let your voices blending
Long and loudly mourn my boy,
Through six counties proudly sending
Song as great as that of Troy.

"He was at the Christmas mummer,
Bounding like a ball at play;
He was as the dancing summer,
Bright and merry as the May.

"What was motion now is starkness,
What was comfort now is none:
What was sunshine now is darkness;
My heart's music, it is gone.

"There's a grief that few can measure,
All-absorbing, deep and dim;
'Tis a grief makes death a pleasure,
And that grief I feel for him.

Dark as flows the buried Dowr,
Where no ray can reach its tide,
So no bright beam has the power,
Through my soul's cold stream to glide.

"Did your eyes like holy fountain
Gush with never-failing spring!
Had ye voices like the mountain,
Then my lost child, ye might sing!

"Keeners, let your song not falter,
He was as the hawthorn fair;
Lowly at the Virgin's altar,
Will his mother kneel in prayer.

"Prayer is good to calm the spirit,
When the Keen is sweetly sung;
Death though mortal flesh inherit,
Why should age lament the young.

"'Twas the Banshee's lively wailing,
Well I knew the voice of death,
On the night wind slowly sailing
O'er the bleak and gloomy heath.

"Through the holy Mother Mary,
And her Babe our Saviour blest.
Hearts that of this world are weary,
Will in Heaven find joy and rest.

(To be continued.)

VOLCANIC ERUPTIONS ON THE MOON.

Messrs. Loewy and Pulseux, of the Paris Observatory, in issuing some additional plates of their photographic atlas of the moon, refer to the recent volcanic cataclysm at Martinique and St. Vincent, and say that study of the lunar surface leads them to think that eruptions, quite as intense as the greatest recorded on the earth, have occurred on the moon, repeated at long intervals in the same places. But, "favoured by a condition of calm and dryness they have been more durable in their effects, and the more recent deposits superposed upon the earlier ones are distinguishable by their darker tone and less extended boundary."

OUR WEEKLY STORY

HIS MOST CRITICAL CASE.

By GRACE S. RICHMOND.

The patient in Private Room 31 stirred restlessly, and lifted a feeble hand to beckon the nurse nearer.

"Seems as if Joey's a long time coming," she whispered.

"Doctor Hasbrook will be here soon now, I think," the nurse responded, cheerfully, for the fifth time that morning. "You know your grandson is very busy, and several of his patients are here in the hospital. He stops to see them all before he comes to you, so that he can give you more time."

"Seems as if he ought to get started earlier, then," complained the patient, weakly. Her faded blue eyes roved about the room indifferently, passing by the great bunch of scarlet carnations on the mantel, the coal fire glowing in the grate beneath, the pictures on the walls, and all the other evidences of her grandson's thoughtfulness, to rest eagerly upon the door.

He came at last—the big, young-looking fellow with the clean-shaven, kind face and keen eyes—came with a quiet swiftness that brought a slight smile of relief to the wrinkled face on the pillow.

"Thought I was a good while about it?" he asked, as he sat down beside her after a kiss and a touch of the thin, white hair. "Well, every last one of them had three new symptoms apiece this morning—or thought they had, which is worse. Never mind, you have me now, grandma, and I can spare you a good half-hour. And how are you this morning?"

His fingers were upon her pulse; his eyes, sharp in their skilled scrutiny, were studying her as she gave her slowly-spoken account of a sleepless night and a weary morning. He listened patiently, as if it were not an old story to which there could be but one ending.

"Seems as though," she whispered, when the old answer had been given, the answer which could never tell her that she was getting well, "seems as though, if I could just get back to the old home, I wouldn't ask for nothin' more. 'Tain't that you don't do everythin' for me, Joey—you do, dear, and I couldn't ask no better grandson. And this room's fixed up just as nice as can be with all the flowers and fixings, and Miss—Miss Eaton's as good to me as a daughter, and I know I'm having every care and kindness. But, Joey, if you was a broken-down old woman you'd know how I feel—and I don't know as I can tell you."

"Try, grandma," the doctor bade her, his voice full of the tenderness for the showing of which he was taking time from many pressing cares. His hand held the thin fingers in a close grip, his eyes were constantly upon his patient's face.

"I don't know as it could be done," the the weak voice went on, eagerly, "but I seem to feel so much stronger just when I'm thinking 'bout it I 'most believe knowing I could really start would set me up so as I'd be strong enough. And sometimes it does seem, Joey, as if I couldn't—go—from a hospital. Not that it makes any real difference, you know—and you so kind—and all—but—"

The big, warm hand tightened its grasp; the doctor bent closer to listen, because the old voice shook so that the last words were not quite clear.

"You mean," he said, very gently, "that you wish you could get to the little old home in Illinois. I think I can understand that feeling, grandma. It's very natural. No hospital can be like home. But, grandma, you remember that there's nobody in the old home now?"

"I remember that, Joey," she answered, with a sigh, but with an instant renewing of the pleading in her tone. "But—I don't know as you can understand it, dear; 'taint likely you can, bein' young and strong, and not full of fancies like me—but it seems to me as if they was all there just the same. Your grandpa's picture hangs right opposite my bed in the little bedroom, and George's and Jane's likenesses set on the chest o' drawers, and the things the children give me stand all about. And it seems as though, if I could just lie and look round, I—I wouldn't be so sort of homesick, Joey. And I wouldn't mind—going from there—"

Doctor Hasbrook leaned back in his chair where Grandma Ransome could not see his face. His fingers rested upon the feeble pulse again; this time he was estimating its strength in relation to the possibility of making a great demand upon it.

The old woman lay very still for a little, but presently she stirred with a long breath. "It ain't to be thought of, I suppose, Joey?" she questioned, tremulously.

Doctor Hasbrook leaned forward again. "I don't know, grandma," he said. "It would be a risk, certainly—but—"

"Joey," said grandma, "I don't know as I should mind so much if I didn't quite get there—if the train only just got across the border into Illinois—"

"You poor, homesick old soul," said Joel Hasbrook, under his breath, "I believe I know how you feel. That night down in the brush on the way to Santiago, after I was wounded—You shall go, grandma," he said aloud, and he got to his feet decisively. "Miss Eaton, could you arrange to take charge of Mrs. Ransome on this journey, and to remain with her in Illinois as long as she should need you?"

"I think so, Doctor Hasbrook," the nurse replied, without hesitation. But grandma was staring at them both with something like fear in her sunken eyes.

"Why—Joey, boy—" she almost gasped the words.

"Yes, grandma, what is it?" The doctor sat down by the bed again.

"Wouldn't—wouldn't you go with me, Joey?"

It was Joel Hasbrook's turn to stare, but what he saw in grandma's face turned the quick words upon his lips into a very gentle explanation. He took the shadowy old hand in his again as he made it.

"You know I am very busy, grandma," he said, "and I've some critical cases which I—I don't know how I could leave. Miss Eaton here can take charge of you better than I could. I'll make every arrangement—the ambulance—a stateroom in the sleeping-car—I'll telegraph to your next-door neighbour—Mrs. Henderson, is it?—to have the house all ready for you. Everything shall be done. I'll see you in bed on the sleeping-car, and Mrs. Henderson shall meet you at the station at Glendonville with the best conveyance they can fix up to take you to the house. Now, isn't that all right?"

There was a pitiful quiver upon the wrinkled face, and the faded eyes were shut as Doctor Hasbrook bent to look cheerily into them. A tear crept out from under the closed lids, but grandma's hand wiped it away at once. Presently she opened her eyes, and looked up into her grandson's troubled face.

"You're all I've got left, Joey," she whispered, "and if it's so you couldn't go, I guess maybe I'd better stay here with you. The home folks are only shadows, for all they seem so real to me; they couldn't close my eyes—and I sort of want one of my own to do that. I'd like to get back there, but—it's all right, dear. I guess I ain't one of them critical cases, and 'twouldn't be right for you to leave any of them for me."

Doctor Hasbrook went away down the corridor with a knit brow and a slow step. The air of genial strength which he had carried with him from bedside to bedside that morning had vanished. There was a reason why he should not go with grandma which he had

not given, but it was the most pressing one of all.

When he reached his own office on an avenue near by, he went into a private room and closed the door, evading for a few moments the patients who awaited him. He threw himself wearily upon a couch, and clasped his aching head between two hot hands.

"I think I shall be able to keep going just about three more days," he murmured. "This confounded temperature doesn't let up a degree, and I feel meaner every day. I suppose if it were one of my patients, I'd put him to bed and keep him there with a gun, but I don't see how I can spare the time to be sick. I wonder if I can get out to Glendonville with grandma before I break down. Poor old soul —she might not need me farther than Buffalo. 'If she could just get across the border into Illinois'—what a terrible longing that must be! 'I'm all she has.' And I'm in for a run of fever when I can get around to it—typhoid, I suspect. Well, now let me see if I can study this whole thing out."

"That's all, I think," said Joel Hasbrook, closing his case-book and his visiting list. "It will be a great favour to me if you will look after those special patients. I shouldn't feel easy to turn them over to anyone else. I think I shall not be away long. Mrs. Ransome may not live out the journey, though I hope she will, for I shall like to see her where she wants to be so much. Thank you, Norton, and good-bye."

He spoke in his usual hearty way, looked his friend steadfastly in the eyes, and, forgetting, held out his hand, ungloved. Doctor Norton grasped it, and a change came into his face—the professional change which recognises a symptom. He retained the hand, and laid his own cool touch upon the wrist.

"Hullo!" he said. "What does this mean? Fever! eh—and a ripping pulse? And you starting for Illinois? Sit down."

"Excuse me," objected Joel Hasbrook, pleasantly. "The patient is waiting, and the train leaves in an hour and twenty minutes."

"Sit down!"

"Some other time, thank you," Hasbrook repeated, smiling, and trying gently to release himself from his friend's firm grasp. "When I get back, if you like. I haven't time now."

"Put out your tongue!" commanded Doctor Norton. "How long has this been going on? You are sick, Hasbrook. You can't go to Illinois. You can't go to Brooklyn. You go to bed here in New York, where I can keep an eye on you. Any pain here —or here?—lots of typhoid about."

"Now hold on!" cried Joel Hasbrook. "That's all right, and I'll attend to it when I get back. I'll do well enough for a while longer. To-night I am booked for the Chicago Limited. I wouldn't disappoint grandmother now if I thought I'd die before she did. You should have seen her face when I told her I'd go with her. Norton, were you ever homesick? I've been homesick. But to be homesick and dying—good-bye, Norton. Don't worry. See the hip-fracture case first in the morning, please."

"You're a fool!" murmured his friend, in a disappointed tone as he turned away from the door which had closed with Hasbrook's decisive bang. "But—confound you—you're a mighty uncommon sort of fool," he added, affectionately.

As the train which was speeding westward reached the north-western boundary of Indiana, Doctor Hasbrook rose suddenly from his seat and came over to the berth where Grandma Ransome lay. The nurse gave him her place, and he sat down beside his patient.

"We're just crossing into Illinois," he said in her ear. In a minute now—wait—here we go. I know the place—I used to watch for it when I came home from college. We are in Illinois, grandma, and almost home—do you hear?"

"In Illinois," murmured the pale lips, and the dull blue eyes opened wide. "In Illinois —'most the old home—the old home, Joey boy. My good boy, Joey—to bring the old woman back to the old home."

He held her hand, with his fingers on her pulse, watching her anxiously, for he longed intensely now to have her reach the journey's end alive. Presently she spoke again, in a voice perceptibly stronger.

"Joey, I 'most believe Jane"—his mother —"knows you're doing this for me. She'd like to have you do it for me if she knew—and if she understood about your leaving them critical cases just for me—"

"Grandma," he said, with a tremulous little smile on his usually firm lips, "you needn't worry about those. You are my most critical case now."

Whether or not the pleasure of nearing home acted on the worn-out, flagging heart as a last stimulus Joel could not tell, but certain it was that when he carried grandma from train to carriage at Glendonville, she seemed no weaker than when she had left the New York hospital.

When he laid her in her own bed, and, sitting down beside her, gazed into her face, he felt that it had paid. His own heart was thumping tumultuously, his head was unbearably heavy, and he knew himself to be growing hourly a sicker man, but he was very happy.

"Joey," whispered grandma, when she could speak for joy, "there's Nathan, right up there looking down at me—and there's Jane—and George—and there's all the little fixin's I made for my room when Nathan and me was first married. And there's George's little chair —I can see him now, a-luggin' it round—'most as big as he was. Seems as if they was all here, Joey."

"I think they are, grandma," said Joel. The tears came running down his own cheeks now; he was too tired and ill to keep them back. To him, too, it seemed good to be here in grandma's little quaint old home, where as a boy he had spent so many happy hours. He thought of his mother, and longed for her with the longing which had tortured him when she first left him, years before.

"If I'm to be ill and 'go,' too," thought Joel, "I think I'd like it to be from here myself. Perhaps it will be. Perhaps—"

But he pulled himself together, and helped the nurse to do all things possible for the old lady's comfort. It was a great exertion now for him to get about at all, and he wondered sometimes whether he should be able to stay by his charge to the last.

She did not need him long, however; before the morning of the second day she had gone away upon that long journey on which she asked for no companionship. She went with a contented smile upon her lips, and it was "her own" who closed her weary, happy eyes.

How Doctor Hasbrook got through the next two days he never knew. He sent the nurse back, protesting, to New York, begging her to go at once to a patient of whom he had not ceased for an hour to think. Somehow he kept about, knowing that his temperature was steadily rising, and that he ran more risk with every hour he stayed.

But he did stay, by sheer force of will, and did for grandma all that the "home folks" she had so longed for could have done. When he had seen her laid away in the old family lot, he closed the door of the little house, took the key to Mrs. Henderson, and stumbled blindly away up the street to the station.

"That there Joel's either a mighty sick man," commented Mrs. Henderson to a neighbour, as she watched him go, "or else he's been drinkin' all the while he's been here—I don't know which. But I don't believe it's that. Jane's boy has got too much her look in his eyes to take to such evil ways. He's a splendid fellow, I'll say that for him—leavin' the big city practice they say he's got and comin' 'way out here just to humour a whim of Grandma Ransome's. Beats all how pleased she was, though, to think she'd got here. He can remember he done his duty by the last of his folks, that's sure."

Joel sent a telegram to the New York hospital, asking that an ambulance be in waiting for his train, climbed wearily aboard the sleeping-car, feed the porter heavily, and dropped, with all his clothes on, into his berth. What happened after that he neither knew nor cared.

When the train rolled into the station at New York, a big, well-dressed man with an expression of deep anxiety in his eyes succeeded in getting aboard the foremost sleeping-car before anybody was off. The porter, who had come by this time to feel like a father toward the man who had put a five-dollar bill into his hand and who was now lying in a semi-stupor in Section Six, approached him eagerly.

"Beg pahdon, sah. Lookin' foh de sick gentleman who got on jus' dis side o' Chicago? Yessah—dis way, sah. In Numbah Six, sah."

Dr. Charles Norton parted the curtains, and stood looking down at the still figure in the berth.

"My poor, dear boy," he murmured, beneath his breath, "you took grandma home and made her happy! But whether you haven't deprived the world of a noble soul in doing so —I'm afraid to guess."

Then he bent tenderly over Joel Hasbrook, and laid his hand upon the rumpled head.

"Hasbrook, old fellow," he said, "you're home again. Can you look up and see that Norton has you now?"

But Joel Hasbrook only stared stupidly at nothing, and muttered thickly: "If I could only just get over the border into Illinois!"

"This way, boys," called Doctor Norton to two hospital assistants who had followed him with a stretcher, "and mind you handle him gently. You never carried a more valuable load," he added, softly. One of the men assented with a nod, and the other said emphatically, "We know that, doctor."

It was a long pull, that illness of Joel's, and there was not much left of him when it was over except his big frame. His face was pitifully thin and wasted. Only by virtue of the most skilled and devoted care had he been brought through to convalescence. For the first time he could lie in a great invalid chair and look about at a room filled with evidences of what people thought of him.

"Miss Eaton," he asked, when he noted a tremendous bunch of crimson roses lately brought in and placed upon a table near by, "does it seem to you that there can be any flowers left in the florists' shops?"

"Not many," responded the nurse, with a laugh. "The florists certainly have had the time of their lives during these six weeks—not to mention silk invalid robes and chairs and cushions which the room won't hold."

Hasbrook looked thoughtful. "Just let me smell those roses a minute, will you," he requested, "and then take them down to the Children's Ward. I hope you've been sending some of these things to the old ladies for me. How is poor Donnelly? And how is—"

"Now just hold on!" cried Dr. Charles Norton, coming in. "Donnelly's doing well, and so are the old women. The question is, How is my patient?"

"Norton," said Joel, eagerly, "I've been wanting to see you. How did the fracture case—"

"Do you ever think of yourself?" interrupted Norton, impatiently.

"I do, indeed. I've been longing to see you to beg you for one inch—just one square inch —of beefsteak."

"If you will promise me solemnly not to swallow it!" laughed the doctor. "Won't it do if Miss Eaton gives you the juice from it?"

"I want to feel it between my teeth," urged the patient. "But about the fracture case, Norton?"

"On next Saturday," declared Doctor Norton, "if you are still doing well, I will give you a complete history of all your cases. Until then you are to ask me no questions. I have some authority with you left, and I shall continue to exercise it until you are safely on

your feet. It's been a hard fight to keep you with us, old man. Tell me, Hasbrook—I'm a bit curious to know. Think of the weeks you've lost out of your life, and of the weeks more before you'll get all the old strength back. You know—and you knew when you took that trip—that you were endangering your life for the sake of an old woman's sick fancy. If you'd given up and gone to bed at once, you'd have had, in all probability, a much lighter run. You're built of heroic stuff, I know, but do you honestly think the thing was worth the sacrifice ?"

"Perhaps not," said Joel, thoughtfully, "from one point of view. But from another I am pretty sure it was. It was worth a good deal to see the look on that poor old face when she lay in her own bed. I'm not sorry I did it—I'm glad. You see," he added, simply, with his eyes on his mother's photograph where it stood upon the table, "as I told you before, I've been homesick myself."

THE CALLOW CRITIC.

The "Author" reprints an article from the New York "Critic," which records the views expressed by the members of a "literary class" in an American public school on Browning's beautiful little poem called "Meeting at Night":

I.

The grey sea and the long black land;
And the yellow half-moon large and low;
And the startled little waves that leap
In fiery ringlets from their sleep,
As I gain the cove with pushing prow,
And quench its speed i' the slushy sand.

II.

Then a mile of warm sea-scented beach;
Three fields to cross till a farm appears;
A tap at the pane, the quick sharp scratch
And blue spurt of a lighted match,
And a voice less loud, thro' its joys and fears
Than the two hearts beating each to each!

Some of the boys and girls to whom the poem was submitted took pains to show that it stood on a perfectly moral basis:—

I think It is a nice poem it explains going to a man walking up the sea shore in dark he is just going home from work, and as he reaches the house he tapps at the window to let his wife or friend know that it is no stranger or no body that will hurt her."

"I think it is pretty good because it is taken from life and that when a man goes home he always kisses his wife."

Another was nearer the point in saying:—

I think It is a nice poem it explains going to see his sweetheart. But I believe it would be better if the sweetheart had had the light burning previous to his arrival. The description of the waves as they beat against the boat is very good.

The "alleged obscurity" of Browning seems to have appealed to other critics. One says, for instance:—

It is fairly good, but I can see but little sence. It is well worded and the words are well connected.

Another budding Jeffrey says:—

Poor. Because it starts too quickly and because it tells nothing of where he was or how he came to be in the book and he skipped from the ocean to the moon and then back to the water.

This is blunt:—

It is no good. Because I think it is foolish.

But what could surpass the following?

This little poetry is nice because it tells the nice route of the lover and would be much more beautiful if it was longer and contained many more interesting facts.

ANTRIM AND ITS ANTIQUITIES.

The Editor D. P. J. will feel obliged if W. J. R., author of the paper with the above title, printed in the issue of 8th inst, will kindly send his name and address, which have been accidentally mislaid.

NOTES AND QUERIES.

THOMAS O'CONNELLAN.

TO THE EDITOR DUBLIN PENNY JOURNAL.

Sir—I was informed that the grave of Thomas O'Connellan was at north-east side of Teampull Nuadh, and just outside the wall of the burial ground attached to the church, but Mr Owen Bresnan writes to me that this is a mistake. Mr Bresnan says that about forty years ago some strangers visited Lough Gur, and thought that the grave was within the ruinated church at north-east corner, but of course this cannot be where the site of the grave is, and Mr Bresnan says that portion of the ruin is occupied by an old vault of the Ivors family, who once rented portion of Knockadoon from the Fanes or Bourchiers, according to John Punch. Close to the vault of the Ivors family is the vault of the Bayly family, and a vault of the Weekes family is at the south-eastern extremity of the church. Mr Bresnan says that he never heard that O'Connellan was buried outside the wall of the graveyard, and the north-eastern corner of the graveyard is the burial place of the old family of O'Briens, of Lough Gur. Mr Bresnan thinks that O'Connellan was buried near the vestry, beneath the eastern gable of the Church, and of course outside the church.

I also have to express regret that James Butler's name was written James Coleman. Mr Butler has been very helpful to us in the difficult work of identification of the old sites beside Lough Gur, and I am very sorry that I made this mistake with regard to his name. Mr Bresnan says that he will obtain from Mr James Butler for "D. P. J." the music of the Banshee's Wail. I enclose copy of a poem on O'Connellan's grave, by Mr Bresnan, written many years ago. In connection with Carriggal, or "white rock," I forgot to mention that there are sites of three stone forts on that rock of Carriggal, a name which reminds one of the term applied to the rocks of Lough Gur in Mesca Ulad p. 14,, a n-des ra findcharrgib Locha Gair, "their right towards the white rocks of Lough Gur."—Yours faithfully,

J. F. LYNCH,
Cahirconlish Rectory, Nov. 11, 1902.

TEAMPULL NUADH.—AIR, "NELLY GRAY."

O! I love to see that church-yard on Loŭgh Gur's romantic shore,
Where the shamrocks and the ivy ever grow,
Where the wild-dove and the raven, like protecting spirits soar
O'er the green graves of silent Teampull Nuadh.

Sweet Teampull Nuadh, where our tears so freely flow,
On the graves of those who nursed us long ago,
May high heaven smile upon thee, and its choicest gifts bestow
On the shades of thy beloved sleepers, Teampull Nuadh.

By that high and hoary gable, which defies the wreck of time,
Sleeps O'Connellan, beside the shining wave.
Those who love our Irish melodies, entrancing and sublime,
Will place the wreath of laurels o'er his grave.
In sweet Teampull Nuadh, etc.

By the firesides of our fathers, in the troubled days of yore,
He turned the harp to Erin's songs of woe,
But that harp is mute for ever, and the minstrel is no more,
For he is sleeping in silent Teampull Nuadh.
In sweet Teampull Nuadh, etc.

Those ivy-mantled castles overshadowing the wave
Oft resounded his melodies also;
But their halls are long deserted, and their old defenders brave,
Slumber round him in silent Teampull Nuadh.
In sweet Teampull Nua—, etc.

Tradition says the Banshee caoined a sad and lonely wail,
With a grief human bosoms never know,
And she paced those ancient ramparts, towering o'er the sunny vale,
When they laid him in the silent Teampull Nuadh
In sweet Teampull Nuadh, etc.

May the clay press lightly on him, in his silent, nameless grave,
Where the shamrocks and the ivy ever bloom,
And the beach-trees, tall and shady, overhead him gently wave,
'Till the trumpet's sound shall call him from the tomb.
In sweet Teampull Nuadh, etc.

—Owen Bresnan.

A CORRECTION—MULLAGHMAST.

TO THE EDITOR DUBLIN PENNY JOURNAL.

Sir—In No. 31, and at p. 487 of the "Dublin Penny Journal," the Rev F R Montgomery Hitchcock, in his interesting article on the O'Connors of Offaly, states that before the brutal and treacherous massacre of the Irish gentry of Offaly and Leix, in 1577, the ancient name of the Hill of Mullaghmast was the "Hill of Carmen," and that after the slaughter it was called Mullaghmast, or "the Hill of the Decapitation." These statements are entirely wrong, and were probably drawn from that most unreliable source, Rawson's "Statistical Survey of the County Kildare, 1807."

According to that great Irish scholar, Dr John O'Donovan, the ancient Irish name of the Danish settlement at Wexford (where that town is now), was "Carman," which in long pre-Norman times was famous for its annual fair, called the "Oenach Carman." Mullaghmast means "Maistiu's Hill," and according to the "Dindshenchas," Maistiu a princess, the daughter of Oengus mac Umor. For hundreds of years before the butchery of the Irish took place the hill was known as "Maistean," or "Mullach Maisten," as it is called in the old Irish Annals and Histories; and at the present day it is famous for its Long-Stone and Raths, Rathmore and Orandhoon, with their traditions, as well as for its having been the place selected for one of O'Connell's monster Repeal meetings, which took place there on the 1st of October, 1843.

I would not trouble you with this note, but I cannot bear to see such misleading inaccuracies repeated time after time (though given in good faith by the writers), without a word of protest.—Yours,

"OMURETHI."

UNIQUE BOOKS UNKNOWN TO THE BIBLIOGRAPHER.

TO THE EDITOR DUBLIN PENNY JOURNAL.

Dear Sir—My first (1) unique book unknown to the bibliographer was Mrs Glasse's "Compleat Confectioner," published in Dublin, 1872; my (2) Charles Kelsall's 'Letter from Athens," printed in London, 1812, and my (3) a French book, published in Paris, 1637, and described in this letter.

(3) Macchiavel, N. (Citoyin et secretaire de Florence). Discours De L'Estat de Paix et de Guerre, Traduicts d'Italien en Francois.

Easemble un Traiete du mesme Autheur, entitute Le Prince. De nouveau corrigez, et illustrez de Maximes Politiques.

A Paris, Chez Michel Brageart, et Michel Brunet, Proches le Palais, 1637. Boards quarto. Black Letter Collation. Au Lecteur 2 pp., N. Macchiavel à Zanobe Bondelmont et Cosme Rucelay, 2 pp., Le Seigneur des Essarts N. de Herberay au Traducteur des Discours (Paune) de N, Macchiavel 1 p., Sonets de M. G. M. Al Lettore 1 p. Preface de l'autheur 2 pp, (all unpaged), Les Discours de N, Macchiavel sur la premiere Decade de Tite-Live 350 pp., Table des sommaire des Discours 10 pp. sur l'ordre des Dialogues 4 pp, Title of L'Art de la Guerre (folding plates) 1 p, Le Prince (Title) 1 p. (1637), Nic Macchiavel au Magnifique Laurens 2 pp., Text of Le Prince 98 pp., Table 2 pp.

The first issue of this translation from it into French was probably before 1550, as Herberay des Essarts, himself the translator of Amadis des Gaules (1540-1548), died in 1552, and his "tres-cher amy," the translator, was evidently a contemporary whom he highly appreciated. Herberay's laudatory poem is signed "Acuerdo Olvido," his adopted Spanish nom-de-plume, meaning "To Remember and Forget." There is little internal evidence by which to identify the translator. If the author of the "Soneto," "M. G. M," be (M)onsieur (G)uillame (M)orel, the distinguished Gr.-Lat-Francais Lexicographer (1505-1564)—the très-cher amy" of Herberay and Morel was probably an Italian Professor settled in Paris, and to compliment whom, Morel would use the Italian tongue. Morel at the time of first issue of this trans. was Director of Imprimerie Royale. Very probably the Professor "was born to blush" unrecognised, and so I leave him—to present-day bibliographers.

PHRENOLOGY.

AN IRISH PIONEER OF THE SYSTEM.

JOHN SCOTUS ERIGENA'S CRANIAL MAP.

(From the "Dublin Penny Journal," 1832.)

Who would expect to find in the works of an Irishman of the ninth century, the origin of the Phrenological system, which Gall asserted he had discovered? Such, however, we will show to be the fact. The accompanying sketch is copied on a re-

No. 1. Fantasia. 2. Sensus Communis. 3. Imaginativa. 4. An inscription which cannot be deciphered. 5. Cogitativa. 6. Eetimativa.

duced scale from the celebrated work of Johannes Scotus Erigena (or John the Irish Scot), called "Margarita Philosophicæ," or, de divisione naturæ" (the "Pearl of Philosophy," or, "of the divvision of nature") editio Hydelberga, 1496. We met with this curious and rare work in the house of a friend in Cunnemara (!!), whose excellent library we were rummaging over on a wet day.

This was the celebrated person who assited Alfred the Great in the foundation or re-establishment of the University of Oxford, and was the FIRST instructor of the English people in the sciences of Geometry, Astronomy, &c. Attempts have, indeed, as usual, been made to rob us of the honour of giving him birth—but the effort has been in this instance quite fruitless. Hear what the judicious and learned Mosheim says of our countryman. "The philosophy and logic that were taught in the European schools in the ninth century scarcely deserved such honourable titles, and were little better than an empty jargon. There were, however, to be found in various places, PARTICULARLY AMONG THE IRISH, men of acute parts and extensive knowledge, who were perfectly well entitled to the appellation of philosophers. The chief of them was Johannes Scotus Erigena, a native of Ireland, the friend and companion of Charles the Bald. Scotus was endowed with an excellent and truly superior genius, and was considerably versed both in Greek and Latin erudition. He explained to his disciples the philosophy of Aristotle, for which he was singularly well qualified by his thorough knowledge of the Greek language: but as his genius was too bold and aspiring to confine itself to the authority and decision of the stagyrite, he pushed his researches yet farther, dared to think for himself, and ventured to pursue truth without any other guide than his own reason. We have extant of his composition, five books concerning the division of nature, an intricate and subtle production, in which the causes and principles of Christianity are allegorically explained, yet in such a manner as to show 'their ultimate end in the union of the soul with the Supreme Being.' He was the first who blended the scholastic theology with the mystic, and formed them into one system."

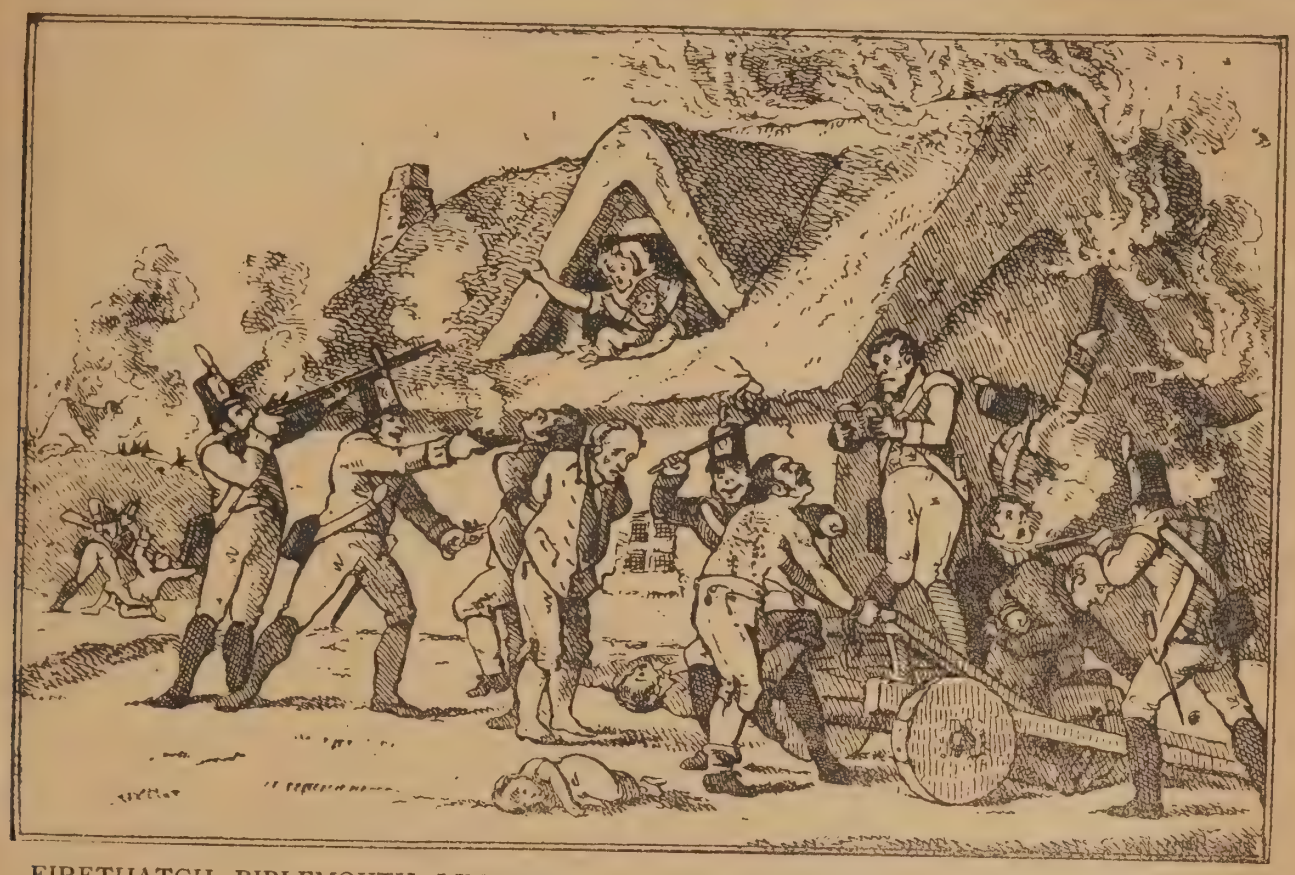
Camden, also, in his account of the foundation by Alfred of the three colleges at Oxford, for grammar, philosophy, and divinity, quotes a passage from the old annals of the monastery at Winchester, in which most honourable mention is made of our countryman. "In the year of our Lord 886, the second year of the arrival of St. Grimbald in England, the university of Oxford was begun; the first who presided and read divinity lectures in it being St. Neoth, an abbot and able divine, and St. Grimbald, a most eminent professor of the incompatible sweetness of the sacred pages; Asser, the monk, an excellent scholar, professing grammar and rhetoric; John, monk of the church of St. David, giving lectures in logic, music, and arithmetic; and John (Erigena), the monk, colleague of St. Grimbald, a man of great parts, and a universal scholar, teaching geometry and astronomy, before the most glorious and invincible King Alfred, whose memory will dwell like honey in the mouths of all."

The skill which our ancestors had in astronomy, at this early period, while all the rest of Europe was in the darkest ignorance, is proved by the fact that our countryman, Feargil, or as his name was latinised, Virgilius, was the first to assert "the sphericity of the earth, and consequently, that a great part of it was yet undiscovered, and that every nation had their antipodes, or people living diametrically opposite to them." This opinion was not understood, or approved of, in those unenlightened times, and Feargil was was accused by Archbishop Boniface of propagating heretical doctrine.

John Scotus Erigena also incurred displeasure by the boldness of his opinions, in a translation from the Greek in the supposed works of St. Dionysius the Areopagite, and Pope Nicholas wrote to Charles the Bald, the friend and patron of Scotus, "that one John of the Scots' nation (so the Irish were always called) had translated the work written by Dionysius, the Areopagite, of the names of God, and of the heavenly hierarchy, into the Latin tongue; which book ought to have been sent to him and approved of by his judgment, especially since the said John, 'though a man of excellent learning,' was suspected not to be orthodox, and therefore entreats him to send the author and the book to Rome, or to banish him the university of Paris." Charles, being unwilling to offend the Pope, advised Johannes to return to his native country, which he did in the year 864. In 883 he came into England with Grimbald, on the invitation of Alfred, and in two years afterwards was employed by the king as an instrument for the restoration of literature in Oxford. His portrait as well as that of his new patron was formerly (and is perhaps still) preserved over the door of the refectory of Brazen Nose College, sculptured in stone, and of elegant antique workmanship, and our readers will not, we are assured, look at our faithful copy of his noble and intellectual countenance, without strong feelings of interest and pleasure.

Johannes had the playful wit of his countrymen, of which a good instance has been preserved but which, unfortunately, cannot be well conveyed in a translation. Sitting over a glass of wine after dinner one day, opposite to his friend Charles the Bald, in whose chamber he often slept, the

JOHN SCOTUS ERIGENA.



king asked him in his Teutonic dialect, "how may a Scot be distinguished from a Sot?" He answered, "by the table."

But to return to our phrenologically mapped head—the reader will perceive that it is much simpler in its division of the organs than that of the modern philosopher; and what is very remarkable, that in some respects it agrees with their arrangement. Time, the great establisher of all truths, will tell which system is the most just. For our own parts, we are inclined to believe that if the original inventor did not proceed far enough, his followers have gone farther than they will be able to establish. P.

SMITH'S HISTORY OF CORK.

NOTES AND ELUCIDATIONS.

BY REV. J. F. LYNCH.

I am sure that all readers of the "Dublin Penny Journal," but especially those who hail from Cork, feel much indebted to the Editor for the reprint of Smith's interesting and valuable old "History of Cork," and it has occurred to me that Cork men ought now to take advantage of the opportunity afforded by the reprint of this old history, and send notes illustrative of the text as well as corrections of the mistakes made by Smith; and if this suggestion meets with the Editor's approval, and if Cork men will bestir themselves, I see no reason why we should not now obtain a really valuable and quite up-to-date history of Cork. I accordingly send some notes on the first instalment of the history. Smith, who has followed Ware, appears to be incorrect in connecting the Coriondi with the Cork district. Beauford says: "But what led Ware into this mistake was probably reading Ptolemy. 'After the Coriondi above the Brigantes are the inland cities, instead of.' 'Afterwards the Coriondii above the Brigantes. The inland cities are.'"

The name Cork is the Irish corcach. "a marsh," and Dr. Joyce ("Irish Names") says that the old name was Corcach-mor-mumhan, the great marsh of Munster.

O'Reilly ("Irish Dictionary") has uairceas, meaning cock-boat, but in "Todd Lecture Series," vol. iii., p. 175, it is stated of Eochaidh Uairceas Di bliadhain dec illongais for muir. Is aire atberar uairces de. For innarba robai o Sirlam. "Twelve years was he in exile on sea. It is for this he is called Uairces (Solitary). In expulsion he was by Sirlam."

Beauford says that Ware makes the Ouodiai (Vodii or Udiœ) the ancient inhabitants of the counties of Cork, Limerick, and Tipperary, but he is of opinion that they were probably the inhabitants of Corca Laidhe, containing the southern parts of the present county of Cork. The old inhabitants of North Limerick and portion of Tipperary now included in the baronies of Owney (Uaithne) were named Uaithne, of which name various explanations are given, but ne may mean descendants, as it does in Conmaicne, and thus Uath would be left, which I take to be the same as Fotha, for the F is a variable letter, but if ne be a suffix then we must accept he explanation of Uaithne in "Corca Laidhe." Fotha or Fothadh is a name which occurs in many old Irish lists of names, and it is also in "Corca Laidhe." This name is very similar to Ouodiai, Vodii, or Udiœ, and to Foaty or Foata, the name of an island in Cork Harbour. Smith says that Cork Harbour was in ancient manuscripts called Bealach Conglac, recte Bealach Chonglais, which name has become Baltinglass, in county Wicklow; it means road of Cuglas; and of the [illegible] Cuglas(1) a legend is given by O'Curry ("Lectures," p. 586). It appears to me that cuglas means grey hound, and it is probable that Bealach Chonglais was the name of the old road leading to Great Island in Cork Harbour, and passing across an arm of the harbour, near Belvelly. Keating says: "From Ath-cliath of Leinster—leap of the sea—to Oilen Arda Neimidh, without sadness, not cowardly his conduct, was the portion of Orba, for land of his race. From the ford in which Neimidh found death to Meadruidhe." Great Island was named Oilen Arda Neimidh, or "island of the height of Neimidh," and the ford where Neimidh found death must have been the ford where now is Belvelly Bridge, for Keating says also that Neimidh died on Oilen Arda Neimidh.

Youghal represents the Irish Eochaill, and means yew-wood; and there is a local legend concerning the old yew trees of this wood. The present Irish name of Mizen Head is, I think, Ceann Carrain. Carrain means a "reaping-hook," but it is also the diminutive of Carr, "a rock." Beauford says that Mizen Head was named by the Irish Ben Moisaimh Beallen and Mullobhaghagh, the last being the equivalent of Smith's Mullavogy. Beauford says that in the Palatine edition of Ptolemy the name Ouelleboroi is written Oikai Ellibroi, and says that Ware thinks that they were the inhabitants of the northern parts of Kerry.

In the Palatine edition the name Uterni or Outernoi appears as Jouernioi, considered by Ware to be the inhabitants of Desmond. The Jouernioi are the Iberians, or Ivernians, and the name is shown by Professor Rhys to

(1) In "Book of Rights," p. 55, Eanach Conglais, marsh of Cuglas, now Killany, in the barony of Farney, is mentioned.

be the same as Erne(2), who in the Irish documents are often mentioned as residing in the west with Tara Luachra as capital, but Ivernis of the Iverni must, I think have included the Knockaine and Lough Gur district, and the Mairtine of Limerick, mentioned by O'Heerin, must have been a remnant of the old Ivernian folk who were the owners of Fermoy district, and with this people must also be connected the old inhabitants of north-east Ulster. Inber Sceine is the old name of the bay of Kenmare, and is said to have been named froom Scene, wife of Amergin, who is said to have been drowned there.

The territory of Carbery, in Cork, was named by the O'Donovans from their old territory of Ui Chairbre Aebhdha, in Limerick. Cairbre Aebhdha, from whom the O'Donovans claimed to be descended, was son of Brian, King of Desmond, son of Fiacha Fidhgente, son of Daire Cairbre, son of Oilioll Flannbeg, son of Fiacha Muilleathan, son of Eogham Mor, son of Oilioll Olum, whose monument has been recently discovered on the summit of Slieve Chlaire, now Slieve reagh,(3) about three miles south of Knocklong. Cairbre musc, from whom the muscraidhe of six districts in Munster, Cairbre baschaein, from whom Corc Bhaiscin, in Clare. and Cairbre riada. in Antrim, were the sons of Conaire Mor, by Saraid, daughter of Conn of the hundred battles. Sadb, wife of Oilioll Olum, was sister of Saraid. Enna Aighnech is aid to have slain Nia Seghamain, who slew Conall Collamrach, whose daughter, Tuag, was stolen from Tara by Fer Fi.

O'Donovan ("Book of Rights" says that "after the English invasion, about A.D. 1192, the families of O'Suilleabhain (O'Sullivans), and MacCarthaigh (MacCarthys), who had been previously seated in the great plain of Munster, were driven by the English into Kerry, and then these baronies of Corcaguiny, Iveragh, and Magunihy, were seized upon by the MacCarthys and O'Sullivans, who reduced the race of Conaire Mor to obscurity.

Iveragh or Evaugh represents the Irish Ui Eathach, the descendants of Eochaidh, son of Cas, son of Corc, King of Munster, the fourth in descent from Oilioll Olum, King of Munster. Their territory originally comprised the barony of Kinelmeaky, and they afterwards encroached on Corca Luighe, and became masters of the district called Fonn Iartharach. or western land, also called Ivahagh, which comprised the parishes of Kilmoe, Scool, Kilcrohane, Durris, Kilmacanoge, and Caheragh. The chief family of the tribe took the surname of O'Mathghamhna, Anglice O'Mahony. Kinelmeaky is the Irish Cinel-m-Bece, or "race of Bece," who was sixth in descent from Eochaidh, son of Cas, son of Corc, King of Munster, fifth in descent from Oilioll Olum. Inokilly is the Irish Hui Maic Caille, or "descendants of Mac Caille." The name occurs in "Calendar of Oengus." I do not know who this Mac Caille was, but in "Genealogy of Corca Laidhe," p. 63, a Mac Caille is stated to be son of Fearghus, son of Dallan, son of Fochta (Fachtna), son of Fothadh Airctheach, son of Lugaidh Maccon. In "Corca Laidhe," p. 43, it is stated that the Uaithne Thire (now Owney and Arra), and Uaithne Cliach (now Owney beg), were descended from Fothadh Airctheach, who, with his brothers, Fothadh Cairptheach, that is, Fothadh Canann, and Fothadh Dolus, were the three sons of Fuinnche, daughter of Nar, son of Fearmora, of the Ara Cliach." So far as I can understand the Fothadhs belonged to the Iberian race, and I think that Ptolemy's Vodii or Udiœ may be explained by the Irish Fothadh or Fotha.

O'Curry ("Lectures," pp. 591, 592) mentions two tales entitled, "The Elopement of the Wife of Ailell, the Son of Eoghan with Fothadh Canann," and "The Love of Caillech Berre for Fothadh Canann." Caillech Berre is connected with several old sacred places(4) of the Irish, and the name Berre is sometimes written Bheurtha, or Vera; and it appears to me that the borai of Ptolemy's Oueliboroi may be connected, as Smith thinks, with Berre or Bear, for Oueliboroi is the tribal name derived from Ouelibor. Colonel Conder has informed me that the mounment of Bear, or Bera, has been identified near Berehaven, and I may also mention that Colonel Conder told me that he was surprised at the number and variety of the rude stone monuments of Ireland, which he regarded as next in importance to those of Syria and North Africa.

In the poem of Gilla-Coemain, given by the Rev. Dr. MacCarthy, in "Todd Lecture Series," vol. iii., we read:—

> Received the Fotachs (Fothads) the kingship
> A year over Banba marshy;
> Fell Fotach Cairptech (charioteer),
> By Fotach Find Airgdech (Raider).

In "Silva Gadelica," p. 521, we read: "One year the two Fothas had ruled Ireland when Fotha Cairpthech fell by Fotha Airgthech; in the battle of Ollarbha in Line, subsequently the latter fell by Caeilte Mac Ronain." In "Silva Gadelica," p. 531 we read: "Fuinche of the triple breasts, daughter of Firmora of the men of Cliu (Aradh Cliach in Co. Limerick), was mother of the three Fothas, of Cahir Mor's son, Currach, and of Maeniadh's (Lugaidh Maccon) other son, Teite(5), a quo Aenach Teite (now Nenagh, i.e., An Aenach, in county Tipperary)." The Rev. Dr. MacCarthy explains airctheach or airgdech as "raider," and Mr. S. H. O'Grady says that airgtech is airgetach, from airget, argentum, or silver, in case of Eochaidh Airgtech. Dr. Joyce ("Irish Names," vol. i., p. 338) says: "In the Leabhar na h-Uidhre, it is related that Caeilte, Finn Mac Cumhals foster-son, slew Fothadh Airgtheach, monarch of Ireland, in the battle of Ollarba (Larne Water), A.D. 285. Caeilte speaks: 'The uluidh of Fothadh Airgtheach will be found a short distance to the east of it. There is a chest of stone about him in the earth; there are his two rings of silver, and his two bunne doat, and his torque of silver on his chest; and there is a pillar stone at his cairn; and an ogum is on the end of the pillar stone, which is the earth; and what is on it is "Eochaidh Airgtheach here"'" (Petrie. "R. Towers," p. 108).

Fothadh Airctheach belongs not to Irish history, but to Irish mythology, and so I think that the name Mac Caille in Imokilly is most likely the Mac Caille of the "Genealogy of Corca Laidhe.'

Lewis (Igtermurragh Parish) says: "The principal seats are . . . Castle Richard of R. Fitzgerald, Esq., near which are the remains of the ancient Castle of Inchicrenagh, a fine old tower of excellent masonry in good preservation; on the wall of one of the arches is an inscription bearing date 1592, with the initials T. G.; it was built by the great Earl of Desmond, and was the seat of the seneschals of Imokilly, ancestors of the present occupier of Castle Richard." Inchierenagh is in Irish Inis na cruithneachta, or "river holm of the wheat," and is the name of the townland, and Inchicrenagh Castle is often called Imokilly Castle, and was, as Lewis says, the residence of the seneschals of Imokilly, the first of whom was the Earl of Desmond, appointed by Edward III. about the year 1340. A curious legend is told concerning Castle Richard, or Inchicrenagh Castle. It is said that a fierce boar had his lair on Cnoc an Chollaigh, or "hill of the boar," and laid waste all the district about his lair as far as Coill na Muice, or "wood of the sow." Many warriors of the period who had endeavoured to slay this boar were killed by him. The Earl of Desmond had offered a great reward for the slaughter of the boar. At last a young warrior, named Thomas Fitzgerald, succeeded, after a terrible fight, in which he nearly lost his own life, in killing the boar. And for reward Thomas Fitzgerald was appointed by the Earl of Desmond seneschal of Imokilly, and was granted a great extent of land surrounding Cnoc an Chollaigh; he adopted as his crest a boar's head, and built Castle Richard, or Imokilly Castle. This tale appears to be a variant of a very old tale. which has also survived in connection with the Castle of Loughmoe ("reward-plain"), the old seat of the Purcells, in county Tipperary. I gave the Loughmoe legend in an early number of the "Dublin Penny Journal. William Hackett ("Trans. Os. Soc." vol. v., p. 64) says: "I have noticed in the Kilkenny paper ("Trans. Kilk. Arch. Soc," vol. ii., pp. 303-34) that the procession headed by the "Lara ban" promised all manner of happiness and blessings to the generous and bountiful, and all maledictions and misfortunes to those who did not contribute liberally to the support of the Muck olla; a long practical address was recited on such occasions, and such parties as young women anxious for husbands, newly-married couples wishing to have children, even avaricious farmers, contributed largely in hope of earning the blessings of the Muck olla. It is singular that these processions flourish most in Imokilly, in that district between Cork harbour and Ballycotton, where the achievements of Fionn in slaying the boar are most celebrated—such contradictions are frequent in the regions of legendary lore. Samhain's eve(6) was the time for making these appeals." Crofton Croker names a hill at north east side of Lough Gur, Ardancolleagh, that is, Ard an Chollaigh, or "height of the boar," and here the people tell stories of the Black Pig, or Sow, and at south side of the lake is site of the remarkable cromlech described in "Ordnance Letters" named Leaba na muice, which, most likely, was Leaba na muice duibhe, or "bed of black pig."

(2) In the "Edinburgh Dinnshenchas," p. 58, Lough Erne is said to be named from the Erne. Ptolemy has marked the Lough Erne district in the occupation of the Erdinio, that is, the Erne or Iberians.

(3) Slievereagh represents the Irish Sliabh Riabhach, or "grey mountain," and the mountain is a dark grey colour. O'Donovan ("Sup. to O'Reilly," p. 588) says that Sliabh Riach (Riabhach) is the modern name of Sliabh Caoin, but this is an error which has been adopted by several writers, including Mr. S. H. O'Grady, in "Silva Gadelica," and it tends to much confusion. Sliabh Caoin is now the Ballyhoura range of hills between the counties of Limerick and Cork. Bearna dhearg is the name of the gap in the mountain of Sliabh Caoin, but O'Donovan ("Sup. to O'Reilly," p. 582), is incorrect in stating that King Mahon was murdered here. The murder took place near Macroom, where there is also a mountain named Sliabh Caoin.

(4) O'Donovan ('Ordnance Letters") says that in county Meath he heard an Irish verse, of which he gives the following translation: "I am poor Caillech Bera, many a wonder I have seen in many a land. I have seen Carnbane a lake, but it is now a mountain." Carnbane is near Slieve na Calliagh, in barony of Fore, county of Meath.

(5) In "Genealogy of Corca Laidhe," p. 58, Teite is stated to be the daughter of Macniadh, the son of Lughaidh; and in "Silva Gadelica," p. 200, Teite is made daughter of Ragamain. In the "Bodleian Dinnshenchas," p. 26, Dartaid of Knockaine is made daughter of Ragamain or Regamain. O'Curry ("Lectures," p. 585) says that Dartaid or Dairt, was daughter of Eochaidh, King of Knockaine, and that Regamain was a chief in Burren, county of Clare. One of the houses of Emania was named from Teite ("Feast of Bricriu," p. 140).

(6) Professor Rhys ("Hibbert Lectures," p. 515) says: "The habit of celebrating Nos Galangaeaf (Samhain's eve) in Wales by lighting bonfires on the hills is possibly not yet quite extinct; and within the memory of men, some of whom are still living, those who assisted at the bonfires used to wait till the last spark was out, when, unlike Diarmait, the whole company would suddenly take to their heels, shouting at the top of their voices:

> Yr hwch du gwta
> A gipio 'r ola'!
>
> The cropped black sow
> Seize the hindmost!"

Inisherkin represents the Irish Inis Arcain, island of the little arc, or orc, that is, "boar," and Smith's Cothilia is Cothluidhe. Dr. Quarry, late Archdeacon of Cork ("Genealogy of Corca Laidhe," p. 88) says: "The name of Corca Laidhe still exists in the corrupted form Cothluidhe, which name, however, is now confined to two small districts, called Cothluidhe-mor and Cothluidhe-beag, situated on either side of the River Ilen(7), near Skibbereen. The name is known to the country people, though not appearing in the maps." O'Donovan quotes from "Annals of Innisfallen," A.D. 1215: "The English gained great power in Munster. Sleibhne built a castle at Dun-na-ngall, in Cothluighe, and another at Dun-na-sead. Barret built a castle Traghbhaile and another at Cuan-Dor (Glandore)."

According to O'Donovan, the principal families of the Corco Duibne were the Ui Failbhe or O'Falvys, of Corcaguinny, the Ui Seagha or O'Shea, of Ui Rathach, now Iveragh, in Kerry, and the Ui Congaile or O'Connells, of Magunihy. Cape Clear Island is now called in Irish Oilean na Cleire, or "Cleric Island," but the old name is Oilen Doimhle. In "Silva Gadelica," p. 510, we read: "Brendan of Birr's mother, Mainnsena, came once to Saighir, and was fain to go to Oilen Doimhle." In the "Calendar of Oengus," p. cxv., Inis Teimle is explained "island of darkness," but, perhaps, not correctly, for at p. cix., the name of this island is also given as Inis Doimhle, and in "Wars of the Gaedhil with Gaill," p. 7, the island is named Inis Temhni and Inis Doimhli Dr. Todd says that in the martyrology of Donegal Inis Doimhle is described as "between Ui Ceinnselaigh (County of Wexford) and the Deisi (Waterford)," and he accordingly follows O'Donovan in identifying Inis Doimhle with Little Island at the mouth of the Suir. The Irish doimhne means depth, profundity; and if this be equivalent to doimhle, then Little Island and Clear Island might have been named with respect to the depth of the ocean, but it is not easy to explain the name owing to the variants.

I have mentioned that the monument of Oilioll Olum is on the summit of Slievereagh, and as Oilioll Olum is such an important Munster personage, and as O'Donovan is, I think, mistaken concerning his monument, it may be desirable to give particulars. In Supplement to "O'Reilly Dictionary," p. 598, O'Donovan says that Sliabh Claire, or "Mountain of the Plain," is the conspicuous hill lying to the east of the Church of Duntryleague. This so-called Church of Duntryleague was a private chapel built by the Massy family, and is not the Church of Duntryleague, which was close to the village of Galbally. O'Donovan says that there is a large cromlech on the hill which seems to be the monument of Oilioll Olum, who died on the summit of Sliabh Claire; this monument is Dun-tri-liag, and is the monument of Cormac Cas, son of Oiloill Olum ("Sup. to O'Reilly," p. 627). In the tale of Knocklong, which is quoted in Dr. Joyce's "Irish Names," vol. i., p. 102, it is stated that Sliabh Claire is the mountain now called Slievereagh, which is about three miles south of Knocklong. In "Silva Gadelica," p. 129, we read: "Where was Oiloill Olom, son of Mogh Nuadat slain?" and he answered that "on the summit of Sliabh Claire to the southward he died." On the summit of Slievereagh, that is, Sliabh Claire, Mr. J. J. Mahony has found a small stone circle, and a dolmen or cromlech. The cromlech has table-stone resting on two pillar stones, and the table-stone inclines towards Lios Dun g Claire, that is, the fort Dun g Claire, situated on the boundary between the townlands of Glenbrohane and Glenlara; and on the Clar or "plain," a short distance north of Sliabh Claire. Keating mentions that this fort of Dun g Claire was one of the two regal residences of the Kings of West Munster; and in "Book of Rights," p. 92, it is said to be one of the seats of the Kings of Cashel. Mr. Mahony has informed me that the site is marked by a very large mound, and that the royal fort was defended by several outlying forts at short distances from it. A short distance north of the fort is the site of Templehalawe Church (8) and a little to the east of the fort, and in Glenbrohane, is a cromlech, a fort, a graveyard, and a well named Toberreendoney (Tobarrigh-an-domhnaigh, "Well of the King of Sunday").

The cromlech on the summit of Slievereagh is 180 yards W. by N. from the stone circle, which is 45 feet in diameter. The celebrated well of Tobercanvore(9), which is said to have issued forth from the spot where the spear of Mogh Ruith(10) fell, is about two miles N. by W. from the stone circle, and only a short distance in a N.N.E. direction from a group of three small artificial mounds on Slievereagh, which were also dscovered by Mr. Mahony. The site of Knocklong Castle, Tobercanvore, and the mounds appear to lie in a right line, and I think that on the site of Knocklong Castle was the "Long" from which the hill was named. The old name of Knocklong is said to have been Druim-damhghaire, which, according to Dr. Whitley Stokes (Lives from "Book of Lismore"), signifies "the hill of the troop of stags."

These important monuments on Sliabh Claire have hitherto escaped notice, and this is the first account of them in which are given the particulars received from Mr. Mahony, Superintendent of Ordnance Surveyors, who discovered them. In Smith's "Cork" there are numerous references to the stone monuments, and may I request the attention of Cork men to these monuments, and let those who are within reach of them examine them, and let us have the people's tales of the stones. When O'Curry beheld the stones of Lough Gur he exclaimed: "There are the oldest records of the Gaedhilic race."

(7) Ilen is connected with the Irish eibhle, aibhle, a spark; eibhlighim means to sparkle or glitter, and aibhell and eibhling mean spark of fire. Ilen means bright or sparkling river.

(8) According to "Tripartite Life," St. Patrick built a church near Sliabh Claire, named Cill Ratha, or "Church of the rath," and it is related that he was opposed in this district by the clans of Cairbre and Colman, and one of the forts is named Rath Cairbre. The name Brocain is also mentioned, and this may have survived in townland name Glenbrohane.

(9) "Tobar cheanna mhoir, a well in the parish of Emlygrennen (Bile Ghroidhnin), in the barony of Coshlea and county of Limerick; it is celebrated in the Irish romances about the Druid, Mogh Ruith" ("Sup. to O'Reilly," p. 714). Compare the passage quoted by O'Donovan from "Keating and Lib. Lec." See also "O'Curry's Lectures," p. 272, and Joyce's "Irish Names," vol i., p. 103.

(10) According to a Cork folk tale, published some years ago in "Cork Arch. Journal," Mogh Ruith was the tighernadh, or "chief," from whom Carn Tighernaigh, a carn on a mountain, near Rathcormac was named. Mogh Ruith's wife is stated to have been buried in Leaba na Cailligha, between Glanworth and Fermoy. See notice of Leaba na Cailligha in description of Glanworth by Lewis. Tigheruach is made King of South Munster in many tales, but it appears to me that the identification of Tigernach with Mogh Ruith is correct. Windele says that the carn has the shape of a large overturned boat, or ancient ship, and it has occurred to me that the "Long" on Druim-damhghaire may have been a ship-like cairn, for long means ship as well as encampment. I have been unable to discover the name of the wife of Mogh Ruith, but I suggest that it was Cuil, from whom the chief fort of the Fianna of Fermoy, near Kildorrery, was named.

Ancient Boroughs of Ireland

From Lewis's "Topographical Dictionary of Ireland," 1837.

CLONMINES.

CLONMINES, an ancient disfranchised Parliamentary borough, and a parish, in the barony of Shelburne, county of Wexford, and province of Leinster, on the high road from Wexford to Duncannon and Fethard, near the upper extremity of a small bay, 5 miles (N.E. by N.) from Fethard; containing 360 inhabitants. This parish comprises 1,359 statute acres, and is the property of A. Annesley, Esq., of Blechingdon Park, in the county of Oxford. The town, which is of great antiquity but is now only distinguished by its ruins, occupied an area of about 20 acres, and was surrounded by a vallum and fosse. According to Mr. Fraser, it had, in the time of the Danes, a mint for coining silver, which was found on the opposite side of the Scar, at a place called Barry's-town, in the parish of Bannow. A convent for Eremites of the order of St. Augustine was founded here at a very early period by the family of Kavanagh or Cavenagh, which was considerably enlarged and beautified by Nicholas Fitz-Nicholas, in 1385, and was subsequently occupied by friars of the order of St. Dominick. A castle was also built by one of the family of Roger de Sutton, who accompanied Fitz-Stephen to Ireland, which has been converted into a farmhouse, and it is now in the occupation of Mr. Richard Sutton, a descendant of the founder, whose family is now the only one residing within the limits of the ancient town. Ships formerly came up to this town, but the port has been blocked up by a shifting bar at the entrance. The borough seems to have been held of the king in free burgage: several inquisitions "post mortem," in the reigns of Jas. I. and Chas. I., mention the seisin of certain persons in burgages, but contain no allusion to a corporation or charter, which it appears the borough never had. It returned two members to the Irish Parliament prior to the Union, when the £15,000 awarded as compensation for the abolition of its franchise was granted to Chas., Marquess of Ely, and Chas. Tottenham, of Ballycurry, in the county of Wicklow, Esq. The ruins of the ancient town are very interesting: they are commonly called "Clonmines Castles," and consist chiefly of the tower and walls of the parish church, and a fragment of the wall which enclosed the monastery, with one of the flanking towers. Embosomed in trees, and forming a strikingly picturesque feature in these ruins, is a small chapel surmounted by two turrets leading by spiral staircases within to a parapet: it is said to have been built by a person that had risen from the humble station of a cowherd to great opulence, over the remains of his mother, and was endowed by him with a stipend for a priest to say Masses for her soul; it is still called the Cowboy's Chapel.

THE ANCIENT AND PRESENT STATE OF THE COUNTY AND CITY OF CORK.

By CHARLES SMITH, M.D.

Æquum est enim meminisse & me, qui discerem hominem esse, et vos, qui Judicetis ut si probabilia dicentur nihil ultra requiratis. Cicero Univers.

In Two Volumes.

VOL I.

The Second Edition, with Additions.

BOOK II.

Containing the Topographical Description of this County, including the City of Cork.

CHAP. I.—Continued.

This town returns two members to Parliament, and gives title of Baron to the Right Hon. Richard, Earl of Burlington. Sir Richard Boyle, the first Earl of Cork, being created Baron Boyle, of Youghal, by letters patent of King James I., dated Septemb. 6, ann. reg. 14th of England, and 50th of Scotland, 1616 (12). It was in this town that the first potatoes were landed in Ireland by Sir Walter Raleigh. The person who planted them, imagining that the apple which grows on the stalk was the part to be used, gathered them; but not liking their taste, neglected the roots, till the ground being dug afterwards to sow some other grain, the potatoes were discovered therein, and, to the great surprise of the planter, vastly increased; from those few, this country was furnished with feed (13).

It is said Sir Walter Raleigh brought them, together with tobacco, into Ireland from Virginia. He also brought the celebrated Affane cherry, at the same time, from the Canary Islands (14)

(12) Original patent at Lismore.

(14) Ben Johnson, in his play called "Every man out of his humour*," mentions potatoes as a great rarity, when he wrote.

* Act 2.

(14) August 6th, 1617, sir Walter Raleigh set sail from the harbour of Cork, on his last voyage to the West Indies. In a letter to Mr Carew Raleigh, sir Walter's son, from the earl of Cork, (dated at Dublin Jan. 16, 1631), the earl says, "That sir Walter's last coming into Ireland cost him above 1,000 marks, whereof he had supplied him in ready money with £350, besides oxen, biscuit, beer, iron, and other necessaries he furnished him with. And adds, that the day he took shipping upon his last fatal voyage from Cork, he dined with him at sir Randal Clayton's house, where, at table, he let fall some speeches, as if he was not fully furnished for his voyage; which the earl observing, immediately procured him a hundred French crowns, which he knew would be current money in any place he should put in to water or victual. After dinner, he and the earl withdrawing to a window, the earl offered him £100 more, telling him, he feared from his discourse that he was not sufficiently furnished with money for his voyage, and thereupon made him this offer, which he refused, protesting that all his defects were supplied by the earl beyond his hope or expectation. Adding, that if he was driven into any harbour, he had jewels that he would sell, rather than take any more money from him. Upon which, he called to him the lord Barry, the lord Roche, his son, Mr Walter Raleigh, capt Whitney, and several others, who dined there: And taking his son by the hand, told him and the other gentlemen, how that the earl had kept a continual open house for three weeks, to entertain him and all his company. That he had supplied his ships with several kinds of provisions, and with £350 in ready money; and had given money to most of the captains of his fleet; and that the earl would now press £100 more upon him, which he did not want: And addressing himself to his son said, Wat, you see how nobly my lord Boyle hath entertained me and my friends; and therefore I charge you, upon my blessing, if it please God that you may outlive me and return, that you never question the lord Boyle for anything I have sold him; for if he had not bought my Irish land, it would have fallen to the crown, and then one Scot or other would have begged for it, from whom neither I nor mine should have received anything of it, nor such courtesies as now I have received. And thereupon the earl accompanied him to the boat, where at taking leave sir Walter repeated all the earl's civilities. And this, says lord Cork, was the last time I ever saw him."

In the beginning of this letter, the earl says, that he paid sir Walter the full of what he owed him for his estate, long before this event; which he purchased at a time when it was utterly waste, and yielded him no profit." The earl paid him £1,000 after his attainder; which debt being forfeited to the crown, he generously made choice of paying to sir Walter, rather than to accept of a composition tendered him by sir John Ramsay, afterwards earl of Holderness, who, for 500 marks in ready money, offered to procure him a full discharge, under the broad seal, for that debt; which obliged the earl to stay two months after in London to sue out a release for that money from the crown; and the expenses, he says, stood him in £200 more.

MSS. at Lismore.

(15) MS. sir Richard Cox.

(16) Ib. ib.

In this town is a barrack for two companies of foot. At the arrays, in 1746, there were 1,000 Protestants in this place fit to bear arms.

This place suffered much in the wars of the Earl of Desmond; it was taken and gained by Capt. White, it was retakenainffi gained by Capt. White, it was the same year retaken by the seneschal of Imokilly (15). White and most of his men being slain, by this means Youghal was left quite desolate, not a man staying in it, except one poor friar; but the old inhabitants were invited to return, a garrison of 300 men being left for their protection. The mayor, who had refused a garrison and had perfidiously yielded the town to Desmond, was taken and hanged at his own door.

Afterwards, ann. 1582, the seneschal of Imokilly assaulted Youghal; but was repulsed with the loss of 50 of his men.

The Earl of Cork shut himself up in this town in the rebellion of 1641, in which he suffered very great hardships, and died in it during those troubles (16). The Earl of Castlehaven besieged it about ten weeks; and though the town was far from being strong, and the garrison very weak and ill supplied, yet they had the courage to defend it bravely, with considerable loss to the Irish army, who were at last forced to raise the siege, ann. 1645. For the further historical incidents which happened there, I refer the reader to the third book, which concerns the civil history of this county.

Within three miles of Youghal, the Earl of Cork had a noble park in the parish of Ardagh; but it had been disparked several years. A little way up the river from the town, on a bold point of land, stands the ruined castle of Rincrew, once an house of the knights templars.

By the Earl of Cork's purchases from Sir Walter Raleigh, and his having the N. and S. abbeys, with the other lands granted to the second earl, for 49 arrears due to himself and others, whose debentures he purchased, the greatest part of this town belonged to this noble family. Not long since, a considerable part of it was purchased by the Right Hon. the Earl of Bessborough and others.

Half a mile N.W. of the town, the solanum officinale grows in great plenty.

The principal seats in this neighbourhood are:—1. Bally-Virgone, belonging to Bor Uniacke, Esq., a pretty plantation, where there is a liquorice tree, and a large fir brought from Newfoundland. 2. Ballydaniel, the seat of Henry Rug, Esq., recorder of Youghal, on the W. side of the bay, from whence is an extensive prospect of the sea coast and ocean; near it is a small subterraneous river, which runs about a mile under ground, but there is another more considerable one, near Castlemartyr, of the same kind. In Mr. Rug's fish-ponds is the water-lily, a beautiful flower, transplanted hither from Youghal bog, where they grow in plenty. 3. The poisonous quality of the yew tree has been experienced, by cattle eating of the branches, some years ago, in the garden of Ballymacoda (then held by Mr. Maurice Uniack), in this neighbourhood, after which they suddenly died. This castle was built by Thomas Fitz-Gerald, ann. 1521. 4. Mount Uniack, in the parish of Killeigh, the seat of Richard Uniack, Esq., from whence is an extensive prospect of a great part of this barony. In the gardens are orange trees which bear fruit, as also plantane trees and cypress.

The castle of Inchiquin stands about three miles S.W. of Youghal (17). This

(15) MS. sir Richard Cox.

(16) Ib. ib.

(17) Pleas held at Adare, before Will. de Windfor, lieu. of the king in Ireland, on the quindene of St Michael, in the 44th year of king Edward III.

The sheriff was commanded to seize into the king's hands the fourth part of the manor of Inchecoigne, with its appurtenances, the property of Thomas Roos, and the manor of Ballyderawn, with the appurtenances, the property of Will. de Canton, of which lands they were disinherited, because they did not in person, before the feast of Easter, in the 43rd year of the king, come into Ireland, nor send a sufficient number of men in their stead to defend the same; and that he should, by a jury of 12 men, return the value of said lands to the lord lieutenant, etc. By virtue of which mandate, John Lombard, sheriff of th said county, on the Wednesday next after the feast of St Denis the martyr, in the 44th year of the reign of king Edward III. by the undernamed, viz., Richard Fitz-Peter de Carew, etc, which the jury say upon their oaths, that the 4th part of the manor of Inchecoigne, with the appurtenances, which was the property of Thomas de Roos on the feast of easter, in the 43rd year of the king, was not worth above £3 3s a year, in all its issues; and that Illeger, as attorney for the said Thomas de Roos, received the profits from thence, etc. And that the manor of Ballyderawne was worth nothing by the year, because it was in the hands of rebels to the king, etc.

manor formerly belonged to the house of Ormond, and was a distinct barony in itself. Sir Richard Boyle passed patent for this manor, castle and barony, March 3rd, the 11th of James I. It was purchased from the present Earl of Burlington by the Earl of Bessborough. The manor anciently belonged to the see of Cloyne. Near this place are good plantations, particularly of witch elms, which bear feed.

Killeigh is a small village, four miles from Youghal, in which is a decent church. At this place was an ancient nunnery of canonesses, founded by St. Abban in the sixth century, where he placed St. Conchere as prioress. The rivulet that runs by it is remarkable for its serpentine course, and for its being accounted good for whitening cloth. It discharges itself into Youghal Bay. Adjacent is a well, visited by the Irish. Near it is Aghada, the house and plantations of Mr. Richard Supple. In his garden are two trees of an unknown kind; the first, a bladder nut, or the nux vessicaria or staphilodendron of Parkinson, being so called from a nut enclosed in a husk or skin resembling a bladder. The other, the arbor vitæ of Gerrard, or the thuyæ theophrast. C. B., being 15 inches in diameter and about 30 feet high. They give an handful of the leaves boiled in ale as a specific for the gravel. It appears that the castle of Aghada was built by the Carews; for Sir Thomas de Carew, the son of Maurice, granted several annuities out of the lands of Aghfadda to William Skiddy, of Cork, temp. Edward III., as appears from copies of three ancient deeds preserved in the Lambeth library of England (F. 99, 100). To the W. of this is Garan-James, Mr. Barth. Purdon's.

Castlemartyr, formerly Ballymartyr, was the seat of a branch of the Fitz-Geralds, called seneschals of Imokilly (18). In the year 1663 it was incorporated by the interest of the first Earl of Orrery, who erected it into a borough, with the nomination of the chief magistrate, recorder, town-clerk, clerk of the market, and other proper officers, to the Earl and his heirs for ever, and with a privilege of sending two members to Parliament. It was anciently called Leper's town, as it is said, from a leper-house belonging to an adjacent place, called Ballyouteragh, which was a village of some note; and there is a tradition of its having been remarkable for a copper manufactory, Ballyouteragh literally signifying a town of braziers; yet there is no copper ore near this place, but iron mines almost everywhere round it. The old church is in ruins, and the site thereof removed to Castlemartyr, by Act of Parliament, where a new, handsome church was erected on ground given by his Excellency Henry Boyle, Esq. The high road from Cork to Youghal lay formerly more to the S., and ran by the castles of Ichtermurragh, Ballytotas, &c, of which road there are still several traces. But it has undergone another alteration from the Right Honourable Henry Boyle, late Speaker of the House of Commons, who at great expense has laid out a fine, level road, and erected a handsome stone bridge to the S.W. of the town. Here is an alms-house, founded by the first Earl of Orrery, for six poor men and as many women, who have a weekly allowance, and clothing once a year; the Lady Mary Boyle, mother to Henry Boyle, Esq., bequeathed £100 to be put to interest towards buying them clothes. His Excellency conveyed to the Incorporated Society two English acres of land for ever, valued at 4s. an acre, for the erection of a charter-school near this place; and gave a lease of three lives of ten English acres of land, at 40s. per ann., which ten acres were to pay no more than an acknowledgment of 5s. a year during his Excellency's life. Also a lease of ten English acres more, at 4s. an acre. The school contains 20 boys and 10 girls. There are several voluntary subscriptions for the support of this foundation. Over the door of the school is this inscription, on a black marble:

"In the year of our Lord 1748, this charter-school was erected at the charge of the Incorporated Society, on ground given for the purpose by the Right Hon. Henry Boyle, Esq., Speaker of the House of Commons, and one of the Lords Justices of this kingdom."

Since the opening of this school, the children have proceeded in a very thriving way.

There is also a spinning school here, for the encouragement of the linen manufacture. This is a neat, small town, well watered and situated for this manufacture. Its chief beauty consists in the seat and improvements of his Excellency Henry Boyle, Esq., lord of the soil. Adjacent to this house is a castle (first built by the Carews) that belonged to the seneschals of Imokilly, and afterwards to the Earl of Orrery, but ruined in the late wars (19). Opposite the house is a large, beautiful canal, which forms a vista to that side of the country through a venerable grove of lofty trees. To the south of the house are the gardens, with fine plantations of elms, chestnut, and other forest trees of a large growth. The artificial river made by his Excellency, which surrounds his domain, as well as the town of Castlemartyr, is one of the greatest undertakings of this kind in Ireland. It is regularly banked, and its sides adorned with fine plantations, and winds in a serpentine manner, being broad and deep enough for a handsome boat to row round it; at the east of the town it is broken into several cascades, and is a great ornament to this part of the country. On this river,

——— The stately sailing swan
Gives out his snowy plumage to the gale,
And arching proud his neck with oary feet
Bears forward fierce, and guards his osier isle,
Protectice of his young.

—Thomson.

This river glides away in a clear stream, wandering through the woods on each side in several windings, shining here and there at a great distance through the trees; the mazes may be traced a considerable way, till the eye is led through two ridges of hills, where it empties itself into another river, that discharges into Youghal bay, and is navigable for about three miles up the country. A small expense, added to what his Excellency has already done, would make it navigable up to the town of Castlemartyr, for boats and lighters.

Towards the east of the town, some large human bones were lately dug up, being buried under a large stone in a small heap, in a cornfield; but not having seen them, I can say nothing about them.

(To be Continued.)

(18) Ann. 1420, 9 Henry V. James earl of Desmond was constituted seneschal of the baronies of Imokilly, Inchiquin, and the town of Youghal, during life, by James earl of Ormond lord lieutenant of Ireland. From this earl of Desmond, this branch of the Fitz-Geralds had this title.

(19) Capt Henry Boyle in the late wars, put his castle under the protection of general Mac-Carty, as did also the lord Inchiquin, his of Rostillan, who promised to secure them and their houses, which he did not perform; for Castlemartyr, with all the improvements and furniture, to the value of some thousands of pounds, were destroyed.

LITERARY NOTES.

Has Mr. Chamberlain been reading Mark Twain lately ? In his speech at University College School the other day he said: "I think we Englishmen—we Britons—are perhaps more inclined to depreciate ourselves and to be pessimistic as to our own characters than any other nation on the face of the earth." This sounds uncommonly like Pudd'nhead Wilson's discovery of a mention of the British race in the Bible: " Blessed are the meek, for they shall inherit the earth."

✧ ✧ ✧

We cut the following from the advertising columns of the " Book Trade " :—

Read This: Messrs. —— now have seventeen eighteenpenny net books which are selling in thousands. If a bookseller orders 150 assorted, he gets them at 11d per copy, which gives him a profit of 63 per cent. on his outlay. If he can only take a dozen copies, he pays 1s 1d per copy, which gives him 38 per cent.

Thirty-eight per cent. is not at all bad in these days, but 63 per cent. is better. Who said that there was scarcely any profit on the sales of new books ?

✧ ✧ ✧

There is some little danger, it appears, that Mr. Stopford Brooke, and Mr. Henry James are about to become rivals in the production of long sentences. According to "Punch," the first sentence of Mr. James's next novel is to run serially for six months (not twelve, as "rumour" had stated) in a popular American paper. According to the "Athenaeum," a sentence in Mr. Brooke's recently published study of Browning fills 32 lines of small print, and then leaves off in the middle of a sentence.

✧ ✧ ✧

A tablet has been placed on the house in Victoria street, Swindon, in which Richard Jefferies, the Wiltshire naturalist and author, lived. Lord Avebury has promised to perform the ceremony of unveiling the tablet, which is to take place on the 15th inst., and Lord Edmond Fitzmaurice, M.P., and Professor Story-Maskelyne will be present. The tablet is the result of the efforts of the Swindon and North Wilts Field and Camera Club, and the house on which it is affixed was occupied by Jefferies when he was a reporter on one of the Swindon newspapers. Coate, Richard Jefferies' village home, is a couple of miles from Swindon.

✧ ✧ ✧

We are sorry to notice (says the "Athenæum") the creeping-in again of the word " Premier " for Prime Minister, even in places where a better practice might have been expected. The Australian Premiers are past praying for. The gallant attempt of Sir E. Barton to introduce a distinction for the Commonwealth by the use of the better term has failed. But in this country Gladstone had succeeded in impressing upon the literary public his horror at the substitution of " Premier " for the classical " Minister," as describing the First Minister or Prime Minister, and the reversion to " Premier " is enough to make him turn in his grave.

✧ ✧ ✧

The old but ever-new question of literary style and its formation has been again under discussion in a contemporary. Many have been the principles upon which the literary artist has proceeded in the endeavour to acquire a style, but probably the most naive was that given by one of his contributors to Dickens when he was editing either " Household Words " or " All the Year Round," we forget precisely which of the two. Dickens, having remarked on the clear style which this contributor possessed, asked how he had acquired it. " Well, Mr. Dickens," was the answer, " you see, there are so many words I don't understand the meaning of, and so many words I can't spell, that I am forced to use the simplest words I can find." Such a rule might not satisfy a Stevenson, but it is certainly conducive to perspicuity.

✧ ✧ ✧

The complete works of John Lyly, now for the first time collected, are about to be issued from the Oxford University Press. Mr. R. Warwick Bond, M.A., has edited the volumes, to which he contributes a life of the author, whose immense importance to English literature is beginning to receive a tardy recognition. Attention to the substance of Lyly's work, and recognition of its literary bearings, have hitherto been found chiefly abroad. Mr. Bond notes that almost everywhere far more attention has been paid to euphuism than to the matter of the euphuist's work, or to the man. Lyly, it is pointed out, was the first who made English-speaking people feel that prose was an art; he was the first English novelist and the first regular English dramatist. The editor suggests that there is far more dramatic credit due, and far more influence on Shakespeare attributable to Lyly than to Marlowe or any other of those with whom the euphuist has been usually classed.

✧ ✧ ✧

What Carlyle and Thackeray advised the literary aspirant to do a couple of generations ago the " Saturday Review " advises him to do to-day. He must give up, says a literary contemporary, his aspirations; if he declines to do that he must be suppressed. " The truth is," says the " Saturday," " that literary aspirations should mercilessly be crushed; the only rational advice to give to anyone, especially a young man, who talks of giving up work of any kind for literature, is ' don't.' " But the " Saturday " makes the inevitable reservation, " he who has it in him to accomplish real literature will accomplish it." And that reservation, after all, begs the whole question. The aspirant does think that he can accomplish real literature, and he continues to think it when his friends have given him up. There is something in the printed word which fosters illusions; it suggests unrealisable possibilities to the people who are never more than aspirants to the end.

✧ ✧ ✧

The " Academy " recently originated a competition, which took the form of a request for the titles of the twelve best novels published this year. The prize, our contemporary stated, would be awarded to the sender of the list which most nearly answered to the general opinion as determined by a plebiscite. Excluding the novels that received less than four votes, the result is as follows :—

Plebiscite List.—Love and the Soul Hunters, 83 votes; The Vultures, 80; Temporal Power, 69; The Intrusions of Peggy, 66; Fuel of Fire, 59; The Lady Paramount, 46; The Hound of the Baskervilles, 41; Audrey, 38; Love with Honour, 37; The River, 31; Scarlet and Hyssop, 30; The Sea Lady, 30.—— Paul Kelver, 25; The Little White Bird, 25; Wings of the Dove, 25; At Sunwich Port, 25; The Way of Escape, 24; Felix, 17; The Success of Mark Wyngate, 16; The Hole in the Wall, 12; King's Byways, 11; The New Christians, 10; The Conquest of Charlotte, 9; The Sheepstealers, 9; The Conqueror, 9; Donovan Pasha, 8; Mystery of the Sea, 8; No Other Way, 8; Four Feathers, 7; Nebo the Nailer, 7; The Valley of Decision, 7; If I Were King, 6; The Wistons, 6; Cecilia, 5; Donna Diana, 5; The Eternal City, 4; Anna of the Five Towns, 4; A Baynard from Bengal, 4; The Westcotes, 4.

✧ ✧ ✧

In the current " Lippincott's Magazine " there appears an interesting article entitled "A Slender Sheaf of Memories." The writer, who disguises his personality under the pseudonym of " Senex," devotes most of his article to James Hannay, a journalist and man of letters whom this generation has practically forgotten. Hannay, indeed, did not make the reputation which his early promise seemed to have marked out for him; he did some sound critical work, edited the Edinburgh " Evening Courant," and died at forty-six. The writer of the article quotes two characteristic letters now in his possession addressed to Hannay, one from Carlyle, the other from Thackeray. Carlyle wrote apropos of a laudatory article on him by Hannay :—

If you are decided to follow literature as a practical employment—which I should by no manner of means advise if you were not decided—you will either give up such notions as these that dictated the paper on me, or else prepare yourself for one of the fiercest struggles, successful or not ! I wish you the best " success," that of growing, in this pursuit or in other fruitfuller ones, to your full spiritual stature under God's sky.

From Thackeray's letter we cut the following :—

I'm very glad you are in the country and like it. . . . And I envy a man who has freshness enough in him left to be meditating heroic satires and reading Catullus in green lanes. I fancy sometimes I could do these things, but I'm afraid it's too late now. The London literary street-walkers must come back to the flags. They are taken home and lead virtuous lives for a little—but they come back to the lamps and the gin-palace again. If you have a fair opening in a profession, for God's sake take it, and don't depend on our's. I expect myself to be done in three or four years, and then what is to happen ?

This was written in 1850, before much of Thackeray's finest work was written. In three or four years he had by no means " done."

✧ ✧ ✧

Every person who knows the value of maintaining a high standard of excellence in the chief periodicals of our time will regret to learn that the " Pilot " ceased publication on Saturday last.

✧ ✧ ✧

The editor, in " A Farewell " to his readers, writes as follows :—

We publish to-day the last number of the " Pilot." We make this announcement with the more regret because we are compelled to leave the field just when the modest success that would have contented us seems coming within sight. Some few of our readers may perhaps be interested in recalling the purpose and history of our venture. Not quite three years ago an opportunity unexpectedly offered itself for beginning an experiment which some of us thought well worth a trial. The High Church Party was almost unrepresented in the secular Press. Excellent " Church papers " had long been in existence, but a Church paper appeals mainly to those whose minds are already made up, and it has necessarily to devote much of its space to matters which interest only the clergy. What seemed to be wanted was a journal which should give no larger place to ecclesiastical affairs than any other secular paper, but handle them, when they were important enough to demand attention, from the point of view of convinced and liberal High Churchmanship. In respect of the character and variety of its general contents, it was hoped that the " Pilot " might not fall behind the best of its contemporaries. We proposed to treat politics in a serious and independent temper, and to approach social problems with an open mind and a full sense of their importance. The literature and art of the day was to be criticised with care and sincerity, and some small place found for solid learning. Competent correspondents abroad were to furnish a just estimate of those religious controversies which underlie the politics of almost every Continental country, and room was to be made, whenever possible, for reasoned and temperate statements of views opposed to our own. In addition to this, the lighter and more humorous aspects of life were not to be left out. We are conscious that these aims have been very imperfectly attained, but we are glad to place them on record. We abandon, with real sorrow, the effort to carry them out, but we have no shadow of doubt that the work the " Pilot " has tried to do is worth doing. We can only hope that it may be done at some future time by other hands with better fortune. The editor takes this opportunity of offering his warmest thanks to the shareholders and debenture-holders for their generous support, to the directors for the unquestioning confidence they have throughout placed in him, and to the many contributors for the help which has made his undertaking possible and pleasant.

It is much to be regretted that no permanent place could be found in these countries for a journal with the laudable aims of the " Pilot."

SCIENTIFIC TOPICS.

Father Landell is a gentleman some forty years of age, spare and ascetic in body, vivid and enthusiastic in mind. He was born in Brazil, of which country both his parents are natives, though his mother is of Scotch descent. Educated and ordained in Europe, he returned to his native country to become a parish priest and professor in the seminary until he left for the United States. Father Landell's system of telephony depends upon a new principle of light which he has discovered. "By virtue of this principle," he went on, "it is possible to transmit speech through a luminous axis without the intervention of silenium or of a microphone. Nay, even a receiver will not be necessary. All persons within the radius of reception will be able to hear the message with the aid merely of their natural organs.

✧ ✧ ✧

Since the invention of wireless telegraphy, scientists have been greatly interested in applying the same principle to the telephone. In the field of wireless telephony a Brazilian priest, Father Landell de Mowra, claims to be the pioneer. In 1900 Father de Mowra, who is now in New York, succeeded in obtaining a Brazilian patent for his invention, which he calls the gouradphone. This patent was expressly granted "for an apparatus intended for the phonetic transmission of speech to a distance, with or without wires, through space, earth or water." With this apparatus Father Landell, in the years 1900 and 1901, made many public demonstrations which attracted attention in Brazil, but have only vaguely and intermittently reached the ears of Anglo-Saxondom. He demonstrated that the human voice could be transmitted phonetically without wires to a distance of thirty or thirty-five miles. Father Landell has made applications to patent his inventions in the United States to the Patent Office at Washington. He recently received word that his theories were so revolutionary that patents could not be granted without the submission of working models to make practical demonstration of their verity. These models he will supply as soon as he is in a position to do so.

✧ ✧ ✧

In demonstrating the tonic charges of the atmosphere, H. Ebert describes some simple and instructive experiments. A plate of tinned iron two square metres in area is supported four metres above the earth's surface on insulating pillars planted on the top of a slope seventy metres high overlooking the River Isar. In clear weather the plate was first connected to earth acquiring a negative charge, then being disconnected and left to itself for some time so as to acquire the potential of the surrounding air. It was then earthed through a galvanometer, and showed a current proceeding from the plate to the earth. The charges acquired vary within wide limits by the weather, being largest in fine and smallest in foggy or damp weather. This shows that the connection of negative irons from the atmosphere of the earth varies in accordance with their mobility in the atmosphere. A rough estimate of the quantity of electricity thus conveyed on a fine day gives about 300,000 electrostatic units per square kilometre per minute.

✧ ✧ ✧

Some of the triumphs of the spectroscope are noted by the Rev. Fred. J. Hillig, S.J., in a special article contributed to the "Catholic Universe," Ohio. He says that the spectroscope has again accomplished a remarkable triumph in establishing a relation between the corona of the sun, the phenomenon known as aurora borealis and the newly-discovered elements: helium, argon, krypton, neon, and xenon. When these gases are enclosed in a tube and electrical discharges made to pass through them, they glow with an orange-red light similar to the light emitted by the auroras and the corona. When the light of these gases are examined through the spectroscope a great number of so-called spectral ines is observed, most of which are either identical or closely related to the lines obtained in the coronal and auroral spectrum. The result has led scientists to assume that the corona of the sun and the upper portion of our air, where the aurora-phenomenon takes place, are in the main made up of the same gases; an opinion which was confirmed with regard to the atmosphere by a spectroscopic examination of the uppermost strata of the air-ocean during the passage of meteors through these regions, when a spectrum similar to that of the aurora was obtained.

✧ ✧ ✧

As our knowledge of the air-ocean, at the bottom of which we are moving about, has been widened by the above-mentioned observations, it may here be the place to review briefly what is known of this subject in general. From trigonometric observations of fire-balls and meteors we conclude that our atmosphere is more than one hundred miles high. We know, moreover, that on the whole the temperature and density of the atmosphere decreases the higher we rise. And since it can be shown that in a mixture of gases of different density the denser gases tend to accumulate in the lower strata, and the higher altitudes, we are led to believe that the heavier constituents of the atmosphere gradually diminish in proportion to the altitude.

✧ ✧ ✧

Let us now suppose that an æronaut were to ascend from our place to the extreme confines of the atmosphere, what changes would he encounter? During the first miles of his trip he would pass through air of the ordinary composition—viz., oxygen, 21 per cent; nitrogen, 79 per cent. Water vapours and carbon dioxide would also be present, and even hydrogen in the almost disappearing quantity of the two ten thousandths. While the air grows colder and thinner, the water vapours are more and more condensed, and finally give out altogether. At an altitude of forty miles or more the carbon dioxide will meet the same fate as the water vapours in the lower regions, forming here and there thin clouds, and falling to lower levels as carbon dioxide rain. This would account for the clouds which have been seen at very high altitudes. All this time the air has slowly but persistently changed its composition; oxygen and nitrogen have considerably decreased, whilst hydrogen, which was present in the lower strata in trifling quantities, has become far more abundant, so as to turn about 12 per cent. of the gaseous mixture at an altitude of forty miles. By this the æronaut reaches the height of fifty miles, where the temperature might be about 135 degrees, the nitrogen and oxygen have so thinned out that the main constituent of the upper air which is left is hydrogen.

✧ ✧ ✧

In this region also helium will make decided appearance with the other rare gases, argon, neon, and krypton in its train. At a further latitude with a temperature of —220, the complete elimination of oxygen and nitrogen will take place, the last remnants of these gases being condensed, forming here and there hazes of liquid air. The æronaut now enters the aurora region, where the temperature is fast approaching the absolute zero, while the density of the atmosphere is nothing short of a Crook's vacuum. Perhaps he will arrive just in time to witness the wonderful performance of an aurora borealis, flooding the dark abyss above and below him with a mysteriously quivering rosy light. He would probably recognise this phenomenon as an enormous discharge of cathode-rays, working up the argon and xenon atmosphere in spite of its ethereal rarity into a brilliant fluorescence. From here to the absolute vacuum of the interplanetary space there is only a short distance, the description of which can be dispensed with as it offers no new features of particular interest. It is needless to say that our fictitious æronaut has to provide himself with means and contrivances which would make life possible under the absence of heat, pressure, and oxygen, otherwise his observations will soon come to an abrupt termination.

✧ ✧ ✧

The Marconi Wireless Telegraph Company of America has secured a site for a station at Eaton's Neck, Long Island, where a station will be installed, the first of a series along the Sound, and the territory adjacent to it, which will be operated for the convenience of yachtsmen. While the service will not begin until next season, several of the best known yachtsmen in America, who are identified with vast business interests, have already made arrangements to have their craft equipped with Marconi apparatus. The Sound service and the stations on the ocean side at Cape Cod, Sagaponack, and Babylon will make it possible for yacht owners cruising in these waters to keep in communication with New York whenever necessary.

✧ ✧ ✧

In the month of December Captain Debureaux is to commence his project of crossing the Sahara by balloon. It is intended to explore the region by a balloon containing four aeronauts, probably including Count Castillon de Saint-Victor, Jacques Balsan, and Lieutenant of Marine Hourts. Before making the attempt it has been decided to carry out a preliminary experiment with a balloon of 1,300 cubic yards' capacity which is to be furnished by the Minister of the Marine. This balloon, however, will not be mounted by aeronauts; it is provided with automatic apparatus for assuring the equilibrium and for throwing out ballast at the right time, and these will take the place of the aeronauts. The equilibrium is to be obtained by a steel guide-rope measuring 2,400 to 2,700 feet long, and weighing 550 to 660 pounds. The ballast arrangement is a water reservoir, which is provided with a simple automatic device so that when the balloon comes within 150 feet of the ground a valve is opened and the proper quantity of water discharged. An air-bag inside the balloon is kept inflated by an automatic air fan, and thus keeps up the form of the balloon should the gas leak out or contract under the influence of a lowering of temperature.

✧ ✧ ✧

The start will take place from Gabes, on the Mediterranean coast, about 150 miles south-east of Tunis, taking advantage of the north north-west winds which prevail constantly in the Sahara region from the beginning of October to April. These winds should drive the balloon with its guide-rope at a mean speed of 12 miles an hour. The distance to be covered, from Gabes to the Niger, is about 1,400 miles, so that the balloon should traverse this part of the Sahara in about five days. The projectors have also provided for the case where the guide-rope becomes entangled in an obstacle along the route, and for this purpose the cable possesses four points of rupture, whose resistance increases with the length of the rope, going towards the balloon. The lower sections will thus be broken first and free the balloon. Automatic registering devices will be carried, as well as carrier pigeons, which will have their cages opened by an automatic release when the car touches ground. The experiment, which is to cost about £320, has been favoured by the Government, and the Minister of the Marine, besides furnishing the balloon, will no doubt bear the expenses of the inflation, which will be carried out with pure hydrogen, as well as of the transport of the material. The Municipal Council of Paris and other bodies have also given financial aid to the project. If the first experiment succeeds it will no doubt be followed by an attempt to cross the Sahara in a balloon mounted by Captain Debureaux and the three aeronauts mentioned above.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

BELFAST REVIEW.

BELFAST, JULY 13, 1787.

On Tuesday, at three o'clock, the Earl of Charlemont, attended by his Aides-de-Camp, Sir A. Stewart and Richard Dawson, Esq., arrived in town, under the escort of the Belfast Light Dragoons. His Lordship was saluted by the Artillery Division of the Belfast Volunteer Company, with 19 guns; the Belfast Volunteer Company having also been drawn up to receive him. On Wednesday morning the troops marched to the ground under a heavy rain, which continued without intermission till they returned in the evening. In consequence of the extreme inclemency of the weather, his Lordship ordered each line to pass him in half and quick time, and after a general salute to march off the ground. It is impossible to form a good estimate of the marching of the several corps, considering that it was performed under such discouraging circumstances; from appearances it seemed likely the discipline is this year fully equal to what it was the preceding one. The General remained during the whole time exposed to the incessant beating of the rain, affording an animated example of true military spirit to the several bodies of Volunteer Troops under his care in the kingdom.

DUBLIN, MONDAY, JULY 16, 1787.

We are sorry to hear that Counsellor William Henn, son to Justice Henn, met with a melancholy accident about one o'clock on Friday, at this side of Rathcoole. On his way to the Munster circuit, travelling in a phaeton, on of the horses proved restive, and striking across the road, drew the carriage into a dangerous position. Mr. Henn thought to extricate himself by leaping out, but in the attempt fell, by which his leg was fractured in two places, and the foot shattered by one of the wheels passing over it.

Thursday night, between the hours of eleven and twelve, two gentlemen were stopped by four footpads, well armed, in Dorset street, within a few yards of Paradise row, and robbed of their watches, two guineas, and some silver, with which they got clear off.

COUNTRY NEWS.

WATERFORD, JULY 13.

Last Tuesday night the house of Edmund Flanagan, of Williamstown, near this city, dairyman, was burglariously entered by twelve men, who feloniously carried away what cash was in the house, together with all the wearing apparel belonging to the family. They were mounted on horseback, had their faces blackened, and wore white shirts over their clothes. It was a fortunate circumstance that the principal part of their money was put out of the house a short time since, in consequence of another robbery which was lately committed in the neighbourhood of this city. They were seen making off towards town.

DROGHEDA, JULY 14.

Thursday last, about half after four o'clock, his Excellency the Lord Lieutenant, accompanied by the Right Hon. the Speaker, Sir John Parnell, and several other persons of distinction, arrived in town from Collon, and proceeded to Alderman Hardman's; as his Grace passed, the 58th regiment, who were waiting his arrival, presented arms, and remained on the Mall till his departure; shortly after the worshipful Mayor, Alderman, Sheriffs, Peers, and Common Council, waited on his Grace, and presented him with the freedom of the Corporation in a gold box, which he received with cheerfulness and respect, and was afterwards with his suite entertained at dinner in the Mansion House, in a superb and elegant style. The officers of the garrison and a number of the gentlemen of the town and neighbourhood were invited.

Yesterday at the general quarterly assembly, the freedom of the Corporation was unanimously voted to the following gentlemen:—Right Hon Sir John Parnell, Chancellor of the Exchequer, in a silver box; Thomas Burgh, Esq.; Colonel Dundas, Hon. Captain Finch, and Major Magennis, Aides-de-Camp to the Lord Lieutenant; John M'Clintock and John Thomas Foster, Esq., in fiats.

DUBLIN, TUESDAY, JULY 17.

Kilmainham Gaol being found too small, and not laid out in separate cells for the various classes of offenders, a considerable sum of money has been raised by presentment towards erecting a new prison for the Co. Dublin on an extensive plan. The foundation is now sinking near Gallows hill, which will occupy within three perches of an entire acre of ground. The rere of the intended building will be contiguous to the river, and the foundation wall being laid two feet below the body of the river, will render an escape that way impracticable, as the aperture in the wall would overwhelm the party in such an attempt. The Earl of Carhampton, the Right Hon. Luke Gardiner, and R. Talbot, Esq., are so obliging as to superintend this useful undertaking.

Yesterday the Liberty was all in commotion in consequence of a combination among the broad-weavers. Having turned out for more wages, they began a riot in the morning, and continued knocking down individuals, and other acts of outrage, until the arrival of large parties of police, horse and foot; but they being found insufficient, a party of the army came, headed by Justice Wilson and the High Sheriffs, who apprehended from 20 to 30 of the rioters, and lodged them in the New Prison. No examples have yet been made of those riotens, who in various branches of business support the spirit of combination. Such illegal proceedings must for ever be destructive of the manufactures of this country. The rivalship of England must always maintain a substantial ground while Irish manufacturers are thus the bitter enemies of the national welfare.

Saturday last the Commission of Oyer and Terminer was opened in the usual form before the Right Hon. the Lord Mayor and Baron Power.

Yesterday the Court proceeded, according to adjournment, when Dominick Trant, Esq., who had been indicted for assaulting and wounding Sir John Conway Colthurst, at Vaucluse, in the county of Dublin, of which wound he languished till he died, was tried and acquitted, there being no prosecution.

A subscription, we hear, is entering into by a number of gentlemen to establish a Pottery in the neighbourhood of this city, that should principally be destined for an exportation trade, there being at present the greatest encouragemen to such a project, from the great demand in all parts of France for every thing of that kind, their own earthenware being ill-fashioned, clumsy, and dear. As a proof of which, a vessel lately arrived at Bordeaux from Liverpool, with a cargo of earthenware, sold its contents at a profit of 50 per cent.

The passage boats between this city and Monasterevan are become so completely the conveyance of all whom pleasure induces to travel to and from the westward of this metropolis, that they are every day full, particularly at this time, as numbers are going that way to the great fair of Ballinasloe, to which they are the more inclined, as a port coach attends occasionally to take up passengers from Monasterevan.

Yesterday being quarter day of the Guild of Merchants, we hear the freedom of that respective corporation was conferred on that ornament to mankind, the humane Mr. Howard, and on that patriotic Senator, the Right Hon. John O'Neil.

Sunday evening, between eight and nine o'clock, a lady walking to town from Clontarf, with her son, a young boy, was stopped by three footpads, on a lonesome part of the road; they proceeded to rob her, and took out of her shoes a very fine pair of set buckles; at the instant, a coach, with company, luckly came up, and they immediately fled, leaving the buckles behind them in their confusion.

On the 7th instant Patrick Coughlan, and John Collins were whipped at Cork, for heading Whiteboys and firing at Hon. Cox, Esq., and the Rev. Thomas Evans, the 26th June, 1786.

DUBLIN, THURSDAY, JULY 19.

Letters from Waterford advise that the vessels fitted from thence for the Newfoundland fishery this year have taken full cargoes, with which they have sailed for Lisbon, etc.

Many accounts having appeared in different papers relative to the affair in the Liberty, on the 16th instant, we can assure the public that the following only may be depended on, as we have it from a correspondent on whose veracity we have ever relied:—On the morning of that day a number of villains, commonly known by the name of the Liberty Light Horse, assembled on the Coombe, and proceeded through different parts of the Liberty, in order, as they termed it, to levy taxes in support of trade. They proceeded to different manufacturers, who, through fear, were obliged to pay them. On their coming to Mr. Thomas Hardford's, on the Upper Coombe, they presented a pistol to his head, held a case knife to his throat, and with oaths and imprecations obliged him to give them money, which he refused to do, until absolutely compelled thereto in order to preserve his life. They then proceeded to the house of Mr. Andrew Broghill, also on the Coombe, where they behaved in like manner, and from each of these honest, industrious men, who support a number of persons in their different manufactories, they took away their spring shuttles, and gave them the grossest abuse. They immediately, on the villains quitting their houses, applied to the Divisional Justice, Mr. Alderman Emerson, who, with his usual alacrity on such ocasions, gave these distressed gentlemen every assistance in his power; after proper examinations were sworn, he, by his clerk, Mr. Eustace, applied to Sheriff Fleming, who, as on all occasions, behaved as became a feeling man and an active Magistrate: they laid their plan so well that they surprised, with only six Police horse and a few regulars, the whole body of these villains, as they were enjoying themselves on their ill-gotten spoils of the day, in a house in the upper end of Cork street. On the Sheriff and Mr. ——'s entering the house, a bold resistance was given by these desperate bravoes, but on a few of the soldiers entering, they after a short contest submitted; upwards of twenty of the pricipal ringleaders were safely lodged in the New Prison without the smallest accident having happened. We are happy also to inform our readers that the principal ringleader, who held the pistol to Mr. Hartford's head, was the second person taken by Mr. E—— after the Sheriff had entered the house.

(To be Continued.)

DROGHEDA.

THE OLD TOWN ON THE BOYNE AS IT WAS SEVENTY YEARS AGO.

(From a drawing by the late Geo. Petrie, R.H.A.)

(From Lewis's "Topographical Dictionary of Ireland," 1837.)

DROGHEDA, a seaport, borough, and market town, and a county of itself, locally in the county of Louth, and province of Leinster, 57 miles (S. by W.) from Belfast, and 23 (N.) from Dublin; containing 17,365 inhabitants, of which number 15,138 are in the town. This place is said to have derived its name, "Droighad Atha," in the Irish language, signifying "a bridge," from the erection of a bridge over the river Boyne, at a period prior to the English invasion; but no notice of any town of importance occurs till after that event. At a very early period a monastery was founded here for canons of the Order of St. Augustine. It was included in the original grant of Meath to Hugh de Lacy; but in 1220, when a new grant of that lordship was made to his son Walter, by Hen. III., the town and castle of Drogheda had become of so much importance that the king retained them in his possession, allowing to De Lacy £20 per ann. from the Exchequer, and the talliage of the town, as a compensation. At that time the Boyne, which now intersects the town, formed the boundary between the counties of Meath and Louth, and the two portions of the town on its opposite banks constituted separate boroughs. In 1229, Hen. III., by charter, gave to the town on the Louth side of the Boyne certain privileges and free customs similar to those of Dublin; and in 1247 the same monarch invested the burgesses of the town on the Meath side with similar privileges and immunities, and granted them a weekly market and an annual fair for six days. A new charter was granted in 1253 to the burgesses of Drogheda in Louth, empowering them to elect a mayor, to exercise exclusive jurisdiction, and to hold an annual fair for 15 days; but the increase of the town was soon checked by

the continued aggressions of the native inhabitants of the surrounding districts. In the 7th and 24th of Edw. I., the town received grants of toll for murage; and in 1316 the king granted 300 marks for the repair of the walls and turrets. In 1317, the burgesses of Drogheda in Meath obtained a new charter for a weekly market, and the grant of a piece of ground on which to hold the same, and the decision of all pleas except those of the Crown. Mandates were issued, in 1319 and 1320, by the king to his justiciary in Ireland, to protect the mayor and burgesses of the town in Louth in the enjoyment of their liberties, and to grant remission of their fee-farm rent of 60 marks per ann., to enable them to extend their fortifications. In 1375, a mayor of the staple was appointed for both towns; but the calamity of pestilence, added to that of almost incessant warfare with the Scots and native septs, had so reduced the burgesses that, in 1380, Rich. II. granted to them certain customs' dues for the repair of the fortifications and the general improvement of the town.

This place from an early period was, in municipal privileges and political consequence, always considered as on an equality with the four royal cities of Dublin, Waterford, Limerick, and Cork; and of the numerous Parliaments assembled by the lords-deputies, some of the most remarkable were held here. Rich. II., on the 16th of March, 1394, in the hall of the Dominican priory received the submission of O'Nial, O'Hanlon, O'Donel, Mac Mahon, and other native chieftains of Ulster. In 1407, the inhabitants united with those of Dublin in a predatory warfare against their common enemies, which they extended even to the coast of Scotland. Hen. IV., towards the close of his reign, united the two boroughs into one body politic. In 1437, part of the fee-farm rent was remitted by Hen. VI., on account of the devastation of the town and the injury of its trade by the king's enemies. The Earl of Ormonde, on being removed from the office of chief governor, in 1444, assembled the nobility and gentry of the English pale at this place; and so strong were the testimonies in his favour, that he was reinstated in his office. A Parliament was soon afterwards held here; another was also held in the 31st of Hen. VI., and in 1467 a Parliament assembled at Dublin was adjourned to this town, by which the Geraldines were attainted, and the Earl of Desmond appearing to justify himself, was instantly brought to the scaffold. In 1474, when the fraternity of arms was established, the goods of the men of Drogheda and Dublin were exempted from the tax for its support; and by the statute passed in Lord Grey's Parliament, concerning the election of temporary chief governors, the mayors of Drogheda and Dublin were to have a voice in the council. In an engagement which took place at Malpas Bridge during this reign, the mayor of Drogheda, at the head of 500 archers and 200 men armed with pole-axes, assisted in the defeat of O'Reilly and his confederates, who had committed great ravages in the county of Louth, in reward of which such valiant conduct, the mayors are allowed to have a sword of state borne before them. In 1493, Lord Gormanstown held a Parliament here, but the validity of its proceedings was disputed; and in the 10th of Hen. VI., Sir Edward Poynings assembled another in this town, of which the acts relating to the adoption of the English statutes and other important matters have been more celebrated than those of any other Parliament prior to the last century. In the succeeding reign, the importance of this place appears from the duties paid at the custom-house, which in 1632 amounted to £1,428 15s.

In 1641 it was attacked by the northern Irish in great numbers under Sir Phelim O'Nial, when a body of 600 foot and 50 horse, sent from Dublin for the relief of the garrison, was defeated at Julianstown bridge, about three miles from the town. Though Sir Henry Tichbourne, the governor, had an incompetent force, and the besieging army consisted of 20,000, yet from want of military skill, artillery, and ammunition, the latter were unable to form a regular encampment; and the siege was little more than a blockade. The town, however, was reduced to great distress from want of supplies, but the numerous assaults of the enemy were vigorously repulsed, and great numbers of their men and several of their bravest officers were killed in the sallies of the garrison; and on intelligence of the approach of the Earl of Ormonde with a considerable force, the commander of the insurgent army raised the siege and retired towards the north. When Ormonde advanced towards Dublin against the Parliamentarian governors, Col. Jones sent most of his cavalry to Drogheda, with a view to cut off Ormonde's supplies; but Lord Inchiquin, coming immediately in pursuit of them with a strong body of royalist cavalry,, surprised and routed the party and laid siege to the town, which he soon obliged to surrender. After the battle of Rathmines, Col. Jones besieged the garrison placed here by the royalists, but suddenly retired on the approach of the Marquess of Ormonde with 300 men. The Marquess inspected and repaired the fortifications; and foreseeing the danger to which it would be exposed, committed the government of the town to Sir Arthur Aston, a gallant R.C. officer, with a garrison of 2,000 foot and 300 horse, all chosen men and well supplied with ammunition and provisions. Cromwell, on landing at Dublin in 1649, marched with 10,000 men against Drogheda, as the most important town for opening a passage into the northern provinces; and after a siege of two days, his artillery having made a sufficient breach in the walls, the assault was commenced by his troops, who were twice repulsed; but in the third attack, headed by himself, he gained possession of the town, and in order to impress upon the Irish such a dread of his name as might prevent all opposition, gave orders to put the whole garrison to the sword: this barbarous execution was continued for five successive days, the governor and all his officers being included in the proscription, and even some ecclesiastics who were found within the town were butchered: a few of the garrison contrived to escape in disguise, and besides these only thirty were spared from the general massacre, who were instantly transported as slaves to Barbadoes.

In the war of the Revolution, this place was garrisoned by the forces of Jas. II., who had a magazine of military stores and ammunition here; and in the immediate vicinity was fought the celebrated battle of the Boyne. On the 30th of June, 1690, King William's army came within sight of the town and advanced in three columns towards the river. King James's camp extended westward from the town in two lines along its south bank. As his army was marching into camp, William advanced within cannon range of the ford at Oldbridge, to reconnoitre, and dismounted; while Berwick, Tyrconnel, Sarsfield, and some other of James's generals rode slowly along the opposite bank. On remounting, a ball from a field-piece concealed by a hedge grazed the bank of the river, and taking a slanting direction struck his right shoulder, tearing his coat and slightly lacerating the flesh; but though a report of his death was quickly spread, William sustained no other injury than a difficulty in using his sword arm. A brisk cannonade was maintained from the opposite bank of the river till the approach of night; and on the following morning, William's right wing crossed the river at some fords below Slane, overpowering a regiment which had been stationed there to defend the passage, and made their way over a very unfavourable country to a morass through which the infantry passed with great difficulty, while the cavalry found a firmer passage on the right. The part of James's army stationed near the morass, astonished at their intrepidity, fled towards Duleek, suffering great loss in their flight. The central column of William's army now attempted to cross the river; the Dutch guards, followed by the Huguenots, Enniskilleners, Brandenburghers, and English, plunged into the stream near Oldbridge, in front of the enemy's lines and breastworks, checking the current by their numbers, and causing the water to rise so high that the infantry were obliged to carry their muskets above their heads. One squadron of the Brandenburghers was repulsed by General Hamilton's Horse, and driven back through the river, and in their retreat threw the Huguenots into disorder; but the general's cavalry wheeling through Oldbridge were cut down by the Dutch and Enniskilleners, with the exception of a small party which encountered the Duke of Schomberg while rallying the Huguenots, wounded and made him prisoner, on which the French Protestants fired into the midst of the party, and unhappily killed the Duke. The Rev. George Walker, who had so gallantly defended Londonderry, was also killed about the same time. After the conflict had continued about an hour, the Irish army retreated to Donore, where James had remained surrounded by his guards; and William, who had crossed the river about a mile above Drogheda, with his left wing, placed himself at the head of his army;

and when the enemy had advanced from Donore, almost within musket-shot of his infantry, he was seen sword in hand animating his squadrons and preparing to fall on their flank. James's troops, however, halted, and again retreated to Donore, but there charged with such success that the English cavalry, although commanded by William, were repulsed. The enemy was, however, bravely attacked by the Enniskilleners, supported by the Dutch, and ultimately by all the English army, and the battle was for some time maintained with equal bravery by both parties. But the Irish infantry being at last defeated, and the cavalry, after making a furious charge, routed, James and his troops retreated through the pass of Duleek. In this important battle, James lost 1,500 men, and William's army about one-third of that number. On the following day, King William sent Brigadier La Melloniere, with 1,000 horse, a party of foot, and eight pieces of artillery, to summon Drogheda, which was defended by a garrison of 1,300 men under Lord Iveagh, who, after a parley, accepted terms of capitulation, and marched out with their baggage, leaving behind them their arms, stores, and ammunition; and Col. Cutts' regiment immediately took possession of the place and preserved it from violence.

The town is advantageously situated on the great north road from Dublin to Belfast, and on the river Boyne, which discharges itself into the Irish sea about three miles below, and by which it is divided into two unequal portions, of which the larger, on the north side, is connected with the smaller by a bridge of three arches, erected in 1722. The streets are tolerably regular, and many of the houses are well built, especially those in the principal street and on the quay, which extends along the north side of the river. Of the ancient walls, beyond which the present town extends, the most curious and perfect portion is the gate of St. Lawrence, forming a handsome approach.

Besides the charters already noted, many others were granted by different sovereigns. The two boroughs continued till the reign of Hen. IV. to be separately governed by their respective charters, and each had its separate corporate officers, from which circumstance the merchants frequenting the town were burdened with the payment of tolls and customs to both corporations, dissensions and debates were daily springing up between the two bodies, and in their contests blood was often shed and many lives were lost. To put an end to these evils, Hen. IV., by charter dated Nov. 1st, 1412, with the consent of the burgesses and commonalties, united both boroughs under one corporation, and erected the town, with the suburbs on both sides of the river, into a county of itself. The town sent members to the first Irish Parliament ever held, and continued to return two members till the Union.

The religious foundations of this place were anciently very numerous, and of several there are still some remains. On the north side of the river are those of the Augustinian priory, of which the steeple is standing; it is more generally called the old abbey, from its remote antiquity, having, it is supposed, been founded by St. Patrick, who it is said baptised his converts at a well within its precincts, which, previously to its late enclosure, bore his name; the old abbey experienced many injuries from its Irish and Danish assailants, but was rebuilt and endowed by the English in 1226. On the road leading to Collon, near the town, is a stone called Clough Patrick, or St. Patrick's stone, on which he prayed; in commemoration of which the marks of his knee and staff were chiselled in the stone, and are yet to be traced. The hospital of St. Mary was founded early in the 13th century, for sick and infirm persons, by Ursus de Swemele, and was afterwards occupied by Crouched friars of the Order of St. Augustine. The priory of St. Lawrence, near the gate of that name, is said to have been founded by the mayor and burgesses. The Dominican abbey, founded in 1224, by Lucas de Netterville, Archbishop of Armagh, afterwards became a house of great celebrity; it was proposed as the seat of an intended university, and after the dissolution was granted to Walter Dowdall and Edw. Becke. The Grey friary was founded in the 13th century, either by the family of D'Arcy, or that of Plunket, and was, in 1518, reformed by the Observantine friars, and on its dissolution granted to Gerald Aylmer. The Augustine friary was founded in the reign of Edw. I., probably by the Brandon family; and there were two smaller foundations, known as the houses of St. James and St. Bennet. On the opposite side of the river was the priory or hospital of St. John, for Crouched friars, a cell to the priory of Kilmainham, supposed to have been founded by Walter de Lacy, a great part of the revenue of which was, after the dissolution, granted by Edw. VI. to James Sedgrave; and also the Carmelite friary, founded by the inhabitants, and which, with the houses of St. Mary, St. Lawrence, and the Augustinian friary, were, at the dissolution, given to the corporation. There was also a Franciscan monastery, of which the founder and history are not known. There are at present some remains of the old church of St. Mary, and of the Dominican abbey, in which was interred Patrick O'Scanlain, Archbishop of Armagh, in 1270. The abbey was dedicated to St. Mary Magdalene, and its majestic remains consist of a square tower, in the battlement of which there is a breach, said to have been made by Cromwell's cannon. It was enacted by the Irish Parliament, in 1465, that a university, enjoying the same privileges and immunities as that of Oxford, should be established at this place, but the design was not carried into execution. The archbishops of Armagh formerly had a palace in the town for their accommodation while attending their Parliamentary duties. Divers remains of earthworks, and traces of military operations, are still to be seen at several of the stations which were occupied by Cromwell during the Parliamentary war, William of Drogheda, a writer on civil law in the 14th century, and James Miles, author of two works on religon and one on music, and who died a member of the Franciscan monastery at Naples, in 1630, were natives of this place. Drogheda gives the titles of Marquess, Earl, and Viscount, in the peerage of Ireland, to the family of Moore.

ODE TO POVERTY.

BY ROBERT DWYER JOYCE.

O kind acquaintance! thou who, proverbs say,
Dost make strange fellows meet in tawdry bed—
Comrades of wistful mouth, keen eyes of gray,
Rough, world-bewrinkled face and hoary head,
They say a gulf's between us that no tread
Of thine can cross, tho' loving me so well,
Yet still I long to clasp
Thy hand with friendly grasp,
For spite of their predictions, who can tell?

What days we had, old comrade you and I,
Bright years ago, when I was gay and young;
With you I roamed the ferny mountains high,
Heard nature's voice in streams, in winds that sung,
And wood-birds warbled with melodious tongue;
With you and other just as quaint compeers,
What days and nights we had,
Well mixed of gay and sad;
What revels, and what laughter, and what tears!

Ah! many a lord of power and high renown,
Driven from his state, at last shook hands with thee;
And many a queen and mighty king, whose frown
Would shake the world, have kept thee company:
Thee they derided while I reverently
Call on thee, brother, with affection kind,
That if misfortune's pain
Should come to me again,
Thou'lt leave me still the heaven of peace and mind!

HOW THOUGHTS ARE WOOED AND INSPIRED.

Haydn was one of the most quiet of composers; he required no strong stimulus, no enlivening punch or sparkling champagne to give an impulse to his genius; but he had a familiar spirit of his own of another kind, a gentler sort of Zamiel, and this was a diamond ring which had been presented to him by Frederick the Great. Did it sometimes happen that at his studies the ideas would not flow with ease, the fault was at once laid on the ring. He had forgot to put it on; and no sooner was the magic ring on the composer's finger and its brilliants sparkling in his eye, than the spring of his awakened fancy was at once unsealed. In order for the fancy of Gluck to become enkindled, nothing would do but he must be off to some green meadow. His Dorothy must perforce have her piano lugged thither, and a bottle of sparkling champagne be placed at his side, and thus warmed by the double glow of the sun and his favourite wine, he poured forth some of the most brilliant of his inspirations. How woefully, then, must some of the writers of his life have been mistaken Inspired by Iphigenia, forsooth! nonsense, it was by the perfumes of a fresh-made haycock. Sarti went quite an opposite way to work. He shut himself up in a large dark room, faintly lighted by a single aperture, and in this abode, as melancholy as the grave, and not less silent, immured the livelong day, and frequently the night, too, would he compose those lovely airs which breathe all the freshness of the most gay and vigorous existence. The method to which Zingarelli resorted to catch inspiration seems scarcely less propitious; before sitting down to compose an opera, he would read some portion of the lives of the fathers of the desert—perhaps the history of St. Anthony's temptation in the wilderness. Salieri disdained the confinement of rooms and books, and sought his genius amid the busy hum of men. He would roam up and down the streets, with his pockets full of confectionery, and as his spirit happened to move, would note down his thoughts in his pocket-book. Paer wrote his "Sargoni," "Achilles," etc., while trifling in the midst of his friends, quarrelling with his servants, playing with his favourite dog, or wrangling with his wife and children; and Paesiello composed his "Nina," his "Molinara," and his "Barbiere de Sivinglia"—in bed.

THE KEEN OF THE SOUTH OF IRELAND.

ILLUSTRATIONS OF AN ANCIENT CUSTOM.

By LECTOR.

IV.

THE SMITH'S KEEN.

(The original of this Keen, got from Mrs Harrington, 1818, was composed by the sister of a young man, a smith by trade, who left his widowed mother and sisters at Killavullen, on the Blackwater, county Cork, to get married in a distant part of the county. Hearing some time after that he was ill this sister set out to see him, but before she could reach her destination night came on, and compelled her to seek shelter in a roadside cottage. Here she found the inmates preparing to proceed to a wake where her brother resided; and going forward with them, discovered on her arrival that it was her brother's wake, at the sight of whose lifeless remains she burst out with the following exclamations. The conclusion, in which she retorts rudely on the priest present at the wake Croker has not versified; whilst he affirms that it is not possible for a translator to do justice to the strain of powerful sarcasm of the original, directed against the wife of her deceased brother.)

"Oh, brother dear! oh, brother dear, your absence long from home,
It did not raise you into ease—you left us but to roam,
And found a wife to plague your life, who knew not how to prize
Your mother's boy, your sister's joy, the darling of our eyes.

"Come from afar, unknown you are; unknown your family,
For those who stand on either hand, are strangers all to me;
They only know you were a smith, and of a smith the son,
And that he dwelt where Blackwater her beauteous course doth run.

"Oh, if I had your cold limbs sad, by the Blackwater's side,
Or on the banks of the Awbeg, or by the gentle Bride,
Then Mary, Kate, and Julia, would cry for your sad downfall;
Your mother, too, would sweetly cry; and I'd cry more than all.

"Oh, brother dear! oh, brother, dear! I might have guessed my woes,
When brother dear, I did not hear your strong and heavy blows
Fall sharp and quick, and close and thick, upon the anvil's head,
Oh, brother dear! oh, brother, here! I should have thought you dead.

"My darling one—my hope that's gone, you had the cruel mark
Of a bad wife who lived in strife—she left you in the dark;
In summer dry, in winter cold, without a Sunday dress,
And fasting long, with patient song, your sorrow to express.

"You woman there, my brother's wife, you woman with dry eyes,
You woman, who are deaf and dumb, nor heed a sister's cries,
Go home—go home—go anywhere, your husband leave to me,
And I will mourn my brother's loss, and keen him bitterly.

"You woman there who in that chair, with tearless eye is seen,
Come down, come down; and I will sing for you a proper Keen,
A husband you if young enough, perhaps may find another,
But I can never find again a dear and darling brother!

KEEN ON MR. SAMUEL HODDER.

(This Keen was translated by Croker from the recitation of Mrs Leary, at Blackrock, Cork, April, 1829, according to whom it was composed about twelve or fourteen years previous to that by Mrs Mary Hodder, on the death of her husband, Samuel Hodder, of (Hoddersfield, or Ballea Castle, possibly, for Croker had forgotten which it was) near Carrigaline. This Mr Hodder, who was generally called Frank, as in the Keen, was killed by a fall from his horse at the Fair of Carrigaline Mrs Hodder having gone there to join her husband made her way towards the crowd, where she saw his horse standing riderless, and found that it was collected round his dead body. On the corpse being laid out in the evening for "waking," she is said to have spoken the following Keen, which Croker considers all the more singular, because the Hodders ranked among the gentry of the country, amongst whom the custom of "Keening" had then fallen into disrepute, and was followed out only by the peasantry.)

"My heart's love and darling,
My horseman so fearless,
Whose good word has redeemed
From the stone-pound so cheerless,
The poor widow's cattle;
And has saved from the halter,
Young men who their courses
From evil would alter.

"I see you, my darling,
In the hall of your mansion,
Or your grounds that were small
To your heart in expansion.
I see you surrounded
By the guests you've invited,
And I see all the windows
Are joyously lighted.

"There are ladies so stately
In rich silken dresses;
With sweet smiles on their lips,
And with beautiful tresses.
There is mirth and there's feasting,
There's all that's entrancing—
The sweetest of music,
And the gayest of dancing.

"From that house has departed
Its strength and its splendour,
Since the loss of my darling,
With his eyes full and tender.
The flowers of the valley
In sadness they languish;
Their heads droop with dew-tears
Of sorrow and anguish.

"The cuckoo is silent,
Though summer's returning—
The fish in the river
Partake of the mourning;
And all that was pleasant
And made sport and rejoicing,
Lies still—for that mansion,
There's now no lord's voice in.

"Frank, my heart's love and darling,
I saw you this morning,
With your head neatly powdered
Your fine horse adorning.
From Cork to Ivera
That horse would have bounded;
But before the day's ended,
With grief I'm surrounded.

"I went to the fair-ground,
All mirth and all gladness,
Nor dreamed that I'd there find
My life's bitter sadness;
I went where a great crowd
Had gathered together,
With a heart that was light
As the eider-duck's feather.

"When I saw what had happened,
And what was before me!
My husband stretched out there!
A numbness came over me.
I spoke not—I wept not—
For tears were too common;
But I stood without motion,
A statue-like woman.

"Then came the long struggle
Between silence and weeping;
No sound could I utter,
For the blow sunk too deep in,
And that which looked brightly,
Now seem'd my eyes dim in,
All, all was unsightly,
And reeling and swimming.

"At last when I roused me,
And burst into sorrow,
No mock-grief I needed
From Keeners to borrow.
I looked on my husband—
I looked on him only,
And I thought of his children,
With me left so lonely.

"Frank, my own love and darling,
You had every blessing—
A wife and two daughters,
Your bosom to press in;
A plentiful table,
With green China dishes,
And a cellar of wine
That could answer all wishes.

"The best bed and blankets,
The finest of sheeting,
And a quilt richly covered,
With birds and flowers meeting.
You might lie of a morning
Asleep or in seeming,
Till the sun's light came in
Through each small crevice streaming.

"You did not forget me
At the Spa (Mallow?) when near dying,
But willed me your fortune,
As I sat by you crying.
Your wife and your cousin,
I was doubly related,
And your lands and your money
Make me doubly estated.

"Frank my true love and darling,
Again I'll not marry;
But for your sake, a widow
Will evermore tarry.
And all you've bequeathed me,
And to me confided,
Shall between your two daughters
Be fairly divided."

KEEN ON YOUNG DRINAN.

(Mr Croker obtained the original of this Keen in April, 1829, from his nurse, who told him that it was composed about 40 years before that by the nurse of a boy named Drinan, as she accompanied his funeral from Cork to Carrigaline. Excited by the boast in the sixth verse respecting her forefathers' abundant table, another woman said to be this nurse's sister-in-law, on unfriendly terms with her husband's family, replied in a severe commentary, of which two stanzas are appended to this Keen.)

"The pulse of my heart, and the prop of my years,
The child of my breast, whom its softness had cherished
Lies there—and I see through the mist of my tears,
In the darkness of death, that my sunshine has perished.

"Had he lived open home he'd have kept for all men,
Tho' a child who that marked his high spirit could doubt him,
But he now lies as cold as the snow in the glen,
And what is this world to be left in without him.

"My gossips, the ways of the world I'll explain,
They are falsehood, and meanness, and cheating, and squeezing,
Since small bits of sheepskin will great rents obtain,
And the agent is warm, while the tenant is freezing.

"The rents they are heavy; then look at the ground,
Every foot is twice measured by learned surveyors,
No landlord in Ireland is now to be found,
Who will give the odd acre to gain a man's prayers.

"With clothing and victuals the needy and poor
My child would have helped through the cold of the winter;
In summer the thirsty would have drunk at his door;
And his nurse in no manner of thing would he stint in.

"She never was stinted, fresh fish every day,
With potatoes the largest her father was able
To give her; and honey and butter and whey,
And the best wine from France he could put put on his table."

The speaker's sister-in-law replies:—

May a heart raw and scalding be yours for the boast,
Your father, poor man, to his wits' end was driven,
Your fresh fish—the limpet picked up on the coast,
Your potatoes, the small things, to pigs only given;
Your butter, slocaune, that's the scum of the strand,
Your honey, from seacoast flung up by the ocean,
For whey—the sour milk of a dead woman's hand,
And the best wine of France? You're a fool I've a notion!

Croker makes mention in his book, of the celebrated Keen composed by the widow of Arthur O'Leary the famous outlaw, who is buried in Kilcrea Abbey, county Cork, which he was unable to see, but it has since been published together with a translation in Vol. I of the "Last Colonel of the Irish Brigade," by Mrs Morgan John O'Connell (London: Kegan Paul 1892).

That "Keens" were not always due to the tragic events which gave rise to most of the specimens reproduced in the present paper is shown by the one that Mrs O'Leary composed on the final departure of Mr Crofton Croker for London, which is too long and too purely eulogistic to be here reprinted. No genuine student of Ireland's bygone ways and days cannot, however feel other than deeply grateful to this now all but forgotten writer, to whom we are so largely indebted for the knowledged he has garnered and brought to light on so many other kindred subjects apart from his ever-interesting monograph on "The Keen of the South of Ireland."

(THE END.)

IS A POUND OF LEAD HEAVIER THAN ONE OF FEATHERS?

That old question about a pound of feathers and a pound of lead takes on new interest when we look at it in a simple scientific way. It seems absurd, of course, that a pound of one thing could be heavier than a pound of another thing, yet that is exactly what may be shown in this case—not that the pound of lead is heavier than the pound of feathers, as most persons would say, on the spur of the moment, but just the other way—a pound of feathers is heavier than a pound of lead. This apparent inconsistent statement may be quite easily proved. With accurate scales weigh a pound of lead, using ordinary shot for convenience; then, with the same scales, weigh a pound of feathers, putting them into a muslin bag for the purpose; the feathers and the bag together must weigh exactly one pound.

The next step in the operation will show, apparently, that there is no difference whatever in the weight of the two articles, for you put the shot in one pan of a balance and the bag of feathers in the other, and after a little see-sawing they will come to an exact level.

Now, however, the scientific phase of the question presents itself, and you are reminded that in weighing the articles thus in the open air you have taken no account of the buoyant power of the air, which bears everything up in proportion to the object's bulk. As the bag of feathers is of greater bulk than the shot, it is borne up more than the shot is, and for that reason it is necessary to use a little more than a pound of feathers to balance a pound of lead.

This, however, is theoretical; the practical proof is obtained when you place the balance bearing the lead and feathers on the receiver of an air pump and cover them with the glass bell. Then exhaust the air, and you will find that the pan bearing the feathers will sink and the pan bearing the lead will rise, thus showing that when weighed in the ordinary way the quantity of feathers used to make a pound is actually more than a pound.

OUR WEEKLY STORY

THE DISAPPOINTED POLITICIAN.

BY MRS. MOODIE.

"Should you like to be a queen, Christina?" said Count Piper, in a tone of affected carelessness, to his beautiful young daughter, who was reclining upon a couch, nursing a lap-dog.

"Queen of Hearts,' said the petite Venus, without raising her head.

"That empire is your already," returned the politician.

"Then I have no ambition to extend my dominions. I have more subjects, at present, than I well know how to manage."

"How! I was not aware, madam, that you had lovers. Surely you are too prudent to encourage their addresses."

"Indeed! I am not so obligingly grateful for homage which I consider as my due. There is only one man in the world for whom I feel the least tender regard."

The brow of the Prime Minister of Sweden darkened .

"And pray, who is the favoured Adonis?" Christina blushed, looking enchantingly simple, and redoubled the caresses she was bestowing upon her dog.

The Count repeated the question.

"My cousin, Adolphus Von Hesse."

"You have not been so foolish as to fall in love with that boy?"

"Boy, indeed! No, I walked into love with him, for I cannot remember the day when he first appeared lovely in my eyes."

"Nonsense! You have been brought up together. 'Tis a mere sisterly regard."

"I should be very sorry if Adolphus were my brother."

"But the youth is portionless—has no other maintenance than his commission and my bounty."

"He is handsome and brave; and, when I discovered that he had fine eyes, and that they spoke the most elegant language in the world, I never examined the depth of his purse."

"My dear girl, you must forget him," said the Count, passing his arm tenderly round her waist.

"My good sire, I don't mean to try. You are not indifferent to his amiable qualities, and love him yourself."

"Not well enough to make him my heir."

"And you will not render us the happiest couple in the world," said Christina, her fine eyes sparkling like sapphires through her tears.

"Christina, you have been a spoiled child. I have given you too much your own way; and now you demand impossibilities. You are not old enough to choose a husband for yourself. Be a good girl, and your aunt shall introduce you at court; and then you will see our brave young King."

"The rude monster! I have no wish to see him. Besides, he hates women."

"'Tis a libel. He is in love with you."

"With me! I never saw him in my life."

"But he has seen you, and he says——"

"Ah, my dear father, what does he say?"

"You do not care for the opinion of a rude monster, and a woman-hater?"

"Ah, but he is a king. What did he say?"

But the Count was determined to keep the secret; and no coaxing, in which feminine art the little flirt was a perfect adept, could wheedle it out of him. "Christina, I shall bring an officer home to sup with me: you must treat him with respect, as I intend him for your husband."

"But I will never have him," said Christina, laughing, as the Count left the room. "If I do not marry my soldier, I will die a maid."

"Bravely resolved, sweetheart," cried Von Hesse, stepping from behind the arras. "It is worth playing at hide-and-seek, to hear you advocate a cause so hopeless as mine."

"Hopeless! why the battle is half won. My father's anger is like the dew upon the grass, which the first sunny smile evaporates. Prithee, do not sigh, and hold your arms, and look so sentimentally solemn. Love will pay the piper, and we shall yet dance to a merry tune."

"You suffer hope to deceive you, Christina. I know your father better. Ah, Christina! you will not be able to refuse the magnificent bribe he will offer in exchange for the warm heart and devoted attachment of your cousin."

"I perceive that you are determined that I shall increase the list of faithless lovers," said Christina, pouting, "in spite of the late convincing proof you so treacherously obtained of my constancy."

"Dearest love, you mistake my meaning. Dry those tears, Christina: I am not Stoic enough to withstand such eloquence."

"Why did you cause them to flow?" said Christina, still sobbing. "Was it merely to indulge in the levity of kissing them away; or were you jealous of some imaginary rival? What think you of that antidote to the tender emotions of the heart, Count Ericson?"

"Ah, Christina!——"

"Why that sigh, Adolphus?"

"Your father will introduce to you, to-night, a new lover, and I—I shall be forgotten."

"You deserve the fate you anticipate for entertaining these just suspicions. But you are a man—and I forgive you."

"Then you really love me, Christina?"

"Am I to tell you so a thousand times? You must be tired of the repetition of that word."

"On the contrary, 'tis ever new to me."

"We love each other," said Christina; "but my father will not, at present, give his consent to our union; and we must wait patiently till he does."

"And if that period should not arrive?"

"Never fear."

"But, Christina, I do fear."

"Our happiness would not be increased by an act of disobedience."

"I thought as much, Christina: you have grown very prudent."

'I cannot break my father's heart."

"But mine?"

"Adolphus, if I am not yours with my father's consent. I will never wed another. But he is so kind—so good—I am his only child. No, no—I cannot disobey him."

The young soldier frowned, and walked several times hastily across the room, at every turn stopping to contemplate the fair tyrant who held his heart in her chains. Christina was trying to look grave; but the roguish dimples, which gave such a charm to her rosy mouth, were ready to expand, upon the first provocation, into a hearty laugh. It was impossible for the little beauty to look sad for two minutes together. Von Hesse was in no laughing mood. He was in the very heroics of love; and his distorted fancy magnified the reasonable impediments to his union with Christina into mountains, guarded by those hope-extinguishing monsters, ambition and avarice. Ignorant of her father's designs, and firmly confiding in his parental love, Christina saw no difficulty in the matter; and she was

greatly diverted by the perplexed and jealous askances of her lover. Von Hesse was out of humour. He dared not complain of Christina's coldness; and he, therefore, endeavoured to draw upon her compassion by railing at himself.

"Christina, I have suffered a fatal passion to mislead me. I will not repay the debt of gratitude I owe your father by robbing him of his child. Farewell, Christina. I go to join my regiment. Should I fall in battle, sometimes think of Von Hesse." His voice faltered—the tears rushed into Christina's eyes—Von Hesse was at her feet. All his magnanimous resolutions vanished; and the lovers parted more enamoured with each other than ever.

If Adolphus was inclined to despair of the success of his suit, Christina, on the other hand, was too sanguine in believing that small opposition would be made to her wishes. The influence she maintained over her father was great; but it was not without limitation. She reigned an absolute queen over his household. Her comfort, her taste, and her inclinations, were consulted in every thing; but her power extended no further. To Christina politics were a forbidden subject: the Count suffered no female interference in state affairs. But, latterly, he had retailed much of the court news to his daughter, and was always eulogising the young monarch, whose favourite he had the good fortune to be, and who was daily heaping upon him fresh marks of his affection and esteem. This brave prince, whose eccentricities had filled all Europe with astonishement ,had been introduced, incognito, to Christina, and, in spite of his professed antipathy to the sex, was secretly among the train of her admirers; a circumstance which gratified the pride, and called forth all the ambitious hopes, of her father. Nor was it unreasonable for the politician to suppose, that the youth who had commenced his reign by crowning himself, and beating the united forces of Denmark, Saxony, and Russia, would scrupulously consult the etiquette of courts in the choice of a wife. In his charming daughter Count Piper though he beheld the future Queen of Sweden.

The hint which he had dropped about the young King's admiration of her personal charms did not fail to make an impression upon the lively Christina. She knew she was beautiful; and the agreeable consciousness of the fact was displayed with such natural ease and gaiety, that what would have appeared absurd in another female, increased the attractions of Christina. Fond of admiration, she was pleased with those gallant attentions from the other sex which all women secretly love to receive. Her attachment to Von Hesse was steady and sincere; but she thought it no treason against the sovereignty of love to appear as agreeable as she could in the eyes of all men. She received their homage as a matter of course; but it was only when Adolphus approached that her voice became tremulous, the brilliancy of her eyes softened, and her heart beat with reciprocal tenderness. Christina would have died for love; but she would have retained through life a painful impression of the lost object of her early affections.

In spite of her lover's jealous fears, the spirit of coquetry induced her to bestow an extra ten minutes on the business of the toilette; and, when she entered the hall, where supper was prepared for her father and his solitary guest, with unusual magnificence, she looked perfectly captivating. The stranger advanced to meet her, and in an awkward and constrained manner, led her to her seat at the head of the table. Great was Christina's disappointment in recognising in her new lover, an old familiar face. "Count Ericson!" she muttered to herself: "what does my father mean by introducing such a dull wooer to me?"

And who was Count Ericson? Patience, gentle reader:—a tall, raw-boned youth, in a Captain's uniform, with large blue eyes, a high aquiline nose, ruddy cheeks, and yellow curling hair; slovenly in his dress, ungraceful in his movements, and so blunt and uncourteous in conversation, that he had been long Christina's butt and aversion. For some weeks past, this half-grown man had been a constant visitor at her father's table, with whom he was often closeted for hours. Christina, out of very mischief, had played off, upon this luckless wight, all her artillery of bright glances and wreathed smiles, without being able to extort from him a single compliment. He would sit and stare at her for hours, without speaking a word; and sometimes, but this was seldom the case, he had condescended to laugh at her bright sallies. Christina had given him up in despair, and great was her indignation at her father's providing her with such a spouse; and she determined to affront him the first time they were left alone together.

As if aware of her hostile intentions, the silent youth endeavoured to exert his powers of pleasing, and, for the first time, commenced a conversation with his fair enslaver, by abruptly asking her what she thought of Alexander the Great?

Christina burst out laughing, and replied, with great simplicity, that "she had never thought much about him; but she remembered, whilst reading his history, considering him a madman."

Ericson eagedly demanded her reason for pronouncing non compos mentis the greatest conqueror the world ever saw?

"Had Alexander been as wise a man as he was a great conqueror," said Christina, he would have learned to govern himself before he undertook the subjugation of the world."

Ericson reddened, and his proud eye flashed, as he replied with some warmth, "Cannot you, madam, enter into the noble zeal which hurries a brave man into the focus of danger, and induces him to relinquish life, and all its petty enjoyments, to gain the wreath of immortal fame?"

"No, indeed,' 'returned Christina, "I have no feelings in common with the destroyer. I would rather be celebrated for conferring blessings upon my fellow-creatures, than be immortalised by their curses. I have ever looked upon great conquerors as fools or madmen—a scourge to their own people, and an intolerable pest to society."

"My lord," said the Minister, striving to mollify the rising choler of his guest, "you must pay no heed to my daughter's impertinences. Her knowledge of battles and conquerors is confined to the chess-board. On that limited sphere, she enacts the General so well, that even an old soldier like me finds some difficulty in taming her audacity."

Ericson retained his composure, and, turning to the laughter-loving Christina, with more gallantry than she had imagined him capable of displaying, challenged her to play a game with him.

"With all my heart," said Christina, "but if I should beat you?"

"It would not be the first time that I have been vanquished by you, Lady Christina," said Ericson, looking her full in the face.

Christina coloured, and cast her eyes to the ground, only to flash them again upon the Count with a proud glance of mingled coquetry and disdain. But the ice was broken—the bashful youth had gained more confidence; and he met her indignant look with an expression of admiration and defiance. "There is more mettle in this proud boy than I imagined," thought Christina, as she took her seat at the chess-board; "my father has set me to play a dangerous game." She shaded her glowing cheek with her hand, and fixed her eyes immovably on the board, determined, out of pure contradiction, to play as stupidly as she possibly could, to mortify her opponent. The game, however, required no particular skill to ensure a conquest on her part. Ericson scarcely looked at his pieces. His moves were without judgment: they were rash, and easily counter-planned. "My queen gives check to the king," said Christina, with a triumphant air. "Fair tyrant," said the defeated, "do not you wish that you could make the king your prisoner?". "No, it is enough that I have him in my power." "Most completely," said Ericson, rising and pushing the board from him: "you have checkmated me."

. . . . . .

"Father, how could you impose upon me by bringing Count Ericson here as my wooer? Do not imagine that a girl of my sensibility or taste, could condescend to marry that awkward boy?"

"He is nineteen: just two years your senior, is brave, wealthy, and nobly born. What would you desire more?"

"My cousin," said Christina; "as to this Count Ericson, I detest him, and mean to tell him so the very next time I have the misfortune to spend a whole evening in his company."

But many days passed away, and Christina was too busy amused in tormenting her unfortunate lover to put her threat into practice. Besides, Von Hesse purposely absented himself from the house; or, when present, behaved in so cold and distant a manner, that Christina saw no other way of restoring him to his senses than by flirting with the Count.

"I had the misfortune to dream of you last night," she said one morning to the enamoured youth: "I wish for the future that you would not presume to disturb my slumbers by your unwelcome presence."

"I, too, had a dream," said Ericson: "I dreamt that you smiled upon me, and I was happy.' '

"You must take dreams by their opposites," said Christina. "I know better, waking, where to bestow my smiles."

"How did I appear to you last night," said the Count.

"Oh, just as agreeably as you do to-day."

"Scornful girl, teach me how to woo you," cried Ericson, suddenly imprinting a kiss upon her lips.

This freedom, the rudeness of which he was not quite aware of, was repaid by so smart a blow, that the offender, as he rubbed his crimsoned cheek, marvelled how it could have been inflicted by a hand so soft and delicate.

"Your father led me to imagine," he said, in a sullen tone, "that you would not receive my addresses with indifference."

"My father knows nothing about the matter," said the indignant Christina, "or he never would have introduced to his daughter such an unmannerly youth. But you are an object of indifference——"

Before she could conclude the ominous sentence Von Hesse stood before her.

"Who are you, sir?' 'demanded Ericson fiercely.

"A soldier," said Von Hesse, flinging his sword carelessly upon the table: "one who has bled in the cause of his country, and is ready to die in her service."

"We must be friends," said Ericson, extending his hand.

"We are rivals," said Von Hesse, drawing back.

"Does Christina love you?"

"She has told me so a thousand times. See what it is to trust to the faith of woman. You are no longer an object of indifference, and I resign my claims."

"To whom?" said Christina, the tears slowly gathering in her eyes.

"The King," said Von Hesse, turning away.

"Stay!" said Charles.

The young man reluctantly obeyed. "I have seen your face before—what is your name?"

"Adolphus Von Hesse, the son of a brave officer, who died on the field of battle, and left me no other heritage than his good name and my mother's tears."

"And where did you receive that scar upon your left temple"

"In the battle of Narva, where your Majesty, with a handful of men, defeated the armies of Russia."

"You need no other passport to my favour," said Charles, raising him from the ground, as he attempted to kneel and kiss his hand. "That glorious day made me act the part of a soldier, and feel like a man. Then turning to Christina, who had already dried up her tears, he said with an air of pleasantry, "By my sword, maiden, I am a sorry wooer. That blow of thine has frightened away all the Cupids that had taken possession of my heart. Do you love this brave youth?"

"Most sincerely."

"What prevents your union?"

"My father refuses to make us happy."

"On what plea?"

"He has higher views for his daughter."

"Umph!" said Charles, "I see through them now; but Love has outwitted the politician. Christina, if your father refuses to bestow you in marriage on the man of your heart, why—I will. Charles, though an uncourteous lover, is not an ungenerous friend."

The delighted pair sunk at his feet; and, with blunt good-humour, he united their hands. Then, bending over the blushing Christina, he pressed upon her snowy brow the last kiss of love he ever proffered to woman.

"Will your Majesty pardon me," whispered Christina, "for inflicting such a severe blow upon your royal cheek?"

"Silence," returned Charles; "have I not amply revenged the injury? My bride must be wooed in the field of battle, and won 'mid the shouts of victory!"

The week following he honoured the marriage of Christina and Adolphus with his royal presence; and the disappointed politician alone wore a grave countenance at the feast.

ODD ITEMS FROM EVERYWHERE.

About 200 young women at Waremme, in Belgium, have formed a club known as "The Swallows." Each member has given her word of honour never to marry a man addicted to drink.

The "Deer Isle Messenger" has no hackneyed social reporter on its staff. This is the way he reports a recent marriage: "Charles A. Scott came home Saturday, slipped his head into the matrimonial halter and left again Monday, taking his bride with him. Here's wishing the couple many years of happiness."

Thousands of farmhouses in Kansas are now supplied with telephones. The farmers order goods in the nearest town and the rural mail carrier delivers them.

A New Orleans bird fancier says that popular opinion is all wrong about geese. The goose, he adds, is one of the easiest fowls to train and one of the brightest.

NOTES AND QUERIES.

BULLOCK.

TO THE EDITOR DUBLIN PENNY JOURNAL.

Newbridge, Co. Kildare.

Dear Sir—Having read that interesting article upon the old town of Bullock in your issue of last week, I do not see any mention made of the celebrated Colonel Blood, who made such a daring attempt to steal the crown of England. The people about Bullock used to assert that Blood was a native of that place, and that his father was the village blacksmith there, in the time of King Charles I. Perhaps some of your readers can tell if this be true.

JOHN V. BRUTON.

CAROLAN.

In the "Lives of Illustrious and Distinguished Irishmen," by James Wills, published in 1847, in page 89 of Vol. V, will be found an account of Carolan and his habits. Suffice it for the present to quote the few following extracts of his manner of living:—

"Carolan himself was a devotee to whiskey. He took a farm at Mosshill, and launched into a course of reckless and prodigal hospitality, which was both the bent of his nature and the fashion of his time. The Irish of that day were addicted to extravagance in a degree incredible in this sober and trading age of teetotalism and railroads; the only pledges then were pledges over the punch bowl; the best kept road was the road to ruin, and a merrier and more crowded way was never known, and on such Carolan was not likely to be wanting. Among the vices of Carolan's generation there was one which was most likely to have a fatal effect upon one whose profession was in a considerable manner the essential creative of boon fellowship and hospitable profusion—it was the characteristic custom of drunkenness, which tinges the very poetry and sentiment of that day. Hard drinking was the disease and inspiration of Carolan, his love of whiskey was the love of a lover; it was the theme of his most successful strain, and he is said always to have composed his music with a bottle and a glass at his elbow."

Goldsmith, his countryman, and who knew him well, says of him, as quoted by Wills: "His death was not more remarkable than his life. Homer was never more fond of a glass than he. He would drink whole pints of usquebagh, and he used to think without any ill consequence." He then recounts the tragic and sad circumstance of his death. When calling for his glass, he tried to drink out of the bowl, but, failing, observed with a smile that it would be hard if two such friends as he and the cup should part at least without kissing, and then expired.

RICHARD J. KELLY.

SOME REMINISCENCES OF THE PAST CENTURY IN DUBLIN.

TO THE EDITOR DUBLIN PENNY JOURNAL.

Sir—I have been requested by old friends to give a few recollections of the past century in the City of Dublin. I was born in this same house of my father's 85 years ago, who commenced business life here as early as 1805.

The world only a century ago was very different from the present day. My earliest recollection was, in my fourth year, watching the procession, passing up Dame street, of King George IV., in 1821. During my school days, until I matriculated in T.C.D., what were my object lessons in the city? No gas. No police. No railways. No steam. Oil lamps hung in cups in the streets; some of the cups may still be seen attached to railings of houses in Harrington street. Night watchmen, called "Charlies," in watch-boxes, or houses, were armed with long poles, which had a curved hook at the top to trip up the fugitive transgressors of the law, and a rattle or a corncrake, the shriek of which would almost waken the dead.

There were "no motors" then to convey the ladies to their evening entertainments, but Sedan chairs were for hire at certain places (Hume street corner). They had a long pole at each side, which ran out like shafts before and behind, and were carried by nimble-limbed men in swallow-tail coats, knee-breeches, buckle-shoes, and three-corner hats. On arrival at destination the carriers lifted the roof, so that when the lady stood up to alight her tall head dress would not be crushed, and then the door was opened, and the fair dame stepped out in safety in all her finery. These carriers on such occasions always wore a huge buttonhole.

In 1836 I walked over the Kingstown Railway line ere it was opened, curious to know what a steam locomotive would be like—a carriage drawn without horses. Our G.P.O. building, in Sackville street, was only commenced in 1818, and from it the evening show "was the turnout" of the night Royal mail coaches and four, manned by burly coachmen and showily-dressed guards. They also sported large bunches of flowers in their buttonholes.

I fear to swell my reminiscence if I crossed the line into any issue of public notoriety of history, too well known to all your readers, so I briefly close with the optimistic, and not the pessimistic, aspect of this the 20th century. The early citizen of last century if he rose up from his silent tomb and opened his eyes on Dublin of 1902 would not recognise the old city. Its actual area is doubled, its civic population enlarged by 120,000, its leading thoroughfares beautified, and the main features of commercial wealth testified by the immigration of all the Northern keen-eyed bankers, following their trade in Dublin, raising princely establishments, viz., as the Ulster, Belfast, and Northern, alongside their old competitors the National, the Hibernian, the Royal, and the Munster and Leinster.

The enlargement of the city slums, the opening of new food markets, and inauguration of tramways all across the city to new townships, swelling out north and south, are patent to every eye, with a very marvellous supply of pure life-giving water from the hills of Wicklow (24 miles off). The newly-discovered results of electricity on its birth soon to follow. For a weak financial borough, during its last sixty years able to raise a fructifying capital of two millions sterling, is nothing to sneer at, and from an insolvent predecessor of the exclusive classes enjoying now a real estate of £30,000 in fee rents, with Parliamentary helps also of £50,000 more, is something to boast of, with a rating of 9s. 3d. only covering all their civic responsibilities and increasing demands of paupers and lunatics yearly.

—Yours,

H. BROWN, J.P., T.C.

Fownes's street, Dublin.

CARRICKFERGUS.

TO THE EDITOR DUBLIN PENNY JOURNAL.

Sir.—There appeared lately in the "Dublin Penny Journal" an interesting account of the above ancient town, but very little said of its origin. Some time ago an account was given in a Belfast weekly of the town, which was hard to reconcile with authentic history. It stated that Fegus and St Patrick were there at the same time. I cannot understand why Buchanan's History of Scotland should be ignored. Buchanan was tutor to James VI, afterwards James I of England. His account should be reliable. It shows that Fergus was drowned there, so far back as 330 B. C. St Patrick's time was 432 A. D. Buchanan's history gives the several reigns and the duration of each reign from the reign of Fergus. I had better give an extract from Buchanan's History, Vol. I., Book IV:—"Fergus returning home victorious (after defeating Coilus, King of the Britons), the Scots confirmed the kingdom to him and his posterity by an oath. When he had arranged the affairs of Scotland, he passed over into Ireland, to repress a rebellion against his authority there, which, having accomplished, in recrossing, he was suddenly overtaken by a tempest, not far from the harbour, to which was given, in consequence, the name of Fergus Craig, now Craig Fergus, or Carrickfergus, and perished in the 25th year of his reign. The time of his arrival in Albion is placed about the taking of Babylon by Alexander, the Macedonian, nearly three hundred and thirty years before Christ." Fergus, the son of Ferchard, was esteemed first of all the Scots for wisdom and activity.

WM. MARTIN.

Castletown, I. O. M.

THE POET.

BY MARION MUIR.

He suffers; but his mournful days are crowned
By the diviner joy of those to be;
His heart may bleed, yet he hath power to see
All loves wherewith the universe is bound:
And tones that link the living sense of sound
With the deep secrets of infinity,
Blow through his spirit, beautiful and free.
He knows, though all the world upon him frowned
By the immortal burdens it hath borne
How lofty is the soul that in him dwells.
Life he can lay aside—a garment worn—
And smiling, walk among the asphodels;
For glory and despair, all joy and woe,
And love and action are to him a show.

ANCIENT IRISH SOCIETY.

ITS ELEMENTS.

By M. J. B.

SLAVERY—II.

(From the Ancient Irish Laws.)

Resuming our study of the slave system of ancient Ireland, we shall next consider the status of the slave.

The slave was regarded in the light of property, and the master had a right of action for the abduction of his bondman or bond-maid (i., 163). So the heir's remedy for his share in a bond-vassal is classed with that for his share in a cauldron (i., 217-227). And in another place, dealing with salvage claims for finding and restoring stray property, the slave is classed with bees (iv., 431). The master had apparently an absolute power of life and death over captive slaves (iii., 485). It would appear, however, that those in slavery on account of crimes of others or for debt could not be slain with impunity (i., 75-77; iii., 485). It would seem their tribe had some right of redemption. Notwithstanding this, slaves would appear to have had some rights. The forms of legal procedure were favourable to assisting the "fuidher" against every injustice (i., 125-139), and the duties in respective of a captive are mentioned—e.g., to guard and feed him (i., 125-137). It was also expressly provided that contracts of a bondman with his chief are not binding (iv., 55), but that the chief may repudiate it. Now, if a slave had no rights of any kind, obviously he could never enter into any contract, and such a provision would be unnecessary. It is clear, however, that slaves had some rights of property. Thus, we find it discussed whether their creditors might or should levy execution on either themselves or on their cattle (i., 107-9), and there is also a discussion as to their liability for the debts of their chief and of themselves (i., 109-111), showing they could incur debts. If injured, they were entitled to medical attendance at expense of the wrong doer (iii., 481). In the curious laws as to bees, we find that daer-persons possessed them (iv., 439). And we find mention of daer-persons possessed of real estate (iv., 471). There is also a reference to a special mode of tenure of land by slaves (iv., 17-19), but possibly this is a mistake in the translation, and the reference was intended merely to mean a base-tenure (iv., 19). The taking of holy orders operated to free a slave (iii., 31). The liabilities of slaves for their own forts are discussed in the "Book of Aicill" (iii., 175, 179, 275), but possibly the translation is here incorrect, as elsewhere it is stated the master is answerable for the crimes of the daer-person (iii., 433), which would be much more in accordance with the general principles of Irish jurisprudence.

Daer-persons themselves sometimes had servants of their own (iii., 179), which was the case in ancient Rome according to Dr. Smith (Dict. Greek and Roman Antiq. "Servus"). On the other hand, "fuidhir-labourer" lay under some incapacity to contract, but this incapacity was rather a prohibition to enter into contracts than "incapacity," as we now understand it (ii., 289-93; ii., 59). Under the ancient Irish law contracts bound not only the individuals making them but a certain circle of relatives and civil connections. Hence it was inexpedient individuals should have absolute freedom of contract, and such was not allowed to the greatest in the land (i., 51-53; ii., 283-289; iv., 55, etc.). Slaves were also under some disability in sueing without giving security—a lot they shared with all the humbler classes (i., 85, 91, 105). They were also apparently disqualified from acting in the capacity of Bailiffs for levying execution (ii., 85); at all events in cases where the debtor was of superior rank to themselves. In various places we find slaves classed with labourers and foreigners and landless persons, as if their only distinction was the want of property (i., 91; ii., 25-85, etc.), and in some places the slave is classed with the son and wife (i., 233).

When we travel outside the laws, as, for instance, into the "Book of Rights," we find still clearer evidence of the fact that slaves were regarded as property, since they are frequently passed from chief to chief as part of a regular tribute ("Book of Rights," 33, 69; 111, 127, etc., etc).

There is much information on the slave system in the Patrician documents, edited by Dr. Whitley Stokes for the Rolls Publications, but it is so difficult to weed the fictions from the truth in these legends, that probably they would afford a very unsubstantial foundation upon which to construct any theory. However, in the confession which is admittedly genuine, St. Patrick seems to indicate that the value of a slave was something considerable (p. 372), and that even children of Kings were sometimes purchased or hired (372). The letter to Coroticus is also admitted as genuine, and from this it would appear that St. Patrick preached against enslaving Christians (378). In one of the legends a reference is made to a distinction between a slave's tonsure and the tonsure of a cleric (p. 25), but, perhaps, we had better not launch into these legends.

One thing is, however, very remarkable in St. Patrick's life, namely, the fact that his old master was not apparently able to, or, at all events, did not reclaim him as a runaway slave.

Sir James Ware devotes the 30th chapter of his "Antiquities" to a short essay on the servile classes in ancient Erin, but our means of acquiring knowledge of ancient Irish society have vastly increased since Ware's time; and for various reasons, not now necessary to mention, I do not consider his remarks of much value on this head. The canons which he cites seem capable of various interpretations.

THE SONG OF HOPE.

The following poem by the late J. F. Taylor, K.C., first appeared in the "Nation" in 1876:—

Labour on, and cease complaining—
Idle whining works no cure—
Nerve, and brain, and sinew straining,
Toil and trust; reward is sure.

What are sorrows and afflictions
But the school which moulds the great?
Can the earth's combined restrictions
Chain the heart that fears no fate?

Look around! see brave men striving—
Do they waste their time with sighs?
Bonds, like cobweb links, they're riving,
Resolution lights their eyes.

All the men and states that ever
Won from time an honoured name—
Earnest, calm, and strong endeavour
Built the fabrics of their fame.

Not with sudden zeal, soon swerving,
But with trustful, patient strength,
Day by day made more deserving,
Till they reached reward at length.

Thus should we toil on with ardour;
Struggles make our joys no less;
Tougher cares and toils the harder—
Purer radiance crowns success.

Scorn the sneerer's dull derision,
And the honeyed curse of praise;
Onward, braced with man's decision,
Urge your steps in wisdom's ways!

Wasted hours and vain aspiring,
These with all your soul regret;
But with hope and strength untiring
Act, and trust for triumph yet.

Virtue seek—not cramped and frigid,
Spying flaws in others' deeds,
Ice-bound path of minds made rigid,
Churchyard-rich in venomed weeds.

Be your words no stinging lances;
Faints a brother by the road?
Lead with love his slow advances,
Never dare with taunts to goad!

Fix your thoughts on aims of merit;
Rouse your slumbering strength to life;
Cast with trust your words and spirit;
Armoured thus, who fears the strife?

Shrink not pale from sorrow's rigour—
Rocks withstand the waves' wild swell;
Be thus firm! and, roused to vigour,
Trust your strength, but guide it well.

J.F.T.

THE SCIENCE OF STOKING.

According to Consul-General Mason at Berlin, the trailing clouds of black smoke from mill and factory that hang over so many cities, darkening the atmosphere and befouling the buildings, could be eliminated if the scientific methods constructing chimneys and stoking furnaces that prevail in Germany were adopted. "It is not every strapping labourer who can shovel coal who is permitted to stoke a boiler furnace in Germany," says Mr. Mason. The stoker in that country must learn the theory and practice of economical scientific firing, whereby the coal is so distributed over the grate surface as to secure the most perfect combustion. The use of fuel briquettes for domestic purposes in Berlin also tends largely to the prevention of smoke.

THE ENGAGEMENT BETWEEN THE SERAPIS AND THE BON HOMME RICHARD.

JOHN PAUL JONES.

A BRILLIANT SEA DOG OF THE PAST.

By ADMIRAL PORTER, UNITED STATES NAVY.

The history of a nation is the history of its distinguished men, and we neglect a duty if we fail to do justice to the memory of those who, either in peace or war, have done honour to the country. The events of the Revolutionary War and of the War of 1812 once held a prominent place in the public mind; and it is one of the objects of this article to revive such recollections, since the nation seems to have forgotten these events as well as the men who gained laurels from the "Mistress of the Seas," and forced an honourable peace. The navy of the United States had on its rolls in 1775 and 1812 many gallant spirits who would have rivalled the fame of Blake and Nelson had the opportunity been offered them.

Although our navy has always borne a prominent and successful part in all the wars in which the United States have been engaged, yet it has never received justice from the community. It is true that while the memory of some of its triumphs was fresh in the popular mind, the service has been the recipient of temporary applause, but such momentary enthusiasm soon expired. In consequence of this, the navy has always been allowed to languish in time of peace and maintain a precarious existence, and very few monuments have been erected by the Government to commemorate its heroes or its victories.

Even the illustrious Paul Jones, who first taught the English to respect our flag on the ocean, is generally referred to as a bold "adventurer," a designation given him by our foes, and which we, to our shame, have accepted. The names of Truxton, Hull, Bainbridge, Porter, Perry, McDonough, Decatur, Preble, Lawrence, Somers, Biddle, and others, are occasionally remembered as men who at a remote period performed gallant service; but nothing has been done to preserve the memory of those distinguished officers, and it is only within a few years that anything like an accurate account of their achievements was given to the world. This is inexcusable, for few, indeed, have any conception of the hardships and sacrifices of the men who went forth to battle with the "Mistress of the Seas" upon her chosen element.

It should never be forgotten that, in 1776 and in 1812, we entered into what was generally considered a hopeless conflict with the greatest navy the world had ever seen, and that but for the gallantry of our seamen we should have been forced to agree to an ignominious peace. The successes of our navy, in the language of Byron,

". . . . . taught her Esau brethren that the flag,
The floating fence of Albion's feebler crag,
May bow to those whose red right hands have bought
Rights cheaply earned with blood."

Through the efforts of the navy in 1812 we gained what we went to war to obtain, and from that time our flag has been respected as the emblem of one of the great powers of the world. The history of that memorable struggle has been written by our distinguished countryman, Cooper, and, from his naval experience and personal knowledge of the principal actors, he was well qualified for the task; but in a general narrative of the war it was, of course, impossible to give that full account of the life of his heroes, by which alone their merits can be properly estimated.

Since the war with Great Britain, many events have occurred in which our naval officers figured conspicuously, the details of which are unknown to the general public. Most of those who were distin-

guished in the War of 1812 have since occupied important positions at home and abroad, and have letf the impress of their characters indelibly fixed upon the naval service, and the survivors who served under their command still delight in the remembrance of their career under those pioneers of our navy.

And yet, how little are those men remembered by what is called "a grateful nation!" How few of them ever received any substantial compensation! And their friends have not the satisfaction of knowing that the love and tenderness of their Government overshadowed them in their advancing years. How much better it would have read in history if their deeds had been properly rewarded!

In this country we are too apt to keep back those cheering words and rewards while expectant ears could hear them and when brave hearts could be thrilled and made happier by them. What good does it do to the heroes to pay them honours when they are gone? How much better would it be that the flowers intended to adorn their coffins should be sent to sweeten their homes while living! If they had had friends who laid away fragrant perfumes of sympathy and affection and who had appreciated their daring deeds, how much better than breaking them over their dead bodies that they had been brought forth in their weary and troubled hours to refresh and cheer them in time of need!

I myself would rather have a pine coffin without a flower—a funeral without a eulogy—than a life without the solace which comes from the generosity of one's Government. Post-mortem kindness cannot cheer those who are neglected while living.

Many of the distinguished naval officers of the Revolution and of the War of 1812 died poor and literally had to ask for bread, and their Government did not even give them a stone to mark the place where their honourable remains were laid.

John Paul Jones, the subject of this sketch, died comparatively poor. Though the greatest naval hero of the United States, he has had no monument erected to his memory to refute the stigma cast upon his character by those who denounced his brave deeds as acts of "piracy." History has redeemed his name from the ignominy thrown upon it by the English, who owed it to themselves to acknowledge his bravery and chivalry.

Cooper has paid Paul Jones a handsome tribute by making him the hero of his celebrated novel, The Pilot, which will live to all time. The deeds of Paul Jones will be read in centuries to come by those who take pride in their country and desire to know more of those who laid the foundations of the Republic. It would be impossible to give a full account of the life of Paul Jones in an article of this kind, for it would require a large volume to chronicle all that he achieved, and as time rools on and future historians delve into the archives of England, France, and America, there will be doubtless glorious deeds brought to light of which we know nothing.

In 1775, when it was evident that there was no possibility of keeping up relations with the mother country, Paul Jones permanently identified himself with the colonies. "With deep interest he watched the progress of those political events which were to decide the fate of his adopted country; and when an open resistance was made to the dominion of Britain, he could no longer remain an inactive spectator. Having only just completed his twenty-eighth year, he was full of bodily vigour and of mental energy, and he conceived that his nautical skill would qualify him to be a distinguished assertor of the rights of the colonists. He was appointed on the 22nd of December, 1775, first lieutenant of the 'Alfred,' and on board that vessel, before Philadelphia, he hoisted the flag of independent America with his own hands, THE FIRST TIME IT WAS EVER DISPLAYED."

The following verses were dedicated to the memory of Paul Jones by Miss G. H. Sherburne, granddaughter of Elijah Hall, first lieutenant under Jones in the Revolutionary War:—

'Twas Jones, Paul Jones, who first o'er Delaware's tide.
From Alfred's main displayed Columbia's pride;
The Stripes of Freedom proudly waved on high,
While shouts of freemen rang for liberty.

All hail! Paul Jones, Columbia's friend in need,
In humbling Britons, thou first took the lead;
Sailing in triumph over every sea,
Proclaiming to all, Columbia should be free.

Old Neptune hailed thee as his favourite son,
With corals crowned thee for thy victories won;
Sea-Nymphs chimed thy praise in merry glee,
While meteor-like thou ploughed the foamy sea.

Through England's fleets thou dashed in bold array,
On Albion's coast spread terror and dismay;
Thy cannon's thunder shook her rockbound shore,
Her Lion trembled amid his boastful roar.

At thy dread name were tyrants made to quake,
And offer Gold for the head they could not take;
Till lowly humbled, owned Columbia free,
Home of the oppressed, blest land of liberty.

Thy triumphs, Jones, the magic muse shall trace,
Thy matchless deeds shall fire a future race;
Thy name shall live in song till time's no more,
Till ocean's mountain waves shall cease to roar.

There are conflicting accounts in regard to John Paul Jones' character, but it is certain that he was a true patriot, a thorough seaman, a good disciplinarian, and a man of literary acquirements. While residing at the Court of France, under direction of Benjamin Franklin, Jones showed considerable diplomatic ability, and so ingratiated himself with the French Court and people that he was of great assistance to Franklin in procuring ships, money, and supplies with which to carry on hostilities. Great Britain, our foe, soon learned Paul Jones' ability, which is shown in the virulent abuse showered upon him by the English Press. Had he fought upon the side of Great Britain as persistently as he did for America, they would have lauded him to the skies, and would have built him a monument higher than the Nelson Column in Trafalgar Square.

The difference between Jones and Nelson was that the latter had opportunities which were never within the reach of the former. Had Jones such fleets as Nelson commanded, he would have swept the British squadrons from the seas. As it was, he did more than anyone else who ever fought on the sea for American independence.

After committing many depredations in the West Indies and Bahamas, Paul Jones was ordered, June 14th, 1777, to command the sloop-of-war "Ranger," the first ship that bore the Stars and Stripes to Europe. A short time after crossing the ocean he sailed for St. George's Channel, notwithstanding that the British coast swarmed with cruisers who never expected to see an American ship-of-war in those waters. Although he was surrounded by enemies, Paul Jones sank and destroyed a number of British vessels, sending the best of them into the French ports of Brest and L'Orient. During this cruise he captured, after a sharp engagement, the British sloop-of-war "Drake," which came out of Whitehaven with the full expectation of capturing him. Jones took his prize safely to France, and such was the excitement in favour of the American cause, owing to this incident, that Franklin was enabled to rise funds to fit out a squadron, consisting of the "Bon Homme Richard," 42 guns; "Alliance," 36 guns; "Pallas," 30 guns; "Cerf," 18 guns; and the "Vengeance" 12 guns; with the "Monsieur" and "Granville," privateers.

With this fleet Paul Jones sailed from the Roads of Groix for the English coast at daybreak of August 4th, 1779, again to beard the lion in his den.

It is not the object of the writer to relate particulars. Suffice it to say that sad havoc was made with British commerce. The performances of the squadron set the British Isles in a blaze. Paul Jones even landed on the coast, committing many depredations. Ships of war were hastily fitted out to go in pursuit, all the coast-guards were on the look-out, and every prominent point was furnished with signals to convey news of the whereabouts of the American fleet. Jones was, however, very poorly seconded by some of the commanding officers of his ships, who were inefficient and insubordinate, and a less energetic commander would have given up the expedition altogether.

After burning, sinking, or running on shore numbers of vessels, Paul Jones met with an enemy more worthy of his adventurous spirit. This affair does more to exhibit the daring character of Paul Jones than any other event of his life, and should have silenced those detractors who tried to take from him the fame he had so bravely won. It showed that his skill and determination exceeded that of any other living naval commander. About noon of September 23rd, 1779, while Jones' squadron was cruising off Flamborough Head, a convoy of forty-one sail appeared, and chase was given. The merchant vessels crowded sail for the coast, but the two ships of war in charge of the convoy bore down and showed a disposition to engage. Making signal to form line of battle, to which the "Alliance" paid no attention. Jones made every effort to close, but did not succeed in coming alongside the enemy's flagship till seven o'clock p.m.,

when, being a pistol-shot away, the latter hailed the "Bon Homme Richard," and was answered with a broadside.

The battle thus begun between the opposing flagships was carried on with unremitting fury, each side seeking to rake the other. Jones' vessel was much less manageable than that of his opponent, being at the best a dull sailer, and the latter in consequence several times obtained an advantageous situation in spite of the efforts of the Americans to prevent it. Having to deal with an enemy of much greater force, Jones was compelled to come to close action in order to neutralise the superior qualities of the British flagship in manœuvring. It was his desire to place the "Bon Homme Richard" athwart the bow of his opponent, but, losing some of his braces, Jones was unable to carry out his intention. In the attempt, however, the bowsprit of the British ship came across the poop of the "Bon Homme Richard," and was immediately lashed to her mizzenmast, when the action of the wind brought the two ships square alongside each other, the bow of one at the stern of the other, the yards interlocked, and the muzzles of the guns of one ship touching the side of the other.

This was the situation of affairs an hour after the opening of the engagement, but previously the American ship had received several 18-pound shot below the water-line and was leaking badly. Lieut.-Col. De Chamillard, commanding twenty French soldiers stationed on the poop, left his post, having lost some of his men by the fire of the British, while the rest deserted their quarters. The battery of 12-pounders, manned by American seamen and French volunteers, and commanded by Lieutenant Dale and Colonel Weibert, was the chief reliance of the American commander, but this was silenced and abandoned. Six 18-pounders, composing the lower gun-deck battery, proved to be of no use, two out of three bursting at the first fire and killing nearly all their crews. This left but two 9-pounders on the quarter-deck effective out of the battery engaged, and none of the heavier guns were fired during the remainder of the action. Purser Mease, who commanded the quarter-deck battery, having been seriously wounded, Jones was obliged to assume his duties, and, rallying with great exertions a few men, shifted over another 9-pounder from the side disengaged, and was thus able to bring three guns of that calibre to bear on the enemy.

The fire of the men stationed aloft was the only aid these three guns now received, but bravely was their assistance rendered, Lieutenant-Colonel Stack, who had charge of the maintop, being specially commended by his commanding officer. Double-headed shot from one of the nine-pounders were hurled at the enemy's mainmast, while grape and canister from the other two cleared his decks and silenced his small-arm fire. At this point, according to Jones' official report, the enemy were about to call for quarter, when the gunner, carpenter, and master-at-arms of the "Bon Homme Richard" called for quarter, under the impression that the ship was sinking, and the former ran aft to lower the colours, but they found they had already been shot away. Suppressing this attempt to surrender the ship, and giving the English Commodore a "most determined negative" to his demand to know if he surrendered, Jones fiercely continued the fight.

The British frigate had dropped anchor, and the fight so far had been between the two flagships, but at 9.30 the "Alliance" came up, and, to the dismay of the Americans, opened fire on the "Bon Homme Richard," which, in spite of hails and signals, continued until several officers and men had been killed or wounded. Some of the "Alliance's" shot struck the "Bon Homme Richard below the water-line, adding to the apparently hopeless condition of affairs for the Americans, while at the same time fire broke out, and Jones was urged by some of his officers to surrender. To add to the difficulties of the situation, the master-at-arms, on his own responsibility, released the prisoners. But in spite of all obstacles Jones continued the action. Shortly after the Englishman's mainmast was observed to be tottering, his fire slackened, while that of the Americans increased, and at half-past ten o'clock p.m. this remarkable battle came to an end, the British Commodore lowering his own colours. The prize was the new frigate "Serapis," Captain Richard Pearson.

The "Bon Homme Richard" had five feet of water in the hold, and was on fire in several places. Her pumps barely kept the water from gaining, while the fires were not extinguished until ten o'clock a.m. of the following day. The ship was a wreck, the rudder cut away, the timbers almost entirely destroyed, and, to quote from Jones' official report, "a person must have been an eye-witness to form a just idea of the tremendous scene of carnage, wreck, and ruin that everywhere appeared."

A survey of the "Bon Homme Richard" showed that it would be almost impossible to bring her into port. Still, the attempt was made, but the wind increasing, she was abandoned on the 25th, and went down. The consort of the "Serapis," the "Countess of Scarborough," was captured by the "Pallas" after an engagement of one hour. Thus ended this memorable action, one of the most sanguinary recorded in history.

The two ships were not fairly matched, the "Bon Homme Richard" being an old merchant vessel and carrying forty guns, while the "Serapis," built for war purposes, carried fifty guns, though rated as a forty-four-gun ship. The following shows the batteries:—

Serapis—20 18-pdrs, lower gun-deck. 2 9-pdrs, upper gun-deck. 6 6-pdrs, quarter-deck. 4 6-pdrs, forecastle.

Bon Homme Richard.—6 18-pdrs, lower gun-deck. 14 12-pdrs, middle gun-deck. 14 9-pdrs, middle gun-deck. 2 9-pdrs, quarter-deck. 2 9-pdrs, spar-deck. 2 6-pdrs, forecastle.

It will be seen by those conversant with the matter that many of the British guns were of large caliber for those days, twenty 18-pounders against six 18-pounders on the American vessel (which were not used after the first fire), so that Jones had to depend on his 6 and 9-pounders. The list of killed and wounded on either side does not appear anywhere with accuracy. Jones reports them as over two hundred on board the English, judging from the muster rolls, while Captain Pearson states, on what authority is not known, that Jones' list of killed and wounded was three hundred and six, and that many of the latter went down in the "Bon Homme Richard."

If doubt remains in the mind of anyone in regard to Jones' bravery and determination to win at all hazards, it should be set at rest by this dreadful battle. His glorious victory made his name a greater terror to the enemies of his country, and still more endeared him to the American people. Owing to the heavier battery of the British ship, the "Bon Homme Richard" appeared several times on the point of being conquered, but Jones determinedly refused to surrender, and would have gone down with his colours flying rather than fall into the hands of the British.

It was such men as Paul Jones who made the glory of our navy, and gave the American flag that prestige which it still retains, notwithstanding we have now no ships that can maintain its integrity upon the ocean. Others followed in his footsteps in the War of 1812, and showed that they were imbued with the spirit of Paul Jones, the founder of the United States Navy; and in years to come those who read of the deeds performed by the naval heroes of the Revolution and of 1812 will not forget the lesson taught them by those great sailors, many of whom are without the humblest monument to mark their resting-place.

SPECULUM VITAE.

BY JOSEPH I. C. CLARKE.

Let us look in the glass for a moment,
Let us brush off the mist from its face—
The mirror of life that is broken
When Death in our ears knells the token
To crumble in space.

We must fall whether praying or pining,
Whether fearing or mocking the blow,
Brush the mist from the mirror, then, trembling;
The grave is no place for dissembling—
There vaunting lies below.

The eyes as they glaze to earth's glory,
Peer into that mirror of pain,
Where the slain of our years lie all gory,
Bent over by grim shadows hoary,
Recording each stain.

Not a blot nor a blemish escapes them,
The sins of the lone and the crowd,
The crime where we pandered or paltered,
The dark things that lips never faltered,
They cry out aloud.

They are there, and no tempest can hide them;
They glow with accusing and shame.
Tho' the years be all dead, they are living,
'Mid the silence they cry for forgiving,
With direful acclaim.

On the wreck-plank of life is there pardon,
When joy is worn hollow in sin?
When the heart sees no light in the sparkle,
Nor gloom where the drowsy waves darkle
O'er foeman and kin?

Then brush the world's mist from the mirror
While life in our bosom is sweet,
And turn with a love of the purest,
O'er pathways the fairest and surest,
The trace of our feet.

THE ANCIENT AND PRESENT STATE OF THE COUNTY AND CITY OF CORK.

By CHARLES SMITH, M.D.

Æquum est enim meminisse & me, qui discerem hominem esse, et vos, qui Judicetis ut fi probabilia dicentur nihil ultra requiratis. Cicero Univers.

In Two Volumes.

VOL I.

The Second Edition, with Additions.

BOOK II.

Containing the Topographical Description of this County, including the City of Cork.

Chapter I.—Continued.

About a mile south-east of Castlemartyr, a river, called the Dowr (20), breaks out from a limestone rock, after taking a subterraneous course near half a mile, having its rise near Mogeely. Where it breaks out it forms a small lake, in some places three hundred yards over in winter time, and about an English mile in circumference. At this season of the year it is a receptacle for many kinds of wild fowl, and was, in the great frost of 1739, much frequented by wild geese and swans, which are very rare in this part of the kingdom. The halcyon, or king's fisher, is an inhabitant of this lake. The Spaniards boast much of the subterranean passage of the famous river Guadiana, in Murcia, over which they pretend is a bridge that may be passed by an army in battalia; and the same, with as much justice, may be said of our rivulet.

The castle of 'Ichtermurragh, about a mile E. of Castlemartyr, is well built, and one of the most modern structures of this kind in the country, being erected by the Supples in the beginning of the last century, who married into the family of the Fitz-Geralds, and is now inhabited by Mr. Smith. Here is a remarkable ravenry, where these birds build yearly. And at Clonpriest, about four miles more to the east, near the seat of Mr. John Haymond, there is a herony, where herons also build every year. In the parish church of Ichtermurragh are some tombs of the Supples and Pitmans. The former family removed into this country, from the county of Limerick, in Queen Elizabeth's time; Cambden mentions them among the inhabitants of that country, by the name of Saple.

Drumada, now Supple's Court, a small mile S. of Castlemartyr, is an handsome seat of Ed. Supple, Esq., on a rising ground, which takes in an agreeable prospect of a considerable tract of country, and all the improvements, and new river, of Castlemartyr. Facing the house is a pretty canal, good gardens and offices, and considerable quantities of bog-timber have been found at Ballyquirk, the estate of this gentleman.

About three miles E. of Castlemartyr is the church of Kilcredan, in which are two old monuments. That on the south side of the altar has the following inscription:

"Hic jacet corpus Roberti Tynte aurati, hujus provinciæ regis conciliis, filii quinti Edmund Tynte de Wrexhall comitatu Somesetensi in Anglia armigeri, qui honorem fuum gladio acquisivit. Hanc ecclesiam atq; monumentum fieri fecit, Dei omnipotensis providentia. An. dom. 1633."

On this monument is placed the effigy of Sir Robert Tynte, lying on his back in coat armour; and at his head and feet are two women, in a praying posture, all of painted alabaster.

On the other side of the Communion table is another monument, with the following inscription, over which are the effigies of a man and woman, in a praying posture:

"Conditur in hoc monumento Edwardus Harrisus miles & regis curiæ loci capitalis in Hybernia justicarius secundus, & cum illo Elizabethæ 4to Aprilis 1636. Illa primo Januarii 1622 hanc vitam discessit."

At the west end is a modern tomb for the family of Wallis.

The castle of Ballycrenane was built by the Carews, who also built that of Garivoe, now ruined, in the church of which is an ancient tombstone of this family, but the inscription is not legible. Ballycrenane was an old seat of the Tynte family; it is now inhabited by William Wallis, Esq., and is situated near the east end of the strand of Ballycotton; the adjacent land lies very convenient for manuring with sea-sand, and produces large crops of wheat, and excellent barley; also all kinds of garden stuff are produced here very early. The strand of Ballycotton is four miles long, smooth and level, and very agreeable to take the air on. The point of Ring forms the east side of this bay; and Ballycotton point and island, the western extremity of it. The shore towards the west rounds in a large semicircle, like the hollow of a fine amphitheatre. The island is an high, small spot, which, in the proper season, is almost covered with nests of various sea fowls and puffins eggs, that breed here in great multitudes. In this bay and coast are taken several kinds of fish, particularly excellent flat fish, lobsters, and sea trouts. There are here a species of crabs, called man-crabs, from the resemblance of a human face on the back of them. As also the spider fish, being a kind of crab, with longer claws and fewer than the common crab, observable only on the shores of this bay. From the island of Ballycotton may be seen Kinsale-head and the mouth of Cork harbour.

Two miles west of this strand is the castle of Ballymaloe, built by the Fitz-Geralds, and after the rebellion of 1641 possessed by the first Earl of Orrery, who resided in it. It is now the seat of Hugh Lumley, Esq., who purchased it from Col. Corker, and added some new buildings to the castle. In the castle hall are two pair of horns of the moose deer, one of which measured, from tip to tip, ten feet three inches, the breadt of the palm was 32 inches, from the vertex of the head to the nose 20 inches. The other pair were, from tip to tip, six feet three inches, and the breadth of the palm in proportion; yet the skull of this smaller pair was larger than the other head, which shows that this last had not come to its full growth, and also that this species of deer cast their horns annually (21).

In the same hall, on the picture of a dwarf, named Chuff, who belonged to Col. Corker, are these lines, said to be wrote extempore. He received an accidental shot in the shoulder some time before this picture was drawn:

To please a good mistress, I'm drawn as you see,
With my crutch, and my wounds, thus express'd;
A brace of hard balls in my body still be,
That will ever disquiet my rest.
Man's life, and my length, are much of a size,
Scarce either exceed a good span;
Mankind perpetually do me despise,
And the maids won't allow I'm a man.
Tho' my inches are nine, besides a fair yard;
And my years they are twenty and four;
Then pity my case, which you see is so hard,
As I ne'er shall grow half an inch more.
Plain Richard Nomane they called me dad,
And for him, a name good enough;
But as I am form'd a more dapper lad,
They call me but plain master Chuff.

Adjoining to this castle are good gardens and other plantations. This gentleman has made an improvement to cider, by boiling it before it is fermented, which greatly adds to the strength of the liquor, one-third being evaporated. He also takes particular care to have his cider well fermented before it be tunned, as also to sweat the fruit before it is ground. Mr. Philips, in his admirable poem on cider, observes that even windfalls may be ripened by

(20) Dowr, in the British language, signifies water; and Dowr, in the old Irish, has the same signification.

(21) This species of deer, which we have no other traces of in this kingdom, but from their horns and bones dug up in bogs, are supposed by sir Thomas Mollyneaux, to be the same as the American moose deer, concerning which the baron Lahontan gives the following account. "The original is a fort of elk, not much different from that we find in Muscovy. It is as big as an Auvergne moyle, and much of the same shape, abating for its muzzle, its tail, and its great flat horns, which weigh sometimes 400 weight. This animal usually resorts to planted countries. Its hair is long and brown, and the skin is strong and hard, and not thick. The flesh of the female sort eats deliciously; and it is said, that the far hind foot of the female kind, is a cure for the falling sickness. It neither runs nor skips, but its trot will almost keep up with the running of an hart. The savages assure us, that, in summer time, it will trot three days, and three nights, without intermission. These sort of animals commonly gather into a body towards the latter end of autumn; and the herds are largest about the beginning of spring, at which time, the she ones are in rutting; but after their heat is over, they all disperse themselves. The savages make canoes of the elks skins, which they sow together very easily, covering the seams with a sort of earth instead of pitch."
Baron Lahontan's voyage, vol. I. p. 57, 59.

sweating, equal to those of fruit which have been meliorated in the natural way.

———His fallen heaps
Collecting, cherish'd with the tepid wreaths
Of tedded grass, and the sun's mellowing beams,
Rival'd with artful heats, and thence procur'd,
A costly liquor by improving time
Equal'd with what the happiest vintage bears.
Book II.

Among other trees in this gentleman's gardens are the arbutus or strawberry-tree; also almond trees, that bear fruit; the arbor vitæ of Gerrard; and several kinds of myrtle, which thrive here, and flourish equal to those planted in a warmer and happier climate.

A mile more to the west is Cloyne (situated 12 reputed miles east of the city of Cork), an ancient Bishoprick, founded by St. Coleman (22) in the sixth century, who was the first Bishop of this see.

Cloyne was called Cluain Vamha, and, in the old Roman provincial, Cluain Vanian. Clone, or Cluain, signifies a den or cave, also an enclosure or retirement. Llhyud says it is sometimes taken for a park. Vamha signifies a dark place, or a place of horror. There is a deep and large cave in a park near this town, part of the domain of the see, which probably gave name to the place (23).

This cathedral (dedicated to its founder) is built in the form of a cross, and is a decent Gothic building; the choir, in which there is a good organ, is neatly finished. It is 70 feet long, and the nave about 120. On each side are lateral aisles (besides the cross aisles), divided by Gothic arches, five on each side. At the entrance of the choir is an handsome portal of wood. The stalls, bishop's throne, pulpit, and other pews are well executed, and so is the altar piece. There is a canopy seat for the Earl of Inchiquin in this choir. On the N. side of the chancel is the Bishop's consistory court, also used for a vestry room; out of this a pair of stairs leads to the pulpit. On the S. side of the altar is a flag stone to the memory of the Rev. Henry Rug, Dean of this cathedral, who was interred here in June, 1671. On the east wall of the north cross-aisle is a monument, with this inscription:

Margaritæ Corker,
Petri Wallis de Shanagary chiliarchæ
Ex
Audria Baker de Carrigrohan
Filiæ,
Piæ, pudicæ, literatæ, beneficae,
Edwardus Corker de Ballimaloe armig.
Charissimæ conjugi
Possuit
Obiit XVII die Julii A. D. MDCCXXI.
Hic etiam jacent,
Catherina Baker, matertera,
Et
Mehetable Foulke, soror Margaritæ.
Obiit Catharina XXVIII die Martii A. D. MDCCXIV.
Obiit Mehetable I die Julii A. D. MDCCIII.

Arms, argent, a lion rampant azure, impaled with azure, two hearts in chief gules. Motto, "Sacrificium Deo cor contritum."

On the N. side of the same aisle is another monument, of black marble, somewhat defaced. On the top were two images, in a praying posture, since defaced.

Epitaphium Johannis de Geraldinis militi
A.D. 1611.
Hic situs est miles magni de stirpe Geraldi,
Æterna cujus patria laude sonat.
Hospitis celebris, doctrina clarus & armis,
Digna suit virtus nobilitate viri.
Omnipotens animam, rapiat miseratus in altum
Dura hæc est animum marmora corpus habet.
Illus & gesta in pace, & quamplurima bello,
Te doceant vivi, amice lector, vale.
Obiit predict. eques
Anno ætatis 85.
Die vero mensis Januarii 15. ann dom. 1612.
Sub hoc etiam marmore
Requiescit,
Filius cum patre, qui immatura morte præripuit,
Ann. ætatis 43.
Die vero mensis Martii 10. ann. dom. 1612.
Vivimus heu si tanquam omnes, mors nulla sequatur
Et pœnæ inferni fabula vana forent.
Ergo
Mors tua, mors Christi, fraus mundi, gloria cœli,
Et dolor inferni sunt meditanda tibi.

Before the arrival of the English, we have very few remains of the Bishops of Cloyne. The following is a catalogue of the Bishops of this see.

O Malvain, Bishop of Cloyne, died in 1094.

Nehemiah O Moriertarch flourished ann. 1140, and died in 1149.

Matthew, he sat in 1171, and died in 1192.

Laurence O'Sullivan, died in 1204.

Daniel, died in 1222.

Florence, succeeded in 1224.

Patrick, a Cistercian monk, succeeded in 1226.

David Mac-Kelly succeeded, and in 1237 was translated to Cashel.

Allan O Sullivan succeeded in 1240, and in 1248 was translated to Lismore.

Daniel, a Franciscan friar, succeeded 1249, and died in 1264.

Reginald, Bishop of Down, was translated to this see in 1255; he died in 1273.

Allan O Lonergan succeeded in 1274, and died in 1283.

Nicholas de Effingham, succeeded in 1284; he died in 1320.

Maurice O Sullehan succeeded in 1320; he died ann. 1334.

John, surnamed de Cumba, from Combe abbey, in Warwickshire, succeeded in 1335.

John Brid; how long he sat is uncertain.

John Whitlock succeeded 1351; he died in 1361.

John de Swaffham succeeded 1363, and in 1376 was translated to Bangor, in Wales.

Richard Wye succeeded 1376, and was deprived for misdemeanours in 1394.

Gerald Canton, or Condon, succeeded ann. 1394.

Adam Pay sat in 1421; he died in 1430.

Jordan; in his time this see was united to Cork, and so continued for 200 years and upwards.

For a list of the Bishops after him, vide the See of Cork, down to Dr. Synge.

George Synge was consecrated Bishop in 1638; he died in 1653.

After his death, the see continued vacant, because of the rebellion, until the restoration of King Charles II. in 1660, when Dr. Michael Boyle was advanced to it, and held it, together with Cork and Ross, as did also

Edward Synge, from whose death, in 1678, the sees have been separated.

Patrick Sheridan, succ. in 1679, and died in 1682.

Edward Jones, succ. in 1682, and was translated to St. Asaph, in Wales, in 1692.

William Palliser, succ. 1692, and in 1694 was translated to Cashel.

Tobias Pullen, succ. in 1694, and the following year was translated to Dromore.

St. George Ash, D.D., succ. 1695, and in 1697 was translated to Clogher.

John Pooley, succ. in 1697, and in 1702 was translated to Raphoe.

Charles Crow, D.D., succ. in 1702, and died in 1726.

Henry Maule, LL.D., succ., and in 1731 was translated to Dromore.

Edward Synge, succ. in 1731, and in 1733 was translated to Leighlin and Ferns.

George Berkley, D.D., succ. ann. 1733, and died in 1753.

James Stopford, succ. in 1753, and died in 1759.

Robert Johnson, succ. in 1759, and died in 1767.

Hon. Frederick Hervey, succ. in 1767, and in 1768 was translated to Derry.

Charles Agar, succ. in 1768, and is the present Lord Bishop of this see.

In this town was anciently an abbey of Augustinian nuns, founded in the sixth century by St. Ite, who was the first abbess; it stood a little west of the present see-house. But it has been long since entirely demolished.

(To be continued.)

(22) The foundation of the cathedral is attributed to Saint Coleman, the son of Lenin, man of learning and piety, and the disciple of St Finbar, bishop of Cork.

The building of this church is mentioned by the author of the life of St Brendan abbot of Clonfert, in these words. "Erat hic Colemanus, filius Linini, vita atque doctrina inter fanctos præcipuus, ipse fundavit ecclesiam Clonensem, quæ est hodie cathedralis, and samosa in partibus momoniæ: claruit in seculo sexto, sed placidetandem in domino obdormivit anno 604, Novemb. 4to. Upon which day the calendar of Cashel, and martyrology of Talmac place his death. Colgan's Act, Sanct. p. 309, 310. sect. 14.

One Coleman, the son of Lenin, is said to have wrote the life of St Senin in verse; he died, according to Colgan on the 24th of Novem, 600; but whether he was the same person with the founder of this cathedral, is uncertain.

Our saint was surnamed Mittine, and was cousin-german to the celebrated saint Bridget of Ireland. In an ancient Irish martyrology, composed by Charles Macguire, the country of Imokilly, in which this is founded, is called Regio Huibliathain, being probably, then a part of Olethan, mentioned in p. 41 of this work.

23. Some writers mention another Cloyne, by the name of Cluan Vidhnech, which they translate latibulum hæderosum, i.e. the ivy cave. This place was in the diocese of Leighlin.
Colgan's Thaumaturg. p. 354.

There was also another bishoprick in the county of Roscommon called Cluin-hemain, mentioned in the annals of Donegal and said to be destroyed anno 1089. Vide Colgan's Act. Sanct. p. 339.

None of the ancient records of this see now remain. Sir James Ware mentions a pipe roll, called Pipam Colmani, begun anno 1364, when John de Swaffham, a Carmelite friar, was bishop, who was translated to Bangor, in Wales. But this roll is now lost. Ware's Antiq. cap. 29.

Doctor George Synge, who was bishop of Cloyne, mentions this roll in a letter to the earl of Cork; and says, that the manor of Inchiquin belonged to this see, and to the earl of Ormond; and that the part of the roll wherein this manor was mentioned, was defaced. This letter is dated April 8, 1641. This bishop petitioned the court of castle-chamber against his lordship, for detaining the lands of Coolemonagh, Killenleagh, and Ballymeghan, being part of the manor of Donaghmore, the ancient possession of this see. MS. at Lismore.

"The Humour of Druid's Island" is the title of a new novel by Mr Archibald M'Ilroy which Messrs Hodges, Figgis and Co, Ltd, of Grafton street, Dublin, have now in the Press and will publish shortly at a popular price. The work embraces a rich and quaint collection of droll sayings and incidents peculiar to the people of Ulster.

LITERARY NOTES.

Mr. Justin M'Carthy has not yet exhausted his reminiscences, though he gathered these into two goodly volumes a few years ago. He proposes to illuminate that curious decade, the sixties, with a series of personal portraits containing sketches of its celebrities

✧ ✧ ✧

It is satisfactory to know that the late Mr. Lionel Johnson's poems, both published and unpublished, are to be collected and published, with an introduction by Katharine Tynan. His prose essays are also being gathered by Mr. Arthur Galton. Great as was the esteem in which Mr. Johnson's prose was held, it will probably be found that its publication in a collected form will procure it higher fame.

✧ ✧ ✧

"C. K. S.," of the "Sphere," is able to announce that we are to have an authorised life of Sir Arthur Sullivan. The work is to be undertaken by Mr. Vernon Blackburn, who was one of Mr. Henley's young men on the "National Observer." The Life, says "C. K. S.," will include, by permission, several letters from the King and the Duke of Edinburgh, and will show his Majesty and the late Prince as keen lovers of music. There is a large and valuable correspondence. The publisher of this work has not yet been decided upon.

✧ ✧ ✧

In connection with the "Edinburgh" centenary, a correspondent of the "Athenæum" writes:—"What would Sydney Smith, Jeffrey, or Macaulay have said if he had met with such a sentence as this which is to be found on p. 284 of the 'Edinburgh Review' for October? 'The original idea was to run the "Review" without giving any remuneration to the writers.' Perhaps the mildest remark which any of the three might have made is that the conductor of a journal or review is not 'a runner.'" True, but many things have happened to the language in the interval.

✧ ✧ ✧

And to literature, too. It is impossible not to ask ourselves (remarks the "Globe") how we stand in 1902 as compared with the reading public on whom those young lions (Sydney Smith was just over thirty and Francis Jeffrey was under it) launched the "Edinburgh," which, however, has been classically compared, not to a ship, but to a bird that

Spread its light wings of saffron and of blue.

When one thinks of all that was arriving then, there slips into the mind, however, unreasonably, the lament of Gifford, of the "Quarterly," when, to use Scott's phrase, he "squabashed the Della Cruscan at one blow" with his Baviad:—

Oh, for the good old times! when all was new,
And every hour brought prodigies to view,
Our sires in unaffected language told
Of streams of amber and of rocks of gold:
Full of their theme they spurned all idle art,
And the plain tale was trusted to the heart.
Now all is changed! We fume and fret, poor elves,
Less to display our subjects than ourselves:
Whate'er we paint—a grot, a flower, a bird,
Heavens, how we sweat! laboriously absurd!

✧ ✧ ✧

The stream of Mr. Justin M'Carthy's histories flows on with admirable persistence. The publication of his "Reign of Queen Anne" reminds us of the beginnings of that stream. It was Mr. M'Carthy's original notion to write his "History of Our Own Times" in such a way as to tell the story of the growth of the Radical party. But that narrow ideal was dissipated in talk with his friends, and it was to a broad-minded history that he addressed himself. A certain London publishing firm asked for the book, and would have had it but for the panic which seized them when Mr. M'Carthy stood for Parliament as an Irish Nationalist. They backed out of the bargain.

✧ ✧ ✧

Thereupon Messrs. Chatto and Windus stepped in and offered ten times the price for the book. They have published all its successors, and, as all the world knows, no political prejudices in either the author or his readers have interfered with the success of the series. Some years ago Mr. M'Carthy explained his method of writing these histories to an interviewer. "My way is," he said, "to write from my own knowledge the great big things first, filling in the others at such length as they are fairly entitled to. What I want is to avoid the dead-level of the 'Annual Register,' which would give as much space to a Whitechapel murder as to the Greek crisis. My method of taking the big episodes first may have its drawbacks, but it is my way. I write even novels thus." Mr. M'Carthy dedicates his present work to his daughter.

✧ ✧ ✧

In view of the approaching centenary of Douglas Jerrold, Mr. Brimley Johnson announces a new edition of the immortal "Mrs. Caudle." This is based on his edition of last year, arranged by the author's grandson, in which appeared for the first time all the ninety illustrations by Keene, Leech, and Doyle. A photogravure portrait from the painting in the National Portrait Gallery has been now inserted

✧ ✧ ✧

Dumas the elder is but little known as a writer of travel books. One of these goes by the name of "The Speronara," and is an account of his trip through Sicily in 1834. This tour provided Dumas with the opportunity of accumulating a mass of historical legendary lore, which furnished material for many delightful sketches and stories. A translation of "The Speronara," by Katharine P. Wormeley, forming the initial volume of a series of "Journeys with Dumas," will shortly be published by Messrs. Dent as a companion volume to their edition of the Romances.

✧ ✧ ✧

It is perhaps a little late in the day to discover a misprint in Dickens, but one of a singularly interesting character is the subject of an article in the November "Connoisseur," which publishes in facsimile a page of the novelist's manuscript.

✧ ✧ ✧

A correspondent who has just visited Dorking sends us the information that the old building there popularly supposed to be the scene of Tony Weller's ducking of Mr. Stiggins appears to be doomed to demolition. It was for many years in use as the post-office, and before that it was the King's Head, a well-known inn on the Brighton road in the old coaching days. There have been many local claimants to being the Marquis of Granby mentioned in "Pickwick," but the evidence, perhaps, is not very satisfactory in the case of any of them.

✧ ✧ ✧

The latest two volumes in Messrs. Chapman and Hall's biographical edition of Dickens are "Oliver Twist" and "Nicholas Nickleby." The plan of the edition demands chronological sequence, and it is noteworthy that even in the early days of his career, when these works were produced, Dickens had already begun to write the novel with a purpose. The introductions contain the well-known facts regarding the writing of the books, but we notice a suggestion that Vincent Crummles may have been sketched from one of the ancestors of T. W. Robertson, the author of "Caste." With its dedication to Macready the theatrical flavour of "Nicholas Nickleby" is very strong, and to a certain extent may reflect some of Dickens's own aspirations towards the stage. The remarkable fact about "Oliver Twist" is that it was being written simultaneously with "Pickwick" for some months, and once again the story of the high pressure under which Dickens worked at that time is told by "A. W.," who does not forget to quote the novelist's remark to Foster that he found Fagin "such an out and outer that I don't know what to make of him."

✧ ✧ ✧

Much is continually being said, and rightly said, about the pleasures of reading. But general remarks on this subject are nearly always tedious. How much better and deeper, if also sadder, is the little rhapsody on books which you find in this month's instalment of Mr. George Gissing's "An Author at Grass" in the "Fortnightly." Mr. Gissing speaks of the sudden hunger that comes over one for a certain book, and also of the hopelessness of ever finding time to read some books again. "Perhaps when I lie waiting for the end, some of those lost books will come into my wandering thoughts, and I shall remember them as friends to whom I owed a kindness, friends passed upon the way. What a regret in that last farewell!"

✧ ✧ ✧

An appreciation of Lord Acton is contributed to the current "English Historical Review" by its editor, Mr. Reginald Poole. Mr. Poole justly refers to Lord Acton as "the last of a generation of great historians," great in spite of the fact that he never wrote a book. Indeed, until he was sixty, he never delivered a lecture, and then as Professor of Modern History at Cambridge he began to exercise a remarkable and enduring influence. He could not and would not dissociate history and religion: "the first of human concerns," he declared, "is religion, and it is the salient feature of the modern centuries." He went to Cambridge at a time when there was some danger of modern history being treated too exclusively from standpoints of philosophy and politics. But he broke no tradition; he merely controlled the tendency by insisting on exact knowledge touching both broad issues and narrow details. Mr. Poole concludes his interesting tribute thus:—

No attempt to indicate, however faintly, the characteristics of Lord Acton's work could omit to refer to his courageous decision to pass the age of sixty from speculation to practice, and to allow one circle of students to know something of the plenitude of his powers.

✧ ✧ ✧

The library of the late Lord Acton, which passed by bequest into the hands of Mr. John Morley, has been presented by him to the University of Cambridge. In his letter to the Duke of Devonshire, Chancellor of the University, making offer of the gift, Mr. Morley displays that balanced style and scholarly appreciation which make his writings always strong and distinguished. Speaking of the library he says: "For some time I played with the fancy of retaining it for my own use and delectation. But I am not covetous of splendid possessions; life is very short; and such a collection is fitter for a public and undying institution than for any private individual." The only condition which Mr. Morley imposes on the acceptance of the gift is that the sixty to seventy thousand volumes which constitute the library should be kept intact and apart from other collections. Of the books themselves he says:—

The very sight of this vast and ordered array in all departments, tongues, and times, of the history of civilised governments, the growths of faiths and institutions, the fluctuating movements of human thought, all the struggles of churches and creeds, the diverse types of great civil and ecclesiastical governors, the diverse ideals of States—all this will be to the ardent scholar a powerful stimulus to thought.

In a letter almost amusingly curt and business-like compared with Mr. Morley's scholarly enthusiasm, the Duke accepted the gift.

SCIENTIFIC TOPICS.

It will be remembered that some time ago Dr. Garnault attempted to disprove Dr. Koch's theory of the transmission of tuberculosis to human beings by animals, inoculated himself with bacilli from a consumptive cow. Dr. Garnault himself is perfectly well, but guinea pigs inoculated with the skin taken from his arm have developed symptoms of tuberculosis.

✧ ✧ ✧

Prof. Edmond S. Meany, of the Smithsonian Institution, is the first scientist to visit the mummy caves of the Aleuts of Alaska. Many mummies, to be sure, have been sent from Alaska from time to time, but no man of learning has ever examined the caves themselves. The report which the professor will doubtless prepare will be looked for with some interest.

✧ ✧ ✧

At Grove City, near Chillicothe, a perfect skeleton of the Mastadon Americanus was found. The tusks measure from 10 to 12 feet in length. Their size and the condition of the teeth, which are well worn, show that the animal was full grown when it died. Other well-preserved specimens have been found in marshy beds in Ohio; but this is said to have been found in clay, a rather unusual circumstance.

✧ ✧ ✧

The Scotch mineral known as Lanarkshire blackband, which was discovered in 1801, has been practically exhausted, as there are now no pits in the Lanarkshire coalfield where it is worked as a principal product, though a small quantity of a thin blackband is raised with the gas coal at one or two pits. Some blackband of excellent quality is, however, still raised in Fife and Midlothian for smelting in the Lanarkshire furnaces, while the somewhat leaner blackbands of Ayrshire are still fairly plentiful.

✧ ✧ ✧

In 1851 Foucault originally demonstrated the rotary movement of the earth by means of the pendulum which bears his name. The experiments were interrupted after the coup d'etat of December 2, 1851. Another demonstration was carried out on October 22 last. Foucault's pendulum, composed of piano wire, about 220 feet long, was attached to the summit of the dome of the Pantheon, and from it was suspended a ball weighing 56 pounds. The steel stylus was fixed to the bob thus constituted, and beneath it on the floor was placed a round table upon which the points of the compass were marked. A little heap of sand was run around the table. Flammarion, the well-known astronomer, and Senator Chaumie, Minister of Public Instruction, delivered appropriate speeches in the presence of a large assembly, which included numerous scientists. Then the Minister, with a taper, burned a silk cord attaching the pendulum to the side of the table, and the pendulum swung across the table, cutting a trench through the sand, each swing widening the trench slightly until the table appeared to be revolving.

✧ ✧ ✧

A curious fact has been ascertained during the recent survey of India—namely, that the northerly direction of the plumb-line, ascribed to attraction by the great mass of the Himalaya and the Tibetan upland, is reversed along a comparatively narrow belt between 22 deg. and 24 deg. north latitude, crossing India from east to west for one thousand miles. Here the deflection is southerly, while the northernly deflection reasserts itself farther south, and is connected so far as 18 deg. north latitude. The zone, so strangely exempted from what has been supposed to be a general law, runs across Central India from the delta of the Ganges to that of the Indus, but well to the south of the great Gangetic plain. These facts are discussed by Major Burrow in a paper read before the Royal Astronomical Society. Major Burrow's theory is that the phenomenon follows the axis of what he calls a subterranean chain of mountains, causing the greater density of the earth's crust in this particular tract. The hypothetical range would, we are at liberty to conjecture, either have foundered bodily in some great catastrophe or subsided gradually and been submerged under alluvium and silt. The fact opens up an interesting subject for the discussion of geologists.

✧ ✧ ✧

A farmer who lives in northern Louisiana has grown weary of peppering gray hawks with blue whistler buckshot. It takes too much time. He sat down and thought long, and finally evolved a method that does credit to Yankee ingenuity. Every one knows that hawks perch only on dead trees. This Louisiana farmer made a strong pole some 50 feet in length by nailing some scantlings together. To one end of the pole he tied a scythe blade, with its razor edge turned down. He set the pole up about 500 feet from his barnyard. An hour had hardly passed when a black hawk alighted on the scythe, grasped it with its talons, but released its hold with a suddenness that gave ample proof of an injury sustained. The bird glanced down and attached the scythe viciously. It was cut again and again, but never relented, maddened probably by its own blood, as most hawks are. After a short struggle the bird fell to the ground with its head split open. This Louisiana farmer has killed many hawks in the same manner.

✧ ✧ ✧

An interesting letter appears in an American contemporary from a Mr. R. H. Oliver, of Gary, Florida, with reference to the habits of mussels. Mr. Oliver writes:—Some time ago I read an article on the pearl button trade of the Mississippi and Arkansas Rivers, and in it found the following paragraph: "Authorities differ upon the question of whether mussels move or not, except as the water makes them or the fasten on to some moving object that touches them, but the fact that sand and mud deposits kill them seems to establish their inability to move without assistance." I was reared on the Tennessee River, and lived for a number of years near the Colorado, in Texas, and have had ample opportunities to make observations on the characteristics of the mussel. I can state emphatically that mussels do move. I have watched them for an hour at a time. They elevate themselves with the open part of the shell down; a mussel six inches long and three and one-half or four inches wide will make in moving, two parallel lines about one and one-half inches wide. Their method of locomotion is to protrude sufficiently out of the shell and operate on the same principle as a snake, moving very slowly. If the water is disturbed in the slightest manner they will close their shell at once and fall over. I do not suppose they can hear, but of course they have sensation. The fact that mussels are covered up by sand deposits and destroyed is no argument against their locomotion. The mussel is a very slow mover, and the debris of a river moves rapidly during a rise, and of course the mussel is unable to reach a place of safety. In the West I have seen hundreds of fish drowned in the sudden rise of a stream caused by a waterspout. It is not strange, then, that the slow-moving mussel should be killed by the same cause.

✧ ✧ ✧

Fuel oil has worked many strange improvements in the method of doing things in Texas and Louisiana since the Lucas gusher "came in" nearly two years ago, and it is destined to accomplish more wonderful changes, the latest and most striking of which has just been announced. One plan has as its object nothing more or less than the turning of a comparatively unimportant section of a Texas county into a thriving centre of life and activity through the agency of electricity. Harris County is that selected, and the industry to be developed is the raising of rice on an immense scale, all the power to be supplied by electricity, even to flooding the fields, harvesting the crop, milling the rough rice, lighting and heating the homes of farmers, supplying heat for their cooking stoves, and the power for transportation of product over a network of trolley car lines. In other words, almost every necessity and comfort of the people who will be brought in to settle this country will come to them through the agency of electricity. Fuel oil will produce the steam which will operate the central power plant, and through its use the cost of operation will be just about one-half of what it would be were coal or other fuel used, the oil fields being only a short distance away.

✧ ✧ ✧

H. Rieder reports a continuation of the experiments begun in 1898 relative to bactericidal power of Rontgen rays. The bactericidal power of the Rontgen rays was tested against the cholera spirillum, the bacillus prodigiosus and the colon bacillus. The micro-organisms were innoculated into gelatine or agar and exposed to the action of the rays in Petri dishes, the covers being removed. After twenty to thirty minutes' continuous exposure to the rays many of the bacteria were killed, and multiplication ceased in nearly all. In every series of experiments, however, a few of the individual bacteria were not affected. Experiments have shown that the bactericidal power of the rays is not due to the fluorescent light, heat, ozone, or electricity. So far as is known the culture media are not altered by the rays or made unsuitable for the growth of bacteria. Gelatine is never liquefied. It is not, however, to be assumed on the basis of the above experiments that the Rontgen rays possess any bactericidal action upon bacteria when present in the animal body. The evidence from animal experimentation is against such a supposition. As a rule, animals inoculated with pathogenic bacteria and exposed to the rays die sooner than similarly inoculated animals which are not thus exposed. It is not to be denied that in the human subject certain infectious diseases, particularly those of the skin, may be successfully treated by the Rontgen rays, but it does not seem probable at the present time that such success is due to bactericidal action.

✧ ✧ ✧

It is generally believed that the bite of sea serpents, or hydrophids, is not dangerous, but this is not so, and cases of death from this cause have been observed by Comtor in Japan, Fayrer in India, and Forne in New Caledonia. M. Kermorgant has published some new observations in the Annales d'Hygiéne de Medecine Coloniales. The geographical distribution of the sea serpents is very extensive, embracing a marine zone which is bounded on one side by the coasts of Asia and Africa, and on the other by the west coast of Central America; Australia is included in this region. These include the Hydrophis nigra and H. nigrocyneta, of the Indian Ocean and the seas of China; the H. chloris, of the Indian Ocean, also the H. cyanocyneta, as well as the Pelambys bicolor of the Australian coast. If the effects of their bite have not been more often pointed out it is because they are not mortal in a great number of cases. In many of the colonies of New Caledonia these serpents are found in abundance, and the opinion is so general that they are harmless that the snake charmers use them in their performances. In fact, they bite but rarely and with difficulty owing to the smallness of their mouth, and the dangerous effects are not frequent as they have only very small venom-glands and minute fangs. The head, which is small, is scarcely to be distinguished from the body, while the tail is flattened in the form of an oar. The length often exceeds three feet. A rat, when bitten by one of these serpents, dies in four or five minutes.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

DUBLIN, THURSDAY, JULY 19.

The Company of Undertakers of the Grand Canal have it, we hear, in contemplation to purchase the property of the River Brusna, for a head stream to supply the upper levels of the navigation.

We hear from Tralee, that on Sunday, the 6th instant, a dispute arose between some of the inhabitants of the lands of Banna, near Ardfert, when a battle ensued, in which two men were killed outright, and one or two others so desperately mangled, that we hear they cannot recover. The names of the men slain were, we understand, Connor and Molony.

Tuesday night some villains, attempting to strip the lead off Col. Gore's stables, Stephen's Green, were fired on by the porter from an upper window, on which they fled, leaving their utensils and a good deal of blood behind them.

The cause of the riot in the Liberty is represented by a correspondent as follows:—There are two committees of the working woollen weavers in that part of the city, one of whom thought proper, in their great and sovereign pleasure, to order a fine of threepence on each loom, to be levied throughout the whole, which was opposed by the weavers in the other district, as thinking it to be an innovation on the rights of their own committee who ought to have been consulted. Open war ensued between the two parties, and in consequence the military and police were called in to quell the tumult. They were only seventeen of them taken and lodged in the New Prison. The purport of this fine was to support the hosiers, calico-printers, and pin-makers, in order to fee counsel for them on their trial for combination.

DUBLIN, SATURDAY, JULY 21, 1787.

We are happy to inform our readers that, by a report made to the Linen Board by the proper officer, it appears that the value of linens exported directly from the Linen Hall in the June market, 1787, has exceeded the values of the linens exported in the June market, 1786, in a sum not less than £111, 600.

Trials at the Commission of Oyer and Terminer before the Hon. Baron Power.

Thursday Mr. M'Nally, of Rush, was tried and acquitted, for the supposed murder of a revenue officer on the 2nd of September last, near the town of Swords.

Richard Troy, Thomas Walsh, Christopher Murray, Connel Holland, and Edward M'Dermot was tried for street robbery on Hon. O'Brien. The jury found Troy guilty, and acquitted the rest. He was sentenced to be hanged on Saturday, the 28th inst.

We are informed that the course of the River Dodder will be turned so as to gain several hundred acres from the sea, at a moderate expense, agreeable to a plan which has been approved of, and will shortly be proceeded upon; by which means the navigation of our harbour will be rendered more secure by eventually deepening the bed of the Liffey, by a proper embankment.

A new Royal Infirmary is now erecting for the use of the army in the Phœnix Park, near the gate leading from the barrack. The front of Portland stone is in an elegant style of architecture, the second storey is now raised, and has the advantage of an elevated situation. This structure, when finished, will vie with any public building of the kind in this improving country.

Yesterday at the general quarterly assembly held for the city of Dublin, the Right Hon. the Lord Mayor, Aldermen, Sheriffs, Commons, and Citizens, voted the freedom of this city to the Right Hon. John O'Neil, of Shane's Castle.

CORK, JULY 16.

Last Wednesday morning, between one and two o'clock, two men armed and their faces blackened, forced into the house of John Mullane, a poor man, at Fair-hill, and robbed it of every article they could find worth taking away.

DUBLIN, FRIDAY, JULY 13.

Thursday se'ennight, the "Amiable Mary," Capt. de Brosse, sailed from Waterford for Nantz, with a choice assorted cargo, consisting entirely of Irish manufactures; amongst which were kitchen furniture, different kinds of cutlery, and cabinet-maker's ware, with a large quantity of printed linens, calicoes, and cottons, to the amount of twenty thousand pounds prime cost.

The utility of the Grand Canal, with respect to many articles of necessity, which now find their way to a reasonable market, has at length reduced the price of Kilkenny coal to near half the usual cost. The best of that commodity is now selling at the Canal stores for ten pence a hundred. The carmen who brought coal to Dublin from the pits of Clough, Donane, and Castlecomber, lay their burdens down at Monasterevan, Athy, and Carlow, from whence they are transported to the capital at two-thirds less expense, besides the advantage of a constant supply to the boats in one-third of the time.

DUBLIN, MONDAY, JULY 23.

Extract of a letter from Gaybrook, near Mullingar, July 20.

"Yesterday, about twelve o'clock, a ball of fire nearly as large in appearance as a hogshead, ran either from Dysart Island, in Belvedere Lake, or from the water close to it, took its course north-easterly over the wood of Belvedere, and close to Mr. Dennis's house, proceeded in that direction till it was out of sight, not above forty or fifty feet from the ground; in about seventeen minutes it returned, though with very diminished velocity, and fell into the lake, just under Mr. Lyons, where it is supposed it burst, as its effect upon the lake for ten minutes after was amazing—fish thrown thirty yards on shore, and Mr. Dennis's boat was thrown out of a deep dock two yards upon the dry land. I have since heard that the ball struck against a tree in Clonmoyle, about two miles from the lake, which it shivered to pieces, but which, however, was the cause of its turning. Its whole course was about seven miles. Though an eye-witness of the above, I would hardly venture to relate it, if it could not be authenticated by some of the most respectable men in the county—Mr. Lyons, the two Mr. Rochfort's, Rev. Mr. Dennis, Mr. R. Swift, Mr. Nugent, Dr. Naughten, were present along with me at this truly wonderful and awful sight.

DUBLIN, TUESDAY, JULY 24.

The Parliament of this kingdom, which stood prorogued to this day, is further prorogued to Tuesday, the 25th of September next.

The company of undertakers of the Grand Canal have, we hear, determined on bringing a supply of water for some of the upper levels by means of an aqueduct from the River Liffey.

The last rains have very much impeded the stone-cutting work in the nearer parts of the county Wicklow, where the stones are roughshaped and sent off to this city in great abundance for the purposes of flagging and building. The demand has been so great of late, and especially within the last two years, that numbers of persons procure a comfortable livelihood thereby for themselves and families. In the mountains near Kilgobbin, and the places contiguous, there are above two hundren men fully employed; during rain and frost they are, however, obliged to desist.

The wool fair at Mullingar is at last over, and the bags which were bought there sold at the enormous price of eighteen shillings and sixpence a stone; a circumstance that may be very acceptable to the graziers and sheep growers, but which must eventually prove of the utmost detriment to our working fabrics.

Saturday night a journeyman smith, returning home with his week's earnings, was hustled into a passage in Capel street, by three foot-pads, one of whom seized him by the throat, while the other ruffiians rifled the poor man's pockets of nine British shillings, with which they escaped.

We hear that James Foy, otherwise Sladdeen, who was concerned in the murder of Patrick Randal M'Donnel, Esq., and Charles Hipson, and who was tried and acquitted of the murder, and afterwards pleaded autre fois acquit as to the procurement of said murder, is now to be tried on an indictment for the procurement of the murder of Charles Hipson, when, it is said, the counsel, in case of his pleading to that indictment autre fois acquit, mean to demur to that plea, instead of joining issue, as was done in the former case.

MULLINGAR, JULY 21.

Wednesday last a number or men were employed in order to clear away the ground for the foundation of our new county gaol, which is to be erected on one of the best and most approved modern plans, for strength and convenience. The river of the town will run through the gaol yard, and many other conveniences peculiar to the site on which it is to be built, rarely to be met with in other places.

DUBLIN, WEDNESDAY, JULY 25.

The apprehensions entertained from the Custom House being erected at the east end of the town, are in some degree abated by the carriage on the Grand Canal being opened in the West. The influx of trade caused by this circumstance is really inconceivable; besides supplying the city with provisions, numberless persons are furnished with the means of industry, and the circulation of specie it causes is sensibly felt by the whole neighbourhood.

DUBLIN, THURSDAY, JULY 26.

Between the hours of three and four on Tuesday afternoon, this city and its neighbourhood experienced the most tremendous thunder and lightning known these thirty years; the peals were scarcely without intermission, and the lightning truly terrific. The rain which accompanied was the heaviest remembered by the oldest persons, causing such floods in the streets at the West end of the city that the passing carriages were up to the naves of the wheels in water, but did not extend farther Eastward than College Green. During the storm a curious phenomenon was seen in the air—a large body of fire about the size of a hogshead, which descended in an oblique direction a little to the South-west, and when near the earth exploded with a greater noise than the discharge of several pieces of cannon; this was succeeded by another small ball of fire, which ascended with the velocity of a rocket, and burst in the air.

KILUSSY CHURCH, CO. KILDARE.

From GROSE'S ANTIQUITIES OF IRELAND, 1791.

The following account of the curious old building above depicted is taken from Grose's "Antiquities of Ireland," 1791:—

The style of building in the steeple or tower of this church is very singular, not being paralleled (as far as I know) by anything exactly similar in this kingdom, except at St. Kevin's Kitchen, where the round tower makes part of the fabric. There are such structures at Halling in Kent, and Little Saxham in Suffolk.

The time when Kilussy church was erected cannot be determined; the monastic chronicle ascribes its foundation to St. Auxil, nephew of St. Patrick, from whom it received its name, Kil-Auxaile, or more contracted, Kil-ussy. Let its age be what it may, we know from the instance of St. Kevin's Kitchen at Glendalough, built before 1169, that the original campanile or belfry was a distinct structure almost everywhere, but particularly in Ireland, and that its approximation to the church was by slow degrees. This belfry was, in those early times, a round tower. There is a castle and house at Kilussy, the latter the seat of Robert Graydon, Esq. The castle is a square battlemented tower of great strength, and is fitted up and used as offices for servants. Directly behind the house, on a rising ground, is Kilussy church: there are a number of caves contiguous, a strong proof of the antiquity of the fabric.

This view was taken by Lieutenant Daniel Grose.

HUGH HAMILTON.

AN OLD DUBLIN ARISTOCRATIC PORTRAIT PAINTER.

By M.

I.

Whenever an opinion has acquired a popular ascendancy, and has become hoary with age, he is said to be a bold man, if not presumptuous also, who dares to question its truth; the dogma having acquired a prescriptive legality, submission becomes almost inferential; in short, it is taken as one of those matter-of-fact propositions, which render the exercise of the judgment a perfect sinecure; for having been adopted without inquiry, it is circulated without scruple, and continues to hold its ground upon the mere pleas of possession. Yet all this time it is, perhaps, a most flimsy error, which, when subjected to the ordeal of a searching inquiry, is found to be wholly untenable, and is therefore thrown aside; having suffered by the investigations, fully as much as did the noted shield of the redoubtable Scriblerus, the claims of which to the high rank of antiquarian importance, with which the sanguine speculations of its owner had invested it, having all disappeared by the simple operation of scourging! after which it stood in its nakedness—a mere modern sconce! Such, generally speaking, is the ultimate fate of all fashionable error, however dexterously constructed, or pertinaciously sustained. Time is a sure, though sometimes a tardy detecter of falsehood.

The erroneous and injurious opinion, which we combat, and to which we would direct public attention, is the assertion so often, and so confidently urged—viz., that portrait painting is not only a very inferior walk of art, but that its practice incapacitates for the lofty pursuits of Taste!

This we deny; on the contrary, we shall prove that there is no walk of art in which higher powers are required, in order to obtain distinction, or in the practice of which, the diversified attainments of a genuine painter are more continuously exercised.

But ere we proceed further, let us most earnestly disavow any intention of including within the boundaries of genuine portrait painting, that low, servile inventory of the features, ycleped likeness painting, in which there is neither mind nor sentiment; nothing, in short, but a vulgar, vile exaggeration of the palpable peculiarities of the individual, and which, after all, is not so much a likeness, as a staring tracery of a face!

What we mean by portrait painting is that transcribing of the living man, in which whilst the personal identity is almost faithfully preserved, there is also the mind, the character, the feeling of life—in short, it is that into which the vitality of thought has been breathed, and in which are to be found those attractions of high art, which raise it to the rank of a universal interest, counting as its admirers every genuine votary of taste! This, we take it, cannot be achieved by men of an ordinary class of mind.

Now there are two ways of demonstrating this truth; the first is to show what those requisites are, that enable a painter to produce a fine portrait; the second is to exhibit the facts, that the greatest painters, ancient or modern, were themselves great historical painters. This, we should hope, will at once set the question at rest.

The essentials of a fine portrait being identity, both personal and mental, it necessarily follows that the likeness must not only be veritable, but characteristic also; and in conducting such a picture, it is quite clear that the consistency of its character, as a whole, can only be sustained by the introduction of such accessories, as, whilst they harmonise in a pictorial sense, are in strict unison with the expression of the principal object. For instance, the thoughtful, the studious, the profound philosopher cannot, with propriety, be surrounded with those objects which would fitly assimilate with the light, the airy, or the gay. Thus it is evident that a fine portrait is something more than a mere likeness. It is, in truth, graphic biography, and in many instances both historical and instructive.

We do not say that there is no higher walk of art; but we do affirm that the powers which sustain a great portrait painter are competent, should accident or choice determine him into the higher walk, fully to sustain him there likewise.

It is a most illogical mode of reasoning to infer incapacity from inability. When a portrait painter for the first time attempts history, he is less successful than when in his own walk; and it is precisely so with the historical painter when he essays portraits. But neither of these results establish incapacity. Nelson, we apprehend, might not have managed matters quite so successfully at Waterloo as the hero who conquered there; and it is very possible that even the great Duke himself might have failed at the Nile! Yet would it not be a very bold assertion, indeed, to affirm, that these great men possessed not in common with each other, the highest qualities of mind; or that if their respective pursuits had been reversed, they would not have been equally renowned. But we shall quit all mere speculations, and come at once to facts.

The greatest portrait painters amongst the ancient masters were Raphael, Titian, Guido, Parmegiano, Rembrandt, Rubens, Vandyke, Murillo, and Velasquez. Now these very men were renowned as great historical painters: and in our own days Reynolds, Gainsborough, Romney, and Lawrence have each proved his just claim to the rank of historic painter. Gainsborough was also one of the greatest landscape painters that has appeared; and as to his cottage groups, their unique excellence has long since become proverbial. Yet with these demonstrated facts full in view, your modern Mecænas, when encouraging art, excludes from the pale of his patronage—a portrait!

How fortunate for Rubens and Vandyke that they live not in these days! Had fate so cast their nativity, neither the "Chapeau de Paille," nor the "Gevartius" could be selected for honours or reward, both being portraits! Even that exquisite picture by Rubens, the portrait of his mother, now in the Dulwich Gallery, in which the widowed parent, smiling benevolently, even in decay, looks as one thankful for having been spared to witness the success of her honoured son; her aged and nervous hand laid gently at rest, that so often in its beauty has been affectionately stretched forth to aid the infant totterer! No, nor yet that noble work by Vandyke—Charles the First on his white charger, passing through the gates at Temple Bar—the very impersonation of calm, melancholy, unefforted dignity. These precious works! poignant with mind, must, conformably with the restrictive regulations on modern taste, be put aside! in order to pour, with a concentrated effulgence, the rays of patronage on some low, vulgar, smutched manipulator of tin or brass, or, mayhap, one of your vendors of screeching discords—the Orpheus of the village pothouse. Yet all this time we are sagely assured, that this is the only way to raise and to sustain the fine arts of our country! Oh! what a premium is thus offered to the mental declension, which, insensible to the attractions of beauty and grandeur, finds its highest ambition in driving a profitable trade with the grovelling and the low.

We presume it must have been the imposition of some such restrictions on the aspirations of taste, which drew from the caustic Rochefoucauld that withering prayer, "Delivre nous, grand Dieu, de ces amateurs sans amour, et de ces connoisseurs sans connoissance!"

Believing, as we do, that the refutation of an error so offensive, and often so injurious to the eminent portrait painter, could not have been more fitly attempted than when commencing, as we now are, the memoirs of a painter eminently endowed with the conjoined powers of historic and portrait art, we have, therefore, essayed the full exposure of its fallacy; but we have not done so merely because that opinion might have grated upon the ear, or might have occasionally wounded the feelings of the portrait painter. We had other and equally just motives, impelling us to assist in the correction and removal of so popular an error.

Next to a just appreciation of the artist's powers, as evidenced in his works, is a knowledge of the powers of the art itself, and the true classification of its various walks. Without this necessary information we never can hope to judge truly, or with effect; for, if through the bias of any of those conventionalisms with which the region of criticism so abounds, we shall have previously degraded that path of art in which the painter moves, we are by no means likely to feel, or to value, his attainments or his works. We should, therefore, recollect that class does not make the man, nor the painter neither—and Sir Joshua Reynolds was so convinced of that truth, that as confirmatory of it, he has given it as his opinion, that "distinction even in the humbler walks of art, is only to be achieved by those who have brought down with them to that walk the attainments acquired in the higher." This is most true, particularly as regards the eminent portrait painter.

It is, therefore, essential that the principle of criticism should be closely investigated, and thoroughly understood, by those who desire to be the advocates or encouragers of art, in order that their proceedings may be guided by that enlarged sense of justice and of taste, which recognises the art—not the artist.

The mere love of an art confers no knowledge of that art, although it may, perhaps, in time lead to its acquisition; but until that knowledge shall have been acquired, the highest and purest motives may but terminate in error; for uninstructed integrity is often as injurious in its decisions as the most reckless partiality, although originating in motives so wholly dissimilar. The truth is,

well-directed zeal must ever be guided by knowledge.

Mr. Hamilton commenced the practice of his profession as a crayon painter, very early in life, to which walk he confined himself for many years. He was very successful in his likenesses, drew with great truth, and with as much facility as is consistent with truth; but he never indulged in that slovenly ill-digested attempt at form, so attractive to the half-taught, so destructive to true genius. His were faithful, intelligent expressions of the object before him, which proved his thorough intimacy with its character and form.

His portraits in crayons, generally speaking, were rather crayon drawings than crayon pictures. They were full of ability, very faithful as likenesses, but they wanted that breadth of effect, and that depth of tone, which the material in such hands could have so abundantly yielded. They appeared to have been very slightly executed, laid in with a few colours, the prevailing tone of which was grey, and then finished with red and black chalk. They were marked with great skill and truth; the features, particularly the eyes, were expressed with great feeling; but as pictures, they were not sustained by those depths of colour or of shadow, which alone confer pictorial effect. They had all the appearance of having been hurried rather than neglected; in short, it was quite evident that they were the productions of a clever man, but one whose professional engagements scarcely left him time to mature his own thoughts.

Such was really the fact, particularly when he first practised in London. On his arrival there, he took lodgings in the house of an eminent court milliner, in Pall Mall, and having placed the likeness of the lady of the establishment in the room in which she attended her customers, it was so much admired, that in the course of a week he found himself overwhelmed with business. He came at once into notice, having as his sitters the highest of the nobility. The size of his drawings was six inches by four, and the form oval; his terms nine guineas. He could scarcely execute all the orders that came in upon him, and the writer has heard him declare, that in the evening of each day, a part of his occupation was picking and gathering up the guineas from amongst the bran and broken crayons, in the several crayon boxes into which, in the hurry of the day, he had thrown them! This was about the year 1780.

He remained in those lodgings for two years, and there took a house in St. Martin's lane, at the rere of which he built a most expensive and commodious painting-room. He resided there for six or seven years in the fullest practice, and subsequently went to Italy to study the works of the great masters. He settled in Rome, and during his residence there painted many of the English, and almost all the Irish nobility and gentry then on the Continent. The friendships which he then contracted followed him through life. He was fully sensible of the honour and value of such attachments; but among those which he seemed most to prize, and which he most uninterruptedly enjoyed, was that of the La Touche family, a name rendered venerable by the practice of every virtue, and the promotion of every good—the friends of genius, the encouragers of industry, the protectors of the poor; the tried, the steady friends of their country.

When in Rome he became acquainted with the late Mr. Flaxman, the great British sculptor, then prosecuting his studies in that emporium of art. Of Mr. Hamilton's talents as a draftsman and composer, Mr. Flaxman conceived the highest opinion, and with that universal and generous warmth, which high minds only are impelled by, he stated to his friend the estimate he had formed of his powers, urging him most earnestly to take up the palette and brushes, and thus give to his large capabilities a more ample and suitable field for their exercise The impetus thus given by praise from such a man as Flaxman, to a mind such as Hamilton's, at once determined the adoption of a change, on the propriety of which his own thoughts had been long vibrating. He immediately took to oil painting, from the practice of which he never after departed.

Mr. Hamilton was accompanied to Rome by his only daughter, whose amiable and accomplished manners gave additional charms to her attainments in classical literature; and those were of no ordinary extent. Amongst the many who sought and enjoyed her society, none were more impressed than Mr. Flaxman, who a very few years before his death, while sitting in his own studio in Buckingham street, honouring the writer of this memoir with a most interesting account of his studies in Rome, assured him that he had never met a young woman whose attainments and whose manners so thoroughly commanded his respect and esteem, as those of Miss Hamilton. Her conversation and society must, therefore, have been most cheering and delightful to her father, whose highly imaginative mind so constantly sought refreshment from the invigorating sources of literature and science.

On his return from Italy, he came and settled in Dublin as a portrait painter, and very soon established his high reputation. All his former sitters and friends flocked round him, to be again painted by one whose talents they so highly valued, and for whom they entertained so warm a regard. His residence was in Clare street, the large house at the corner of Merrion Square. His rooms were crowded with pictures, most of which were large whole lengths and half lengths. We have never seen in any of the London portrait painters' rooms so many works in actual progress. To be sure we must not forget, that at that period, from 1790 to 1800, the nobility and gentry of Ireland resided in Ireland. That great legislative measure, on the benefits or injuries of which such conflicting opinions are so sagely propounded; and that, too, with such pertinacity and vehemence, had not as yet withdrawn from the country either the rank of the wealth it possessed. Non-residence was then deemed a desertion, and absenteeism a positive evil; but the light of political economy had not then reached the public mind upon the subject, and the result was, that the imperfect glimmerings which twinkled along the paths of duty, led each man to believe that his love of country was best evidenced at home!

We hope that in indulging in this very harmless reminiscence of what Dublin once was, we shall not be deemed as offering any disobedient resistance to that executive restriction, which authoritatively denounced even an allusion to the subject, and which, under the order of some new order of physics, not yet publicly taught, confidently guards against explosion, by keeping the safety valve of complaint constantly shut down!

(To be Continued.)

Acetylene has been experimented with for signaling in the German army, with great success. Mixed with a certain percentage of oxygen, is is said to give three times the light of the oxy-hydrogen lamp, and can be plainly observed in daylight at a distance of five miles. The distance is trebled at night.

A STRONGHOLD OF THE GAEL.

By JOHN J. BURKE.

The village of Claddagh, of such interest to the folk lore seeker, and to those who desire to become acquainted with a remaining remnant of people who cling to the traditions of the past, presenting many entertaining features, is situated in the suburbs of Galway, almost on the southern border of the old western "citie." Unlike the many villages in Ireland named such, Claddagh, which numbers about three hundred houses, is entitled to the rank of town. If history and local knowledge tell aright—and there can scarcely be a doubt that they do—the number existing not many years since exceeded this, but have now fallen into decay.

The construction of the village, or rather as it is laid out, is most perplexing to the stranger, for the houses, roofed with straw thatch similar to those met with in rural districts, in the West of Ireland especially, cross and re-cross each other in utter defiance of all the rules of architecture or of our up-to-date ideas of exactness, as may be observed when one traverses the laneways and byways which lead off the public road, washed by the broad Atlantic, to the village.

Claddagh, with its fishing population, in the days prior to the Ballot Act was a formidable tower of strength to a candidate wishing to secure success at the hustings.

The people there in late times have experienced many vicissitudes, chiefly caused by the number both of sail and steam trawlers that fish in the bay, and the very small facilities which they possess in having to compete with them, lacking as they do adequate fishing boats and gear. Galway itself, we read, so early as 1280 was a place of note, as we may find from the reports of the Commissioners on the records of Ireland; two rolls, one from the Sixth of Edward I. empowering the collecting of tolls and customs on various commodities, in aid of and for building the walls, etc.; the other record from the patent roll of the 49 of Edward III., entitled "Charter of the Staple of Galway"; also another record granting unto Germyn Lynch the office of Warden and Master of the Mint in Ireland, dated the 6th August; the 1st of Edward IV. empowering them to coin money for Galway.

The village of Claddagh, as it is to-day, is one of the last remaining remnants of Galway as it was in the ancient times, if we except some old buildings of Spanish style to be met with through the city. It is not the buildings which point out this fact alone, but the people with their quaint way.

The population of Claddagh at one time, it is stated authoritatively, exceeded fifteen hundred persons—distinct in dress, in language, and customs from the other inhabitants of Galway. The Claddagh man of old wore a dress of light blue colour, soldier-like, all the men being attired in the same costume; the women, likewise, were dressed in plaid shawls and red flannel garments, and their cloak has become famous even in society circles, and for jewellery wore the well-known ring, generally in gold, of heart and hand, which, like the cloak, has become named, in the West at least, after the village. The fishing industry in the early forties, before pestilential famine and the hardly lesser evil, emigration, had taken root, must have been a great source of remuneration to those hardy toilers of the deep. The population, however, has declined, and with the causes named it has lessened by the great number of the grown-up amongst them becoming volunteers for the naval service.

Yet strange, yet true, the people of Claddagh are a distinct race, law-abiding, peaceful, honest, despite their still largely congested state.

Superstitious to an extraordinary degree they are; fairies to them are believed in as a

reality. The old people there seldom or ever, strange to say, have been to the other end of the town, although the distance is not far.

A Claddagh man hardly ever in a generation sees the interior of a Courthouse; law and its officialdom has no charms for him—he knows it not. All disputes, of whatever complexion, are settled there amongst themselves, where until lately there reigned a "King" whom they looked upon and styled as such, to make all matters right. The Bearla Briste, or English language, is yet almost there a total stranger. Knots of the old and younger people congregate near the roadway daily, when not otherwise employed, and discuss in the tongue of the Gael all that which concerns them and theirs, and what not besides.

The youngsters delight to address the pedestrians as they pass by in the vernacular—truly Claddagh is not an infinitesimal part of Gaelic Ireland. Close by is a chapel which is ministered in by the good Fathers of St. Domonick. This church, built some years since to replace one of an ancient date, is a splendid edifice. It is the third built there by that famous Order since the Penal days, the first being demolished by the fury of the soldiery, when the Soggarth was under ban. Quite adjacent is a churchyard in connection with the church, but is now long since disused. In the Dominican Church the Claddagh people are found congregated on devotion days—old and young. A school under the National System, termed the Claddagh Piscatory National School, erected in 1846 at a cost of £1,086, is of great advantage to the children of the village; both male and female attend there. To those desirous of variety, or of viewing memories of the past, Claddagh is the place—or, at least, its people.

ROMANCE.

BY MARY MULLALY.

There is no romance in this world, men say,
It died out long ago,
With the mail-clad knights and the ladies gay
And fortalice, and joust, and roundelay,
And arquebus and bow;
With the simple truth and the trust sublime,
And the fervour and faith of the olden time,
And the glory of long ago.

There is no romance in this world we're told,
It died out long ago;
Yet the sun and the moon rise and set as of old,
And the grass springs up through the bare, brown mould,
And the seasons come and go;
And the winds sweep by as they did of yore,
And the waves break thundering on the shore,
And the stars and the blossoms glow!

What! no romance in this world of ours,
Where the feelings ebb and flow,
Where the heart to the music of love keeps time,
Or stumbles and halts like a broken rhyme,
Or sinks 'neath its weight of woe;
Where the battle of life rages day and night,
And the deathless struggle of Might and Right
Goes on as in long ago.

What! no romance in this world of ours?
We hear it o'er and o'er;
Yet in knightly soul, not in knightly lance,
Dwelt the lofty spirit of old Romance
That lumined the days of yore;
And in glowing mind and in earnest will,
In souls that soar and in hearts that thrill,
It will for evermore!

It was well known that the late Lord Pauncefote, Great Britain's Ambassador to the United States, was an accomplished musician, but a few weeks, ago, however, it was discovered that he was a composer of no mean merit as well. The music of the dreamy little encore "The Muleteers," by Tom Moore, was one of his earliest compositions. His nom de plume was "A Templar." Around the beautiful little song, "I trust the happy hour has come," clings the romance of the composers life. It was written for and sung as a serenade to Miss Selina Cubitt, a pretty English girl, who afterward became Lady Pauncefote. "Venise," a barcarolle in French; "The Parting" and "My Lady's Hand" are among the other compositions of the distinguished diplomatist.

OUR WEEKLY STORY

THE SHADOW OF A DREAM.

BY HELOISE DURANT ROSE.

It was in the latter part of the last century, and lacked ten minutes of 5 by the white and gold clock on the mantel shelf in one of the finest salons of the Faubourg St. Germain, when the portieres were drawn aside, and a dainty maiden in flowered chintz gown, draped over a gay petticoat, stepped across the threshold.

"Pierre! Pierre!" she called, glancing at the clock, and a good-looking young servant in livery joined her.

"I know what you are going to say, Mlle. Jeanette, but it is early yet."

"Five by the clock, and Mme. la Marquise may be at home at any moment. You should have lighted the fire sooner, Pierre."

"It will be ready in a moment now," he answered good-naturedly, and, going to the richly-carved woodbox in the corner near the fireplace, took out some pine cones and kindled them under the logs already laid on the andirons, Jeanette watching him the while. In the shadows of the autumn evening the flames lit up her trim little figure as they also revealed her pouting lips. Pierre, still kneeling on the hearth, looked up into his companion's face with a tender expression, but she took no notice of him.

"Always dissatisfied, Jeanette. What is it you want now?"

"Nothing from you," she answered rudely.

Pierre sighed. He rose to his feet, dusted his knees, gave a last look at the fire, and then, leaning towards Jeanette, said slowly, "Why are you so unreasonable these days?"

"You always have declared that no woman is reasonable."

"But you are more unreasonable than most women. You will not even listen to a compliment nor accept the smallest gift."

"Not from you," Jeanette replied, with a toss of the head.

"You might do worse, my dear. Some grand gentleman must have turned your head with his airs, and I, being only a simple fellow, loving you honourably, cannot suit the fine tastes of the little coquette."

"I am not a coquette."

"When I offer you my hand and heart, what more do you want?"

The girl hesitated. "I am young and——"

"And pretty," put in Pierre.

"And pretty," echoed Jeanette, "and I want to see life."

"See life with me," urged her lover.

"Can you not leave me alone? I want no offers from you."

"You are not only a coquette, but cruel."

"And you are not only cruel, but stupid," retorted Jeanette, turning away and bursting into tears.

Pierre stood gazing at her, a picture of dismay. He did not approach the girl, fearing to offend her still more. His honest face flushed as he said timidly: "My dear, only tell me how I can please you. You do not know how unhappy your unkindness makes me."

"What does it matter?" began Jeanette, with a petulant stamp of her foot, when the rustle of a silk dress was heard, and a tall, dignified woman entered the salon.

"Take my cloak, Jeanette," she exclaimed, and crossed to the fireplace. "Put some more wood on the fire, Pierre. The air is chilly. Alack, how quickly the summer has fled!" As she spoke her eyes glanced from the girl to the young man.

"Has Mme. la Marquise any orders?" he asked.

"If any one calls, I am at home."

Pierre bowed respectfully and left the salon. As the marquise unbuttoned her gloves she looked keenly at the young girl.

"You look sad, little one. Not homesick, I hope?"

"No, madame."

"You have been crying, Jeanette. Has Pierre been unkind?"

"On the contrary, madame."

The marquise knit her handsome brow. As Jeanette was about to take the cloak and plumed hat into the boudoir, a gesture stopped her. "Are you unhappy with me?" asked her mistress.

"Ah, no, madame," replied the girl, with downcast eyes.

"When my old nurse—your grandmother—wrote, asking if I could take you into my service, I thought I should please you both by bringing you here, but if city life makes you sad why then, little one, you must go home."

"Ah, no, no!" interrupted Jeanette quickly. "Madame is too good to send me back to my village."

"You are young," continued the marquise, seating herself on a sofa. "Your duties with me are light; a young man in my service asks you to marry him, a young man who is good-looking and has already substantial savings, and yet you weep. It is not unnatural—unless—unless——" She paused, scanning the girl's face, and then said commandingly, "Jeanette bring me a footstool."

As it was placed at her feet the marquise lightly rested her hand on Jeanette's shoulder, and, pushing her down, said peremptorily, "Sit there."

"I, madame, to sit down"

"Yes, and listen to me."

The girl sank down on the little satin stool, and her troubled eyes looked anxiously up into the beautiful face bending towards her.

The marquise, still keeping her hand on Jeanette's shoulder, asked abruptly, "Who is he?"

"He, madame?"

"Yes, the man who made you weep."

"There is no one."

The marquise smiled. "Fie, what untruths, little one! You grandmother wrote that she wished you with me, knowing that you would be safe here. Now, why safe if there was no danger at home? And here with me, protected and in good health, living an easy life, and having an honest fellow devoted to you, you weep. And why? There can be but one answer—some one has bewitched that little head and stirred that little heart. Who can it be—let me think? The miller's son?"

"Dubois? Oh, no, madame!"

"Then perhaps the farmer, Laudry?"

"Never, never, madame! He is so rough."

"Ah! Some one more refined. Could it be the cure's nephew?"

"The idea of that boy!"

"Some one older? Why, I know of none in your village. A stranger perhaps, but so few go there, and you have not been away from home. But stay, did you not go to the Chateau St. Reme for some weeks last spring?"

"Yes, madame. I went there to help to take care of the children, as the duchess had sent away her nurse for a holiday."

"Surely you were not so foolish as to get a heartache over a servant there?"

"No servant, madame," was the answer in a low voice.

"Not a master!" exclaimed the marquise. "Ah, there were guests, of course! Is it possible that you would listen to the idle flatteries of a penniless poet?"

"He is not penniless, madame."

"Worse; a rich guest amusing himself with a little maid."

"Not amusing himself, Mme. la Marquise."

"Really this is alarming! So an old roue——"

"Not old, madame."

"Thin and little?"

"Not thin and little."

"Tall and stout?"

"Not very stout."

"Black eyes?"

"Blue, madame—beautiful blue."

"A proud upstart of a mushroom family."

"Ah, no, madame; one of the oldest families."

"Jeanette," cried the marquise, "you frighten me; a rich aristocrat making love to a little country girl!"

"Alas, madame, I know full well that I am unworthy of him, but he told me that he loved me."

"And did he wish also to marry you?"

Jeanette sighed, and after a moment's hesitation replied, "He has not settled a definite time, but promised he would if I——"

"If you—if you—quick, answer me!"

Jeanette's voice sank still lower as she said, "If I went with him to Paris."

"I knew it—the traitor!" cried the marquise, springing up. "Oh, if we women tried to ruin an innocent life, how would the world deal with us But these gay lords of creation cast their snares, kill their victims, and society continues to open its doors to them and lavish upon them its smiles. Jeanette," and she paused before the young girl, who had risen from the footstool and stood downcast and silent, "who saved you from this man?"

Jeanette raised her eyes timidly. "My grandmother arrived one day, kissed me many times as she said, 'You look pale, petite. I know that city eyes are looking too often into yours. We are plain country folk, and must remain so. Come home, my child, with me,' and she packed my things and never let me out of her sight until we were home again. I tried to see him, but grandmother was like iron. She has broken my heart," and the girl wept.

"Poor little field flower," said the marquise softly. "This first sorrow, like a heavy sorrow, bends your head low in the dust; but, like others, it will pass, and you will blossom again, fairer than before, in the sunshine of honest love."

"Never, never, Mme. la Marquise," sobbed the girl.

"Listen, Jeanette. You are young and do not know the world. This man meant harm. He soon would have grown tired of your simple ways, and would have put you aside as he would toss a faded flower, and then he would have married a lady for her fortune."

"Ah, no, no, madame!"

"Yes, yes, Jeanette. Your grandmother has saved you from disgrace. Come, my child, dry those eyes and forget flattering words that were as false as the man who uttered them. Poor little moth, you fluttered too near the flame and singed your wings."

Then, seeing how sad the child looked, the marquise added kindly: "There, I shall not scold you more to-day. But be sure that your grandmother and I are your truest friends. Believe in us, for we would shield you from harm."

Jeanette took the fair hand extended to her and kissed it respectfully. "Madame is too kind to interest herself in me and my little troubles. She has all my gratitude."

"Then show your gratitude by following my advice," answered the marquise, smiling.

"I will try, madame," and, taking her cloak and hat, Jeanette quietly left the room.

As the door closed behind her the marquise crossed to the fire and stood meditatively, with one arm leaning on the mantelshelf. The loose ruffles of her short sleeve falling back, revealed the round, white arm. On the taper fingers jewels flashed in the firelight. She was an aristocratic looking woman, adored by her friends and relatives, though Parisian society deemed her a shade too serious to accord her the popularity which her rank and wealth might otherwise have given her, but her wit and appreciation of talent filled her salons with artists, savants, and men of letters. A certain simplicity of manner had kept her from the stilted affectations of the period, and her innate dignity gave little encouragement to the ordinary scandalous gossip around her. At 18, to please her father, she had married an old courtier, who died before she was 20. Nearly ten years had elapsed since then, and she was still a widow, though suitors for her hand had not been lacking, among whom none was so devoted as the Comte de Vaugirard. No rebuff could daunt his ardour. He had proposed and had been refused, yet persisted in his suit. She was touched by his pertinacity, and had grown to depend upon his continuous attentions.

As Jeanette left her, after a passing regret that her little maid should already have had a taste of the bitter-sweet fruit of the tree of life, she dismissed the subject from her mind. Vaugirard had returned to Paris, and she would ask him who the blue-eyed roue could be who had made love to Jeanette while she took care of the duchess' children, for he knew the Saverins, and had visited St. Reme. With this reflection the marquise glanced at the clock. "Yes, in a few minutes Leon will be here." Her eyes grew tender, and she sighed as she took up a book and reseated herself on the stiff backed little sofa. But the book remained unread. It rested lightly in her lap while she glanced around the salon. Yes, the red and gold vase was filled with fresh flowers, and the wax candles shed a soft light from their brackets on the wall. The spinet stood open, with songs, on the music rack. Between rare Turkish rugs the polished parquet glinted. The bric-a-brac and pictures showed the taste of an artist.

The marquise cast a satisfied glance around. All was in readiness for the expected guest, but was he? "How much easier to say, 'Yes' to a man one likes than constantly to refuse him," she thought. "And why do I hesitate? What is it I fear? Is not Leon all a woman could desire, and he loves me, but—how well? Does he mean all he says? Is his heart absolutely mine? Ah, who knows? If I married him, and found him false, I dare not think what would be the end. To be deceived, and by the man I trust! No! We both could not breathe the same air after that! Does not he ask for all I have to give, and shall not I then have al lhe has to give? Love for love, truth for truth, faith for faith—or nothing!"

"M. le Comte de Vaugirard," announced Pierre, as a handsome man somewhat over 30 years of age entered. He was dressed in dark maroon velvet, with pale yellow satin waistcoat. Fine old lace fell over his wrists, and in his jabot, on his fingers, sword-hilt, and shoe buckles diamonds sparkled. His three-cornered hat he pressed close to his breast as he bowed low.

"My fair marquise, I am, as ever, your slave."

"Let me set you free, then."

"But I love my chains. To others I may vaunt my pride, but at your feet I am all humility."

She made no reply, but her eyes looked at him with affection. Vaugirard knelt before her, and, taking one of her hands, he kissed it fervently. "Am I to kneel forever in vain?" he pleaded.

"Rise, M. le Comte," she said hastily. "You are not an actor to play a passionate role."

"And yet my passion, alas, is but too real! I love you, and you alone."

"For how long?"

"Until eternity?"

"If I married you," said the marquise sadly, "and you proved unfaithful, it would break my heart."

"You break mine with these doubts."

She held out her hand to him. "Then I will try and banish them."

"Oh, my love! May I hope?"

"Wait, Leon, until to-morrow."

"Then?"

"And then I will listen to you. Now be seated again, like an ordinary mortal. Come, you must have a glass of Tokay."

"Your words are as wine to me," said the count gayly. His face flushed with pleasure. The goal seemed near. The prize he had for years sought so eagerly was within his grasp.

"How did you spend this morning?" asked the marquise, as she pulled the bell rope.

"I rode near Issy. The Jesamines live there. They are related to the Saverins, you know."

"Ah, that reminds me. You were with them last spring. How lovely St Reme must be in May. It should have inspired you with many a poem."

"The inspiration was lacking, as you were not there."

"But did none of the other guests write poetry?"

"No one was there while I was visiting St. Reme."

"No one?" echoed the marquise, much startled.

"I was the only friend enjoying their hospitality at the time."

"What! No gay damsels or proud seigneurs to dispute with you the role of favoured guest?"

"There was no one," said Vaugirard, surprised at the agitation of her voice.

"Did Mme. la Marquise ring?" asked Pierre entering.

"Some tokay for M. le Comte, and," with a slight pause, "let my little maid serve it."

Pierre bowed and left.

"Did you hear of other guests at St. Reme" asked the count, reverting to the subject, and troubled by the manner of the marquise.

"Perhaps I dreamed it—like my other dreams."

Her tone jarred on him.

"Ah, these dreams!" he said impatiently. "Forget them. Think only of my love, of my devotion. Oh, Celine, do you still doubt my loyalty?"

She did not reply, but glanced towards the portiere through which Jeanette was entering, carrying a small tray.

"A glass of wine for M. le Comte." Mme. la Marquise poured it into the glass, while Jeanette stood modestly holding the tray, her eyes downcast.

"Your health, M. le Comte!"

"To you, fair marquise," replied her lover, taking the glass. As he raised it to his lips he perceived Jeanette, who at the sound of his voice had started and uttered a little cry. The glass fell from his hand and was shattered on the polished floor.

"Hush, Jeanette," said the marquise. "It is only an accident. Here a broken glass—there a broken heart."

"Oh, madame," sobbed Jeanette, "I did not know why you sent for me!"

"Child, this is M. le Comte de Vaugirard, who did me the honour to ask me in marriage some three years ago, and who has repeated the offer frequently since then."

"Oh, madame, let me go!" cried the girl.

"Look, Jeanette," continued her mistress, "at the blue eyes of this proud noble of a stainless race."

"Mme. la Marquise, let me go!"

"Yes, go. Forget that you once heard words that meant less than the empty air, for the May breezes were at least laden with the scent of blossoms."

"Marquise, this is a dangerous jest," said the count in a low voice. His face was very pale.

"It is no jest."

"Ah, madame!" wailed Jeanette.

Her mistress patted her kindly on the shoulder. "Courage, petite. Let Pierre console you."

The girl turned away, still sobbing.

"You desire to insult me!" cried the count as they were left alone.

"No more than you insult me. The great honour you did me in offering the fresh, unsullied devotion of your soul I must decline," she replied, with a stately courtesy.

"Heavens! Could a bandinage with a country wench stand between us and happiness! I adore you! I worship you——"

"Take that worship to another shrine."

"No, no! You cannot be so cruel! Let me implore pardon for what sins I may seem to have committed——"

"Seem!" she exclaimed scornfully. "I need no excuses. Our romance is dead. The shadow of my dream is its shroud."

GOOD MORNING.

BY JOHN T. CAMPION.

The willows droop along the Nore,
And bow down o'er its flowing,
And blossoms paint its winding shore,
'Mid summer perfumes glowing;
And sunbeams smile and bright birds sing,
Like flowers the sky adorning,
And bending down upon the wing,
They bid my love—"Good morning!
Good morning—Good morning!
As if with sweet and lyric string,
They bid my love good morning.

The breezes blow along the Nore,
'Mid teeming fruit-trees creeping,
As if to whisper fairy lore
Where loneliness is sleeping;
Upon their lips are perfumed sighs
That give the senses warning,
As gently roving through the skies,
They bid my love—"Good morning!"
Good morning—Good morning!
As if with magic melodies,
They bid my love good morning.

The swallows swoop along the Nore,
And dip their bosoms, gliding;
As if some joyous news they bore,
And wantoned in their priding;
As if were theirs ooth time and tide,
For heeding or for scorning;
But in their speed, and in their pride,
They bid my love—"Good morning!"
Good morning—Good morning!
Yes, whilst they mock at road or guild,
They bid my love good morning.

SLIABH-NA-MON,

AND

Its Fenian Traditions.

SUPPLEMENTARY NOTES BY REV. J. F. LYNCH.

I.

I send some notes supplemental to Mr. Dunne's interesting article on the Fenian traditions of Sliabh na m Ban Fionn.

In the "Genealogy of Corca Laidhe," the name Sidh na bhfear bhfinn, or "fairy-hill of the white men," occurs, and this ilustrates the name Sliabh na m Ban Fionn, but the grammatical rule quoted by Mr. Dunne from O'Donovan is not without exceptions; perhaps it is a case of Exceptio probat regulam, which my old Latin teacher told me signifies that the rule is the other way. At any rate, in "Genealogy of Corca Laidhe," we have the name Beal an atha solais, or "mouth of the ford of light," and in Ludden or Lodan parish there was a ford named Ath an Coinne Lodain by Keating.

In "Battle of Ventry," Sliabh na m Ban Fionn is written Sliabh Ban Finn, but the name means "mountain of the white women," and it does not appear to be necessary, considering the name given above, that Fionn should be regarded as a corruption of Femin, or Femhin, the name of the district which includes the barony of Iffa and Offa.

In Annals of Four M., it is stated that Magh Femin* was bestowed on Aeife, one of the three daughters of Ugaine Mor, the other two being named Ailbe and Muiresc, but in Silva Gadelica, the three daughters of Ugaine Mor are named Aife, Ane, and Muiresc, while in the tale of the Children of Lear, the daughters of Ailill of Ara† are named Aobh, Aeife, and Ailbe, and they are said to be the foster children of Bodb Derg, King of the Tuatha De Danann, and residing with him in his sidh, which in "Children of Lear" is supposed to be beside Lough Dearg of the Shannon, but in "Battle of Ventry," Bodb Derg, King of the Tuatha De Danann, and son of the Dagda, or Deagda, or Deacaidh, is supposed to be living in the sidh of Sliabh na m Ban, and in Silva Gadelica, p. 522, we read, "Bodhb of the men of Femen's sidh was son of Eochaidh Garbh, son of Duach temen, son of Bres, son of Elatha."

Keating says that Eochaidh Garbh was son of Duach dall, and Elatha he makes son of Ned, son of Ind Ui (Indaoi), son of All Ui (Allaoi) (1), son of Tat, son of Bathadh, son of Iobath, son of Beothach, son of Iarbuineol, son of Nemidh, son of Aghnoman. The name Iffa is probably the same as Aeife. North of Galbally there is a valley close to Dun tri liag ("fort of the three pillar stones," where is grave of Cormac Cas, son of Ailill Aulom), named Gleneefy, or "valley of Aeife," and it appears from "Wars G. G." p. 93, that there was a place not far from Cnoc Aine named Aifi, that is, Aife, or Aíobhe ("fair").

Several explanations are given of the name Femen (2). In the Bodleian Dinnshenchas, p. 17, Femen and Fea are said to be the sons of the Moagab, son of Dachar, of the clann of Brath mac Deagha, which is the same as Breg mac Deagha. It is stated that Femen and Fea cleared Magh Femen and Magh Fea, which were named from them. Magh Fea is in the barony of Forth, County of Carlow. In Silva Gadelica and in Chronicum Scotorum, Fea is said to have been the first of the folk of Partholon who died in Ireland, and he is said to have been buried in Magh Fea. In Silva Gadelica, Fea is made son of Tortha, son of Sru, son of Esru, and Keating makes Partholon the son of Sera, son of Sru, son of Esru. Keating writes the name Magh Fea as Magh Feadha, and says that Feadha, son of Tortha, was the first man of Partholon's folk who died in Ireland, and that Magh Feadha was named from him. One of the sacred trees of Ireland, Bile Torthain, or Bile Toirthen, was named from Tortha, or

*In the "Feast of Brioriu," p. 40, is given a list of the names of the great plains (Morbrugi), of Erin, and in this list are mentioned the plains of Fea Femen, and Ane. In Silva Gadelica the names of several of the old monuments of Magh Femin are given. Two of the forts are named Rath Chinn Chon, or fort of hound's head, which may be compared with Cathair Chinn Chon, beside Lough Gur, and near the Raithin, mentioned in State Paper, dated 1200. The Raithin na niongnadh, or little fort of wonders, was close to the northern Rath Chinn Chon, and connected with the hound, and so I think that Raithin of Lough Gur was also named Raithin na niongnadh, the wonders being the hound and treasures cast up by him. I have given the tale of the treasure concealed near Cathair Chinn Chon.

† In "The Fate of the Children of Lir," p. 83, the editor says, "Oilell (Ailill) Arann, that is, Oilell of Ara. I suspect that this name should be Oichell Arann, because there is on the western or great Arann Island, on the coast of Clare, a large Cyclopean fort, still bearing the name Dun Oichill or Oichell's Fort." This is erroneous, for Ailill Arann is correct. The name Ara has four genitive forms, Arann, Aradh, Araidhe, and Airend. Tipperary is Tiobraid Arann, and Clonkeen of Owney beg, in county Limerick, is Cluain Cain Arad. ("The Calendar of Oengus," p. clxxxi).

1. In the Genealogy of Cu Chulaind (Siabur-Charpat Con Chulaind), MacCuill is son of Cermait, son of Ind Dagda, son of Elatha, son of Delbaeth, son of Net, son of Ind Ui or Ai, son of All Ui, or Ai, son of Tat, son of Taburnd. In the same Genealogy Ind Dagda is also made Mac Ind E, that is, son of the E, or Ai, for the vowel e is a union of the two vowels a and i, and o is a union of a and u. In Irish, Arabic, and Hebrew, A, I, and U are the original vowels.

2. The western termination of the territory of the Corca Duibhne was also probably named Rinn Femin. In Cinfaela's poem (Trans. O S. Soc. Vol v., p. 277), we have:

Iar sin gabsad indbhear Sgeine
Dia mairt for cheart challaind mai
O sin amach, co dearbh deimhin,
Do dercsad rind Feimen fai.

They landed at Invear Sgeine after that.
On a Tuesday of the Kalends of May exactly,
From which, 'tis true, they saw
The adjacent headland of Femen.

Invear Sgeine, now the Kenmare river in county of Kerry, was so named from Sgeine, wife of Amergin, said to have been drowned there.

Toraidh; and O'Flaherty (Ogygia) mentions that this bile was an ash-tree, and that it fell towards the north-west, towards Cill-Iachtair-thire (3), or "Church of the western land," in Galway district.

"Craobh Daithin, is Craobh Mughna,
Is Craobh Uisnigh cnuas Cumhra;
Bile Tortain, Eo Rosa,
Frioth san oidhche cheadna so."

"The branchy-tree of Dathan, and the branchy-tree of Mugain,
And the branchy-tree of Uisnech of the fragrant fruit,
The large-tree of Torthan, the yew tree of Ros,
Were on this same night discovered."

These trees are said to have been found first in Ireland on the birth-night of Conn of the hundred battles.

In "Silva Gadelica" it is also stated that Femen, Fera, and Fea were the sons of Mogaid ,or Moga, son of Dachar of the Clann of Brath mac Deadath, and that they cleared the three plains named from them. Magh Fea is in "Silva Gadelica" also said to be named from Fea, wife of Net, but the wife of Net is sometimes called Nemon and Be Neit ("wife of Net"), or "goddess of war," and Cormac (Glossary) says that Net or Neith was Dia catha le gentil Gaedhel, acas Neamon a bhen sin. "Net was war god of the pagan Gael, and Nemon was his wife."

From Net came the Irish word, Net or Neith, "battle," just as English martial is from Mars. It is also stated in "Silva Gadelica" that Magh Femin was named from Femen, the name of the two oxen of Dil, daughter of Lugh mannair, which died on the plain. In the Bodleian Dinnshenches, p. 4, it is stated that the ox of Dil, daughter of Lugh mannair, was named Brega (4) and Falga, and that Dil and the ox were brought to Tara from Tir Tairngiri, or Tir Falga (the Irish pagan Elysium), by Tulchine, the druid of Conaire Mor, the son of Etirscel, son of Mess Buachalla.

In "Genealogy of Corca Laidhe," we have Feruilne, that is, Fer Fhuillne, or Fer Fhuilne, son of Deag mannair, son of Lugh, son of Ethlenn, son of Lugh, son of Ith, son of Breogan, or Breg, and Maccon is son of Lugh, son of Daire, son of Fer Fhuilne, son of Sithbolg, son of Deadh, or Deag mannair, son of Deag Derg, son of Dergthenedh, son of Nuadat, or Nuad, or Nu (5).

The genealogical lists of "Corca Laidhe" are of extreme importance, and need careful study and comparison with the other old lists of names.

In Annals of Four M., Fuilne, which is same as Fer Fhuilne, is son of Ugaine Mor, and on him were bestowed Magh Fea.

O'Donovan (supplement to O'Reilly) says that Dam Dili, or "ox of Dil," was a fabulous ox of antiquity, and was one of the three wonders of Leiter Dallain, in County of Tyrone. Dil, the blind druid, who was owner of the Ech dubh, or "Black horse," which ran at the races of Oenach Culi Mna Nechtain, came from Magh Femin to Loch Gair. I stated in a previous article that in Irish mythology difference of sex is a matter of indifference, the dark horse (6) of Loch Gair won and will win all the prizes.

Mr. Dunne has mentioned that a district beside Sliabh na m Ban is named Sliabh Dile, or "mountain of Dil."

O'Donovan (supplement to O'Reilly) says that, in the Book of Lismore, Sliabh na m Ban is called Sliabh Oighidh mhic Iugaine, that is, mountain of Oighe son of Iugaine, or Ugaine mor, and he adds that on the summit of the mountain there is a large cairn of stones called Suidhe Finn, and also a rude cromlech, the table stone of which Mr. Dunne has called Bord Finn.

In "Silva Gadelica," the mountain is named Sliabh Aighe mhic Ugaine, or "mountain of Aighe son of Ugaine mor." We see from comparison of the two names that Aighe and Oighe are forms of the same old name, and I think that Oighe is the same as Oicè, which was the name of the district in Ui Fidhgenti, in Limerick, bestowed on Bard son of Ugaine mor, and I traced the name Oice to Oce, or Oca, which is derived from Oc which is same as Ac.

In "Silva Gadelica," the table stone of the cromlech is named Lech Lige, or "flagstone of the grave," and the monument is said to have been raised by the Tuatha De Danann, who every year came to fight on the Faithche, or "exercise green," of the Sidh, on which were the monuments, with the twenty-eight sons of Midir of the yellow mane, son of the Dagda, who are said to have first discovered the Sidh of Sliabh na m Ban.

The mound now named Suidhe Finn, or "Seat of Finn," is named, in "Silva Gadelica," Fert an druadh (7), or "grave of the druid." whose name is said to have been Dianghalach, of the Tuatha De Danann. This is not an old name, and may be regarded as giving the tradition of the period of the writer concerning the druid of the fert, or dumha, as vigorous, active, and very brave in war. At Tara one of the mounds was named Dumha nandruadh, or Fert nandruadh, grave-mound of the druids." O'Curry (Lectures, p. 514) has:

Duma Find, Duma na n Druad,
Duma Credni gruad ar gruad,
Duma mondernad glecc gle
Duma Erc, Duma Aicle.

"The mound of Finn, the mound of the Druids,
The mound of Credne, cheek by cheek;
A mound at which was fought a gallant fight,
The mound of Erc, the mound of Aicail."

O'Curry (Lectures, p. 284) mentions that the Druid of Dathi repaired to Dumha na n Druad, beside the river Moy, in order to get knowledge of futurity. In "Silva Gadelica," p. 109, Dumha na n Druad is called Fert na n Druad, and it is said to be north-west of Tara.

In the "Book of Rights," p. 5, it is prohibited to the King of Connacht to sit in autumn on the grave mounds (i feartaibh) of the wife of Maine (or Maithne). The Suidhe Finn of the Ballyhoura mountains is named Carn Feradaigh, or "grave-mound of Feradach, in "Silva Gadelica." The mound on the eastern summit of Knock Finnel was named Tor (8), or "tower," and in the Bodleian Dinnshenches, p. 30, Suidhe Aedha, or "Seat of Aedh,' above the waterfall of Ballyshannon, and on Sidh Aedha, is also named Tor, and the builder was Dechet, or Deag-

---

3. In the Egerton Variants ("Battle of Ventry), Tir Iarthach is named Tiobruid Fala Beine and Dithreabhach, where was the hermitage of St Colman Mac Duagh.

4. Magh Breg or Breag is the name of the district of the Meath Tara, and the name Breg is plural being the name of the race who took the name Breg, which is the same as Breagan or Breogan, the latter being merely an extension of the former, and with Breagan or Breogan, who is mentioned in "Corca Laidhe," must be connected the Brigantes who, according to Ptolemys map, appear to have held Magh Femin. O'Curry also mentions that Magh Breogain was the old name of Muscraigh Breogain, near the town of Tipporary. The Brigantes held the Yorkshire district in England, and were the second Celtic race of the British Isles. The three races of Ireland are the three races of Gaul mentioned by Cæsar. Compare also Tor Breogain, near Corunna, in Spain.

5. Nu is one of the oldest names in Egypt, and is applied to the primordial ocean. Professor Maspero (Dawn of Civilisation, p. 127), says—"The latent germs of things had always existed (according to Egyptian notions), but they had slept for ages and ages in the bosom of the Nu of the dark waters." The Irishword Nu comes from U, "water," by initial nasalization. There are three kinds of nasalization in the Irish language, which may be termed initial, middle, and final. The name London from Lod, as I pointed out in a previous article, illustrates middle and final nasalization, and the corresponding Lodan is an example of final nasalization. Professor Rhys (Hib. Lect., p. 125), equates Lod or Lud with Nud, the Irish Nuada of the Silver Hand, and says that there is a mythical Welsh king named Llud Llawersint, or Llud of the Silver Hand.

6. Professor Rhys (Hibbert Lectures, p. 370), says "The triad in question speaks of the Three Horse-loads of the Isle of Britain, one of which it describes as borne by Du Moro or the Black of Moro. In the Red Book version (see R. B. Mab., p. 300) this horse is called Du y Moroed, "the Black One of the Seas"; but the older and less transparent name is Du Moro, as in the oldest copy of the Triads (Hengwrt MS. 54, p. 53), or Du March Moro Oeruedawc, "Black the Horse of Moro Oeruedawc," in the story of Kulhwch (R. B. Mab., p. 124), where the rider of the beast is no other than Gwyn ab Nad." In "Silva Gadelica, p. 140 it is stated that Finn made trial of the Ech Dubh or "Black Horse" of Lough Gur on Traigh Bherramhain or "Strand of Berraman," near Tralee, and that the strand was consequently called Traigh an eich dhuibh, or "Strand of the Black Horse." Professor Rhys has equated the Welsh Gwyn ab Nud for various reasons with the Irish Finn, and we may equate the Welsh Du March or "Black Horse" with the Irish Ech Dubh or "Black Horse." With regard to the Welsh Moro, it appears to me to mean "Sea," for the Irish muir, "Sea," has an old genitive mora, the present genitive is mara. The Welsh word for sea is mor, cognate with Irish muir and Latin mare. Fear Mora is mentioned in "Corca Laidhe," p. p. 40, 58.

7. In Silva Gadelica" the Tuatha De Danann are said to have assembled around this mound before the battle with the Sons of Midir Mac Dagda. In Chronicum Scotorum, A. D. 561, it is stated that the army of Diarmaid Mac Cerbhaill marches around a cairn before the battle of Cuil Dremne,

Slugh do cing attimceall Cairn
Is mac ainfthe nos dus mairn.

"A host that marches around a Cairn,
And a son of storm that betray us."

8. Keating mentions that the Children of Nemed destroyed the Tor of Conaing, Conann, or Conand, on Toirinis, or Tower Island, now called Tory Island; and Tor Breogain, or tower of Breogan, is often referred to in the tales. Those tors were built of earth and stones, and must not be confounded with the Round Towers, but Henry O'Brien is quite correct about the Goban Saor, who, according to Petrie, was an architect who built many of the Round Towers early in the seventh century. In the Edinburgh Dinnshenches, p. 70, Tuirbe, father of the Goban, is stated to have fled out of Tara before Lugh Mac Ethlenn, and it must not be forgotten that, according to the legend given by O'Donovan Annals of Four Masters, Lugh Mac Ethlenn was born in the Tor on Toirinis. There was a round Tower also built on Tory Island. The pagan or represented the earth, or universe, as did the Pyramid in Egypt, and the Ziggurat in Chaldœa.

haidh, or Deag, the rathmogaid or "rath-builder," of Glass mac Caiss or Glas mac Cais. The name Cas mac Glais also occurs in the tales.

(To be Continued.)

PUZZLES OF MODERN SCIENCE.

There is no softer substance in the world than cotton wool, and we use it for wrapping up all our most treasured and breakable possessions. Treat this warm and fluffy wool with nitric acid, and it is speedily turned into gun cotton, one of the most terrific explosives known to science. A pound of ordinary gunpowder, when fired, takes the hundredth part of a second to explode. Gun cotton goes off in one fifty-thousandth part of a second. Gun cotton was first discovered sixty years ago, and every country was so delighted with an explosive of such power that quantities of it were made and stored. But explosion became distressingly frequent. There was one at Stowmarket which killed 24 people, dreadfully wounding another 60, and made the town look as if it had been bombarded. This led to the discovery that gun cotton could be mixed with water—that is to say, thoroughly damped, and so be stored in safety, while still containing all its explosive properties. Torpedoes are to-day charged with moistened gun cotton at heavy pressure.

Nitrogen is a dull, heavy sort of gas. It puts out fire instantaneously, and kills any living thing plunged into it. Yet seventy-eight parts in one hundred of the air we breathe are composed of this gas. It is the 20 per cent. of oxygen which is combined with the nitrogen that transforms it into life-giving, pure and elastic air. Water, on the other hand, puts out fire, and will not sustain warm-blooded life; yet water contains, comparatively speaking, more oxygen than air does. What makes this combination still more peculiar is that hydrogen gas, which is combined with oxygen to form water, is in itself not nearly so deadly a gas as nitrogen. It is the lightest of all the gases, and will burn freely in the air.

Two deadly poisons appear every day upon every table in the civilised world. One is a bluish-white metal, which is so desperately inflammable that, if swallowed, it would set one on fire inside. The other is a yellowish gas, which will suffocate instantly any living thing that breathes it. The metal is sodium, the gas chlorine. Yet, in chemical combination, these two form common salt.

Charcoal is the purest form in which we generally see the element carbon. Who would for a moment imagine that more than half of the delicate white of an egg is composed of this black charcoal? Yet 52 parts in every 100 of egg albumen are carbon, and 54 parts in each 100 of the bread we eat. There is, in fact, carbon in every living thing, whether you take your own flesh and blood, the pip of an apple, or the skeleton of a mouse. The pencil you write with and the diamond in your scarfpin are composed of the same element. The keen steel of the razor blade depends on carbon for its hardness. Less than one part of carbon is there to the ninety-nine parts of iron; yet without it, the blade which will cut a hair would be no better than a barrel-hoop. On the other hand, if more than that tiny proportion of carbon were mixed with the iron it would be steel no longer, but mere brittle cast or pig iron.

Gold, when absolutely pure, is so soft that it can be dented with the finger nail. Add one pound of copper to twenty of gold, and the resulting mixture is almost as hard as copper itself. Numbers of metallic alloys seem almost miracles, so different are they from the materials which have gone to compose them. Brass is extremely unlike either the copper or zinc which make it; but the most curious thing about brass is that a very little lead added to it will cause it in appearance to precisely resemble gold. Why dull, gray lead should have this effect is one of the many mysteries of metallurgy. A little nickle added to steel will make a mixture harder than either of its constituents. Phosphorus, the softest of all the metals, and one of the lightest, gives enormous strength and density to bronze, making it more suitable than even steel for certain purposes, and this list might be indefinitely extended.

NOTES AND QUERIES.

OGHAM WRITING AND ITS RECENT DECIPHERERS.

In the paper on "Irish Antiquities, As Seen Fifty Years Ago"* a brief reference was made to Ogham writing, by its author, the late Mr John Windele, of Cork, who, together with his friend, the Rev M. Horgan, P P, of Blarney, made this old and difficult form of script their special study. Father Horgan was in fact the first to discover the clue to Ogham Deciphering, though a like discovery was made about the same time by the late Dr Graves, Protestant Bishop of Limerick, who, having long survived the former, is now best remembered as an authority on Ogham. None of the three has, however, published any separate work on this abtruse subject; but to John Windele is mainly due the collection of Ogham stones now to be seen in the National Museum, Kildare street, Dublin. To another Cork man, the late Mr Richard Rolt Brash, we owe the first and so far the largest, if not the most important, work on Ogham writing as yet published. Mr Brash's work is entitled, "The Ogham Inscribed Monuments of the Gaedhil in the British Islands, with a Description of the Ogham Character" (London, 1879). It was published by his widow after his death, and was edited by his friend, Mr George M Atkinson, late of the South Kensington Museum, who himself contributed some years since a series of papers on Ogham writings to what is now the Journal of the Royal Society of Antiquaries, Ireland. Apart from Brash's work, "Ogham Inscriptions in Ireland, Wales, and Scotland," by the late Sir Samuel Ferguson (Edinburgh, 1887), and the recently published "Studies in Irish Epigraphy, Parts I and II, by Mr R A S MacAlister (London, D Nutt), almost all that has otherwise been published on the subject of Ogham writing is confined to the pages of the aforesaid Journal R. S. A. I., the principal contributors thereto being the late Rev Edmond Barry, P P, of Rathcormac, Professor Rhys, of Oxford and to a less extent, Mr Robert Cochrane, R. S. A Dublin, and the Rev P Power, Waterford, a very limited number so difficult and recondite is this form of research.

In an interesting review of Mr. MacAlister's Studies in Irish Epigraphy, which appeared in the "Athenæum," October 4th, 1902, occur the following passages, which set forth clearly to what stage the study of Oghams has so far advanced, and the inherent difficulties which bar its progress: "We are fully prepared to have patience about Oghams, for we feel at last that men like Professor Rhys and Mr MacAlister are making way; and are at all events shaking off the trammels of their predecessors' mistakes. The older generation were divided into two classes: decipherers, who knew but little about Irish, and Irish scholars, who knew nothing about deciphering. We may discount a third class—amateurs, who knew neither the one nor the other. The late Bishop Graves was a most accomplished and versatile man, not likely to neglect the study of successful deciphering in other fields. But though he often quoted the achievements of Egyptian scholars, he seems to have missed one lesson to be learnt from Champollion's masterly account of his own discovery. Bishop Graves was as acute a decipherer as any of them, but he never even sought to acquire a living knowledge of the language, which in its earlier stage was the language of the inscriptions. Hence he was led, Mr MacAlister tells us, to refer the apparently outlandish forms which he brought out by his readings to a cryptic intention on the writers, and this theory seems to have greatly impaired the value of his work. Modern scholars, better versed in the curiosities of old Irish grammar reject such such a theory, and seek to interpret the Oghams as representing the dialect of their day, but there remain so many difficulties, there seem to be so many impossible combinations in their readings, that we feel some doubts whether there be not a residuum of truth in the Bishop's theory—viz, that some of these texts do not represent any normal Irish of any epoch. But we feel disposed to ascribe these vagaries in Ogham writing not to a desire of learned men to conceal their knowledge; but to the inability of ignorant men to use an alphabet of which the use was decaying, and the knowledge becoming more and more inaccurate. But as yet there is apparently no criterion established for distinguishing the latter from the earlier texts (of Oghamic writing). Until this is attained our progress must be slow, and it can only be attained by first acquiring a thorough knowledge of the Irish tongue in the middle ages, and then reasoning back to more primitive stages, as has been done in parallel cases. No reading will be free from constant and gross errors except the reading of a scholar who knows what is possible and what is impossible in a man writing his own tongue intelligibly. We trust the decipherers of Ogham writing will take these lessons to heart, and pursue the study of the language, as the first condition of ultimate success."

Apropos of Oghams, the fact that the recent removal of an Ogham stone from one of the Blaskets off Kerry to Dublin has excited much comment, and in fact downright condemnation, would show that more value is attached to these objects in the popular mind, than was the case when Windele first wrote on this subject fifty or more years ago. Yet none the less it cannot be denied that an immense amount of wanton destruction is continually occurring in respect to these ruder forms of Irish antiquities, arising from the worse than savage ignorance of most of our people, in respect to their nature, origin and uses.

*Published in this journal.

EARLY IRISH-PRINTED BOOKS.

TO THE EDITOR DUBLIN PENNY JOURNAL.

Nobber, 27th November, '02.

Dear Sir—I find I can supplement Mr Dix's very interesting list of early works printed on Irish-made paper, as given in No. 15 of your journal by another in my possession, and with your permission, I wish to put it on record, as the information may be of use to others. The title page is:—

A
LETTER
To the
DUBLIN SOCIETY,
On the
IMPROVING
Their
FUND;
Manufactures, Tillage, etc.
in
IRELAND.
(A long Latin Motto.)
DUBLIN.
Printed by R. REILLY,
For G. EWING at the ANGEL and BIBLE in
DAME STREET. MDCCXXXIX

This Pamphlet is Printed on Irish Paper, made by Mr. Randal at Newbridge, near Leixlip.

It is a small pamphlet, 56 pp. 8vo, signed letterwise "SAML. MADDEN," who was no other than the celebrated clergyman of that name, who done so much for the revival of Irish industry in the early part of the 18th century. It is bound up with the larger and more important "Reflections and Resolutions proper for the Gentlemen of Ireland," by the same patriotic pen. The latter was printed and published by Reilly and Ewing, in 1738, but not signed by Dr Madden.

O. S.

STRUGGLE AND TRIUMPH.

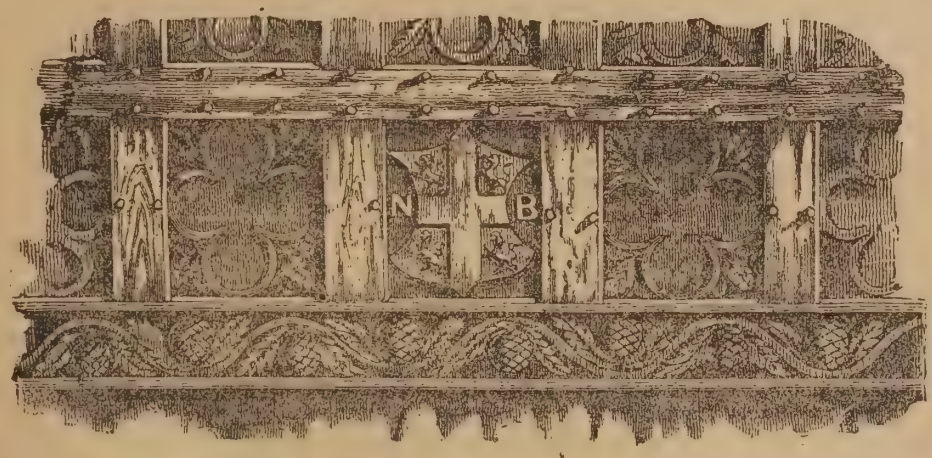
BY WILLIAM J. M'CLURE.

Rise brother-bard, rehearse with me
The Past, that was Futurity:
And up the shining hills of Thought,
Muse o'er the deeds that men have wrought,
And on the bright Parnassian peak
These words of meditation speak:
In the struggle is the triumph.

Hail! gracious youth, thou, too, may'st come;
Leave passion's revel, pleasure's hum,
The strife, the jealousy, the guilt,
The recklessness of error's tilt;
Thy soul, confirmed in noblest light
Will vow at last—"for truth and right,
In the struggle is the triumph."

O, sage—most rev'rend are thy years
Transfixing folly, less'ning tears—
Come, thou shalt teach me many things
Of earth, air, sea: of paupers, kings;
Of angels bred in poverty,
Of demons reared in luxury,
Of the struggle and the triumph.

Youth linked to age and bard to bard
Stand forth, united for reward!
And whether on the mount or plain,
In town or forest, still retain
The soul above the diadem,
As champion of the apothegm—
In the struggle and the triumph!



OLD DROGHEDA.

ITS WOODEN HOUSES.

PICTURE OF AN INTERESTING SPECIMEN.

WOODEN HOUSE, DROGHEDA; ERECTED, 1570; TAKEN DOWN, 1824.

SPECIMEN OF CARVING ON THE PANNELLING OF THE HOUSE, WITH THE ARMS OF DE BATHE, THE FOUNDER.

(From the "Dublin Penny Journal," September, 1832.)

This building was erected A.D. 1570, by Nicholas Bathe, a member of a family which appears to have had considerable possessions in the county of Meath, Athcarne Castle, a few miles beyond Duleek, being erected by William Bathe in the year 1590; and it appears, by the inscriptions, and the carpentry of both buildings was executed by the same person, viz., Hiv Mor, or Hugh Moore.

It occupied the angle formed by the junction of Laurence's street and Shop street, the principal front being in the latter, and was composed chiefly of oak, said to have been obtained from Melifont Park; it consisted of three storeys, the upper projecting beyond that immediately beneath. The upper or attic storey was composed of strong square oak framing, with spandril pieces, each piece forming a quadrant, or segment of a circle, the interstices filled with plaister; the principal, or as we would now say, the drawing-room storey, was of a more finished character, consisting of pannelling or wainscot, each pannel being about a foot square, and fancifully carved in quaterfoils and foliage, executed in good style; the rails and styles were also ornamented with projecting pins or trennails. It is difficult to say how the lower storey was arranged, it having undergone many alterations; it was, however, extremely low, and latterly divided into several small shops.

In the angle on the drawing-room floor was a handsome semicircular bay window, consisting of four divisions, a pannel in the pedestal of which contained the arms of Bath, viz., a cross between four lions rampant, with the initials N. B.; this pannel was preserved by Peter Van Homerigh, Esq., the late Recorder. There was another projecting window in Shop street, but it did not appear to be of such antiquity as the rest of the building.

On the bressimer, in Laurence street, was the following inscription, in the antique raised letters used in the time of Queen Elizabeth, each about six inches long, and each word divided by a star:—

MADE * BI * NICHOLAS * BATHE * IN * THE YEARE * OF * OUR * LORD * GOD * 1570 * BI * HIV * MOR * CARPENTER.

There is no doubt but at the time of erection this house was considered a "chef-de-ouvre," and even in later times it was considered a curiosity, and commanded the admiration of many. Taaffe, among others, remarks, "I have seven wooden houses in Pilnitz, Richenau, and other towns of Bohemia and Germany, but none of such curious and elegant, as well as durable workmanship." He has, indeed made a TRIFLING mistake with respect to its antiquity, as he continues, "The date was carved in the oak, in figures about two feet long!! and I think it was 1074!!"—thus adding ONLY eighteen inches to the length of the figures, and 500 years to the age of the house.

The "Wooden House," after having, like Napoleon, "fulfilled its destiny," and being extremely rickety through "old age and infirmity," besides suffering under the obloquy of a very indifferent character, having been for many years suspected of harbouring rats, reprobates, and typhus fever, was at length condemned to annihilation by the corporation, and disappeared for ever in the year 1824; and the present handsome modern brick buildings were erected on its site. A.

The signature to the above article—merely the initial letter of his name, Armstrong—the "Dublin Penny Journal" told its readers, revealed the modesty of the author, a journeyman housepainter, of Ranelagh, who, making good use of his leisure, had "acquired the power of sketching like an artist and writing like a gentleman."

ANOTHER NOVEL FIRE ENGINE.

The chief of the fire department in Rouen, France, has invented a fire-pump which can be operated by tapping the current of any street car or electric-light system. The pump is small enough to be drawn easily by one horse, in a light, two-wheeled cart, but sufficiently powerful to throw a stream of water 100 feet high. In a trial the new pump developed its full energy in three minutes, while a steam-pump required 14 minutes to get up the same pressure.

THE GREAT NAPOLEON'S SON.

By W. M. SLOANE, Ph. C.,

PROFESSOR OF HISTORY IN COLUMBIA UNIVERSITY.

There is probably but a single instance in which the whole civilised world, and most of the round globe besides, has anxiously regarded its fortunes as dependent on the birth of a child. Yet this, in plain prose, was virtually the case on March 20, 1811.

If Napoleon Bonaparte should found a dynasty it would be long ere things would again be as they had been only a short time ago, and as the vast majority of Europeans desired them to be once more. As the fateful moment drew near, nations literally stood expectant; when it passed, the great arms of the semaphores began to wave and circle along all the highways of Europe, telegraphing to hamlet, village, town and city the news which seemed to determine the fate of peoples and principalities.

As for the great metropolitan city of Paris, the suspense of its populace was breathless; it appeared as if all the men and women within the walls were gathered in one dense mass about the palace of the Tuilleries. After what seemed interminable waiting, cannon began to boom from the terrace of the Invalides; the intervals were ages, but the patient people counted, and as the twenty-second blank shot rang out across the distance, one mighty cheer broke forth from the assembled masses, as if to drown the artillery. It was the preconcerted signal to announce the birth of a boy.

Within the palace the suspense had been terrible. The mother's life had hung in the balance, and the new-born child gave no signs of life. For seven minutes the Imperial baby lay in suspended animation. But at last he gave a wail, and as he did so he was hailed: "King of Rome! Grand Eagle of the Legion of Honor! Grand Cross of the Iron Crown! Knight of the Golden Fleece!"

A THIRD CHARLEMAGNE.

These were but his titles of honour; his place was to be that of a third Charlemagne, the successor of his sire, who was posing as the second, the Emperor of the West, holding sway over not merely Germany and Italy, but all lands westward to the Atlantic, unless indeed the islands of Great Britain should elude his sovereignty for an hour. If there should be a second son, he would be the true king of Italy, reigning, although not governing, at Rome. This was the Imperial father's intention.

But this boy was to be sovereign paramount of the European world, perhaps of all the earth. Just now he was the token of reconciliation between the monarchies and the parvenu empire; his mother was a Hapsburg, his father a Napoleon, as the new dynasty was styled; combining the ancient prestige of one with the present power of the other, his infant majesty would have a legitimacy unknown to the ruling parent, who sighed that his own power was jeopardised by the lack of kingly ancestry.

The title, "King of Rome," was chosen for weighty reasons. It was a defiance to the Papacy, for Pope Pius was very stubborn just now; it recalled the great empire of Charles the Great, Charlemagne, as the French called him in their absurd claim that the most typical German who ever lived was a Frenchman; but above all, it suggested, as Napoleon desired, that, although born a French subject in Corsica, he was no Corsican, but a Frenchman of noble Italian descent.

To many grave and thoughtful Frenchmen the circumstances seemed of primal importance in history, for they felt that the dissemination and ascendancy of French culture throughout the West was assured under conditions similar to those which, under Alexander the Great, had scattered the seeds of Hellenic culture far and near over the then-known world. The wild enthusiasm of the French masses found expression in the poems of Casimir Delavigne and Michaud.

The child had much to contend with from the hour when his swaddling-clothes were bound about him. His mother proved almost less than human, such was her utter indifference to her babe. The tenderness and solicitude of maternity she did not feel, and she made no pretence of showing any symptoms of them.

The training of that Austrian court had already a sorrowful notoriety throughout Europe. By the most insidious wiles its wards, whether children of the reigning house or other princes of the royal blood, were stripped of will-power, taught such half-truths as revolt even the child-reason, fashioned into courtly puppets moving with outward grace and inward sullenness at the behest of their superiors.

The revolt was sure to follow. The marriage of Marie Louise was an emancipation, partial, to be sure, but real. I have the testimony of Kossuth at second hand that he saw in Vienna the piles of the daughter's letters which revealed to her father, her husband's deadliest foe, the innermost secrets of the French policy.

She may have remained a spy, a facile tool in the hands of the Emperor Francis, but she had a fond husband, and her passion for selfish indulgence was bounded, not by his willingness to furnish the means—never! only by the narrowness of her own mind, narrow even in its selfishness. It was broad enough, however, to make all care and anxiety distasteful, even about her own son, and that, too, a son who might be the heir of the ages.

Nevertheless, the little fellow throve. His father's care abundantly supplied the absence of a mother's love. A great lady, Madame de Montesquieu, was chosen to be his guide and friend. Her virtues were those of the old French nobility to which they belonged, and among these was loyalty. Whatever the reality of her emotions, her little charge was tenderly nurtured. He was surrounded by affectionate care. His infancy was unclouded by heedlessness. The noble woman remained with her charge long into childhood, until the Austrian emperor would no longer tolerate her service.

The baby's cradle deserves a word of notice. It was the gift of the Paris municipality. The heraldic bearings of the city are a medieval galleon on a stormy sea, and the legend is, "Fluctuat nec mergitur," "She tosses, but does not sink." Of such a vessel the goldsmiths of what was already the world's artistic capital wrought in vermeil, a sort of glorified silver gilt, an exquisite model, in ample dimensions and richest decoration. The design was by Prudhon, easily the greatest artist of his day.

The little king was not infrequently seen in public, with a style such as was befitting the liege of a devoted people. The chosen place was the terrace of the Feuillans in the gardens of the Tuilleries, overlooking the Seine. There on the broad walk he was drawn up and down in a toy wagon, to which were harnessed pairs of trained rams.

There is a beautiful and familiar portrait of the baby King of Rome. It was by Gerard, and was painted when the child was eighteen months old. By this time the emperor was far away on the plains of Russia, in the thick of the operations which open the period of Imperial decadence. The child is displayed in the exuberance of infancy. He is as plump and rosy as a cherub. Lying half-naked in his basket-crib, he throws his legs into the air with the mere delight of existence. His head is beautifully developed, his features having the suggestive charm of infancy, and in his chubby hands he clutches for glittering toys a sceptre and the globe of the world.

CAPTAIN COIGNET'S PLUME.

The exquisite picture was forwarded to Napoleon, and reached him when in camp on the banks of the Moskwa River. It was a ray of sunshine in an hour of gloom. He was beside himself with joy as he gazed on the portrait. It was hung in a conspicuous place at headquarters, and the father-emperor gave it the superlative honour of a formal salute from the old guard. It is believed to have formed a part of his personal baggage throughout the worst disasters and most terrible privations of that awful campaign.

Napoleon's affection for the boy ceased only with death. When he was a captive on St. Helena a thoughtless attendant handed him a nosegay on his birthday, August 15th, as coming from his boy. He put it aside with evident anguish. Wife and Son, he recalled, were far off in Vienna, both indifferent, as he believed, to one who, in his hopelessness, still loved them with passionate devotion.

There is another glimpse of the infant king which we have through the eyes of a Captain Coignet, a common grenadier who, during the weary years after his battles, wrote his reminiscences in a style of homely sincerity which is almost Homeric:

"Finding myself one day at the palace of Saint Cloud, Marshal Duroc, who was with me, made a signal for me to come up, and the dear child (the King of Rome) stretched out his little hands to catch my plume. I stoop, and lo! he begins to tear at the feathers. The marshal says to me: 'Let him go on.' The child was wild with delight, but the plume was ruined. I felt pretty foolish. The marshal says to me: 'Give it to him. I'll give you another.' The lady in waiting and the nurse split their sides with laughter.

"The marshal says to the lady: 'Give the prince to the sergeant, and let him carry him on his arm.' Ye gods! I stretched out my arms to receive the precious burden. Everybody crowds round me. 'Well,' says M. Duroc to me, 'is he heavy?' 'Yes, my general.' 'Come, take a walk with him; you're strong enough to carry him.'

"HE WILL NEVER REIGN IN FRANCE."

"I took a short walk on the terrace. The child tore away at my feathers, and paid no attention to me. His wraps fell low about my legs, and I was afraid of falling; but I was happy to carry such a child. I handed him back to the lady, who thanked me, and the marshal says to me: 'Come to me in an hour.'

"I duly appeared before the marshal, who gives me an order on the manufacturer for a beautiful plume. 'You have only that single one,' says he. 'Yes, general.' 'I'll give you an order for two.' 'Thank you, general.' 'There, my fine fellow, you shall have one for Sundays.'

"Returning to my superior officers, they say to me: 'But where's your plume?' 'The King of Rome took it from me.' 'A very good joke, indeed, you tell.' 'See this order of Marshal Duroc. Instead of one plume, I am to have two, and I have carried the King of Rome on my arm for nearly a quarter of an hour. He tore my plume to pieces.' 'Happy mortal!' they said to me. 'Such memories are indelible.' But I never saw the child again. 'Tis the fault of politics which harvested him in before his time."

This is the famous scene which Monsieur

Rostand "adapted" and incorporated into his play.

It was not until his return from the ghastly spectacle on the Beresina that Napoleon saw his boy again. This was in 1813, and the little king seemed to his sire a child of the greatest promise. There is an unverified legend that the emperor seemed most preoccupied about the future of his son, and said in a moment of gloom to one of his chamberlains: "He will never reign in France."

Be this as it may, and it seems probable, the great soldier, about to try once more the fortunes of war as a last desperate resort, arranged for the King of Rome the only scenes in which the child ever appeared as the darling of an affectionate household. It was known that from the steppes of Russia Napoleon had written to consult and advise about the baby's health, especially the important matter of his teething. His devotion to his young wife was common talk. During his short stay the three were seen together on all kinds of occasions, and the beautiful domestic life of the little family warmed the hearts of every plain French man or woman. And it was these plain people, virtuous, simple-minded and loyal, who made the public opinion of France.

After his defeat at Leipsic, in 1813, Napoleon's case was still more desperate, and again the child may be said to have clutched at the skirts of history. On the eve of his departure for the French campaign, which was the giant's last desperate heaving under overmastering power, the emperor assembled a portion of the National Guard in the grand ballroom of the Tuilleries.

"MY WIFE AND MY CHILD!"

It was an act of great courage, for the citizen soldiers were now disaffected, as their fellow burghers were. The towers of Imperial grandeur were toppling, and they knew it. They did not mean to perish in the wreck. The temper of affairs and men alike was cold as they stood in unsympathetic expectancy opposite the portal of honour.

As the great doors swung open, there appeared the "little corporal" in simple uniform, accompanied only by the empress and the little king in the arms of Madame Montesquieu. For a few moments all was still. Then, in unimpassioned words, Napoleon announced that he was about to put himself at the head of his troops, hoping by their valour and the help of God to drive the enemy from French soil.

There was no response, not even a glimmer of sympathy, from the auditors. Then, grasping the empress's left hand in his own right, and the little right fist of his toddling son with the other hand, he advanced and committed them to the safe-keeping of the National Guard. Still there was chilly silence. Finally, summoning all his great dramatic power to his aid, he said, with a suppressed sob, "My wife and my child!" The spark caught, the men cheered, the officers rushed forward in tears and protested their fidelity.

There is but one more scene in the tragic drama of the child's infancy. When the allies approached Paris, his uncles, Joseph and Jerome, hastily prepared for the flight of the Imperial family. The baggage-wagons were packed, in one of them a vast treasure of precious stones and money, and the travelling carriages drew up to the doors of the Tuilleries. The empress and her little suite took their places in sorrowful resignation; but as the king and his governess were about to enter the coach reserved for them, the little fellow broke into bitter crying, and would not be comforted.

He could not leave his home and his glory thus, infant as he was; and it was only by gentle force that he could be put in his place and soothed as the procession of vehicles rolled swiftly away. Away to Rambouillet, to Blois, and thence across the whole broad extent of France to the Rhine, which was crossed at Huningen, whence shortly, under Austrian guards, Marie Louise and the babe Napoleon, with Madame de Montesquieu, were escorted to Vienna, and at last installed in the splendid suburban palace of Schonbrunn.

Mother and child were still styled empress and king, but not for long. By decree of the International Congress which sat at Vienna, the former was made Duchess of Parma, Guastalla and Piacenza, with the reversion of those Italian principalities to her son by Napoleon. But even this last grace was soon withdrawn from the child. This was in 1817; the following year he was designated by the purely Austrian title, Duke of Reichstadt, the designation which even the French finally accepted, and by which he was known until he died.

THE "PHANTOM" AT SCHONBRUNN.

From the day of his arrival at Schonbrunn, Napoleon II., as the Bonapartists fondly called him yet, becomes almost a phantom. In no other sense of the word can he be regarded as a historic figure, except in the one already given. From his birth to his early childhood he was a menace to the whole ancient dynastic system of Europe, especially to that of France. If he were to perpetuate the Napoleonic system it would be merely a question of time when the seven fat kine of all the other monarchies should be eaten up.

After the fall of his father, he could be, and was, nothing more than a feeble pretender, a tool in Metternich's hands, or rather a scarecrow, wherewith to disturb the self-complacency of the Bourbons. The Bonaparte or Imperialistic party of France had him in view for their own ends, but they could scarcely lay eyes on their idol to see what manner of man he was outwardly, much less could they communicate with him to test his ability and his courage.

While Napoleon was upon Elba, the boy was so closely guarded at Schonbrunn that neither letter nor emissary could penetrate to the child's presence. At Fontainebleau the emperor's abdication was made in favour of his son, but the allies laughed the idea to scorn. The exile reclaimed his boy in vain. Even during the Hundred Days, with the renewed allegiance of France and a formidable military power at his back, Napoleon renewed his demands for his heir without effect.

Forced to abdicate a second time after Waterloo, Napoleon I. designated the purple for Napoleon II.; but this, of course, was a procedure even more farcical than the earlier one; and when the spirit of the mighty warrior and statesman was finally quelled on St. Helena, there was no further effort possible on the father's part. A lock of the baby's hair and a bust of the child in marble were sent to him, and these he guarded as his most sacred treasures.

Of the education which Marie Louise's son received at Schonbrunn we can form a fair idea by piecing into a patchwork the shreds of information given by various casual witnesses. His grandsire, Francis, Emperor of Austria, loved him in his own stolid, formal way. The tutor provided to replace Madame de Montesquieu, who was driven away lamenting, was a well-bred, conscientious man, the Count of Diedrichstein. For his charge he provided able teachers, some of them famous in their day—men such as Collin and Obenaus. But while the instruction was good, the plan of education was really Mephistophelian in its ingenuity, devised to extinguish every spark of ambition, to quench every flame of energy.

The young duke learned the classics, ancient history and a sort of Bowdlerized modern history, which was, in substance, a bald chronology, without narrative or commentary. Philosophy and the science of politics he enjoyed in a feeble way, for in them greater liberty was granted to his instructors. His studies in the art of fortification were thorough, for his mind had a military turn, and the lecturer, Major Weiss, was master of his subject. It is doubtful whether in all this he was permitted to think a single thought.

Silence broods over his religious education, but there is no reason to suppose that it was other than that which his mother, and, in fact, every member of the Austrian royal family, had received. The processes which turned her into a weak voluptuary seemed to distant onlookers utterly to have emasculated him. What may have been the bigotry and superstition which were compounded into the air he breathed we can only divine. All we know certainly is that he once declared his belief in the statement of his father that Christianity was the essential basis of society. If so, the boy reasoned, it must be true.

THE LAST YEARS OF "THE EAGLET."

We have a volume of reminiscences from one who was a sort of officer companion, but it reveals only what is indifferent. No true-hearted Frenchman was ever allowed to penetrate the seclusion of a Bonaparte prince whose right the faithful Bonapartists felt it was to know his friends.

One Frenchman born there was, indeed, who saw and knew him—Marmont, Duke of Ragusa, the double traitor; traitor to his emperor after the magnificent campaign of 1814, traitor to his country in the July Revolution of 1830; traitor so double-dyed that his title became a common byword; to "raguse" was synonymous with to "desert" for years and years. It was really a black insult that such a man should have been chosen, after his flight from Paris, to tell the son the tale of his father's matchless strategy and recount the matchless panorama of the Napoleonic wars as seen by the distorted vision of a brilliant scoundrel.

But so it was, and even as Marmont narrated or read in long detail, they roused the dull spirit of the boy for a time into pride and enthusiasm. Such at least is the story. In reality, we have no evidence of any kind that will bear careful sifting. This it is which gives such abundant room for the poet's imagination to roam at will. The romancers and the playwrights select these years as their time; naturally, there is no one to contradict their inventions.

Of rumours we have no end. There is no foundation for any of them. At the time, many believed, and said, that in spite of every precaution, the boy was not only secretly familiar with his father's career, but had elaborated plans to secure what he regarded as his own legitimate succession. That all these schemes came to naught they attributed to Metternich's watchfulness. There is also a story that when the young duke was sixteen years old, and aware with a kind of awakening manhood of how close were the restrictions about him, he gave way to despair.

It was thought that a letter from France had somehow reached him; a call from the Bonaparte party, perhaps, for some sign from their prince, that in his boyish way he had taken the matter into consideration, that the problem was too hard. The report was that, striking his brow in a tragic way, he exclaimed:

"But what do they want to make of me? Do they think I have my father's head"

Further rumour has it that from his twentieth year onward, amid the ravages of his disease, he cried incessantly: "Let me die in peace!"

On July 22, 1832, the "boy Ascanius," as a French poet styled him, died. His disease was consumption of the throat, and his sufferings were terrible. But his faith as an orthodox Christian remained unshaken. He mastered his agony as best he could, received the Eucharist, and passed away with the name of his mother on his lips. His remains lie in the crypt of the Capuchin Church of Vienna, not far from those of his famous grandmother, Maria Theresa.

The signature of the young duke as he wrote it was Francesco duc di Reichstadt. The name of Napoleon is denied him even on the sarcophagus which contains his ashes, though that of his sire and his title, King of Rome, are both there.

"Greet the Vendome column for me," it is

said that he wrote in sarcastic pleasantry to Marmont's adjutant, Zame, after that officer left his exiled master and went to live in Paris. The anecdote is pathetic. The scion of Napoleon's stock certainly adored his father. He also loved his mother and his grandsire with the human instinct. But such dwarfed and stunted pride as he had was centred in France.

The passionate, romantic, and sentimental folk of that great land have taken him to their heart. In a microcosmic way he is to them a literary figure, much as Charlemagne is. In that quality he becomes of greater importance as the years go by. The " Son of the Man," the " Son of Hector " are titles once in vogue which have now passed. But to-day the French, under the inspiration of their favourite playwright, recall the famous verses of Victor Hugo in his " Songs of the Dusk," where he sings that of the two great victors over France " each for his fangs divided the prey, England took the eagle and Austria the eaglet." The eaglet, l'aiglon, is the phrase in vogue to-day. Poor eaglet ! he must have been one, for have we not the authority of Horace that " the fierce eagles do not beget the unwarlike doves ?"

MAKING PHONOGRAPH MUSIC.

There are all sorts of queer callings in the world, and not the least interesting is that of the men who make phonograph music. It is thus described by a writer:—

A semi-circle of a dozen coatless, collarless, perspiring men faced the flaring brass mouth of the phonograph receiver.

An athletic individual stepped in front of the receiver and spoke. Where had you heard that voice before?—that bellow so resonant, so Jove-like, so supremely confident of itself and of that of which it spoke!—that masterful, compelling voice that you had heard echoing over moonlit lakes and summer hotel piazzas and through darkened auditoriums when the moving pictures were about to begin! And here was the reality, a workman in his shirt-sleeves with damp hair falling into his eyes. This was what he announced in that awe-compelling roar:

" 'The Forget-Me-Not Waltz,' played by the UmphyUmp Symphony Or chestra!"

Twenty-five hundred concert records are turned out every day in this factory and twenty-five thousand of the small household records. Besides the bandroom there are a dozen or more other rooms where piano and organ soloists may project "The Lost Chord" and "The Moonlight Sonata" into wax cylinders for the edification of those who live far from the madding crowd. A moment after the band had played through the "Forget-Me-Not Waltz" they adjourned to the testingroom, where the cylinder was promptly run through a phonograph, while the hard-worked orchestra listened in front, each one every now and then heaving a deep sigh or cursing behind his beard when the machine failed to bring out his star part.

"It sounds slow to me," said the record tester. "You'd better play it all over again."

The band mopped its brow, and returned to the bandroom.

Out in the big testingroom pandemonium reigned. In this room the various duplicate records of the twenty-five thousand household and twenty-five hundred concert records are tried before they are sent out into the world to be inflicted on a delighted public. Down the whole length of this room sit girls with heads bent toward the funnel of the concert phonographs, each one of which is screeching out a different tune. Each one of the records is loud enough to drown out the noise of the others from the particular girl who is listening there, but to one who passes down the line and gets the mingled effect of the various piano solos, monologues, orchestra selections, and banjo pieces, the room is pandemonium.

THE ANCIENT AND PRESENT STATE OF THE COUNTY AND CITY OF CORK.

By CHARLES SMITH, M.D.

Æquum est enim meminisse & me, qui discerem hominem esse, et vos, qui Judicetis ut fi probabilia dicentur nihil ultra requiratis. Cicero Univers

In Two Volumes.

VOL I.

The Second Edition, with Additions.

BOOK II.

Containing the Topographical Description of this County, including the City of Cork.

Chapter I.—Continued.

The episcopal house was rebuilt by Bishop Crow, in which he died; and the late Dr. George Berkley, when Bishop of this see, successfully transplanted the polite arts, which before flourished only in a warmer climate, to this northern climate. Painting and music are no longer strangers to Ireland, nor confined to Italy. In the episcopal palace of Cloyne, the eye was entertained with a great variety of good paintings, as well as the ear with concerts of excellent music. There were here some pieces of the best masters: as a Magdalen of Sir Peter Paul Reubens, some heads by Van Dyke and Kneller, besides several good paintings performed in the house; an example so happy that it has diffused itself into the adjacent gentlemen's houses; and there is at present a pleasing emulation raised in this country, to vie with each other in these kind of performances. The great usefulness of design in the manufacture of stuffs, silks, diapers, damasks, tapestry, embroidery, earthenware, sculpture, architecture, cabinet work, and an infinite number of other arts, is sufficiently evident.

In Cloyne is a small castle, said to have been erected by the Fitz-Geralds. To the N.W. of the town is a reputed holy well, dedicated to St. Coleman, who was the ancient patron of Imokilly; it is visited by the Irish on the 24th of November, being the patron day of that saint. Near the church stands a round tower, 92 feet high and 10 feet diameter. The door is about 13 feet from the ground, which faces the west entrance of the church, as all the doors of these kind of buildings do, that I have yet seen. Concerning the true use of these towers, I shall say something in another place. The soil in this neighbourhood is a loamy, grey earth, mixed with sand, affording plenty of wheat, small barley, and potatoes. The chief manure is sea-sand and burnt clay, of which hereafter.

A small mile west of Cloyne is Castlemary, the house and plantations of Robert Longfield, Esq., situate at no great distance from the eastern side of Cork harbour, of which there is an agreeable prospect from the house and gardens, together with a considerable part of the great island. This place was called, formerly, Cot's rock, from the remains of a Druid's altar, still to be seen in an orchard near the house. This altar consists of a large stone, 15 feet long and 8 in breadth, of a rough, irregular figure, approaching to an oval form. The highest part of it is 9 feet from the ground; it is supported by three other great stones (23). Adjoining to it is a large, round flag-stone or table, which was probably used for cutting up the victims for the sacrifice (24). This altar seems to have been situated in a very retired place, the old Druids performing most of their religious ceremonies in woods; from whence Lucan, lib. 1.

——— Remora alta remotis
In colitis lucis.
Ye haunt the lonely converts of the groves.

And Pliny observes (25) they chose groves of oak to retire into; nor do they (says he) exercise any of their sacred functions without that tree.

On this gentleman's estate there is a white chalky substance, which does not ferment with acids; it is tinged with a yellow ochre, and lies 7 or 8 feet from the surface; it plasters exceeding well, and, I believe, if tempered with proper liquids, would make a good material for stucco. It burns red, and will not make pipes; mixed with linseed oil, it serves indifferently well for a white paint. It has been laid on land, as I was informed, but no corn came up where it was used. I take it to be the clay called, by Mr. Hill, argilla alba tenax, N. 5 p. 19 of his history of fossils. On this land is a fine grey marble, which may be raised in large blocks; being near water carriage, it is easily transported, and was wrought in Cork, by one Mr. Sinclair, who had in his work-yard various kinds of fine marble, the produce of this country.

(23) This altar was named, in Irish, carig croith, i.e., the sun's rock, and corrupted to carig cot. The ancient Irish worshipped the sun, and swore by its head, i.e., by cean groith, St Patrick, in his confession, which he wrote by way of epistle to the Irish, says, "The splendour of the sun shall not always reign, nor have continuance for ever, but all who adore him shall unhappily fall into eternal punishment." And I make no doubt, but these stones, from the similtude of the name, was an ancient Druid's altar, dedicated to the sun.

(24) Cæsar *, who has furnished a long discourse on the customs of the Druids (who were the ancient priests of the heathen times), observes, that they made use of human sacrifices upon their altars. Sometimes they made images of a monstrous size, whose limbs and parts being composed of osiers, they filled with living men, which, setting on fire, they burned the enclosed victims to death †. Strabo says, the Gauls (from whom, I doubt not, all the ancient and religious customs of these islands had their origin), never sacrificed without the presence of their Druids; and adds, that they used human sacrifices.

* Cæs Com. lib. 6. † Lib 4.

(25) Lib. 16. cap. 44.

Rostillian, two miles W. of Cloyne, formerly belonged to Robert Fitz-Stephen, to whom half of the kingdom of Cork was granted. But the castle, which some years ago stood here, was built by the Fitz-Geralds. It is at present the seat of the Right Hon. the Earl of Inchiquin, whose ancestor, Murrough, Lord President of Munster, took this castle, ann. 1645, which was the same year retaken by the Earl of Castlehaven. It is a noble seat, pleasantly situated on an arm of the sea at the S.E. side of the harbour of Cork, where the tide gently flows to the garden wall, and boats come up to the stairs. The present house was built on the ruins of the ancient castle. On a terrace, near the water, are some small pieces of cannon mounted, which, upon firing, render several echoes through the various hills that surround the harbour. In the house are several good family pictures; on the staircase are two large pair of those fossil horns, known by the name of moose horns. From this pleasing situation, one may see,

——————The crouded ports,
Where rising masts an endless prospect yield,
With labour burn, and echo to the shouts
Of hurry'd sailor, as he hearty waves
His last adieu, and loosening every sheet,
Resigns the spreading vessel to the wind.
Thompson, p. 121.

This prospect is terminated to the W. by the islands of Spike and Hawlbowlin, and to the N. by the great island. White-well, near Rostillian, is frequented on certain days of the year by the superstitious Irish devotees; it is a fine limpid, soft water, flowing from a lime-stone rock, and not far from it is a pleasant light chalibeat spaw. Adjacent to the house is a noble park. To the S.W., near the harbour's mouth, is Cork-beg, now the seat of Robert Uniack Fitz-Gerald, Esq., built in a peninsula, to which is a narrow isthmus from the mainland; near it are the ruins of an old castle, said to have belonged to one of the Condons, for whom there is an old tomb in the decayed church of Cork-beg. Here is most excellent lime-stone, esteemed the best in the barony. On the E. side of the harbour are the remains of a large, regular fortification, with platforms below for gun-batteries, level with the water. This work was erected towards the end of queen Elizabeth's reign, but suffered to go to ruin. Near this is a lesser fortification, which, in the reign of the late King James, was made use of to annoy the landing of the Earl of Marlborough; this battery was soon taken by the seamen. The headlands, which form the entrance of this noble harbour, are little more than half an English mile asunder, so that vessels are no sooner in than they are land-locked on all sides in a large, deep, smooth, and still basin. The shore being very high on all sides, affords a noble shelter from almost every wind; but has this disadvantage, that there is scarce room to erect batteries to fortify the harbour. More to the S., on the sea-side, is Trabolgan, an old seat of the Roches, a branch of the Fermoy family.

Poor-head is the most southern cape of this barony, from whence one has a prospect of Kinsale head to the W., and a considerable tract of the sea coast to the east; this cape is bold and lofty, and well answers to Shakespeare's description, that,

——It is a cliff, whose high and bending head
Looks fearfully on the confined deep.

On the western side of Cork harbour, within the mouth, is an high, round land, called Corribiny-point; on its summit is one of the ancient tumuli, raised to the memory of some Irish or Danish hero of former ages. These sepulchres were often placed on the sea-coasts; witness that of Æneas for his nurse Caieta, mentioned by the Mantuan bard.

Tu quoque littoribus nostris, Æneia nutrix,
Æternam moriens samam; Caieta, dedisti;
At pius exequiis Æneas rite solutis,
Aggere composito tumuli, postquam alta quierunt
Æquora, tendit iter velis.
Æneid. VII.

And thou, O matron of immortal fame!
Here dying, to the shore hast left thy name:
Caieta still the place is call'd from thee,
The nurse of great Æneas' infancy.
Now, when the prince her fun'ral rites had paid,
And o'er her bones a lofty mound had made,
He plough'd the Tyrrhene seas with sails displayed
Dryden.

And they were often, in after ages, used as land marks for mariners to steer by.

Not far from the strand of Ballycroneen, there stands on a hill a pillar stone, 8 feet high, the end of which seems to be buried deep in the earth. More to the W. is a place called Liscally, is a strong moated Danish entrenchment, with one of the highest mounds I have seen, being 12 feet high, and seems to have been less impaired by time than any other in this part of the country. Ballykendrick castle is a good, strong building, between this and Cloyne, and formerly belonged to the Fitz-Geralds.

A little to the N.E. of Middletown is a range of rocky hills, on which grow several aromatic plants; and the fields hereabouts are covered with great quantities of comfrey.

Middletown, so called from its situation, midway between Cork and Youghal, being 10 miles from each, is a borough and market town, well built and pleasantly situated, a river running at each end of it, and the tide flowing up to it, being in the N.E. angle of Cork harbour. It consists of one long street, ranging from the north to the south bridges. Here is a good market, both of flesh and fish. The Irish still call it Castre-ni-chora, i.e., the castle of the ford; and from thence an ancient abbey was called Chore abbey; in Irish, Monastre-ni-Chora, and in the records called Monasterium de Choro Sancti Benedicti Beat. Mar. Virg. It was a daughter of the abbey of Neany, or Magy, in the county of Limerick, the monks being furnished out of that house for occupying this abbey. It was founded about the year 1180, according to Ware, by the Fitz-Geralds; and, according to Jungelin, by the Barrys. Gerald Fitz-Richard, Bishop of Cloyne, appropriated the vicarages of Clonmult, Danigin, Donilbam, and Bally-spellany to this house, ann. 1476. It was granted, upon the dissolution, to Sir John Fitz-Edmond Fitz-Gerald, of Cloyne, who forfeited it in the rebellion of 1641. This town was erected into a corporation by the interest of Sir St. John Brodrick, who rebuilt the church and steeple and the greatest part of the town. It is governed by a sovereign, two bailiffs, and twelve burgesses, who return two members to Parliament. The late King James also incorporated the place; by whose charter, in 1687, Sir James Cotter, Knt., was appointed sovereign, and Philip Roche and Dominick White, merchants, bailiffs thereof; but this charter soon went into disuse. Here is a fair market-house, built with hewn stone, and adorned with a clock; and besides an English school for the education of poor children in the Protestant religion, there is a public free-school, which is an elegant building, composed of one main structure and two returns, over which was lately an handsome dome. This school was founded, ann. 1709, by the Lady Elizabeth Villiers; she was eledest daughter of Sir Edward Villiers, Father of Edward, Earl of Jersey, and maid of honour to Queen Mary when Princess of Orange; and in 1695 was married to the Lord George Hamilton, third son of William, Duke of Hamilton, afterwards created Earl of Orkney (26). She expended a considerable sum of money in building this house, and settled a good estate on this endowment, for the support of a master, two ushers assistants, a writing-master, and £50 a year for scholars entered from this school into the University of Dublin (27).

(To be Continued.)

CHRYSANTHEMUMS.

By R. Heaton.

We spring from the earth at the Winter's birth
When the ground is bare
And we reign supreme, like a passing dream
Till the world is fair.

We brave the gale, and the rain and hail,
Afraid of none!
While our petals blaze like the golden rays
Of the setting sun.

From bronze we shade, and to pink we fade
As the rosy morn;
And our lips are kissed by the dewy mist
Of the early dawn.

To mauve we turn and to crimson burn—
Then fiercer glow.
But our souls delight in our petals white
As the driven snow.

(26) Collin's Peerage of England vol. 3. p. 533.

(27) She reserved to herself a power to make rules for the governing this school. The governors first appointed by the charter were the earls of Orkney and Inchiquin, Thomas Brodrick, Alan Brodrick, and Samuel Maynard, esqrs. lieut Peter Bettesworth, and their respective heirs, together with the bishop of Cork, and the sovereign of Middletown. They nominate the master, who has £100 a year salary; an usher, who has £20 per annum and a writing-master, £20 per annum. There is £10 per annum for repairs of the house, with the sum of £50 to be distributed in exhibitions to scholars (of this house) in Dublin College, as the majority of the governors shall direct, provided no more than £15 be paid to one person. And if such scholars are not to be had, this money is to go to such charitable uses as the governors shall direct. The estate bequeathed to this school, are the lands of Ballynehortig, Ballynereguine, Ballynemeuile, Ballynodagha, 64 acres of Tullaghloane, lying in the barony of Kinalea and Kerricurihy, and all the lands leased by the late king James to sir Richard Mead, at the rent of £100 per annum. The lands of Ballysabeg and Kilgoban, in the barony of Carbery, containing 331 acres, and all other lands in the said barony, formerly set to William North, esq, by the late king James, at £100 per annum.

LITERARY NOTES.

Londoners can look on Burke's house in Gerrard street, Soho. There is a peculiarly interesting passage in John Thomas Smith's "Book for a Rainy Day," in which that amiable gossiper tells how he used to watch the great statesman and orator at work at night from a window over the way.

✧ ✧ ✧

Mr. Watts-Dunton, the "Athenæum" states, has written a new critical study of "The Merchant of Venice" for the great edition of Shakespeare to be published by the Cambridge University Press, Massachusetts. He deals with the sources of the plot and the place it occupies, not only in the Shakespearian drama, but also in the drama of the Elizabethan epoch.

✧ ✧ ✧

C.K.S., of the "Sphere," presents us this week with a photograph of the house at 12 Arran quay, Dublin, in which Edmund Burke was born. It is a modest, three-storeyed house, whose ground-floor is occupied by a tailor. Yet when Edmund Burke's father was a flourishing attorney it was in a fashionable quarter of the city. Burke, we are reminded, was born here on January 12, 1729.

✧ ✧ ✧

"I should like to die on my yacht," Mr. G. A. Henty said early in this year, and such was his fate. Mr. Henty, we learn from our newborn contemporary, had been cruising in the Channel during the summer, and was just laying up his yacht in a backwater of Weymouth Harbour when he had the paralytic stroke that brought his sunny and well-spent life to a close. We believe that the number of Mr. Henty's books exceeds ninety. His was a father in fiction to hundreds of thousands of boys, and it seems certain that his place will not be immediately filled.

✧ ✧ ✧

One hundred and fifty years ago last Thursday week Chatterton, "the marvellous Boy, the sleepless Soul that perished in his pride," was born in Bristol. Of the author of the "Rowley" poems Johnson said: "It is wonderful how the whelp has written such things," and the wonder was shared by many besides the Doctor. Hazlitt, it is true, was less enthusiastic in his praise of Chatterton's achievement, and when someone declared the youth might have blossomed into a Keats, the essayist retorted: "Yes; but on the other hand, he might have blossomed into a Poet Laureate!"

✧ ✧ ✧

After all, America is not the home of the very latest in journalism. Austria must be accorded that honour. A Viennese Bank director, assisted by two friends, who are lawyers, has decided to publish a newspaper for nervous persons. Catastrophes like that at Martinique, big bank defalcations, and other events calculated to upset the nerves will be treated in a soothing way, so as not to disturb sensitive people. The director has invited some newspaper men of prominence in Austria and Germany to send descriptions of a number of recent stirring occurrences treated in this way, and he offers large prizes for the best work.

✧ ✧ ✧

The "Athenæum" says—It is said that Mr. Alexander Macdonald, of Ohio, is negotiating for the purchase of Abbotsford in order to present the place to the Scottish people.

respondent of a Glasgow journal reminds us that if the subscription of £10,000 projected after Scott's death to discharge all encumbrances and entail the house had been successful such a possibility could not have been suggested. Lockhart states that a part of the sum raised was embezzled by the young per "appointed to the post of secretary, who carried it with him to America, where he soon after died." Mr. Macdonald, the prospective purchaser of Abbotsford, is an American Scot, president of the Standard Oil Company of Kentucky.

✧ ✧ ✧

Luneville is to do honour to itself and to the memory of Emile Erkmann by erecting a monument to him whose name stands first in the familiar compound Erkmann-Chatrian. The story of the partnership which resulted in such books as "Waterloo" and "The Conscript" is ancient history, as is also the record of the lamentable rupture which separated the pair after a close comradeship of many years. The universal popularity of the work of Erkmann-Chatrian is easily accounted for; it rests on actuality, simplicity, and a domestic sentiment which never degenerates into the pathetic. But they were successful, too, in the difficult medium of the supernatural; they suggested "mystery and wonder" with astonishing effect, an effect largely heightened by the introduction of natural and convincing human contrasts.

✧ ✧ ✧

Mr. Austin Dobson, I observe (remarks the literary critic of the "St. James's Gazette"), differing therein from Edward Fitzgerald, is not in favour of abridgments of Richardson's novels. Why abridge at all? he asks in his new book on Richardson in Messrs. Macmillan's English Men of Letters Series. Why not leave the "large, still, Book," as Tennyson called it, intonis capillis—with locks unshorn of the shearer? Any retrenchment must be mutilation. And why mutilate to please the modern reader, who, when all is said and done, will probably prefer a modern performance. "Clarissa" is of its author and of its time; it can never be of us and of our time.

✧ ✧ ✧

Richardson and Fielding, like the Dickens and Thackeray, of a later day, were the victims of a rivalry forced on them by their admirers. It is the happy fortune of Mr. Austin Dobson (and the happier fortune of all wise modern readers) that it has fallen to him to dispense equal justice to the pair in the calm of posterity. The true duty of the public, as Goethe said to Schiller about their own case, is to be thankful that it has two such fellows. Mr. Dobson's Fielding has long waited for Mr. Dobson's Richardson to bear him company, and we all welcome him now that he is come. Mr. Dobson, as biographer, does not blink, be it said, Richardson's rather feminine jealousies of his great rival.

✧ ✧ ✧

The New York "Critic" devotes an article to Mademoiselle Chammoynat, aged ten, who, under the pseudonym of Carmen d'Assilva, has almost convinced Paris that she is great. When she was nine this precocious little person presented herself as a candidate for the Society of Dramatic Authors of France. M. Sardou examined some of her plays, heard her declaim one of them, cried, "Gentlemen, this is certainly the youngest dramatic author in the world"—and Carmen d'Assilva was admitted to the Society. Carmen d'Assilva also acts and writes stories; she has, we are told, a satirical gift, and she does not exclude divorce from her range of subjects. We are not surprised (says the "Academy") to hear that when Mlle. d'Assilva speaks her "eyes light up with an unusually penetrating expression." It would be astonishing if they did not. We cannot say that at present Mlle. d'Assilva's future career is a matter of much interest to us.

✧ ✧ ✧

Mr. J. Churton Collins on Tennyson is always interesting. He has just edited, with critical introductions, commentaries, and notes, together with the various readings, "'In Memoriam,' 'The Princess' and 'Maud'" (Methuen). As is well known, Tennyson was "fastidiously scrupulous" about the minutiæ of expression and language which he used, and was continually making changes. On this point Mr. Collins says:—

The editions of Tennyson's various works are so numerous that no Bibliography records them, and no single library, public or private, so far at least as I can discover, contains them. These editions teem with variants, and so restlessly—one might almost say morbidly—indefatigable was Tennyson in correction, that till an edition, even though there be no indication on the title page that it is anything more than a reprint, is inspected, there is no security that the text has not been altered. Backwords and forwards, forwards and backwards fluctuate the incessantly shifting variants.

This makes the task of any conscientious editor of the poet a very serious undertaking, and Mr. Collins confesses that he has devoted more labour and expenditure of time to the present volume than he cares to remember.

✧ ✧ ✧

While admitting that "The Princess" is "sown thick with beauties," Mr. Collins holds that the impression which the poem makes as a whole is, apart from its serious purpose, "unsatisfactory and disappointing." He further says:—

As a contribution to social philosophy, "The Princess" has done its work. The problem which was unsolved when the poem appeared has long found its solution. As a didactic work it stands in the same relation to social philosophy as "In Memoriam" stands to religious thought. What lives and is influential in both belongs to the currency which Time will, in all likelihood, discount still further, but probably not much further.

"The Princess," as a whole, is indeed, he says, not likely to maintain either "its attraction or its interest."

✧ ✧ ✧

As regards "Maud"—the third poem dealt with in the volume—Mr. Collins, after pointing out some of the "chief infirmities of the poem from a dramatic point of view," goes on to say:—

But when we regard the poem not as a dramatic study and in relation to dramatic art, but in its relation to pure lyric, it is not difficult to account for the fascination which it had for its author and which it must have for all to whom lyric and music appeal. As a masterpiece of rhythm it must rank among the wonders of art. Never, perhaps, have emotion and passion in their various phases found in words a medium of expression so subtly responsive, so wholly adequate.

The exquisite treatment of nature is another charm of the poem noticed. It is curious to recall that the poem was not received with much favour by the poet's contemporaries, "Blackwood" rising from its perusal "dispirited and sorrowful"

✧ ✧ ✧

In the "North American Review" there appears a short, terse article by Leoncavallo, entitled, "How I wrote 'Pagliacci.'" The writer gives a sketch of his life which reads almost like a summary of a Balzac novel, with the love interest left out. After taking his diploma as doctor of letters at Bologna, Leoncavallo, at the age of twenty, went to Egypt, where he became a concert pianist. He was appointed private musician to Mahmoud Hamdy, but his patron having taken the side of Arabi Pasha, Leoncavallo, after Tel-el-Kebir, escaped in the disguise of an Arab to Ismailia. Finally he reached Paris, where, utterly destitute, he became an accompanist to cafe concert performers, and later pawned his furniture to raise money to reach Milan. There M. Ricordi gave him a commission to write the music for the libretto of the "Medicis." The music was written, but after three years the opera was still unproduced. Then, says the writer of this piece of autobiography,

After the success of "Cavalleria" by Mascagni, I lost all patience, and I shut myself up in sheer desperation, resolved to make a last struggle. In five months I wrote the words and the music of "Pagliacci," which was acquired by M. Sonzogno, after he had only read the libretto, and which Manuel admired so much that he insisted on producing it at Milan on May 17th, 1892. The success of this piece, as is known, was as striking as that of "Cavalleria," and its fame spread like wildfire.

So that professional emulation did in a few months what years of hardship had failed to produce. It is an old and always interesting story.

SCIENTIFIC TOPICS.

Some interesting tests have been carried out with a novel and interesting type of high-speed electric locomotive designed by Mr. Walter Reichel, the chief engineer to Messrs. Siemens and Halske, the eminent firm of electrical engineers, which, in conjunction with the Allgemeine Elektricitats-Gesellschaft, has been carrying out the elaborate experiments in connection with high-speed electric traction. The body of this new locomotive is carried on two four-wheeled bogies, and to each axle a motor is fitted, making four motors in all. The special feature of this engine is that the motors receive the current direct from the supply trolly at 10,000 volts potential, and the fitting of a motor to each axle dispenses with transformers and enables the weight to be considerably reduced, with a corresponding reduction of energy consumption.

✧ ✧ ✧

The reason for building a locomotive instead of another automobile car for these high-speed trials was simply the lower cost. Owing to the imperfections of the permanent way, the maximum speed attained in the trials was only 105 kilometers (66 miles) an hour, but they afforded ample proof of the feasibility of using motors taking current at very much higher pressures than have hitherto been attempted. Pressures extending up to 11,000 volts were used in the trials without giving rise to difficulties of any kind. According to the engineer, the substitution of these motors in the Siemens and Halske high-speed car employed in last year's trials for the 1,150-volt motors and transformers then used would reduce the weight from 96 to 76 metric tons. This car attained a speed of 160 kilometres in the former trials, and if, when carrying 50 passengers, it were coupled to a 42-ton car without motor equipment, the total weight, taking 7 tons as the weight of 100 passengers, would amount to 125 tons, or 1.25 ton per passenger.

✧ ✧ ✧

Professor Baccelli's method for the treatment of tetanus has been used during the last few years in a considerable number of cases, especially in Italy. This method consists essentially in administering a series of hypodermic injections of phenol in dilute solution. The phenol is rapidly absorbed, and its action is that of fixing the state of the malady; in the favourable cases no new symptoms appear after the first injections of phenol have been regularly made. As to the symptoms which already exist, these are not at once attenuated, but at the end of several days they diminish gradually. Dr. Croffi has been engaged in formulating the results of the cases treated by the Baccelli method, of which 80 have already been published, and shows that it has given more satisfactory results than the other methods.

✧ ✧ ✧

The figures show a mortality of 12 to 13 per cent., while in the case of anti-tetanic serum as used by Holesti. Haberlinge, and others the mortality reaches 30 per cent., which is a considerable difference. Even considering the grave cases, the method is still superior, and shows a mortality of 30 per cent., but this is not excessive, as in the treatment of grave cases of diphtheria by the anti-diphtheritic serum the mortality reaches 47 per cent. The advantages of the Baccelli method are best seen when it is applied from the commencement of the disease; in this case, if the patients arrive at the seventh or eighth day, the issue is almost sure to be favourable. It is a striking fact that while the method is successful in the case of the human system, it seems to have no marked effect upon the animals which have been used in the experiments, but this may be explained by the fact that in the latter case the tetanus shows itself in the acute form which causes a rapid mortality, and here the remedy is of no avail.

✧ ✧ ✧

An extended series of observations upon the hygiene of acetylene lighting has been recently carried out by M. Masi, a prominent Italian scientist, who made a number of experiments at Rome. The number of appliances for producing acetylene is considerable, but in many cases their imperfections and defective construction have rendered the use of acetylene less extensive than might be, seeing that it has many advantages and is a more healthful method of lighting. According to the experiments of Grehant, Weyl and Frank, the gas has a harmful influence only upon the air when it reaches the proportion of 46 per cent., and it is only at 79 per cent. that it causes death. When absorbed by the blood in quantities not exceeding 10 per cent. it seems to combine easily with the albuminoid elements. The burner, to give a good light, should work under a pressure equal to 3 or 4 inches of water at least, and be mixed, before burning, with oxygen or an inert gas which permits it to come in contact with a great quantity of air.

✧ ✧ ✧

Messrs. Lewes and Hempel have shown that its lighting power is 15 or 20 times that of illuminating gas used in an ordinary burner, and from 3 to 5 times when in a Welsbach burner. M. Masi carried out some experiments in a chamber fitted up in the cellars of the Institute of Hygiene at Rome, under the most unfavourable conditions as to ventilation, so as to bring out as much as possible the effect on the respiratory organs. He observed also the intensity and steadiness of the flame, the quality of light produced, the heat and the change brought about in the surrounding air. Repeated experiments on these different points showed that acetylene gave superior results. The gas in burning consumes less oxygen and gives off less carbonic acid gas and water vapour than is the case with other methods of lighting, excluding, of course, the electric light. In a confined locality it produces less heat than either gas, candles, or petroleum, and it does not give rise to ammonia, nitrous acid, or carbon monoxide. He considers that it does not present any more danger from explosion than gas or petroleum, and that it is cheaper for a given candle power than all other methods of lighting.

✧ ✧ ✧

The following story is given in "Cassier's Magazine":—"I remember," said a bridge contractor some time ago, while on the subject of workmen's dare-deviltries, "when working at the big bridge across the Niagara, when the two cantilever arms had approached within fifty feet of each other, a keen rivalry as to who should be the first to cross sprang up among the men. A long plank connected the two arms, leaving about two and a half feet of support at each end. Strict orders were issued that no one should attempt to cross the plank upon penalty of instant dismissal. At the noon hour I suddenly heard a great shout from the men, who were all starting up. Raising my eyes I saw a man step on the end of that plank, stop a minute, and look down into the whirlpool below. I knew he was going to cross, and I shouted to him, but he was too high up to hear. Deliberately he walked out until he reached the middle of the plank. It sagged far down with his weight until I could see light between the two short supporting ends and the cantilevers on which they rested. He saw the end in front of him do this, hesitated, and looked back to see how the other end was. I thought he was going to turn. He stopped, grasped both edges of the plank with his hands, and, throwing his feet up, stood on his head, kicking his legs in the air, cracking his heels together, and yelling to the terrified onlookers. This he did for about a minute—it seemed to me like forty. Then he let his feet drop down, stood up, waved his hat, and trotted along the plank to the other side, slid down one of the braces hand over hand, and regained the ground. We discharged him, of course, but what did he care? He got all the glory, his fellows envied him, and he could command work anywhere."

✧ ✧ ✧

John Smeaton, in 1752, was the first man who ever styled himself a civil engineer, and in the one hundred and fifty years (says the "Mining and Scientific Press") the business has ever been growing more and more of an exact profession, till now it is of equal importance with any of the learned professions, and demands as high a quality of intellect. The business of mining engineering has not as yet reached so high a standard, but is destined to surpass it. The old rule of thumb is being rapidly discarded, and the advance is noticeably greater in the last twenty years than in the preceding one hundred and thirty years. Like the miner, who has had to grope his way painfully upward, the mining engineer has had to be creative in his functions, and cause a demand before furnishing the correlative supply. The scope of the mining engineer is becoming a tremendous one in variety and requirements. He is becoming the master and interpreter of protean forces, and in his functions combines the powers of many branches of practical science.

✧ ✧ ✧

Indeed, all the modern arts and sciences, so far as they apply to mechanics, come under the domain of the mining engineer, for nearly everything to make up modern mechanical progress comes in somewhere as a part of the great mining and metallurgical industry, whether it be the whole railroad system or ore transportation, the pneumatic method in convertors, the best efforts of the electrician, the most complex and far-reaching process of the chemist, the keenest effort of the geologist, the profoundest demonstrations of the mathematician. Thus the educational equipment of the mining engineer is becoming necessarily as much more complex than it was as are the appliances at his command in contrast with the simple devices of a generation ago. And if the demands for capacity and knowledge seem great, it is to be borne in mind that the rewards are proportional and commensurate. No youthful profession on earth pays higher salaries to-day than are paid mining engineers, and the world of great mining enterprises stands ready to pay a man the value he himself sets upon his services, provided he can demonstrate his worth as a matter of economy—economy in this regard meaning the judicious expenditure of money.

✧ ✧ ✧

The United States Commissioner of Patents Allen said in a recent interview that the number of patents granted during the present year would be greater than that of any previous year by far. This great increase in the number of patents granted always takes place at such times as the present, when prosperity prevails, and the receipts of this Department of the Government are said accurately to reflect the condition of the money market. The previous experience of the present Commissioner as a patent lawyer made him thoroughly familiar with the former shortcomings of the Department, so that during his administration he has been enabled to remedy a great many of them. The system of the bureau has been bettered to such an extent that litigated cases, if appealed immediately from one examiner to another, may be tried and passed up by the three tribunals of the Department within sixty days from the time of the institution of the original contest. "This," says the Commissioner, "is faster than the attorneys generally wish." Out of all the applications last year, one in fifteen hundred was carried to the District Court of Appraisers.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

DUBLIN, FRIDAY, JULY 27.

There are at this time thirteen houses in this city where the working people of the different branches assemble at different stated periods in order to support the pernicious cause af combination. It would perhaps be a very judicious and prudent measure to withdraw the license for selling malt and spirituous liquors from every publican against whom it could be proved that he or she harboured such illegal meetings, or, as they are termed, Committees, in his or her place. These men, who are chose by the aggregate body of the working people of each branch, are for the most part artful and designing fellows, who levy contributions on the rest, and live in a state of idleness and dissipation themselves. Thus those Committee-men find it to their advantage to promote a spirit of combination, and to enjoy the plunder of the deluded persons whom they dupe of their money, and lead into acts highly injurious to themselves and the trading interests of the kingdom.

A gentleman who some time since paid a visit and spent a few days in Slane, speaks in high terms of the exertions of Colonel Cuningham, to furnish the lowest orders of the people with employment. . Through the whole of last winter, from 350 to 400 men, were employed in useful improvements, and at present are engaged in erecting a most superb building for the residence of that gentleman. If persons of landed property were thus solicitous for the welfare of the poor wretches that languish out life upon their estates, we should not behold such scenes of beggary, want, and misery, as are every where to be met with in the country parts of Ireland.

So great is the concourse of passengers travelling into the country by means of the Grand Canal, that three boats which set off from hence every morning are continually crowded with the genteelest company. A circumstance that does not a little contribute to make this mode of travelling most eligible is, the regulation whereby second rate of steerage passengers are now disposed of in a separate boat, and the cabin where they sat is in the first boats converted into a drawing-room for the ladies.

CORK, JULY 26, 1787.

On Monday night twelve villains armed with muskets, pistols, and hangers, and their faces blackened, broke into the house of one Murphy, an industrious dairyman, at Curragh, in the South Liberties, and robbed the family of every shilling they were possessed of; they cut and abused them in a horrid manner, and carried off every article of wearing apparel they could find, and about eighteen pounds in cash. By the activity and spirited exertions of Mr. Bennett and Mr. Johnson, four of the fellows have been secured, and the shirt and waistcoat of one of the poor people, covered with blood, was on an old offender of the name of Leary. As the rest of this infernal gang are known, and a strict pursuit after them, we hope their further depredations are put a stop to. Leary had nearly two pounds of small balls in his pocket newly cast. In justice to the people of the country, we must acknowledge, they were a set of ruffians from the city, who made this excursion, and would have repeated their attacks but for this timely discovery. The public are much indebted to the gentlemen who secured them.

Cove, July 25th, 1787.

On Saturday night, the 21st inst., about twelve o'clock at night, a party of Whiteboys came on the lands of Ballyleary, near Cove, in the Great Island, to the house of Michael Fitzgerald, an honest, industrious man, who was assisted in viewing the tithes of the Rev. Dr. Asterbury, Rector of the parish. They surrounded the house, and after having fired several shots, and thrown stones, by which they broke thirty-nine panes of glass, and did other considerable damage, they broke in the outer door, and that of the room in which he generally slept. Not finding him within (for having got notice that they intended to pay him a visit, he had taken care to be absent), they forced his wife to get up and swear she knew where he was. On her swearing she did not, some of them insisted on dragging her out and ill-using her, but were prevented by one of the party, who seemed to have some authority over them. They then went away to another part of the island, to the house of Garret Condon, whose windows they broke because he had presumed to deviate from their rules with respect to the entertainment and dues of their priest. In their progress they rode several people's horses. The next morning the following notice was found affixed to the churchyard gate, and to that of one of the chapels here:—"This is to give notice to the public, that no person or persons throughout this diocese is to buy their tithes during these three years to come. Wherefore I think it incumbent on every parishioner that has the least idea of any of them to give intelligence of it to the gentlemen redressers, who shall well reward the intelligencer, and according to their usual custom will punish the offender. In like manner to give information of such as do swerve from this rule in their own districts, and such a strict enquiry to be made in every parish for such people that should deviate from the general custom, and a diligent search to be made for them.

"Signed by Captain Right, 21st July, 1787."

This morning Sir Emanuel Moore, Bart., with an attention to peace and order, which does him much credit, took down a sign which one Fowlue, a publican, had put here (the subject the same with that of the sign which the Mayor of Cork ordered to be taken down in Castle street), as tending to keep alive the spirit of outrage, and to inflame the minds of the lower class of the people.

DUBLIN, TUESDAY, JULY 31.

The unbounded acts of charity and benevolence which have ever distinguished the character of Lord Chief Justice Earlsfort, merit no less the admiration of mankind than they claim the applause of every well-wisher to this country. Scarce a day passes that is not happily marked by some new instance of his extraordinary beneficence. But his late enlargement of the prisoners from the City Marshalsea of men and women from their loathsome bondage to above forty in number, does such honour to the humanity of his Lordship's feelings as must ever endear this nobleman to society. When we view this valuable personage, at the hazard of his life, visiting the dreary cells of distemper and distress, extricating the wretched at his own private expense, restoring them to the community, perhaps the preservation of their almost famished and expiring families; when we find him thus literally verifying the text, "Sick and in prison and ye visited me," we feel ourselves not only called upon in a manner the most powerful, to thank that Providence that has placed him among us, but are prompted at the instance of such merit to say, "Hear this ye great ones, and imitate it if you can," or in the mandate of Our Saviour, if it will better suit ye, "Go, and do thou likewise."

The buildings and store-houses to contain goods from the luggers and other vessels opposite the harbour of the Grand Canal are to be considerably enlarged. The additional works have been already begun, and will be executed with all possible despatch, as there is not near room sufficient to hold with proper conveniency the goods that are almost daily landed. The vessels plying on the navigation have more than been doubled since the junction with the Barrow has been effected, and it is supposed by persons, well acquainted with every circumstance of what is going forward with respect to the affairs of the canal, that the vessels will be increased one third more before the expiration of the succeeding year. This is certainly a very flattering and pleasing consideration!

A new cut for a canal has, we hear, been laid before the Company of Undertakers for completing a line to the Shannon. This is called the Northern line, and is extended towards Trim, Mullingar, etc.

At Longford Assizes, Thady Feeny was capitally convicted for robbing William Coates, Esq., and ordered to be hanged on Saturday, the 25th of August.

DUBLIN, WEDNESDAY, AUGUST 1.

The scheme spoken of some years ago of establishing a Royal Navy in Ireland, for the protection of our trade in time of war, is again mentioned with much confidence, as a measure that will be proposed to our Parliament from the British Cabinet next spring, on the following conditions:—

"That if Ireland will covenant to defray the expense of building, manning, and maintaining two ships of the line and six frigates, for the general service of the empire, his Most Gracious Majesty will give his Royal word that these ships, or an equal number and force, shall be always stationed in the Irish ports or cruising in the Irish seas, unless in some case of great emergency.

"That dock-yards shall be built in Ireland for the building and repairs of these ships.

"That a fourth division of the Royal Navy shall be established in honour of Ireland, under the name of the Green Division.

"That for the purpose of making a saving of the national expenditure, the better to defray the expense of the Irish Navy, a reduction of three thousand of the land army of Ireland will be consented to."

Tuesday se'nnight a lady and two gentlemen were walking in Mabbot street during the thunder storm, a flash of lightning struck her on the cheek, which was scorched as if seared with a hot iron the breadth of an inch. The violence of the shock was so great as to disengage her from one of the gentlemen whose arm she held. She is now recovered from strong hysteric fits occasioned by the fright, but will probably bear the mark of this accident as long as she lives.

DUBLIN, THURSDAY, AUGUST 2.

We have the best information that in many parts of the county of Cork notices have been posted up at the Chapels, threatening with death or the most barbarous treatment all persons who shall comply with the Compensation Act, or take their tithes at higher rates than those appointed last year by Captain Right; and that twenty-one horses were cropped in one night at one place, for offences committed by the owners of them against the laws of Captain Right.

Yesterday morning, about one o'clock, his Majesty's mail of letters, coming from Drogheda to the General Post Office, was stopped near Gormanstown by a single robber, who opened the mail, and took thereout the Lisburn, Rathfriland, and Dunleer post-bags, with which he got clear off.

BALDUNGAN CASTLE.

AN OLD COUNTY DUBLIN KEEP.

From GROSE'S "ANTIQUITIES OF IRELAND," 1791.

This interesting old County Dublin keep, the picture of which is given above, is situate 5 miles south-east of Balbriggan. A splendid and capacious castle (says the "Parliamentary Gazetteer of Ireland," 1844), composed entirely of flint, stood on a bold eminence in the parish, and commanded an extensive and thrilling view over both sea and land. The ruins not long ago existed, and were both extensive and strongly picturesque. At the west end rose two square towers, to dignify and protect the grand entrance; and at the east end stood two towers of less noble aspect—one of them apparently of later erection than the great body of the pile, and carrying up the staircase or path of ascent to the battlements. The castle was probably founded, late in the 13th century, by the Barnewall family; it soon passed, by marriage, to the family of Bermingham; and in the 18th century it was again affected by matrimonial alliance, and transferred to the Earls of Lowth. Previous to 1635 it was the residence of Nicholas Fitzwilliam, son of Sir Thomas Fitzwilliam, of Merzon; in the Carolist war it was held and defended for the Parliamentarians by Colonel Thomas Fitzwilliam, the son of Nicholas; and before the close of the war it was surrendered to the Royalists, dismantled, and partially blown up with gunpowder. Archdall, Grose, and a crowd of scribblers in their train, assert that Oliver Cromwell battered the castle from his ships; while others—aware, perhaps, that the position and altitude of the fortalice with relation to the shore rendered such an exploit nearly, if not quite, impossible—say, more cautiously, that he attempted to batter it from a neighbouring hill. A tradition, recorded by Archdall, that the castle was

"at different times a friary and nunnery," is altogether unworthy of credit, but may have originated in the fact that an establishment of Knights Templars in the immediate vicinity was dedicated to the Virgin Mary. Mr. Brewer, describing the ruins of that establishment as they existed in 1824, says, "At a very short distance [from the castle] are the remains of a church, extending to the length of more than 80 feet. The steeple is a curious structure, and was apparently designed to answer the purpose of defence as well as that of religious appropriation. This building is a tower of ten angles, and is of such excellent workmanship and materials, that it has little to apprehend from the hand of time, if left free from the more destructive operations of man. The walls of the church and of that part of the tower which is near the body of the fabric, have perforations about four or five inches square; probably intended for openings to musketry during the civil wars of the 17th century. In the vicinity of the church are the ruins of buildings which may have been used by the religious fraternity noticed in the tradition preserved in the Monasticon Hibernicum."

The picture given on page 1 is from a drawing made by Francis Grose in 1791.

SACRILEGE.

BY THOMAS S. COLLIER.

Beside the wall, and near the massive gate
Of the great temple in Jerusalem,
The legionary, Probus, stood elate,
His eager clasp circling a royal gem.

It was an offering made by some dead king
Unto the great Jehovah, when the sword
Amid his foes had mown a ghastly ring,
Helped by the dreaded angel of the Lord.

There, on his rival's crest among the slain,
Thro' the red harvest it had clearly shone,
Lighting the grimness of the sanguine plain
With splendours that had glorified a throne.

Above the altar of God's sacred place,
A watchful star, it lit the passing years,
With radiance falling on each suppliant's face,
Gleaming alike in love's and sorrow's tears.

Till swept the war-tide thro' the sunlit vales
Leading from Jordan and the western sea,
And the fierce hosts of Titus filled the gales
With jubilant shouts and songs of victory.

Then came the day when over all the walls
The Romans surged, and Death laughed loud and high,
And there was wailing in the palace halls,
And sounds of lamentations in the sky.

Torn from its place, it lay within the hand
Of Probus, whose keen sword had rent a way
With rapid blows, amid the priestly band,
Whose piteous prayers moaned through that dreadful day.

And there, beside the wall, he stopped to gaze
Upon the fortune that would give his life
The home and rest that come with bounteous days,
And bring reward for toil and warlike strife.

There was no cloud in all heaven's lustrous blue,
Yet suddenly a red flash cleft the air,
And the dark shadow held a deeper hue—
A dead man, with an empty hand lay there.

HUGH HAMILTON.

AN OLD DUBLIN ARISTOCRATIC PORTRAIT PAINTER.

By M.

II.

As yet we have been regarding Mr. Hamilton as an eminent artist in the practice of crayon painting. We shall now direct our attention to his works in oil, as an historical, historic-portrait and portrait painter; but as he made the latter his professional walk, we shall commence with that.

The difficulties which oil painting presents are numerous, and are not easily overcome. It is one of the languages of art, and by far the most copious. Its capabilities, as a means of expressing the effects of nature, are as various as those effects themselves; but that very illimitedness in the means demands a corresponding range of knowledge and of power in him who is to use it; nor is it the least of the difficulties which beset even the experienced oil painter, that in the management of the material there is often a diversion of those powers, and of that original intention, which should be undividedly given to the object to be represented. These obstacles, however, appear to have given but little interruption to Mr. Hamilton's practise, whose first pictures in oil had all that depth and clearness, which in ordinary cases would have presupposed previous and longer practice; but this facile appropriation of the agency of a new material may, to a certain extent, be accounted for by his long study of the best works of the ancient masters; his powers as a draftsman, and, above all, his great intimacy with nature, which removed many of the impediments so very formidable to the tyro. Be it as it might, he soon triumphed over all difficulties.

His works were characterised by great strength of effect, particularly the head—perfect truth of outline—and an intelligent facility of pencil. The expression of the features most agreeable, and although making no idle display of his knowledge, he was anatomically correct in every part of the face. The hands, too, were admirably drawn—and the drapery, both as regarded the general form, and the characteristic foldings, given with a just feeling of the forms beneath. Yet as a whole, many of his pictures wanted that breadth of effect which so delights us in the works of Reynolds and Rembrandt.

His male portraits were painted with great vigour, particularly when the sitter was advanced in years, and when, as in the case of judges, or high official personages, he had the judicial or legislative robes, which so pictorially compose, and yield such ample fold for the pencil. We have a perfect recollection of his fine portraits of Lord Kilwarden—Judge Downes, afterwards Lord Downes—Sir Michael Smith, Master of the Rolls—Judge Finucane—Judge Chamberlain—Chief Baron Yelverton—Earl of Moira, afterwards Marquis of Hastings—The Right Hon. David La Touche—Professor Higgins, etc. These were amongst the number of his best works, and with the exception of the last picture, which was a three-quarter, the rest were mostly large whole lengths.

In female portraits he was eminently successful; there was a graceful, lady-like air about them, which at once caught and rivetted attention—there was no mistaking the thorough gentlewoman coming from the pencil of Hamilton; and when, as in the evening of life, benevolence and quiet are ascendant in the character, he pourtrayed it with a felicitous skill, which showd him to be a close and an amiable observer of the purest qualities of mind. This is very delightfully expressed in the whole length portrait of Mrs. La Touche, the lady of the Right Hon. David La Touche, now in the collection of Lucan House.

His portraits of children were very beautiful, and exceedingly simple; he expressed with much truth, that chubby, tottering motion which indicates the immaturity of infantine strength, rather than any positive weakness; and then in the more advanced periods of youth, he gave that plalful archness and grace so captivating in the child. He seemed to have loved that practise of his art.

But it was in that class of portraits denominated historic that the high qualities of his mind were evidenced. You saw clearly in these that the bent of his genius was for historical painting; for although few painters gave with more fidelity the minuter details of the face when painting the individual, yet, when expressing, through the general agency of the human countenance, the deep and powerful workings of passion and of soul, he rose with his subject—and like the long-chained eagle when freed, showed that the wing had not lost its impulse for flight, nor its power of sustentation.

Amongst the number of pictures of this class which he painted, there are three to which we particularly desire to draw attention. The first is—Lady Frances Beresford, as the widowed mourner at the shrine of her husband; the second, Colonel St. George, at the tomb of his wife; and the third, Arthur O'Connor, at that time a prominent declaimer on popular rights, in the act of addressing his countrymen.

The two first pictures pourtray the workings of the heart when weighed down by its own afflictions; the last exhibits its aspirations after liberty, when it believes itself deprived of those rights, to a constitutional participation of which it would assert its claims. The first sues for our softer sympathies; the last appeals to our sterner sense of justice. The one is a domestic pulsation; the other a national one. By the first we are always made better; by the latter, we are sometimes made worse. In the one, we trace the hand which chasteneth by its corrections; in the other, we hear but that voice which too often drowns all admonitions of truth in the thunders of complaint.

The picture of Lady Frances, as an abstract expression of grief, was conducted with consummate skill. There was a solemn, but not gloomy, air pervading it, which at once linked the feelings of the spectator with those of the mourning sufferer. Her ladyship was seated close to the sarcophagus, containing the remains of him whom she so tenderly loved; she leaned over her lost treasure, and seemed in direct mental communication with another world. The countenance was one of calm, religious resignation; yet the

tremor of the lip, and the slight elevation of the pointed brow, gave notice of a passing struggle within, and showed that "busy meddling memory, in barbarous succession, had mustered up the sott endearments of each happier hour." It was a work of deep and of wholesome feeling, enlisting all our finer sympathies, and demonstrating most instructively the eloquence of genuine art.

Colonel St. George stood in front of his wife's tomb. His dress that of cavalry officer; his helmet lay on the ground. He seemed fatigued, as though he had come a long distance to make this visit of the heart. He leaned his arm on the cornice of the tomb, with head upraised, and eye steadily looking upwards—the very picture of sadness; of that grief, although it rejects not comfort, yet canot be consoled. He looks like the last man, the grief-worn survivor, the solitary sojourner through the desert of life. The tone of the picture, cold almost to chilliness; the monument, simple and unadorned; the accompaniments, a few cypress trees. The place has a lonely air; and, when we think of the worth that lies there interred, we cannot estimate the picture otherwise than as a most impressive, admonitory lesson, upon the instability of all earthly enjoyments. No mind but that of the highest order could produce such a work. It stamps Hamilton the painter of the heart.

The last picture is that of O'Connor addressing a public assembly. He stands firmly erect, with arm raised and stretched forth, as though he had just uttered a sentence of stimulating excitement. His countenance seems the seat of sanguine expectations. His robe is the Roman toga, and the whole air of the man is that of Brutus. Hamilton judiciously attempts no present action for the orator, but has expressed that momentary pause which presupposes a bygone one. It is historical, in the best acceptance of the term, and, although said to have been a most faithful likeness of the individual, yet it possessed all those generalised forms which represent a class; it was a most able production.

It might easily be supposed that a painter, whose every hour was profitably occupied with his sitters, could find little time, or, perhaps, feel less disposition, to turn to the more laborious, and certainly the less requited, walk of historic painting; but the truth is, where the talent or the power is, it will exercise itself at all risks; genius is neither mercenary nor sluggish.

With Hamilton this was strikingly so, for even at a very advanced period of life, when ease and rest might fairly have been sought, every moment that he could snatch from his daily occupations were given to studies in the higher path of his art, or to his other favourite pursuit, chemistry. But it is the characteristic feature of cultivated original powers, like the soul which they inhabit, to triumph over the clay that surrounds them; shining out at no period with a purer or a steadier lustre than in the calm evening of life. This triumph of mind over matter, beautifully denotes its origin and it destination.

The last historic works of his which we recollect, were two pictures of the loves of Cupid and Psyche, and a colossal head of Medusa; but as of the first two pictures only one was finished, we shall confine ourselves to that one, and to the Medusa.

Our classical readers need not be reminded that, although there was but one Psyche, there was supposed to have been pluralities of Cupids. Psyche, as the Greek name denotes, was emblematic of the soul. Anteros was the name given to Cupid, the child of Mars and Venus; his darts were leaden, and his excitement sensual. Eros was Cupid, the son of Jupiter and Venus; his darts were golden, and his inspirations were affection and pure love; from which it will appear that, in their mythology, the heathens arrived at as pure and as high a morality as man, unassisted by Divine revelation, could reach. In the history of this omnipotent little deity, it is strongly marked; for the various and conflicting characters impressed upon him by the poets have each a direct reference to his imputed parentage; which, when properly understood, means the different orders and classes of feeling in which our desires originate. It is, therefore, quite clear that the moral aim of mythology should be kept steadily in view by the painter who would truly illustrate its pages; and that something more is, therefore, required at his hands, when he would paint Cupid, than a mere chubby hero with wings. Hamilton felt this strongly, and expressed it with a chastened simplicity.

The picture was a very large half-length; the height of the figures about four feet. He held Psyche in his hand, and was timidly drawing her over to himself, whilst, with head depressed, and cheek innocently suffused, she gently advances. Her wings were those of the butterfly, and seemed as if floating amidst the zephyrs. The grace and beauty of her figure fully justified the entranced admiration with which her young lover regarded her! It was unsullied purity, when first it saw the object of its heart. It was love, pure and undefiled! Angels need not have turned away from beholding it! This is art, worthy of all honour, and the nation which cherisheth it not can, at best, be rated but as semi-barbarous.

The Boy Cupid was represented as about twelve years old; his figure had all that grace and beauty which the as yet imperfect development of form could possess. Psyche, too, was the perfection of young female beauty. They were both of that beau ideal with which human feeling can sincerely sympathise, yet feel the almost immeasurable distance at which it views the object. Intimacy, but not familiarity, can ever be the result: is is the very deference of true admiration!

The "Head of Medusa" was very fine. It had that air of Grecian beauty, which is conventionally the centre around which admiration revolves. The model was a young and beautiful girl, who just then appeared in Dublin. She is still to be seen in the streets, but so sad, so changed, so unhappy, as scarcely to be recognised as the same being! appearing as if the tenour of her life had drawn down upon her displeasure more heavy, and disgrace more annihilating, than that which Minerva visited upon the Medusa of old, and differing, too, in this respect, that she is herself the cold, the petrified creature of sorrow, and of shame!

In the management of colossal forms there are difficulties which don't at first appear to the common observer. It is supposed that you have only to enlarge the object, by enlarging the parts, and that thereby you obtain the true colossal proportions, with all their imposing effects. It is very true that such is the mode of proceeding; but it is equally true that that very enlargement is often destructive of the end to be obtained, as, for instance, in the case of female beauty, which by common consent does not occupy very extended space. Such enlargement, therefore, puts beauty to flight; for we can have no idea of a woman being, in the ordinary acceptation of the term, handsome, or beautiful, who is ten feet high. She exceeds the limits of all our admiration.

It is very true that some of the finest impressions of form and of beauty have come down to us from the great masters through the agency of colossal works. But it must not be forgotten that those very works were placed in domes and high places, and reached us but as the ordinary size of life; their increased dimensions were, therefore, only given in order that they should make the intended impression at a given distance. But when, as in the present case, the picture is to be viewed closely, perhaps in a small apartment, then the difficulties of which we speak are great indeed, particularly when beauty is to be at all expressed.

If sublimity or grandeur were to be impressed, and terror, or even fear, were to be excited, then colossal size would have its proper effect. This may be familiarly understood by the child, or very often by the adult also, who in most instances on first looking into a magnifying mirror, instantly recoils from the enlarged image, as if terror-struck by its giant-like dimensions.

Hamilton conveyed this difficulty most skilfully, by a just understanding of his subject. He did not make beauty the ascendant quality of his picture, although he judiciously retained enough of its attractions to interest the beholder. The expression which he so aptly imparted to it was that of surprise, or wonderment, as if she could not account for the cold looks with which she then, for the first time, saw herself regarded; seeming wholly unconscious of the transformation of those ringlets, which until then had led admiration captive. It was as yet an immatured discovery, which although not quite painful, was tremulously astounding. It was expressed with a discriminating judgment, worthy of any school or age, and proved our honoured and lamented countryman to be, in the enlarged comprehensive sense, a painter.

Any person at all acquainted with the practice of art, will at once feel the almost insurmountable obstacles that oppose themselves to the portrait painter, when he turns to the high, epic walk of mythology. In the paths of historical painting, regarding the term as exclusively applied to ancient and modern history, he has fewer difficulties to conquer, because the personages through whose agencies he tells his story are human beings, acted upon by human passions, and differing from the people who surround him only in those national traits of character, or that influence of climate, or of costume, which travel, or the study of books, will have enabled him thoroughly to comprehend; add to this, that his professional practice, and long intimacy with the human countenance, may almost be said to have fitted him for the attempt. But when he would ascend the heaven of invention, and pourtray the deities that inhabit it, he quits the terra firma of all his previous experience, and must then move amongst those elements, and breathe that ethereal air, too fine for ordinary humanity. All that is earthly in thought, and in conception, must be refined; the imagination must be regenerated, and, in the professional sense, he must put on the new man. This is no easy task, and can never be effectually accomplished if there exist not vast talent, purity of mind, and of invention, which the chill of ordinary pursuit is so likely to benumb.

But Hamilton was a man of great inventive faculty, elevated in all his views of art, and strictly original in all his compositions.

He scorned to appropriate the thoughts of others, an act which, morally, no man can justify, and which, professionally, no man should commit. He dealt fair by both the public and the profession, and the result was that he honourably secured to himself their deference and respect.

It the retirement of private life he was most estimable—ardent, and steady in his attachments. His manners were those of the perfect gentleman; full of information, entertaining an affectionate regard for the talented members of his profession, and always willing to make the most unreserved communication of his knowledge and practice to all who sought it. He lived to an advanced period of life, nearly eighty years. He died at his house in Lower Mount street, about the year 1809, honoured for his talents, and beloved for his personal worth.

(THE END.)

THE SUN AND MOON.

MOON.

O Sun! ere thou closest thy glorious career
(And brilliant thy wide course has been),
Delay, and recount to my listening ear,
The things which on earth thou hast seen.

SUN

I saw, as my daily course I ran,
The various labours of busy man;
Each project vain, each emprise high,
Lay open to my searching eye.
I entered the peasant's lowly door,
I shone on the student's narrow floor;
I gleamed on the sculptor's statue pale,
And on the proud warrior's coat of mail.
I shed my rays in the house of prayer—
On the kneeling crowds assembled there;
In gilded hall and tapestried room,
And cheered the dark, cold dungeon's gloom.
With joy in happy eyes I shone,
And peace bestowed where joy was gone.
In tears, upon the face of care—
In pearls that decked the maiden's hair;
I shone on all things, sad and fair!
But few the eyes that turned to heaven,
In gratitude for blessings given;
As on the horizon's edge I hung,
No hymn or parting lay was sung.

MOON.

Thou risest in glory; my journey is o'er—
Alternate our gifts we bestow:
Yet seldom behold we the hearts that adore,
The source whence all benefits flow.

SUN

Thou comest, O Moon! with thy soft beaming light,
To shine where my presence has been;
Then, tell me, I pray thee, thou fair Queen of Night,
What thou in thy travels hast seen!

MOON.

I shone on many a pillowed head,
On greensward rude and downy bed;
I watched the infant's downy sleep,
Compos'd to rest, so ca'm and deep.
The murderer, in his fearful dream,
Woke startling at my transient gleam!
I saw, across the midnight skies,
Red flames from burning cities rise—
And where, 'mid foaming billows roar,
The vessel sank to rise no more.
I heard the drowning sailor's cry
For succour—when no help was nigh.
On mountain path, and forest glade,
The lurking robber's ambuscade,
I shone; and on thee peaceful grave—
Where sleep the noble and the brave—
To each and all my light I gave;
And as my feebler silver ray
Vanished before the dawn of day,
In vain I lent my willing ear,
One word of gratitude to hear.

SUN

We still travel onward, our task to fulfil,
Till time shall be reckoned no more,
When all shall acknowledge the sovereign will,
That made them to love and adore.

OUR WEEKLY STORY

THE LOST FRIEND.

BY ALEX. SUTHERLAND.

Oh, known the earliest, and esteemed the most,
Dear to heart where nought was left so dear!
Though to my hopeless days for ever lost,
In dreams deny me not to see thee here!
And morn in secret shall renew the fear
Of consciousness awaking to her woes,
And Fancy hover o'er thy bloodless bier,
Till my frail frame return to whence it rose,
And mourn'd and mourner lie united in repose.
—Byron.

In my younger days I visited the capital of Ireland, in company with a friend, whom I shall call Walsingham—a youth of rare talents, superior acquirements, and generous disposition. We had been associates from infancy; our parents had been on terms of friendship prior to our birth; the same preceptors had superintended our education; and, to crown all, a similarity of pursuit, in riper years, served to bind us more closely together. For my own part, I cherished for Walsingham a regard nothing short of fraternal—a regard which I calculated on his one day claiming as his right, in consequence of an alliance eagerly sought by him, and anticipated with pleasure by all concerned; and, on his side, it seemed the study of his life to prove the sincerity and strength of his affection for me and mine.

Our motives for visiting Ireland, at the period I allude to, were simply those of curiosity. Both had a passion for roaming, in order to gratify which, we had penetrated into the most retired fastnesses of the Scottish Highlands—had visited the barren rocks of Zetland and Orkney—and latterly, nearly the whole of the Hebrides, from of which (Islay) we ran across in a fishing skiff to the Irish shore, and after a due examination of the wonders of the Giant's Causeway, proceeded on to Dublin, with the intention of concluding our protracted excursion by a survey of the metropolis.

Though we carried introductions to several families in Dublin, and, in consequence, had many pressing invitations to throw ourselves on private hospitality, we uniformly declined civilities that threatened to curtail our liberty. We had entered on the excursion not for the purpose of hunting out good cheer and frivolous amusement, but to store our minds with information regarding the districts we traversed; therefore, any engagements militating against this pursuit was studiously avoided. True it is, that now and then an evening was devoted to a lively party; but the day was invariably spent in rambling round, or in examining objects worthy of observation within the metropolis. It was the indulgence of these prying, inquisitive habits, which eventually occasioned the misfortune I lament, and for ever interrupted my search after knowledge.

One day, on our way to the outskirts of the city, it chanced that we had to pass near to a church, remarkable, as we had been previously told, for the extensive vaults beneath it—most of which were appropriated for the reception of some of the noblest families in the realm. The doors of the edifice stood open inviting us to enter; and a short consultation with the sexton, whom we encountered in the porch, induced us to accept the invitation. The entrance into the vaults was at that moment unobstructed, the remains of a person of note were to be laid within them on the ensuing day; and, for a trifling gratuity, the porter of these dreary mansions agreed to let us behold them. Constitutionally gloomy, and looking upon everything in nature with the eye of a moralist and a poet, Walsingham expressed delight at his acquiescence; but the triumph of the grave was to me always a painful sight, and I followed unwillingly, and with a faltering step.

As we had been led to expect, we found the vaults capacious, and, from their branching off into various compartments, more like the catacombs of a big city, than places reserved for the interment of a few families. A cold damp air, sluggish and perceptibly unwholesome, saluted us on our entrance; and, sunk far below the surface of the ground, and remote from noisy streets, no sound disturbed the silence of the vaults, save ever and anon, when the crash of rotten boards and fleshless bones told that the noxious rat had taken up its abode among the coffins of the dead. The rat was a creature I instinctively detested; and the proximity of one of the species was, of itself sufficient to unnerve me; it was no ways surprising, therefore, that the pattering of multitudes, on the hollow-sounding shells that doubtless contained the food they subsisted on, created in my mind disgust towards the place. Walsingham, from feeling none of the intuitive horror, betrayed an evident unwillingness to give way to my entreaties, and depart with his curiosity ungratified; but, accustomed to acquiesce in whatever I proposed, he at length complied, and we speedily regained the world above, and the pure air of heaven. At parting, my companion put some brief question to the sexton; but exulting in my liberation, I gave no heed to a circumstance so trivial.

During the excursion which this occurrence had induced us for a short time to procrastinate, Walsingham frequently reverted to the subject of the vault—sometimes jesting with me on my pusillanimity in regard to vermin, at others moralising over what he had recently beheld, in that sublime and eloquent strain for which he was remarkable. An accident I met with in the course of the day, however, changed the current of his thoughts. In scrambling over the rocks on the northern shore of the bay—to which we had directed our steps—I chanced to make an unlucky stumble, and so severely sprained my ankle, as to oblige us to conclude our ramble by a ride back to Dublin in a post chaise.

On the ensuing day, my twisted joint continued to give me acute pain, and the swelling had increased so prodigiously as to preclude all attempts at exertion. A surgeon was scalled in to examine it; and inferring from his declaration that I had to calculate on close confinement for a week, I entreated Walsingham not to let me draw too largely on his good nature, but to seek out of doors what amusement he listed, and only become my companion when he had nothing more interesting to occupy his time. After some demur, a sudden thought seemed to strike him, and in a cursory way he mentioned that he would take a short saunter in the course of the morning. In a few minutes he got up, took his hat, and with an assurance that two hours would be the duration of his absence, departed. It was the last time I looked upon him in life.

The two hours passed—dinner was served—long left untasted, and at length eaten with reluctance, and petulant reflections on his want of punctuality. Tea and supper in like manner appeared and vanished without his partaking of either; and finally, towards midnight, I saw myself under the necessity of retiring, without having an opportunity of exchanging the friendly expressions with which we usually separated. Then, and not till then, did my heart misgive me, and a qualm

of sickening apprehension pervade my frame. In his solitary wanderings my friend might have encountered a foot-pad; that he would endeavour to repel force by force I could securely calculate on; and of the consequences of such temerity I trembled to think. Be this as it might, however, I had no means of relieving my anxiety. My injured limb fettered me to my apartment, and no other procedure was left but to seek my pillow, supported by the hope that some juvenile frolic had tempted him to overstep the boundaries of prudence, and that on the morrow he would meet me at breakfast, ashamed of his indiscretion, but unharmed by either bludgeon or knife. Such was the mode of reasoning by which I sought to cheat an anxious mind, but it failed to secure me sound repose. All night I tossed restlessly on my bed—now racking my brain with vague suppositions, or listening breathless for the peal that was to announce his arrival; anon enduring, in broken sleep, all the misery inflicted by extravagant and terrific dreams—those tormentors of the careworn and sorrow-anticipating heart.

The morning arrived, but my friend arrived not with it; and though the light of the day communicated a portion of hope for my sinking spirits, the anxiety I experienced continued of the most painful description. Holding myself as guilty of unpardonable negligence were I longer to hesitate in instituting inquiries regarding him, I wrote a few hurried lines to a gentleman who had been conspicuously attentive to us both; and in a short time had the satisfaction of seeing him appear, eager to assist me in whatever way we should think advisable. He strenuously recommended our immediate application to the police, at the same time volunteering to make it; and being unable to hit on a preferable expedient, I thankfully assented, and he set off on his mission.

Conscious that measures were in train to effect the restoration of my friend, I felt somewhat easier during the absence of my agent; but, the moment he reappeared, my apprehensions of somewhat fatal having occurred returned with tenfold strength, for news of evil import sat depicted on his face. He had been to the headquarters of the police, and had made known his errand, but no elucidatory information had been tendered him in lieu. During the time he was unavoidably detained, however, a circumstance had taken place which promised to explain but too too clearly the cause of Walsingham's mysterious disappearance. A man had come forward, and given testimony, that in the course of the foregoing night he had heard loud cries of murder proceeding from one of the bridges —that he had ventured as near to the spot as regard for his own safety warranted, and, while lying in ambush, beheld a band of ruffians consign to the waters of the river the body of a man whom they had doubtless plundered and massacred. To me this tale carried conviction the moment I was made acquainted with it. I had no hesitation in acknowledging Walsingham as the unfortunate therein described; and tears of anguish coursed down my cheeks as hope took flight for ever. My Irish acquaintance showed every desire to sympathise with and console me; but the task was beyond his power. The only circumstance that afforded any solace was the assurance that the police would use every means to bring to condign punishment the authors of so barbarous a crime; and that no exertion would be spared to recover the body of the murdered man, and procure its identification. That painful office, I was aware, would devolve on me, as would the heart-breaking duty of communicating his untimely end to those who, like myself, were to forget his worth only when their hearts forgot to beat.

Several days full of wretchedness waned over; my sprain became sufficiently reduced to admit of my going abroad; but neither the murderers nor the murdered had, in the interim, been discovered, though the vigilance of the police had suffered no relaxation, and the river, in the immediate vicinity of the fatal bridge, had been several times trolled with grappling irons. At length I was given to understand that the body was found, and awaited my identification. It may easily be supposed that I required not a second summons to hurry off, in order to fulfil this last duty, save one, I had to perform towards the departed. With knees knocking against each other, and tongue cleaving to the roof of my mouth, I approached the bier on which lay the insensate remains. One of the attendants slowly rolled back the cloth that concealed them; and with the resolute stare of desperation, I fixed my eyes on the death-set features. With what sudden revulsion did the blood rush back to my heart, when I beheld a countenance totally unknown, and so different from the mild and benignant lineaments of my friend, as to assure me, at a glance, that I was looking on a stranger! It was the corpse of a man of stout, athletic frame; his apparel, though soiled and torn, betokening the gentleman, and his moustachioed lip the profession he belonged to. The blow of a bludgeon had beaten in his skull near to the left temple, and evidently proved the primary cause of death, though the tattered state of his dress declared he had maintained a protracted struggle for life. Who he was I left for others to discover. Grief had rendered me so selfish, that I looked upon it as quite immaterial to me whether he was the son of a lord or of a beggar, now that I had ascertained he was not the friend I bewailed. This conviction rekindled a spark of sickly hope within my breast; and, in a state of mind impossible to describe, I hastened from the scene.

What was it that at such a moment directed my steps towards the identical church under which lay the vaults mentioned in the commencement of this narrative? Was it a chance—an involuntarily impulse, that acted as my guide? or did heaven, as a punishment for want of due resignation, decree that I should be the wretched instrument in bringing to light the awful cause of my friend's mysterious disappearance! Be this as it may, almost unconscious of the way I had sauntered,, I found myself perambulating under the walls of the cemetery within whose confines the church was situated. The chime of the clock, as it tolled the hour, at length roused me from the gloomy reverie in which I had been absorbed; and noticing that the gate, as on our former visit, stood ajar, I mechanically turned into the enclosure. The sexton likewise, as before, was there, engaged in his mournful ocupation; and the same undefinable impulse which had thus impelled me to invade the dreary realm,tempted me to address him. In the course of a few brief observations, I came to learn that Walsingham had a second time visited the vaults, and that on the day succeeding our first visit, and at the hour when they received the remains of the noble personage for whom we had seen a receptable preparing within their dark recesses. A pang struck to my heart as I listened; and it was not diminished by the narrator going on to say, that during the ceremony of inhumation, the mourners had been alarmed by finding that foul air of the most unwholesome nature filled some of the cavities; and that in consequence of several of the more inquisitive having nearly suffered death by suffocation, the whole had made a hurried retreat, and the door of entrance been forthwith shut. In a trembling voice I inquired if he had noticed my friend subsequent to the event? but on this point he could not take upon himself to give a decided answer. He was too much occupied at the moment—had too many things to attend to, to have time for remarking every strange face that surrounded him; but certain sure he was that he (Walsingham) must have left the vaults at the time the general flight took place: at all events, no man in his sober senses would have voluntarily permitted himself to be closed up in such a den, with the choak-damp as his enemy, and the noisome rats as his companions.

This mode of reasoning had rationality on its side, but it did not satisfy me, for suspicions of fearful import began to take possession of my mind. I recalled to recollection Walsingham's inquisitive disposition—the gloomy pleasure he professed to derive from meditating among the bones of the dead—and, above all, the intense hold these subterraneous repositories seemed to have taken of his thoughts. Nor did it escape me that nearly a week had elapsed since all access to or from the vaults had been cut off; and, consequently, that all earthly succour could prove of no avail to whomever they might enclose. But to remain longer in doubt was greater agony than to ascertain the truth at once; and, holding out a handful of silver, in a tone between entreaty and command, I requested the sexton to give me admission into the sepulchres without delay. The man looked at the money—then at me—then at the money again—threw down his mattock, and pocketing the bribe with a self-satisfied grin, proceeded to gratify what he doubtless thought a very singular humour.

Now that the catastrophe of my tale approaches, the pen trembles in my feeble grasp; a cold shiver, such as the first breath from that charnel-house occasioned, creeps over me; and the smell of earth-worms and vermin seems to prevail throughout the chamber in which I write. In order to dissipate the perpetual darkness to which these subterraneous apartments were subjected, my conductor brought from his dwelling, to which he had been obliged to repair, a lantern, containing a lighted candle; but the faint beam it shed barely seemed to display the grim features of the place. The galloping and pattering of many tiny feet, and the crash of rotten boards and mouldering bones, proclaimed the numerical strength of the legion of rats our entrance disturbed, and put to flight from their unholy carnival. All was gloom within; and the cadaverous blast that rushed forth as the door fell back, was of itself sufficient, at any other time, to have made me retreat in dismay. But now my friend was paramount in my thoughts, and elevating the lantern, which had been consigned to my charge, I strode resolutely into the vault. Suddenly my feet became entangled in what I at first conceived to be a bundle of withered faggots, and thrown off my equilibrium by the interruption, I tottered and sank down on one knee. In that moment, the light flashing from the lantern I carried, fell on, and allowed me to perceive that I had stumbled over a human skeleton—as fresh and white as if the surgeon's knife had newly done scraping the bones, save that here and there the green mildew of putrefaction displayed itself in unseemly blotches. A cry of horrors escaped me as I gazed on the grinning teeth and empty sockets; and it was echoed by the sexton, as he pointed with astonish-

ment to the hair that still remained on the but half-stript skull. From the few words he made use of, I could infer that he conjectured that some of the coffins had been wrenched open by the rats, and the corpse dragged out and devoured. To me this seemed a very improbable circumstance; but I was too much agitated by the terrible phantoms of my own imagination to contradict a supposition I would have gladly embraced. In the end he left me, in order to procure me more light and assistance to replace the bones once more within the shelf from which he fancied they had been torn.

My perturbation of mind during his absence is not to be described. As my tremulous hand, from time to time, caused the beams from the lantern to waver, and play on the fleshless visage at my feet, fancy rioted in horrors; and I found it impossible to divest myself of the idea that the dark curling hair that still covered the scalp bore a strong resemblance to that which shaded the temples of Walsingham. I felt inexpressibly relieved when the trampling of feet and the flare of torches announced the return of the sexton.

To look for the coffin which had been violated was our first object; but the search proved unsuccessful—no fractured shell was to be discovered; and eventually the general attention was directed to gathering up the bones of the unknown. In doing this, a shout of wonder escaped the whole party, when it was discovered that the tattered habiliments of a man half enveloped them; and this was repeated with many exclamations of amazement, when the sexton held up to view a gold watch he had found in the fob of the pantaloons, which though gnawed in every direction, still clung round the skeleton limbs. How did my every nerve quiver, and the sickness of death fasten on my heart, when I recognised it to be the identical watch worn by Walsingham on the day of our separation! It was a family piece, not to be mistaken, from having the arms of his house raised on the external case; and, shrieking like a madman, I proceeded to search for other proofs, till I gradually identified the remains of his pocket-book, the buttons of his coat, and, in short, almost every shred that yet adhered to the fleshless bones. What preternatural power supported me throughout this soul harrowing scrutiny I cannot take upon me to say; but when it concluded—when all the relics were naked together, and fully displayed to my starting eyeballs, the icy fingers of death seemed to crush my heart—I uttered a loud long cry of despair, and sunk into happy forgetfulness.

How or where the bones of my friend were consigned to the earth I never dared thrust myself to ask, for during the first month that succeeded their discovery, reason might be said to totter on her throne. The Irish gentleman who had been so assiduous in the commencement of my afflictions, superintended their inhumation; and father than recur to anything the thing was done, I sought to know no more. It was years before I could with any degree of composure, speculate on the circumstances attendant on his death; and it need scarcely be said that any additional light thrown upon an event so mysterious, was merely the offspring of conjecture. The most rational supposition was that, while in one of the obscure recesses into which his curiosity would likely allure him, he had inhaled the pestilent atmosphere that reigned within, suffered partial suffocation, and so being unable to make his escape with the crowd when the panic became general. From this trance he had been roused either by the efforts of nature, or by the gnawing of the vermin that were on the watch to devour him, and so dragged himself to the door, which was closed between him and the world for ever. There he had died—in what manner the human mind revolts from ever supposing; and there did I, a miserable wretch, find the bones, stripped by the teeth of disgusting vermin, and with the green mildew of the grave already beginning to corrode them.

SLIABH-NA-MON,

AND

Its Fenian Traditions.

SUPPLEMENTARY NOTES BY REV. J. F. LYNCH.

II.

It appears to me that the cromlech on Sliabh na m Ban must have been connected with Oighe mac Ugaine mhoir. It is stated in "Silva Gadelica" that when Finn was sitting on the mound of Sliabh na m Ban, Cnu Deroil, or "tiny nut," appeared to him, playing on his harp; he had been expelled out of the Sidh of Sliabh na m Ban, by the other musicians of the Tuatha De Danann, who were jealous of him. The wee man is said to have been only four fists in height, and he was regarded as one of three best windfalls which fell to Finn. For Cnu Deroil, Finn procured from Tech Duinn or "house of Donn," in County of Kerry, a tiny wife, named Blathnait (9), or "little blossom," and she, and Cnu, and the two hounds, Bran and Sceolan, were the three best windfalls of Finn. Fer Fi, of Cnoc Aine, is represented as a tiny harper, and is said to be son of Eogabal and dalta or foster-son of Manannan Mac Lir. From the Meath Tara, Fer Fi is said to have stolen Tuag, in order to take her to Tir Ban Sulhain, or "Land of the Everliving Women," there to be the wife of Manannan or Manu (Bodleian Dinnshenches, p. 44). In "Silva Gadelica" it is stated that the two most precious things at the Meath Tara were Lia Fail, or "stone of Fal or Light," and Lige an abhaic, or "grave of the dwarf," but the dwarf of the Meath Tara (10) is Fer Fighail (Fer Fi) mac Eogabail, dalta do Manannan, agus drui (druid) do Tuathaibh de Danann, and the dwarf of Loch Gair and Cnoc Aine is Fer Fighail, who is the same as Gar, named Traithnin Glas, or "green blade-of-grass," in "Galloping O'Hogan." It is thus placed beyond all question that Fer Fi is connected with Cnoc Aine, Loch Gair, and Tara. The oldest Lia Fail or "Stone of Light (11) of Ireland is also at Lough Gur, and a Lige an abhaic is at Lough Gur; it is a dolmen, and Mr. Leahy, the owner of the land on which the dolmen is, tells most extraordinary tales of what he himself experienced in connection with the Lech of the Lige, or grave. The Westminster stone was never in Ireland. These are some of the reasons why I have placed the Iberian Tara the oldest of all the Taras, at Lough Gur, and have supposed Tara Luachra to have been first at Lough Gur.

"Well 'tis known that Erin's ollaves met in Tara Luachra's hall,
Fail'd to find the certain knowledge of the Tain amongst them all,
Though there there sat sages hoary, men who in their day had known
All the foremost kings of story, but the lay was lost gone."

"Not for selfish gawds or baubles dares my soul disturb the graves;
Love consoles but song ennobles—songless men are meet for slaves.
Fergus, for the Gael's sake, waken! never let the scornful Galls
'Mongst our lands reproaches reckon lack of song within our halls."

Cnu Deroil is often referred to in the Fenian poems; for instance, in "Agallamh Oisin agus Phatric," we read:

Cnu dheireoil, Cnu mo chuirp,
An t-abhac beag do bhi ag Fionn.
An uair do sheinneadh cuir a's puirt,
Do chuireadh sinn a d-toirchim suain.

Blathnaid an inghean og,
Nach d-tug moid d'fhear faoi'n n-grein;
Acht amhain do Chnu dheireoil,
Och! A Phatraic, ba bhinn a beal.

Little Cnu, Cnu of my heart,,
The small dwarf who belonged to Finn;
When he chanted tunes and songs,
He put us into deep slumbers.

Blathnaid, the youthful maid,
Who was never betrothed to man under the sun,
Except to little Cnu alone,
O, Patrick, sweet was her mouth.

With reference to the ball seirce, or "love spot," of Diarmuid na m ban, Pro-

9. Blathnait was also the name of the wife of Cu Roi Mac Daire, and Cu Chulaind. She is variously made daughter of Mind, Conchobhar Mac Nessa, and Pall, a form of Fal, "light," hence also Falga supposed to be in the east, or district of light. In the Irish tales there are names of the remotest period, side by side with names of recent formation, and Irish scholars often make mistakes with regard to the meanings of the old names, treating them as a recent formation. In "Feast of Bricriu," p. 97, Dr Henderson explains Uath Mac Imomain as Terror, son of Great Fear. This Irish Uath or U mor is the Welsh Hu Gadarn or Mighty Hu, who led the Welsh from Taprobane to Wales. Imoman is not great Fear, for Im is root, and oman or man is suffix, as in Eochman and Erimon.

10. Several of the tales of the Munster Tara were borrowed and adapted to the Leinster Tara. One of the Munster royal forts (Cathair Thuaighe "fort of Tuag") probably Caherass, near Croom, was named from Tuag, "Book of Rights," p. 87. In Silva Gadelica, p. 523, we read "Whence Temhair Luachra," "Tara of Luachair"? Temhair, daughter of Ith Mac Breogan, wife of Erimon, from her this is derived, and every other Tara as well." Tara of Meath is stated in Dinnshenches to be named from Tea wife of Erimon, and some folk say that the wife of Erimon was the daughter of Zedekiah king of Judah, but we now know that Erimon is a personification of Erin, and is from Eri, mon being a suffix. This explanation of Eber and Erimon was given by O'Beirne Crowe in Kilkenny Journal.

11. This stone is Cloghabhile or "Stone of the Sacred Tree," on Ordnance map. It is one of the outlying stones of the great stone circle, and is S. S. E. of the centre of the circle. It differs in appearance from all the other stones at Lough Gur. The late Edward Fitzgerald told me that Professor Rhys spent nearly two hours examining this stone. The people's tradition, as also given by Fitzgerald (History of Limerick), is that it was an altar stone of the Druids. It is known that Leac na g Cead, "flagstone of the hundreds," a stone on the Rock of Cashel, was an altar stone, and a stone of inauguration of Kings of Cashel. In Judges ix., 6, it is stated that the men of Shechem made Abimelech King by the oak or terebinth of the pillar-stone (Elon Mutstsab) that was in Shechem. The huge pillar-stone at circumference of the stone circle and N. N. E. of centre of the circle is named Rannach Chroin Dhuibh. Rannach, perhaps from rann, "a verse," then oracle stone. Compare the Golden Stone of Clogher, sacred to Cerman. In Judges ix. the oak or terebinth of the augurs or magicians (Elon Meonnim) is mentioned. The last Sunday is July or first Sunday in August is called Domhnach Chroim Dhuibh, or "Sunday of Crom (Stoop) the Black."

fessor Rhys (Hibbert Lectures) and Mr. O'Grady ("Pursuit of Diarmuid") err in stating that this was a mole on the face of Diarmuid. Mr. Dunne has given the tradition of Munster correctly concerning the ball seirce. I have always been told by the old people that the ball seirce was a large mole on the left breast of Diarmuid na m ban. Dr. Henderson (Feast of Bricriu, p. 211) says that Fhua Mhoir Bein Baynac is, in Mr. W. G. Stewart's "Popular Superstitions of Scotland," described as "wholly invulnerable to all the weapons of man, with the exception of a large mole on his left breast, which mole was the size of a common bounet." Dr. Forbes (Arabic Reading Lessons, p. 61) explains the Arabic wasim as "handsome, beautiful, comely, distinguished by or sealed with a wen, or large wart, on the body, characteristic of a prophet or heavenly messenger." The Rev. S. Baring-Gould (Curious Myths of the Middle Ages, pp. 294-5) says: "Achilles, a humanised sun-god, was vulnerable in his heel, just as the Teutonic Sigfried could only be wounded in his back; this represents the sun as retiring from the heavens with his back turned (12), struck by the weapon of darkness, just as Ares, the blind god, with his tusk slew Adonis, or sightless Hodr, with his mistletoe shaft smote Baldur." Diarmuid corresponds to Adonis, or Dumu Zi, and Diarmuid was like Adonis of the Phœnicians, or Dumu zi of the Chaldæns slain by the Boar who corresponds to Ares and Bel of Nipur. In the "Pursuit," the Boar is said to have been the half-brother of Diarmuid, who was changed into a boar in Brugh na Boinne. In Egypt, also, Set, or Sit, the brother and slayer of Osiris, was represented as a boar.

O'Curry (Lectures, p. 396) gives the following account of Finn's "Thumb of Knowledge," as related in the ancient tales. Upon a certain occasion Finn was hunting near Sliabh na m Ban, and when he was standing beside a spring-well, a strange woman came suddenly upon him and filled a silver tankard at the spring, and immediately afterwards walked away with it. Finn followed her unperceived until she came to the side of the hill, where a concealed door opened suddenly and she walked in. Finn attempted to follow her farther, but the door was shut so quickly that he was only able to place his hand on the door-post, with the thumb inside. It was with great difficulty that he was able to extricate the thumb, and having done so, he immediately thrust it, bruised as it was, into his mouth to ease the pain. No sooner had he done so than he found himself possessed of the gift of foreseeing future events. This gift, however, was not, we are told, always present, but only when he bruised or chewed the thumb between his teeth. The reference to silver here is of some importance, and in order to illustrate the use made of it in the tale, I give the following quotation from "The Ancient Hebrew Tradition," by Professor Hommel, p. 66: "Ea's wife is called Dam-gal-Nunna (Great Wife of the Celestial Ocean), while Sin's consort receives the designation Ningal (Great Mistress), to which I may add that the signs for 'Nin' and 'Dam' are almost identical in meaning. Ea is called Gushgin-banda, that is, 'Small Gold,' by which silver is meant, and Sin is also distinguished by the appellation Lugal-banda, 'The Little King,' silver being the symbol of the moon, as gold is of the sun." Some time ago in "The Expository Times," Professor Hommel identified the Chaldæan Ea (Ai, or Ia) as a very ancient moon-god, and Sin is also a very old Chaldæan moon-god.

I have found invariably that when silver and gold are employed in the Irish tales in mythical appellation, that silver refers to the moon, and gold to the sun. We thus without any trouble have the signification of Nuadha Airgiodhlamh, King of the Tuatha De Danann, for whom the Irish leech, Diancecht, made the airgiodhlamh, or "hand of silver," and so in the present tale we may be certain that the silver tankard of Sliabh na m Ban refers to the moon. We see also from Prescott that silver and gold were symbols of the moon and sun amongst the Peruvians. In the "Boyish Exploits," Finn is stated to have obtained his knowledge by tasting the Eo feasa. "Seven years Finn Eces remained at the Boyne watching the salmon of Linn Feic (Pool of Fiac), for it had been prophesied that he would eat the Eo Feic (salmon of Fiac), and he would be ignorant of nothing afterwards. He caught the salmon, and ordered his pupil Demne (Finn) to roast it, and the poet told him not to eat of the salmon. The young man brought him the salmon after cooking it. "Hast thou eaten any part of the salmon, O young man?" said the poet. "No," replied the young man, "but I burned my thumb (when touching the salmon), and put it into my mouth afterwards." "What name is upon thee, O youth?" said he. "Demne," said the youth. "Finn is thy name, O youth," said he, "and it was to thee the salmon was really given in the prophecy to be eaten, not to me, and thou art Finn, truly."

There is a Munster tale in which Finn Eces becomes Canuran Caoch, who placed a ring on Finn's finger while he was cooking the Eo Feasa, or "Salmon of Knowledge," and when Finn tasted the salmon he knew that the Canuran would kill him when he awoke from sleep, and so Finn treated the Canuran Caoch, or one-eyed rude fellow, exactly as Ulysses treated the Cyclops Polyphemus, but the ring on Finn's finger always replied to the question of the Cnuran Caoch—"O Ring, where are you?" "I am here on the finger of Finn Mac Cumhaill," and so the blind giant was enabled to pursue Finn, but at last Finn cut off his finger, and cast the finger with the ring on it into the Suir, and when the ring replied from the bottom of the Suir, "I am here on the finger of Finn Mac Cumhaill," the blind giant fell into the Suir and was drowned. The Eo Feasa (13) is a symbol of the moon, and so there is only a seeming contradiction between two accounts of Finn's Thumb of Knowledge." The Welsh counterpart of Finn is named Gwion the Little, and he was placed in charge of a magic cauldron by Kerridwen, or Hwch, but three drops from the cauldron fell on one of his fingers, and on account of the scalding sensation he put the finger in his mouth, when he suddenly knew everything and that Kerridwen intended to kill him. This tale from the Welsh Triads is given by Brash (Ogham Inscriptions), and by Professor Rhys (Hibbert Lectures). The Welsh Gwion is equated by Professor Rhys with the Irish Finn.

Gleann an Smoil means "valley of the thrush," and smolach, the present word for thrush, is an extension of smol. O'Reilly has smiol and smiolach, nightingale or thrush; smaolach and smolach, a thrush. He also has searrach, a word noted by Mr. Dunne, but O'Reilly also has searr, "a foal." Mr. Dunne says that a Kilkenny man will never consent to have smol taken to signify a thrush till it can be shown that spar would stand for sparrow or swal for swallow. Ni ansa, "not difficult." The English word sparrow is from Anglo-Saxon spearwa, which is cognate with Norse sporr; Gothic, sparwa; old high German, sparo; and middle high German, spar. The English word swallow is from Anglo-Saxon swealwe, cognate with Norse, svala; old Saxon, swala; and old Irish, suall. In Finn's first poem we read, Cearbuid sam suaill sruth, "the summer swallows skim the stream."

Mac an Smoil, or "son of the thrush," was the name of one of the Fians, and also the name of one of their hounds. In Fiadhach Fhianna Eireann ar Shliabh

12. I have carefully examined all the pillar stones at Lough Gur, and only one of the stones has marks, so far as I could ascertain. This is the pillar stone on Paddock Hill or Ardaghlooda. The back of the stone bears S. E., and on the back of the stone are two short parallel grooves. There are some grooves, probably rain marks, on one of the large pillar stones, which stand at entrance to stone circle, in the townland of Grange, Lough Gur. In an article on Cill-na-martra, published some years ago in Cork H. and A. Journal, and written by Mr Conor Murphy, it is stated that the two entrance pillar-stones of Cloch Adhna Cemetery had Ogham inscriptions on them. Professor Sayce, "The Early History of the Hebrews," p. 468, mentions that stone columns were planted before the entrance of a Phoenician temple, and he refers to the account given by Herodotus (ii, 44) of the columns of Tyre made of gold and emerald glass, and he also mentions the columns of stone found in the temple of the Giants in the island of Gozo. There were also two lofty pillars at Heliopolis in Egypt one which is the so-called Cleopatra's Needle traced to a pillar-stone in Canon Driver's Deuteronomy.

13. The Eo Feasa derived his knowledge from the nuts of the nine hazels, which grew above the Well of Condla, under the sea (Bodleian Dinnshenches, p. 32). O'Donovan (Supplement to O'Reilly) says, "Caill Crimmon, hazels which inspired the poets. The ancient Irish believed that there were fountains in which the principal Irish rivers had their sources. Over each of these fountains grew nine hazels which produced beautiful red nuts, which fell into the fountain and floated on its surface; that the salmon of the river came up and swallowed the nuts. It was believed that the eating of these nuts was the cause of the red spots on the salmon's belly, that whoever took and eat one of these salmon was inspired with the sublimest poetical ideas. Hence "the expressions, "the nut of science," "the salmon of knowledge."

Truim, or "The Fenian Hunt of Sliabh Truim.' we read:

Do leig Mac an Smoil Coingoil a's Gruaim ghrinn,
"Mac an Smoil let go Coingiol and Gruaim the merry."

Leigthear a's Garra Garbh da choin,
Iollan ard a's Mac an Smoil.

"Garra (or Garraidh) Garbh lets go his two hounds, Iollan Ard and Mac an Smoil."

Garraidh, or Garaidh, or Gara, is frequently mentioned in the old Irish poems and tales, and is usually termed Mac Morna.

O'Donovan (supplement to O'Reilly) says that Gleann Gara is a valley in the parish of Shanrahan, in the barony of Iffa and Offa West, at the south side of the Galtees. Gleann Gara a n-Uibh Fatha, o Ghara Glunduibn mac Morna. Keating in reign of Cormac Mac Art "Glenn Gara in Ui Fatha is named from Gara Black-knee, son of Morna."

Aedh Caemh, son of Garaidh Glundubh, son of Morna, is stated to have been the chief of Clann Morna in the battle of Gaura, in which Oscur and the Fians are stated to have been annihilated.

(To be Continued.)

THE WIND-SWEPT WHEAT.

BY MARY AINGE DE VERE.

Faint, faint, and clear—
Faint as the music that in dreams we hear—
Shaking the curtain fold of sleep,
That shuts away
The world's hoarse voice, the sights and sounds of day,
Her sorry joys, her phantoms false and fleet—
So softly, softly stirs
The wind's low murmur in the rippled wheat.

From West to East,
The warm breath blows, the slender heads drop low
As if in prayer;
Again more lightly tossed in merry play,
They bend and bow and sway
With measured beat,
But never rest—
Through shadow and through sun
Goes on the tender rustle of the wheat.

Dreams more than sleep,
Fall on the listening heart and lull its care;
Dead years send back
Some treasured, half-forgotten time;
Ah, long ago,
When sun and sky were sweet,
In happy noon
We stood breast high 'mid waves of ripened grain,
And heard the wind make music in the wheat.
Not for to-day—
Not for this hour alone—the melody
So soft and ceaseless thrills the dreamer's ear!
Of all that was and is, of all that yet shall be,
It holds a part—
Love, sorrow, longing pain;
The restlessness that yearns;
The thirst that burns;
The bliss that like a fountain overflows;
The deep repose;
Good that we might have known, but shall not know;
The hope God took the joy He made complete—
Life's cords all answer from the wind-swept wheat.

J King, 33 Khedive road, Forest gate, London, writes:—Dear sir—I gladly take advantage of your kind offer in issue of 22nd, and beg to inform you that I have now in the Press at "Nation" Printing Works, Dublin, "King's Irish Bibliography: A Subject Guide to Irish Books." Price one shilling net. Some 5,300 books about Ireland are arranged under subject matter, giving subhead, author, place and date of publication. I intend to pursue the research work until I have published a complete Irish Bibliography.—Yours faithfully,

J. KING.

THE LOGAN FAMILY.

By Eblana.

JAMES LOGAN.

This "able and learned man" was born of a Quaker family at Lurgan, in the County of Armagh, so far back as the 20th of October, 1674.

When he had received a fair education he was apprenticed to a linendraper in Dublin.

He employed his spare time in the assiduous study of various branches of learning, especially in mathematics and languages, dead and living, as Hebrew, Latin, Greek, Spanish, and Italian, being already acquainted with Irish and English.

Owing to the Jacobite and Williamite wars of 1689-90 he and his family were obliged to go to Edinburgh, and afterwards to London and Bristol.

In the latter place the elder Logan taught a school, and was assisted in it by his son James, who at the same time pursued his own studies.

In 1698 James engaged in commerce, trading between Dublin and Bristol, until the great change in his life occurred, due to his intimacy with William Penn, the celebrated Quaker, whose father had great estates in Ireland, and had been Governor of Kinsale and Vice-Admiral of Munster, and had appointed his son agent of his Cork property.

In consideration of £16,000 advanced by Admiral Penn to Charles II., a grant of land in America was made to his son, William Penn, and named after him, Pennsylvania.

The latter, accordingly, set out with a colony, mostly Quakers, in three ships, held a meeting under a great elm tree, and there founded the city of Philadelphia. Fifty sail more arrived from Ireland, England, Wales, Holland, and Germany, and after he had settled these he returned to England two years later—1684—leaving 7,000 behind him. His intimacy with King James, however, obliged him to secrete himself, and on William's accession he was tried, but acquitted. In 1699 he again set out for Pennsylvania, with his second wife and family.

This time he was accompanied by James Logan as his secretary, and after a voyage of three months in the sailing vessels of that day they arrived in Pennsylvania in December, taking up their residence in the "Slate-Roof House" on Second street in Philadelphia.

Here Logan resided with Penn at a salary of £100 per annum.

When in 1701 Penn returned to England, he left Logan, who was then only 26 years of age, in exclusive charge of his affairs. As Penn wrote:—

"I have left thee in an uncommon trust, with a singular dependence on thy justice and care."

Alfred Webb says that "the judgment of the proprietor of Pennsylvania was not mistaken," that "Logan displayed the greatest capacity for business, the most statesmanlike qualities, and the sincerest loyalty not only to William Penn, but, after his death, to his widow and children." Adding, "The difficulties of his position were at times very great—what between the jealousies of parties, the conflicting interests between the Quakers and other bodies, the dissolute character of Penn's eldest son, and the necessity for forwarding sums to England to relieve Penn's monetary difficulties."

Logan became provincial secretary, receiver-general, and commissioner of property, besides being the business agent of the Penn family, and the champion of their interests.

In the year 1702 he entered the Provincial Council, where he held his seat for the long period of 45 years.

In 1704-5 he became embroiled in the disputes of Governor Evans.

In the latter year also he was sent to the Indians at Conestoga, and in this and subsequent embassies he treated them with such wisdom and consideration as to gain their esteem and confidence, and, as a testimony of their regard for him, they named their chief Logan, after him.

He was afterwards impeached for, among other things, holding two incompatible offices. In his answer he abused the Assembly, but, as he was preparing to start for England, the House ordered his arrest. But the Sheriff refused to obey the order, and Logan sailed, vindicated himself, returned in 1712, and became Judge of Common Pleas of Philadelphia, and in 1723 Chief Justice and Mayor.

Penn having died, he went abroad again to consult with Hannah Penn.

In 1731 he became Chief Justice of the Supreme Court, and, after the death of Governor Gordon in 1736, he acted as Governor and President of the Council. It was not till 1747 that he retired to private life, but thenceforward he spent his remaining years at his seat at Stenlon, near Germantown, and now in Philadelphia.

In his leisure Logan had devoted himself to literary and scientific works, and produced several learned volumes. He corresponded with several scientific men, among whom was Linnæus, who gave the name Logan to a class of plants in his honour.*

Logan was one of the founders and members of the first Board of Trustees, in 1749, of the College of Philadelphia, now the University of Pennsylvania.

Some of his works were written in defence of the Penn family, and some in his own justification for the part he deemed it right to take in social and political matters. Some were written of ethics and philosophy. He rendered Cato's Distichs into English verse, and published several learned works in Latin, including some of Geometry, Davis's Quadrant, and one on Astronomy, besides several translations of Cicero and others, Greek and Latin.

Blackwood describes Logan as "a great scholar for the age, familiar with many languages, a good mathematician. . . . and as, altogether, an extraordinary man."

Benjamin Franklin printed and published most of his works.

In his judicial capacity Logan was no less renowned. His charges were printed abroad, and "Walsh's Appeal" says of them:—

"Of singular excellence. He appears in them not only as a watchful guardian of the domestic weal, and as a sagacious director, but as a profound moralist and beautiful writer. Such subtle disquisition and lofty speculation, such variety of knowledge and richness of diction, are seldom found in compositions of the kind."

Alfred Webb describes him as "tall and well-proportioned, with a graceful yet grave demeanour. He had a good complexion, and was quite florid even in old age; nor did his hair, which was brown, turn grey in the decline of life, nor his eyes require spectacles."

He died at his house at Stenlon, where he had so long resided, on the 31st of October, 1751, at the age of 77, and was interred in the Friends' Cemetery, Arch street, Philadelphia.

He bequeathed his valuable library, which he had been fifty years in collecting, to that city, according to Chalmers, who observes that this will vindicate his literary enthusiasm. The bequest included above 100 volumes of authors in folio, all in Greek. All the Roman classics. All the whole Greek mathematicians, viz.—Archimedes, Euclid, Ptolemy, with Theda's Commentary, which was "so scarce that neither prayers nor price could purchase

*Loganiaceæ.

ANOTHER "WATTY COX" CARICATURE.

(From the "Irish Magazine and Monthly Asylum of Neglected Biography," 1811.)

THE BATTALION OF TESTIMONY RAFFLING FOR FORFEITED ESTATES.

it"; besides many Latin authors and modern mathematicians, Newton, Wallis, Halley, etc.

This collection was, in 1792, annexed to the library established by Benjamin Franklin in Philadelphia, where it still is under the separate name of the Logonian Library, and, according to Appleton, received in 1828 an accession of 5,000 volumes by the bequest of William Makenzie, the famous American book collector. In the minutes of the Library Company of 29th March, 1732, James Logan is described as "a gentleman of universal learning, and the best judge of books in these parts."

Logan street in Philadelphia is so called from him, as also Logan Square, on which is situated the Catholic Cathedral, imposing and picturesque, as seen through the foliage of the Park promenade.

WILLIAM LOGAN

was the son of the aforesaid James, and was born in Philadelphia on the 14th of May, 1718.

At the age of 12 he was sent to his uncle, Dr. William Logan, who still resided in Bristol, England, where he remained for some years, and on his return home to America embraced the legal profession, and became attorney for the Penn family, with his father.

On the death of the latter in 1751, William succeeded to the family seat at Stenton, and devoted himself to agricultural pursuits. But he also took some part in public affairs, and was elected to a seat in the Assembly of Councillors of Philadelphia in 1743, and continued to represent that city till 1776, when the meetings were discontinued.

He engaged in works of mercy and benevolence, giving the aged a settlement on his land, and educating, at his own expense, the youth of the district, besides receiving the Indians at his house. In carrying out his father's will he deeded the library to Pemberton, Peters Allen, and Franklin, to be, with his brother, James Logan, and himself, the trustees and managers.

His uncle, Dr. William Logan, having also died, bequeathed to him his collection of books of about 1,300 volumes, which he added to his father's bequest, and himself acted as librarian till his death on the 28th October, 1801.

The Government and quit rents of Pennsylvania which William Penn had bequeathed to his second family—his property in Ireland and England being left to the first—was sold by them to the State of Pennsylvania after the Revolution for £130,000.

GEORGE LOGAN.

This able and patriotic statesman was the son of William and the grandson of James Logan, and was born at Stenlon on the 9th of September, 1753.

When his preliminary education was completed he applied himself to the study of medicine, going to Edinburgh for that purpose, and on his return home in 1779 settled down to the practice of his profession. Later he travelled till 1780, when he devoted himself to scientific agriculture.

He took great interest in the public affairs of his State, and was elected to the Legislature of Pennsylvania for several terms. He was a strong supporter of what was known as the Jefferson or Republican Party. For this he incurred the opposition and resentment of the Federalists.

When, in June, 1798, a rupture with France seemed imminent, Logan volunteered to go to Paris as peacemaker. He persuaded the French Government to annul the embargo on American shipping, and prepared the way for a negotiation that terminated in peace.

On his return he was violently denounced by the Federalists, who passed an Act called the "Logan Act," which made it a misdemeanour for a private citizen to take any part in a controversy between the United States and any foreign Power. He vindicated himself in a letter of 12th January, 1779.

In 1801 he was elected to the Senate as a Democrat from Pennsylvania, and served till 1807. He is said to be the only strict Quaker who ever sat in that assembly.

Notwithstanding the "Logan Act," he again left America in 1810 on a mission of peace. This time his destination was England, but he failed in his object of averting war between that country and the United States.

Like his distinguished grandfather, he was an author, and wrote several valuable scientific works, including "Experiments on Gypsum" and "Rotation of Crops."

He was a member of the Board of Agriculture and of the Philosophical Society of Philadelphia.

He died at Stenlon on the 9th of April, 1821.

BENJAMIN LOGAN.

This distinguished officer seems to have been connected with the preceding remarkable family.

He, too, was the son of Irish parents, and was born in Augusta Co., Virginia, about the year 1752.

The family removed to Pennsylvania. There the father died intestate when Benjamin was about fourteen years of age, and as he was the eldest son, he was heir to the entire estate. But he generously divided it amongst his brothers and sisters.

He himself then migrated westwards, purchased a farm on Holston River, and settled down and married while still very young.

Taking an interest in public affairs he joined the army, and when only 21 he accompanied Colonel Henry Bouquet as sergeant in his campaign against the Northern Indians.

In 1774 Logan was engaged in the Dunmore battle, and in the following year he joined with Boone when on his way to Kentucky, and thus left his name as a landmark.

When near their destination Logan separated from the main body of troops, and commenced the construction of the stockade, afterwards known as "Logan's Fort," whither he removed with his family in 1776. It was about a mile from Stanford, and is now known as St. Asaph's Spring, Logansport, in the capi-

tal of Cass County, Indiana. One or other of the Logans have given names to places in more than a dozen States.

Logan and his wife, however, again left Logan's Fort in the same year, as it was not considered safe, and removed to Lincoln, where their son William was born. A few years later the family again removed, and this time to Shelby County, also in Kentucky.

Appleton says—"On the 20th of May, 1777, Logan's Fort was invested by Indians in ambush. . . . One of the guard killed, and one mortally and one helplessly wounded. The others escaped with the women to Fort Harrison. The third wounded man was rescued by Logan, who took him in his arms, and bore him within the walls, amidst a shower of bullets. The garrison was 35, and the defence 12 guns. The siege lasted for weeks, and the ammunition ran low. Logan selected two trusty comrades, crept out of the fort at nightfall . . . and pursuing unbeaten paths through the forest, reached Holston, 150 miles distant, where he obtained supplies. At last, in September, 200 well-armed mounted men raised the siege. Afterwards Logan repeatedly led his men in pursuit of predatory bands of savages in his vicinity. On one occasion his right arm was broken by a bullet, and he barely escaped with his life."

He was second in command in Bowman's expedition against the Shawnees, each taking opposite sides of the village of Chillicothe. Bowman was to give the signal, but as he did not do so Logan led the assault in the morning, and just at the moment of victory Bowman sent an order for retreat. The Indians then assailed them furiously, but Logan and his 150 men drove them off, destroyed a great part of the village, and took 160 horses.

Later on Logan led a volunteer body to the relief of Bryan's station, and he also took part in Simon Garty's pursuit of the Indians.

In the following year Logan, now a general, was appointed to the command of 600 men in an engagement against the North-western Indians, who were in alliance with the English. Several skirmishes ensued, in which Logan was victor. After this Logan retired into private life at his farm at Shelby.

But he by no means retired from the service of his country, as he still took an active interest in public affairs.

He was elected to the Assembly, of which he was a member when the first Constitution of 1792 was formed, and also that of 1799, and was re-elected several times to the Legislature.

He is described by Appelton as being "six feet two or three inches in height, powerfully framed, of iron nerves and will, and great courage."

He died at his residence at Shelley, Kentucky, on the 11th of December, 1802.

JOHN LOGAN.

Benjamin's brother, comrade, and friend, was also a leader in the military events of his day, several times a Legislator, and Secretary of State for Kentucky.

WILLIAM LOGAN.

Benjamin's eldest son, also distinguished himself in American history, but his career belongs to a later period.

HIGHEST OF ALL RAILROADS.

The American-built Oroya Railroad in the Peruvian Andes attains the greatest elevation reached by any railroad in the world. At one point it passes through a tunnel 15,665 feet above sea-level. This is nearly 1,500 feet higher than Pike's Peak, and but little over 100 feet less than the elevation of Mont Blanc. The Oroya Railroad also enjoys the distinction of having cost more per mile than the great majority of railroads. It is 138 miles long and cost 43,000,000 dollars. The many tunnels, bridges, and zigzags presented difficult engineering problems.

PREHISTORIC RACES IN ARIZONA.

The recent discovery from Arizona of an irrigation canal of large proportions, which was used before Columbus, has roused a new spirit for archaeological investigation in the south-west. The remains of enormous and wonderfully made irrigation canals, constructed by a race of whom there are now no known descendants, are abundant in the region of Phoenix and Mesa, in Maricopa County, but this discovery of a canal that was evidently fed by the Rio Verde (in what is now Yavapai County), and which was so large that logs and small barges could be easily floated along it, is the most interesting piece of prehistoric work found in Arizona in years.

All who have investigated the fascinating subject agree that there were once several cities of perhaps 100,000 population in central Arizona, and that buildings, each constructed of a peculiar concrete of adobe soil and gravel, covering two acres in area and reaching eighty and more feet in height, were not uncommon for sun-worship in Southern Arizona. Los Muertos (a recently named city, but probably more than 1,000 years old), in Pima County, must have had some 200,000 population. The remains of its city walls, reaching miles up hill and down dale, and the immense quantities of burned bone dust, probably the remains of aboriginal ceremonies, betoken this. The vicinity of the Gila and Salt rivers was the scene of the densest population, as the abundance of prehistoric implements and weapons and ruined walls show.

But the artificial waterways of those ancient and mysterious peoples are the most interesting remains found in the territory. Army engineers say they are marvels of engineering skill. The largest and best preserved waterway is thirty-two miles north of Phoenix. The water was supplied from the Verde river. For nearly four miles this waterway passes through an artificial gorge in the Superstition mountains, cut out of the solid rock to a depth of 100 feet. After the mountains are passed it divides into four branches, the longest of which measures more than forty miles, while all four aggregate a length of 120 miles, independent of the soil. Except in rare instances these smalleer ditches have been filled, and in that part of the desert are obscured by the sandstorms that prevail, but the larger one is distinct, and measures sixty-four feet in width, with an average depth of twelve feet. Through this way the water for the support of the cities between the Salt and Gila rivers was conveyed, and 1,600 square miles of country, now almost destitute of vegetation, was irrigated by it.

This canal reaches to within a short distance of the Gila river, and the water was taken from the Salt river, for the apparent reason that at this point, the north bank of the Gila was so high that the builders were unable to reach the current with a canal, and they evidently knew of no way to raise the water to the level of the surrounding country. This part of the desert is covered with ruins, and must have been at one time the residence of a teeming population. Immediately south of this region several large canals were taken out of the Gila, and they extend quite a distance into the valleys, one of them supplying the city which contained the Casa Grande—the largest, best preserved, and most noted prehistoric ruin in the United States.

On the other side of the Salt river there are more waterways, though they are not of such length. Here, also, was the principal city, twenty-eight miles in length by twelve in breadth. It contained many large buildings, which are now little more than shapeless rounds of stone and mortar. All the wooden parts of these structures have been destroyed by the ravages of time, and even the joists where they were protected by the stone and mortar have decayed, leaving only the vacancies they once filled. Near Phoenix, in one of the ruins which are evidently those of some public building, the walls and roof appear to have been crushed together with great force, forming a huge pile of debris, yet standing to a height of twenty feet. The wooden beams in the structure, some of them eight inches in diameter, were bent, broken and thrown across each other in great profusion. In this position the broken stone and mortar settled around them, and in the course of time the mass hardened again, so that when the wooden timbers finally decayed, they left holes the size of the timbers. When the fact is considered that rain seldom falls here, and that cold and dew are conditions entirely unknown in the valleys, it is apparent that ages must have elapsed while this process of decay was going on.

There were undoubtedly two eras of inhabitation, that of the cliff dwellers being the more recent of the two, and perhaps as long after the valley races had become extinct as our age is after them. As yet no theory has been advanced by which we can so much as approximate the age of the cliff dwellers. Their builders were rude and more unsettled than the inhabitants of the valleys, and they lived by war and the chase, as is proved by the weapons found about their abodes. On the contrary, the people of the valley lived peaceful lives, built magnificent temples, to a certain extent encouraged the fine arts, and tilled the soil with a system of irrigation equal to that of the most prosperous days of ancient Egypt.

Recent surveys prove that at one time not less than 2,000,000 acres of land were capable of irrigation from the canals then in existence, while now we have only 337,000. The population must have been enormous. The extent of their civilisation is not so much enveloped in mystery as is their origin or the cause of their total destruction. Hundreds of implements used by the artisan and farmer have been unearthed, and the vessels used for culinary purposes are symmetrically and tastefully fashioned. Many of them were painted in a manner evincing a considerable knowledge of art, and the figures, though they have for ages been subjected to the chemical effects of the alkali in the soil, are still as bright and perfect as the day they were drawn. Shell bracelets found on the arms of skeletons and other jewels of turquoise and bone show skill and fine workmanship. The houses were constructed on a plan adapted to ease and comfort, and the capacious hallways with their stone floors and cement walls were peculiarly fitted for this half-torrid climate. Their knowledge of engineering was so perfect that our centuries of practice and discovery have not enabled us to improve upon the grade or location of their canals. No metallic substances are found in any of the ruins, and the people evidently knew nothing of their use. That they had a language written by hieroglyphics is unquestionable, and for miles at a stretch throughout Arizona the faces of the cliffs are covered with mysterious characters. Slates found in the ruined dwellings and temples are engraved with the images of animals, persons and these emblematical figures, though so far no attempt has been made to decipher their meaning.—"The Review," St. Louis.

MOGHA NEID—A FRAGMENT.

(By Dr. John Anster, the Translator of Goethe's "Faust.")

On the plains of Tulagh, in his last battlefield,
King Mogha Neid's tomb did his warriors build;
Where o'er the chieftain they heaped the high cairn,
Streams the heath's purple pall, wave the plumes of fern,
But he hath his palace hall still in the cave
Of the cairn, and his throne-room of state in the grave;
And where was he robed again for the strife
Of heroes! He stands in dread semblance of life.

In his right hand the broadsword, before him the shield,
And the helmet still guarding his head;
Again the red lightnings of war will he wield,
Again lead the thousands he led.
The keen had been chanted, the sepulchre sealed,
But say not, Neid Mogha is dead!

Beam of light or breath of air
From our sky came never there;
Never since the stars of night
Saw our sacrificial rite.
When beneath the golden knife
The proud warhorse poured forth his life,
And the Druid sang his spell:

That courser white to the land of light,
Of dauntless truth, of the dream of youth,
To the heaven, whose hope betrayeth not,
Where the bud to blossom delayeth not,
Where the worm on the green leaf preyeth not,
Where the cold rain cloud weigheth not,
Might bear Neid Mogha well.

Sword, shield, javelins, snow white steed,
Trance-like in that marble hall,
All longing to be freed;
Sword, shield, javelins, battle steed
Wait the waking of Mogha Neid.

Ancient Boroughs of Ireland

From Lewis's "Topographical Dictionary of Ireland," 1837.

COLERAINE.

COLERAINE, a seaport, borough, and post-town, and a parish, in the barony or district called the town and liberties of Coleraine, county of Londonderry, and province of Ulster, 24½ miles (E.N.E.) from Londonderry, and 118¼ (N.) from Dublin; containing 7,646 inhabitants, of which number 1,978 are in the parish of Killowen, and 5,668 in the town. This place derives its present name from "Cuil-Rathuin," descriptive of the numerous forts in the vicinity, and is by some writers identified with the "Rath-mor-Muigheline," the royal seat of the kings of Dalnaruidhe. The original town, now called Killowen, on the western bank of the river Bann, and which subsequently became the chief or shire town of the county of Coleraine, is of very remote antiquity; and in 540 had a priory of Canons Regular, of which St. Carbreus, a disciple of St. Finian, and first Bishop of Coleraine, was abbot. This establishment continued to flourish till the year 930, when Ardmedius, or Armedacius, was put to death by the Danes; it was, together with several other churches, plundered in 1171 by Manus Mac Dunleve, since which period no notice of it occurs till the year 1213, when, with the exception of the church, it was destroyed to furnish materials for a castle which was erected here by Thomas Mac Uchtry and the Gaels of Ulster. The county of Coleraine is described as having extended from the river Bann on the east to Lough Foyle on the west, and as having formed part of the possessions of O'Cahan, from whose participation in the rebellion of the Earl of Tyrone, in the reign of Elizabeth, it became, with the whole province of Ulster, forfeited to the crown. Jas. I., in 1613, granted this district to a number of London merchants, who were in that year incorporated by charter, under the designation of the "Governor and Assistants of the New Plantation in Ulster," and from that period the name of the county was changed into Londonderry. The Governor and Assistants, generally called the Irish Society, were by their charter bound to build the town of Coleraine, to people it, to enclose it with a wall, and to establish a market, within seven years from the date of their charter, by which were granted to them the entire abbey of St. Mary, its site, and the lands belonging to it, together with the old town, now Killowen, and all its appurtenances. But this condition appears to have been very much neglected, for Pinnar, in his first survey, in 1619, says, "that part of the town which is unbuilt is so dirty that no man is able to go into it, especially what is called, and should be, the market-place." The same writer, in his second survey, dated 1625, says:—"The town of Coleraine is in the same state as at the last survey; only three houses are added, which are built by private individuals, the society allowing them £20 a piece. The walls and ramparts are built of sods; they do begin to decay, on account of their narrowness; the bulwarks are exceedingly little, and the town is so poorly inhabited that there are not men enough to man the sixth part of the wall." So unpromising was the condition of this settlement that, in addition to the sum of £20, large portions of land were allotted for each tenement, and long leases at nominal rents were offered to all who would undertake to build houses.

A conspiracy of the natives having been formed to seize the place, in 1615, military stores were sent hither from London; and by a vote of the common council, a citadel was built for its defence in the following year; it was a strong fortress, commanding the ferry, and was kept in repair and well garrisoned by the Irish Society, till the erection of the bridge in 1716. The bridge, which was wholly of wood, was so much injured by floods, that it fell in 1739; and in 1743 a new bridge was built, with pillars and buttresses of stone, towards the erection of which the Irish Society gave the timber and £2,050 in money; in 1806 it was widened at the expense of the county, by transverse beams supporting a footpath of four feet on each side. The growth of the place was exceedingly slow, and so little had its trade advanced that, in 1633, the customs of the port, for the half-year ending on Lady-day of that year, amounted only to £18 9s. 8½d. On the breaking out of the war in 1641, the town was attacked by a body of 1,000 insurgents, but was vigorously defended by the garrison and inhabitants, amounting to 200, who defated the assailants. It was taken by Gen. Monk for the Parliament, in 1648, but was afterwards given up to Sir C. Coote. On the advance of the forces of Jas. II. into the north, in order to repress the Protestant party, Mount-Alexander, Rawdon, and other leaders, stationed themselves with a force of about 4,000 men at Coleraine, which they fortified and kept possession of with a view to prevent the Irish from passing the Bann. They were here joined by Lord Blayney with his party from Armagh, and though for a time they repulsed the enemy, yet the Irish, after a successful skirmish, passed the river in boats, and the party stationed here finding the place no longer tenable, fled by various routes to Derry, in order to take possession of it, before the Irish could cut them off from their last place of refuge. The subsequent history of the town consists of little more than a succession of disputes in the corporation, and between that body and the Irish Society, relative to their respective rights, privileges, and possessions: the Society enclosed the quay and made the port duty free in 1741.

The town, which is the second in the county in importance, and is rapidly increasing, is situated on the east bank of the river Bann, about three miles from its influx into the sea, and is connected by a handsome bridge with the village of Killowen, or Waterside, a considerable suburb on the opposite bank of the river. It is large and handsomely built, consisting of five principal streets, a spacious square called the Diamond, and several smaller streets; the houses in the Diamond, New row, Church street, and Bridge street are large and well built, especially those of later erection; in the Diamond and in Church street are some ancient houses of timber cage-work, said to have been framed in London and sent over by the Irish Society to be erected here.

The inhabitants received a charter of incorporation from Jas. I. in 1613, by which the Government was vested in a portreeve, burgesses, and commonalty, and by another charter granted in the same year, which latter is the governing charter, in a mayor, recorder, chamberlain, coroner, twelve aldermen (including the mayor), and 24 principal burgesses, assisted by a town clerk, prothonotary, serjeants-at-mace, and other officers. Previously to the Union, the borough returned two members to the Irish Parliament; the right of election was vested in the mayor, aldermen, and burgesses alone, but by the decision of a Parliamentary committee it was declared to be vested also in the freemen.

The priory of St. John, or "Kil-Eoin," from which the suburb on the western side of the Bann, now Killowen, took its name, has altogether disappeared; a part of that establishment formed the old parish church, on the site of which another was subsequently erected, the remains of which have been converted into a schoolroom. Not far distant was the monastery for Canons Regular, founded by Carbreus in 540, and the site of the castle which was built on the ruins is now occupied by Jackson Hall. In sinking for foundations in the part of the town of Coleraine which occupies the site of the ancient abbey of St. Mary, stone coffins, human bones, and other relics of antiquity, together with foundations of some of the conventual buildings, are frequently discovered. One mile south of the town is Mount Sandel, one of the largest and most perfect raths in the kingdom; it is 200 feet high, surounded by a deep, dry fosse, and encircled near its summit by a magnificent terrace; in the centre is a deep, oblong cavity, called the Giant's Grave, formed apparently for the purpose of concealment. There is also a very high and perfect rath a little west of the Cranagh; another close to the church of Killowen; and a very curious fort near Ballysally. This place has been celebrated from the earliest annals of Irish history, and has produced many eminent lawyers, senators, and divines: among the latter was Dr. John Vesey, born here in March, 1632, and successively Archdeacon of Armagh, Dean of Cork, Bishop of Limerick, and Archbishop of Tuam. From this last dignity he was driven by the harsh conduct of Lord Tyrconnell, and remained in London in great poverty till he was restored to his see, on the accession of William III.; he was three times after his restoration made Lord-Justice of Ireland, and died in 1716, aged 84. John Abernethy, an eminent Presbyterian divine, was born here in 1680. Coleraine has given title to many noblemen; the last was that of Baron to the family of Hanger.

THE ANCIENT AND PRESENT STATE OF THE COUNTY AND CITY OF CORK.

By CHARLES SMITH, M.D.

Æquum est enim meminisse & me, qui discerem hominem esse, et vos, qui Judicetis ut si probabilia dicentur nihil ultra requiratis. Cicero Univers

In Two Volumes.

VOL I.

The Second Edition, with Additions.

BOOK II.

Containing the Topographical Description of this County, including the City of Cork.

Chapter I.—Continued.

The church is a neat structure, and well pewed; and the steeple is capable of holding a ring of bells. On a white marble, on the Gospel side of the altar, is this inscription:

Elizabeth Atkin, alias Coningsby,
Wife of Walter Atkin, Clerk,
And Incumbent of this Parish,
Of the Family of Hampton-Court,
County of Hereford, England.
A sincere Friend,
A prudent Mistress,
A tender Mother
A dutiful Wife,
A true Christian.
Died in fervent Faith and Devotion,
November the 4th,
1713.

Arms, argent, three conies gules, a chief vairy or and azure.

William Hutcheson, first sovereign of this corporation, lies interred in the chancel; he died March 9th, 1690, and was born ann. 1631.

Upon an handsome tomb in the burial ground is this inscription:

D. O. M.
Elizabethæ Dawson, piæ innocu
Matri amantissimæ, uxori charissimæ,
Quæ annos vixit 39,
Febri correpta obiit, 26 Martii, 1748.
Posuit mæstissimus conjux
Robertus Berkley, D. D.

On the grave stones are the names of Lewis, Downing, Hill, Harold, Pritchard, Martin, &c. Alan Brodrick, Esq., Lord Chancellor of Ireland, was created Baron Brodrick of Middletown, Apr. 13th, 1st of Geo. I., 1715, and Viscount of the same, Aug. 3, 1717, in which year he was constituted one of the Lords Justices of Ireland, as he was several times after.

Not far from the water side there is the remains of an ancient building, called the Spittle, supposed to have been a leper-house, of which kind there were many in this kingdom. Near this is the village of Ballinachora; and adjacent the Rev. Dr. Berkley has a good house, with gardens and plantations. In the garden is an high sepulchral mount, being one of the Danish tumuli.

The Lord Viscount Middletown has two fine deer parks here, one on each side of the town. In that nearest Cork harbour is his seat, called Ballyanan, very agreeably situated. In Middletown park is a small river that takes a subterraneous course, near which is a large romantic cave. Near Middletown is Rocksborough, a pleasant seat of Richard Hull, Esq., adjacent to which is a reputed holy well, frequented by the superstitious Irish on Lady-day. In a bog between this and Castlemartyr, marle has been discovered on Lord Middletown's estate. There is also marle at Coppinger's town, about a mile E. from Middletown, of a blue and white kind, of which a good quantity may be had. The lands from hence to Carrigtohill and so on to Cork, have great plenty of limestone, and afford large crops of corn.

In several parts of this barony, iron ore may be found in plenty, particularly on land near Castlemartyr, callen Rathcallen, where the outward stratum of it may be seen in the highway and ditch sides, besides many stones tinctured with the mine. An uncommon accident, which happened to some apple trees on this land, may be worth mentioning; some were killed, in a night's time, from the top to the root; and others, here and there, decayed, though in perfect health the day before. Lightning might have probably been the cause of this accident. Mr. Evelyn mentions the like to have befallen trees even in a shorter time.

At Middletown there are veins of several coloured marbles, particularly liver coloured, black, and grey; but that of Castlemartyr, of the grey kind, exceeds it in closeness of texture and largeness of the blocks. There are few woods in the barony, except those of Killeigh and Glanbowre; in the latter are some good echoes, affording seven or eight repercussions from the same sound. The hills to the north are but poor and very stony, the manure mostly used is sea-sand. Burning and grassing has been too much practised, to the great impoverishment of the soil. A new kind of manure used in this barony, and in some other parts of this county of late, is burnt clay.

Kilnataloon is the smallest barony in this county; it signifies the church on the other side of the river (28), which was probably the church of Knockmourne, an ancient corporation. It is bounded on the E. by Waterford, on the W. by the barony of Barrymore, on the N. by Imokilly, and on the S. by the barony of Condons. It was formerly mortgaged by the Lord Barry (28) to Thomas, the eighth Earl of Desmond, and was assigned by Gerald, Earl of Desmond, to his brother, Thomas Roe. This small barony is watered by the river Bride, which runs N. of Tallow and discharges into the Blackwater. Sea sand may be brought for manure, by water, up to Tallow bridge; and near the western part of this barony there is plenty of lime for the same purpose. On the banks of the Bride are the ruins of several of Desmond's castles. Mogeely, two miles W. of Tallow, was a principal seat of the Earl himself. It takes its name from the parish church, which in old Irish was named Moidghealladh, i.e., the church of of the vow. At this castle, Thomas, the great Earl of Desmond, resided, who had a favourite steward, that often took great liberties with his lord, and by his permission tyrannised over the Earl's tenants equally with his master. This steward, unknown to the Earl, gave an invitation in his lord's name to a great number of the chiefs of Munster, with their followers, to come and spend a month at this castle. The invitation was accepted, and crowds of gentlemen flocked in, to the great surprise of Desmond, who began to be alarmed, lest sufficient provision should not be found for such a number of guests. They had not stayed many days when provisions in reality began to fail, and at last the Earl's domestics informed him that they could not possibly furnish out a dinner for the next day. The Earl was in a great strait, and knew not what to do, for his pride could not brook to let his guests know anything of the matter; besides, his favourite steward, who used to help him in such things, was absent. At length, he thought of a stratagem to save his credit, and inviting all his company to hunt next morning, ordered his servants to set fire to the castle as soon as they were gone, and to pretend it was done by accident. The Earl and his company hunted all the forenoon and from the rising grounds he every moment expected, with an heavy heart, to see Mogeely in a flame. At length, about dinner time, to his great surprise, his favourite steward arrived, mounted upon a fresh horse, whom the Earl threatened severely for being so long absent at such a juncture. The steward told him he arrived just time enough at the castle to prevent his orders from being executed; and, farther, that he had brought a large prey of corn and cattle sufficient to subsist him and his company for some months; which news not a little rejoiced the Earl, who returned with his guests to the castle, where they found sufficient plenty of everything they wanted. The ruins of this castle show it to have been a very large and stately building.

The other castles are Kilmacow, about a mile W. of Tallow; it was built by John Fitz-Gerald, descended from the house of Macallop. This castle, with one plowland adjoining to it, being demised to Richard Joke, the 1st of July, 1586, was by him assigned to Richard Crishal, Jan. 30, 1593, and by him to Sir Richard Boyle, Jan. 7, 1604. Near it is the dwelling-house and offices of the Rev. Mr. Thomas

(28) The barony of Kilnataloon contains five parishes, viz., Agherne, Ballynoe, Mogralty, Coole and Knockmourne, being 41 plowlands, and therein 15,677 acres.

(28) Kil, a church, tal, over, oon, the river.

(29) MS. Sir Richard Cox.

Squire. This castle has very lately fallen down (30).

A mile west of Mogeely is Connough castle, which belonged to Thomas Fitz-Gerald Roe. It was demisd to Sir Richard Boyle by Sir James Fullerton, anno 1603. Near it is a stone bridge over the river Bride. This castle is an high, square tower, built on a steep rock, and commands an extensive prospect over the adjacent country. More west is the small parish church of Knockmourne in repair, the only remains of an ancient corporation, which was entirely burnt down by the White Knight, with many other churches and villages, in Desmond's rebellion. A mile west of this last is Aghern, where was formerly another castle of the Fitz-Geralds on this river; it is now a good house, with orchards, gardens, and other plantations of Mr. Giffard, pleasantly seated on the Bride. Near it is the parish church in repair.

In this small barony are some good improvements, particularly at Curryglass, a neat, pleasant village, prettily planted and well watered, in which (besides other gentlemen's houses) is an elegant seat, formerly possessed by William Maynard, Esq., then collector of Cork, but of late gone much to decay, being in the hands of the crown. On this land is a white clay, with which the above-named gentleman covered the walls of a wood, that for its smoothness and whiteness was much admired. At this place is a large, well-grown cedar (not many years ago) raised from seed brought from the West Indies, from which tree many others have been propagated by layers. At Curryglass is an holly-tree, perhaps the largest of the species in Ireland. Here are also witch elm that bear seed.

At Ballynoe, two miles south of Knockmourne, near the decayed church, are some large ruins, said to have been a religious house, but of what Order I cannot find, either from tradition or record; and near it is a good chalybeat spaw.

There are several plantations of cider fruit in this barony, and in the neighbourhood towards the banks of the Bride and Blackwater.

Mr. Philips, in his poem on that liquor, thus beautifully characterises several kinds of this fruit:

The Pippin burnish'd o'er with gold, the moile
Of sweetest honey'd taste, the fair Pearmain,
Temper'd, like comliest nymph, with red and white;
Nor does the Elliot least deserve thy care,
Nor John Apple, whose withered rind, intrench'd
With many a furrow, aptly represents
Decrepid age; why should we sing the Thrift,
Codling or Pomeroy, or of pimpled coat
The Russet, or the Cat's-head, weighty orb
Enormous in its growth—

The Burlington crab, or Earl of Cork's pippin, and an harsh, austere apple, called the Kekagee, with a mixture of golden pippins, are most esteemed in this county for making the best and strongest cider (31).

(To be Continued.)

(30) At this place, the first earl of Cork had a very large iron works. I find, by the accounts of iron in the castle of Lismore, there were made here, for his lordship, in seven years, 21,000 tons of bar iron, which at £18 the ton, as it was then sold, was worth £378,000 sterling. Most of the mine was dug up at Ballyregan. The bar-iron, I find, did not stand his lordship more than £3 a ton, wood being then very plenty.

(31) Langly, in his Pomona, fol. London, p. 149, says, to make this account of our ciders as compleat as I can, I must, in the last place, mention to you another sort which hat not been heard of among us, more than six or seven years: The name of it is, Cockagee or Cackagee (for the word, as far as I can learn, is Irish, in which I, as well as you, am no critic). The fruit is originally from Ireland, and the cider is much valued in that country. About 16 or 18 years hence (if I am rightly informed), it was first brought over, and promoted about Minehead, in Somersetshire. Some gentlemen of that country have got enough of it to make 5, 6, or 8 hogsheads a year of the cider; and such as have to spare from their own tables I am told sell it from £4 to £8 a hogshead.

CHARITY TO MAN.

BY WILLIAM DRENNAN.

O sweeter than the fragrant flower
At evening's dewy close,
The will, united with the power,
To succour human woes!

And softer than the softest strain
Of music to the ear,
The placid joy we give and gain
By gratitude sincere.

The husbandman goes forth a-field:
What hopes his heart expand!
What calm delights his labours yield—
A harvest, from his hand!

A hand that providently throws,
Not dissipates in vain;
How neat his field, how clean it grows!
What produce from each grain!

The nobler husbandry of mind,
And culture of the heart—
Shall this with men less favour find,
Less genuine joy impart?

O! no; your goodness strikes a root
That dies not, nor decays;
And future life shall yield the fruit
Which blossoms now in praise.

The youthful hopes that now expand
Their green and tender leaves,
Shall spread a plenty o'er the land,
In rich and yellow sheaves.

Thus, a small bounty, well bestowed,
May perfect heaven's plan;
First daughter to the love of God
Is charity to man.

'Tis he who scatters blessings round,
Adores his Maker best;
Tis walk thro' life is mercy-crowned,
His bed of death is blest.

CALIFORNIA'S GOLDEN TREE.

Everyone is familiar with the fame of California's gigantic sequoia-trees. Hardly less wonderful for size, and far more useful than those trees, are the first cousins of the giants, the redwoods, Sequoia sempervirens. Unlike the Sequoia gigantea, the redwoods avoid the mountains and follow the seacoast, keeping a few miles back, but always within reach of the fogs. Of late there has been a revival of the redwood lumber industry, and the great excellence of the wood has never before been so fully recognised as it is now. Of a light salmon colour when cut, it gradually turns a deep red. It is hard, and remarkable for its resistance to fire. It gives fine results in carving, and when used for piano-cases is said to increase the resonance of the instrument. It polishes beautifully, and is used for house interiors and many decorative purposes. The annual product is now more than 300,000,000 feet, and it is estimated that the supply will last for 150 years.

AN ANCIENT MEXICAN CITY

Senor Leopoldo Batres, the eminent Mexican archæologist, passed through Chicago recently, on his way to the City of Mexico, from the congress of Americanists recently held in New York. Senor Batres has long been an authority on the archæology of his country, and for many years has been in the service of the Government with the title of "inspector general y conservador de monumentos en la Republica Mexicana." His published works have made his name familiar to scientists all over the world, and his discovery six months ago of the buried city of Monte Albau, four miles from the city of Oaxaca, in the southern part of Mexico, not very far from the ruins of Mitla, is the most important of its kind ever made in America.

Senor Batres and Senor Berriozabal, the Mexican Consul in Chicago, were guests of "El Circulo Espanol," and by special request of the members, the former gave an account of his explorations in Monte Alban. Senora Corella-Phipps acted as interpreter, and with the ease and fluency of speech which characterise his race, Senor Batres told in charming conversational style of the great city covering millions of cubic metres, with its spacious palaces, pyramids, and tombs, built of stone and mortar on the top of a high ridge of mountains so steep and rough as to be almost inaccessible.

In the absence of any indication of there having been water there, the supposition must be that not only were all the building materials brought from a great distance below, but also the water for mixing the mortar. It was a mighty enterprise. The speaker calculated that it would take 10,000 men a hundred years to construct such a city in that place. The walls are still in an excellent state of preservation, and have upon them carvings which throw some light on the beliefs and customs of the inhabitants, who, according to Senor Batres' calculations, must have lived over 2,000 years ago.

He traced several points of resemblance between these ruins and those of Egypt, the most striking being the obelisks, which, as in that country, stand facing the tombs of the monarchs, who apparently erected their own tombs before their death. On the four sides of the obelisks are carved statues seven feet in height in a sitting posture, with the head bent forward and the eyes closed. The inscriptions on the sides are in picture language and commemorate presumably the achievements of the rulers.

The speaker thought there was no hope of the inscriptions ever being correctly interpreted, as they show conclusively that ancient people had no knowledge of an alphabet to which a key might some day be discovered, as in the case of the Egyptian hieroglyphics. One of the pyramids of Mount Alban is larger than that of Cheops, and, as in Egypt, gives every indication of having served for the purposes of burial.

The stone steps of the stairways in the ruins are evenly hewn with sharp cut corners. The origin of this ancient city is as mysterious as the cause of its destruction. Some of the stones of the stairway are found thirty metres from their original location, and have the appearance of having been hurled there by some mighty force.

"BLACK LIGHT."

This curious term is used by Gustave Le Bon, of the French Academy of Sciences, to describe a form of radiant energy which arises from the back of a thin sheet of opaque metal when the front is illuminated with ordinary light. "Black light" in some of its properties resembles the X-rays, but differs from them in fundamental points. Le Bon first announced the discovery of this singular radiation in 1897. This year it has been observed by Monsieur Nodon, who calls it a radio-actinic phenomenon.

LITERARY NOTES.

It is announced thtat the publication of the "Pilot" is about to be resumed.

✧ ✧ ✧

Dr. P. W. Joyce has in the press in Dublin a work entitled "A Social History of Ancient Ireland," the aim of which is to picture society, in all its phases, as it existed in Ireland before the Anglo-Norman Invasion. It will be published early next year by Messrs. Longmans, Green, and Co.

✧ ✧ ✧

The book of the week has, of course, been General Christian Rudolph De Wet's work, "Three Years' War." This volume has been reviewed in all the principal journals, and it is no exaggeration to say that it has enhanced its author's reputation, not only as a soldier, but also as a statesman. Messrs. Constable are the publishers.

✧ ✧ ✧

Fanny Burney and Jeremy Taylor are to be included in Messrs. Macmillan's new series of "English Men of Letters," now in course of publication, Mr. Austin Dobson having engaged to write the Life of the former and Mr. Edmund Gosse that of the latter. For the same series, Mr. George W. E. Russell will write the volume on Sydney Smith, which was originally undertaken, but afterwards abandoned, by Mr. Augustine Birrell.

✧ ✧ ✧

Professor Mason reached his eightieth birthday on Wednesday last. He was born at Aberdeen on December 2, 1822, and from the age of nineteen, when he became editor of a Scottish provincial paper, has been in harness up till lately as author, lecturer, and Professor of English Literature in University College, London, from 1852 until 1865, and from 1865 until 1895 in Edinburgh University. His monumental work on Milton embalms his name, while he has made many fields of literature and history otherwise peculiarly his own. He has edited the Register of the Privy Council of Scotland until recently, when he was succeeded by Dr. P. Hume Brown as historiographer for Scotland.

✧ ✧ ✧

The work is in eight volumes, published at sixteen shillings the volume, and is illustrated with numerous portraits, fourteen coloured plates and autographs. Among the portraits are those of Rabelais, with facsimile of his autograph; of Honore d'Urfe, first of French romancers; of Pascal, with facsimile of a page of his "Pensees"; and, needless to say, we have a whole portrait gallery of the eighteenth-century writers and beaux-esprits. Here we find that jolie laide, or, as we should put it, interestingly plain woman, Madame d'Epinay and her somewhat ungracious protege Rosseau; also D'Alembert, life-long, unrewarded adorer of another jolie laide—Mdlle. de l'Espinasse, of the immortal love-letters; also Madame Geoffrin, the bourgeoise holder of a salon of whom Sainte-Beuve has given us so charming a portrait. This sumptuous and encyclopædic work ought to be added to every public library.

✧ ✧ ✧

A correspondent of the "Western Mail" gives some interesting particulars of the late Mr. G. A. Henty's mining experiences in South Wales. Mr. Henty's father, who had made a moderate fortune, bought, in 1852, some old ironworks at Banwen. This was at a time when the Welsh iron industry was reviving after long depression, but unfortunately the new proprietor knew nothing of the iron industry. He removed with his family to Banwen, which was a bleak, boggy, and uncomfortable neighbourhood, and proceeded to lose his money. There was not even a proper approach to the works, and material had to be hauled in sledges over the hills. Also there was a dispute with a neighbouring landowner as to the right way. The whole thing resulted disastrously, but it was good-training for the future story writer.

✧ ✧ ✧

One of the most splendid literary enterprises of the day has been successfully brought to a close during the present year. This is the great history of the French language and literature, edited by M. Petit de Julleville, his collaborators, whose name is legion, being the first contemporary writers, Thus M. Joseph Texte, whose works upon Rosseau and Wordsworth have been translated into English, writes upon the international literary relations of France during the eighteenth century, also from 1848 to 1899; M. Emile Faguet, foremost of French critics, writes upon the history of criticism in France; M. Rene Doumic, the well-known contributor to the "Revue des Deux Mondes," gives a monograph upon La Fontaine; M. A. Chuquet, whose works on the Cahiers of 1889 has been noticed in these pages, writes on literature of the Revolutionary period; and Mr. Gaston Deschamps, who was recently lecturing here, dilates upon Victor Hugo.

✧ ✧ ✧

The latest number of the "Academy" contains an interesting appreciation af the work of the late Mrs. MacAlpine (Avery MacAlpine). Our contemporary remarks:—Although for just ten years no new title-page with the name of the author of "Teresa Itasca' 'has issued from the press, there must be many whose recollection of the volume thus called (after the name of one of the four stories it contained) will have been revived by the announcement of Mrs. MacAlpine's death. "Teresa Itasca" (Chatto and Windus, 1886) a work rather of fine promise than of matured achievement revealed two years later in "Broken Wings" (Chatto and Windus, 1888) —had a critical reception, which left the literary position of "Avery MacAlpine" in no dubiety, and sustained the judgment of the circle, enthusiastic rather than full, which has welcomed her first book. "Broken Wings" appeared serially in the "Pictorial World," as did "A Man's Conscience," published as a volume by Messrs. Sampson Low in 1890. "Joel Marsh: an American" (Ward, Lock and Co., 1892), was the last novel which Mrs. MacAlpine, herself of the hero's nation, ever wrote.

✧ ✧ ✧

Continuing, our contemporary says:—Interrupted health and an intermittent affection of the eyes, which made sustained literary effort painful and uncertain, hampered her work during the last years of her life, and disappointed the expectations of that public of her own which had been able to appreciate the rather elusive and restrained character of her art. She contributed from time to time essays and short stories to "Black and White" and the "Sketch," and her fine critical taste gave a delicate individuality to her occasional appearance as a reviewer in several literary organs, including this journal. But it was chiefly for their first acclamation of the four short, slight stories in "Teresa Itasca" that her literary admirers applaud themselves. They had, as it were, made at once this intimately delightful discovery of a personality in fiction, and the meagreness in all but quality of her eventual achievement gives the note of disappointed expectation to the regret with which the news of her death, after a short and rather sudden illness, has been received. She will be remembered in her novels and stories by the audience, fit if few, which first treasured, and by the larger public which eventually came to recognise them. It is not inappropriate to say that in social life Mrs. MacAlpine has left friends on both sides of the Atlantic, to whom the loss of an endearing personality comes with even a sharper pang than to those whose opportunities allow them to regret her talents alone.

✧ ✧ ✧

Mr. W. D. Howells, in "Harper's Bazaar," has been telling girls what to read. Fiction and poetry, he says, should be read "least and last," which is a very hard saying, indeed. However, every thing depends on the girl. Mr. Howells has recently assured us that the man writes novels writes for women—they constitute his public. But to educate the public up to novel reading a good deal of hard works seems to be necessary; Mr. Howells assumes that the indispensable part of a girl's reading should include "history, biography, travels, studies in the speculative and exact sciences, and philosophical and critical essays." When Mr. Howells comes to novels he is not kind, but we do not say that he is unjust:—

Most novels are worse than worthless, not because they are wicked, but because they are silly and helplessy false. Among the worse of the worse than worthless are the historical novels, which pervert and distort history, not so much because the authors are wilfully indifferent to the facts, as because they have not the historical sense. A very, very few novels in this kind are above contempt, but these are so good that they redeem all their kind. Some of Scott's (but not many), Manzoni's "I Promessi Sposi," Stendhal's "Chartreuse de Parme," Tolstoy's "War and Peace," D'Azeglio's "Nicolo de' Lapi," and the novels of Erckmann-Chatrian treating of the Napoleonic campaigns, are books of such superlative excellence as to give one pause in any headlong censure of the class they dignify. . . But when a poor girl has read them, what shall she do? Go on from them to worse novels? By no means; she must go back to the best, and read them again, and keep reading them, and them only.

This is quite sound advice, for others as well as girls; but still the pseudo-historical novel increases and multiplies, and its author flourishes like the green bay tree.

✧ ✧ ✧

A volume compiled by Estelle Davenport Adams, just issued by Mr. Grant Richards, entitled "This Life and the Next," is full (remarks a literary contemporary) of the best kind of serious utterance. Books of this sort have an inherent appeal to almost every class of reader; they bring together the balanced thought of the ages upon the two unsolvable mysteries. In her preface the compiler says: "It has especially been sought to record, where obtainable, the writers' latest comments upon Life as they had known it and Death as it presented itself to their imagination." Turning over the pages at random we chance upon this noble and familiar passage from Scott:—

I am drawing near the close of my career; I am fast shuffling off the stage. I have been, perhaps, the most voluminous writer of the day; and it is a comfort to me to think that I have tried to unsettle no man's faith, to corrupt no man's principle, and that I have written nothing which on my death-bed I should wish blotted.

A few days before his death Daudet said:—

When I look at life I do not find it banal, and and just because it is not banal it interests me, and I observe it, and I like to put it in my books. I adore life because it is beautiful, because it is full of poetry and mystery, of seduction and fascination.

Robert Buchanan, who was often in revolt against things as they were, could write thus with sincere conviction:—

I dream'd when I began
I was not born to die,
And in my dream I ran
From shining sky to sky;
And still, now life grows cold
And I am grey and wan,
That infant's Dream I hold,
And end as I began.

Finally we may quote this passage from one of R. L. S.'s letters:—

Life is not all Beer and Skittles. The inherent tragedy of things works itself out from white to black and blacker, and the poor things of the day look ruefully on. Does it shake my cast-iron faith? I cannot say it does. I believe in an ultimate decency of things; ay, and if I woke in hell, should still believe it.

SCIENTIFIC TOPICS.

General Crozier was formally installed as the head of the United States Bureau of Ordnance on June 28, after a long struggle made against his appointment to the place. The opposition was based on the fact that he is the inventor of a large number of mechanisms designed for army use, and as the head of this branch of the service he would be called upon to pass on innumerable other devices, and the claim was made that under the circumstances he would not be tble to give an unbiased judgment. This objection was largely removed by displacing him from the Board of Ordnance and Fortifications.

✧ ✧ ✧

A new car coupling is being tried on the line from Berlin to Oranienburg, which has for its object to lessen the space between the cars. With this system the distance has been reduced to 20 centimetres (7.8 inches). The buffers are the same as in the old cars, but the springs, which are, a little shorter than before, are built into the cars, thus making the shorter couplings possible. The question has been raised if the shortening of the couplings will not bring about an increase of danger from collisions. Careful trials, however, have proved that this is not the case, as the effect of the buffers remains the same as in the old system.

✧ ✧ ✧

A Swedish engineer, Mr. T. F. Malmros, has invented a lubricator for oiling piston-rods, cylinders, and guides on locomotives. By introducing the intermixed steam-lubricating apparatus, through glandular bushings expressly constructed for this purpose, the invention has effected a good and economical lubrication of packings and rods, as well as of the cylinders and guides. The system has for five years been tested on the engines of the fastest train in Sweden, with such good results that all locomotives of the State railroads will be provided with it. This seems to be revival of the old lantern brass used in the Cornish engine.

✧ ✧ ✧

In the city of New York there are only 737,477 white persons born of native parents, or but 21.4 per cent. of the population of the city. This statement means that out of every one hundred persons living within the municipal boundaries of New York seventy-eight are either foreigners or the children of foreign-born parents, or coloured people. New York however, is not the first, but the second city of the country having the largest foreign-born population. Fall River, Mass., is first in that respect. Official figures show that there are in New York city more males under twenty-one years of Slavonic parentage than of any other people, and the number of Slavonic men more than twenty-one years of age exceeds that of any other nationality except Germans and Irish.

✧ ✧ ✧

Herman O. Moritz, of No. 473 Fifth Avenue, Brooklyn, the inventor of a device called the aerial toboggan, was killed at Coney Island on June 12, while getting his toboggan slide in shape for operation. He had secured a patent on the thing with some difficulty and commenced the construction of the first one about three years ago, but until recently he was refused permission to operate it because of the danger. During the last spring, however, he modified the plans to such an extent that the building commissioners gave him the desired consent, and preparations were being made to send the first car over the slide when it slipped from the chains which were holding it and started off "wild." The inventor was standing at the foot of the incline, and the car struck him with such force as to hurl him a great distance, and injured him so seriously that he soon died.

✧ ✧ ✧

Haber and Geipert have been investigating the conditions under which aluminium is obtained by the electrolytic method, and have published their results in the "Zeitschrift f. Elektrochemie." They point out that no trustworthy details of the method employed in the various works where the metal is now produced have hitherto been made public. Using a small experimental fusion cell, and the ordinary lighting supply current of the Karlsruhe Technical Institute, they were able to reduce alumina without difficulty and to obtain as much as 230 grammes of the metal in one operation. The metal obtained was remarkably pure, one sample tested containing only 0.05 per cent. C and 0.34 per cent. Si. The mechanical tests made with six samples of the aluminium gave an average tensile strength of 21,425 pounds per square inch.

✧ ✧ ✧

The fused mixture used in the carbon cell contained 33 per cent AlF_3 33 per cent. NaF and 33 per cent. Al_2O_3 the high percentage of aluminium fluoride being conducive to fluidity. The current density employed was about 2,800 amperes per square foot, and the E. M. F. varied between 7 and 10 volts. The authors, as the result of their experiments, have come to the conclusion that the steady improvement in the efficiency of the process as carried out in the aluminium works is due, not to secret modifications in the process, but to the more careful attention now given to the purity of the raw materials employed. They also point out that the carbon contained in the aluminium obtained in their experiments was not present in the combined form, and as it was graphitic in character they assume that it represented mechanically inclosed particles, due to the disintegration of the anode and cathode carbon. By remelting the aluminium it was possible to remove a portion of this impurity from the metal. The necessity of employing carbons comparatively free from ash is insisted on, since any impurities of the carbon used will be found in the final product.

✧ ✧ ✧

In studying the heating effects upon the poles of a spark-gap, as affected by the variance of the inductance of the circuit, Mr. B. Eginitis uses Tesla coils without a core, and poles of fine wire. The brightness of the aureole varies at first inversely as the heating effect for all metals examined. At high inductance, both the temperature and the brightness increases with increasing inductance—at least, in iron and steel. A closer study of the effects by determining the temperature of the poles was made with the aid of a thermoelectric couple. The metals examined include aluminium, copper, and silver. The heating first increases rapidly with increasing inductances, and then breaks into a succession of maxima and minima. The presence of metallic vapour is not a primary factor in the heating effect, as is shown by the fact that at small inductances the brightness of the spectrum decreases with increasing inductances, whereas the heating increases very rapidly.

✧ ✧ ✧

At a colliery in the Dortmund district of Prussia it was required to dismount a horizontal arm of the pump rods; but this was found impossible owing to the rusting of the bolts and cotters, while the part in question could not be cut through by hammer and chisel on account of the small space at disposal. It was, therefore, determined to effect the separation by means of the electric arc. The energy employed was obtained from a continuous-current dynamo generating 320 amperes at 110 volts, which served for lighting, the negative pole being put in connection with the pump rod and the positive with a carbon of 20 millimetres diameter, held in a well-insulated gas pipe. The latter was fitted with a rest, so that the carbon might be guided by hand, and, for preventing any danger from fire, a bucket filled with sand was placed under the spot where the melting was to be effected, while a small hand pump was also held in readiness.

✧ ✧ ✧

For protecting the men's eyes from the bright light red and green glasses were provided, to be held in the hand. The work was carried through with a current of 320 amperes at 60 to 70 volts, the carbon point being held from 40 to 50 millimetres away from the point to be melted in such a manner that a vertical slot of 20 to 30 millimetres was formed, and then gradually deepened. The guiding of the carbon, which became more difficult as the depth increased, had to be effected in the upward direction, so that the molten iron might fall in drops. The work was performed by six men, who relieved one another every hour or half-hour, in about twelve hours altogether, including a few interruptions. No inconvenience was experienced by the man during the operation; but afterwards all of them felt more or less severe pains in the face and hands, while those who did not always use the glasses also suffered in their eyes. The pains, however, lasted only a short time.

✧ ✧ ✧

Reports have been submitted to President E. H. Harriman, of the Southern Pacific Railroad, for the construction of a tunnel nearly seven miles long through the Sierra Nevada Mountains, at a cost of about £2,800,000. Such a tunnel would cut down the summit grade about 1,500 feet, and would enable the company to dispense with all but three of the forty-two miles of mountain snowsheds.

✧ ✧ ✧

Instead of blowing down coal in mines by means of dynamite, an Englishman intends to make use of a hydraulic cartridge, which is said to obviate the wasteful shattering of the fuel. The cartridge is 20 inches in length. Orifices along its sides admit of the application of a pressure of some three tons per square inch. The total pressure is about 60 tons. It is said that in a few minutes after the apparatus has been at work, the coal breaks up and falls in great blocks. About 1½ pints of water are used in the operation. One colliery proprietor who has adopted the invention for use in three mines computes that each cartridge saves £15 per week.

✧ ✧ ✧

The lack of marble in Denmark has led to would equal in decorative effect the natural product and would not exceed it in cost. Some success has been achieved in the manufacture of this article in Sweden, but the thin slabs would not keep their shape, inclining to bend and warp. The veins were stiff and angular, and the soft transitions of colour which make variegated marble a thing of beauty were wanting. A significant advance has been made in this industry by a Danish master builder, who is producing a stone of such delicate transition of tints and play of colour that it is impossible to distinguish it from the natural product; while as to cost of manufacture, it can compete with all other artificial marbles. The imitation of the more expensive species does not exceed in cost that of the cheaper ones. The inconvenience hitherto met with, that the mass had to be greased to prevent adhesion (thereby destroying the crystalline surface characteristic of the genuine article), has been overcome. The process of manufacture is simple and easily learned, and the cost of the outfit does not exceed £35. The article can be produced in any form desired—columns, plain or fluted, and capitals—as readily as flat slabs. It is claimed that even pictures may be made of this material. It seems to have the durability of genuine marble, but its cost is only about one-tenth as much. At the present stage of the development of the industry the maker is able to produce a slab about half an inch thick at a cost of sevenpence per square foot. The inventor's name is Soren Schongaard, and his address is Copenhagen.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

Extract of a letter from Castlebar, July 29.

"The Assizes of Sligo proved a maiden one, as those of Castlebar will. However, this day a matter of great legal curiosity came on here in the Crown Court—it was in the case of the King against James Foy, otherwise Sladdeen, who was heretofore tried and acquitted for being present, aiding, abetting, and assisting at the traitorous and felonious murder of Patrick Randal M'Donnell, and also of Charles Hipson, with the late George Robert Fitzgerald. This man was afterwards indicted for the procurement of the murder of Patrick Randal M'Donnell, and on his arraignment of the fact pleaded autre fois acquit, upon which plea, issue being joined, the jury found in favour of Foy, under the direction of Sir Samuel Bradstreet. He was this day indicted for procuring the murder of Charles Hipson, and on the Court ordering him up to be arraigned, he moved, by his counsel, for time to plead to the present indictment until the record of the former indictment could be had, which had been removed to Dublin by virtue of a certiorari; and it having appeared to the Court that he fact was so, the trial was postponed accordingly. The counsel for the Crown were James O'Hara, Esq; Francis Paterson, Esq.; and St. George Daly, Esq. For Foy—Edmund Stanley, Esq.; James Whitestone, Esq.; Ulick Burke, Esq.; and George Joseph Browne, Esq.

As there is little reason to doubt the accounts published from the Cove of Cork, relative to the late risings of the Whiteboys, it is apprehended there wil be an absolute necessity of enforcing the Magistracy Act in that county. The recent outrages are a proof that the leniency extended by Government has had but little effect on the Southern insurgents, and certainly should make it the interest of every person, either of condition or property in that quarter, and every other part of Ireland, to enforce such a due execution of the laws as may prevent the necessity of establishing the system of additional magistrates and constables which the Administration, it is evident, are extremely reluctant to enforce, from the great expense it must create in every county.

DUBLIN, MONDAY, AUGUST 6, 1787.

The city of Cork is every day improving in consequence and respectability; and we hear that its inhabitants are determined to have its internal economy equal to that of the best regulated cities in Europe. A resolution has been agreed upon—that the streets shall be lighted in the same manner, and upon the same plan, as those of Dublin, with globes and double-burners, and at similar distances.

DUBLIN, TUESDAY, AUGUST 7.

The first volume of the philosophical and literary transactions of the Royal Irish Academy is now printing, and we hear will soon be published.

The iron boat lately built by direction of an English gentleman, is now without precedent even in this kingdom. as about five years since one of a similar kind was constructed at the iron mills near Lucan, and employed in carrying the fabrics manufactured there to this city. It may seem somewhat strange that iron should swim, but the specific gravity of water being in proportion to a solid or cubical inch of that metal as six to one, if spread out in thinness or flatness, as even to one, must undoubtedly float. Lead bears the proportion of eleven to one, and gold near thirteen, yet water is more compact and less porous than any of them, as all the force of mechanic power cannot compress that fluid into a smaller space than its apparent bulk, whereas these metals can be contracted.

The activity of Mr. Sheriff Fleming deserves the warmest acknowledgment from his fellow-citizens for his indefatigable exertions in removing these long-neglected nuisances, the dung-hills on the sides of our most frequented roads in the environs of the metropolis. In a few days he has removed twelve on the Blackrock road, a considerable one at Rope's rest, and on Saturday last on a line with the houses in New street, about 2,000 loads. By such spirited exertions, the avenues leading to and from the city will be rendered perfectly wholesome, and cleared from those pestilential vapours so destructive to the health of the inhabitants at this warm season.

Houses are actually building at the East side of Merrion square, and the whole range, we hear, will, in a short time, be occupied; previous to which, it is intended to lay out the area of space by levelling the surface. and planting it with a number of perennial flowering shrubs, and constructing a capacious basin in the midst, ornamented with statues, etc.

LIMERICK, AUGUST 6.

We hear that on Wednesday last, three Justice of the Peace, who assisted in levying church rates near Kilrush, in the county of Clare, were interrupted in the execution of their duty, and some cattle which they had distrained were rescued; in consequence of which they called upon a party of the 27th Regiment, quartered in said town; the rioters continuing their resistance, by violently attacking the Magistrates and soldiers with stones. the army were ordered to fire, by which two women were killed on the spot, and several desperately wounded. Two men in whose custody were found fire-arms, were secured and lodged in Ennis Gaol by George Studdert, Esq.

CLONMEL, AUGUST 6.

On the 24th was committed to our county jail, by John Power, Esq., Denis Kennedy, of Failnacleragh, farmer. charged on oath with having on the 20th ult, forcibly detained Catherine Ryan, of Birch Grove, spinster, in the house of Mrs Kennedy, of Failnacleragh, against her will and consent, for the space of eight hours, until relieved by her friends, who were obliged to go in arms to her rescue.

DUBLIN, WEDNESDAY, AUGUST 8.

The benefits resulting from water-carriage on the Grand Canal have very deservedly been made the subject of encomium. The happy effects have been extended to all ranks, but are more immediately felt by trading people who live upon industrious labour. Provision has undergone a sensible and very considerable reduction, and fuel may be had, either Kilkenny coal or turf, at a very moderate rate. Vast quantities come down every day, and their rates are, for Kilkenny coal, 1s 5d per cwt; for turf, 6s per ton; but turf is retailed in smaller quantities. Those are the great necessaries of life, without which the poor cannot exist; to ensure a supply of them, at moderate rates, has been the great object of the Canal Company; and it must give every friend to the community sincere pleasure that they have been so far successful.

Yesterday the "Grace and Peggy," of Cardigan, Captain Philips, proceeded from Dunleary to the Kish Bank, with two gentlemen from England, who have been preparing a considerable time past to make some attempts towards part of the treasure contained in the Belgiofo. They go down in the same bell the unfortunate Mr. Spalding lost his life in; but they have made many essential improvements, by which they can not only continue much longer under water, but commune with those above, and raise themselves to the surface in a moment. Those adventurers have also the advantage of intelligent assistants, perfectly acquainted with the nature of the business, the want of which occasioned the melancholy accident that formerly happened.

Letters of Spain of the 5th of July, mention the death of Marcus Bagot, Esq., Lieutenant-General in the armies of his Catholic Majesty, at the Castle of Saragoffa, in Arragon, of which city and province he was Governor. His Excellency was a native of the county of Kildare, in this kingdom, and is said to have been immensely rich. He was the oldest officer in Spain, being 93, wanting a few days, at his decease.

DUBLIN, THURSDAY, AUGUST 9.

They are now taking down the houses in Parliament row, Blackmoor-yard, etc., for the purpose of beginning the new front to the House of Commons, the plans of which have been agreed upon; it is to be connected to the great south front by a curtain wall, similar to that which joins the new portico of the House of Lords to it, and is to have a portico to the west front, but will not be by any means so superb as the east portico now erected, being a much plainer design, consisting only of four columns of the Ionic order, without any statues to adorn that front.

His Grace the Duke of Rutland is at present at Mr. O'Neill's, Shane's Castle, where he has been received with all that elegance of manner and magnificence of entertainment, almost peculiar to the distinguished character whom he honours with his presence.

The porters of every denomination finding that they must comply with the regulation for procuring badges, as a permission to ply in the streets, numbers of them went in consequence yesterday and took them out agreeable to the mode laid down; several were stopped with their loads, and their baskets detained, until they were obliged to take out Licenses. An affray, however, happened in consequence of endeavouring to enforce these regulations in Newmarket, and one person had his ear almost cut off, but the Police secured some of the refractory persons and lodged them in their guard-houses.

On Monday night, the 30th ult., about twelve o'clock. a number of people on horseback, went to the house of Mathew Bushell, of Garrancasey, within five miles of Clonmel, forced open his door and window, and after throwing in several large stones, some of the party got on top of the house, threatened to pull it down, and put him to death. Bushell, having a loaded gun in the house, watched an opportunity, and fired at one of the party who was outside the door. on horseback, by which he wounded him and the horse on which he rode, and which caused the whole party to retreat, leaving behind three horses, the property of Francis Kearney and John Lonnergan, of Fourmile Water, and Richard Keating, of Lodge; which, it is supposed, according to the usual custom of the Whiteboys, they took from off their lands. This has been the fourth attack of a similar nature on this poor industrious man within six weeks past.

Vol. I., No. 38. DUBLIN, SATURDAY, DECEMBER 20, 1902. PRICE ONE PENNY.

FETHARD CASTLE, CO. WEXFORD.

AS IT WAS IN 1791.

From GROSE'S "ANTIQUITIES OF IRELAND,"

This castle (mention of which is made in the article printed below, "Where Ireland was Fought and Won"), is in the barony of Shelbourne, and on a point of land which forms the western entrance to Bannow Bay. It has been altered and modernised; the original entrance, doors, and windows much enlarged; the outside all plastered, and the stairs are on one side, in the thickness of the wall. The tower remains in its ancient state, is elegant, and well-built. The crown and battlements are supported by brackets; there is an opening round, from whence stones might be thrown, or arrows shot, at an enemy. This castle surrendered to Oliver Cromwell in 1649.

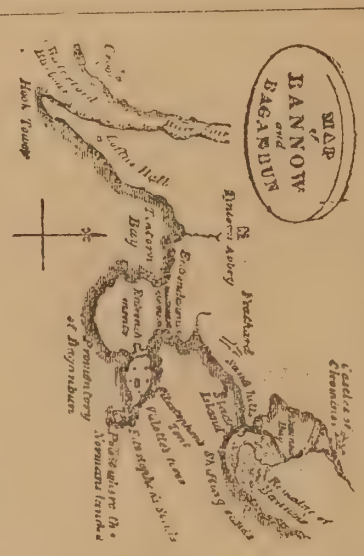
This View was taken from an original drawing by Barralet, in the collection of the Right Honourable William Conyngham.

"WHERE IRELAND WAS LOST AND WON."

WITH SOME ACCOUNT OF THE IRISH HERCULANEUM.

BY REV. R. WALSH, LL.D., M.R.I.A., M.D.

[The following article by Rev. Robert Walsh, LL.D (T.C.D), M.R.I.A, M.D—excerpts from whose book, "Notices of Brazil in 1828 and 1829," with a brief biographical sketch, we gave in our third number—was contributed by him to one of the annuals, "The Amulet," for 1830, which was edited by S. C. Hall.]



In the month of May, 1169, Robert Fitzstephen, then Governor of Cardigan castle, in Wales (by the invitation of Dermod Macmorrogh, King of Leinster), accompanied by Harvey de Monte Marisco, collected a force of 30 knights, 60 esquires, and 300 archers, and embarking in two ships, called Bagg and Bunn, according to the tradition of the country, they ran for the nearest headland, and disembarked at a point called at this day Baganbun, from the names of the vessels that brought them

over. They were next day joined by Prendergast, with 10 knights and 200 archers, making in all an army of 600 men. Dermod had remained secreted in his Castle of Ferns, waiting the arrival of the strangers; they, therefore, apprised him of their coming, and in the meantime fortified themselves on the promontory till some expected reinforcements, which he promised to send, should arrive to assist and guide them. In a short time he was able to despatch his natural son, Donald, with 500 horse; and with this reinforcement they set out from their position to penetrate into the interior of the country. Their direct road would have been through the parish of Bannow, which lay opposite to them; but as they had two deep and rapid channels of the sea to cross, at the mouth of the bay, they were obliged to proceed round the other extremity of it. In their way they were opposed by some Irish collected hastily at Feathard. Here the first encounter took place between the Anglo-Normans and the Irish; and it is still called by the peasants "battles town," in commemoration of the circumstance. It is further added, by the tradition of the country, that Feathard was a name given to the town built on the spot by the conqueror, who called it "Fought-hard," which was, in process of time, corrupted into Feathard.

From hence, ascending the river, which falls into Bannow Bay, he passed through Goffe's Bridge, and so to the town of Wexford. Wexford was originally built by the piratical Danes at a very early period, and called by them "West, or Wex-fiord," the western bay. It was rudely fortified, but could not resist the invaders, now reinforced by all Macmorrogh's adherents. It was, therefore, taken, and Dermod made it a present to Fitzstephen and Fitzgerald, as a reward for their services. Fitzstephen built on the river not far from it, a castle, on the promontory of a limestone rock, and so erected the first Norman fortification ever built in Ireland. This still stands, commanding the navigation of the Slaney, and is a very curious and conspicuous object. It so struck a Catholic barrister on his way to the assizes of Wexford, that he afterwards declared, as is reported, in a speech at the Association, that "it ought to be pulled down as a revolting object of Ireland's first degradation."

This expedition was followed by that of Strongbow, Earl of Chepstow, who has gained the reputation of a conquest, which had been achieved by his predecessor, as Americus Vesputius defrauded Columbus of his title to America. Strongbow passed the promontory of Baganbun, and proceeded up the contiguous harbour of Waterford. Waterford was also built by the Danes, and was a place of some strength and trade. It was called by them "Vader Fiord," the Father's Harbour, and dedicated to Woden, the Father of Scandanavian deities, of which the present name Waterford is an absurd corruption. On one side of Strongbow stood a tower, erected by the Danes on the Wexford shore; on the other, a church built by the Irish, on the Waterford. It was necessary to land, but he hesitated on which shore he should disembark to march to Waterford. He inquired the names of the places he saw, and he was informed one was the tower of Hook, and the other the church of Crook. "Then," said he, "shall we advance and take the town by Hook or by Crook?" And hence originated a proverb now in common use. Strongbow took Waterford, where his grim statue in blue limestone, stands at this day in front of the Ring Tower, close beside the river. He was followed by Henry II. with a large army, and so the warriors obtained the same footing in Ireland as they had done in England, though it took them a much longer time afterwards to establish it. Henry adopted the example of Dermod; he made Dublin a present to his good citizens of Bristol, and the original of this cool and extraordinary gift of the capital of a kingdom to the traders of a commercial town is still extant in the Record-office of the Castle of Dublin.

The prime object of my curiosity on entering this historic ground was to visit

the spot where the first Norman foot had pressed the shore. It was a conspicuous point from my friend's house, at the extremity of a neck of land; the annexed sketch points out the locality.

I embarked in a small boat, and crossed the narrow but rapid Frith which had stopped Fitzstephen's army. From hence I walked along the sand-hills to the romantic and solitary village of Feathard, where there was no inn; but a man from whom I inquired, directed me to a private house. Here the kind landlady set before me a plentiful breakfast of tea, fish, and eggs; and what I valued even still more, a folio volume of Irish antiquities, which it was her delight to study. From her I obtained all the directions I wanted, and then proceeded to the object of my search. I inquired, when near the place, from a peasant who was digging potatoes, the nearest path to it. He immediately threw down his spade, and, in the true spirit of Irish courtesy to a stranger, begged to "go with my honour if agreeable, to show me the ins and out of it." He was full of local information, and I was well pleased to have him for a companion.

The whole headland called Baganbun consists of about thirty acres. It forms a bold projection towards the Welsh coast, and is the only one near Wexford, the shore which extends from it to Carnsore point, near that town, being a flat sand, not safe for shipping to approach. On the side of the greater promontory is a lesser, running from it at right angles, and stretching to the east, about two hundred yards long, and seventy broad; presenting inaccessible cliffs, except at its extreme point, where it is easily ascended. Outside this is a large, high, insulated rock, which forms a breakwater to the surf on on the point, and from this several smaller stretch to the shore, just appearing above water, and affording a kind of causeway. Here it was Fitzstephen ran in and moored his ships, protected from the surf by the insular rock, and availing himself of the low ridge to reach the land. The distance of the last rock to the point is considerably wider than the rest, but Fitzstephen, with his heavy armour, sprang across it, and it is called at this day "Fitzstephen's Stride." My companion tried to follow his example, without his encumbrance, and fell into the sea.

Ascending from hence to the esplanade on the summit, he pitched his tent and established his head-quarters. In the middle of the esplanade is still to be seen an oblong, hollow space, like the foundation of a house, and as the surface of the soil was never disturbed in this place since the period of his landing, it seems not improbable that such a trace would not be obliterated, and that the use assigned to it by tradition is the true one. His next care was to fortify his situation, to secure him from attack while waiting for Macmorrogh's promised reinforcements; and these hasty fortifications yet remain, evincing that the Normans had attained to no small science in the art of defensive war. On the isthmus which connects the lesser peninsula with the greater, a deep fosse, about seventy yards long, extends from side to side; this was bounded on each edge by high mounds of earth, and in the centre covered by a half-moon bastion, twenty yards in circumference. On each side of the bastion, through the fosse, were the approaches to his camp, by two passages; and a mound of earth connected the bastion with the esplanade. Sentinels placed in this half-moon entirely commanded the approaches, and were themselves protected by a rampart which rose round them and overlooked all the ground in the vicinity. Beyond this, on the neck of the greater promontory, he also sunk a fosse, much more profound and extensive, stretching across the whole breadth, for the space of two hundred and fifty yards. This formed a deep and wide covered way, and was lined with a high mound on either side, that on the outside being defended by another deep fosse. All these remains are very distinct and perfect at the present day, changed only by the growth of

vegetable matter, rendering the fosse somewhat more shallow, and the mound less elevated.

But a discovery was made a short time ago connected with this encampment, which adds considerably to the interest it excites. About five years before my visit, some labourers were throwing up a low hedge round the cliff to prevent the sheep which graze there from falling over. On turning up the soil, the discovered about one foot below the surface the remains of fires at regular intervals on the edge of the precipices. These were supposed to be the watch-fires of the Videttes, which were stationed round the encampment. Some of the freestone flags on which they were made were also found; and as there is no such stone in this part of the country, they must have been brought for that purpose by the strangers. Sundry pieces of bones of sheep and oxen, consumed by the army, were strewed round the fires, particularly cow's teeth, the enamel of which remained perfect, though the osseous parts were decayed; and on the whole promontory, fragments of rings and spears were picked up wherever the soil was disturbed. Curious to see some of these remains, I requested my companion to get a shovel and dig for me; he did not require to be asked a second time, but ran off and soon came back with a spade, and began to dig with all his heart where the first had been discovered; he soon upturned pieces of charcoal and parts of burnt bones, which I brought away with me as memorandums of the first fires ever lighted by the Anglo-Normans on the shores of Ireland.

It is now nearly seven hundred years since that event, and everything connected with it on this spot is in singular preservation. It is so remote as to be entirely out of the way of intercourse with other places, and seldom trampled on by human feet. The soil, tradition says, was never turned up, and the surface continues at this day as it was then left by the Normans—it is, and has always been, a sheep-walk. The remains also consist of the most undecaying materials; charred wood and bone are nearly imperishable. The circumstances connected with it are perhaps the most interesting in the history of our country; the first landing of the strangers in this place was of deep importance to England, and still deeper to Ireland. "Baganbun, where Ireland has lost and won," is the universal expression of the people of the country, nad they consider it an occult and prophetic saying. My companion, when we were leaving the place, asked me if I had ever heard "The ould saying about it." I replied "Yes, but I do not understand how Ireland has won on this spot." 'Oh!" said he, "that's to come, they say; sure didn't the boys in the ruction want to fight it out here entirely" It is certainly affirmed that some of the leaders in the Wexford insurrection, in 1798, wished to avail themselves of the feeling it excited. They actually deliberated on retiring to this spot, and bringing on a decisive engagement here, with this powerful prestige strongly impressed on the minds of their followers.

SLIABH-NA-MON,

AND

Its Fenian Traditions.

SUPPLEMENTARY NOTES BY REV. J. F. LYNCH.

III.

In the "Pursuit of Diarmuid and Grainne," and "Silva Gadelica," p. 230, Finn is stated to have been married to Maighneis, or Maighinis, daughter of Gara (Garaidh) Glundubh mac Moirne, or Morna, and that after the death of Maighneis he sought in marriage Grainne, daughter of Cormac Mac Art. Gara or Garaidh is an extension of Gar, from whom is named Loch Gair, or "lake of Gar," and Gareth of the Arthurian legends, who is is made son of Lot (14), and Bellicent, sister of Arthur, is the Irish Garaid, or Gara, or Gar. This important Iberian word is the base of the Irish Grian, Gran, Garman, or Carman, and Gaulish Grannus, who in Gallo-Roman inscriptions is called Apollo-Grannus. The Iberian Gar (15), or Car, or Kar, is cognate with the old Persian Kor, or Khur, found in the name Cyrus; Greek, Kuros; and Persian, Khurush. In certain dialects of the Pamir, the forms Khar, Khir, Khor, occur (Sayce's article on Cyrus in Hasting's Dictionary of the Bible). The Iberian Gar is cognate with the Persian Khur; Zend hur, hvare; Pazend, Khur; and Sanskrit, Sura.

In "Silva Gadelica," the old name of Sliabh Bladhma, now Slieve Bloom, is said to be Sliabh Smoil mhic Edlecair, or "mountain of Smol, son of Edlecar." Here Smol mac Edlecair is a personification, and we meet with many similar to it in the Irish tales.

Notice is taken of the singing of the thrush and blackbird in many old Irish poems. In Finn's first poem we have:

Canait luin laid lain, dia mbeith Laigaig ann.
"The blackbirds sing their full lays would that Laigaig (Laighaid or Laig) were here."

In "Agallamh Oisin agus Phatraic," we read:

Do chualas ceol ba bhinne na bhur g-ceol,
Gid mor mholas tu an chliar;
Sgaltarnach loin Leitreach Laoi.
'S an faoidh do ghnidh an Dord Fhiann.
Smolach ro-bhinn ghleanna Sgail,
No mongair na m barc ag buain re traigh.

"I have heard music more melodious than your music,
Tho' greatly thou praisest the clerics;
The song of the blackbird of Leiter Laoi (Laigh),
And the melody which the Dord Fiann makes,
The very sweet thrush of Gleann an Scail."
Or the dashing of the barks touching the shore.

In Battle of Ventry we read:

Truagh an fhaidh
Doni an smolach a n Druim Chain,
Agus ni neamhtruaighi an scal
Doni an lon a Leiter Laigh

"Woeful the tune
Which the thrush in Druim Chain makes,
And not less sad the cry
Which the blackbird in Leiter Laigh makes."

The tale of Oisin's quest for the blackbird, the rowan berry, and the ivy leaf, is also told in the district of Birdhill, county of Tipperary. The dog is termed Bran's pup, and the people say that the pups were cast violently against the sheep's skin, and that all perished except one, which clung to the skin and began to devour it. When Oisin's boy told him, Oisin said that the pup was the making of a good dog and that he should be reared and carefully tended and fed. The weapons of the Fians are found in a cave (16) in Birdhill, where they had been concealed since the time of the Fians, and at the mouth of the cave was a stone of great size, which Oisin ordered the boy to move out of the way, but the boy laughed, and said that ten men could not even stir the stone; thereupon Oisin took up the stone in one hand and cast it away. The weapons of the Fians were too weighty for the boy to carry to the top of Birdhill,

14. At Lough Gur I have not been able to discover the relation between Gar and Lodan, but the lake is named from Gar, and three miles north of the lake is the district named from Lodan mac Lir, or Lodan, son of the Sea. In the British mythology, Gareth (Gar) is son of Lot (Lodan). When the Shannon or Sinann (the Senos of Ptolemy), is personified, she is made a moon goddess, and is made daughter of Lodan. Sinann ingen Lodain Lucharglain a Tir Tairngiri, "Sinann, daughter of Lodan, bright-pure from Land of Promise," Bod. Dinn, p. 32.

15. Professor Rhys (Hib. Lect. p. 249), says that "Gweir, son of Gweiryoed, occurs in one of the Triads, where he is called one of the Three Paramount Prisoners of the Isle of Britain, the other two being Llud and Mabon, both gods of the pagan Celts, and we seem to be warranted in assuming Gweir to have been of similar rank. The triad . . . . occurs in a brief and presumably old form in an earlier group in the same manuscript (Red Book of Hergest), where instead of Gweir, son of Gweiryoed, we read Geir, son of Geiryoed." Professor Rhys (Hib. Lect. p. 250, note 2), considers that Gweir or Geir, signifies word the present Welsh gair or geir: but this Welsh Geir appears in Irish as breith, or breth, "a judgment," and in English a word from Anglo-Saxon, woord which comes from root wer, the d in the English word as the b in the cognate Latin verbum being suffix. The Welsh Gweir or Geir, one of the triad of prisoners, is the Irish Gar, which is quite a different word from the Irish Gair, "an outcry," and the Welsh Gweiryoed and Geiryoed are lengthened forms of and plays upon the forms Geir and Gweir See the account of the Dwarf of Lough Gur in "Galloping O'Hogan."

16. Gleann an Scail, perhaps "valley of the shadow," the name of several valleys, is a name which also belongs to the mythology. In "Imtheacht na Tromdhaimhe," there is an enumeration of all the "jewels" of Gleann an Scail. In Irish scal also means a hero but perhaps the word signifies shadow in the name Gleann an Scail. The Irish Scal appears to be derived from Irish Scath, "a shadow," l being suffix letter, and the dental having fallen away, perhaps this might supply a hint for the etymology of smol, and enable us to connect the word with English smut; middle English, bismitten, bismoteren, bismutten, to spot, to stain; Dutch, smet, a spot, smetten, to become spotted. The Irish scath is cognate with Welsh sysgod; English shadow, shade from Anglo-Saxon sceadu; German schatten from old German scato, Gothic skadus; Greek skotos. Seal also means loud cry.

and Oisin had to carry them himself. The boy sounds the horn three times, and after the first and second sounding, small blackbirds are seen winging their way towards Birdhill, and after each sounding Oisin asked the boy whether he saw any large bird flying towards the hill. After the third sounding, the boy shrieks with terror, for he sees a blackbird (17), much larger than a sheep, flying towards the hill. Then Oisin orders Bran's pup to be let free, and a combat takes place, which lasts for three days and three nights, and at last the bird is killed; but the pup becomes mad from the poison of the bird, from the excitement of the battle, and because he was the first pup of Bran. Bran's pup is killed by the cast of the ball by blind Oisin, exactly as Mr. Dunne has stated, and the rowan berry and the ivy leaf are also found near Birdhill, and Oisin bears back in triumph to St. Patrick the leg of the blackbird, the rowan berry, and the ivy leaf, and thus proved to him that he was no liar (19).

It appears that in pagan Ireland the firstlings were regarded as sacred and were sacrificed (Trans. Os. Soc.' vol. iv., pp.30-1), and this seems to be the real reason why throughout Ireland the first pups and first kittens are by the people drowned, and if reared are supposed to go mad; but in this district the people say that first pups will go mad because Bran's first pup went mad. Bran (20) is a hound of Druidic manufacture, and Bran's pup is like herself—the shadow in the Celtic dream-world of something real in the world of nature. In "Seilg Muca Draoigheachta Aonghuis an Brogha" (Trans. OS. Soc., vol. vi.), we read:

Truagh soin, a Bhrain bhuadhaigh bhinn,
A mhic Fhearghusa fhoilt fhinn;
Duitsi nocha gniomh feardha,
Mo mhacsa do lan-mharbhadh.

"Woe it is, O victorious sweet Bran,
O son of Fergus, the fair-haired,
To you it is not a manly deed
To kill my own son."

The note of the translator is, "Bran was the son of Fergus, King of Ulster, and was metamorphosed into a hound."

The black pig, which according to this poem was slain by Bran, is said to have been the son of Oengus of Brugh na Boinne in the form of a black pig. A very important note concerning the Celtic doctrine of metamorphosis (21) is given by Dr. Whitley Stokes (Bodleian Dinnshenches, p. 22), wherein is given an account from the Book of Leinster of the various existences which the two champions of Bodb of Sid Femin, and Ocaill of Sid Cruachan, passed through. They had been swine herds, hawks, beasts under the sea, phantoms, worms, and had also been the two celebrated bulls, the Whitehorn of Ai, and the Dun of Cualgne.

The black pig of Gleann na muice duibhe was slain by Bran, and the blackbird of Gleann an Smoil was slain by Bran's pup.

The Irish name of Birdhill is Cnocan an Ein Fhinn, which O'Donovan (Supplement to O'Reilly) explains "hill of the White Bird," but O'Reilly says that Eunfionn means Kite. Mortogh King (Deuteronomy xiv., 12) renders the English ossifrage (22) by "an tean fionn," and the same word, in Leviticus xi., 13, by "an preachan ceanann." O'Reilly explains Preachanceannan as osprey, which King renders by Iasgaire cairneach. The Hebrew word rendered ossifrage is Peres, the Lammergeier, the largest and most magnificent of the vulture tribe. In "O'Rahilly's Poems" (pp. 113, 204), the Eun Fionn is also named Eun Oeanann. The people say that it was from the bird slain by Bran's pup that Birdhill was named, but the hill was named from Eun Fionn, and the bird slain is said by the people to be a lon dubh, or "blackbird." In "Silva Gadelica" it is stated that there was a lake beside Sliabh na m Ban, named Loch da en or "lake of the two birds," and there also appears to have been a lake near Birdhill. In the tale of Knocklong, it is stated that when Mogh Ruith (23) prepared himself for the encounter with the three druids, he put on his rough grey bull-hide, his white speckled bird head-piece, his fluttering wings, and his druidic instruments.

It appears to me that some change has been made in the tale of Birdhill, which appears to be a very old one, and not borrowed from Sliabh na m Ban, but from same source.

I do not know the source meaning of Smol (24), but one of the Welsh words for thrush, bronfraith, means "speckled-breast," and the French word for thrush, grive, also appears to have reference to the appearance of the bird. The source meaning of the English word thrush is not known. The English thrush and throstle come from Anglo-Saxon thrysce and throstle, cognate with old High German drosca; Norse, throstr; and Latin, turdus from turdus. Probably the Irish smol has reference to the dark and speckled appearance of the bird.

The blackbird was named lon, from the dark, glossy appearance of the bird, and though O'Reilly says that ciarseach means thrush, and makes the word masculine, still the old people here apply the word ciarseach, from ciar, "dark brown," to the hen blackbird.

In the Bodleian Dinnshenches, p. 25, Magh Mossad, the plain just north of Magh Femin, is said to be named from Mossad, son of Maen, son of Flesc Find (25), or "White Rod," or "white

17. I have not seen Birdhill, but John Sadlier has informed me that he has often been at this cave, which is of small size. John Sadlier also said that it was in Ballyvalley that the rowan berry and ivy leaf were found. I have been told by other old men in Cahirconlish that the Black Pig when on the way to Lough Gur from Ulster passed through Ballyvally. In the Ulster legend, given by William Hackett, the Black Pig is stated to have passed through the counties of Limerick, Leitrim, and Sligo, before entering Donegal (Trans. Os. Soc., Vol. v. p. 155). It appears from the legends that the Black Pig and Blackbird were predecessors of Sir Boyle Roche's Bird. John Davis White (Cashel of the Kings, p. 5), mentions "the blacke ditch, commonly called Dooclay, on the south of Cashel," and he also notes, "ye other faire of Cashel kept on ye Friday and ye Saturday before the Sunday of ye dedication of ye Church of St Patrickes aforesd, and in Irish called Downugh Cromdu, falling alwaies in ye month of July."

19. John Sadlier of Cahirconlish village, recently told me the tale, and he said that when Oisin saw the housekeeper of St Patrick, he exclaimed: "The law of the lie is a broken jaw, but take that," giving her at the same time a slap on the face which killed her, but Oisin did not intend to kill the stingy housekeeper.

20. In "Battle of Ventry" there is a Bran made son of Febal, son of Lodan, son of Lear, and he is made King of Tara Luachra. In English version of "Battle of Ventry," by Firbolg Og, who was often at Lough Gur, Tara Luachra is at Lough Gur, with Bodb Derg as king. Mr Nutt has published in the Grimm Library "The Voyage of Bran, son of Febal, to the Land of the Living," in which there is an essay upon the Irish Vision of the Happy Otherworld, and the Celtic Doctrine of Rebirth, by Mr Alfred Nutt. A short time ago I had some correspondence with Mr Alfred Nutt concerning old Irish things and I then expressed the opinion that Bran, the metamorphosed Ulster Prince, and Bran, King of Tara Luachra, were the same. The name Tara Luachra belongs to the mythology, and there was more than one Tara Luachra, the name has nothing to do with rushes, as O'Curry thinks.

21. D'Israeli (Curiosities of Literature), says, "The opinion of the metempsychosis spread in almost every region of the earth; and it continues, even to the present time, in all its force amongst those nations who have not yet embraced Christianity. The people of Arracan, Peru, Siam, Japan, Java, and Ceylon still entertain that fancy, which also forms the chief article of the Chinese religion. The Druids believed in transmigration. The bardic triads of the Welsh are full of this belief; also a Welsh antiquarian insists that by an emigration which formerly took place, it was conveyed to the Bramins of India from Wales. The Welsh bards tell us that the souls of men transmigrate into the bodies of those animals whose habits and characters they most resemble."

22. It is stated on the title page of the Irish Bible that the translation is made from the original languages Bishop Beddell was a Hebrew scholar, but the Irish Bible is a translation of the English Bible, and the Old Testament is the work of King. In the Highland version Peres, or rather ossifrage, is rendered an enaimh-bhristeach and in Luther's German version, by der Habicht, "hawk." The rendering of Revised Version is gier eagle, and that of the German Textbibel is Bartgeier, or golden vulture.

23. Professor Rhys (Hibbert Lectures p. 526), says, "As to Mo-Febis, see the Book of the Dun, 74, where Febis or Femis is said to have been the mother's name; but the Four Masters make Mofebis a man, and date his death, A. M., 3751, though they mention his son, Mogh Ruith, engaged in war, A. M., 3579, or 172 years earlier." Dr Joyce (Irish Names, Vol. 1., p. 103), gives a tale of Mogh Ruith, as engaged in war over sixteen hundred years, from the date of his death, as given by Four Masters. Mogh Ruith is said in the Edinburgh Dinnshenches, p. 73, and by O'Curry, Lectures, p. 402 to be the father of Tlachtga who erected a pillar stone at Cnamchaill, about a mile and a half east of the town of Tipperary.

24. O'Reilly has a word-Smol, meaning snuff of a candle, a speck, a fault. O'Rahilly (xxix), has

Ni'l Saor-fhlaith na dragan do phreimh chloinne Chaisil
Gan gaol ris an annir mhiola gan smol.

"There is no noble chieftain or warrior of the stock of the Children of Cashel.
Who is not akin to the mild, faultless maiden."

The Irish had a very high opinion of the singing of the thrush. It is stated in Imtheacht na Tromdhaime, p. 51, that the thrush is the most pleasing of all song birds. Agus asi in smolach beathaigheach is lia aisdi cheileabhraidh ar bith.

25. In Corca Laidhe, p. 16, Lughaidn Laidhe, who is so celebrated in the Irish romantic tales, is said to have had two sons, Aenghus Bolg, or Aenghus Bag, and Aenghus Duibhfhleasc, or Aenghus Black-Rod, but flease also means a wreath or diadem. Here we have Two Rods, white and black, and at Birdhill two Birds, white and black, symbols of light and darkness. The fawn of Gleann an Smoil has sides white and black. In Corca Laidhe, p. 18, Aenghus Bolg is made son of Maicniadh, and father of Aenghus Duibhfhleasc. O'Donovan ("Corca Laidhe," p. 8) says that Aenghus Gaifuileach, i.e., Aenghus of of the bloody spear is also Aenghus Bolg, i.e., Aenghus of the sacks or quivers. But this explanation of Aenghus Bolg is not correct, since Bolg in that name is nominative singular, and not genitive plural, for in "Corca Laidhe," p. 18, the genitive case of Aenghus is Aenghusa Builc, and at p. 44 are mentioned the Ui Builc, named from Aenghus Bolg, and this should be Ui-Bolg if O'Donovan were correct. Aenghus also called Aenghus Bulga (Corca Laidhe, p. 25), was named from one bag.

fillet" (compare Dr. Hyde's Giolla an Fhiugha, p. 5), who found the hawk named Seig Mossad on Magh Eoin, or "plain of the bird." He fed it and nourished it till it used to eat the herds of horses, and the droves of cattle, and the human beings, by twos and threes. And when at last it found nothing to devour, it turned on the plain against its fosterer, even Mossad, son of Maen, and hence Magh Mossad. Perhaps there is some connection between this seig, or "hawk," and the bird slain by Bran's pup. Mr. Dunne considers that the poem entitled Seilg Ghleanna an Smoil, or "The chase of Gleann an Smoil," refers to the Gleann an Smoil of Kilkenny, and he has in his valuable article made the best of a bad case. Dr. Joyce (Irish Names, vol. i., p. 489) says "Smol or smolach is a thrush. The best known name containing the word is Gleann na smol, the valley of the thrushes, the scene of a celebrated Irish poem which is believed to be the same place as Glenasmole, a fine valley near Tallaght, Dublin, where the river Dodder rises. Near Lifford, in Donegal, is a townland called Glensmoil, which represents the Irish Gleann a smoil, the thrush's glen."

In the poem, the name is not Gleann na smol, but Gleann an smoil, "the valley of the thrush," and not of the thrushes, and the Dublin valley and the Kilkenny valley are named Gleann an smoil, but the Dublin valley is not the scene of the celebrated Irish poem, or poems, for there are two celebrated Irish poems which treat of Gleann an smoil.

Mr. Dunne merely refers to the claim of Cork for the celebrated valley, and in Cork the valley was, with a reflection in the Celtic dream-world, as I shall now proceed to prove,

(To be continued.)

MY LIFE IS LIKE THE SUMMER ROSE.

BY RICHARD HENRY WILDE.

My life is like the summer rose,
That opens to the morning sky,
But ere the shades of evening close
Is scattered on the ground—to die
Yet on the rose's humble bed
The sweetest dews of night are shed,
And if she wept the waste to see—
But none shall weep a tear for me!

My life is like the autumn leaf,
That trembles in the moon's pale ray;
Its hold is frail, its date is brief,
Restless—and soon 'twill pass away.
Yet ere that leaf shall fall and fade,
The parent tree will mourn its shade,
The winds bewail the leafless tree,
But none shall breathe a sigh for me!

My life is like the prints which feet
Have left on Tampa's burning strand;
Soon as the rising tide shall beat,
All trace will vanish from the sand;
Yet, as if grieving to efface
All vestige of the human race,
On that lone shore loud moans the sea,
But none, alas! shall mourn for me!

MADE IN THE DAYS OF THE MAMMOTH.

In the caves of La Mouthe and Font de Gamme in France have been discovered some remarkable engravings and rough paintings on the rock, made in prehistoric times, and representing animals long since extinct. Among these the mammoth figures conspicuously. There are also striking pictures of the reindeer, which is known to have been an inhabitant of western Europe. A picture of a reindeer from the cave of La Mouthe is herewith reproduced in miniature. It shows how ancient is man's artistic instinct.

OUR WEEKLY STORY

HARRY JONES'S HOARD.

A year after the close of the American Civil War there lived in the southern portion of the State of Mississippi a poor family whose home was a log cabin on the bank of Pearl River. The little household numbered three persons, Mr. Henry Jones and his two children, Nancy and Jere; Mrs. Jones had been dead two years, and it was a pinched life in a lonely place that fell to the young people. They had no friends; the nearest neighbour's house was ten miles distant, and all around a great forest of pine, oak, cedar, and magnolia rose dark and solemn, heavily hung with Spanish moss. An obscure road ran near the house. It led through the woods to a sparsely settled region surrounding a small country town twenty miles distant.

Mr. Jones was a lame man, 55 years old, whose only means of earning a living for himself and children was operating a ferry scow and a skiff at the point where the road crossed Pearl River near his cabin. He was a quiet, honest person, with but one ambition, which was to save enough money to buy him a little farm up in the hill country where he had lived when a boy. Nancy and Jere knew of this desire so patiently nursed by their father—indeed, they were quite familiar with his habit of hoarding in a little leather bag such small coins as by the most stringent economy he could withhold from necessary expenditure, and they shared with him the dream of going to a new home in a healthier part of the country.

In the wild time immediately following the fall of the Confederacy all the low country near the Gulf Coast was overrun by roving bands of freebooters, some of them mere idlers for want of a home and something to do; others, however, bent upon plunder and reckless excitement, did not hesitate to commit crimes of the darkest sort. These bands of fearless and often desperate fellows were mostly well mounted and heavily armed. They had their places of rendezvous in the great swamps, whence they made frequent and long marches, now pillaging a town, now robbing a country store, now relieving a plantation of its horses and cattle; wherever they went they took all they wanted.

Murder was not infrequent, and the people lived in terror, for even the bravest man felt powerless to resist a whole company of marauders. But Mr. Jones and his two children heard little and thought less about the danger which was hanging so heavily over many people far more comfortably housed and much better clothed than they. Jere was but fifteen years old, and his sister two years younger; they were both strong, however, and Jere sometimes poled the scow or rowed the skiff when his father happened to be absent in the woods, who, although quite lame, was a successful hunter; and Nancy knew enough about cooking to bake the sweet potatoes and fry the bacon and game upon which the family lived.

One day in the early springtime, while Mr. Jones was out with his gun and dog, a man came to the ferry and demanded to be set across the river. He was in a buggy drawn by a strong young horse, and behind him, tied to the rear axle, followed a slender, emaciated little mare, limping badly. Jere promptly made ready the scow, and the man got out of the buggy and untied the rear horse.

"I guess she's played out," he said "she can't go any further." He patted the poor beast, examined its lame leg hastily, then looked back up the road as if uneasy. "I'll leave her. You may have her," he added, regretfully. "If you'll take care of that leg it may get well. She's a fine mare. But hurry, my boy, hurry; get me across, quick." Again he looked back, and Jere saw him feel of his heavy pistols that hung beside him. He was a dark, determined-looking man. When the scow reached the other bank of the river he gave Jere a dollar, and drove away at a rapid pace without waiting for the change.

Of course the strange behaviour of the man impressed Jeré's imagination. He wondered no little, and tried to make out why a traveller should be in so great a hurry that he would give a whole big dollar instead of ten cents, which would have paid the ferry fee. When he had poled the scow back to the home side of the river. Jere found the little mare browsing on the bank. There was an ugly wound in one of her hind legs which had bled freely, and was now greatly swollen and inflamed.

Jere was delighted, for it had been a dream of his to have a horse of his own. Many of the mounted travellers who crossed the ferry were mere youths, almost as young as he, and naturally his imagination made much more romance out of their roving life than really belonged to it. He led the mare to the house, and called Nancy out to look at her. When Mr. Jones came home, with a wild turkey that he had killed, he found the children washing the wound on the mare's leg, a wound that had evidently been made by a gunshot. Jere told him all about the stranger and how he had made him a present of the pretty animal.

Mr. Jones looked grave and shook his head disapprovingly.

"There wasn't any good in that man," he remarked, "and I s'pect the mare's been stole by him. We mought git inter trouble about her."

Both Jere and Nancy took a more cheerful view; they wanted to make a pet of their new property. Already they felt a warm affection for it, and it had quickly evinced grateful friendliness when they soothed its painful hurt with warm water.

"Oh, I don't think the man was a thief," said Jere. "More'n likely he was a good man, who'd been in trouble with the prowlers."

The wandering, predatory horsemen were called "prowlers" and the name was a very fitting one.

"Yes," Nancy assented, promptly sustaining her brother, "ef he'd been a horse thief he wouldn't 'a' been by hisself."

There was considerable discussion between the father and his children about the propriety and safety of keeping the mare; but two against one, with the added dumb pleading of the intelligent little animal in her own behalf, prevailed, and Mr. Jones reluctantly gave way.

That very evening a party of five horsemen, heavily armed and wearing the look of desperate characters, arrived in pursuit of the stranger in the buggy. Jere promptly and ingenuously told them all that he knew, and Mr. Jones showed them the wounded mare. They demanded to be set across the river, and when this was accomplished they continued their pursuit.

"Oh, it's all right; do what you can for the little mare, and keep her," said the leader to Mr. Jones just before departing. "If you can cure her up you'll have a daisy. She's the finest horse in Mississippi."

They never again heard of the man in the buggy or the five pursuers, and so the title to "Daisy," the name Jere gave to the beautiful mare, seemed quieted forever. Her wound healed slowly, but in time the cure was so perfect that only the slightest scare remained. Jere and Nancy vied with each other in their kindness to Daisy, feeding her on cane leaves from the brakes, wild grass and whatever fit for her to be gathered in wood or glade or marsh, and rubbing her down until her fine bay coat shone like silk.

She was an intelligent animal, affectionate, gentle, quick to respond to every kindness, and always delighted when receiving attention from her young master and mistress. She grew plump, and her beautiful brown eyes seemed to gather brilliance day by day. Nor

was he entirely free from faults of temper; for at times her heels were a trifle dangerous to Nab, Mr. Jones 'favourite dog. Jere made a bridle for her out of strips of buckskin and an old pair of bits, and she seemed never better pleased than when he rode her about in the open parts of the adjacent woods.

Well knowing that Daisy would be taken away by the first free rider that chanced to see her, Jere did not dare to keep her near the house; so he built for her a rude but comfortable stable of pine brush in a thicket at some distance in the forest. Of course it was a great deal of trouble taking care of her, and after a while Mr. Jones, who knew that she was valuable, spoke of selling her. Jere and Nancy were appalled at the suggestion. Sell Daisy! It was not much different from offering themselves to the highest bidder—at least that was their feeling—and they implored their father to let them keep her; but he had no sympathy with their unbusinesslike sentiment.

"The mare's wo'th a good hundred dollars," he said, "I'll take 'er to town and sell 'er; that'll fix us fer goin' up the country and buyin' a farm. I've already got purty nigh 'nuff."

Nancy cried, and Jere looked as if he had been ill a month when at last the day was set for Mr. Jones to go away with Daisy.

"To-morrer at daylight I'll be off," said the father. "'Tend the ferry, an' be good while I'm gone, an' I'll fetch ye somethin' nice f'om town."

Something nice from town! What did they care for such a promise? Daisy was more to them than everything the town held. In their lonely lives the bright and affectionate little mare had been something immeasurably willing, magnetic—something to love with unhindered devotion. Until she came to them they had never known what the grateful friendship of even a horse could do for two lonesome-hearted children, who had been all their lives shut up in the woods quite away from everything cheerful and amusing. And now she was to be taken from them and sold.

It should, perhaps, have been some comfort to know that the money their father would sell Daisy for would enable him to go away by the river and find a far better home for him and them; but Daisy whinnied so softly that day at noon when Jere went to feed her, and she laid her nose on Nancy's shoulder so lovingly—how could they part with her? And to-morrow morning she must go, never to come back to them.

It was splendid weather; warm, yet breezy, and fresh feeling, with fragrance in every breath. The thrushes and mocking birds sang round the cabin, while up from the river came the lively cackling of kingfishers and the twitter of blackbirds in the canebrakes. But Jere and Nancy were almost heartbroken. They saw their father making his preparations for the morrow's journey, and as even drew on with gathering dusk, the stars pricking point after point in the dreamy sky, and the owls hooting from distance to distance in the woods, the desolation seemed but a part of their great sorrow.

When their scant supper had been eaten, heartily enough by Mr. Jones, but without relish by the children, and when the little family sat in silence by the hearth, where a splinter of burning fat pine sent up a tall, slender flame to light the room, Nancy sobbed and Jere covered his sallow face with his hands.

"I hain't a-seein' no use o' this yere foolishness," Mr. Jones presently said. "The mare's not a bit o' use to us; jes' trouble an' keep, an that's all. Seems like you children orter see 'at it's right ter sell 'er an' use the money ter git us a good place ter live at. Yer not usin' good sense an' jedgment."

Still any sharp observer could have seen that Mr. Jones was not quite easy in his conscience. He loved his children, and their grief at what he felt it his business duty to do touched him at a very sensitive point of hs rough nature.

"But, oh, pap!" cried Nancy, "Daisy is so——"

She never finished her sentence, for just then there was a loud trampling of horses outside, and a gruff voice called:

"Hello!"

The little group by the hearthside was startled almost into breathlessness. The children gazed stupidly at their father, who sat quite still until a heavy hand struck the door a resounding blow. Mr. Jones knew in an instant that a gang of prowlers had arrived

"Who's there?" he presently demanded

"Open this door, an' do it quick, an' ye'll see who's here," was the answer, and again the cabin fairly shook with the force of a knock on the door, and the insolent voice added: "Ef ye don't want yer neck twisted, ye'd better be lively."

Mr. Jones went to the door, and, undoing the fastenings, opened it

"Come in an' welcome," he said, trying to make his words sound hearty and cheerful.

Meantime Jere had darted out through a little back door. He was dreadfully frightened, and a moment later a pistol shot, followed by a low whine from Nan, added greatly to his terror. Not knowing what else to do, he ran round the corner of the cabin and crawled under the floor close to the chimney. Then he heard heavy feet on the loose boards above him. The prowlers had entered the house, and pretty soon he heard them demanding money and threatening to kill his father.

Jere suddenly recollected that the leather bag in which the money was hoarded lay on a sill of the house very near to where he was crouching. Mr. Jones had placed it there by lifting up a board of the floor. Jere had but to reach up his hand and touch it.

"We know 'at ye've got some money hid somewheres 'round here, an' ye'll jes' show it up er we'll burn ye alive," said one of the ruffians. "Ye've been a-gittin money from the ferry, an' ye ain't never spent none. Fetch it out, ole feller, er ye'll die fer it."

Just then Jere's quick ears caught the sound of a distant whinny. It was Daisy calling to the horses of the outlaws. Her voice set Jere to thinking. What if the men should hear her? Wouldn't they be sure to steal her?

"Git that money in a hurry, I tell ye!" stormed a loud voice above.

Poor Mr. Jones, trembling and expecting death every moment, tried to make his assailants believe (while they kicked him and rapped him with their pistol butts) that he had no money; but at last he could bear it no longer; he went and lifted the board, while a burly ruffian held a lighted pine splinter for a candle; and just as the little bag of money was uncovered he saw a hand reach up from beneath the floor and take it away.

Jere had grabbed the money just in time to prevent his father from giving it up, and now he scrambled out with it and ran to the wood. The outlaw who held the torch understood the move and gave the alarm; he heard Jere's footfalls as he scampered away. In a moment Mr. Jones was knocked senseless and there was a rush for the door. Two men who had been left outside to look after the horses saw Jere when he climbed over the low fence behind the house.

"Shoot him! shoot him!" shouted those who rushed out. "He's got the money. Shoot him!"

Three or four pistols responded to the murderous demand, but Jere sped on, as fast as his bare feet could fly, straight to Daisy in her brush stable. The men rushed after him, making a great noise in the dense underwood, stumbling over logs and running against trees in their half-drunken haste. Daisy uttered a glad little murmur of welcome when Jere darted to her side. In a moment he slipped the rude bridle on her head and led her out He heard his pursuers not far away tearing through the bushes.

All this time poor little Nancy had been sitting like one struck dumb and unable to move. At last, when the men were all gone, she fell upon the body of her unconscious father, and lay there holding his head in her arms. She heard shouting and shooting in the distance, but she did not know of Jere's peril or what the sounds meant.

It was Daisy's turn now to show the stuff she was made of. Jere, still holding fast the little bag of money, mounted and rode away through the wood, taking no particular direction at first, only bent upon escape from the robbers. Presently, however, he found it difficult to proceed, the trees were so close together and the underbrush so dense; then he turned Daisy's head toward the road, which led from the ferry to the distant town. His pursuers turned back to the house to get their horses. They shrewdly suspected that Jere would strike out for the highway. They had heard him riding in that direction.

Then began a wild race. The desperadoes were splendidly mounted, for their horses and saddles were the pick and choice of the country, and they were reckless riders all of them. Jere had nearly a mile the start when the race fairly opened; but Daisy did not go very fast; she galloped freely and easily without any urging, and Jere felt that her speed was sufficient; indeed, he knew so little about horses, never having ridden a great deal, that he imagined she was going at a break-neck run! This was after he had found the public road, which was a dim, glimmering line of white sand barely visible in the gloom of the woods.

Daisy, when presently she heard the horses of the robbers coming behind her in the distance, slackened her pace and neighed to them. Doubtless she felt inclined to have them overtake her; for she nad been a long time without company of her own kind. Jere, however, objected to any social amenities just at that time; he did not think it advisable to let Daisy have her way; so he urged her to go faster; and much to his terror she refused!

The pursuers were coming at full speed, recklessly spurring their horses, and Jere could hear them drawing closer and closer behind, the galloping feet beating a rapid tattoo in the heavy sand of the road.

"Halt!" cried a hoarse voice.

But Jere kicked Daisy's sides and cried to her, "Git erp, Daisy, git erp!"

Two or three shots rang out and the bullets came hissing along close to Jere's head. At these sounds Daisy gave such a spring that her rider came near falling off her back, and then she ran like a deer. Jere felt her settle under him, and stretch herself with long level leaps. The wind seemed suddenly to blow a gale in his face, sweeping his hair straight backward.

"Halt! Halt!"

Again the robbers fired, and again Daisy increased her speed. It was like flying. Jere leaned forward, lying almost flat along the mare's straight neck, and he gripped her sides desperately with his knees. On either side of him the trees seemed rushing in dusky, wavering lines to the rear. His pursuers were yelling and shooting far behind. Daisy was running away from them And all this time Jere held the little bag of money in one hand; it now felt almost unbearably heavy in his straining fingers. He did not make the least effort to guide or in any way control Daisy. She kept the dim road better without his help than she could have done with it.

Thus they flew along for many minutes, the robbers gradually losing ground, but still desperately following. Daisy began to pant under the great strain, and Jere felt his nerves giving out. It seemed to him that he must soon fall off. Instinctively, however, he clutched the bag of money every now and then with a renewed grip and tightened his knee pressure against the mare's heaving sides.

Then, suddenly reaching a sharp bend in the road, Daisy turned; the change was too great for Jere, he was flung off, and he went tumbling headlong in the sand by the roadside, badly shaken up and confused, but unhurt.

The money bag took a flying leap from his hand and whirled away somewhere in the dark. At the same moment a band of mounted men from the opposite direction came down the road at a fast gallop. One of them caught Daisy's bridle as she slowed her speed at meeting them.

"Hello, there! Who're you?" cried a stern voice, as Jere picked himself up and staggered into the road.

The poor boy thought his time to die had surely come, but these men were a sheriff and his posse going on the track of the very villains whose horses could at that moment be heard coming in chase of Jere. Breathless, half-dazed, and frightened nearly to death, it was quite impossible for him to speak at first; he presently managed in a gasping, half-choken voice to make the sheriff understand that the robbers were almost in sight.

In the next three minutes law fully asserted and enforced its superiority over criminal disorder. There was a sharp fight, followed by a determined hand-to-hand struggle, and then the robbers, three of them badly wounded, were taken and handcuffed. Jere looked on during the fierce contest; he could dimly see the horses and men all mixed together in a close huddle, but it was impossible to understand what was going on, save that it was a terrible fight.

When it was all over, and the robbers had been put in irons the sheriff questioned Jere, and soon had his whole story. The money bag was found where it had been trampled into the sand by horses' feet, then the whole party set out for the Jones cabin. Nancy had managed to bring her father back to consciousness, but he was dangerously hurt, and it was a month before he was well again.

There was a reward of a thousand dollars to be paid to the person or persons who should capture the leader of this gang of marauders, and the sheriff was greatly pleased to find him in one of his prisoners.

"You've got me at last," said the ruffian, "an' I suppose you'll get the thousan' dollars, but by rights that plucky boy there oter have it. Ef 't hadn't been for him we'd got ole Jones' money and by this time we'd a been on Honey Island."

It was a lucky suggestion. The sheriff felt the justice of Jere's claim, and when the reward was paid five hundred dollars of it were given to him. This enabled Mr. Jones to buy a good farm up in the hill country, where he lived happily for many years. The only thing that cast a shadow upon the new life of Jere and Nancy was having to give up Daisy. Her true owner, of whom she had been stolen, came and took her away. True, he left a liberal reward in Jere's hands, but money could not quite compensate the loss of the sprightly and faithful little mare.

[The above tale was found after his death amongst the papers of Maurice Thompson, author of "Alice of Old Vincennes."]

TWO SOLILOQUIES.

He:

I wonder if it would be wise
For me to wed her!
She's pretty—has good hair and eyes—
In many ways she seems a prize,
Yet when I see her anger rise,
I dread her!
I wonder if it would be wise
For me to wed her!

She:

Conceited thing! Does he suppose
That I would take him?
I like him least of all my beaux,
I hate his priggish, turn-up nose,
His selfishness too plainly shows—
I'll shake him!
Conceited thing! Does he suppose
I'd take him!

NOTES AND QUERIES.

THE IRISH IN THE CANARY ISLANDS.

In Mrs. Olivia Stone's interesting work on "Teneriffe and Its Six Satellites," published a few years ago by Marcus Ward (Belfast), appeared the following curious items on the subject of the Irish in the Canary Islands:—"Some authors affirm that the beauty of the present race in these islands is due to a number of Irish refugees who fled there after the Battle of the Boyne. I don't think this is possible, for the number who came would not be sufficient to influence the mass of the people. Among the upper classes it is more likely to be true, as many of them have Irish names, and know their ancestry to have been partly Irish. The family name of the Marques de Candia, one of the chief grandees of the Canaries, is Cologan: the poet of these islands is Teobaldo (Theobald) Power, author of "Cantos Canarios," now organist to the Chapel Royal at Madrid, whose great grandfather was an Irishman; and in La Ciudad di Santa Cruz, the capital of Palma (one of the six satellites), the principal street is called O'Daly." Mrs. Stone also relates that when the Canaries were formally ceded in 1519 to Spain by Portugal the mystic island of legend and song, known as St. Borondam, was actually mentioned as one of this group, by the name of Tir nao Truvais or undiscovered island, St. Borondan being no other than St. Brenden (of Kerry), who is supposed to have landed there in A.D. 565, at the same time that he is also said to have endowed the water tree at Hierro, another of the satellites, with its virtues."

EVOC.

THE MacCARTHYS MORE, REAGH, AND GLAS.

It is somewhat curious to find that whilst the still very numerous representatives in Ireland of the once great and powerful sept of the MacCaura or MacCarthys, have apparently lost all sense of clanship, and entirely ignore the old sept distinctions of More (great), Reagh (dark), and Glas (green)—both England and France should furnish us with notable examples of bearers of the Irish surname, MacCarthy, who tenaciously retain these particular affixes to their ancient family name.

The last recognised head of the MacCarthys More, to whose branch belonged the famous Castle of Blarney, near Cork, was that Earl of Clancarthy, who, as is well known, died in exile, and whose direct line in another generation or two became totally extinct. His title, however, has since been revived, but the first bearer of it in recent times, whose un-Irish patronymic was Trench, had not, we believe, a drop of MacCarthy blood in his veins.

Luckless as was the last Earl of Clancarthy, of Blarney in losing all his great family estates in Munster and dying in exile, his fate was far less cruel than that of one of his great forbears, Florence MacCarthy More and Reagh, Prince of Carbery, who spent most of his life, and finally died a prisoner of state, in the Tower of London. Great in many senses of the word, it was to this very Florence MacCarthy's enlightened patronage and support, in spite of his political disabilities, that we owe the valuable historical document known as the "Book of MacCarthy Reagh," of which an account was given in this journal in the 14th number, issued July 5, 1902.

It was only fitting that some record should exist of this memorable Irishman and famous chief of the MacCarthy clan; and still more so that this should be the work of one of his name and blood; and in "The Life and Letters of Florence MacCarthy More," written by his kinsman, Mr. Daniel MacCarthy Glas (London, Longman's, 1867), we have, happily, a worthy memorial of this great MacCarthy chieftain, whose weight and influence were such as to lead the Government of that day to exile and imprison him, as it proved for life, in London's historic Tower.

Of the second generation of his name, born and brought up in ease and wealth in England, Mr. Daniel MacCarthy, Glas, stands out in noble contrast to those Irish parvenus of recent days, in whom sudden prosperity or social success immediately enkindles the idea that they are of French, Norman, or some other descent to that to which they can only rightfully lay claim. Mr. MacCarthy, Glas, devoted his time and no small amount of his money to tracing out his family history in Ireland, though fully cognisant that his labours in this line would bring him neither riches nor renown. He felt, however, fully rewarded by the marvellous success that attended his genealogical researches, of which he published an account in another work that he wrote, having for title, "The MacCarthys of Gleannacroim, or a Historical Pedigree of the Sleoch Feidlimedh (Exeter, 1875), Gleannacroim being that portion of the county Cork near Dunmanway, where the MacCarthys, Glas, were at one time the lords paramount.

No nobler or worthier bearer of the name of MacCarthy has lived, in our time at least, than this Mr. Daniel MacCarthy Glas, and if personal worth, intellect, and position, as well as his literary work, especially in respect to the history of his clan, has met with due appreciation, he would have been rightly acclaimed. "The MacCarthy—a title which is elective rather than hereditary; for Mr. MacCarthy was fully aware of the fact that the late Mr. Justin MacCarthy, of Carrignavar, represented the oldest branch of the name in the Co. Cork, and, in fact, in Ireland. An unforeseen change of fortune darkened Mr. Daniel MacCarthy's later days, and frustrated his many patriotic and benevolent plans, but he lived to an advanced age, and now lies buried in the Catholic portion of Southampton Cemetery.

His researches into the MacCarthy clan history led him to discover that another branch of the MacCarthys had for several generations figured amongst the nobility of France. This French branch of the MacCarthys were the descendants of Denis MacCarthy, of Spring House, County Tipperary, who died at Argenton, France, in 1761. He had quitted his country, "disgusted," as he declared, "by the persecution which attended all, who like himself, were attached to the Faith of their fathers, and afflicted by the too frequent apostacies which resulted from the tyranny and seduction of the English Government." Before his death at the early age of 43, he exacted from his only son, Justin, then a youth of seventeen years, a promise that "he would abandon Ireland and return to it no more unless peace and liberty were restored to the Catholic faith and people bent under the yoke of England." In accordance with this promise, Justin MacCarthy, as soon as his father was interred, hastened to realise all that his family had been able to preserve of the debris of an immense fortune, and then selected for the future home of himself and his posterity the city of Toulouse in Southern France.

But on quitting his native land he took measures to provide himself with certain attested documents and proofs of nobility of birth and relationship with officers in the Irish Brigade. The genealogical compilation carried by this Justin MacCarthy to France was duly authenticated by the English Kings at Arms, Ralf Bigland, Clarenceux, and Isaac Heard Norroy, was translated into French and formed two splendid folio volumes in vellum, gorgeously illuminated and blazoned, and accompanied by transcripts of all the authentic muniments concerning the family in the Herald's College, London, and elsewhere. The first volume was devoted to the historic, the second to the genealogical evidences thus collected. Each page was attested and paragraphed by the above-named Heralds, and sealed with their seals, and the whole work was further illustrated by a detailed genealogical chart or map of Munster, showing the homes of the several branches of the sept, and various sketches of castles, churches, and monasteries erected by the earlier princes of the race.

These volumes forming the "Genealogie de la Royale et Serenissime Maison de MacCarthy" having been placed in the hands of M. Cherin, then the genealogist of the Orders in France, were verified by him as genuine, and Mr. Justin MacCarthy, late of Spring House, Co. Tipperary, became Count MacCarthy Reagh of Toulouse. He was naturalised as a French subject in September, 1766, received Letters Patent from Louis XVI., conferring on him the dignity of Count, and on the 25th February in the following year was admitted to the honours of the French Court.

Restored to the Count and remaining in the family archives till 1836, these volumes were again placed in the hands of a French Herald, Monsieur Laine, Genealogist to King Charles, X., in order that the MacCarthy Reagh pedigree, might be inserted in the Archives Genealogiques et Historiques de la Noblesse de France, which was published by M. Laine, at Paris, in 1836. That portion of it dealing with the MacCarthy Reagh, of France, family history was afterwards detached from the above-named work by M. Laine, and sold separately; but it has never been translated into English, and but few copies of it have found their way into the United Kingdom. One of these Counts MacCarthy Reagh was one of the greatest bibliophiles

in Europe. The title is still in existence, but as the present Count McCarthy Reagh has no issue it is to be regretted that on his decease this notable branch of the Clan MacCarthy, will have become extinct.

But there is still another French branch of the MacCarthys, of whom Mr. Daniel McCarthy Glas possessed no knowledge. A short biographical notice of the latter, however, which appeared in the "Irish Monthly" having got into the hands of an Irish priest in France, led to what would have been to him a most pleasing and interesting discovery — that residing chiefly at Nantes, in Western France, is Monsieur Pol, Duc de Clancarthy-Blarney (of the MacCarthys More), the direct descendant, and inheritor of the title conferred in France by James II. on General Justin MacCarthy More (younger brother of the Earl of Clancarty of his day), whose name figured so prominently in the engagements at Bandon and Enniskillen in King James's time, and was spoken favourably of even by his opponents in those rancorous days. From his son, who fell in the Battle of Fontenoy, the present Duke is descended, but he is only in possession of the title of Duc de MacCarthy-Blarney since June last, when he succeeded to his father, Florence Duc de Clancarthy-Blarney, who died during that month at the patriarchal age of ninety. Unlike that other Franco-Irish family which has enriched itself in the manufacture of a well known alcoholic article, the Duc de Clancarthy Blarney is intensely Irish in feeling, sentiment, and sympathies. He is Hon. President of the Association Franco Irlandaise of Paris, at two of whose annual reunions he has delivered stirring and patriotic addresses. He is on friendly terms with his kinsman, Count MacCarthy Reagh; but as he has only two daughters and no sons by his marriage, it is to be feared that after him there will be no male representatives left of the French MacCarthys More, Ducs de Clancarty Blarney. Of Mr Daniel MacCarthy Glas, three grandsons are living, two in far-off Oregon and one in Tasmania.

J.C.

REDMOND O'HANLON.

20 Sydney Avenue, Blackrock,
December 7th, 1902.

Dear Sir—Please permit me to encroach on the space of your valuable paper, to ask your readers if they can give me any information about the Irish rapparee, Redmond O'Hanlon, outside that given by W Carleton and Clark Luby, in "Count Redmond O'Hanlon," published by Duffy and Co. I would particularly desire to get information about the following:—1. If Redmond O'Hanlon was married; if so, had he any children *—their names. 2. What services Redmond O'Hanlon performed in France that entitled him to the title of Count, and 3. if there are any lineal descendants of this justly celebrated man living at the present day.

Again, I might mention that Luby (in his sketch of Redmond O'Hanlon), quotes a certain J Cosgrave as the author of "The Lives of Famous Irish Rapparees and Robber Chieftains," and calls the work "A Little Chapbook." "sold at many of the fairs and markets in Ireland for a few pence." This book gives a life of Redmond O'Hanlon, and it would oblige me greatly if any of your readers could tell me where I could procure a copy, or any information whatsoever about it. Another book the same gentleman quotes, viz, "The Cromwellian Settlement in Ireland," by J Prendergast, London, 1870. I cannot find either, although I have made every inquiry. Perhaps some of your readers know the publisher (or the book).—Hoping I have not taken up too much of your valuable space, I remain yours very sincerely,

H. M. J. O'HANLON.

* O'Hart mentions in his "Irish Pedigrees" that "Katherine, daughter of Count Redmond O'Hanlon, married David Conygham, of Letterkenny."

ENGLISH RABBITS AND AMERICAN HATS.

Millions of rabbits are annually killed in the British Islands and in Australia for their skins, or rather for their fur, which is used in making felt hats. Great quantities of the English rabbit skins are sent to hat manufacturers in the United States, but first they go to the Continent of Europe to have the long, useless hairs laboriously pulled out by cheap hand labour. Satisfactory machines to do this work are yet lacking. After the skins reach America the close hair, or fur, is shaved off to be made into felt.

Irish Antiquities As Seen Fifty Years Ago.

COMPILED BY JAMES COLEMAN.

The following graphic and instructive description of our national antiquities was written by the late Mr. John Windele, of Cork, one of the foremost of the Irish antiquaries of his day. Excepting the fact that the pagan origin of the Irish round towers, of which he was a strenuous upholder, is now no longer held, his descriptions still faithfully apply to the various forms of Irish antiquarian remains, of which too many have disappeared (and are still disappearing) since Windele wrote, now quite fifty years ago:—

Ireland in her antiquities affords a rich and extensive field for research. Her isolation and sequestered position, her freedom from Roman conquest and subjugation, in the period of Rome's highest power, has left to the character of her Celtic archaeology features peculiarly her own, whilst the acquaintance of her early pagan population with letters and the large amount of extant literature which has descended to us, capable of throwing so much light on the condition of her ancient races, have invested the whole subject with an importance and interest surpassing that of the antiquities of any other western nation in Europe.

This broad and inviting field of research has been hitherto but imperfectly and partially wrought, seldom indeed by the scientific inquirer, and too often only by incompetent or prejudiced labourers. There has been abundance of wild and indiscriminating enthusiasm at one side; and again, on the contrary, an over-sceptical, theorising rationalism, embarrassing and obstructing its useful culture. What effect the vicinity of Roman civilisation produced on the arts and civilisation of this country we have no present evidence to determine. The vast variety of implements, utensils, and objects of art disinterred from time to time and the numerous monuments which still subsist, afford no means to inform us as to the extent or nature of such influence, if any. The character of Irish remains, indeed, is more impressed with an Oriental than Greek or Roman origin, and tends to sustain the Eastern descent claimed by the Irish senachies for their ancestry. Some few Roman coins alone sparingly discovered tell of a limited Roman intercourse. In like manner the actual presence of the Northmen on the Irish soil seems to have been nearly as ineffective. Occupying for above two centuries a considerable portion of the island, and especially of the maritime cities, it is strange that they have left hardly any trace or vestiges behind them. Beyond a solitary tower (Reginald's) in Waterford and a few silver coins, the Irish antiquary cannot really point to a single memorial (save the record of their devastations) in the page of his history. Whilst in England and Scotland, and even in the Isle of Man, the sculptured cross and Runic inscription still remain to indentify their sway; in Ireland neither the one or the other throughout the whole breadth and length of the land can be found.

Ireland, then, has no remains of Roman magnificence to exhibit, no vast temple, amphitheatre, or aqueduct; nor does she possess any of those antiquities which the Northern archaeologist could identify as of Scandinavian origin; but she has, on the other hand, many relics of early Phoenician intercourse—vestiges of a religion, an architecture, a language, and a literature, claiming derivation from and affinity with the remote East.

The antiquities of Ireland may be classified into three grand divisions, viz.: the primeval or pagan, early Christian, and mediæval. In the first are comprised stone monuments appertaining to the Druidical religion, such as circles, cromleacs, pillar, holed and rocking-stones, rock-basins, etc, raths, cahirs, duns, the fortified residences of the ancient inhabitants, consisting of great earthworks, or Cyclopean stone enclosures, lofty round towers, stones inscribed with the virgular character called Ogham, dome-roofed structures, round, oblong, or square, with massive walls constructed of uncemented stones. The Cromleac or Druidical altar is a monument well known in these islands and in Northern Europe, and not infrequently found in India and America. It is occasionally met with placed within circles of pillar-stones, but it is often difficult to distinguish between it and the Kistvaen. The latter monument when divested of its covering of earth or stones is to all appearance a perfect cromleac; but there are many of the latter which, from the nature of their sites and peculiarity of construction, could never have served this purpose. The term Cromleac seems to be of modern origin; it does not occur in any ancient Irish manuscript hitherto examined. The native name is that of leabba or leacht: a bed or stone monument.

There are varieties of the circles, some of which must, undoubtedly, have served for religious or judicial purposes, and others found encompassing tumuli. There can be no precise limit to the number of the stones composing these monuments, but several circles are known to contain only five, which seems to have been a favourite number. There is no doubt but that the cromleac (not the kistvaen) and the circle were used sepulchrally, as remains of interments have been frequently found within them. Ireland contains no circles of equal magnitude to those of Stonehenge and Avebury, in England.

The Dallan, or pillar-stone, a monument widely scattered throughout the island, is of various heights from 2 feet above the surface to 24 feet. It is always rough and unhewn, never exhibiting any evidence of art, save where the early missionary may have cut the symbol of Redemption upon it. As it was used in pagan times either as the representative of a deity, or as a monument to the dead, or of some conflict or event, or as a terminal index, we have seldom any means of discriminating its use. The dallan is found either singly or in groups, in lines or in circles. On many of these stones inscriptions in the Ogham character have been discovered. These inscriptions, which occur not only in the dallan, but also on stones comprising the interior chambers of the rath, have only lately obtained any attention from the Irish antiquary. The old senachies have frequently spoken of them and attributed their invention to Ogma, one of the Irish pagan deified princes. Upwards of 150 inscriptions now discovered have given the subject a very deep and just degree of importance. Nevertheless, there are those who regard the origin and use of these (Ogam) letters as a very disputable question. The followers of Dr. Ledwich ascribed the invention to Christian monks, who borrowed the idea from the Danish runes. But when it is stated that some of the inscriptions have been found on unquestionably pagan monuments, and that all, when translated, eschew the Christian formula used in epitaphs, and also when it is borne in mind that the Christian monks (already in possession of the Roman characters), at all times the chief victims of the pagan Danes, were not likely to borrow new letters from their barbarous ene-

ANOTHER "WATTY COX" CARICATURE.

(From the "Irish Magazine and Monthly Asylum of Neglected Biography," 1811.)

LIMPERLIP, THE PRIEST KILLER, SHOOTING AT FATHER DUANE.

mies, it will be readily seen how unlikely such a presumed origin must be.

The sepulchral remains of pagan Ireland are numerous and varied, but offer few distinctive features from those of the neighbouring Celtic nations. They consist of barrows and cairns of different figures and proportions, composed either of earth or stone, and are found in all parts of Ireland. Those in the neighbourhood of the Boyne, at New Grange, North and South, are the most remarkable of this class, not only in Ireland, but probably in all Europe; they are known to cover vast galleries leading to funereal chambers, the stones forming them being of cyclopean proportions and construction. In the Irish sepulchres two kinds of burial were observed: inhumation or whole burial of the body, sometimes with, and often without, arms, weapons or ornaments; and cremation, or burning of the deceased, the ashes and calcined remains being deposited in urns of stone or baked clay. These latter vessels have been numerously found and present a style of ornamentation of a very superior design and execution.

The rath or lis, the cahair, and the dun, formed the fortified residences of the early Irish races, the Firbolg, Danaan and Scoto-Milesian. They are generally circular (although many of the raths are oblong or square), and all strongly entrenched, usually with one vallum and fosse, but often with several. The rath is commonly level with the surrounding ground, but is sometimes raised to a very considerable height above it. Within all these structures souterraines are contained. These last consist of several narrow passages and chambers, either excavated in the solid earth or constructed of dry stone walls or pillar-stones, placed on their ends, and covered over with large flag-stones. The chambers are often square, and sometimes of a beehive-like form. Almost invariably the communication between one apartment and another is by a passage of several feet in length and about eighteen inches or two feet square, so small as only to admit access by creeping through, hence they have been appropriately called creeps. In several chambers human remains have been found, showing that they have occasionally been used for sepulchral purposes, and this use is confirmed by the discovery in many of Ogham inscriptions commemorating the dead. In these chambers also have been frequently found querns or hand mills for grinding corn, showing that they have been used for domestic purposes; in many instances the galleries are carried outside the fort itself, and under the surrounding fosse. The finest specimens remaining of these ancient fortresses are to be seen at Tara, Croghan, Usnach, Emania, the Hill of Allen, etc.

The Round Tower forms the most interesting and also the best controverted object in the whole range of Irish antiquities. Its location, beside, though apart from churches and the presence of the cross over one doorway, together with two decorated doors and the name Cloctheach, by which many of them were vernacularly known, has induced the opinion that they are of the Christian origin. On the other hand, this type has been found on the shores of the Caspian, and in India, Etruria, Sardinia, and Minorca, in monuments indisputably pagan. Dr. Petrie, who by his admirers has been deemed to have settled for ever all controversy on this subject, has concluded that they were of Christian construction, erected as belfries and places of security, and assigns their era to between the fifth and thirteenth centuries. Although now Christian cemeteries, their sites afford many indications of earlier pagan uses, such as holy wells, rock-basins, Ogham inscriptions, stones impressed with footmarks, etc., whilst the names of several are also expressive of heathen appropriation.

Belonging to the Christian era are a great variety of small churches, whose dates extend from the 5th to the 12th century, stone crosses, inscriptions in the Romano-Irish characters, reliquaries, shrines, bells, croziers, etc., and the whole mass of our manuscript literature. The earlier churches are generally plain and unornamented, but one of special interest to the antiquary, from the pelasgic or polygonal character of their masonry and details, manifesting an immediate derivation, or rather continuity, of a preceding style of primeval antiquity in Ireland. Several of them were roofed with stone. The churches of the eighth and subsequent centuries exhibit more decoration and are of greater extent. Their details present more elaboration, etc., of the sculptor's art. In all these, too, there are peculiar features distinguishing their system from the coeval architecture of England. A chancel is generally superadded to the nave, and both portions are connected by a semicircular decorated, sculptured arch. Interesting specimens of the architecture of this period are presented in the ruins of Iniscailtra, Clonmacnois, Cashel, and Monaincha.

The earlier missionaries made it a practice to appropriate the sacred sites and monuments of the converted pagans, and dedicated them to Christian uses. Near the round tower they built their churches; wells and fountains sacred to the inferior deities they consecrated to the worship of angels and saints, and on the heathen pillar-stone they inscribed the cross. Numerous instances of this practice still remain. In many of those crosses considerable inventive taste is displayed; they are found on the tall, rude obelisk, and on the horizontal slab. In these the Cross is usually placed within a circle. Out of this practice grew the beautiful and elaborate class of crosses covered with sculptured devices, emblems, and the most intricate scroll and fret-work. They are generally perforated at the intersection of the arms, and their sites are almost invariably the most ancient cemeteries, although a more recent species—the Wayside cross—is often, as its name implies, found near our highroads. On some of the earlier crosses inscriptions in the Romanesque-Irish character occur. The style and general execution of these monuments afford a high evidence of the skill and artistic attainments of their period.

In the precious and other metals Ireland is especially rich in remains. Her ring-money,

alone, consisting of the perfect circle and the open or penangular ring, forms a distinctive class, of interest, as realising the statement of Caesar as to the use of such a currency amongst the Celts, and still existing in Africa. The golden torques, lunettes, armlets, brooches, etc., so frequently found in tumuli (mounds), etc., attest the abundance of this metal in ancient Ireland, and the almost refined taste with which it was wrought. The Museums of Trinity College, the Royal Irish Academy, the Dublin Society, as also the cabinets of many private individuals, contain rich collections of these and similar articles—swords, spears, daggers, trumpets, celts, axes, chisels, gouges, cauldrons, mazers, and other vessels—which satisfactorily demonstrate the progress of the arts and manufactures in ancient Ireland from the very earliest periods. These articles exhibit a high degree of manufacturing skill and variety of invention, which few would be inclined to credit if the proofs collected were not so very abundant and convincing. An inspection of the Cross of Cong, the Bell-Shrine of St. Patrick, or the Book of Kells, must satisfy the most prejudiced that the art of the metallurgist and the illustrative skill of the scribe had reached a high degree of excellence in Celtic Ireland.

In a land where the avocation of the bard was held in such high estimation, the poetic remains should be, as they are, numerous and abundant. A large amount of "tale, romance, and lay" is accessible to the inquirer. The names of Miss Brooke, J. C. Walker, Drummond, Hardiman, O'Daly, and others are already associated with its publication; and as metrical translations, inbued with all the spirit, fervour, and felicity of expression of their originals, the names of Callanan and Mangan will long be remembered. It were needless to descant here upon the unapproachable merit and beauty of the music of Ireland. Moore has been the happy medium of introducing and locating it through all the civilised world. In the long lapse of ages, much of our original melody has doubtless been lost; but much of it also fortunately survives, and is heard in the sequestered glen and on the hillside, in the cottage of the peasant and in the salons of the wealthy and noble. Not so, however, the harp, which once gave forth the full tide of its entrancing spirit; it has all but ceased in the land, and, despite many efforts for its revival, its further use seems all but departed.

The ancient language of Ireland is still more or less spoken. It is the best preserved, as it is the purest representative of the ancient dialects of Western Europe, and to the philologist and inquirer into the history and antiquity of nations it is of the utmost value. According to the learned Bochart in contains more pure Celtic than the Welsh, Armoric, and Basque, and the mass of its literature which survives embraces a varied treasury of history, hagiology, jurisprudence, poetry, romance, astronomy, mathematics, botany, and physic, unequalled by any other of the non-classical languages of ancient Europe. It is curious to note that much of this literature is embodied in verse, conveyed in this garb from the earliest ages, just as it was amongst the Spanish Turditani, and the Hindoos, Persians, and Arabians. The Irish scholar needs a perfect lexicon and printed books to facilitate his study of this literature. Of late years something has indeed been done towards removing these impediments. The Celtic and Irish Archæological Societies, Mr. O'Daly, Professor Connellan, Dr. Todd, and, beyond all, Dr. John O'Donovan, have published several volumes of great value to the scholar, and the great work of collating and transcribing for publication the Brehon laws, comprising the whole body of ancient Irish legislation and jurisprudence, is now, fortunately, in actual progress. Before quitting this section of Irish antiquities, we may be excused for observing that many of the early Irish manuscripts present the most beautiful specimens of their kind to be found in any country. Mr. Westwood, a most competent authority on this subject, has stated as his opinion that at a period when the fine arts may be said to have been extinct in Italy and other parts of the Continent, viz.:—from the fifth to the end of the eighth century, a style of art had been established and cultivated in Ireland absolutely distinct from that of all other arts of the civilised world. There is abundant evidence to prove that in the sixth and seventh centuries the art of ornamenting manuscripts of the Sacred Scriptures, especially of the Gospels, had attained a perfection almost marvellous in Ireland. Specimens of these illuminated manuscripts may be seen in the Libraries of Trinity College, Dublin; the Royal Irish Academy, the British Museum, the Bodleian Library (Oxford), and in many private hands.

The subject of Irish antiquities belonging to the period between the twelfth and sixteenth centuries is of too extensive a nature to be more than glanced at in this notice. That era was distinguished by the introduction of new elements, a new race, the Anglo-Norman; a new style of architecture, in castellation, with all its varied peculiarities, until its termination in the Tudor manor-house; and the substitution in church and abbey of the pointed orders (Gothic) for the old Romanesque; besides changes in government, religion, modes of warfare, manners, habits, costume, arts, and even language; which would require volumes for their elucidation.

BONNIE TWINKLIN' STARNIES.

BY JAMES M'KOWEN.

Bonnie twinklin' starnies!
Sae gentle and sae bright—
Ye woo me and ye win me
With your soft and silver light.
Now, peepin' o'er the mountain—
Now glintin' in the streams—
Now kissin' the red heather-bell
All with your winsome beams.
Bonnie twinklin' starnies!
Sae gentle and sae bright—
Ye woo me and ye win me
With your soft and silver light.

Bonnie twinklin' starnies!
When gloamin' sheds its tinge,
And strings the crystal dew-drop
Around the gowan's fringe—
How often do I linger
With keen and anxious eye,
To watch your bonnie faces
Come glintin' frae the sky.
Starnies! twinklin' starnies! etc.

Bonnie twinklin' starnies!
Bright guardians of the skies—
How can we dream of wickedness
Beneath your sleepless eyes?
Cold and pulseless is the heart,
And deeply fraught with guile,
That does na feel the "lowe o' love,"
When ye look down and smile.
Bonnie twinklin' starnies! etc.

CHICAGO A GREAT INLAND PORT.

That Chicago is a great shipping centre almost everyone knows. But that it now ranks fourth among the ports of the world is not so well known. The latest figures relating to the matter of shipping are:—London, 16,529,095 tons; New York, 16,445,320; Hamburg, 14,198,817; Chicago, 14,186,100; Antwerp, 13,573,472; Liverpool, 11,818,000; and Marseilles, 9,629,114. Chicago leads all United States ports except New York in tonnage, and the constant extension of lake traffic has added not only to the commerce of Chicago, but likewise very largely to the commerce of Cleveland, now a very important port of entry; Detroit, Buffalo, Milwaukee, Duluth, and Toledo. The chief articles of commerce on the lakes are wheat, flour, coal, iron, and lumber. In 1871 the number of bushels of wheat passing through the Soo Canal was 1,376,705, while last year the number of bushels was 60,000,000, or more than forty times as much as in 1871.

Ancient Boroughs of Ireland

From Lewis's "Topographical Dictionary of Ireland," 1837.

DINGLE, or DINGLE-I-COUCH, an incorporated seaport, market, and post-town (formerly a Parliamentary borough), and a parish, in the barony of Corkaguiney, county of Kerry, and province of Munster, 22 miles (W.) from Tralee, and 173 miles (S.W by W.) from Dublin; containing 6,719 inhabitants, of which number, 4,327 are in the town. This place was anciently called "Dangean-ni-Cushey," or "The Castle of Hussey," from a castle built here by an old English family of that name, to whom one of the Earls of Desmond had granted a considerable tract of land in the vicinity. On the rebellion and consequent forfeitures of the Desmond family and its adherents, it was, with divers lands, granted to the Earl of Ormonde, from whom it was purchased by Fitzgerald, Knight of Kerry, who had also a castle in this town. After the destruction of the Spaniards at Smerwick, in 1581, the Lord-Deputy rested here, where many of his men died from from sickness, notwithstanding the supplies brought in by the Earl of Ormonde. Soon after this event, Queen Elizabeth granted £300 to the inhabitants to surround the town with walls; but in 1600, the "sugan" Earl of Desmond having been refused admittance into the Knight of Kerry's castle, revenged the affront by setting fire to the town; the Knight subsequently delivered up the castle to Sir Charles Wilmot, who for some time made it his head-quarters. Dingle is the most westerly town in Ireland; it is situated in lat. 50 deg. 10 min. 30 sec. and lon. 10 deg. 15 min. 45 sec., on the northern coast of the bay of the same name, an inlet from which forms the harbour, and may be called the capital of the extensive peninsula which comprises the entire barony of Corkaguiney. This district is generally supposed to have been colonised by the Spaniards, who formerly carried on an extensive fishery off the coast, and traded with the inhabitants, who still retain strong indications of their Spanish origin, and some of the old houses are evidently built in the Spanish fashion. The town occupies a hilly slope, and is surrounded by mountains on all sides except that towards the harbour, which here presents the appearance of a lake; the outlet being concealed by a projecting headland. The streets are irregularly disposed, but as there are more than the usual proportion of respectable slated houses, with gardens attached, the town has from a short distance a very pleasing appearance. The pier, originally built by the corporation, aided by a grant of £1,000, in 1765, from the Irish Parliament, was enlarged by the late Fishery Board, and subsequently improved by the customs' department: it has been found beneficial for mercantile and agricultural purposes, as well as the fisheries: vessels of 300 tons can come up to it. The harbour is well adapted for vessels of moderate burden, but not being discoverable from

the sea, is what is nautically termed a "blind" one; it is, however, extremely difficult of access during a strong west wind, and vessels passing by it and running to the eastward are in danger of being lost on Castlemaine bar.

Queen Elizabeth, in the 28th year of her reign, signed a warrant for the grant of a charter of incorporation to the inhabitants of the town, with privileges similar to the borough of Drogheda, and with a superiority ove rthe harbours of Smerwick, Ventry, and Ferriter's-Creek; but the charter was not actually granted until the 4th of Jas. I. This charter, which is the only one known, was granted to the "Sovereign, Burgesses, and Commonalty," from which it would appear that the corporation was then in existence, probably under the authority of the warrant of Elizabeth. The town, however, under the name of "Dingle-i-Couch," is found among those that sent members to Parliament in the 27th of Elizabeth. The style of the corporation is "The Sovereign, Burgesses, and Commonalty, of the Town of Dingle-i-Couch." The borough sent two representatives to the Irish Parliament until the Union, when it was disfranchised, and the entire compensation of £15,000 paid to Richard Boyle Townshend, Esq., several other claims having been disallowed.

The old church, which was dedicated to St. James, is said to have been built by the Spaniards: it was originally a very large structure. A part of it, called St. Mary's chapel, was kept in repair until the erection of the present parish church, on the site of the ancient edifice, in 1807.. In the churchyard is a tomb of the Fitzgerald family, with an inscription in Gothic characters, bearing the date 1504. Of the ancient monastery which formerly existed here, as a cell to the abbey of Killagh, near Castlemaine, there are no remains. At Ballybeg, north-east of the town, is a strongly impregnated mineral-spring, of a chalybeo-sulphureous nature, but not much used for medicinal purposes; and along the shore of the bay are several caves, in which are often found the beautiful crystallisations called "Kerry stones." From Connor Hill to the north-east of Dingle, on the road to Castle-Gregory, a splendid view, embracing both sides of the peninsula, is obtained. On one side is seen the bay of Dingle, as far as the island of Valentia, with the great Skellig rock in the distance, and the town and harbour of Dingle lying immediately beneath; and on the other side, Brandon bay and several bold headlands. On each side are mountains, with wide and deep valleys intervening, and numerous tarns or small lakes lying in the hollows of the hills.

RAYS THAT SHOOT THROUGH IRON.

Experiments by Professor E. Rutherford, reported to the Royal Society of Canada in Toronto, show that the wonderful substance, radium, from which a constant, invisible emanation takes place, is capable of sending its rays through from eight to ten inches of iron. The ionisation produced by the rays after emerging from the iron shows Professor Rurtherford says, that they must be regarded as consisting of negatively charged particles.

THE ANCIENT AND PRESENT STATE OF THE COUNTY AND CITY OF CORK.

By CHARLES SMITH, M.D.

Æquum est enim meminisse & me, qui discerem hominem esse, et vos, qui Judicetis ut fi probabilia dicentur nihil ultra requiratis. Cicero Univers

In Two Volumes.

VOL I.

The Second Edition, with Additions.

BOOK II.

Containing the Topographical Description of this County, including the City of Cork.

CHAP. II.

Containing a Description of the Baronies of Barrymore, Barrets, and Muskery.

To the west of the foregoing small barony, the large one of Barrymore is situated, bounded by it and Imokilly on the east, by Barrets and the liberty of Cork on the west, on the north by Fermoy and Condons, and on the south by the harbour of Cork (1). This country gives title of Earl to the ancient and noble family of the Barrys. They were first called Lords Barry, of Olethan from this territory; and were summoned to Parliament as Lord Baron Barry, of Barry's-Court, ann. 1490, the 6th of Henry VII. They have also long enjoyed the title of Viscount Buttevant in this county; and were created Earls of Barrymore, Feb. 28, 1627-8, the 3rd of Charles I. On the 12th of Dec., 2nd of Charles I., letters patent passed to David, Viscount Buttevant, of the manors of Barry's-Court, Castle-Lyons, Buttevant, Timoleague, Rathbarry, Shandon, and divers other lands. King Charles II., in a warrant directed to the Duke of Ormond, Lord Lieutenant of Ireland, takes notice of a petition of Richard, Earl of Barrymore, setting forth that the above manors were passed by letters patent to his father; to which there belonged several lands, known by distinct names, not mentioned in the patent, but specified in a schedule annexed to the petition, and praying directions for new letters patent to be passed. The King referred this petition to the consideration of his Grace the Lord Lieutenant, who, with the Privy Council, upon examining the same, made out new letters patent, in which several other lands, not mentioned in the former ones, were included.

This barony is, for the greatest part, rough and hilly; towards the N., near the S., and E. it is indifferently fruitful, and has in it several good tracts of limestone, particularly near the river Bride, and also a large vein running through it from Cork. It has some considerable high mountains to the N.W., called Nagle's mountains, ranged along the south of the Blackwater; from their feet, the river Bride, which runs through this barony (there being also another of the same name in Muskery), takes its measuring course down to Tallow. Many of these mountainous tracts, which, in the winter season, are unfrequented by man and beast, are in summer no unelegant places of abode. The vast and extended prospect they afford over the well-cultivated plains beneath them, at once fill the eye with delight, and the mind with satisfaction. In dry weather, the air is far from being unwholesome, being then filled with aromatic perfumes from various plants; and the heath, from its russet brown, is then in flower, and clothed in purple and scarlet.

Leaving the small barony of Kilnataloon, the first place on the banks of the Bride is the castle of Robert's-Town (being an high square tower), built by Robert de Barry, as a frontier to their territory, against the invasions and depredations of the Fitz-Geralds, of Closhbride, dangerous and powerful neighbours, when force gave a title to possession, as it did in this country in former days.

A mile W. is Castle-Lyons, called Castlelehan, from the O'Lehans, an ancient Irish sept that possessed it, and who gave their name to a great part of this country (2). It is a well-built market town, pleasantly situated and well watered, in a rich, fruitful soil, a short way from the river Bride, and has some share of trade. In this place John de Barry founded a monastery of Conventual Franciscans, anno 1307. Upon the dissolution, it was granted to the Earl of Cork, who assigned it to his son-in-law, David, the 1st Earl of Barrymore, or rather to his daughter, for in his will he says "he bequeaths the rents and profits of "this house to his daughter Barrymore, to "buy her gloves and pins (3)." A considerable part of this abbey still remains, particularly the choir, nave, and steeple of the church. This town lies well for the linen manufacture, and is distant twelve reputed miles from Cork. The Lord Barrymore has here a strong and stately house, built on the foundation of the O'Lehan castle. It is a large square building, with a court in the centre: on one side of this square is a spacious hall, hung round with muskets, swords, bayonets, pistols, and other weapons, ranged in several figures. The kitchen forms another side of the building, which is watered by an aqueduct,

(1) It contains 30 parishes, viz, Clonmult, Dungorny, Inchenebacky, Ballyspillane, Ballynacurra, Garrankinfeaky, Aghaddy, Titeskin, Templenicarigy, Ballycorney, Lisgoold, Mogeshy, Carrigtohil, Temple-Robbin, Clonmel, Kilgarvane, Little-Island, Cahirlag, Kilquane, Killervane, Temple-Usque, Dunbullogue, Ardnegehy, Kilshanaghan, Rathcormack, Gortroe, Templebodane, Castle-Lyons, and Britway. There are in it 204 plowlands, containing 79,159 Irish plantation acres.

(2) There is a town of this name on the river Dordone, near Bordeaux, in France.

(3) Copy of his will, at Lismore.

contrived by a common Irish miller, at an inconsiderable expense; a celebrated undertaker from England having failed in the attempt to bring this water by another course, after a good sum was expended thereon. On the N. side of the house is a noble gallery, 90 feet long and two storeys high, but it is yet unfinished. There are here several good apartments, furnished with family pictures, among others two originals of Richard, the first Earl of Cork, and his second lady. The gardens, with a large canal, lie to the W., and near the house is a charming deer-park, through which the river Bride runs. In throwing down some of the old walls of Castlelehan, a chimney piece was discovered, with this inscription, "Lehan O'Cullane hoc fecit MCIII." Which shows that stone buildings were much earlier in Ireland than our modern antiquarians allow them to have been (4). Places near Castle-Lyons are Cool, Mr. Peard's, so named from its being in a corner of Condon's barony, which runs into Barrymore; near it stand the ruins of a church; here the Condons had formerly a castle. Toormore, a new house, and good improvements, of Mr. Barret; and Ballydorgan, Mr. Lear's seat. Ballinterry, between Castle-Lyons and Rathcormuck, belongs to Lord Barrymore; it is agreeably situated, and well planted.

Rathcormuck, i.e., Charles-Fort, is a small, neat market town and borough ($11\frac{1}{2}$ measured Irish miles from Cork), near the river Bride, adorned with a pretty parish church and steeple, and a session house, where the county sessions are held once a year; it returns two members to Parliament. Near it is Lisnegar, a fine improvement, the seat of Redmond Barry, Esq., with pleasant gardens, large plantations of cider fruit,and the nonpariel apple. There is a fine canal to the east of the house, stocked with fish. The town of Rathcormuck also belongs to this gentleman, who is descended from an ancient branch of the Barry family, commonly called Mac-Adam, who have been seated here 500 years, and formerly sat in Parliament; particularly David de Barry, of Rathcormuck, who sat in the Upper House in a Parliament held 50th of Edward I., anno 1302. S. of Rathcormuck is a fair stone bridge over the Bride, upon which is this inscription: "The foundation of this bridge was laid June 22, 1734, Col. Redmond Barry, Jonas Devonshire, and James Barry, gent., being overseers thereof." To the N. of Rathcormuck is a range of mountains, the last of which, to the E., is named Cairn-Tierna, i.e., The Thane's Heap; on the top of which is a large rude heap of stones, said to take its name from the thane or lord of this country, holding assemblies thereon in a judicial way. It also was said to be the place where they elected their chiefs, as was the custom when tanistry prevailed in this country; which shows a different use of these cairns or heaps besides their being set up as funeral monuments. This hill is very conspicuous from different parts of the country.

From Rathcormuck W. this barony is coarse and mountainous. Within three miles of Cork is Sarsfield's town, or Sarsfield's court (occupied by Mr. Grey), the estate of John Putland, of Dublin, Esq.; from a terrace in the garden is one of the finest prospects in all this country. A mile to the S. is Rivers-town, a pleasant seat of the Lord Bishop of Cork. The house is beautified with several beautiful pieces of stucco, performed by the Franchinis brothers. The river of Glanmire runs through his gardens, banked into serpentine canals, which are stocked with carp, tench, &c., the river being grated at both ends. A pleasant park, stocked with deer, comes close to the garden walls. The adjacent country is here finely improved, well laid out, and cultivated.

Glanmire is a small village, prettily planted. Here is a curious bolting mill, with another near Ballyrochine, both belonging to Mr. Samuel Pike, merchant, of Cork. The water-wheel of this last mill is 24 feet diameter, being an over shot wheel the cog-wheel and axle-tree are very large; these were the first of the kind erected in this part of the kingdom, and stand very convenient for bringing wheat and sending flour and meal by water from and to the city of Cork. Mr. Pike informed me that the best and largest grained wheat of the country grows near the city, the ground being manured with bran, from whence starch is extracted. At Ballyrochine is a slitting mill, for making rod iron; and also a paper mill, all worked by the river of Glanmire, which discharges itself into Cork harbour through a deep and romantic glin, pleasantly wooded on its sides.

Towards its exit is Dunkettle, now the seat of Richard Tonson, Esq., affording a fine prospect of a great part of Cork harbour and the river Lee up to the city, which from Blackrock to the town except a narrow channel formed by the river) is quite dry at low water, with oozy banks on each side, so that upon the ebb vessels and boats are often fast in the mud, as Silas Italicus remarks of Ravenna in Italy,

> Quaque gravi remo limosis seigniter undis
> Lenta paludosæ perscindunt stagna Ravennæ.
> L. 8.

> Encumbered in the mud, their oars divide,
> With heavy strokes, the thick unwieldly tide.
> Addison.

At high water the channel is sufficiently deep for vessels of 100 tons; but this shallowness of the upper part of the river is amply recompensed by the depth, capaciousness, and security of the harbour lower down, in which several fleets may ride in different parts of it without seeing each other. In the house of Dunkettle there are some good paintings, in crayon, and oil; the gardens slope to the water; and there is lately a new enclosed park.

(To be Continued.)

(4) I fear, it has been too hastily asserted, that there were no structures of lime and stone in this kingdom before the 12th century. The small round towers, built, according to Cambrensis (Topograp. Hibern. distinct. 2. cap. 9.) more patrio, i. e. after the custom of the country, seem to imply an established method of building for a long time. The first stone buildings in Ireland, are said to have been the castle of Tuam, built anno 1161, by Roderic O'Connor, king of Connaught, which was a thing then said said to be so new and uncommon, that it became famous among the Irish, by the name of the wonderful castle. Malachy O-Morgair, Archbishop of Armagh, who died in 1148, was the first Irishman (or, at least, one of the first) who built a chapel of stone at Bangor of which, his contemporary, St Bernard in his life, says, the natives were astonished at the novelty. Ware's Antiquities.

IRISH ANTIQUITIES POETISED.

(An extract from Wm. Allingham's "Laurence Bloomfield in Ireland.")

"The mournful relics of the secret past,
Waifs, liftings, from that ocean deep and vast,
The thought and work of many a vanish'd race;
The life of ancient Erin you may trace
In Druid's torque, moonshaped of thinnest gold,
Square bell that to St. Patrick's teaching toll'd;
Cups, coins, and Fibulæ, and Ogham stones,
Spears, axe, and arrowheads of flint or bronze,
Whatever knowledge (at the best but small),
Of such is extant, Laurence knew it all,
And sometimes to his neighbours far and near
Imparts a modest lecture, short and clear,
On things Hibernian, chiefly those around,
The giant's grave, the fort, the fairy mound,
The crumbling abbey wall, the round tower grey,
Still rising smooth and firm as on the day
Its taper cap received the topmost stone;
The mountain cairn to distant counties shown;
The Norman English keep, on river brink;
His light, firm hand connecting link with link
Of Irish history, so that none complain
To find it gall them like a rusty chain.
'Tis gentle hand that clings
To hope's and meaning's ideal things;
. . . . This very night
The ghosts of immemorial ages light,
From Howth to Connemara, Donegal
To furthest Kerry, for their festival
On every height, and head a mystic flame."

PREVENTION OF DEFORMITIES.

Deformities are either the results of injury or disease. Those which result from violence may often be prevented by properly fitted splints, and the exercise of care on the part of the injured person or his nurse that these are not displaced. A bone may be accurately "set," and yet carelessness on the part of the sufferer may subsequently misplace the fragments. A plaster splint is, perhaps, least likely to allow such an accident to occur.

It is well known that deformity is a common result of local paralysis, such as frequently follows diphtheria. The nerves supplying the muscles on the back of a limb, for example, may be affected by paralysis, and in such a case the normal resistance of these muscles to those on the other side of the limb is decreased or destroyed, so that a one-sided activity is established. This, lasting through a considerable time, will produce marked deformity.

It is believed by many eminent authorities that fully one-half the deformities of this class might be prevented by persistent attempts to use the affected muscles. Electricity has its use here, but it must be supplemented by actual use of the muscles themselves. One must often exert his will-power to the fullest extent to obtain the first sign of improvement. Progress may not be immediate. Repeated attempts may be necessary to obtain favourable results.

Physicians who devote a large share of their attention to deformities of the leg, such as bow-leg and knock-knee, assert that all the lesser forms of these diseases might be prevented by daily manipulation by the mother or nurse during the early years of childhood, while the bones retain their pliability. In these cases, also, persistence must be the watchword, and no thought of failure must be entertained. Even the most severe forms of bow-leg and knock-knee may usually be so improved by the more simple methods that operations for their correction need rarely be performed.

A common error is the belief that slight or incipient deformities need only time to correct themselves. This delusion should be emphatically combatted, since it is responsible for a large share of unsightly deformities which in after life prove difficult, if not impossible, to correct.

VOCAL SOUNDS OF FISHES.

By Prof. Charles Frederick Holder.

In the latter part of the summer of 1899 the fishermen brought me two very interesting fishes, which were kept in the tanks for months. They were known to science as Porichthys notatus, the popular names being midshipman, singing fish and star gazer. In a general way the fish resembles the cat fish. It is about fifteen inches in length; the head flat, the eyes on top of it and capable of being depressed out of sight when the fish is touched. The prevailing colour is a deep blue; the mouth is large and armed with an array of sharp recurved teeth, a remarkable series of pores, and a still more remarkable series of silver spots almost identical with the so-called eye spots seen in Scopelus and others so far as appearances go, yet so far as known not phosphorescent organs. These silver spots are arranged along the sides and upon the lateral ventral surface in a curious design, and resemble the heads of pins driven into the flesh. Each is a round piece of silver-coloured membrane, which shows through the skin, above which is a pair of flaps with fringes; between each flap lies a pore.

The fishes habitually lay on the bottom of the tank, rarely moving except when fed; but occasionally they would wriggle to the surface and lie there, displaying the wonderful arrangement of pearly or silver "buttons," which have given the title of midshipman to the fish. The building in which the fishes were kept was sixty feet in length, and while standing at the end one day I heard a loud "umph"-like sound—with heavy accent on the "m." As I stood and listened, it came again—"umph," so loud that it could have been heard twice the distance away. I turned in the direction of the sound, and when I reached the tank of the midshipman I saw that the jaws of one were stretched outward, and again came the remarkable sound, "umph," which resembled the "word" many monkeys utter when grunting their displeasure or pleasure, but so loud and resonant that although I had heard various fishes utter sounds, I was amazed.

Later I took one of the fishes from the tank and carried it the entire length of the building to a dissecting room, and during the passage the fish uttered the sound continually, attracting the attention of the visitors. This sound is made with the air bladder of the fish, but is not so remarkable as what might be termed the musical sounds of the fish. An acquaintance while walking on the sands of San Diego Bay, very early in the morning, heard a singular murmuring sound. It evidently proceeded from the water, and presently so increased in volume that the listener stood for some time trying to trace it. Finally with the aid of a boat he discovered that the sounds came up from the sea, and emanated from a school of midshipmen. To the observing fisherman along the shore, and especially at Don Pedro, the music of the fishes is familiar, but it rarely happens that a landsman has the opportunity of hearing it.

My informant stated that the sounds were perfectly musical—a murmuring sound, which rose and fell with a certain rhythm, and that it was a remarkable performance, not alone for the loudness of the notes, but for their musical quality.

A very intelligent Venetian fisherman at Avalon informed me that he had often heard the sounds of this fish, and at times in deep water; the peculiar murmuring notes rising and falling, then dying away suddenly to come again.

The late Spencer H. Baird once told me that he had heard the remarkable sounds made by the drum fish of the Atlantic. Wishing to investigate the subject, he made inquiries among the fishermen, and learned that they frequently heard the sound, and they willingly agreed to take him to a spot where he was amply satisfied that the drum fish utters sounds—sounds so like a drum, a strange, uncanny "boom-boom-boom," that not a few sailors have ascribed them to a more superstitious cause than the common drum fish, which utters them partly by grinding together its pharyngeal bones.

The drum fish is not the only one of its group which utters sounds. Nearly all produce them to a greater or less degree; some being just audible, others loud and distinct. Some years ago a British officer reported that a fish of this group uttered such loud noises that the fishermen at a certain point were alarmed, and attributed it to some supernatural cause. He heard the sounds, and described them as resembling the twanging of an immense harp and the beating of a drum. As with those previously described, the sounds varied, being low, a sort of murmur at first, then increasing until there was a babel of strange sounds. It was thought in this instance that the fishes must have clapped their jaws together to produce them, so loud and resonant were they.

One of the most remarkable sound producers it has ever been my good fortune to listen to was a Haemulon of the Gulf of Mexico—one of the wide-mouthed, highly coloured grunts so common on every portion of the reef. I never succeeded in hearing this sound beneath the water, though I passed many hours lying on a platform I had built at the surface, beneath which were hundreds of grunts unsuspicious of my near proximity. They were constantly engaged in games, chasing each other about, now approaching one another, opening the mouth wide, and standing perfectly still; then retreating, and at this time, if any, the sounds must have been uttered. The moment I took one of these fishes from the water it began to grunt: "Oink-oink-oink"; now with one prolonged "o-i-n-k," then strung along rapidly, as though to intensify its agony; all the while it rolled its large eyes at me in a comical manner. No one in listening to such a remarkable outcry from a fish could refrain from wondering whether it had any significance; in other words, the impression was created that it was barely possible that the sounds were repeated in the water, and that they represented a very primitive attempt at vocal communication among fishes; but, as I have said, the sounds were never heard rising from the multitude of grunts, which swam about beneath my improvised screen, and the most plausible theory is perhaps that the sound "oink" is the only one the fish can utter, and that it is accidental or involuntary, though in the case of the midshipman, whose voice I heard sixty feet away, and which appears to "sing," there must be a different explanation. The murmuring sounds have some significance or meaning.

Several years ago I witnessed a sudden run of dog fish—a small shark on the New England coast. In the morning the men were cod fishing on the banks, but suddenly the dog fish "set in." They came in countless thousands, destroying the fishing; a ravenous horde, fairly filling the water and eating jelly fishes to satisfy their hunger. No sooner did a bait strike the water than several rushed at it, and the boat near me had the sail, which was dragging overboard, torn in pieces by them. The fishermen immediately changed their tackle, and began fishing for dog fish for the livers, which were valued at a cent apiece, soon filling their boats. As the fish were hauled in they uttered loud croaks sounding like "r-o-i-k, r-o-i-k," and this was heard from scores of snapping mouths in concert. In this instance it seemed to require no effort to produce the sound, and it may have been, in all probability was, the accompaniment of a convulsive gasping for breath.

The sounds produced by fishes—and sixty or seventy or more are known to utter them—it is supposed are caused by the action of the pneumatic duct and swimming bladder, or produced by the lips or pharyngeal or intermaxillary bones. The curious puff shark uttered a deep grunt when it was taken from the water. I heard this sound one day while on the beach at Avalon, and although I recognised it, I could not see the fish. Finally, after hearing it repeated a number of times, I traced it to a hook near by where a fisherman had, with the usual indifference to the feelings of sharks, hung the fish by the gills. The grunt may have been involuntary, but I chose to construe it into a plea for mercy, and unhooked the shark and placed it in the water, where it swam away, its voice, in this case, having saved its life.

The carp utters a low sound, and a sunfish which I kept, often came to the surface and uttered an audible clicking sound. Some of the gurnards utter a murmuring sound; many of the cat fishes produce sounds, and the eel and moray are said to have the same power. On the Maine coast, near Ogunquit, I once found a remarkable eel settlement, and spent much time drifting over the spot, listening for the sounds made by them, handling many as they crossed the rocks at ebb tide to reach the sea, but I was never repaid. Dr. C. C. Abbott, who has heard the sounds uttered by eels, states they are the most musical of those of any fish observed by him. I have handled and experimented with Florida and Southern Californian morays, with a similar object in view, but without results. It is believed that the sounds are produced by forcing air from the swimming-bladder into the œsophagus, and according to the authority quoted, the note of the eel is often repeated and has a slight metallic resonance.

The little sea horse has a note, though I have always failed to hear it; but I have listened to the low growling croak of the semotilus of the St. Lawrence, and more than once tossed a fish back for its pains and, I might say, its vocal reproaches, and I have heard the croak of the California "big head." A whirring sound is said to be uttered by the gizzard shad—Dorosoma cepedianum—while the chub has a single note, probably produced by the air-bladder, as a discharge of bubbles has been noticed after it. When the sounds of fishes can be caught in the phonograph, and some careful observer devotes his attention to the subject and makes an exhaustive study of it, the results will be of more than ordinary interest.

IRISH IN KENTUCKY.

MANY HIBERNIANS AMONG FIRST SETTLERS OF STATE.

An Irish fair was held in Louisville, Kentucky, recently. At the opening an eloquent address was delivered by Judge Matthew O'Doherty. It was, in part, as follows:—Henry Clay once declared that Kentucky is the Ireland of America. He saw in the luxuriant soil of the bluegress, in the waving meadows and the magnificent mountain scenery of Kentucky, in her rivers and streams, and in the blue sky above them the fadeless beauty of the Emerald Isle, reflected as in a mirror. But it was not the likeness in climate or soil merely which the Great Commoner had inview. No, no, his penetrating mind reached farther and deeper. He saw in the generous hospitality for which the people of Kentucky are famous, in the eloquence, courage, and bravery of her men, and the beauty and purity of her women the real points of resemblance and similarity which made Kentucky, in his judgment, the Ireland of America. He knew too, the early history of his State, and the active and honourable part which Irishmen had taken in it. In Collins's "History of Kentucky," James M'Bride, an Irishman, is credited as being the first white man to enter its borders, "paddling his canoe up the Kentucky River in 1743." James Mooney, John Finley, and William Cool accompanied Daniel Boone to the "dark and bloody ground" in 1769, and they were followed by Captain Grattan, John Tool, and John M'Manus, who laid the foundation of this city. Captain Flynn was one of the founders of Columbia, and with him were John Riley and Francis Dunlevy. Three of the best-known Indian fighters of this period in Kentucky were Major M'Garry, Major M'Bride, and Captain Bulger, associates of Daniel Boone. Fully a score of the fortified stations in Kentucky built for protection against the Indians bore distinctly Irish names. Among them Bryan's Station, Dougherty's Station, Hart's Station, Lynch's Station, M'Gee's Station, Sullivan's Old Station, Sullivan's New Station, Daniel Sullivan's Station, M'Guire's Station, M'Cormick's Station, and M'Keenan's Station. Eleven counties of Kentucky bear the names of men of Irish blood:—Lyon, Adair, Butler, Logan, Hart, M'Cracken, Montgomery, Carroll, Boyle, Rowan, and Casey. There is scarcely a Gaelic name in Ireland that was not represented in Kentucky after the Revolution, and many of those who bore them fought in the War of Independence. Indeed, it has been observed that their names, as published in Collins's "History," look like a voting list in South Boston, so unmistakably Irish are they. The muster roll of the "Huntsmen from Kentucky," who fought with Jasper Greens under Jackson at New Orleans, bears many an Irish name, and shows that the Irish settlers in Kentucky, as elsewhere and at all times, did their full share in the day of trial. When the War of Rebellion, probably the greatest war in the history of the world, ended after four years of fighting, without parallel in any other land, the most fitting Requiem of victor and vanquished was sung by a Kentucky Irish-American, the immortal "Bivouac of the Dead," by the soldier-poet, Theodore O'Hara, a poem of such sublime conception, of such elevation of thought and sentiment, withal of such perfect grace and beauty, that our government had it cast in bronze and placed, where it may now be found, in every national cemetery throughout the land. The history of Kentuckians of Irish blood does not differ essentially from that of their kindred in other States. The share Irishmen took in the War of Independence must ever remain the proudest boast and legacy of their descendants and kindred.

LITERARY NOTES.

Mr. Swinburne has written a paper on "King Lear," and it will be printed in the December "Harper's," with a new series of Shakespeare's drawings, which Mr. E. A. Abbey is beginning.

✧ ✧ ✧

Mr. Sidney Lee (says the "Sketch"') is going to the United States this winter to deliver a course of lectures at the Lowell Institute, and it is likely he will remain on the other side of the Atlantic until the spring.

✧ ✧ ✧

"Tete montee" is not accepted by Littre as being French, although "se monter la tete" is a phrase well known in France, but it is used for a particular form of excited obstinacy on a given point which has nothing in common with "swelled head" or any idea of being "too big for one's boots."

✧ ✧ ✧

The latest view is that, since the publication of Littre, "tete montee" has become French. The second of the two words is used as it is in the "rising" of milk when it boils over. So that "tete montee" is a phrase which has in it elements not only of personal intellectual pride, but also of sudden movement and even of anger.

✧ ✧ ✧

Mr. Kruger's book was issued on Monday, and reviews of it have already been published in all the principal newspapers. General De Wet's volume was issued on December 1. "Three Years War" promises to be full of go; the summary has the air of an adventure book. Thus: The Wild Flight from Poplar Grove—Negotiations with the Enemy—Darkness Proves My Salvation—I Cut My Way Through 6,000 Troops.

✧ ✧ ✧

The "Onlooker" has asked certain well-known people to compile lists of books suitable for Christmas gifts. Here is Lucas Malet's list—"Just So Stories," Rudyard Kipling; "Felix," Robert Hichens; "The Wings of a Dove," Henry James; "The Winding Road," E. Godfrey; "The Papal Monarchy," Wm. Barry, D.D.; "The Spell of the Jungle," Alice Perrin.

✧ ✧ ✧

The gentleman who writes the "Literature and Life" column for the "Saturday Review" of the "New York American" last week began his opening paragraph thus—"Mary Johnston has written a story of love. As it is exquisite and modern manners are not, she has taken the artistic idea to place it out of the century. She has placed it in the age of Queen Elizabeth." In the last paragraph we read this of Joan of Arc: "She was made of poetry as lilies are of dew." America is a great country!

✧ ✧ ✧

Apropos of the failure of that high-class magazine, "The Pilot," an expert in the various sides of literary journalism says that he always began Saturday morning by looking through the list of books wanted in the "Publishers' Circular" and then proceeded to "The Pilot." He adds, "What the failure of 'The Pilot' means is that no weekly review priced at more than a penny can be established with a smaller capital than £30,000."

✧ ✧ ✧

The use last week in the House of Commons by Sir Henry Campbell-Bannerman of the phrase "tete montee" has led to statements in the newspapers to the effect that this is French for the American "swelled head." There is no foundation (says the "Athenæum") for this suggestion except that some persons in England have in very recent years quoted the phrase in that sense. Such use is entirely unknown to France.

✧ ✧ ✧

For the first ten years of its existence Professor Masson edited "Macmillan's Magazine." He enjoyed the friendship of Carlyle and knew De Quincey, whose collected works he edited. Lord Rosebery the other day called the Professor the "Grand Old Man of Edinburgh." Since Professor Blackie ceased to walk Princes street, Professor Masson has been its most picturesque figure. A daughter of the Professor's, Rosaline Masson, promises to perpetuate the family traditions in literature, and has done some good work in fiction.

✧ ✧ ✧

It was not a bad idea to get actors to give lists of ther favourite recitations. In "Favourite Recitations of Favourite Actors," Mr. Percy Cross Standing has brought a number of such lists together. On the whole we find more literature than we should have expected, though there are pretty bad lapses here and there Shakespeare comes first in point of popularity, and we range downwards through Tennyson, Browning, Whittier, Mr Jerome, and Mr G R Sims Rosetti appears four times; Mr Standing says he had a "melodious pen."

✧ ✧ ✧

Mr. G. A. Henty, whose death was announced the other day, told the readers of "Great Thoughts" recently, through the medium of an interviewer, how he wrote and why he wrote. As to the "why" he said, "My object has been to teach history, and still more to encourage manly and straight living and feeling amongst boys." That is well enough—much better than the "how":—

When I have settled on a period in history I send to the London Library for ten books specially dealing with that period. I glance through them to see which gives me the kind of information I want, and then I sit down to write without any previous idea of what the story is going to be. It gradually builds itself up from its surroundings.

✧ ✧ ✧

It is expected that the late Mr. Lionel Johnson's books will be sold by auction shortly. Not a few literary men are likely to desire the possession of a volume from the library of which he was justly proud. We see that in the "Philadelphia Ledger," Professor T. Russell Hayes has just said of Mr. Johnson's poetry—"He refined his art with the golden beauty of Hellenic philosophy; and he meditated upon the grandeur and processional spectacle of Roman history; but the land of his heart's delight held him in thrall from first to last."

✧ ✧ ✧

Some little time ago a correspondent of a literary paper offered to be a Dutchman if "Linesman" and Mr. Kipling were not one and the same person. He was promptly proved to be of the purest Dutch descent. And now a great number of reviewers have tacitly offered to be Dutchmen if "Intelligence Officer's" book "On the Heels of De Wet" is not by "Linesman." They have not even troubled to state it; they have assumed it. Unfortunately, "Linesman" has just declared that this is not the case, and Dutchmen are greatly multiplied.

✧ ✧ ✧

Mark Twain has been writing on the subject of "Amended Obituaries." As a man who has already been reported dead he has a grievance, and he proposes, "by courtesy of the Press," to run through the standing obituaries of himself in newspaper offices, not for the purpose of correcting their facts, but of editing their verdicts. For the best obituary "one suitable for me to read in public, calculated to inspire regret," the author of "Tom Sawyer" proposes to give a prize consisting of a portrait of himself done by his own hand in pen and ink without previous instruction.

✧ ✧ ✧

At the time of his death Sir Walter Besant was engaged on his "magnum opus," "The Survey of London," of which he said—"This work fascinates me more than anything I have ever done. Nothing at all like it has ever been attempted before." Although he did not live to complete the work, he had made such headway with it that the whole of the history from his own hand is finished. The eighteenth century was of all bygone times the special favourite of Sir Walter, and this, coupled with the fact that it is the most interesting period of the history of London, has resulted in the selection of this volume to be issued first. It will be published on the 12th inst. by Messrs. Black, under the title of "London in the Eighteenth Century."

✧ ✧ ✧

In accordance with its usual custom at this season, the "Academy" recently sent to a number of well-known men and women a request that they would name the two books which during the past year they have read with most interest and pleasure. Here are a few of the replies:—

Mr. Herbert Spencer.—I have not read any new books this year.

Mr. Thomas Hardy.—Margaret L. Woods's "The Princess of Hanover."

Sir Charles Dilke.—Two recent books have made more impression on my mind than did any of the spring publishing season, but one of the difficulties of writing once a year is that one is apt to think, in the absence of any book of the first rank, of those which are fresh in one's mind. "La Maison du Peche," which has an extraordinary success in France, and Vandal's first volume of his "Avenement de Bonaparte," are the two books which, in your words, "have pleased and interested" me most: though in the case of the novel the pleasure is qualified by pain.

Mr. Frederic Harrison.—Stephen Phillips's "Ulysses." C. H. Frith's "The Cromwellian Army."

Mr. W. B. Yeats.—But for a few works sent me by young authors I should have read no book published this year, so far as I can recollect, except Lady Gregory's "Cuchullain of Muirthemne." I am entirely certain of the immortality of this book, and doubt if such noble and simple English has been written since the death of Morris.

✧ ✧ ✧

Fiona MacLeod, in the "Contemporary Review, has a haunting and characteristic fantasy called "The Lynn of Dreams." It tells of a man "who loved words as the many love the common things of desire, and as the few love the beautiful things of the arts." When at last he reached supreme knowledge of all verbal music at the Lynn of Dreams, seeing both the forms and souls of words, the knowledge exacted its penalty. He could not even use words as he had used them before: he became a stammerer, and finally dumb. Here is a suggestive passage:—

At first he sought closely into the heart of the rarest masters, now in verse, now in prose; the masters of the dim past, working in the pale gold antique Greek or the ivory of Catullus, or playing on silver flutes like the obscure singers of the Anthology; or the masters of a later time moulding molten brass like Dante and Milton, or achieving a supreme alchemy like Shakespeare, or shaping agate and porphyry like Leopardi, or white cornelian like Landor, or chrysoprase and green jade like Leconte de Lisle and Walter Pater. But nowhere in these did he find the final secret he sought. No, nor in any other; nor in any language inhabited by beauty—neither in the limpid excellence of French, since Villon quickened it with a mocking sweetness till Verlaine thrilled it with a sound like a lost air in still woods, so subtle, so evanishing, so little of the world about us, so much of the other world on whose leaning brows are mystery and shadow; nor in the sweet and stately passage of the tongue of Florentine and Roman: nor in the deep, troubled tongues of the north, from Weimar to Christiania: nor in the speech, accompanied by clarions and chants, of the spell-bound lands of Spain: nor in the great language, like a mighty army marching with banners, of that England that now is continually arising renewed or lying down to rest by the wandering fires of a sunset for ever flaming into sunrise.

SCIENTIFIC TOPICS.

The city of San Jose, California, recently inaugurated its system of electrical lighting. The current is carried for a distance of 173 miles from a plant situated in the very heart of the Sierra Nevada Mountains. The current is used not only for the purpose of illumination, but also for driving the street cars and machinery of the various manufactories.

✧ ✧ ✧

The tremendous power exerted by water in violent motion is well shown by some experiments carried out by English engineers to determine the stress exerted upon the foundations of a lighthouse. Thomas Stevenson discovered that at Skerryvore and Bell Rock pressures of 6,083 pounds per square foot, and 3,013 pounds, respectively, were to be encountered in ordinary weather. This is only about 42 pounds per square inch, and is doubtless much exceeded in severe storms.

✧ ✧ ✧

In his dialogues on the Ptolemaic and Copernican cosmogonies, which first appeared in 1627, Galileo places in the mouth of one of his interlocutors, Sagrado the words: "You remind me of a man who wanted to sell to me the secret of communicating with a person two or three miles distant, by means of the sympathy of two magnetised bars. When I told him that I would gladly buy his secret, but that I first wanted to see the thing proved, and that it would be sufficient for my purposes to communicate with him in his room while I was stationed in my own room, he answered that the operation could hardly be observed at so small a distance. Thereupon I dismissed him, saying that I had neither the desire nor the time to travel to Cairo or Moscow, but that if he would journey to either of these two places, I would gladly act as his correspondent in Venice."

✧ ✧ ✧

Descriptions have been published recently of a new form of artificial illuminant made by saturating air with the vapour of ether, and the carburetting the whole with benzol. Ether-air gas itself has found occasional use for years under the name of eth-oxygen gas, being employed for optical lantern work in places where the oil light was too weak, and coal gas not laid on. A new carburetter has been invented in France which is claimed to be specially suitable for ether. The absorbent material is the fibre of a palm-like tree, which has an apparent specific gravity of from 0.114 to 0.122, and is so extremely porous that it will take up nine times its weight of ether, all of which is subsequently evaporated into the gas. Ether itself burns with a luminous, or even smoky flame, but when it is diluted with air, its vapour, as in ether-air gas, gives a blue flame, and, for purposes of illumination, requires either a mantle or the addition of benzol vapour.

✧ ✧ ✧

According to Langlois, incandescent ether-air gas gives a light of 1 Carcel-hour—about 9.5 candles—for every 6.7 grammes of ether burnt: while the material will bear cooling to 21 deg. Fah. without any of the ether condensing out, and without suffering any diminution in illuminating power. By carburetting ether-air gas with 40 or 50 grammes of benzol per cubic metre, a product resembling oil gas in stability can be prepared. It is stated that carburettd ether-air gas is almost twice as expensive as oil gas; but it has an advantage over the latter in the simplicity of the plant required, and in the rapidity with which a small installation can be erected. It may be noted that the introduction of this ether-air gas renders the term "air gas" as applied to air carburetted with petroleum spirit ambiguous; and the latter product must now be called "petroleum-air gas," or something of the kind.

✧ ✧ ✧

A large syndicate has been formed, and is now preparing extensive operations to exploit the process of purifying water by the means of the electric current. The patent is that of C. E. Holland, of New York, and the company is the Electric Purification Company. An experimental plant hoas been in operation for some time at Chartiers Creek, near Pittsburg, where the practicability of the system has been fully demonstrated, and a proposition will be made to the city of Pittsburg to purify a portion of the city's supply at first, and then all of it, and after this an effort will be made to introduce the system in other large cities. The inventor says that the cost of an electrical plant for this purpose, capable of supplying 75,000,000 gallons per day, would not cost more than £20,000, and after the installation of the plant the cost of purefying the water, as near as can be figured on the basis of the small plant now in operation, would be about 1s. 2d. for a million gallons.

✧ ✧ ✧

C. Phisalix and G. Bertrand have succeeded in isolating two toxic principles from the parotid gland and skin of the common toad, Bufo vulgaris. Of these bufotaline, C119 H171 O25, occurs as a transparent resin, very soluble in alcohol, chloroform, and acetone; less soluble in ether, and almost insoluble in petroleum, ether, or in carbon disulphide. It is precipitated from alcoholic solution on the addition of water, forming an emulsion, which is redissolved on further adding a large volume of water. Although very dilute, the solution thus obtained is extremely toxic to frogs. It acts on the heart,, and does not affect the nervous system. Applied to the tongue, it has a bitter taste, and gives rise to a peculiar and very persistent sensation. It is obtained by squeezing the parotid glands of the animals under water. The opalescent acid liqnid thus resulting is filtered through a Chamberland filter and evaporated.

✧ ✧ ✧

During evaporation a less soluble portion separates as a white pellicle, which is removed as it forms. It is washed with water, and redissolved in absolute alcohol or in chloroform, and purified by filtration. This is bufotaline. After its removal the residual extract is exhausted with alcohol; the alcohol is distilled off, and the residue, dissolved in water, is treated with basic lead acetate. The lead precipitate, decomposed by H2 S, liberates another toxic body, bufotenine, which is purefied from adherent bufotaline by treatment with chloroform, in which the former is insoluble, and by ether, which removes the acetic acid. Bufotenine exerts a powerful paralysing action on the nervous centres. Faust has also isolated bufotaline, but since he worked upon the alcoholic extract of the dried skins of the animals, his product is considered by the authors to have been impure. They find that this extract contains a substance which has no relation to the toxic body. This is the body named bufonine by Faust, which does not occur in the pure secretion of the glands.

✧ ✧ ✧

H. L. Russell and E. G. Hastings describe a micrococcus, isolated from milk, the thermal death point of which is 76 deg. C. for an exposure of ten minutes. As the temperature is raised to about 70 deg. C. some of the cells begin to succumb, but a small residuum retain their vitality until 76 deg. C. is reached (Centr. f. Bakt., Zweit Abt., 8, 339). Using this organism, the investigators, Russell and Hastings, have carried out some interesting observations upon the increased resistance of bacteria in milk pasteurised in contact with the air. Heated in bouillon and in milk in closed vessels (sealed tubes) the thermal death point is approximately the same—viz., 76 deg. C., but in milk heated in an open vessel the organism survived a temperature of 80 deg. C. It was found that this resistance is due to the protection afforded by the membrane which forms when milk is heated while freely exposed to the air, for in samples of sterile milk which were "seeded" with the organism and heated in an open beaker to 80 deg. C., numerous colonies were obtained from the membrane on sub-culturing, while the milk below the membrane was sterile.

✧ ✧ ✧

Aerial telegraphy is soon to be used extensively in France, if the projects of the recently-formed Paris company are to be carried out. The company, which uses the Popp-Branly system, is shortly to install a central station in Paris of a novel character, and subscribers all over the city will receive the news of the day by wireless telegraphy. The main station will be in connection with the telegraph, telephone, and with the aerial posts outside the city, so that it will be in a position to keep the subscribers posted as to all occurrences of importance, stock quotations, results of races, etc. A certain number of trial posts have already been installed, and the system is found to work well. It only remains to apply it on a large scale, and for this the company has been waiting for an authorisation from the Minister of Posts and Telegraphs. The company will supply a number of ingenious schemes to supply the subscribers with news.

✧ ✧ ✧

To obtain the results of the races, for instance, which are generally held near Paris, a wireless telegraphy mast will be permanently installed in each race track. An automobile will be fitted out with all the necessary instruments, and will constitute thus a moveable post. On the occasion of the races it will proceed to the track and connect with the mast, and will thus be able to send all the details of the events to the main station, which in turn transmits them to the subscribers. An extensive system is to be organised on the coast of France. The Government has already authorised the company to establish two posts at Havre and Barfleur, which will be the beginning of a system which will unite the coasts of France and Algeria. Such a system would be of great value. In the first place, collisions at sea would be rendered almost impossible. Provided with aerial telegraphy outfits, ships could not only signal to the coast at a distance of 150 miles, but also with the ships in the same waters. In case of disaster, help can be demanded from the shore or from neighbouring vessels. For the national defence, the application of such a system is at once apparent. At 150 miles from the coast a simple torpedo boat could announce the approach of the enemy's fleet, and the posts would send the news all along the coast and to the interior.

✧ ✧ ✧

With the completion of the road between Mahatsara, on the east coast of Madagascar, and Tananarivo, the capital, it is now possible to transport goods for a distance of 200 miles. To be sure, goods are transported not entirely upon land, but partly over this newly completed road, and largely by waterway formed by a series of lagoons and canals. It is hoped that before many years have passed the roads and canals will give place to a railway which is to lie between Tamatave and Tananarivo. In order to transport goods to the coast, Hova carriers are employed to carry huge packs through the mountains. With the completion of a new road the Hova porter will be compelled to seek a new field of employment. Between four and five thousand porters usually made the trip through the mountains to the coast. When the new road was finished, carts immediately began to displace the Hovas. Where three waggons were used last January, 372 were used in June. To be sure, the cartage is still rather primitive; for the vehicles are hauled by men. If human power is used to draw these carts, the question naturally arises, How is it that the Hova carriers are compelled to seek other employmena? The reason is to be found in the fact that each cart, having a carrying capacity of 750 pounds, is drawn by three men; whereas the Hova carrier, however strong he may be, can hardly bear more than 100 pounds. When oxen and mules are substituted for men, we may expect a reduction in the price of carriage transportation.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

DUBLIN, SATURDAY, AUGUST 11.

Though the long-talked of project of turning the course of the River Dodder to the eastward of Irishtown is, to the surprise of the public, unaccountably laid aside, yet the Ballast Committee seem not wholly inattentive to obviate, as much as possible, the mischiefs occasioned to the shipping that frequent this harbour, by the bar, or bank, formed by that river near Ringsend, for which purpose a number of the ballast gabbards are actually employed in drudging it up; an expedient, though a temporary one, has for the present so good an effect, that we are already informed the ship channel there is already deepened fourteen inches.

The Black-cart, attended by the Constables of the House of Industry, parading through a part of the city on Thursday last, in order to take up beggars and vagrants, was stopped by a party of the Police Guards, and the Constables sent back, as the police took the office on themselves.

The computation of houses in the city of of Dublin, which according to some is estimated at between 14 and 15,000, must certainly be wrong, when London and its suburbs are supposed to contain near 150,000 houses. though not standing on more than three times its size. This metropolis, therefore, may be reasonably supposed in comparative population, at about one-fourth of London; especially as Bristol contains near 14,000 houses, though it does not occupy more than one-third of the extent of this city. The number of houses in Dublin must, therefore be above 30,000; in Cork near 10,000; in Limerick above 4,000; Waterford and Belfast 3,000 each; and Kilkenny 2,500. These cities, as well as others, especially Londonderry, and all the maritime towns around our coasts, will no doubt greatly increase in magnitude in the space of a few years, and bear a proportion to the augmentation of our manufacturers and commerce.

Among the great number of public works at this carrying on in and about this city, there is not one for real utility can exceed the building of the wall or mole constructing in our harbour. It is with peculiar satisfaction, therefore, we have it in our power to inform our readers, that the stupendous work goes forward with uncommon spirit under the direction of the Ballast Board, of which there cannot be a greater evidence than that there is a moral certainty five hundred feet of additional work will be added to it before the end of autumn. The curbing stones of the new work are of the red Cumberland granite, imported for the purpose; the inside is of the rock freestone, brought thither from Dunleary.

The gentlemen who were some time commissioned at the public expense to go to Paris, and if possible obtain the old ancient map of Ireland, called the Down Survey, are returned with anaccurate copy thereof, which must prove not only a sensible gratification to our learned antiquarians, but be of singular service in ascertaining many curious historical facts, particularly respecting the original settlement of many of the great families of this kingdom.

LIMERICK, AUGUST 9, 1787.

A quarrel happened at St. John's Well on the 25th of June last; between the Cratloe people and those of Thomond Gate, in the North Liberties of this city; this occasioned a great animosity between them, and we believe there was some agreement to fight it out. Last Monday, being the fair day of this city, they accordingly met, and from twelve o'clock at noon until four in the evening, they skirmished near the Mayor's-stone with sticks, swords, and stones; about that hour one Halloran, of Cratloe, fired a loaded musket, which killed Darby Hickie and Patrick Purtil, alias Purcell, two of the Thomond Gate men, who have both left widows and families.

DUBLIN, MONDAY, AUGUST 13.

Friday last, being St. Lawrence's Day, and the anniversary of the famous and bloody battle fought on the Strand between Clontarf and Sutton, between the Danish invaders and the Irish, wherein the latter were complete victors, the commemoration was observed at Howth by a patron, which is annually held for that purpose. An ancestor of the present noble proprietor, who at that early period was Lord of that town, and chief of a considerable territory in its neighbourhood, joined the Irish forces with a large body of horse and foot, and behaved so gallantly on that dreadful occasion, that the surname now borne by that ancient house was conferred on him by all the Irish Kings then present, in honour of the Saint, and as a perpetual memorial of the distinguished part that illustrious chief acted in that melancholy scene. The national joy was, however, checked by the loss of the brave and humane Brian Boroihme, King of Munster, and Lord Paramount of Ireland, who fell in the beginning of the action.

As every measure which leads to the improvement of the manufactures of Ireland must give sincere pleasure to every friend thereof, a correspondent cannot withhold communicating the satisfaction he received at viewing Mr. Busby's Factory, lately erected in New street, for throwing and winding silk; it consists of two spacious lofts, so constructed that any person from the dwelling part can see the whole with all their machinery at work; the upper loft contains the throwing mills, and the under one the winding machines, which winds the silk with the greatest nicety and exactness, and upwards of 400 bobbins, by which the labour of so many persons are saved (as heretofore it required one person with a wheel to wind each bobbin); and here opens a scene of industry for poor female children, which unfortunately this country is too destitute of employment for; as those from 9 years upwards attend these works, the whole machinery of which are set in motion by a stupendous horse movement on the ground floor! Our correspondent was at a loss which most to admire, the beauty and exact symmetry of each part, or their wonderful executive powers, and thinks it does great honour to its ingenious and spirited proprietor.

The demand that has of late been for flannels and other cheap woollens for exportation, has given such a spirit to these fabrics in the country, that notwithstanding the present high prices of wool, all hands are at work upon them.

The opening of the great thoroughfare from Grafton street across the new bridge through Sackville place to Rutland Square, will be attended with the indispensable necessity of closing into the front of the College the iron pallisadoes, in order to preserve the line, agreeable to the Eastern front of our House of Lords, [illegible] nearly completed.

DUBLIN, TUESDAY, AUGUST 14.

Last night a dreadful quarrel happened on the Coal Quay, in consequence of two soldiers being confined in the guard-house for rioting; the door and other parts were torn down, and several shots were fired, but happily without damage. One of the Sheriffs brought a guard, which put an end to the outrage; some persons were, however, much hurted. The soldiers who had been confined were delivered up to them.

Two fellows attempted to rob three gentlemen who were in a carriage, about half a mile below Clontarf, on Sunday evening last; each of the villains presented a large holster pistol [illegible] the opposite window of the coach, but the gentlemen immediately rushed out and attacked the fellows, who were remarkably strong and robust, and after an obstinate resistance, one of them was taken, who proves to be an old offender, and had often been a lodger in Green street.

A fellow who attempted to rob a gentleman late on Saturday evening in the fields at the upper end of Paradise row, was taken and committed to the New Prison.

Yesterday, about eleven o'clock, upon some dispute between the cabin-boy and one of the mariners belonging to the "Marianne," of London, lying at Bachelor's quay, the latter made an attempt to throw the boy overboard; the lad caught the gunwale in his going off, but the inhuman villain who assaulted him struck him on the hands till he was constrained to drop into the water, where he rose only once and was drowned.

DUBLIN, WEDNESDAY, AUGUST 14.

Extract of a letter from Carlow, August 12.

"Last night our Assizes ended. Amongst a variety of other business, James Redmond, a postboy, stood indicted for opening his Majesty's mail of letters, with which he was entrusted, on the highway between this town and Gowran, and stealing money which had been enclosed in one of the bags; when after a trial of five hours and a half, and hearing the ablest defence that ever was made on any similar occasion, the jury brought him in guilty, and the dreadful sentence of death was pronounced upon him before the Judge left the Court. The greatest praise is certainly due to the Postmaster-General for the plan which they laid, and the exertions which they used in detecting and bringing this offender to justice, his method of opening the bags having been so uncommonly judicious as to render the detection, but for the steps that appeared on the trial to have been taken, almost miraculous; notwithstanding which, his guilt was proved in the clearest manner to the satisfaction of every person present. Mr. Serjeant Toler, who sat as Judge on the occasion, showed himself a perfect master of the criminal laws, in one of the ablest charges ever delivered to a jury."

This day a barrel of new wheat, the property of David Latouche, Esq.; was sold in Thomas street Market-house for £1 14s. 1½d.

Yesterday, about two o'clock in the afternoon, a Chelsea pensioner, who had been arrested for debt in Palace street, ran into the Lower Castle-yard, where the bailiffs, attended by a vagrant populace, pursued him into the mews, where the debtor ran up a slator's ladder and escaped from them over the roofs of the stables; the bailiffs, with the crowd they had drawn together, were shortly after turned out of the yard by order of the officers on duty.

KILKENNY, AUGUST 11.

The following persons were capitally convicted at our Assizes—viz: in the County Court—David Fitzgibbon, for the murder of William Kelly, to be hanged the 29th inst. In the County Court—Zacariah Jackton, for coining; Edmond Sweetman and Mary Kearney, for burglariously robbing the house of Mrs. Faille, of Patrick street, to be hanged on the same day; Patrick Haw, for the above robbery, and Robert Purcell, for returning from transportation, to be hanged on the 10th of November next.

(To be Continued.)

CUSTOM HOUSE, LIMERICK.

AS IT WAS IN 1831.

In "Ireland Illustrated" (1831), from which the above picture is taken, the Rev. G. N. Wright, M. A., Professor of Antiquities to the Royal Hibernian Academy, gave the following descriptive particulars:—

The quays of Limerick have been much improved, and it is intended that the Custom-house, sufficiently interesting in an Illustration, shall make way for one more in character with the commercial rank of the city. The present building has few architectural claims; the elevation consists of an arcade upon the basement supporting two stories, the centre of which are adorned with Corinthian pilasters, over which is an entablature furnished with a heavy block cornice. The arcade on the left does not correspond with the other parts, and the stores beyond it still tend to destroy the uniformity of the whole. The citizens of Limerick, like their wealthy brother-merchants of Liverpool, have waited until the prosperity of their commercial dealings required enlarged accommodations; and that period having happily arrived, a New Custom is about being erected, and extensive floating docks are in actual progress of construction, adjoining Wellesley-bridge, itself a new erection.

LIMERICK.

HISTORY OF THE CITY.

In Lewis's "Topographical Dictionary of Ireland" (1837), the following history of the city of Limerick is given:—

This ancient and important city, supposed by some writers to have been the Regia of Ptolemy, is called Rosse-de-Nailleagh in the Annals of Multifernan; and is believed to have been the place described under the name of Lumneach, as forming the western extremity of the southern half of the island as divided A.M. 2870 and 3970, which name appears to have been modified by the English into its present designation. St. Patrick is said to have visited it about the middle of the fifth century; but the first authentic notices of Limerick represent it as a Danish settlement. The place was first plundered by them in 812, and about the middle of the same century they made it one of their principal maritime stations, surrounding it with walls and towers which enclose the area now occupied by the English town. For nearly a century their power continued to increase, until Brian Boroihme assumed the dominion of Munster and Thomond, when he expelled the Danes from Inniscattery, and reduced Limerick, allowing the inhabitants, however, to continue in it, subject to their own laws and customs, on payment of an annual tribute, said to have been fixed at 365 tuns or casks of wine of 32 gallons each. In 1064, Turlogh, King of Munster, received here the homage of Donsleibhe, King of Ulidia; and his successor Murtogh, having given Cashel to the Church, removed the seat of royalty to Limerick in 1106, from which time it continued to be the residence of the kings of Thomond, or North Munster, until its conquest by the English: from this circumstance, his successors were styled indiscriminately kings of North Munster or of Limerick. The Danes of Limerick did not embrace Christianity until the 11th century, and in the following they elected their first Bishop. In 1153, Turlogh O'Conor, King of Connaught, besieged the city, and compelled

the Danes to renounce the authority of Turlogh O'Brien, and drive him west of the Shannon.

A succession of intestine wars among the native princes was carried on until the landing of Henry II., who soon after obtained possession of it, and placed a garrison there; but after his departure, Donald O'Brien, King of Thomond, regained possession of it. In 1175, Raymond le Gros, with the assistance of the King of Ossory, invested it, and by fording the river in face of the enemy, so daunted them that he entered it without opposition, obtained a great booty, and secured it by a garrison; but on the death of Earl Strongbow, it was again evacuated by the English, and subsequently burned by order of Donald, who declared that it should no longer be a nest for foreigners. In 1179, Henry II. gave the kingdom of Limerick to Herebert Fitz-Herebert, who having resigned his claim to an inheritance so uncertain, it was granted to Philip de Braosa, and he, aided by Milo de Cogan and Robert Fitz-Stephen, advanced against the city, which the garrison set on fire. This so dispirited Braosa, that he immediately retreated, and so assured was Donald O'Brien afterwards of the security of his metropolis, that, in 1194, he founded the Cathedral Church of St. Mary, on the site of his palace. In 1195, the English appear to have regained possession of the city, for it was then governed by a provost; but Mac Arthy of Desmond forced them once more to abandon it.

King John afterwards renewed the grant to Philip de Braosa, with the exception of the city of Limerick, the cantred of the Ostmen, and the Holy Island, which he committed to the custody of William de Burgo, who formed a settlement there, which from that period set at defiance all the efforts of the Irish. A strong castle and bridge were erected; and, encouraged by the privileges offered to them, English settlers flocked hither in great numbers, between whom and the inhabitants of the surrounding country amicable relations appear to have been soon established, for among the names of the chief magistrates for the ensuing century, besides those who appear to be English, Norman, or Flemish, and Italian, there are several purely Irish. Money was coined here in the reign of John. In 1234, the city was taken, after a siege of four days, by Richard, Earl Marshal of England, then in rebellion; and by the continued wars in the surrounding country, especially among the O'Briens, De Burgos, De Clares, and Fitzgeralds, its progress in commercial prosperity appears to have been greatly checked. In 1308, Pierce Gaveston, the Viceroy, passed through Limerick with an army, and compelled O'Brien to submit, but the tranquillity was of short duration. In 1314 De Clare burned the suburbs; and in 1316, Edward Bruce terminated his career of conquest southward at this place, and kept his court here until the following Easter. The hostilities of the O'Briens and others of his allies, and the unbounded authority assumed by the Earl of Desmond and other Anglo-Norman leaders, rendered additional military defences necessary for the protection of the city, and various grants were made by Edward II. for enclosing the suburbs with a stone wall, and for repairing the castle. In 1331, the Earl of Desmond was committed to the custody of the Marshal of Limerick.

In 1337, a dispute arose between the merchants of Limerick and Galway respecting tolls, which, notwithstanding the interference of the Lord-Justice, finally led to open hostilities. In 1340, Limerick was for a short period the headquarters of Sir William Windsor, chief governor, when marching into the west against the O'Briens. During the whole of the fifteenth century, the fortifications—which, prior to the grants of Edward II., had comprised only the part of the city insulated by the Shannon, and called the English town—were extended so as to include the portion of the southern bank of the river, called the Irish town, the defences of which were completed by the erection of St. John's Gate and the neighbouring works, begun in 1450, but not finished until 1495. In the reign of Edward IV., Connor O'Brien, Prince of Thomond, drove the English from various parts of Munster, and compelled the citizens of Limerick to pay him an annual tribute of 60 marks. Another remarkable proof of the distracted state of the country is afforded by a statute of the 28th of Henry VI., from which it appeared that, owing to the prevailing power of the "Irish enemy and English rebels," in the surrounding country, the inhabitants were under the necessity of deriving their supply of provisions principally from France, which was sent only on condition of the ships being placed under the special protection of the King of England. In 1467, a mint was established in the city; in 1484, Gerald, Earl of Kildare, held a Parliament there; and in 1495, the brotherhood of the guild of merchants was erected.

In the reign of Henry VII. the city recovered some degree of prosperity; but in 1524 it was harassed by the open hostilities, both at sea and land, resulting from the commercial jealousies between it and Galway, until these were at length terminated by a formal treaty, and by an injunction by the King, in 1536, requiring a better demeanour from the men of Galway. In the reign of Henry VIII., Alderman Sexton, of this city, took a distinguished part in favour of the British interest. In 1542, the proclamation declaring Henry VIII. King of Ireland was received with demonstrations of the greatest joy, and in the following year Sir Anthony St. Leger held a Parliament here, in which divers important Acts were passed. Towards the close of Mary's reign, the Lord-Deputy Sussex arrived here to suppress a revolt of some inferior branches of the O'Brien family against their chief, on which occasion the Earl of Thomond and all the freeholders of his country swore fealty to the crown of England. During the entire reign of Elizabeth, and throughout the wars that devastated the whole surrounding province, Limerick maintained the most unshaken loyalty, and was made a centre of civil and military administration. Sir Henry Sydney, Lord-Deputy, who visited it in 1567, in 1569, in 1576, states that he was received here with greater magnificence than he had hitherto experienced in Ireland. At this period Limerick is described well and substantially built, with walls extending round a circuit of about three miles.

On the arrival of Sir William Pelham, Lord-Deputy, in 1579, the Mayor appeared before him attended by 1,000 citizens well armed; and in 1854, the city militia amounted to 800 men, being double that of Cork, and a third more than that of Waterford, demonstrating that Limerick was then the most important city in the island next to Dublin. During the Earl of Desmond's rebellion, the city was for some time the headquarters of the English army. From the commencement of the reign of James I. until the war of 1641, it enjoyed undisturbed tranquillity; and notwithstanding accidental conflagrations, in 1618 and 1620, considerable improvements in the construction of buildings and public works took place. The customs' duties for the year ending Lady-day, 1633, amounted to no less a sum than £1,619 1s. 7¾d. In 1636 it was visited by the Lord-Deputy Wentworth, who was splendidly entertained by the Mayor for nine days, and on his departure presented to the Corporation a valuable cup of silver gilt. On the approach of the insurgent army under Lord Ikerrin, Lord Muskerry and General Barry, in 1642, the gates were thrown open by the citizens; the royal garrison, consisting only of 200 men, who had shut themselves up in the castle, were compelled to surrender after an obstinate defence; after which the magistrates sent representatives to the Catholic convention at Kilkenny, and made every exertion to repair and strengthen the fortifications. In 1646, when it was attempted to proclaim the pacification that had just been concluded between King Charles and the Parliament, the attempt was met by violence; and afterwards the supreme council headed by Rinuccini, the Pope's Nuncio, removed hitherto, to encourage the besiegers of the neighbouring castle of Bunratty, on the Clare side of the Shannon, in which the Parliamentarians had placed a garrison. In 1650, the Marquess of Ormonde marched into the city, in the hope of securing it for the King; but the Nuncio's party having deprived him of all power, he at length quitted the kingdom, leaving the command of the royalist troops to the Earl of Castlehaven, who induced the magistrates to accept his offer to defend them against the threatened attack of Ireton. The latter, however, did not commence operations until the spring of 1651; and the siege being protracted until the approach of winter, famine, misery, and death made formidable ravages among the ranks of both parties. The attempts of the Irish forces to relieve the place were defeated, but a sally by O'Niall, who commanded the garrison, nearly proved fatal to the besiegers. The privations of the inhabitants at length compelled them to turn out all useless persons, who, to prevent them from communicating the plague, which then raged amongst them, to the Parliamentarian forces, were, at the command of Ireton, immediately whipped back; and dissensions gradually arose among the besieged, as to the propriety of capitulating. The resistance of the clergy to a surrender being at length overbalanced by some officers who took possession of the gates and turned the cannon against the city, the place was surrendered to the besiegers on condition that the garrison should march out unarmed, and the inhabitants be allowed time for removing, with their effects, to any place where they might be appointed to live. Twenty-four persons were excluded by name from the benefit of this treaty: the soldiers, who marched out to the number of 2,500, were greatly reduced by disease contracted by the sufferings of a protracted siege of six months. After the surrender, the emblems of royalty were removed, the magistrates displaced, and for five years the city was subjected to a military government. In 1653 an Act was passed permitting the English adventurers, officers, and soldiers to purchase the forfeited houses at six years' purchase; and a charter was granted conferring upon the citizens the same privileges and franchises as those enjoyed by the city of Bristol. In 1656 the municipal government was restored, by the election of a Mayor and twelve English Aldermen.

At the Restoration, Sir Ralph Wilson, the governor, declared in favour of the King. He was shortly after succeeded by the Earl of Orrery, who was instructed to endeavour to procure good merchants, English and Dutch, to inhabit the place, and cause it to flourish by trade. All the banished merchants were again restored to their freedom and privileges, on entering into recognisances for their peace-

ful demeanour: and the inland trade increased so rapidly that, in 1672, the tolls of the gates were let for upwards of £300 per annum. During a progress through Munster made by the Marquis of Ormonde, Lord Lieutenant, he was received at Limerick with great distinction, being attended by the principal nobility and gentry of the county, and the cavalry militia of each barony. The same year was remarkable for a great drought in the Shannon, insomuch that the Mayor and citizens perambulated the English town, dry-shod, outside the walls; and the following year a storm, with a high tide, did great damage.

The accession of James II. caused an alteration in the religious ascendancy of the Corporation; and after the battle of the Boyne, the Earl of Tyrconnel established his Viceregal court in the city. Soon after this it was invested by King William in person, at the head of 20,000 veterans. The siege, undertaken at a late period of the season, was rendered particularly harassing by the formidable obstacles opposed to the besiegers by the fortifications and natural defences of the town, the abundance of its munitions of war, and the circumstance of the flower of the Irish army being assembled in and around it, under General Boiseleau, the Duke of Berwick, and other distinguished leaders, who were enabled to obtain supplies of every kind from Connaught, and by sea, where the French fleet rode undisturbed. The operations of the English army were also greatly checked by the loss of its battering train, which had been intercepted and destroyed by General Sarsfield, in a gallant attack, within twelve miles of William's camp. Nevertheless, a breach having been at length effected, the besiegers twice penetrated into the town, and as often were beaten back, until after a desperate contest of four hours, in which they lost 1,700 men, they were obliged to retire; William himself being compelled to raise the siege and withdraw towards Clonmel. But in the August following, William's army, now commanded by General de Ginkell, again invested the town; and the garrison having been abundantly supplied, and in expectation of succour from France, the siege was protracted and sanguinary. One of the most serious conflicts at this period was that in which 600 Irish were slain, 150 drowned, and about 100 taken prisoners, in the defence of Thomond Bridge, the gates having being closed upon them too speedily, by which their retreat was cut off. Operations were at length terminated by the celebrated treaty of Limerick, ratified on October 1st, and said to have been signed on a large stone near Thomond Bridge, within sight of both armies. Two days after the French fleet arrived on the coast, and on the 14th entered the Shannon, with a reinforcement of troops and 30,000 stand of arms and ammunition. Both parties now made strenuous exertions to retain the Irish soldiers in their service: 3,000 were prevailed upon to enter into that of the victorious monarch; but the remainder, amounting to upwards of 19,000 men, embarked for France, and formed the foundation of the Irish Brigade, afterwards so celebrated in the wars of Europe.

After the embarkation of the Irish troops, the inhabitants, who had been compelled by the bombardment to quit their dwellings, on their return found their effects destroyed, and the entire city a scene of desolation and misery. While all classes were engaged in repairing their losses, the poorer by erecting small huts under the walls, the richer by re-edifying, and the soldiers by restoring and enlarging the fortifications, a new and unthought of casualty nearly involved the whole in a second destruction: one of the towers on the quay suddenly fell, and 250 barrels of gunpowder which it contained blew up with a tremendous explosion, by which 240 persons were crushed to death or dreadfully maimed, some being struck dead by stones which fell a mile from the town. For more than 60 years after the siege, the fortifications were kept in complete repair, a garrison and several companies of city militia maintained, and every precaution of an important military station observed. In 1698, the Marquis of Winchester and the Earl of Galway, Lords Justices, on a tour of inspection, visited the city, which in the same year suffered most severely by a storm and high tide. In 1703 an Act was passed providing that no Roman Catholic strangers should reside in the city or suburbs, and that the present inhabitants of that persuasion should be expelled, unless they gave sufficient securities for their allegiance; but in 1724 these restrictions were removed. During the Scottish rebellion in 1745, similar precautions were used, but no symptom of disaffection was discovered. In 1751, a storm, accompanied with high tides, overflowed a great part of the place, and did great damage. In 1760, Limerick was declared to be no longer a fortress, and the dismantling of its walls and other defences was immediately commenced and completed by slow degrees, as the extension of the various improvements rendered it necessary. On the breaking out of the American war, three volunteer corps were formed under the name of the Limerick Union, the Loyal Limerick Volunteers, and the Limerick Volunteers.

After the termination of the American war the improvements and extension of the city were renewed with unexampled spirit; and although contested elections and alarms of insurrection in the neighbouring districts at times disturbed its tranquility, they never retarded its improvement. During the French invasion of 1798, the city militia distinguished itself by the stand it made at Collooney under Colonel Vereker, who in consequence received the thanks of Parliament. In 1803, a design was formed by those engaged in Emmett's conspiracy to take the city by surprise; and the plan was conducted with so much secrecy that it was unknown to the military commandant in Limerick until the evening preceding the intended day of attack; but the prompt and decisive measures adopted prevented the apprehended danger. In 1821, symptoms of insubordination in the liberties led to a proclamation declaring the county of the city to be in a state of disturbance, and to require an extraordinary establishment of police, which was accordingly sent and is still maintained. In the winter of 1833 the city again suffered severely by storms and high tides.

The city, situated in an extensive plain watered by the Shannon, is composed of three portions, the English town, the Irish town, and Newtown-Pery. The first and oldest occupies the southern end of the King's Island, a tract formed by the Shannon, here divided into two streams, of which the narrowest and most rapid is called the Abbey river. This part, the houses of which are chiefly built in the Flemish fashion, is said to resemble the city of Rouen, in Normandy; but, since the erection of the New Town, it has been deserted by the more wealthy inhabitants, and exhibits a dirty and neglected appearance. The Irish town is also very ancient, being allotted to the native inhabitants so early as the reign of King John; here the streets are wider and the houses more modern; both these parts were strongly fortified. The suburb called Thomond-gate, situated on the county of Clare side of the river, at the end of Thomond bridge, was formerly the only entrance to the ancient city, and was protected by a strong castle; it is now of considerable extent; close to the foot of the bridge is the stone on which the treaty of Limerick was signed. Newtown-Pery, built wholly within the last fifty years on elevated ground, parallel with the course of the river, below the union of its two branches, on a site formerly called the South Prior's Land, which became the property of the Pery family about 1770, is one of the handsomest modern towns in Ireland; a very handsome square has been lately erected in it. There are six bridges: Thomond bridge, leading from King John's Castle in the English town to Thomond-gate, on the county of Clare side, is the most ancient. It was built in 1210, and subsequently widened, and consists of 14 unequal arches, which were turned on wicker work, the marks of which are still apparent in the cement; its roadway is perfectly level; it is now being taken down, and will be replaced by a new bridge (the foundation stone of which was laid in 1836, and which is to be opened in 1839), by the Corporation, which has procured a loan of £9,000 from the Boad of Works to effect it; the estimated expense is £12,600. Wellesley bridge, erected in 1827, consisting of five large an delegant elliptic arches, crosses the Shannon from the New Town to the northern, or county of Clare shore. Its roadway is level, and its parapet is formed of a massive open balustrade; on the city side is a swing bridge over a look for vessels to pass to the upper basins and quays. The New bridge, crossing the Abbey river, and connecting the New Town with the English town, was finished in 1792 at an expense of £1,800; it consists of three irregular arches. Baal's bridge, higher up at the same branch of the river, is a beautiful structure of a single arch, built in 1831 to replace an ancient bridge of the same same name, which consisted of four arches with a range of houses on one of its sides. On the same branch of the Shannon is Park bridge, an old lofty structure of five irregular arches. Athlunkard bridge, consisting of five large elliptic arches, crosses the Shannon about a mile from the city; it was erected in 1830 by means of a loan of £9,000 from the Board of Public Works, £6,000 from the Consolidated Fund, and a grant of £1,000 from the Grand Jury of the county Clare; it forms a communication between Limerick and Killaloe. The environs, though flat, are generally very beautiful, the soil extremely rich, and the sinuous course of the Shannon, in many points of view, presents the appearance of a succession of lakes; but the landscape is deficient in wood. Of the four principal approaches, that from Clare, by Wellesley bridge, is the best; the others are through lines of cabins, crooked and deficient in cleanliness. In the vicinity of the city are several good houses and neat villas, but by no means as numerous as its wealth would lead strangers to expect; as the rich merchants chiefly reside in the New Town.

The Corporation exists both by prescription and charter, and its authority is confirmed and regulated by statute. The first documentary grant of municipal privileges was by John, Earl of Morton and Lord of Ireland, in 1199, conferring the same liberties and free customs as were enjoyed by the citizens of Dublin, which were secured and explained by a charter of the 20th of Edward I. Charters confirming or extending these privileges were granted in the 1st of Henry IV., 1st of Henry V., 8th of Henry VI., 2nd of Henry VII., 6th of Edward VI., and 17th and 25th of Elizabeth. The former charter of this last-named sovereign granted, among other new privileges, that a sword of

state and hat of maintenance should be borne before the Mayor within the city and liberties. The governing charter, granted by James I. in 1609, constituted the city a county of itself, excepting the sites of the king's castle and the county court-house and gaol; conferred an exclusive admiralty jurisdiction, both civil and criminal, over so much of the Shannon as extends three miles north-east of the city to the main sea, with all its creeks, banks, and rivulets within those limits; constituted the Mayor (which office and title were enjoyed by Limerick ten years before they were granted to London), Recorder, and four of the Aldermen annually elected, justices of the peace for the county of the city; and incorporated a society of merchants of the staple, with the privileges of the merchants of the staple of Dublin and Waterford. By the "New Rules" of the 25th of Charles II., the Lord Lieutenant and Privy Council were invested with the power of approving and confirming the appointment of the principal officers of the Corporation, who were thereby required to take the oath of supremacy, and the election of all corporate officers were taken away from the body of freemen, and vested in the Common Council; the discussion of any matter connected with municipal affairs in the general assembly of freemen, or Court of D'Oyer Hundred, which had not previously passed the Common Council, was forbidden under penalty of disfranchisement; and it was provided, as in other corporate towns, that foreigners and other Protestant settlers in the town should be admissible to the freedom. James II. granted a new charter after the seizure of the franchises under a decree of the Exchequer, but the judgment of that court having been subsequently set aside, it became void; and the constitution of the municipality continued unaltered until the year 1823, when an Act of the 4th of George IV., c. 126, commonly called the "Limerick Regulation Act," partially remodelled the powers of the Corporation. The freedom is obtained by birth, for the eldest son, or marriage with any daughter, of a freeman, also by apprenticeship to a freeman within the city, and by gift of the Corporation; the admissions of freemen are made by the common Council, subject to the approbation of the Court of D'Oyer Hundred. The Act of 1823 requires the Council to hold quarterly meetings on the first Monday after June 24th, second Monday after September 29th, and the first Mondays in January and April; extraordinary meetings are convened on the requisition of the Mayor. All acts of the Corporation, except the election of officers, must now be approved of and confirmed by the freemen at large in the Court of D'Oyer Hundred, which was re-established by the Act of 1823, after having for about seventy years fallen into almost total disuse, and is now held on the day following each of the four stated quarterly meetings of the Common Council, and also within a specified time after the extraordinary meetings of that body. It is composed of the entire body of freemen, and a certified minute of all proceedings at the meetings of the Common Council must be transmitted by the Town Clerk to the Common Speaker, who presides over the court, for its approval. The city returned two representatives to the Irish Parliament from the period of its earliest convocations until the Union.

Bjornstjerne Bjornson last week celebrated his 70th birthday, and not only all Norway but all Scandinavia has celebrated it with him, Denmark and Sweden taking part with deputations and addresses and processions. It is quite a case for a discourse on Carlyle's theme of the "Hero as Man of Letters."

AND

Its Fenian Traditions.

SUPPLEMENTARY NOTES BY REV. J. F. LYNCH.

IV.

First of all, I shall from the poems show that the valley could not possibly be either in Dublin or Kilkenny. The second poem is termed Eachtra an Amadain Mhoir, or "The Adventures of the Great Fool," and the two poems are contained in Trans. Os. Soc., Vol. VI., edited by John O'Daly. The following reason is given in the poem why the hero was named Amadan mor:

"A dubhairt Colgach gur b'olc an chiall,
Gan arm d'iarraidh chum dul a ngleo;
A's baistimse ort mar ainim,
Fad do mhairfir an t-Amadan Mor.

"Colgach said that it was unwise,
Not to ask for arms when going to fight;
"And I now christen thee for a name
Whilst thou livest the Amadan Mor."

The Irish Amadan Mor corresponds somewhat to the English Lord of Misrule, and the Scotch Abbot of Unreason, whose office, according to Stowe, was "to make the rarest pastimes to delight the beholder." D'Israeli (Curiosities of Literature) says: "Without venturing to ascend in his genealogy, we must admit his relationship to that ancient family of foolery we have noticed. . . . Stubbes a morose puritan in the reign of Elizabeth, denominates him 'a grand captaine of mischiefe.' . . . I prepare another scene of unparalleled saturnalia, among the grave judges and serjeants of the law, where the Lord of Misrule is viewed amidst his frolicsome courtiers, with the humour of hunting the fox and the cat with ten couple of hounds round their great hall, among the other merry disports of those joyous days when sages could play like boys." In Egypt the cat was sacred to the moon goddess Maut, or Mut, the wife of Amon, who was represented as a cat, and Herodotus gives an account of the veneration of the Egyptians for the cat. In Ireland the cat was also the symbol of the moon, and the cat is often mentioned in the Irish folk tales which preserve so many traces of the old beliefs of the people. In a folk tale, published in Cork H. and A. Journal, March, 1897, Aoibhill, or Aoibhinn, the Banshee (26) of the O'Briens, is made sister of Clidna and daughter of Mogh Ruith, and is represented as a large white cat confined in a cave at Castlecor, near Kanturk, Co. Cork. I made enquiry and have been told that the tale of the cat survives at Castlecor. At Lough Gur a tale is also told of an enchanted cat (27), confined in a cave, which guards the key by which may be obtained all the treasures concealed in Lough Gur. It was owing partly to the peculiar property of the contraction of the pupil in the cat's eye during the day that the cat came to be regarded as a symbol of the ruler of the night. In "D P. J.," page 184, reference is made to the Amuid Shugach, or "merry female fool," but I think that the connection of Amuid with Ethiopian Amida is too far-fetched, and the Irish Amuid is derived from onmit. About sixty years ago the wren procession was preceded in Cahirconlish district by a man dressed fantastically in woman's clothes, named Oinseach, who performed all sorts of antics and behaved like an oinseach, or one devoid of sense. The merry character of the Amadan Mor is not referred to in the poem, but guided by the name, it appears to me that there must be some connection, and that in the Amadan Mor we have a different presentation of the character. Dealing with the suffix seach, Dr. Joyce (Irish Names, vol. ii., p. 9) says: "This is not very common in local names, but it is often used as a kind of feminine termination. Its use is illustrated in the word oinseach, in common use to signify a female fool. The corresponding word for male fool is Amadan. The root of both is on, an old word meaning a fool, from which comes oinseach directly. From on comes onmit, another old word for fool; and from this again onmitan, which has been modernised to Amadan." Dr. Joyce

---

26. Sir Walter Scott (appendix to the Lady of the Lake), says, Most great families in the Highlands were supposed to have a tutelar, or rather a domestic spirit, attached to them who took an interest in their prosperity, and intimated by its wailings any approaching disaster. That of Grant was called May Moullach, and appeared in the form of a girl who had her arm covered with hair. Grant of Rothiemurcus had an attendant called Bodach an Dun, or the Ghost of the Hill; and many other examples might be mentioned. The Ban-Schie implies a female fairy, whose lamentations were often supposed to precede the death of a chieftain of particular families. When she is visible, it is in form of an old woman with a blue mantle and streaming hair. A superstition of the same kind is, I believe, universally received by the inferior ranks of the native Irish."

27. Professor Connellan (Trans. Os. Soc, Vol. v., p. 86) says:—"The cat, so strangely associated with the idolatry of ancient Egypt, was not overlooked in the Fetichism, which so intimately entered into Celtic mythology. The supernatural attributes belonging to the animal in the Druidic system have in many instances survived the fall of that religion, and descended in the folk lore of our peasantry." Connellan also says that it is remarkable that in almost all the known languages the term for cat is the same, and he mentions Irish, Welsh, Cornish, Armoric, and Anglo-Saxon cat; Icelandic katt; Danish cat; German katze; Russian kotte; Polish Kotka; Turkish keti; Persian kitt; Javanese cota; Georgian kata to which list I may add the Lituanian kate, and the Arabic kitt. The cave of Cnogda, or Cnogba, or Knowth, near Slane, on the Boyne, was supposed to be inhabited by the chief (triath) lord (tigherna), and brehon (breithiumh), of the cats of Ireland, named Irusan mac Arasain. Compare the reference to the king of the cats in Sir Walter Scott's note on the Taghairm (Appendix to the Lady of the Lake). The mouse (luch) also figures in Irish mythology, and is mentioned in the tales of Lughaidh mac Con and Labhraidh Loingseach as having been eaten. Amongst the Greeks the mouse was sacred to the Sminthian Apollo, and in Isaiah, lxvi, 17, there is reference to the eating of the pig and mouse (achbor), at pagan festivals. The cat is not mentioned in the Bible.

also says: "An Amadan is a fool or simpleton; but the word is often applied in derision as a mere nickname to one who is not exactly a downright idiot, but who has the character of being a foolish, brainless, or spoony fellow, and this application is very common at the present day in most parts of Ireland, even where the Irish language has been long disused."

Cox ("Popular Romances of the Middle Ages," p. 21) says: "The reluctance which Uther's nobles show to receive Arthur as their lord, on the ground that he is but a base-born boy, brings before us another familiar feature in this whole class of legends. With perhaps not a single exception, those Fatal Children, as Grimm calls them, have to spend their early years in banishment, or disguise, or humiliation; and when they come to claim their rightful inheritance, they are despised or jeered at by men of meaner birth, who can never be their match in strength and wit. So it is with Cyrus and Romulus, with Oidipous, Perseus, Theseus. The wise Odysseus is mocked for his beggarly garb as he stands on the day of doom in his own hall; and this passing shame before the great victory, is reflected in countless popular stories which tell us of the degradation of Boots and Cinderella, a degradation which culminates in the Gaelic lay of the Great Fool, who, of course, proves to be wiser and mightier than all others in the land, and who becomes the husband of Fairfine, who is but Euryphassa, or Pasiphae, or any other of the beautiful maidens, whose home is in Ganzblick, or Breidablick, or Lykia, or Delos. The whole story is repeated in the episode of Sir Tor, who is brought in by Aries, the cowherd. The herdsman, supposing him to be his son, complains of his folly—the folly of Boots or the Great Fool; but the wise Merlin, who happens to be present, declares that he is the son of King Pellinore."

In the poem which treats of the Irish Amadan Mor, we are told that he made his way through Lochlann's land with the beautiful princess, whom he had found in the castle in Lochlann guarded by Fergus Mor, that he and the princess entered a valley where they had never been before, of purest streams, woods, and soil, and the roar of the waves on rocky cliffs. In the valley he is met by a Gruagach, who gives him a drink from a golden horn, by which his two legs from the knees down are taken from the Amadan. A deer, followed by a red-eared white dog, now approaches, and the Amadan slays the deer, and appropriates the Gadhar cluas dhearg ban, or red-eared white dog." Mr. Dunne has told us that Bran had red ears, and the three cows brought by Cu Roi Mac Daire to Ireland from Innis Falga were white with red ears. The rocky islet, near Dursey Island, named Cow Island, was so called from a white cow (28) with red ears, and from his tenantry on an estate in the north of England, the Duke of Buccleuch may, under certain conditions, claim a white bull with red ears every year.

The Gruagach, now in disguise, and termed the Gruagach of the golden mantle (Gruagach an bhruit oir), comes again and demands his dog, which the Amadan Mor refuses, and after some altercation, the wife of the Amadan Mor asks for the dog.

Ann Sin, adubhairt an macaomh mna
Tabhair an gadhar ban dam,
Do bhearfainn agus an gadhar breac,
A's da mo ail leat ni bhus mo.

"Then the gentle young woman said,
'Give to me the white dog;
'I would, and the speckled dog,
'And if thou desirest more.'"

We thus see that there were two dogs—a red-eared white dog, and a speckled dog.

The three fare forward, until they saw in the valley a fort (cathair) that shone like gold, and there was no colour which eye had seen that was not in the cuirt or "mansion."

Ann Sin adubhairt an macaomh mna,
Cia an chathair ordha ud;
Is breaghtha snuad 'sis ailne dreach,
No an feidir a brath na suibhal

Dun an oir is e a h-ainim,
Dun garbh Ghleanna an Smoil;
Ni bh-fuil anois da fuirinn ar faghail,
Acht mise fein, a's mo bhean

'Twas then the young woman asked,
"What golden city is that,
Of the finest appearance and hue,
Or could it be betrayed or traversed?"

Dun an Oir (Fort of the Gold) is its name.
The strong Fort of Gleann an Smoil,
There is not now of its inhabitants alive
But myself and my wife.

The Gruagach of the Golden Mantle finally makes himself known to the Amadan Mor as the Gruagach of the Golden Horn, having been under the power of enchantment, and he also informs the Amadan Mor that he is his brother whom he has been seeking for a long time. The Gruagach and the Amadan Mor, who has again obtained his limbs, now depart from Dun an Oir.

D'innis an Gruagach do go raibh,
Cuirt gan locht a bh-fogus doibh,
A's cuigear athach ar a n-dearamh,
Gur mhor an sgannradh dul na g-coir.

Nior bh-fada chuadar anns an ngleann,
A's iad go teann measadh dhoibh;
Go g-cluinid fothram trost, a's fuaim
Ag athach gruama an bhuille mhoir

The Gruagach informed him
That there was a faultless mansion near them,
With five giants guarding it,
And that it was dangerous to approach them.

They did not proceed far in the valley,
And they imagined themselves so stout,
Till they heard a noise, tumult, and uproar,
From the surly giant of the mighty blow.

The Gruagach and the Amadan Mor succeed in overcoming the five giants, and the Amadan Mor took possession of the mansion.

Do ghlac seilbh ann gach ball,
'Na raibh anois a chuid stoir
Ni raibh samhuil doibh a bhus no thall,
Le neart a m-ball san domhan mor.

He took possession of each room,
Wherein was all their wealth;
Their equal was not here or there
For strength of arms in the wide world.

This is the conclusion of the magnificent symbolical poem.

The name of the fort on Clear Island, or Innis Clere ("Cleric Island"), is Dun an Oir ("Corca Laidhe"), and the name of the fort at Baltimore (Baile an tighe mhoir, town of the great house), on the site occupied by O'Driscoll's Castle, was Dun na sed, or "fort of the jewels" ("Corca Laidhe"). Dr. Joyce (Irish Names, vol. ii., p. 377) says: "The old name of Baltimore, on the south coast of Cork, was Dun na sed (Annals of Innisfallen), the fortress of the jewels; but the name was originally applied to a circular fort on a high rock, the site of which is now occupied by the ruins of O'Driscoll's Castle, to which the name is still applied. I will not venture any conjecture as to why the old fortress got the name of Dun na sed."

Dun na sed is not far from Dun an Oir, and the mansion of the five (29) giants in Gleann an Smoil was not far from Oir.

In Trans. Os. Soc., vol. vi., there is a

28. "Bo Bui, or Boi's Cow, is the name of rock (Cow Island), and Inis Bui or Boi's Isle, that of the Island" (Hib. Lect, p. 309). In "Imtheacht na Tromdhaimhe," p. 55, two of the wishes of Brigit, wife of Seanchan, are stated to be, the fill of the fat of a lon uisce, or blackbird of the water, or waterhen, and the fill of a red-eared and purely white cow. Lon uisce here must be an error for lon dubh, for at p. 58, the lon is stated to sing music which would lull to sleep wounded men and parturient women. Hackett compares the red-eared white cow with the Glas of Gaibhlen, or grey cow, which was the property of Lon Mac Liomhtha, who is also mentioned in Dwyer's "Killaloe," p. 495. It was Lon Mac Liomhtha that made the bright (Liomhtha) sword for Finn, named Mac an Loin or son of the lon, or blackbird. In "Agallamh Oisin agus Phatraic, Oisin says,

"Were Fionn and Mac an Loin with me,
Two who never withdrew from the fight of spears,
Despite thy clerics and their bells,
'Tis we that would hold the place."

In "Mesca Ulad," p. xvi, Hennessy says, "Notwithstanding many names by which it passed, the famous spear is best known as the Luin of Celtchar. It is doubtless the Luno of Mac Pherson's Ossian, the Sword of Fingal. It is referred to in other Pseudo-Ossianic tales by the name of Mac An Luin, the sword of the Luin (recte Lon), but it is so-called, according to some learned commentators, from Luno the Scandinavian armourer, who "fabricated" it. in the later Irish so-called Ossianic stories, Mac an Luin is sometimes described as a sword, but more often as merely a powerful weapon. This is the sword termed by Mr Dunne Lann leardartha liomtha, the Sword of Light.

29. I have already noted that the colours have symbolic meanings in the Irish tales, and the same remark holds good with regard to certain numbers and numerals. In the Irish tales of Macha of Emain and of Grain of Pailis Greine, the number five refers to the moon, for Macha and Grian are names for female personifications of the sun, and Grian is at present the ordinary Irish term for the sun. The ancient Irish reckoned time, not by days, but by nights, and began to count by means of the five fingers, and in this way the number five came to be regarded as sacred to the moon, and we find traces of this in various tales. The Feloop numerals given by Mungo Park (Travels in Africa), are, enory cookaba, sisajee, sibakeer, footuek, footuek-silbakcer sibankonyen. The Mandingo numerals are, wean, yar, yat, yanet judom, judom wean judom yar, judom yat, judom yanet, fook. The Foulah numerals are, go, deeddee, tettee, nee jouee, jego (jouee go), jedeeddee (jouee deeddee), je tettee (joue teetee), je nee (jouee nee) sappo. The Jallonkadoo numerals are: kidding fidding, sarra, nani, soolo, seni soolo ma fidding, soolo ma sarra, soolo ma nani nuff. These numerals prove that the counting was at first amongst these tribes by means of the fingers, for six is five-one, seven is five-two, etc. Professor Rhys (Hibbert

poem entitled Seilg Shleibhe na m Ban, or "The Chase of Sliabh na m Ban," and in that poem we are told that Finn and the Fians went to hunt on Sliabh na m Ban, that Finn and Bran were for awhile on the seat on the mountain; and it is also stated:

Do mharbhamar se mhile fiadh,
Is an ngleann do bhi san t-sliabh;
A n-eagmais aigh agus fearb,
Ni dhearnadh sealg mar sin riamh.

"We killed six thousand deer,
In the glen which lay in the mountain.
Besides stags and roe-bucks.
A hunt like it was never performed."

In Fiadhach Fhianna Eireann ar Shliabh Truim, we read:

Piast eile Locha Cuilinn,
Do thuit le Mac Cumhaill an oir,
Do mhairbh piast Locha Neathach,
A's Arrach Ghleanna an Smoil.

Another piast of Lough Cuilinn,
Fell by Mac Cumhaill of the gold;
He slew the piast of Lough Neagh,
And the arrack of Gleann an Smoil.

In Seilg Ghleanna an Smoil, it is stated that when the Fians were hungry and quite jaded from the chase of the Eilit, there approached them a young lady who invited them to Oilean na h-Innse, where was the daughter of the Ardrigh of Greece, with a hundred barques, given her as a present by her father, and many ships freighted with gold, silver, satin, and silks. Oilean na h-Innse was consequently an island which could be approached by ships, but Mr. Dunne says that the lady dealt in enchantment, and that all these matters could be ascribed to the spells which she used.

(To be Continued.)

SPIRIT OF AN IRISH PIPER.

Macdonnel, the famous Irish piper, lived in great style—servants, grooms, hunters, etc. His pipes were small, and of ivory, tipped with silver and gold. You scarcely saw his fingers move, and all his attitudes while playing were steady and composed. One day that I and a very large party dined with Mr. Thos. Grant, at Cork, Macdonnel was sent for to play for the company during dinner; a table and chair was placed for him on the landing outside the room, a bottle of claret and glass on the table, and a servant waiting behind the chair designed for him; the door left wide open. He made his appearance, took a rapid survey of the preparation for him, filled his glass, stepped to the dancing room, looked full into the room, said, "Mr. Grant, your health and company!" drank it off, threw half a crown on his table, saying to the servant, "There, my lad, is two shillings for my bottle of wine, and keep the sixpence for yourself." He ran out of the house, mounted his hunter, and galloped off, followed by his groom. I prevailed on Macdonnel to play one night on the stage at Cork, and had it announced in the bills that Mr. Macdonnel would play some of Carolan's fine airs upon the Irish organ. The curtain went up, and discovered him sitting alone, in his own dress; he played and charmed every body.—(O'Keefe's Recollections).

Lectures p. 364), says, "What, it may here be asked in passing should lead anybody to fix on a week of nine nights and eight days as a unit of time. It would be useless to demand an answer from the moon, and one should rather look at the fingers on one's hands, the half of a nine-night would be the Irish noinden of five nights and four days." This is connected with the cess noinden or couvade of the Ultonians, which lasted five nights and four days.

OUR WEEKLY STORY

THE GHOST AT THE CONSULATE.

A NAVAL OFFICER'S STORY.

BY S. S. ROBINSON.

The dinner was nearing its end. The soft-footed Chinese servants glided about the table offering coffee and liqueurs.

The navigator, trying to show the pretty girl on his right, the steadiness of hand required to make a pousse-cafe, was, under the spell of her exaggerated interest, failing badly in the attempt.

"Pshaw!" said he, pushing away the glass, a hopeless blend of colour, "my nerves are playing me false to-night."

"It's your baneful influence, Miss Crawford," whispered the young ensign on her other hand.

"Lawrence is not given to nerves, except in the presence of ladies. You would think him a perfect clam for all he has let out this evening, but he can tell some capital stories, if I only knew how to start him."

Young Barry, as host, felt responsible for the success of the dinner, which seemed to be dragging, and, for reasons of his own, was particularly anxious that Miss Crawford should be well entertained.

"He always declared, he didn't believe in ghosts either," floated up from the other end of the table, "but Lord," said he, "if the ghost were to appear, what good would your belief do you"

"You ought to give us your views on that point, Lawrence," Barry hastened to say. "You're the only one here who has any experience, I believe."

"How exciting!" cried Miss Crawford. "Oh, do let us hear it, Mr. Lawrence! I've always adored ghost stories, but I never believed a real genuine one would come my way."

"Well," began Lawrence reluctantly, sending a reproachful glance in Barry's direction, as the other guests joined in Miss Crawford's plea. "It's rather a ghastly tale for a festive occasion, but, since you all insist, I suppose I must do my best to harrow your feelings.

"About twenty years ago I was making my first cruise on the Asiatic station. After a pleasant summer in Japan, we had—to our great disgust—been ordered to one of the ports in Northern China to spend the winter.

"The aspect of the place, when we reached it, was not calculated to raise our spirits, but Clayton, our senior watch, was especially down at the mouth, when after ransacking the foreign settlement he could find no quarters for his wife.

"They were newly married, and she had followed him, thus far, all over the station. The idea of separation for an entire winter, therefore, was not to be tolerated, if it could be avoided.

"At the end of the second day's explorations, Clayton returned to the ship and announced that he had found a house, 'but wait,' said he, as congratulations began to pour in, 'unfortunately it's a house with a story.'

"'Well, what of that?' laughed little Ferris. 'The more stories the better. If you and Mrs. Clayton get too much of each other's company, we will all come and make you a visit.'

"Ferris was the paymaster's clerk, and he messed with us. A nice little chap, but with a thirst for practical jokes, which kept him from being too popular.

"'It's all very well to joke,' grumbled Clayton, 'but I call it confounded luck after chasing around for two days, to discover that the only available house in the place has a ghost story attached to it. Oh, yes. You may say it's ridiculous,' anticipating our remarks, 'but you see I'm looking at it from my wife's standpoint, and she is afflicted with an imagination.

"'I found my house about four this afternoon. It is a fair-sized, brick mansion, standing by itself in a large compound, and evidently had not been inhabited for some time. Attached to the main building is a small ell of two rooms, one above the other, and there is an outer stairway at the rere, leading to the verandah of the upper room.

"I was delighted with my find, and hurried off to our consul to make enquiries about the owner, wondering why no one had mentioned this property to me.

"'As soon as I had described the place, his face fell.'

"'Oh, dear me!" said he, 'I guess you don't want that house. It hasn't been rented for many years, and has a bad reputation.'

"'It will have to be pretty bad to keep me out,' I protested. 'I want it very much.'

"'I'll tell you its story,' he went on, 'and then you can judge for yourself how your wife would feel about the matter.'

"'The house used to be a consulate at one time, and the last consul who lived there had brought out not only his wife and family, but also his aged father-in-law. The old gentleman, who was very feeble and much confined to his bed, occupied the upper room in the ell, perhaps you noticed it —while the consul used the one beneath as a dining-room.

"'He and his wife were seated at dinner one breathless summer night, when their attention was raised by unusual movements in the room above. A soft, quick patter as of bare feet running, was followed by a hurried, heavier tread. The consul's wife, in great surprise, started for the door, but before she had set her foot upon the stair, a piercing cry rang out in the still night, and the heavy sound of some falling body overhead, was succeeded by an ominous silence.

"'Her husband pushing past her, ran upstairs, and threw open the door. There upon its back, with sunken eyes turned upward, lay the body of the old man, the bright blood welling in great spurts from a ghastly wound in his throat, and forming a sickening pool about him on the floor. No trace was found of the murderer, but beyond doubt, it was some Chinese thief, who under the impression that the room was unoccupied, had entered it by way of the outer stair, and finding himself mistaken in his supposition, had taken the shortest way of silencing the witness of his intended crime.

"'After this dreadful occurrence, the consulate was abandoned, and for certain reasons it has never again been reopened. The Chinese have a superstitious horror of the place, and there are very few bold enough to pass it after dark. Those who have done so, declare that they have seen faint lights flit past the windows of the old man's room, and as they hurried by, that strange, unnatural noises pursued them on their way.

"'These may be idle rumours, of course, but the natives believe them implicitly, and I doubt, if even by paying extremely high wages, you could get any servants to stay with you.'

"'That ended the consul's story," said

Clayton, 'and it also ended my hopes of a domestic hearth this winter. I'm sure Mrs. Clayton wouldn't enjoy life in a house with such disagreeable associations, and if she didn't, I should not. Even putting aside such considerations, the servant question is an unsurmountable stumbling-block. You can't live without servants in this country.'

"'Do you mean to say," demanded Herrick, our youngest, 'that nobody in this town has had enterprise enough to try for an interview with that ghost?"

"There isn't a reporter in the place, Herrick,' said Clayton, 'but if you are anxious for an interview, here are the keys of the house; I asked for them with a view to going over it myself—by daylight.'

"'I'll tell you what we'll do," suddenly burst out the executive officer, taking the keys from Herrick's willing fingers.

"'I've thought of a way we can get to the bottom of these rumours and have a spree at the same time. Let's have an impromptu supper in the haunted house to-night. We can easily take along the materials. McIntyre will supply the music, I'll make a punch, everybody must contribute something to the entertainment, and if there are any queer sights or sounds we'll investigate and report on them to some scientific paper.'

"'And if there aren't any,' added Herrick, 'Mrs. Clayton and the servants will have to put some confidence in the word of such unimpeachable witnesses.'

"The idea was enthusiastically received with one exception. Ferris remarked that he didn't see the point of eating your supper in a damp, musty hole, when you had a comfortable ward-room for the purpose, and he, for one, didn't propose to do it.

"'Ferris has had one of his periodical headaches to-day and feels grumpy,' said the doctor, 'so his opinion doesn't count. Scott, your motion is unanimously carried.'

"About nine o'clock the supper party set out on donkey-back, only the captain, navigator, one watch-officer, and Ferris remainiug on board ship.

"There was a thin covering of snow on the ground, and the donkeys moved forward in noiseless, single file. Some of the ward-room boys, unwillingly impressed into service, trotted along in the rere beside a couple of mules, loaded with paraphernalia for the feast.

"The donkey-boys stopped short within 1 hundred yards of the compound, and proved as obstinate as their beasts about going further. We dismounted and followed Clayton to a door in the brick wall, where he fumbled for a while with the key. The door swung open with a disused creak, and let us into the deserted enclosure; a tangle of wild, neglected shrubs and bushes, outlined in snow, and the dark mass of building showing dimly in the rere.

"'Come along with some of those lanterns!' called Scott to the group of Chinese boys huddled near the gate. The bright rays of light danced before us up the path, and focussed themselves on the weather-stained front door, whose rusty lock gave Clayton another struggle. As we stepped over the threshold, the breath of mould and decay that came out to meet the fresher air sickened us.

"'Faugh,' said Clayton, sniffing, 'what a musty old hole.'

"The lanterns showed long strips of paper peeling from the walls, and blotches of damp upon the ceiling; cockroaches scuttled away from the light and vanished in cracks in the flooring, and a big rat scampered across the room and disappeared in a far corner with a flourish of his tail.

"The other rooms, as we inspected them, bore the same melancholy aspect. Rot and mildew had placed their stamp on everything.

"We decided to have our modest banquet in the small dining-room in the ell, as it boasted a good open fireplace, and was more likely to furnish ghostly sensations than any other apartment on the ground floor. The servants scolded into activity, lighted candles, laid a fire, and spread the cloth for supper. What with the rosy light the fire shed upon the walls, the warmth that began to pervade the room, and the sight of good cheer upon the table. our spirits, which had not been exactly hilarious during our tour of inspection, were soon on the rise.

"The supper was really a very jolly affair. Scott brewed a great bowl of punch. McIntyre thrummed on his guitar, and we all joined in the choruses of his songs; even the servants began to gain confidence, and chatted affably to each other as they crouched over the little charcoal stoves which had served to warm our viands.

"About midnight there was a pause in the merriment, and Herrick took advantage of it to remark solemnly, 'It doesn't strike me that we are giving the ghost a fair chance. He never could make himself heard in all this racket. Let's blow out the lights and keep quiet for a while.'

"Some one rose at this suggestion and blew out the candles. The fire from lack of fuel was dying down in dull, red embers. The cigars of the smokers made little fiery points in the darkness of the room. The doctor began a ghost story, which the surroundings made effective.

"Suddenly the man next me gripped my arm. 'Hush!' he whispered. 'What's that noise?'

"The doctor's story broke off abruptly, and there was a breathless silence. Into it it fell the sound of a soft, foot-fall. I clenched my hands, and the blood hammered in my temples. The foot-fall came from the room above.

"In the second that followed. as we stared into the darkness, came the thread of hurrying feet. A wild cry of agony echoed through the silent house, and while it still rang in our ears, something dropped dull and heavy overhead.

"Shaking off the spell that seemed to chain my limbs, I with two or three others ran for the stairs, while the rest began to grope for candles and matches in the chaos of the supper table.

"I was the first to reach the upper door. It resisted, but I pulled with all my strength, threw it open, and sprang inside. To my dismay before the others could follow, it sprang to with a click, leaving me alone in a blackness that seemed peopled with horrors.

"I turned to fumble for the latch. and my foot struck something soft and heavy. A cold perspiration broke out on me, and my voice when I could have raised it to call to my comrades, died in my throat.

"Compelling my stiffened nerves to act, I stooped with outstretched hand towards the floor. My fingers touched something liquid, warm, and flowing.

"I cannot tell what I felt. It was an eternity to me before the door burst open, and the welcome light shone in.

"'What is it, Lawrence?' cried Clayton, who was the foremost, staring at my white face and dripping fingers.

"I could only to point to where I felt the dreadful object lay, turning my head aside.

"'My God!' I heard Scott breathe in awe-struck tones. 'if it isn't little Ferris.'

"I turned then and saw by the flickering candlelight a scene I have never been able to forget. The blood which stained my fingers spread in a sluggish pool upon the planking, and in it lay the body of the little clerk. The dark stream flowing from a horrible gash in his throat showed too plainly the manner of his death .

"The doctor bending over the body raised the clenched right hand, and laying it softly down, shook his head. We looked at each other with pale faces. McIntyre was the first to rouse himself.

"'See here!' said he, 'we're wasting precious time. There may be a chance of catching the ruffian who has done this work.'

"We welcomed the suggestion of human agency and of action in the matter, and with our lanterns searched thoroughly the house and grounds, but all in vain. The long window leading on to the upper verandah was open, but, as Scott said, that proved nothing, for Ferris must have entered that way by the outer staircase. The whole affair seemed so mysterious that we hardly knew what to think. and it was a sad little procession that returned to the ship in the dull, grey morning .

"Those who had remained on board were inexpressibly shocked at the awful ending of the frolic, but were not surprised, as we had been at Ferris' presence in the house. 'I rather think,' said the navigator, 'that the poor little chap meant to give you all a bad scare by playing the ghost. He left the ship about an hour after you did, saying he was going to see that you were not disappointed in your "spook." It turned out a ghastly joke for him, poor boy.'

"The next day, having obtained permission from the consul, Clayton and I went to the haunted house with a working party from the ship, and made an exhaustive search in the ill-fated room. Our efforts were rewarded. Under some of the planking, which proved to be loose, we found a complete outfit of counterfeiter's tools.

"It then required little imagination to piece out the story. The house had evidently been chosen because of its evil reputation, as the den of a gang of counterfeiters, and the lights and noises necessary to their work, had served their purpose well by increasing the superstitious terrors of the Chinese in regard to the place.

"On the night of our supper, one of the band coming to the scene of his labours, must have found Ferris in possession, and in pursuance of the maxim that 'dead men tell no tales,' had promptly disposed of his defenceless victim.

"Subsequent events showed this theory to be absolutely correct, for investigations being set on foot by the Chinese magistrates, the gang was discovered, and under the torture too commonly practiced in yamens, one of their number confessed to the murder.

"And so you see," concluded Lawrence. "my ghost story, strictly speaking, is not a ghost story after all, but unfortunately it required a human life to demonstrate the fact."

LIQUID AIR POWER.

The result of tests of a liquid air plant, made at Cornell University, reported at the Pittsburg meeting of the American Association for the Advancement of Science, indicates that the expenditure of one horse-power continuously for one hour results in the production of just enough liquid air to produce, if utilised in its turn as a source of power, in a perfect machine, one horse-power for one minute. The experimenter adds that the most efficient method of obtaining liquid air as yet discovered would increase the time to only five minutes.

NOTES AND QUERIES.

SLIABH-NA-M-BAN.

TO THE EDITOR DUBLIN PENNY JOURNAL.

Sir—I forgot to mention in connection with the Raithin beside Lough Gur, that Mr. John Hayes informs me that it was destroyed nearly sixty years ago, when some human bones and quern stones were found. There is a slip with reference to Iffa, which is explained later on as being the Irish Ui Fatha. In "Lives from Book of Lismore," Crimthann Nia Nair, or "hero of Nar," is stated to have gone with Nar thuathchaech ("blind of the left eye") into Sidh Buidb, or Sidh of Bodb, and though this Sidh Buidb is not to be equated with Sidh Buidb beside Lough Deargh, or Sidh Buidb of Sliabhnam-Ban, still the mention made in this tale of Nar of Sidh Buidb is of importance, especially when Nar, termed a banshee, and wife of Crimthann, is made daughter of Lotan, that is, Lodan, and Crimthann is said to be son of Lughaid of the Red Stripes, son of the Three White Twins, who are named Bres, Nar, and Lothar, which are incorrectly explained by Professor Rhys. According to "Corca Laidhe," Nar is son of Fermora of Ara Cliach, but in the tale of "The Destruction of the Court of Da Derga," Nar is swineherd of Bodh of Sidh Buidb of Sliabhnam-Ban. In the notes on Sliabh na m-Ban, I have forgotten to refer to the tale of Crimthann and Nar. Crimthann Nia Nair (and in other tales we have Cairbre Nia Nair) is connected with Howth, on which was a fort, named from him, from which he went to Oenach Find, where he obtained the Golden Chariot, the Golden Chessboard, and tunic, which he brought to Dun Crimthainn. There is an interesting note concerning Croabh Mughna by Dr. Stokes, "Edinburgh Dinnshenches," p. 67. Mughna, or Mugain, is stated to be the name of a vast yew tree, the top whereof was as broad as the whole plain, which bore fruit thrice a year: "Apples, wonderful, marvellous; nuts, round, blood-red; and acorns, brown, ridgy." In order to understand such tales as this of Mughna we must obtain from the mythology the explanation of the yew, apple, nut, and acorn, which are merely symbols in the tale. Yggdrasil of the North was an ash tree, but Iduna's apples were regarded as the fruits of Yggdrasil. There is a valuable note concerning sacred trees in the Rev. C. J. Ball's "Handbook of Descriptions to the Teacher's Roll of Bible Illustrations." "The worship of a sacred tree is common to almost all ancient religions. Among the Arabs, Phoenicians, Canaanites, Jews (cf., the groves, or rather Asherahs, 1 Kings, 14-23; 2 Kings, 17-10), among the Indians, the Persians, and the Scandinavians, this form of idolatry is found. It is, therefore, natural to find apparent traces of it in the sculptures of Assyria and Babylonia. It appears to have been most prevalent in Assyria during the Middle Empire, B.C., 900-721: and the representations are found at Nimrud (Calah, Gen. 10-11), and Khorsabad (Dur Sargina, or "Sargon's Castle"), but not at Nineveh. The peculiar form of the tree may possibly be due to a conventional combination of three sacred trees belonging to three ancient traditions.

According to an old Babylonian hymn in praise of the god Ea, or Ia,

"In Eridu a dark gishkin tree grew,
On holy ground it sprang up,
Its appearance was that of gleaming lapis lazuli,
Lying in the deep."

Yours faithfully,
J. F. LYNCH.

JOHN MacDERMOTT (EXECUTED 1793.)

Astoria, New York, Dec. 7, 1902.

TO THE EDITOR OF THE IRISH CATHOLIC.

My Dear Sir.—As a member of the American-Irish Historical Society and a son of the late General Thomas W Sweeny, United States Army, the Secretary of War and Commander-in-Chief of the American-Irish forces during the Fenian invasion of Canada in 1866, I am naturally interested in the accounts of the leaders in the revolutionary movement in Ireland in the last century. Your reference to John MacDermott (in "Notes and Queries"), as having been hanged for riot and burglary at Castle Tennison causes me to give you what information I have at hand that may clear his name of that calumny. John MacDermott, son of Edward MacDermott, of Coote Hall, was one of the only Catholic gentlemen who took up the cause of the people when their representatives acquiesced to the humiliating terms given them in 1793. He commanded the "Defenders of Roscommon, of whom Wolfe Tone says: "These men, are called Defenders, are completely organised on a military plan, divided according to their respective districts, and officered by men chosen by themselves; the principle of their union is implicit obedience to the orders of those whom they have elected for their generals, and whose object is the emancipation of their country, the subversion of English usurpation, and the bettering of the condition of the wretched peasantry of Ireland.' Musgrave says that the body under MacDermott's command at the fight at Castle Tennison consisted of 6,000 men. He (MacDermott), as leader in deed as well as name, had half his face shot away, and sought refuge with his former tutor. The reward was so great that he was betrayed. The authorities desired to make an example of him, but after two trials failed to convict him, through the cleverness of his counsel. He was then brought to Dublin, concealed in a barrel (to prevent an uprising of the people), under an escort of the 14th Dragoons. Here the authorities had everything their own way, and he was convicted and bravely met his well-earned execution through the fortunes of war. The bearers of the name of this young martyr will be pleased to know that his individuality and heroism in leading this forlorn hope is looked upon as an inspiration in this country.—Respectfully yours,

WILLIAM M. SWEENY.

THE BIRTHPLACE OF EDMUND BURKE.

TO THE EDITOR DUBLIN PENNY JOURNAL.

Sir—In your issue of December 6th, I notice among the "Literary Notes" that "C. K. S" in the "Sphere" gives a photograph of No. 12 Arran quay, Dublin, in which Edmund Burke was born. I have before me as I write a "Memoir of the Right Honourable Edmund Burke," printed and published in August, 1797, by H D Symonds, No. 20 Paternoster row, London, in which I find the town of Limerick, in Ireland, was the birthplace of Burke. His father was a Protestant, a man of considerable ability, good character, and in extensive practice as an attorney. His son received the first part of his education under Mr Shackleton, a Quaker, who kept an academy at Ballytore, near Carlow. This Quaker was a very skilful and successful teacher, at whose school many eminent men have been educated. May I ask what is the authority for stating that Edmund Burke was born in Dublin?—I am, etc,

J. G. B.

Limerick.

THE FAIRY BOY.

By D. Anster (who was a native of Charleville, Co. Cork).

The summer sun was sinking
With a mild light, calm and yellow,
It shone on my little boy's bonny cheeks,
And his loose locks of yellow.

The robin was singing sweetly,
And his song was sad and tender;
And my little boy's eyes, as he heard the song,
Smiled with a sweet, soft splendour.

My little boy lay on my bosom,
While his soul the song was quaffing;
The joy of his soul had tinged his cheek,
And his heart and his eye were laughing.

I sat alone in my cottage
The midnight needle plying;
I feared for my child, for the rush's light
In the socket now was dying.

There came a hand to my lonely latch,
Like the wind at midnight, moaning;
I knelt to pray, but rose again—
For I heard my little boy groaning!

I crossed my brow, and I crossed my breast,
But that night my child departed!
They left a weakling in his stead,
And I am broken-hearted!

Oh! it cannot be my own sweet boy,
For his eyes are dim and hollow—
My little boy is gone to God,
And his mother soon will follow.

The dirge for the dead will be sung for me,
And the Mass be chaunted meetly,
And I will sleep with my little boy
In the moonlight churchyard sweetly.

THE LESSER CASTLES IN THE COUNTY OF DUBLIN.*

ON DUBBER AND SPRICKLESTOWN.

BY E. R. M'C. DIX.

DUBBER.

In a letter which appeared in the "Irish Builder," in the year 1899, I referred to the names of some of the Castles in the county of Dublin, of which I had then no information. Amongst these was that formerly at Dubber (Tobair, a well), now the name of a place situate to the north of the village of Finglas. Since then Mr. T. Richardson went there to see how much of this Castle still remains.

The modern Dubber is off the right hand side of the road from Santry to Dunsoghly Castle, and is reached by a lane near Finglas, which forms a loop on the road about half a mile long. The present buildings at Dubber stand on the right hand side of the lane at the point furthest from the main road, and are a modern farmhouse, with the usual out offices. The only old work appears to be in use as part of the back wall of the barn, standing east and west. This barn is about 40 feet long, and the portion of it appearing different and older than the rest forms the east portion of the back (or south wall), and is 14 feet in length and 10 feet high. Mr. Richardson considers, from an examination of this portion, that it was probably part of an entrance since built up, as there are traces of what look like side piers projecting slightly from the existing wall. In the old part of the wall there are also traces of a small square window, which is now partly built up, on the left of the conjectural entrance. This window was probably for use in connection with the gateway. Numbers of stones and bricks are heaped along the hedges about the place, and he was shown in one hedge the remains of an oven or baking hearth (taken out of a wall near the barn), which reminded him of the one in the ruined Archiepiscopal Palace at Swords. These were formed by constructing an arched recess at the time of building the house.

The present tenant of Dubber courteously showed Mr. Richardson through the place, and told him that when he commenced some years ago to dig the garden, which is at the back of the barn, he turned up so many stones and bricks, laying bare foundations, some of which were five feet deep, that he was ultimately compelled to abandon all further digging of the garden. It is now in pasture. All these show that a former building stood here of considerable proportions.

A stone which is in the corner of the paddock, on the north-west side of the present

*For some months I contributed articles to the "Irish Builder" on this subject, and had nearly exhausted the subject, when on the retirement of Mr Roe, so long its worthy proprietor, the "Builder" passed into other hands, and its scope and contents being somewhat changed, the following final article could not appear. In this journal it may, however, not inappropriately appear, though three years have elapsed since it was penned.

ANOTHER "WATTY COX" CARICATURE.

(From the "Irish Magazine and Monthly Asylum of Neglected Biography," 1811.)

JEMMY O'BRIEN, AND HIS WORKING TOOLS.

barn, Mr. Richardson was told, indicated the site where a building had been, and in connection with which the usual legends of money being hidden under it exist, but the stone has not been disturbed for many years, if it ever has been.

SPRICKLESTOWN.

I desire at the same time to mention that all trace of the Castle at Spricklestown, the name of a small townland near the Ward, on the very west border of the county, has vanished. Messrs. Richardson and Brilley, both at my request, kindly visited the place, the former twice, and made inquiries of many local people, who all stated that nowhere else in the county Dublin bore this name, but they had never seen or even heard of a castle here. Their knowledge would be good for more than 60 years, that is, back to about 1830.

In 1785, when Mr. Austin Cooper, the well-known antiquary, visited this neighbourhood, he saw here the substantial remains of a Castle, a small sketch of which he attached to his notes, which were recently in the possession of his grandson, the late Mr. Austin Damer Cooper, of Druimnigh, Baldoyle. The remains were one side of a tower, and the walls of the body. In the buildings and place, however, now called Spricklestown, Messrs. Richardson and Briley could see very little resemblance to the Castle and surroundings in the small sketch by Mr. Cooper. Perhaps at the beginning of the century the Castle was pulled down, and the stones probably used in the buildings which still bear the name of Spricklestown.

One of these is the ruins of a farmhouse consisting of two low buildings at right angles. The roof of one appears to have been destroyed by fire. The name of the place does not appear clear; it was probably a personal one during the Norman times.

I fear that these fragmentary remains are all that now exist of many other Castles.

O'CONNELL'S DANCE.

HOW AN IRISH SAILOR GOT A BRIDE OF ROYAL BLOOD.

A STRANGE STORY OF THE PACIFIC.

By John R. Musick.

The Caroline Islands in the Pacific are a group which came into notoriety a few years ago through their purchase by Germany from Spain. They are sometimes called the New Philippines, and lie between the Philippines and Ladrones, the Marshal Islands and Papaa. They are generally flat, and afford no secure anchorage. The climate of the Carolines is mild and agreeable. The original inhabitants were of Malay origin, were warlike, but have of later years become quite docile. They are chiefly fishermen, and make excellent sailors.

The Carolines, like every other inhabited island of the Great Pacific, have their story, in fact, have many stories. The story we shall select to tell at present dates back to 1826, when the islanders were less civilised than at present.

An English vessel named John Bull, under Captain Barkus, was wrecked on one of the coral reefs. Barkus at the time of the wreck lay helplessly drunk on the hencoop, but was roused and placed in one of the boats.

On board the vessel was a missionary and his wife and daughter. The ladies were placed in one boat, and the husband and father in another.

All the crew escaped immediate death, and put to sea in open boats. The missionary's wife and daughter died at the end of three or four days from exposure and were buried at sea.

Next day after the burial of these Christian ladies, the boat in which they had left the wreck and which was lost to sight to all others, sighted land, which proved to be a coral reef. It was past noon before they discovered an opening through it.

When they had effected a passage they found themselves in a smooth bosom of water, and saw hundreds of canoes launching and putting off towards them. They approached to within a short distance, and turning about retreated. This was repeated a dozen times, when they began to shower arrows and missiles at them. The sailors, knowing the folly of resisting such a host, threw themselves in the bottom of the boat until the stones and arrows had passed, and then made friendly signals to the natives.

Satisfied that the strangers did not intend to harm them the natives now made a dash at their boat, which they towed ashore.

After the sailors were landed, they were stripped of their clothing, and everything in the boat, whale-irons, tubs, muskets, and provisions taken out. The boat was hauled up on the beach, and the six sailors, all left of the boat's crew, taken to the canoe house.

They were seated on mats in the centre of the house, and yams, bread-fruit, plantins, bananas, fish, and bits of cold game were brought them. The building was crowded with natives, who sat cross-legged, like Turks, the women sitting on their heels. A continual buzz of conversation ran through the assembly, each talking to his neighbour, and gesturing excitedly.

The interjection or sound indicative of pleasure or surprise was a cluck, which sound was in abundance.

Parties came down where the sailors sat admiring the whiteness of their skins and the blue veins, and giving expression to frequent clucks. This personal examination made, the sailors fear the savages were cannibals, who were inspecting them with a view

to making a feast of them. This horrible suspicion was strengthened when two or three wood fires were built, covered with stones.

This fear was so excessive that they gave themselves up for lost. There was an Irish sailor named O'Connell among them, who felt convinced the natives were not cannibals, but that a feast was to be prepared for their visitors. They were too good humoured to mean any harm to them.

In a sort of desperate recklessness, O'Connell determined to try the experiment of dancing before the savage audience. When he proposed it to his comrades they tried to reason him out of what they regarded criminal, thoughtless conduct, in view of the horrible death that awaited them. The prospect was certainly not agreeable, but O'Connell determined upon his experiment. Accordingly he sprang to his feet and struck an attitude; a cluck of pleasure ran through the savage audience, and one of them, readily understanding his intention, spread a mat for him.

He struck up Garryowen, and danced away in that famous jig to the best of his ability and agility. The savages were highly delighted, though there was no loud demonstration or applause.

The peeping over each others shoulders and continual cluck, cluck, cluck, evinced their pleasure.

Before the dance was finished the cause for which the fire was built became apparent, greatly relieving those who expected to be roasted and eaten. The fires were kindled to roast dogs for the feast. Other preparations, such as the pounding of jago, roasting of game, all indicated that preparations were being made for a feast.

After O'Connell's dance was concluded the sailors were separated from each other, each being the nucleus of a group of natives, who could not sufficiently admire and examine him.

Food and a kind of drink called jago was brought them. They ate the food, but the jago they found they could not swallow. It was pungent, unpleasant in taste, and a very strong narcotic in effect.

For three or four days there was a continual feast with fresh arrivals from a distance, come to see the wonderful strangers.

On the fourth day after their landing there was an arrival of a fleet of canoes, with the head and other chiefs.

The sailors were again inspected by the newcomers, and it was the fortune of O'Connell and a sailor named George Keenan to be selected by the principal chief.

The remaining four sailors were apportioned about among other tribes, and their property brought on shore and divided.

On the next day O'Connell's new friend and master left the island with him and George Keenan. After a voyage of eight or nine hours at sea in open canoes with outriggers arranged so as to prevent their tipping over, the party arrived at the home of the chief.

A great feast celebrated the return of the chief to his home, at which O'Connell repeated the Irish jig which had taken so well on his landing. It was no doubt the heels of O'Connell which induced the chief to select him.

Next day after their arrival O'Connell and George had their ditty bags restored to them. In O'Connell's bag were some books and a shaving glass.

The shaving glass did not last long, but while it lasted it was kept sacred to the eyes of the aristocracy, never permitting a plebian glance to fall upon it. He carried it around with him on his visit to chiefs, and those who were permitted to have a glance at the magic glass, gave vent to such expressions of wonder and delight and made such grotesque grimaces that the sailors could not refrain from laughing at them. They imagined that the reflection of their images was caused by a spirit behind the glass, consequently some awe was mingled with their delight.

One day during his absence the natives destroyed the frame and scraped off the quicksilver in order to get at the geni that produced the reflection.

The sailors had been about two days in their new residence when the natives began to show them their tattooed arms and legs, and by signs and gestures that they must be similarly marked.

On the fourth or fifth day O'Connell and George were put on board a canoe with six natives, who paddled a short distance along the shore and then turned into a creek, wide at the mouth, but soon narrowing till there was not room for two canoes to go abreast.

A hut was reached on the banks of the creek where they landed, and entered it, their conductors remained outside.

No person was there to receive them, and for more than half an hour the sailor busied themselves with guesses and speculations as to the end to which they were tending.

To their astonishment they were at last visited by half a dozen women bearing implements, the use of which they were soon to learn to their sorrow. George was made to sit in one corner and O'Connell in another, the women being equally divided between them.

O'Connell observed that one of the women who approached him had a calabash filled with some dark kind of liquor; another took his left hand, and squeezed it in hers so as to draw the flesh tight across the back. Then a little silver bamboo was dipped in the liquid and applied to his hand, upon which it left a straight black mark. The third then produced a small flat piece of wood, with thorns pierced through one end. This she dipped in the black liquid, then resting the points of the thorns upon the mark on his hand, with a sudden blow from a stick, drove the thorns into the flesh.

O'Connell summoned all his fortitude and set his teeth and bore the excruciating pain like a martyr. Between every blow the dusky beauty dipped her thorns in the ink.

While O'Connell was engaged in his own process of tattooing he heard from his companion.

'Oh, look out, you she-devil," he yelled, as the thorns were driven into his flesh. He swore and raved in every tongue known to him. He wished all sorts of plagues to light upon his tormentors. prayed that the island might be sunk by an earthquake, prayed for an armed fleet to sweep the "hell's minions" off the face of the earth.

But he was bound, and all his raving served only to amuse the women. The operators often suspended their work to mimic him and contrast his conduct with O'Connell's.

"Narlic-a-Nutt much a purk"—Narlic-a-Nutt (his name is a coward); "Jim aroche ma coo mot"—Jim chief brave).

After O'Connell's executioner had battered his hand awhile she wiped it with a sponge. He hoped she had finished; but no; she held up his hand, squinted at the lines, as a carpenter would true a board, then she commenced again, pricking with thorns places where she thought the mark was imperfect. The correction of the work was infinitely worse than the first infliction.

In about an hour and a half the hands were finished and the women went away, taking their tools, after smearing the tatooed parts with cocoanut oil, and putting pulverised coal upon it.

They were left alone for a few hours, when there came a fresh bevy of thise tender ladies who continued operations on the left arm. When night came they were told they could sleep.

After breakfast next day the women returned, and the tattooing recommenced. George howled and yelled so outrageously he was left off with disgust, but there was no excuse for O'Connell.

For eight days the work continued, until not only his arms and legs but his entire body was covered with the marks of the tattooer. For a month he was too sore to leave the hut and at times thought he would die. George was permitted to remain with him, but he was regarded by the natives as a coward, because he could not endure pain.

During the time the application of cocoanut oil and charcoal gave him somewhat the resemblance of a rhinoceros.

When O'Connell recovered he supposed the tattooing was over, but he had not been ashore at the village three hours before, by the chief's direction, one of his daughters prepared to mark him still more. She tattooed a ring on his right breast, another on his left shoulder, and two about his right arm.

This, however, was but the prick of a needle compared with the extensive printing business which had been prosecuted upon his body at the tattoo house, and he made no complaint.

Many dogs were killed, and there was a great feast in honour of his courage and endurance.

George knew how to play a fife, and he manufactured one out of a bamboo stick, which he played for O'Connell to dance, which greatly delighted the natives. The clucking failing to express the delight of the natives, they broke out into a tremendous laugh. George's music saved him from disgrace, for he had been charged with cowardice.

It was not until the second day that George and O'Connell suspected what all this tattooing portended. O'Connell learned that the chief's daughter, who had imprinted the circle on his breast and shoulder, was to be his wife; and that the last finishing touches she gave him was the marriage ceremony. Upon the third morning his bride led him away for a bath, and the day was spent in feasting and dancing, as upon the preceding days. In all their feasting and drinking there was no quarrelling or fighting.

The liquor pressed from the jago is a powerful narcotic, and produces a deep, stupid sleep without exciting the nerves, or arousing the mind of the victim as other liquor.

George was provided with a wife, but she was a woman of no rank; his unwillingness to submit to the process of tattooing did not admit of his marrying one of the first ladies of the land. O'Connell's wife's father was named Ahoundel-a-Nutt, chief of the most powerful island enclosed by the reef, and set down on the charts of that day as the Island of the Ascension. He gave O'Connell his own name, Ahoundel, but he was oftener known as Jem-aroche, while George Keenan's name was Narlic. The first name meant brave, and the second coward.

In speaking of his wife O'Connell said:

"I never had more reason to complain of my wife than the majority of people in civilised countries have. She was only about fourteen years of age, affectionate, neat, faithful, and, barring too frequent indulgences in the flesh of baked dogs, which would give her breath something of a canine odour, she was a very agreeable consort. During my residence upon the island she presented me with two pretty little demi-savages, a little girl and a boy, who stands a chance in his turn to succeed his grandfather in the government of the island."

O'Connell's father-in-law seems to have been a very indulgent parent. He took the Irishman into his house, and would not permit him to live away from there. The many tender evidence of affection on the part of his wife must have made the parting of her civilised husband very sad. She accompanied him on his walks and in his canoe rides, was always at his side, looking up affectionately into his face. She studied his wants, and took every means in her power to gratify them. She taught him their language, and the task was a labour of love.

Her dower was in canoes, Nigurts (slaves) and lands. The estate was considerable, and

had O'Connell chosen to have cultivated it and remained upon it, he would have become a very wealthy man.

O'Connell's royal father-in-law loved a practical joke, and accompanying the sailor and his wife on their honeymoon bridal tour, would often persuade O'Connell to rush into a house with a yell and strike an attitude. If it was in a hut of one of the Carolines who had never seen a white man, the scampering to the right and left of women and children was so comical that the old chief clapped his hands on his sides and roared with laughter.

The chief evidently feared he would ultimately lose the white men, and took every precaution possible to retain them. They were furnished with small fishing boats to go from one island to another in Ahoundel-a-Nutt's province, but were warned not to go to any of the other islands which he represented as inhabited by cannibals, who would delight in eating them.

Their excursion from island to island in the provinces were pleasant. Often as they paddled along the coast or up some river, George would take his fife and make the forests echo with its shrill sounds. At the first notes of the fife the natives would come running from every direction, crying:

"Narlic! Narlic! Narlic! Narlic Cudjong!" Cudjong was the name the natives had bestowed on George's fife. The shore would then be lined with listeners, and while O'Connell kept the boat in motion so as to avoid the banks, George played the flute.

They were invariably invited to land on these occasions, and then O'Connell was persuaded to dance to George's music.

The two on one occasion came very near getting themselves into trouble. The eel was sacred to the islanders. In the fresh water they found eels in large abundance, and on one occasion stole off up one of the streams where they caught, cooked, and ate a large number of them. This might have passed unnoticed had they concealed the bones. Next day some natives discovered some of the bones of the forbidden fish, and such wailing and cries of distress as rose on the air, they had never heard before.

The hastened to the spot and found men, women, and children kneeling, or completely prostrated, beating their breasts, and rocking to and fro, or rolling upon the ground. They at first supposed some great calamity had befallen them, but soon ascertained that all that mourning and wailing was over the small pyramid of eel bones they had left behind them. The sailors, under the exciting circumstances, decided it was prudent to keep silent. For two or three days the lamentations continued; it spread from place to place and from hut to hut; on every side was weeping and lamentation.

The sailors thought they saw some looks indicative of suspicion, but when the bones were buried with great ceremony by the chief's orders the hubbub ceased. Then a great load seemed lifted from the breasts of the sailors, who decided not to make another feast of eels.

On one occasion O'Connell was ill, and, as was usual in such cases, a journey was proposed for him to take him beyond the influence of the evil spirit. He impressed that rest would be more advantageous than a journey through the sun, declined to accompany the party running away from the devil.

This did not prevent the chief, some of his nobles, and even O'Connell's wife from going on the journey. As he lay on his couch reflecting on the conduct of his wife, O'Connell thought that her conjugal affection should have kept her at his bedside, and he resolved to have revenge upon her.

He was considerable better in body on her return, though of sour temper. His sole wedding present to her had been a few blue glass beads, which she prized very highly, and these he crushed between two stones before her eyes. The poor little savage wife ran from the house, and sitting down on the edge of a stone, began to cry like a child. Somewhat ashamed of his act, O'Connell followed her, and endeavoured to pacify her, but it was no use. The only answer she made him was to kick like a spoiled child.

It was not until the tide flowed in and the water was up to her elbows that he could induce her to come away, though she still continued to bellow for her beads. At night O'Connell went to sleep and left her weeping. Shes had refused to eat, though fish and the most delicate bits of roast puppy were offered her. O'Connell awoke about midnight, however, and found her satisfying her appetite on roast dog. He said nothing, thinking her returning appetite a good omen; but when he awoke next morning, clouds and darkness still sat on the countenance of Laowni, his wife.

All day long she wore the same sulks, giving him an occasional look of anything but affection, but not vouchsafing a word. At night he took George with him, and instead of sleeping in the canoe house, which was then Ahoundel's quarters, went to his house proper. There they built a fire, and just as they had arrived at the sage conclusion that his majesty of Nutt and family wer not in the best of humour, they were surprised by a visit from the chief,, accompanied by a native whom they had detected stealing a knife, and two others, all armed with spears.

Without saying a word they sat down at a little distance, biting their nether lips, as is always their custom when vexed or in a passion. O'Connell asked them the reason for the visit, but received no answer. George sat by his side, shivering like a leaf, and every moment expecting to be killed, though O'Connell assured him the visit was intended only for himself.

At last their disagreeable state of suspense was relieved by the appearance of Laowni, who beckoned her father and the armed warriors outside, and they saw no more of them that day.

It was two or three days, however, before the reconciliation between O'Connell and his wife was complete, for he took it upon him to sulk in the most civilised way when she relented. This lesson, however, taught him better than to trifle with the property and comfort of his wife, whose father might inflict summary punishment on him without being amenable for it to any power on earth. Ahoundel left the canoe house with a determination to put him to death, and it was the intercession of Laowni, who followed the party, that saved him.

On the whole the adventure had a good effect, for it impressed the savages with the coolness and courage of the white men in time of danger. They had an opportunity a few months later to fully try the courage of the sailors. Wajai-a-Hoo, chief of a neighbouring island, declared war against Ahoundel-a-Nutt on account of O'Connell's marriage to the daughter of the chief who had promised him the girl for a wife. As Wajai-a-Hoo already had several wives, he ought not to have felt the disappointment very keenly. Nevertheless nothing but blood would satisfy his injured affections, and he declared war.

The armies of Ahoundel-a-Nutt were mustered at once, and preparations made for carrying the war into the island of Wajai. Ahoundel-a-Nutt's soldiers numbered about fifteen hundred, mustered from the main island and two tributaries. Hand and Parlour. Each canoe was furnished with smooth, round stones, stowed away in the bottom, and each native provided with a sling, a spear, a bow and arrows, and war club. The spears were from five to eight feet in length, and barbed with the back bone of a fish, preserving five or six joints, with the protruding bones, like arrow barbs. The clubs were made of heavy wood ,and notched about eighteen inches or two feet in length. The natives were dressed in their best savage articles of adornment, their heads dressed with flowers, but no paina was put on their flesh, except smearing with cocoanut oil and curry.

Ahoundel with his fleet of canoes sailed, or rather paddled, to Wajai's island, and found the enemy in battle array in their canoes prepared to receive them.

When near enough for the battle Ahoundel and Wajai both sprang to their feet on the platforms of their canoes, flourishing their spears, and set up shouts of defiance, while the air was cracked with the blowing of conch shells. The inferior chiefs on both sides rose and joined in the cry, and the engagement commenced with hurling stones from slings. The stones were about one pound in weight, and when the parties were only thirty or forty yards apart, were thrown with tremendous precision.

Several canoes were broken and sunk on both sides, and many killed from volleys of stones. The stones exhausted, arrows and spears were used, the fleets gradually nearing each other until the battle was canoe to canoe, and hand to hand. The natives seized each other by the hair and thrust spears into each others bodies, or cut each other with sharp shells.

Wajai was killed by a stone hurled with such force it crushed his skull. A shout of joy on one side, and a murmur of grief on the other, followed the disaster to the Wajaians.

The Nuttites forced their enemy to land. The Wajaians defended every foot of ground to their doors. An hour and a half of hard fighting brought them to the estate of the chief. The women and children had fled to the woods, and the warriors, defeated and broken, had followed them.

There was no effort at pursuit. The battle ended the war, and Ahoundel returned home to celebrate his great victory with a feast of roast dogs.

In 1813 an American vessel, "The Spy of Salem," from Boston, arrived at the island. O'Connell and George went aboard it, and determined to return to the land of civilisation. They had passed seven years among the savages, and had families from whom they separated with regret; yet the hope and prospect of returning to the land of civilisation caused them to determine on deserting them.

Captain Knight, of the "Spy of Salem," got into trouble with the natives, which resulted in bloodshed, and the poor islanders were really glad to get rid of the vessel.

O'Connell never saw or heard from his wife and children after leaving the island.

THE MILKY WAY.

A SYSTEM WHICH GIVES US A VAGUE IDEA OF THE ETERNITY OF SPACE.

The Milky Way, the grandest feature of the "firmament which bends above us," the hazy path which so majestically bands the whole fabric of the skies together, is now known to be composed of a grand aggregation of at least 18,000,000 suns, each as large as, or larger, than that which makes vegetable and animal life an earthly possibility. One is apt when allowing the mind to revert to the contemplation of these misty and indistinct astronomical subjects to measure their magnitude, or attempt to measure it, by making terrestrial comparisons. It is obvious, however, upon more mature reflection that such comparisons are worse than "odious." The bulk of our sun exceeds that of the earth 1,200,000 times, being 600 times greater than that of the bulk of his whole train of planets taken collectively. This being the case, what basis can we use for calculating the magnitude of 18,000,000 suns, each, as I have said before, probably larger than that which gives us heat and light. The infinite number of suns which, taken together, make up the Milky Way are not set at a uniform distance from our earth, or even from our sun. In fact, they appear to work altogether independently of either this mundane sphere or our "glorious orb of day." The majority of them are planted at a distance too remote to be even imperfectly measured or understood. Some of them are so near (?) that light, which travels at the rate of 185,000 miles per second, would cross the distance between us and them in the period of about ten years. Others, however, are so remote that it would take a full thousand years for their light to reach us.

THE ANCIENT AND PRESENT STATE OF THE COUNTY AND CITY OF CORK.

By CHARLES SMITH, M.D.

Æquum est enim meminisse & me, qui discerem hominem esse, et vos, qui Judicetis ut si probabilia dicentur nihil ultra requiratis. Cicero Univers

In Two Volumes.

VOL I.

The Second Edition, with Additions.

BOOK II.

Containing the Topographical Description of this County, including the City of Cork.

Chapter II.—Continued.

Carrigtohil is a small village, eight miles E. of Cork (5), seated on an arm of the sea, which at high water flows under a bridge of four arches, and overspreads a large tract of land, making an excellent marsh for fattening horses. In the parish church is a monument of Italian marble, erected to the memory of Sir James Cotter, anno 1688. Near this place, to the N.E., is a large cavity running under a rock for a considerable way in the earth. A mile to the W. is Killycloin, an agreeable seat of Alderman Knap, of Cork. Anngrove, formerly called Ballinsperig, at no great distance from the other, is finely situated on a rising hill, which commands an extensive prospect over Cork harbour, the great island, &c. It was sometime since a seat of the late Earl of Barrymore, when Lord Buttevant, and is now occupied by Mr. Grady: And half a mile to the S. is the ruin of the castle of Barry's-Court, which gave title of baron to the Earls of Barrymore. Near this castle is the passage into the great island (6), called formerly the island of Barrymore, from its belonging to that family. As a defence to this passage (7), the only one by which the island can be entered at low water, stands Bellvelly castle (8), built by one of the Hodnet family, formerly a very potent sept in this country. On an escutcheon, cut in stone on the castle wall, is a bend lozengee. This island forms one side of Cork harbour, and is four miles long and two broad. The chief place in it is Cove, a village seven miles from Cork, built under a high, steep hill, the shore on this side of the island being bold, and the water of a great depth. Opposite to this village, his Majesty's ships of war ride, and the largest vessels trading to Cork generally anchor at this place, upwards of 200 sail having been moored here often during the late war, with sufficient room for twice as many in the bay. From Cove, the harbour's mouth seems closed, by the island called Spike, lying opposite to the entrance; so that this harbour is not unlike the fine description given by Virgil, in his first Æneid, of a beautiful port.

Est in secessu longo locus; insula portum
Efficit, objectu laterum, quibus omnis ab alto
Frangitur, inque sinus scindit sese unda reducros:
Hinc atque hinc vastæ rupes, geminique minantur
In cœlum scopuli; quorum sub vertice latê
Æquora tuta silent. tum silvis scena coruscis
Desuper, horrentique atrum nemus imminet umbra.

Within a long recess, there lies a bay,
An island shades it from the rolling sea,
And forms a port, secure for ships to ride,
Broke by the jutting land on either side,
In double streams the briny waters glide,
Betwixt two rows of rocks: A sylvan scene
Appears above, and groves for ever green.
—Dryden.

The eastern channel of the island is the deepest, an dall large ships sail through it. Besides Spike island, there is another called Hawlbowlin, lying west of it, happily situated, serving as another mound to prevent the tide of ebb and land floods from damaging ships riding before Cove. Thus nature has formed a port, provided for against every accident in as regular a manner as the ablest engineers could possibly do, had they the power of removing rocks and islands at pleasure. In this island of Hawlbowlin are the ruins of a small fort, built by the Lord-Deputy Mountjoy in 1601 (9), so situated that no ship of any considerable burden could pass to or from Cork, but under the command of its cannon.

Cove is inhabited by seamen and revenue officers; a mile from it is the parish church of Clonmel, with a decent parsonage house. In the church is a handsome monument of marble, with an inscription, in gold letters, to the memory of George Rogers, Esq., of Ashgrove, in this island, who died May 11, A.D. 1710, in the 61st year of his age, with the names of several of his children. The arms, argent, a chevron betwixt three stags tripant, sable. Here is a grave-stone to the memory of Mr. Thomas Stowe, of Newark, in Nottinghamshire, an officer in Gen. Frampton's regiment, who died in this harbour after returning from the late expedition against Port L'Orient in France, with these lines:

Eximiæ spei adolescentem,
Ostendunt terris hunc tantum fata,
Neque ultra esse sinunt.

This church is in good repair, and on the east is a handsome gallery for seamen, &c.

Not far west from the castle of Bellvelly is Ronayne's-grove, formerly called Hodnet's-wood, a good house and handsome improvements, of Philip Ronayne, Esq. From the gardens one has has a charming view of the river and shipping, up to Cork; as also the town of Passage, on the opposite shore. This gentleman has distinguished himself by several essays, in the most sublime parts of the mathematics, among others, by a treatise of algebra, which has passed several editions, and is much read and esteemed by all the philomaths of the present time. He has invented a cube, which is perforated in such a manner that second cube of the same dimensions exactly in all respects may be passed through the same; the possibility of which he has demonstrated both geometrically and algebraically, and which has been actually put in practice by the ingenious Mr. Daniel Vorster, of Cork, with whom I saw two such cubes.

East of the parish church is Ballydelea, a well planted seat of the late Richard Bettesworth, Esq., surrounded with maple, beech silver fir, and other timber trees.

On the E. ferry is Belgrove, a pleasant seat of John Harper, Esq., of Cork. From a fine terrace over the gardens is an agreeable prospect of the eastern channel of the island, which is here broad and deep, forming a noble basin. This terrace is near a quarter of an English mile long, broad and high, adorned with vases, urns, &c., and is the finest of the kind in this

(5) The first Earl of Cork takes notice, in his will, that in order to prevent other great men from coming to purchase a part of Carrigtohil, which might prove troublesome to the Earl of Barrymore, and to make his manor and town entire, he purchased several lands of the Newtons, and Terrys, near this place and Barry's-court, and leaves his lordship the whole benefit thereof, provided his son Dungarvan be made a saver thereby, and he joins his daughter, the lady Barrymore, in this purchase, to be enjoyed by her and their heirs for ever.

(6) In the great-island, are three parishes, Clonmel, Templerobbin, and Kilgarvan; and 19 plowlands, every one of which are contiguous to the sea; so that each proprietor in the island has an equal benefit of water carriage.

(7) The first Earl of Orrery, in a letter to the Duke of Ormond, wrote in June, 1666, says, "that if he were an enemy, and to invade Ireland, he would land in the great-island, of all places; for it stands in Cork harbour, has but one pass into it, is about six miles about, a fertile place, and nothing to oppose their landing there; which also is in the midst of the best quarters, almost equally distant from Cork, Youghal, Kinsale." He says, "he intended to send forces into it, and to repair the fort and Bellvelly castle, both of which stand on the pass."

Orrerys letters, vol. 2. p 36.

Of this fort there are not any remains t present. This letter was wrote at the time of the French and Dutch war.

(8) Bellvelly, i.e., Beal a Vallah, the way to the ford.

(9) On the 14th of January, 1601, Sir George Carew, lord president of Munster, with lord deputy Mountjoy, went, by boat, from Cork to Hawlbowlin, to view it, in order to have it fortified; whereupon direction was given to Paul Ive, an engineer, to raise a fortification there, and another at Castlepark, to command the harbour of Kinsale.

The fort built here was a square fortification, with four bulwarks and curtains; in the middle, stood a castle, 22 feet square within the walls, ascended to by steps, and defended by a small draw-bridge. This castle still remains, with the ruins of the bastions. To the S. was an handsome gateway, with a guard-house annexed. On the north of the island (level with the water) was a platform, mounted with ordnance. Adjacent to this, was the gunner's house; the ramparts were mounted with a deep ditch. Towards the east a well of fresh water was sunk, which still remains.

Pacat Hibern, p. 252.

In this island, a party or gentlemen, some years ago, built a banqueting house, and called themselves the water club, having several fine pleasure-boats, most of which carried guns, colours, etc. They appointed their admiral and vice-admiral in this little fleet, which ran several races. The day generally concluded with firing of guns, feasting, etc.

county. Beneath the terrace is a pretty bowling-green, with gardens and pleasant walks. To the S. is a spreading grove, which covers an hilly country down to the water's edge. Near the house, among other improvements is an hop-yard, which thrives well, as also a considerable plantation of hemp, a commodity as useful as it is profitable. In the W. passage, almost opposite to Mr. Harper's, they take an excellent oyster in dredges, called Kilvokery oysters. On the N. side of the island is Ashgrove, a fine plantation, deer park, and good house, of John Rogers, Esq. (10). And almost opposite on the main land is Rossmore, belonging to John Coghlan, Esq., agreeably situated about a mile from Barry's court.

At Waterstown, near the E. passage, was a castle, the chief residence of the Barry family in this island, but it has been long since demolished.

Near Cuskinny is a new erected fortification, which commands the mouth of the harbour; a battery of 20 pieces of ordnance, 22 pounders, is now finished, and the guns mounted.

Near the E. point, called Battery-point, is limestone. Sea sand, for manure, may be had on every side of the island; yet notwithstanding its excellent situation, and the advantage of a short and safe water-carriage to Cork, tillage is but slowly prosecuted here. This place abounds with a great number of springs, and rivulets of fine, wholesome water, to the great convenience of the inhabitants, and the shipping in the harbour.

The western extremity of Barrymore is bounded by a part of Muskery, viz., a portion of Whitchurch parish, which is coarse ground. In it stands the ruined castle of Carricknavar (11), built on a small brook that divides this parish into two parts; the other being in the barony of Fermoy, and is detached a considerable way from the rest of that barony.

The manor of Blarney is separated from the rest of Muskery, it being surrounded by the barony of Barrets and the liberties of Cork.

Blarney was a very strong castle, and noble seat of the Earls of Clancarty, who forfeited a great estate in this county for their adhering to King James (12). It lies within three miles of Cork, and greatly annoyed that city in the year 1641, until it was taken by Roger, Earl of Orrery (13), then Lord Broghill, in 1646. In Queen Elizabeth's time it was reckoned one of the strongest fortresses in Munster; the author of "Pacata Hibernia," p. 351, describes it to be composed of four large piles joined in one, which shows that it was formerly much larger than at present. It is seated upon a main rock that secured it from mining; the walls are eighteen feet thick, and it was likewise flanked with bastions. Anno 1602, Cormac Mac-Dermot Carty was accused of a treasonable correspondence with the Irish rebels, and obliged to deliver up this castle to Captain Taafe for the Queen's use. This Cormac was a very powerful person, being able to raise 1,000 men at a call; he also possessed the castles of Kilcrea and Macroomp; the former he gave up to the Lord President Carew, being then his prisoner, but escaped out of his hands soon after. This castle is seated upon an eminence, with a river running beneath it, and on the other side is a fine lake of about 30 acres, abounding with great quantities of good leeches. In the castle, which is in very good repair, is an original painting, at full length, of Charles XII., King of Sweden, brought hither by the late James Jeffrys, Esq., envoy to that monarch, whose father, Sir James Jeffrys purchased this estate from the crown. This monarch is drawn in the dress M. Voltaire describes, and the painting seems to be very well executed. Adjoining to the castle is a fine park, sweetly wooded and well watered; also a fair bridge over Blarney river. The gardens of the castle are well laid out, and kept in good order.

(To be Continued.)

(10) It was formerly named Ballymacshane-Roe, i.e., The town of the son of red John; and here was also a castle of the Barrys'.

(11) This castle was built by Daniel Mac-Carty, second son of Cormac Lord Muskery, who died, anno 1616.

(12) The Earl of Clancarty was first summoned to Parliament as Baron of Blarney, by Queen Elizabeth, and created Viscount of Muskery, and Earl of Clancarty, in 1658, the 10th of Charles II.

Blarney castle was built by Cormac Mac-Carty, surnamed Laider (he came into the lordship 1449). He also built the castles of Kilcrea and Carickna-muck, the abbey of Kilcrea, and the nunnery of Ballyvacadane, with five churches. He was wounded at Caricknamuck, by Owen, the son of Tiege Mac-Carty, his cousin german, and died in Cork, being buried in Kilcrea abbey, anno dom. 1494. This estate was forfeited in the wars of 1641, by Donough Lord Muskery, but the greatest part of it was restored by the act of settlement. This lord was general of the Irish forces in Munster, and very active in that rebellion. Ludlow informs us that he was charged with having put several of the English to death, on the road between his house of Macroomp and Cork, for which he was apprehended, and tried for his life. The trial lasted long, by reason of a clause which he urged in his defence, from a printed copy of the articles made against him, which, "although" (says Ludlow, who was one of the commissioners appointed to try him) "it had been unjust for me to grant in the terms there mentioned, yet would have cleared him and thrown the guilt and blame upon me; for articles given ought to be made good. But this clause, upon search into the original, which I kept, appeared to have been inserted by themselves, in the print which they produced for evidence, under pretence of having lost the original articles. Notwithstanding which, it appearing, that though divers of the English were murdered by the convoy appointed to conduct them safely to Cork; the Lord Muskery had taken what care he could for their safety, and had done what in him to bring the person who was guilty of that blood to justice. The court acquitted him, and he was permitted, according to his articles, to pass into Spain."

Ludlow's Memoirs, p. 442.

Colonel Mac-Carty Reagh and several other persons were also tried, at this time, for the same crimes; but the colonel was acquitted.

Ludlow, ib. p. 440.

This Lord Muskery being created Earl of Clancarty, by King Charles II, died in London, August 5th, 1665. He had three sons, Charles, Callaghan, and Justin. Charles Lord Muskery died before his father, being slain in a sea-fight against the Dutch, June 2, 1665. He was a great favourite of the Duke of York, and was honourably interred at Westminster; his only son, Charles James, succeeded him; but he dying a minor, his uncle Callaghan became Earl of Clancarty, being brought out of a convent in France. He married Elizabeth, daughter to the Earl of Kildare, by whom he had four daughters and one son, named Donough, who was the fourth earl. He was educated by the Archbishop of Canterbury, and bred up carefully at Oxford. His uncle Justin (without the knowledge of his friends) married him, when not sixteen years of age, to the Earl of Sunderland's daughter, and sent him into this kingdom where he continued a Protestant, till the coming in of King James, and then turned to Mass. King James gave him a troop of horse, which he soon composed of the common Irish, and with them committed many ravages.

After the wars were over, several persons in England, particularly the Earl of Sunderland, endeavoured to represent Lord Clancarty as a faultless person; to have him exchanged for a Dutch officer, who was taken the preceding year, by the French, at the battle of Fleury; and in a short time procure him to be restored to his estate. But the grand jury of this county, particularly encouraged by Sir Richard Cox, who was then second justice of the Common Pleas drew up a true representation of his inveterate hatred to the English interest, and the little probability of ever seeing an English plantation in those parts, if he was restored. This representation, in the form of a presentment, was laid before the lords justices, to be transmitted to King William. It was zealously supported by Lord Sidney and the Earl of Burlington, which had so good an effect, that all the schemes in favour of this earl were defeated. King William granted him a pardon, with a pension of £300 a year during his life, upon condition that he should quit the kingdom in a stated time, and promise never to take up arms against the Protestant succession. This nobleman retired to Hamburgh on the Elbe, and purchased a little island in the mouth of that river, from the citizens of Altena, which went by his own name. There he erected a convenient dwelling house, with a range of storehouses, and formed a convenient plan of an useful garden. In this place he made a considerable profit by shipwrecks; but continued to give the distressed all the assistance in his power, and saved the lives of many. His profit arose from the goods thrown on his island, which he placed in his store-houses, and if demanded by the right owners within the year, he returned them, requiring only two per cent for the store room; if not, he made use of them as his own. He died here, October 22nd, 1734, aged 64, leaving behind him two sons, Robert, late commodore in the English fleet, commonly called Lord Muskery, and Justin Mac-Carty, Esq.

ARIZONA ICE CAVES.

Very little is known of the Arizona ice caves, and virtually nothing has ever been written in an authentic way of them. The main cave lies at the head of Clark's valley, about fourteen miles southeast of Flagstaff. The earliest mention that can be found of the ice caves is in the report of Lieutenant R. R. Hill, who headed an exploring expedition through northern Arizona, southern California, Utah and Colorado early in the 40's. He speaks of an immensly deep fissure, where nature had stored many tons of ice. And when we descended part of the way into the fissure," says Hill, "the change from the terrific July heat was so quick and intense as to make many of us severely ill. Indeed it was not less than a 60-degree drop in temperature which we encountered in the course of perhaps twenty minutes of our descent."

Until late years but a few persons visited the caves but since northern Arizona has become more or less an objective point for tourists and scientists the caves are viewed by many people. Until late last August the main cave had only been penetrated to a depth of 200 feet, and even that distance could only be reached by the possessors of small bodies. At that time, E. R. Dulton, a young man from New York succeeded in creeping and crawling through the narrow crevice at the 100-foot point, and over 100 feet farther he found the cavity gradually widening until it grew into a cavern much larger than that near the surface. He found several smaller caves leading out of the large one, all in almost solid ice, and believes that they lead far down into the earth.

The majority of the visitors have gone less than fifty feet into the cave, progress being made only on hands and knees, and by aid of a rope.

The cave is a tortuous passage through the rock and ice and, although in no place has another opening than that at the entrance been found, the ventilation is perfect, a condition which has led Dulton to make plans for further exploration of the cave and its recesses, in the belief that other openings may be found.

Dulton is at the head of the company which is planning to put to commercial use the ice in the caves. He has planned a road to be built to the caves, where the ice will be literally mined, or quarried out, and he declares that by considerable blasting at the cave's mouth an output of several thousand pounds of ice per day may be secured.

LITERARY NOTES.

Mr. Arthur Galton writes from the Palace, Ripon:—"I have undertaken to prepare a memoir of the late Mr. Lionel Johnson, and shall be greatly obliged if any of your readers can assist me by giving information as to his loan of correspondence, from which I should propose to include a section in the memoir. All letters would be carefully preserved, and returned in due course to the owners."

✧ ✧ ✧

We cut the following from the "Westminster Gazette":—"Misther Dooley," says a New York correspondent, was married yesterday to Miss Margaret Abbott, says he, of Boston. "Mr. Dooley," he says, was the creator of Mr. Peter F. Dunne, says he, and it was Mr. Dunne, he says, who received messages of congratchulashun from Mr. Anthony Hope, Sir A. Conan Doyle, Mr. Justin M'Carthy, Sir Henry Irving, and many other celebrities.

✧ ✧ ✧

The following engaging appeal is made by the promoters of a new American magazine—"As magazines cannot live on praise alone, we woud be delighted to have the individual who peruses this paragraph, his clutches on a dollar long enough to enable it to migrate to our bank account in exchange for a year's subscription to this magazine. Do you view it in the light that we do? If you do, remit 1 dollar to the manager, 'The Goose Quill,' 200 Clinton street, Chicago, and receive twelve slices of an intellectual cheese, cut on or about the first of each month."

✧ ✧ ✧

Why, in the name of all that is modern and swift, do not publishers cut the leaves of the books they publish? It is assumed that in these days a man has not time to walk upstairs; it is perfectly understood that telegrams must be accelerated, and that boy messengers must be cherished; and yet publishers will persist in attaching a sentence of slow servitude to nearly every book they issue. Take the "Dictionary of National Biography." It is a serious thing to buy it, but it is a more serious thing to get it cut. Who is to do it? Not every man has relays of daughters, or an under-gardener whom he can arm with a paper-knife. Monarchs and millionaires must have ways of dealing with this problem. It is not to be supposed that at Windsor Castle the reader cuts the leaves. Whitaker may be silent on the point, but it seems certain that a Groom of the Paper Knife or a Book-Barber-in-Ordinary exists and draws an enviable salary.

✧ ✧ ✧

Simultaneously with the production of Mr. Laurence Housman's Nativiey Play, "Bethlehem," on the 17th, Messrs. Macmillan will publish it in a volume which will contain other poems by Mr. Housman related to it in subject. "Bethlehem" itself consists of two acts, the first showing the shepherds, who speak in rustic language their thoughts concerning the star; then the approach of Gabriel proclaiming the Messiah, the entry of the Three Kings, and the progress to Bethlehem. The second act shows the inn stable, Mary with the Child, and the homage of the shepherds and kings; the whole closing with a chorus of song. "The Pageant of Our Lady" which follows in the volume is a rhymed masque, and the book concludes with eight Christmas songs, written for music. Mr. Housman himself has designed a cover i. the book.

✧ ✧ ✧

Since Lord Macaulay proclaimed himself the devoted servant of Dorothy Osborne, that lady has never lacked lovers; and her lovers became a retinue of considerable proportions with a sufficient reason for their faith, when the lady's letters were first given to the world under the editorship of Judge Parry towards the end of the 'eighties. The happy possessor of that delightful book, who may have noted the inclusion of Dorothy Osborne's Letters among the announcements of Mr. Israel Gollanez's King's Library forthcoming from the De La More Press, and fancied that the announcement concerned him not, will have to reconsider the point. For Mr. Gollancz has written to the Press to state that the new edition so far from being a reprint will, he ventures to think, prove to be the first authentic test of these most fascinating letters, because the transcript placed at Judge Parry's disposal was anything but satisfactory. For the forthcoming edition, happily, the originals have been made available. The first volumes of the King's Library, "The Love of Books," by Richard de Bury, has been issued this week. Fitzgerald's "Six Plays of Calderon" will be the next volume.

✧ ✧ ✧

Matthew Arnold, it appears, was in the habit of copying out into his pocket diaries for official engagements passages that struck him in his daily reading. He used to say jokingly in the family circle, we are told, that if anyone would ever take the trouble to collect these extracts from various writers there would be found a volume of priceless worth. The suggestion bore fruit, for after his death his widow began making a transcript, and when she died his daughter, Mrs. Wodehouse, took up the pious task. Mrs. Wodehouse has now published this collection of extracts with the title, "Matthew Arnold's Note Books," and so the anthology which so fine a critic as Arnold considered as likely to prove of priceless value may be obtained from his publishers, Messrs. Smith, Elder, in a volume with the recent re-issue of "Friendship's Garland" for the modest sum of four-and-sixpence.

✧ ✧ ✧

The lecture which Mrs. Craigie has recently been delivering in Edinburgh and the provinces, entitled "The Artist's Life: Balzac, Brahms, and Turner," contained (says the "Academy") some characteristic and personal comment and criticism. Speaking of artists in general, she said—"They think more than there is to think, feel more than there is to feel, see more than there is to see." This concerning Balzac and the method of writing which he employed will hardly be universally accepted, but it embodies a point of view amply justified by the history of art:—

It was his habit to write three or four books at a time. This method, which has been and is followed by all great painters, is beyond question the right one. It is the one sure safeguard against veiled autobiography, which is the fatal danger to those who concentrate for too long a period on any one group of characters and any one particular set of scenes. Balzac's novels are, therefore, well balanced. They are always impersonal, always just, and in order to describe life one must show, not merely a knowledge of men and the spirit of criticism, but a strong sense of justice.

✧ ✧ ✧

Of Brahms, Mrs. Craigie said:—

Although I wish to put aside all personal tastes and prejudices. I may say that to me Brahms seems the Robert Browning among Musicians. . . His songs and his music—songs which once heard are unforgettable, and music which might almost be called a new utterance in its originality and strength and romantic passion—tell all that we need to know, and all that he wished us to know, of his soul.

✧ ✧ ✧

Between Balzac and Turner Mrs. Craigie recognises a strong affinity—with justice, we think. Their methods of work were precisely alike: each absorbed all that he saw, and each, when the creative impulse came, expressed his observation with splendour and vitality. Turner's pictures "followed Balzac's definition of romance—splendid lies, but true in the details." In conclusion Mrs. Craigie said:—

I ask myself now whether, if a man were the master of his own fate, he would be, by choice, an artist? It is a question few could answer quickly. Perhaps, some might say that Balzac answered the question unconsciously in the piercing words: 'It seems as though what is more commonplace in the lives of all other men will ever be I dream of romance to me. I shall never know ordinary happiness." I prefer to take his later statement: "Misfortune, which has true friends, is perhaps far better than blessings which are envied."

Art has friends. We have seen that when everything failed and went wrong, the least fortunate artist had faithful, tender friends, some known, some unknown. Browning, to whom I have compared Brahms, wrote:—

> I have a friend across the sea . . .
> It all grew out of the books I write
> They find such favour in his sight
> That he slaughters you with savage looks,
> Because you don't admire my books!

There is the artist's life—unending labour, supreme desolations, infinite love.

✧ ✧ ✧

The extracts being too many to republish all, Mrs. Wodehouse was driven to make a selection. The plan she has adopted will probably strike many readers as curious, but she gives her reason for it. In order, she says, to present these note-books in the most characteristic and at the same time a compendious form, it was decided to take every fifth year unabridged from 1863 to 1888, the year Arnold died. The object, in other words, was to illustrate Arnold's reading rather than to attempt to select the best among his selection. It should be added that Mrs. Wodehouse has contented herself with transcribing, and has not supplied references where Arnold had not put the reference himself; so that for people who like hunting up references there will be plenty of sport here, for the extracts are in English, French, German, Italian, Latin and Greek. Perhaps the most noticeable thing about them is their predominantly ethical cast.

✧ ✧ ✧

The literary quarrel between Mr. Gosse and Sir Edward Clarke is a very pretty quarrel as it stands, and it would be a pity for outsiders to attempt to compose it. One need not have any sympathy with Mr. Gosse's professional plea that a lawyer should not presume to judge literature. Literature is, or may be, everybody's affair. On the other hand, the pitting of one decade of literary production against another does not strike one as a very useful or intelligent proceeding. Sir Edward Clarke, making poetry and fiction almost the sole field of comparison, selects a decade when Tennyson and Browning, Thackeray and Dickens were at the height of their production. Moreover, as Mr. Gosse has pertinently urged, in this sort of comparison the elders, who have become classics, have an inevitable advantage over contemporaries. Macaulay was almost as contemptuous of his literary contemporaries as Sir Edward Clarke is of his.

✧ ✧ ✧

On the other hand, it seems to me, I confess (writes the literary critic of the "St. James's Gazette") difficult to meet Sir Edward Clarke's challenge to produce a list of books in belles-lettres of the last decade of the century as strong in their own class as his list from the 'fifties; though many would be inclined to dispute his proposition that each item in the list is a better book than any book, except Mr. Hardy's "Tess," produced in the last decade. Without any desire to underrate merits now not always recognised at their true worth, Mrs. Craik, Wilkie Collins, Kingsley, Lytton, Reade, and Buckle, cannot put to the blush Mr. Meredith, Mr. Hardy, Stevenson, and Mr. Kipling, Gardiner, and Mr. Lecky, to name no others. Nor need our younger poets shun rivalry with Owen Meredith. Sir Edward Clarke, by the way, might, had he so chosen, have strengthened his list by adding or substituting these other books—"Sonnets from the Portuguese," FitzGerald's "Omar," Matthew Arnold's "Early Poems," "Villette," the second and third volumes of "Modern Painters"; the later of Landor's "Imaginary Conversations," Leigh Hunt's "Autibiography," Newman's "Idea' of a University," Darwin's "Origin of Species," and Mill's "Liberty."

SCIENTIFIC TOPICS.

Connections have been made on the new telephone cable across Vineyard Haven and the mainland, and communication by telephone has been established. The cable is four miles long, with terminals at Nobscot Lighthouse and Lamberton Cove, near Vineyard Haven, opening on the Atlantic.

✧ ✧ ✧

The filament of an incandescent lamp is thrown into rapid vibrations in the cold state by the slightest disturbance. When the lamp is burning the oscillations readily die away. This is not due to a loss of elasticity, but is probably due to a magnetic damping effect. The incandescent filament may be kept in a state of vibration by the simple device of bringing a magnet into its neighbourhood, provided that either the lamp or the magnet is fed by an alternating current.

✧ ✧ ✧

Absolutely pure silver is produced in the United States mint by electrolysis of fine silver, using an electrolyte of silver nitrate with 1 per cent. free nitric acid. From the bar of silver 0.999 electrolytic action throws the silver down in the form of crystals, which are washed. In melting these crystals the flux used is three parts fused borax and one part pure nitre. The bar's second melting is made without a flux to remove the oxygen introduced by the nitre of the flux. When the silver is thus melted it is stirred with a piece of dry wood as long as the action due to the presence of oxygen continues, then poured into a chalk-lined mould, the bar cleaned with a brush and diluted sulphuric acid, and after being rolled out it is ready for use.

✧ ✧ ✧

Work on the Canadian Niagara power plant is progressing rapidly. The tunnel will have a length of 2,200 feet from the wheel pit to the base of the Horseshoe Fall, where it will discharge into the lower Niagara River. From the shaft to the pit the distance is about 900 feet, and of this length there remains only 48 feet to be blown out. From the shaft to the portal the length is about 1,300 feet, and of this distance about 200 feet remain to be taken out. For the entire length the bottom bench remains to be taken out, but this can be removed quite rapidly. When this bench is removed the stone will be used for concrete work and backing.

✧ ✧ ✧

The captain in charge of the lightship situated at the south-west channel of the bar at the entrance of San Francisco Harbour, recently reported to the United States Lighthouse Commissioner that on the 15th of September a large number of land birds took refuge on board the vessel. A dense smoke from northern forest fires hung over the locality and completely obscured sea and land. Evidently the birds had lost their way, and, exhausted by their long flight, the wanderers lighted on the ship undeterred by the presence of the crew. At one time sixty of the feathered guests were counted on various parts of the ship. Owls, cranes, humming birds, and other non-marine species were noticed during the time. The swarm continued during the prevalence of the smoke, but vanished when the weather cleared.

✧ ✧ ✧

For the last three years it has been planned to study the sea and the fisheries of north-west Europe. Two international conferences have been held, and a third convention is now meeting at Copenhagen, where delegates from the Governments of the United Kingdom, Germany, Holland, Denmark, Norway, Sweden, Russia, and Finland are discussing the problem. It has been decided that simultaneous observations are to be made four times a year. The British Government has assigned two ships to the task of making periodical trips in the Faroe-Shetland channel and across the northern end of the North Sea. Trips wil also be made in the western part of the British channel. Dutch ships will scour the southern half of the North Sea, while the northern half will be covered by the Germans. Denmark will investigate the region between Faroe and Iceland. Norway will explore the North Atlantic along the extensive western seaboard of Scandinavia. Work has been assigned to Russia along the Murman coast and across Barents Sea to Novaya Zemlya. The Baltic will be studied in detail by Danish, Swedish, Finnish, Russian, and German ships. Much scientific, as well as practical information will be gathered.

✧ ✧ ✧

One advantage that often comes from the use of the electric motor for machine driving is the comparative ease with which it may be ascertained whether a particular piece of machinery thus driven is operating at its highest efficiency. This can be done by comparing the power consumed by the motor in driving it with the power used in driving another similar machine. For example, it has more than once been found that certain printing presses of a given make have been consuming from one to two horse-power more than another similar press, notwithstanding that the makers pronounced their apparatus in perfect running order, and in consequence placed the cause of this discrepancy on the electric motor. A brake test of the motors or an exchange of motors quickly showed the fallacy of this contention, and an easing up of the bearings in the press in different places has usually sufficed to get rid of this waste of power. Increase of output of machinery driven by electric motors is, however, after all, the great desideratum which is achieved, and far outweighs in importance the several other advantages incidental to electric driving —the saving of head room, for example, the absence of long lines of shafting, and the avoidance of power wastes. Indeed, the value of the power, whether furnished by shafting or by the electric motor, as compared with the importance of increased product, is nearly negligible.

✧ ✧ ✧

Mr. E. G. Acheson, of caborundum fame, has recently taken out a United States patent for a process of making artificial graphite. In carrying out his experiments Mr. Acheson had observed that by the direct passage of a heating current through a mass of coke, it was possible to free the coke of many of its impurities and to increase its conductivity to a marked degree. Later he discovered that carborundum and many other carbides might be directly transformed into graphite simply by volatilising the non-carbon element. It followed almost as a matter of course that the conversion of carbón to graphite by any method of electrical heating, depended upon the presence in the carbon of carbide-producing elements. It likewise followed that the impurities should be present only in such quantities as to permit the progressive transformation of the mass of coke into graphite, carbides being formed and decomposed, the volatilised non-carbon element combining with adjacent portions of the carbon. Mr. Acheson found that an artificial mixture of carbon with impurities was unnecessary, since non-coking coals and certain varieties of charcoal contain the proper minerals. As the present patent states, the original distribution of volatile impurities is important. For example, petroleum coke in the form of lumps and in rough admixtures of iron or iron ore, can be suitably heated in an electrical furnace, thereby causing the vapours of the metal so to permeate the entire mass as to determine its complete transformation into graphite.

✧ ✧ ✧

At about half-past two o'clock on the morning of July 18, during one of the most terrible thunderstorm that ever visited the vicinity, the large brick stack of the Jamestown Worsted Mills was struck by lightning. This stack is 165 feet high, and is capped by a heavy cast iron plate, but is unprotected by a lightning rod. A large hole was torn in the chimney near the top, and the outer courses of brick were stripped and cracked for a distance of nearly half-way down. The bolt then jumped to the other side of the chimney, and there tore out a long vertical S-shaped gash, scattering the bricks in each with a violence which broke them into fragments, and flung the fragments to a distance of two or three hundred feet, breaking windows and roofing slates in every direction, The further course of the lightning is not traceable. The force which tore the bricks out seems only comparable to the action of an explosive; yet the walls next the gashes were not broke or strained except for a short distance along the west side. The factory was started at the usual time next morning. A careful inspection proved the stability of the chimney to be unaffected. A fine octagonal scaffold was erected, exactly conforming to the shape of the chimney, and the holes were all bricked in, leaving the structure in practically as good condition as ever.

The last of the main generators and engines intended to be installed in the power plant of the Mersey Tunnel Railway has been shipped from the Westinghouse Works at East Pittsburg. These generators are of the railway type (1,200 kilowatts, 650 volts, 90 revolutions per minute), and are to be direct-connected to vertical cross-compound Westinghouse-Corliss engines of 1,500 horse-power each. The power house lighting and the electric light of all stations, sidings, etc., will be supplied from a separate generating plant comprising two compound-wound generators, each having a capacity of 200 kilowatts at 650 volts, direct-connected to Westinghouse compound engines and running at a speed of 250 revolutions per minute. The power-generating plant will have an aggregate output of about 6,000 horse-power—6,000 horse-power for the railway proper, and 600 horse-power for lighting. The Westinghouse electro-pneumatic system of train control is to be used, and the cars will be equipped with Westinghouse high-speed air-brakes. The rolling stock will consist of sixty cars, each about 60 feet in length. The trains will be formed of five cars each, the first and last cars of a train being motor-cars equipped with four 100 horse-power motors each.

✧ ✧ ✧

Lieutenant Peary has brought home news of a mysterious epidemic which is raging among the Esquimaux. Indeed, so terrible were the ravages of the disease, that many of the Esquimaux at Smith Sound begged him to take them south. Twelve years ago the Esquimaux numbered 300. In 1897 Peary found that their number had been reduced to 234. It is now probable that these northern inhabitants of the globe do not exceed 200 in number. This is but one instance of a great number that may be cited. All through the Arctic region the inhabitants are fast disappearing. The Alaskan Esquimaux have been decimated. When explorers first went among them, their number was believed to be from 2,000 to 3,000. Now it is thought that hardly more than 500 people can be counted from Point Barrow to the Aleutian Islands. The lot of these unfortunate natives has been made harder by reason of the destruction of sea life by the whalers who harried the Alaskan coast. The extermination of the seal, walrus, and polar bear have likewise done their share to embitter the cup of the northern races. In south-west Greenland a similar condition of affairs exist. The ten thousand natives are barely holding their own, although largely aided by the Danes. Labrador natives are likewise decreasing. Twenty years ago they numbered 30,000; now they number barely 15,000 souls. Two decades ago the entire population of the North was estimated at 30,000. It is probable to-day that the number has been almost cut in two.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

CORK, AUGUST 13.

On Thursday last Mr. Richard Rowland, of Rathcooney, went to the parish of Whitechurch, to value the tithes of said parish for the Rev. George Berkley; and having gone on the lands to view them, he left three horses in the care of his servant, who was violently attacked by twelve men, armed with sticks and other weapons, beat and dragged through a river, carried two miles into Newgrove mountain, and there tied in such a manner as that he must have perished had not a man whose cow strayed came by at the close of the evening, and released him. After tying him they carried off the horses, which were found on Saturday morning, and two of them so much abused as to be rendered useless to the owner. Mr. Ross, Ranger of this county, who with a party of the 12th Dragoons, went in pursuit of those insurgents, recovered the horses, but the unfortunate man was so ill treated, was not able to ascertain the persons of any of those concerned, as he expected to have been murdered.

Saturday last our Assizes ended, when the following persons received sentence:—In the County—James M'Nelly, for felony, etc. Michael Cooly, on the Whiteboy Act, for feloniously taking a horse, the property of the Rev .Charles Perceval, to be hanged on the 6th of November next. John Davies, of an assault on Arthur Bernard, the elder, Esq., Provost of Bandon, in the execution of his office; John Hingston, clerk, and Arthur Bernard, the younger, Esq., to be imprisoned six months. William Duke and William Wagner, Revenue Officers, for an assault on William Austen, Esq., fined £50 each, and to be imprisoned one month. Michael Morony, of manslaughter of Thomas Montgomery, burnt in the hand. John Sweeny, for different riots and assaults, to be imprisoned for 12 months. Dennis Leagh, otherwise Barole, or an assault and rescues on William Wagner and William Duke, being Revenue Officers, to be imprisoned for 12 months. Richard Martin, of an assault on the Provost of Bandon, a rescue, and tree other assaults on John Brady, Rev. Fitzgerald Tisdall, and Willim Morony, to be imprisoned 7 months. Thomas Mullane, or misdemeanors, as a Whiteboy, to be imprisoned 12 months, and to be whipped the 18th inst. Richard Barry, John Sullivan, and John Barry, Whiteboys, to be imprisoned 12 month, and to be whipped on the 25th of August, and on the 1st and 8th of September next. John Galvan and John Cotter, Whiteboys, to be imprisoned 12 months, and whipped 15th and 28th of September next. Dennis Fowloe, a Whiteboy, to be imprisoned 3 months. William Cashman, to be imprisoned for 2 months. Timothy Quick and Mary Quick, to be imprisoned for one week. Philip Craddock, for an assault, to be imprisoned one month. Daniel Murphy, burnt in the hand, and to be imprisoned 12 months, found guilty of felony, recommended by the Grand Jury. Daniel Sullivan, for forgery, to be whipped the 29th of September, and to be imprisoned 6 months. Patrick Sullivan, to be imprisoned 3 months. Patrick Galvin, for an attempt to commit a rape, to be imprisoned 12 months. Daniel O'Brien, for an assault, fined £30. Henry Sidley, otherwise Captain Sidley, found guilty on the late Riot Act, for feloniously tendering an oath to Richard O'Keeffe, gent., to be transported for life. Joseph Sherlock, of assaulting William Bellingham Swan, a Revenue Officer in the execution of his duty, and the Rev. Henry Baggs, a Magistrate of this county, to pay a fine of £100, or in failure of payment to be imprisoned 12 months. In the City—Patrick Murray, Thomas Evans, and Timothy Gunning, for stealing a bay colt from Patrick Armstrong, and a bay filly from John Crosbie. Wilton Dawson, for robbing Benjamin Swayne, Esq., on the King's highway, of a sword. Mary Murphy, for stealing 41 guineas out of the dwelling-house of Denis and Kean Mahony. Edward Turner, for robbing John Connell at Sunday's-well road, to be hanged on the 8th of December next. Michael M'Carthy, otherwise Coteen, for stealing a rope, the property of John Power and Samuel Pine. Thomas Brien, alias Gannon, for stealing 10 guineas of the money of Obadiah Rick, Captain of the brig, "Ranger. Anne Mortimore, for picking the pocket of Mary Connell, and carrying away a tin grater, which contained a gold ring. Pierce Sullivan, for stealing out of the out-house of Henry Bagnell, a ham of bacon and 15 towels of his property. James Fitzgerald, Timothy Harrington, Timothy Horregan, Anne Dinneen, for stealing 13 pieces of stuff out of the shop of Mr. Chillingworth, value £22 15s. John Dinn, for killing 4 sheep on the lands of Meadstown, and stealing their skins, the property of Richard Barrett. John Walsh and Dennis Kilfoyle, for stealing several articles of wearing apparel out of the dwelling-house of Robert Gwyn. John Gavin, for robbing the house of the widow Grant, of several articles of wearing aparel. Catherine Tankard, for robbing the dwelling-house of John Higgins of several articles of wearing apparel. Dennis Mahony, for stealing a coat and waistcoat, the property of Michael M'Carthy, to be all transported for 7 years. Edward Fitzgerald, for stealing a jacket and trousers from Benjamin Robinson. Samuel Turner, for riot and assault on Thomas Connor, to be both publicly whipped from Gate to Gate, on Saturday, the 25th inst. Margaret Carthy, otherwise Foxy Peg, for stealing several articles of wearing apparel from Ebenezer Hayes, to stand an hour in the pillory, the 18th inst. Timothy Lee, John Lane, and William Connor, for entering the house of David Shepherd, and presenting a pistol at him, to be fined and imprisoned.

DUBLIN, THURSDAY, AUGUST 16,

The lenity with which the Government has exercised the power vested in them by the Magistracy Act has commanded the admiration of the nation. The whole province of Connaught express their heartfelt thanks on the occasion, and particularly the Castle Durrow Volunteers, who, speaking of the Right Hon. Mr. Ode's letter to the Lords Justices of Assize, say, "It reflects equal honour on his head and heart," etc. Must not this show the wisdom and attention of the Government to the interests of the nation, where it relinquishes all patronage, only desiring the people themselves to preserve the public peace.

Saturday last a party of citizens went from this city to Chapelizod for the purpose of being present at the marriage of a young couple. The ceremony performed, dinner over, and the company sufficiently regaled, they were proceeding in three coaches to Ranelagh road, where the new married couple intended to reside. Two of the coaches had proceeded a little before, and the third following, when three footpads came up to it on the Circular road, a little on this side of Dolphin's Barn, and with the most horrid imprecations desired the company to deliver, which request not being instantly complied with, one of them snapped a pistol in at the coach window, whilst the other two made several thrusts with bayonets at the passengers. Three gentlemen who were in the coach on this leaped out, and attacked them vigorously, on which two of the robbers thought fit to decamp, but the third made a most resolute resistance, knocking down his assailants repeatedly, and would in all probability have made his escape, were it not that some Volunteers, who were returning from the camp at Rathmines, came up at the moment, properly secured him, and conveyed him to St. Andrew's watch-house, from whence he was very near escaping through the roof while the crowd was about the door, but they observing him, he was properly secured, and the next day lodged in Kilmainham Gaol. The above culprit is a very able fellow, goes by the name of Reeraw, and has been a most notorious offender. Shortly after he was taken, a gentleman, attended by a servant, came up, who declared that not many minutes before, he had been attempted to be stopped by these villains, and on his endeavouring to get away, the prisoner fired at him, and shot away part of the cock of his hat, and so much was the gentleman irritated at the usage he had received, that he belaboured the prisoner unmercifully with his whip.

As it has been customary with the idle and dissolute artificers to neglect their trades and take out guns through all neighbouring quarters of the metropolis, under pretence of killing game, it is hoped the Commissioners of Police will order a patrol within the Circular Road, and the Justices of the county exert a laudable authority on this occasion, and prevent the fatal mischief which too frequently happens.

DUBLIN, FRIDAY, AUGUST 17.

Last week four soldiers belonging to a regiment in garrison received 300 lashes each, for absenting themselves from barrack at improper hours, and a little fifer received 50, for being caught in slipping over the barrack wall at night.

Monday last a committee of the Grand Canal Company sat to enquire into the cause of the late accident which happened to the Monasterevan packet-boat, near Rathangan, when, it appearing that neither the master nor steersman were in fault, the former was restored to the command, from which he had been suspended till the truth should be known by a judicial inquiry into the merits of the affair.

DUBLIN, SATURDAY, AUGUST 18.

We hear that the Right Hon. Edmund Burke has put the Rev. Dr. Thomas Campbell in possession of his valuable, or rather, indeed, invaluable, collection of manuscript papers relating to the affairs of Ireland, since its sovereignty became annexed to the Crown of England. Among these are Carew's collection, which that writer (who bore so considerable a share in the transactions of the times whereof he wrote), was preparing to publish as a second part to his "Hiberniæ pacata," with many other documents, of which the unwearied diligence of our illustrious countryman has obtained copies, in the cabinets of the curious, to which his eminent talents had given him unreserved access, the whole consisting of four folio volumes.

Notwithstanding the superabundance of every necessary of life wherewith Providence blessed this kingdom last year, and the cornucopia which is this season pouring down upon us, the assize of bread continues as small as if Nature with a stingy hand had dealt forth her favours. The twelve-penny household loaf now weighs no more than eight pounds, three ounces, two drachms—a shameful assize, which bears most heavily on the poor, and calls loudly for a strict scrutiny into the cause of it.

DONEGAL CASTLE.

THE OLD KEEP OF THE O'DONNELLS.
AS IT WAS IN 1831—(From Hall's "Ireland").

DONEGAL.

THE HISTORY OF THE ANCIENT TOWN.

From Lewis's "Topographical Dictionary of Ireland," 1837.

DONEGAL, a seaport, market and post-own, and parish (formerly an incorporated Parliamentary borough), in the barony of Tyrhugh, county of Donegal, and province f Ulster, 24 miles (S.W.) from Lifford, nd 113 (N.W.) from Dublin; containing ,260 inhabitants, of which number, 830 re in the town. In 1150 Murtogh O'Loghlen burnt this town and devastated the surrounding country. A castle was built here by the O'Donells about the 12th century; and a monastery for Franciscan friars of the Observantine Order was founded in 1474 by Hugh Roe, son of O'Donell, Prince of Tyrconnell, and by his wife, Fiongala, daughter of O'Brien, Prince of Thomond. O'Donell, in 1587, bade defiance to the English Government, and refused to admit any sheriff into his district. The council at Dublin not having sufficient troops to compel his submission, Sir John Perrot, Lord-Deputy, proposed either to entrap him or his son. He accomplished his object by sending a ship freighted with Spanish wines to Donegal, the captain of which entertained all who would partake of his liberality. Young O'Donell and two of his companions accepted his invitation, and when intoxicated were made prisoners and conveyed to Dublin as hostages for the chief of Tyrconnell. After remaining a prisoner in the castle for a considerable time, he, in company with several other hostages, effected his escape and returned to Donegal, where he was invested with the chieftaincy of Tyrconnell, and married a daughter of O'Neal, chief of Tyrone. In 1592, an English force under Captains Willis and Convill took possession of the convent and the surrounding

country, but were quickly expelled by the young Hugh Roe O'Donell, with the loss of their baggage. In 1600, O'Nial met O'Donell and the Spanish emissary, Oviedo, here, on the arrival of supplies from Spain at Killybegs, to concert the plan of a rebellion. Shortly after this, the English, taking advantage of O'Donell's absence in Connaught, marched a strong party to Donegal, and took possession of the monastery, which was unsuccessfully assaulted by O'Donell; and the debarkation of the Spaniards at Kinsale, about this time, occasioned him to go to their assistance, leaving the English in undisturbed possession. In 1631, the annals of Donegal, generally called the "Annals of the Four Masters," were compiled in the convent: the original of the first part of this work is in the Duke of Buckingham's library at Stowe, and of the second in the collection of the Royal Irish Academy; part of these interesting annals have been published by Dr. O'Conor, under the title of "Rerum Hibernicarum Scriptores." The castle was taken in 1651 by the Marquess of Clanricarde, who was, however, soon obliged to surrender it to a superior force. On the 15th of October, 1798, a French frigate of 30 guns anchored close to the town, and two more appeared in the bay; but the militia and inhabitants of the town and neighbourhood showing a determination to resist a landing, they left the harbour.

The town is pleasantly situated at the mouth of the river Esk. The borough was incorporated by a charter of Jas. I., dated Feb. 27th, 1612, in pursuance of the plan of forming a new plantation in Ulster. The corporation consisted of a portreeve, twelve free burgesses, and an unlimited number of freemen; and the charter created a borough court, of which the portreeve was president, but it has long since been disused. From its incorporation till the union, the borough returned two members to the Irish Parliament, and on the abolition of its franchise, £15,00 was paid as compensation to the Earl of Arran and Viscount Dudley. Since that period the corporation has ceased to exist.

Manganese is found in the demesne of Lough Esk, the residence of Thomas Brooke, Esq. Pearls, some of great beauty, have been found on the river Esk. The remains of the monastery are still visible at a short distance from the town: the cloister is composed of small arches suported by coupled pillars on a basement; in one part of it are two narrow passages, one over the other, about four feet wide, ten long, and seven high, which were probably intended as depositories for valuables in times of danger. A considerable part of the castle remains, and forms an interesting feature in the beautiful view of the bay; although it and the other property granted to the patentee, at a rent of 13s. 4d. per annum, have passed into other families, one of his descendants still pays a rent to the Crown for it. Within three miles of the town is The Hall, the residence of the Conyngham family. Donegal gives the title of Marquess and Earl to the Chichester family.

SLIABH-NA-MON,

AND

Its Fenian Traditions.

SUPPLEMENTARY NOTES BY REV. J. F. LYNCH.

V.

In these romantic tales there is, however, a setting which is made as natural as possible, and we have the natural and supernatural closely interwoven, and it would not, I think, be possible for an Irish poet to state that a number of ships were beside Sliabh na m Ban without letting his audience know how they had been able to get there. It appears to me that no Irish poet would state that a number of ships from Greece (30) sailed to an island beside Sliabh na m Ban, and I think that if he did so make the statement in a matter-of-fact sort of way, that his audience would laugh at him and despise him for his ignorance of Irish geography. Mr. Dunne quotes from a version of the poem in Kilkenny a statement attributed to the Fians: "We followed her in haste to Oilean na h-Innse till we reached Sliabh na m Ban." In the Ossianic version we read:

A's do leanamair i go luaith,
Go h-Oilean Innse shlugh na m ban.

which O'Daly renders:

"And we followed her shortly after
To Oilean n h-Innse of the hosts of women."

In the Kilkenny version, Finn is made to say that he could not marry the enchantress, having already espoused the daughter of blind Goll, whose anger he dreaded. According to the Ossianic version, Finn says:

"I implore thy protection, O Daughter of the King;
Do not deprive of life any more men;
And I would take thee as my wife,
Were it not for Goll the blind of the stern deeds."

"If I exchange my wife
He would put me to death;
And the woman I took in my youthful days
Places her affections on the blind man.

The last line, Leis an bh-fear caoch go bh-fuil a pairt, has been misunderstood by the Kilkenny redactor, for pairt, according to O'Reilly, means share, kindred, union, confederacy. In the Ossianic poems, the wife of Finn is Grainne, daughter of Cormac Mac Art.

The battle in which a "six-fingered man" is to act a prominent part, in Gleann an Smoil, beside Sliabh na m Ban, is also to be fought, as I noted in a previous article, in Gleann na muice duibhe at Singland, and a magic wheel driven by a stream of the blood of those slain is to appear in the river Groody.

Oilean na h-Innse and Gleann an Smoil must not be far apart, for here again we must let the natural explanation have force, and the hungry and weary Fians should not be required to travel so far to the entertainment provided for them at the Innis by the Grecian princess. In the poem Oilean na h Innse, which Mr. Dunne and O'Daly render 'island of the Inch," is termed also Innis, so that Oilean na h Innse is the same as Innis, and Innis in Oilean na h Innse has somewhat the force of a proper name. The Innis or the oilean na h Innse appears to have been a well-known island, and so I think that Donn an oilean ("Pursuit of Diarmuid and Grainne"), that is, "Brown one of the island, may be connected with the island. It accordingly appears to me from examination of the poem that the Kilkenny Gleann an Smoil is not the valley of Seilg Ghleanna an Smoil.

When the Giantess departs from Oilean na h-Innse, in order to cut off the head of Great Goll, or "one-eyed," who is at Benn Eadair, or Howth, she is described as having made preparations for a voyage of some length.

"She sailed forth with her proud fleet,
And her sail masts high before the breeze,
Till she landed in Benn Eadair of the hosts,
Where the heroic Goll of the sharp blades was.

When the Fians depart from the Innis for Benn Eadair, or "peak of Edar," they are supposed to say:

Do ghluaiseamar gan stad, gan sgith. That is: "We proceeded without halting, without yielding to fatigue."

It consequently appears to me that the valley of the Dodder, which is not far from Howth, cannot be the valley of Seilg Ghleanna an Smoil.

When Osgur and the Giantess are engaged in mortal combat, Osgur is encouraged by Fergus and Conan.

Labhras Feargus beal-bhinn suire,
A's Conan maol do bhi trean ar arm,
Amhic Oisin cuimhnigh an uair,
Bhi tu g-cuan na h-Innse a g-ceangal gharbh.

"The pleasant melodious Fergus speaks,
And Conan the bald who was strong at arms.
'O son of Oisin, remember the hour
Thou wert in Cuan na h-Innse tightly bound.'"

In Professor Kuno Meyer's edition of the "Battle of Ventry,' there is given a list of the principal harbours of Ireland, at which Finn had placed sentries to give notice of the approach of Daire Donn, monarch of the world; and, by the way, why does Dr. Meyer derive Daire Donn

30. In all the Irish mythic tales Eriu signifies the Earth, and the name Eri, or Erid, is the same word as the English Earth from the Anglo-Saxon Eorde. Dr Whitley Stokes has suggested that Eri, which is the same as Iberu means western from Sanskrit avara, western or posterior, but this explanation cannot be accepted. Consequently when in the mythic tales, any other land such as Spain, Greece Thrace, Lochlann, Norway etc, is mentioned we must equate that land with Irish pagan Elysium Professor Rhys in Hibbert Lectures thus explains the Spain of the Irish tales. Professor Rhys has written a fairly large book, but he has barely touched the fringe of Celtic mythology, so vast and complicated it is.

from Darius? In the Bodleian Dinnshenches, p. 35, Daire Donn, or Little Daire Donn, is said to be the brother of Guaire (31), and son of Ind Dall, and in "Corca Laidhe," p. 5, it is stated: "It is boasted concerning Daire Sirchreachtach that he obtained sway over the west of Europe, and some of the learned say that he won the whole world." In the Cuneiform Inscriptions of Persepolis, the name Darius is written Darajavash, and the forms Darheus, Darjawush, Darjawes, Daryaves, also occur. Herodotus (vi., 98) says that Darius means "one who restrains," but the explanations of foreign names given by Herodotus are not trustworthy. Had Professor Meyer said that the Irish Dara or Daire and the Persian Darius, or Darajavash, had a common source, I should not object, but I must object to the derivation of one of the oldest of Iberian names belonging to the Stone Period, from the Persian Darius.

In the Egerton list given by Professor Meyer, the harbour of Baltimore is named Cuan an Tighe Mhoir, or "harbour of the Great House," and the old name of the harbour is given in same list as Cuan na h-Innsi, or "harbour of the Island," which is the place where the Fians were confined, and where were the ships of the daughter of the Ardrigh of Greece.

Dun an Oir, the fort on Innis Clere, is stated to have been the name of the fort in Gleann an Smoil which belonged to the Gruagach of the Golden Mantle, and Dun na Sed at Baltimore was not far from Dun a Oir, and so I think that as the Cuirt of the five giants in Gleann an Smoil is stated to have been not far from Dun an Oir in Gelann an Smoil, that we may identify Dun na Sed with the Cuirt of the five giants, and the Cuan of the Island must be connected with Gleann an Smoil, while the Island must be identified with Innis Clere.

---

31. A short distance north of the village of Moroe, in the barony of Owney beg, and County of Limerick, there is a hill, on which is a large fort named by the people, Liosagh Ghuaire, or fort of Guaire, but on Ordnance Map the name is Lisgorey. This fort is the Royal Fort of Munster named Ebhliu, in Book of Rights, and which O'Donovan was unable to identify. A little north of this hill on the farm of Mr Dwyer, was a large stone grave, destroyed about eight years ago, and there is not left now a trace of it. This destruction of ancient monuments is taking place all over the land. This was one of the most important stone graves in Ireland. In the Ordnance Letters the grave is named Tuaim an fhir mhoir, or the grave of the fear mor or giant, but the people call the grave Guaire's Grave, and say say that Guaire was a giant who had a dwarf brother, whom he killed in order to obtain possession of the dwarf's wife, who cast a pigin of milk with the stream of Athantonnaigh (ford of the fort) to let the giant know when the dwarf abhac was at home. This was also the signal given by Blathnait to Cu Chulaind, at Caher Conree, near Tralee. A short distance north of Guaire's grave is the mountain range, Sliabh n-Ebhlinni inghini Ghuaire, "Mountain of Ebhliu, the daughter of Guaire," which Cu Chulaind saw from Cnoc Aine. Ebhlin was the wife of Eochu, son of Mairid, from whom Lough Neagh was named. A very short distance from Guaire's Grave is the ford in the district of Owney (hi crich Uathne), where Cu Chulaind met and killed Crimthand Niath Nair (hero of Nar), of the Erne or Iberians. Mesca Ulad, p. 52.) Cappanook (Ceapachanabhaie) near Moroe, means tillage plot of the dwarf, whose name is lost in the district.

In Seilg Ghleanna an Smoil, we read:

Do ghluaiseamar chum tulcha os cionn gleanna,
Mar ar bu aoibhinn quilleabhar ar chrainn ag fas;
Bhi eanlaith suairc ag ceileabhar ann.
'San chuach go ceol-bhinn ann gach ard.

"We proceeded towards a Tulach above a glen,
Where sweet blossoms grew on trees;
Pleasant birds were warbling there,
And the sweet-toned cuckoo on every side."

The glen mentioned in this verse is Gleann an Smoil, and the Tulach above the glen is the Tulach from which the parish in which Baltimore is was named, Tullagh, that is, Tulach, and is the rock on which Dun na Sed was built.

In a verse attributed to St. Patrick in "Corca Laidhe," p. 21, the Tulach is named Tulach-teann or "streng hill."

Mac geines i Tulach-teind,
Bidh maith duind braidh aen la lann
Mor manach is mainches mall
Fodheoidh do gebha Conall.

A son shall be born at Tulach-teann,
Good to us shall one day be his church,
Many monks and steady monasteries
Conall shall rule after him.

O'Donovan ("Corca Laidhe," p. 99) gives copy of grant from the king to Thomas Crooke of Baltimore, in which is mentioned "The castle, town, and three carrucates of Baltimore, otherwise Donnyshead, called by the common name of Tullagh within the territory of Collymore."

It is stated in "Corca Laidhe" that St. Ciaran was born at Fintracht Clere, or "white strand of Clear Island," now called Traigh Chiarain, or "strand of Ciaran," who in "Corca Laidhe" is termed Sindser naemh Erend, or "senior of the saints of Erin." O'Donovan quotes following from Smith's History of Cork:

"A little to the east of the castle of Dunanore on the N.W. point of Cape Clear Island is a cove called Tra-Kieran, i.e., St. Kieran's Strand, on which is a pillar stone with a cross rudely cut towards the top, that they say was the workmanship of St. Kieran; and near it stand the walls of a ruined church, dedicated to the same saint. This stone they hold in great veneration, and assemble round it every fifth of March, on which day they celebrate the festival of their patron."

Lewis says that the island is called by the Irish Innish Dharnley (Inis Doimbhe), and in ecclesiastical records Insula Sanctae Clarae, that it is well known to mariners as a conspicuous landmark, and not far from the harbour are the ruins of St. Kiaran's Church, that on the shore is an ancient stone with a cross rudely sculptured on it, and at a short distance a holy well. This stone is named Gallan Chiarain, or "pillar stone of Ciaran," and is four feet nine inches in height.

Lewis says that the scenery is wild and romantic, particularly on the south side of the island, where it presents to the Atlantic a steep and inaccessible cliff. At the south-west point of the island, overhanging the sea, and accessible only by a narrow and dangerous pathway, not more than three feet in breadth, are the ruins of Dunanore Castle, or the "Golden Fort," which from its distance from all the landing places would appear to have been built more for the purpose of a safe retreat in case of invasion than for the defence of the shores; the view from the battlements is very extensive and embraces a great variety of objects of a bold and imposing character. The island belonged to the O'Driscolls, who were men of extraordinary stature and strength, and whose feats are the subject of many interesting narratives; but no tale told at Innis Clere is so interesting as the ancient tales of that valley named Gleann an Smoil and Cuan na h-Innsi, now called the bay of Baltimore, and which must have been regarded as a submerged valley, as a real valley over which broke a real flood, which is referred to in the legend of Clidna of Roscarbery. In Arranmore, stone nuts, buried in sea sand at a great depth, were discovered many years ago, and the late Rev. W. Kilbride, Incumbent of Arran, told me that the people of Arran had a tradition of a great flood, by which Galway Bay was formed.

In the Bodleian Dinnshenches, p. 19, it is stated that Lian or Len (32), from whom Loch Lein (Killarney) was named, was the son of Ban Bolgach, son of Bannach, and craftsman (cerd) of Sid Buidh, or fairy hill of Bodb Derg. It is said that every night after quitting his work at Killarney, he used to fling his anvil away to Indeoin na n Dese, the Anvil of the Desi folk, now Mullaghnoney, or summit of the anvil, near Clonmel, County Tipperary.

The name Lian is from li, or lu, an old word for water, and an is a suffix common to Irish, Hebrew, Arabic, and other old languages. It appears to me that Lian has reference to the moon, and in the old tale it is said that he was under the lake (Loch Lein, now Killarney), making a vessel for Fann the Long-haired, daughter of Ailill Find and Flidais. Fann is made wife of Manannan and Cu Chulaind (O'Curry's Manners and Customs); and O'Curry mentions that the ochnech or "shield" of Flidais was hung in the hall at Emain Macha. At Killarney we have, as I pointed out, a mountain, Sidh Tuirc, or Torc mountain, named from the mythical boar said to have been slain at Kanturk by Domhnall na Gaela. Now, at Athlone the mythical black pig is stated to have been slain by Luan, and the names Lian and Luan are probably the same. When Lewis says that Athlone means ford of the moon, it appears to me that he has confounded the Irish luan (33) with the Latin luna, but the two words are quite different, for the Irish luan is extension of lu, or li, "water," and the Latin luna is properly lucna, from luc, to shine, found in Latin

32. Dr Joyce (Irish names, vol 1, p. 448) says that Lean had his forge on the shore of the lake. In Bodleian Dinnshenches, p. 19, it is stated that Len was under the lake (fo loch), all day making the bright vessel for Fann, and in Silva Gadelica it is stated that Len dwelt in the loch making bright vessels of Fann, daughter of Flidais (Is e ro [illegible] loch ignim niamlestar Fainni ingini Flidais).

33. O'Reilly gives moon as one of the meanings of luan as Dia Luain, "Monday," but I think that he word luan, "the moon," is got from Latin luna and is not the luan from which the ford was named.

lux (Gen. luc-is), and Irish luicet, or lucet, which also appears as lug or luc.

Dr. Joyce (Irish Names, vol. i., p. 335) says that he knows nothing of Luan save that in "The Fate of the Children of Tuireann" the place is called Ath Luain mic Luighdheach (34), the ford of the son of Lewy, but Luighdeach is the genitive case of Lughaidh, and Lughaidh is an extension of Lug or Luc, and in "Boyish Exploits of Finn" the name is written Lucet, and it is stated that Lucet wounded Aedh, son of Daire Dearg, and destroyed one of his eyes, so that from that time forth the name Goll, or "one-eyed," adheres to Aedh.

Aed ba hainm do mac Daire,
Cor gaed Luicet con aine,
O ro gaet mac Luaigne lond
Daire conruitea ris Goll.

"Aed was the name of Mac Daire,
Until Luichet wounded him with dexterity.
But since the stout son of Luaghne wounded him,
He was called by the name of of Goll."

In some very old Egyptian tales, the loss of the eye of Osiris is mentioned.

(To be Continued.)

WEATHER LORE.

There is an old saying that if the first Sunday of a month is rainy, every Sunday in that month will also be rainy. The same rule, in popular estimation, should apply to other days of the week, and without regard to their place in the month. This is merely a convenient way of saying that the weather tends to repeat itself about once in seven days. The conditions prevailing on Sunday are more closely observed and better remembered because of the break which Sunday makes in the regular pursuits of the week.

This notion, like many of those which have become incorporated in the approved weather maxims of the people, finds considerable scientific support. A barometric depression requires a rather well-defined period in which to pass over this country from one coast to the other. The average is from three to four days, varying somewhat with the season of the year and with other conditions. Two of these weather tides—and the second is apt to reverse the first—would take about one week. Thus areas of high or low temperature would be likely to succeed each other in most places by about that interval.

While this is a rough calculation and one which, if put to the test, would encounter many exceptions, weather bureau experts say that, with a vigorous storm to-day, there is slightly more likelihood of another in just a week than of another in either six or eight days. The margin of increased likelihood, although small, is on that side.

This is all that the popular saying implies. Were the rule to work out rigidly, the Mondays of the year would be all on the same pattern, while the Tuesdays would average up to another standard. Nothing of this kind is to be expected. Exceptions to the seven-day rotation occur often enough to keep the mind of man from guessing too readily the great secrets which nature hides in the wind and the storm-clouds.

34. In "The Fate of the Children of Tureann the ford is named Ath Luain mic Lughaidh. Lughaidh is a genitive of Lughu from Lugh, and Lughaidh as nominative has a genitive Luigdech, and from this we get the Oghamic nominative of the Ardmore stone, Lugudeccas, which Brash renders "Lug died," and which Professor Rhys (Hibbert Lectures p. 540), thinks may signify "Lug-slayer. Lugudeccas is an extension of Lug, and is derived from the genitive cases. Dr Joyce (Irish Names, Vol. i. p. 445), says that Tralee would appear to be named from Li mac Dedad (Annals of Connaught). In Silva Gadelica, p. 241, the place is named Traigh Li Meic Oidhremail or Strand of Li, son of Oidhremal, or "Icy." Tralee means strand of the li, or "river." In the tale of the Children of Tuireann, Bodb Derg is made King of Connacht, and in the same tale it is stated that Lugh slew Daire or Dara Dearg at Eas Dara, "Waterfall of Dara," now named Ballisodare, or "place of Dara's waterfall."

GAELIC SUPERSTITIONS.

By GILLA GAEL.

II.

The fully developed Gaelic mind untutored, untainted by an English education, has an imagination which strikes us like a play of blended colours, each colour interfering with the other. There is but one prism by which this "flame" may be examined and each coloured ray refracted, or, in other words, there is but one method by which the component light of the Gaelic imagination may be resolved into all its variously coloured constituents, and this method is a perfect acquaintance with the Gaelic language, and only less important, being of the Gaelic race.

I have read sketches by various authors on what are commonly called Gaelic characteristics; the greatest difficulty to be met with by those who seek to analyse Gaelic character is that (it may be involuntarily) they arrive at the stage of inquiry with preconceived notions and ideas regarding the very characteristics the inquiry is meant to be searching on, so that the Gael is often used as a mirror for, and of the seeker's thoughts, reflecting back the inquiring light, and thus tending at the very outset to render all inquiry confused and confusing.

Gaelic characteristics, to be true, must be written from within, by one of the race, and to be perfectly, actually accurate, ought to be written by one whom English education has not touched, and who, therefore, will not project on a screen for us either pictures which are meant to be pleasing or critical

For the purpose of analysis of the Gaelic mind or Gaelic imagination, I make use of a term which I shall call the Spectrum of Gaelic Imagination, useful only in this, that by it I may be clearly able to map out all those tales, omens, signs, prognostications, in their true light and show that because the causes of certain curious customs have been hidden or unknown we must not stamp them as superstitions, because we are ignorant of their origin. All races on earth known at the present day have histories, the events and facts of which are true only within a limited period.

Solar and steller chemistry is yet in its infancy, yet the materialist and scientist can, by spectrum analysis, detect in the atmosphere of the luminary bodies certain metals, and we are told that the existence of dark lines are caused in the solar spectrum by the passage of white light through the glowing vapour of certain metals. The spectra of the stars all contain dark lines, but these are different from the solar lines, and differ from one another.

It is with the races of men. In each is the white light radiating through their material surroundings, presenting spectra to the world, in which we detect certain base or refined elements, by means of which we characterise them —and by means of which, if our historians can be trusted, we can safely say that certain races possess certain qualities, certain virtues, certain varieties.

Historians should stand in the same relation to men and races of men as the observer who uses spectrum analysis to detect certain elements in the sun or stars. But to the historian there is even a limit, for beyond a certain period his chronology cannot go.

In dealing with the Gaelic race, we should then take up its history as far as it is known, become earnest students of it, and next go to the living plants and note their characteristics, live amidst them, see them in youth, in stalwart maturity, in withering decay.

But, unfortunately, the history of the Gaelic race has yet to be written, and it is not to be expected that the English mind, or the English tongue, could do justice to a race which have evolved a mode of thought and its vehicle a language which is as different to that of the Saxon race as are the races of two different worlds.

We do not know the history of our race truly, and as completely as it might be written. Let us then go to the individuals, to many individuals of that race, remembering that, whatever is false, instinct may be relied on as being true.

One dark line which English observers have told us is a characteristic of the appearance of the Gael to the outer world is superstition. Let us make the analogy clear—it is a glowing vapour round the Gael, and this vapour absorbs exactly the same kind of light which it is able to emit. Now, we wish to see this for ourselves, and we bring to the inquiry all our knowledge of superstition as written for us by many English authors.

There is no greater proof of the invincible ignorance of many authors than that collected tales, meant to extol the introduction of Christianity into Ireland, have been brought forward as evidence of pagan superstitution. Let us enroll before you a chromlith plate, illustrative of The Spectrum of Gaelic Imagination. Encroaching on the left side on the red is a dark hand of "Superstition."

We go to the story-teller to hear a tale of the ancient time. Listen to the excited old man! He magnifies the conquest of Christianity only by magnifying the conquered. He tells you a tale of victory, the tale of St. Patrick's coming. The tale commences; it is a most realistic account of devil worship, of men herculean in every vice, see how attentively the audience listens. With a materialistic mind you scoff at the tale of mighty strength, at the deeds of the mighty Dathi struck to death at length by the lightning spark when violating the saint's sanctuary. The phooka horse rises from the lake, he ravages the country side, all that war can lend to horrify, all that is cruel seems to animate the heroes and heroines of the tale. Mark it! one there is who a little goodness possesses. She is sacred. What a glorious story the old man tells; the green woods ring with music of neighing steeds and martial clang, the wicked are omnipotent and win by malign aid when they fail to win by force of arms. You are hurried on from event to event, of a period when even brute beasts seemed more human than men. The audience get thoroughly frightened, and smoothly a bark of hope lands on Ireland's shores. She is laden with Christians; swift comes the light of the morning to break on the lurid gloom. The story ends. Christianity has conquered! God has sent His ministers to the troubled land! You leave the story teller's presence in admiration of his skill, your only regret that he cannot write such a beautiful descriptive tale, filled as it is with characters who are cruel, cunning, wicked, lovable, passionate, generous. It is a story told in ten or more chapters, the final one being the triumph of Christianity.

It is not to be wondered at that the audience eargerly following the rapid flow of speech could remember it all. I have often tried to, but could not; yet certain events told by the Gaelic story-tellers are indelibly printed on my memory. Would I take from the connected tale, that only served to show, the glorious victory won by the early Catholic Church in Ireland, one chapter dealing with the pre-Christian time of the story-teller. I would publish the chapter dealing with the Pooka Horse of Lough Graine, entirely disconnected with the tale it was essentially part of. and that is just what has been done by many, and that is how superstition is manufactured.

Again, it cannot be wondered at that many of the audience go away as I went, with cer-

tain parts of the tale fixed in their memory, to re-tell them years after.

This disjointed part of a story often served the collector of tales and stories of the Irish peasantry. How many of us remember more of Dr Nikola than that he had a black cat, or of that exciting tale, "Robbery Under Arms," than that Starlight was shot and Dick Marston was not hung after all.

Could the Gaelic story-teller only have written his tales, instead of giving them to us in an attractive wealth of words, much of the so-called "superstition" would never have been heard of.

COLUMBKILLE'S PROPHECIES.

Liberty in Ireland is understood only on the surface. Our people do not rightly comprehend the principles of liberty and progress. Political liberty is not an object in itself, but a means of protecting these other liberties, the possession of which is indispensable to the faculties and forces of men.

In endeavouring to promote material progress all religious considerations should be kept in view, for there is nothing religious but what is morally good. Amongst us these other liberties themselves would be but useless inert instruments without the ideas, sentiments, and beliefs which require them as the conditions of their existence, and amongst all these great influences on human actions the most powerful and indispensable in a free people are Christian beliefs, which elevate, fortify, and purify souls and inspire self abnegation, self-respect, and respect for others.

In a country like Ireland, in a continual state of political unrest and of enduring patience, it it will occur that the egotism of party spirit and cold political calculations will eventually be driven to stifle that benevolent sympathy for suffering humanity, that profound respect for the human conscience, and dignity in others, and that love of truth, which are the fruitful results of Christian teaching.

In times of ardent political agitation and religious excitement these elevated, moral dispositions are often lost sight of; but amongst the Catholic peasantry of Ireland, uneducated and illiterate though they may be, there are many good men who would never dare to arrive at power itself or conduct an argument by means, which would involve the loss of their moral reasonings. These men, day by day, unknown and unheard of, strive earnestly to teach the youths the moral responsibility of their acts. A favourite method is telling them the prophecies of Columbkille.

Could the saint come back for one short year to earth, he would be astonished at the number of prophecies attributed to him. In endeavouring to restrain the ardent temperament of their youths, those old wise men and women, who are earnest in trying to safeguard them against evil, will relate the list of prophecies, ending up with the date of Ireland's freedom, so that the youths will depart, thinking that it matters little how they may strive Ireland won't be free until a certain fixed day.

Columbkille "foretold" "That carriages would run without horses," "that brother would rise against brother," and "that the red-coats (not the khaki coats, evidently khaki has a short shrift) would be defeated after a desperate battle by Irishmen." (This prophecy has kept many an Irish lad from enlisting). All these prophecies come from the past, made at a time when Ireland suppositiously was free. It is curious that we never hear a prophecy which said that Ireland would be conquered.

This brings me to another part of the Gaelic imagination, and here let me dwell for a moment on the supposed evil or bad luck associated with meeting

THE RED-HAIRED WOMAN.

Dearbhargil, daughter to the King of Meath, may have been black-haired, fair-haired, or or aught I know, no-haired at all, but local radition has it that the Breffini's wife was a ed-haired woman. "It was a cursed day for reland when the King of Leinster first saw er, and a worse day for O'Ruark; she fled, and the English came back with her, and a red-haired woman was accursed throughout the land."

On the other hand, it is by some thought that a red-haired woman, or one "whose blood shows through her hair," is hated only from the time, that when a "red-coat" appeared the peasantry avoided meeting him, and thus eventually it became a custom to blame the red colour.

But even on meeting her the peasantry will not turn on the road as has been said. She is not an omen of disaster, but only that you won't have good luck. I am, however, rather inclined to believe that it really has some connection with the traitor wife of O'Ruark, for in tales relating to the period a Gaelic story-teller of my acquaintance in lamenting the false woman's intrigue, said as well as I can translate—"English in Irish clothing, blood-loving she was; dark is the hair of Eire's daughters, red that of her foes. A red-haired woman is one whom passion rules, it is not love she will ever have in her breast, but the love of the beast that is in her. Beware when you meet her, for she will put thoughts in your heart that are not fit company for your travels. She has been said to be unlucky, and she will love to meet you and turn you back from honest intentions. If she were a good woman she would far keep, knowing herself, but when she purposely places herself in your path it is unlucky for you."

From this I gathered it is considered unlucky to meet a woman at all when setting out on a journey, because they might put thoughts into a head pondering on more important things than the charms of a fair maid, and I found I was right. So that we can knock down the red-haired woman from the pedestal of superstition she occupies, and tell our readers that amongst the Gaels a sensible custom prevails, miscalled superstition, of when you are sending one of your sons on a journey on business intent, you had better knock all the sentiment and sweet thoughts out of him by warning him should he meet any of the fair sex on his way not to dally with them, but keep far away from them, and reserve a meeting for some more auspicious occasion.

THE HOLY SHRINES AND WELLS OF IRELAND.

In the preface written by Marcus Clarke to the poems of Lindsey Gordon he says:—

"In historic Europe the least imaginative can find food for sad and sweet reflection; lounging at sunset by some ruined chapel on the margin of an Irish lake, we feel all the charm which spring from association with the past; soothed, saddened, and cheered by turns, we partake of the varied moods which belong, not so much to ourselves as to the dead men who in old days lived amidst the scenes which we survey. Yet these old ruins do more than soothe us; they remain to tell us of the days of Ireland's saints. We love those old landmarks—they are ours; they were those of the sons of the Church—our Church, the only Church."

In referring to these ruins bigoted dissenters sum up our love for them by stating we are "grossly superstitious"; but if our Protestant brethren would but come and visit these old shrines it might give them food for reflection. Still they cannot deny that at least those early Catholics died amidst surroundings which centuries after are held sacred by those of their Faith. To die and not be forgotten is the highest honour that can be given to men on earth. A man's life on earth must be luminously, illustrative of good, if the old ruined, cell, the battered ruin, where centuries ago he lived, suffered, and died, still remains, proudly pointed to as once St. Enda's, Coleman's, or other's sanctuary.

Is the old stone altar that stands in the mountain's valley not dear to us? If we visit it and gaze on the hollow where, when the old Faith was proscribed its ministers outlawed; gaunt-eyed, starving, our Gaelic ancestors came, while the wild winter's wind swept across the moor, and knelt there in adoration of their God, and sad may it be, stained the heather with their life blood in defence of Truth, do you wonder that we, revisiting it again and again, feel filled with a glorious pride, kiss the very stone with reverence, and partake of some of the strength of those soldiers of the Cross who died in defence of that glorious heritage that they safeguarded for us until time be no more.

Yet it is "grossly superstitious" for us to do so. What manner of men are those who say so? Are these links that bind us to the past to be sacrificed to the foolish comments of men to whom the past is hateful and the present new. But, our very religion is called "superstitious." Certainly it is not materialistic.

(To be continued.)

THE EXPRESS TRAIN OF THE FUTURE.

On the experimental railroad built by the German Government between Berlin and Zossen a new type of express-train is to be tested next year. The specifications require that the train shall maintain a speed of 74½ miles an hour for three consecutive hours. In order to diminish the air resistance as much as possible, the entire train, including the locomotive, will be enclosed in a shell of sheet steel, joined so as to secure flexibility in rounding curves, uniform in size from end to end, and presenting no projections to catch the air. The front of the engine will be wedge-shaped, and the wheels will all be of the disk instead of the spoked pattern, and will be enclosed, as far as possible, by the projecting sheath. Steam is to be the motive power, the previous experiments having shown that electric motors at high speeds unduly strain the track.

OF WHAT STUFF NOBILITY IS SOMETIMES MADE.

England prides itself upon the legitimacy of the blood of its royalty and nobility. It contemns the idea that base blood has ever been permitted to enter the veins of its aristocracy. But not all the laws of men can prevent the course of nature, nor can the utmost safeguards avoid the chance of a commingling of base natures with high-born tastes and inclinations. The record of the genealogy of its nobility may show a pretty clean record and a general freedom from the admixture of base ingredients, but now and then history and tradition point to a case in which the rule and law of high words has been broken in upon and violated.

The following curious and historical fact strongly illustrates this point. Aside from that consideration the case is one full of romance.

The wife of the celebrated Lord Clarendon, the author of the History of the Rebellion, was a Welsh pot-girl, who being extremely poor in her own county, journeyed to London to better her fortune, and became a servant to a brewer. While she was in this humble capacity the wife of her master died, and happening to fix his affections on her, she became his wife. Himself dying soon after, left her heir to his property, which is said to have amounted to between £20,000 and £30,000. Among those who frequented the tap at the brewery, was a Mr yde, then a poor barrister, who conceived the project of forming a matrimonial alliance with her. He succeeded, and soon led the brewer's widow to the altar. Mr. Hyde being endowed with great talent and now at the command of a large fortune, rose in his profession, became the head of the Chancery Bench, and was afterwards the Hyde, Earl of Clarendon. The eldest daughter the offspring of this union, won the heart of James, Duke of York, and was married to him. Charles II. immediately sent for his brother, and having first plied him with some very sharp raillery on the subject, finished by saying, "James, as you have brewn, so you must drink," and commanded that the marriage should be legally ratified and promulgated. Upon the death of Charles, James II. mounted the throne, but a premature death frustrated this enviable duchess. Her daughters, however, were Mary, the wife of William II., and Queen Anne, both grandchildren of the cidevant pot-girl from Wales, and wearing in succession the crown of England.

OUR WEEKLY STORY

THE LA RUE STAKES.

BY CHARLES NEWTON HOOD.

"They're off!"

The flag had dropped almost before Billy had expected it, and the race for the La Rue Stakes began.

It did not seem possible that the first rush of that flying field of thoroughbreds could please the critical starter, but it did; Seltzer was well over on the outside, and the little mite of a Billy, the rider, was clinging close over the slender neck of his first mount, with his whole heart and mind and soul bent on winning the race.

Only once had he glanced up from the course since he cantered Seltzer from the saddling paddock. As they had passed the grand stand, Billy had looked up, almost involuntarily, toward the private box where Seltzer's handsome young owner sat, surrounded by a fascinating group of ladies, who waved their handkerchiefs frantically as the graceful mare loped by. Billy raised his whip in salute, and received in response from the man he almost worshipped an encouraging smile and a swing of the hand.

The race meant so much to Billy. It meant a good deal, of course, to young Burnett, for the purse was a big one, and in his little financial expressions of confidence with various other men who had opinions on horses he had valued the mare's speed very highly. But, after all, money didn't matter so very much to a man like Jean Burnett. He would rather have had the mare win honestly without the money than lose with it. But to Billy it seemed as if the whole world and all that life held dear to him hung on the result.

It was only a few months since Billy had had occasion to feel much responsibility. The elder Billy—"Hodge" his other name—had been a pretty successful jockey on the other side; nothing startling, no very great reputation, but a good, honest, clever rider.

He had never won the Derby; in fact, if the truth were told, he had never even had a mount on that famous course. He had earned enough to keep Billy and Billy's mother in tolerable comfort, and but little more.

Burnett had seen him ride some races at a provincial town in which he happened to be tarrying, and, though the man's mounts were poor, he was struck with the coolness and good judgment with which they were handled.

He strolled down to the jockeys' quarters after the race and had a little talk with the man. The elder Billy had only succeeded in bringing his inferior mount in for second place, and he was feeling a good deal discouraged. Burnett could see well that with such a horse a good many riders would have been shut out altogether, and he wondered, very logically, if the man could get so much out of an inferior mount, why he shouldn't be likely to have pretty good success with animals such as were in the Burnett stables on the other side of the Atlantic.

The young man did not find the elder Billy very reticent as to himself. That was a peculiar thing about Burnett. There was a sincerity and an honesty about him which somehow inspired confidence. The elder Billy was blue. Past middle age, and with ambition such as only a jockey can have, he saw himself growing old, unappreciated, with no reputation and no opportunities.

"I've about made up me mind to give it hup on this side," he said. "Hit's no use tryin'. Ther' don't seem to be no chance. 'Ow do you think I'd get along in Hamerica?"

Young Burnett thought—in fact, he was pretty sure, to tell the truth he knew—that the jockey would get along all right, and he said so. He did not engage him on the spot. He had had one tilt with the alien contract labour law, and he did not care to take any more chances.

"Come and see me when you get on the other side," he said. "I think I can be of service to you."

And he gave him his card.

He didn't even know then that there was a Mrs. Billy, or a Billy the younger; in fact, he straightway forgot all about the entire matter.

One morning, quite a good many months later, young Burnett's man came into his employer's library and stood quietly awaiting recognition. Burnett, in smoking-jacket and slippers, had just settled down at his desk to the task of answering and figuring on the pile of letters and invitations which had been accumulating for two days. He scowled vigorously as he wrestled with the problem of taking a run on Heytesbury's new yacht that afternoon and dining at Mrs. Droysen's at six. He deucedly wanted to be on the deck at the trial-trip of his friend Heytesbury's new flyer, but he knew that he could not get back in time to dress for dinner, and the prospect of losing an opportunity of dining at the same table with Miss Eunice Droysen was far from being an argument in favour of the water trip.

It was while he was wrestling with this problem and making numerous vain time-calculations on the backs of handsomely embossed envelopes that he glanced up and discovered his man.

"Well, M'Masters?"

"Pardon me for disturbing you, sir, but there is a fellow here who called about a dozen times to see you. We've sent him away always, but he keeps coming back, sir. He won't tell us what he wants. Says he must see you because it's very important. He's a little English lad, I think, and he has one of your cards, the style you used when we were across last fall."

"Did you ask his name?"

"I did not, sir. Shall I go down and ask it?"

"Yes, I fancy you'd better."

And young Burnett settled himself down to figuring whether he could start on the cruise and be set ashore down the coast and catch a train back to the city in time for dinner, when the man returned, and said—

"He says his name is Hodge, sir."

"Yes, sir, if you please—Billy 'Odge."

And little Billy, who had followed the man noiselessly up the stairway, struggled to the front.

"Well, my little man," remarked Burnett, smiling down at him over his shoulder, "what did you want to see me for, and where did you get this card?"

"It's one you gave me dad, sir, over in England. 'E was a jockey, if you please, sir, an' 'e were comin' to ride for you."

"Oh, yes. Yes, yes, I remember. And where is your father?"

"'E's dead, sir. Died comin' over. 'E 'adn't been well for some years, sir, and the steamer doctor said 'e'd trained finer'n 'e could stand. 'E was buried at sea, sir."

"And are you all alone over here, without any friends?"

"Only me and mother, if you please, sir. I'll be 'avin' to support 'er now."

"That's so; you will," responded Burnett, with the shade of amusement as courteously concealed as if he had been discussing the great game of baseball with the Chinese minister. "And what is your particular profession?"

"I 'aven't none, sir, but if you please, sir, me father always said I was 'andy with 'osses."

"You inherit it, I presume. I'm sorry your father's dead. It's hard to lose fathers. He was one of the best men in a crowd after the pole, M'Masters, I ever saw."

And young Burnett mused so long over the treasure he had lost that the younger Billy ventured to break in—

"Don't you need another lad around your stables, sir?"

"Why, I don't know, I'm sure. A boy can't support his mother unless he has something to do, can he?"

"No, sir."

"Where are you now?"

"We 'as a little room down-town, sir, but we 'asn't much money left, an' the chap wot owns it 'e says I'll 'ave to 'ustle round an' get the rent, or hout we goes."

"Well, well, that is a financial crisis, isn't it?"

"I ain't just sure wot that is, sir, but I knows its very tough."

"They all are, these financial troubles. M'Masters, you might run down with this lad and see if what he says is all straight; and if it is, pay up their rent for a few weeks, and then take him up to the stables and tell Mr. Yorke to give him something to do. He may make a rider yet."

And the young Mr. Burnett turned to his time-tables and was flooded with light and joy by discovering that the "Resort Flyer" stopped at Pebble Beach Junction at 5.5 and got into the city at 5.45, giving him ample time, by having the capable M'Masters meet him at the station, and help him struggle into evening dress in his carriage, to enter Mrs. Droysen's drawing room only a few minutes late.

MacMasters found everything "all straight" at Billy's home. When it became known at the stables that Mr. Burnett himself had engaged the lad, he promptly became an object of considerable envy among the little family of stable boys, rubbers-down, and exercisers. Mr. Yorke soon discovered, too, that Billy was, as he had said, "'andy with 'osses," and he gave the boy considerably more latitude than he did the rest of the underlings, particularly after the day when the owner visited the stables, and, recognising his young importation, had spoken to him kindly and whispered to Mr. Yorke that it would be a great thing if Billy the younger should prove to have inherited certain talents from his father.

Billy was a grateful little chap, and next to his mother he worshipped his young master with a devotion which was as sincere as it was unknown to the owner of Seltzer.

Next after these came Seltzer herself. It was a curious affection which sprang up between the promising mare and the lad, and it dated almost from the very moment that the animal had been assigned to Billy to care for and exercise.

A splendid mare was Seltzer, and great things were expected of her. What hours Billy spent in fussing over the thoroughbred's toilet! And then the story of the early morning exercise spin and the warming up before Humber, the jockey, got around to put in the fine work on the mare's training.

"There's things I knows about that mare wot even 'Umber don't," he had remarked to Mr. Yorke one day after he had made a little private test of Seltzer's gait on the stretch of the practice track behind the woods. And Mr. Yorke had only smiled good-naturedly.

It was the day before the great race for the La Rue Stakes, and all the town, seemingly, was waiting for the result. Seltzer was a big favourite in the betting, with David only a point less popular, Rainbow next, Max O'Rell next, and a big field, with some rumours of "dark horses."

In the evening young Burnett chanced to be passing a well-known betting resort, and out of curiosity stepped in. A bookmaker was just making a few of the regulation remarks:

"So you fellows are afraid of the favourites, are you, and don't care to pick a thirty-to-one shot? Well, now, I'll just pick a winner myself once, to show you how. I pick Seltzer, gentlemen. Who wants the field against her at four to one? No one? Well, I'll make it three to one, thirty to ten, three hundred to one hundred. Come on, come on; I'll bet you any way and any figure."

Just then a young man edged quietly through

the crowd, held a short conversation with the bookmaker, received a ticket, and edged quietly out of the place. Burnett looked troubled. He had recognised the young man as Humber's brother-in-law. This looked odd. Pulling his hat down over his face, he hurried out just in time to see the young man disappearing into another betting room farther down the street.

Burnett followed him The former transaction was repeated, though the odds were only five to two, and the young man quietly retired as before, followed by Seltzer's interested owner.

This time the chase was longer. Far up the street the young man paused in the shadow of a building, and an instant later was joined by another man who was evidently waiting for him. There was a short colloquy, and the two separated.

"Humber!" remarked the man in the doorway, in a whisper to himself. "Strange how hard it is to be honest, even on a salary with five figures in it."

Billy the younger was asleep, curled up like a little ball in his bed, when he awoke suddenly to find Burnett bending over him.

"Don't be alarmed, my boy," said his employer, kindly, as the lad rose up quickly in a tremor of apprehension. "Do you suppose you could ride Seltzer in the race to-morrow?"

Billy was too much surprised to speak, and could only gaze open-mouthed.

"What do you think?" remarked young Burnett, smiling.

"I don't know, sir. I could ride 'er, you know, sir, all right; but I don't know whether I could ride 'er to win or not, sir. I'd like very much to try, sir. An' I'd try 'ard sir, bloomin' 'ard."

And as the lad became more and more awake to a realisation of what it all meant, his voice became eager, almost pleading.

"Yorke says no one can ride Seltzer unless she is well acquainted with them, and that for six months only you and Humber have had much of anything to do with her."

"We knows each other, Seltzer and me do, right. She's a wonder, sir, Seltzer is. W'y, that 'oss—that 'oss—w'y——"

And Billy's command of superlative language proved so inadequate that he paused, gasping for fitting eulogy.

Burnett laughed.

"Then you think she'd do as much for you as she would for anyone?"

"I'm sure she will. But, Mr. 'Umber—is 'e sick?"

"Well—eh—no; at least, not yet; but I'm going to see him to-night, and—eh—he's going to decide not to ride."

"But the association, sir. 'E's carded to ride. I saw it posted all over, 'SELTZER ('Umber 'up),' an' four of the evenin' papers tips Seltzer for a winner, an' two more tips 'er for second place."

"I'll be able to fix that all right yet to-night. I'm on the way now. I shall depend on you, Billy. You'll do your best for me, won't you?"

"Indeed, I will, sir, an' I'll ask Seltzer to do 'er best, too, sir."

"All right. I trust you, remember. Now, you won't see me until after the race. Mr. Yorke will understand and take care of you about your colours and all that. These are the only instructions for you to remember—Let her go for the first quarter, then if you are well up among the leaders hold her in a bit until you round into the stretch, and then push her to win. Do you understand?"

"Yes, sir."

And now they are away. At the first turn it is Rainbow, Max O'Rell, David, and Seltzer, with the field bunched close behind. Billy drew a poor position for the start, but he has pushed Seltzer for the pole at the turn in an almost miraculous way. He is lying close over the mare's neck and is talking eagerly:

"Run, darlin', run. We've got to win. We've just got to. Dad's watchin' us, you know. Go! Hi! Hi! Go!"

The mare seems to understand for she almost flies. Past David, past Max O'Rell, past Rainbow, a length ahead as the quarter pole flashes by. Now, little by little, the mare drops back again. Billy is following instructions. It's taking big chances, he thinks in his secret soul, to do it. It wouldn't be his way; but it is what Mr. Burnett said.

The terrible pace is beginning to affect the temporary leaders. Max O'Reill and Rainbow are being outfooted by the rushing David. Now he is ahead, and Rainbow and Max O'Rell and Seltzer are abreast close behind.

But Billy has taken advantage of the momentary lead to snatch the pole, and is close behind the leader. Now they are near the last turn. Rainbow and Max O'Rell are beginning to pound heavily and are dropping farther and farther back. But what black nose is this which has come up close to Seltzer's flank? Billy glances around. Wonder of wonders, it is Mortality—a rank outsider. It looks as though there was to be a surprise party. Inch by inch the newcomer is gaining. How Billy longs to get into the home stretch so that he can push the mare a bit!

Mortality is coming on like a whirlwind. David is ahead. Seltzer will be in a pocket in another dozen yards, with too short a distance left to go round on the outside, keep up the pace, and have an even show at the finish. It must be now or never. instructions or no instructions. He loosens up on the mare, calls on her, taps her lightly, and feels her respond as she straightens out under him.

They gain a foot or two, but still Mortality hangs close at Billy's saddle and David's tail brushes Seltzer's nose. It isn't enough. Something must be done, quick.

"Forgive me ol' girl," ejaculates Billy, as he raises his whip, and almost with a sob that he is obliged to do it, brings the lash down sharply on the mare's flanks. With a maddened bound she springs ahead, her ears laid back and her nose stretched out almost on a line with her neck. Billy swings her out, and they come straining down the stretch, with the mare gaining inch by inch on the leader; now she is on his quarter—the saddle; a few bounds and it is neck and neck.

Mortality has swung out and is following close behind, third from the pole. The wire is terribly near. Whoever wins will win by a short head.

Suddenly something happens. A nurse-girl with her escort down close by the fence has become too deeply interested, and her little charge has toddled out upon the track and stands piteously helpless right in the path of the flying racers.

Billy sees it all in an instant—the horrified expression on the nurse-girl's face, and the dazed look of the little toddler on the track ahead. He can guide Seltzer around her, he thinks, but nothing can save the baby from the rushing "field" behind.

What can he do? A single false move and the race is lost. It won't be his fault if the child is crushed, anyway, and to win the race means so much! But someway, something in the appealing face of the baby makes him think of the little sister asleep in the tiny English churchyard so far away over the water, and—he can't help it—he must do something. But what?

Like a flash he remembers a picture he once saw of a brave hussar who snatched a little child from in front of a flying regiment of horses. After the Wild West Show was on the other side, all the lads about the stables had practised for weeks picking up articles from the ground by dropping over the horse's sides, and he had been the best of them all; but this was so different.

He knew he would fail, but he must try. With one hard pull on the reins he drops them, and with a cry to Seltzer he slips his left foot through the stirrup and draws the slender iron up to his knee, kicks his other foot clear, and throws himself wildly to the right straight down over the horse's side. There he hangs by one knee, head down, his arms outstretched, and his little body swinging wildly against the racer's side at every bound.

Seltzer falters in her pace and drops back. With a wild sweep of his arms, Billy clasps the little form close and lifts the baby clear of the ground as the horses hurl by.

The strain is a terrible one, and he can only drag himself up a little way. His leg is almost broken by the sharp stirrup. He can only bend himself up as far as possible, close his eyes, and hold tight. He hears the wild shouts from the crowds as David sweeps by, a winner. On they go for it seems a mile, but in reality only a dozen rods. Seltzer slackens and stops. A dozen stable-boys are sprinting at her head. Someone snatches the baby from his arms, and Billy drops down and steals hurriedly away to a quiet corner of the stables.

It has all come over him now. Seltzer has lost. His dreams of making a name for himself are gone. Mr. Burnett will never allow him to ride again. His head is whirling yet. He feels deathly sick. Everything looks black, and he wishes he were dead.

Sinking down on the straw, he buries his face and sobs as though his faithful little heart would break.

"Well, young man?"

It is Mr. Burnett.

Billy does not look up.

"I'm sorry I lost the race, sir," he sobs. "I couldn't 'elp it, you know, sir. She'd 'a' been killed, sir—the baby."

"Well, I should say she would. And how in heaven's name it happened that you were'nt, beats me."

"I'm sorry, sir, I didn't win."

"Eh? What?—didn't win? Why, my boy, I'd rather have my jockey do that thing than have my horses win a dozen races. Yes, a hundred," adds young Mr. Burnett, after computing the matter more carefully.

"But the money, sir, wot's been lost?"

"Not a cent except the purse. All bets on Seltzer declared off. Come along up in the stand, now; they're all howling for you."

And Billy went.

AN HISTORIC PRISON SHIP.

In building a section of the new ways for the construction of the battleship "Connecticut" at the Brooklyn navy yard, the famous English prison ship, "Jersey," was discovered. She was one of six prison ships used during the Revolution. Probably built somewhere around the year 1720, she saw some thirty years of service, fought many a battle, and was then condemned to be used as a receiving vessel for American prisoners of war. Of the six prison ships the "Jersey" was by far the worst. She was a kind of floating Black Hole of Calcutta, and in her damp, leaky hold half-starved American patriots perished miserably. In her palmy days the "Jersey" had a crew of about 400 men, huddled together as crews were in those days. How appalling were the conditions to which American prisoners were subjected may be gathered from the fact that 1,200 prisoners were kept on board almost constantly. One historian says: "She was never cleansed, and lay in that condition seven years. No fires warmed her occupants in winter, no screen sheltered them from the August sun, no physician visited the sick, no clergyman consoled the dying there. She remained throughout the contest a centre of sickness and death, always replenished with new victims. The bones of her dead, estimated at 11,000, lie buried on the Brooklyn shore." When the war ended the "Jersey" was burned at her moorings. For years historical societies and government officials have tried to locate the ship. The half-burned hull lies in about two fathoms of mud and water, about 500 feet from the dock. Unless the hull is removed, the battleship "Connecticut" must be built directly over it. Whether the hulk will be raised seems doubtful. About £100 would be required, and the delay in the construction of the battleship would be considerable. The ways are already behind time as it is. Interest in the old ship reached its height when, some years ago, the skeletons of 300 men were found in the yard. That these were the remains of the men who had died in the "Jersey" was definitely established. The bones were afterwards buried in Fort Greene Park with impressive ceremonies.

NOTES AND QUERIES.

A CORRECTION.

With reference to the words, "Compiled by James Coleman," which appeared under the heading of the article, "Irish Antiquities, As Seen Fifty Years Ago," in our issue of December 20th, we feel bound to state these words were inadvertently printed, and without the knowledge or consent of the writer thus named.—Ed. D. P. J.

REDMOND O'HANLON.

Ardrie, Belfast, 20th Dec., 1902.

In reply to H M J O'Hanlon, in your issue of 20th December, I have a copy of the chap book he refers to with a life of Redmond O'Hanlon. I have also read a life of him elsewhere, if I had time to look it up. "The Cromwellian Settlement," by Prendergast, is a valuable but not a rare book. Every decent library has a copy. Mine is a second edition, M'Glashan and Gill, Dublin, 1875.

FRANCIS JOSEPH BIGGAR, M R I A. F R S A.

ST. SENANUS'S BELL.

In Mr. James Frost's "History of Clare," published in 1893, is the following description of this interesting relic of one of the early Irish saints, who figures in the local histories of Queenstown and Iniscarra, Co. Cork, and the Scattery Islands at the mouth of the Shannon:—"This bell is described by St. Odran, in his Irish 'Life of St. Senanus,' whose festival is observed on the 1st and 8th of March, and to whom St. Odran immediately succeeded in the office of bishop. It was anciently known as Clogna-neall, because it was supposed to have descended from the clouds; but it was subsequently called Cloganoir, from its resemblance in colour to gold, and belonged properly to the ancient church called Ceill Senain, in the townland of Fuidismaigh, north-west of Kilrush. For centuries this bell was preserved in West Clare; and is now (1893) in the possession of Mr. Marcus Keane, of Beach Park, near Ennis. The old life, written by St. Odran, refers to the Round Tower of Scattery Island in such terms as leave no doubt of its origin and use. It is to be regretted that this passage did not meet the eye of Dr. Petrie, as it would tend to sustain his views as to the Irish Round Towers. It is given as follows, in a footnote to the article, Iniscathy, as translated by (the late) Professor O'Looney, in Cardinal Moran's edition of Archdall's 'Monasticon Hibernicum'—'St. Senan built seven churches or religious houses in Iniscathy (Scattery Island). He had sixty friars in one church, and thirty priests, together with seven bishops, in another. He also erected a clogas (i.e., belfry) in Iniscathy, which was 115 feet high; and a bell being placed in it near the top, its sound was heard all over Corcabaskin, so that sacrifice could be made in every chuch of that territory at the very time when Senan and his disciples were engaged in offering it at Iniscathy.'"

Much information as to old Irish bells is given in Miss Stokes's "Early Irish Art" (London: Chapman and Hall), and as to some specimens in France in the Journal of the R.S.A.I.

LECTOR.

THE O'HIGGINSES OF CHILI.

In 'A Short Description of the Republic of Chili," published at Leipzig, in 1901, occurs the following interesting reference to an Irishman named O'Higgins and his family, of whose prominent part in Chilian history very little is known in the land of O'Higgins' forefathers:—"Until the end of the eighteenth century the history of Chili has nothing particular worth recording; all progress was shackled by the poverty of the new colony, and the want of interest displayed by its Spanish governors. This sad state of things was at last altered by the appointment of Don Ambrosio (Ambrose) O'Higgins as administrator of the new country, which then began to make speedy progress. O'Higgins was an Irishman, and came as a trader to Peru, whence he was sent to Chili as the King's official. To his indefatigable activity is due the erection of a large number of public buildings; he built, amongst others, the Cathedral and the Mint, and erected in Santiago, dams as a protection against the continual overflowing of the Mapocho. In the course of his honourable and arduous administration, he also founded numerous towns, and facilitated the traffic by laying many country roads, which were in every way a blessing to the poverty-stricken land." When Chili, later on, endeavoured to throw off the yoke of Spain, many battles occurred between the Spanish troops and the Chilian patriots, in which the latter always remained victorious; but the engagement which took place at Rancagua ended in the annihilation of the troops of the revolutionary party. The leader of the patriots on this baneful, but still glorious day was the brave General Bernardo O'Higgins, a son of the former Governor Ambrose O'Higgins. After this defeat, O'Higgins, with the remains of his troops, fled to Mendoza, in Argentina. Here he met the Argentine General, Don Jose and San Martin, with whom he was on terms of intimate friendship. Both generals decided to equip a strong expedition to liberate Chili, and in two battles the Spaniards were completely beaten. These splendid successes brought the Spanish supremacy to an end, and assured the independence of Chili. After Chili had thus freed itself, San Martin and O'Higgins determined to send an expedition to Peru to drive out the Spaniards from that country too. In spite of Chili's great poverty the two plucky generals succeeded in equipping a small fleet of men-of-war to protect the land army. This fleet was soon strengthened by vessels taken from the enemy. This was commanded by the famous Lord Cochrane, who, by a daring coup de main, took possession of the Spanish ships lying in Callao Harbour, and thus cleared the way for the army, which was pressing onward under General San Martin, and entered Lima in 1821. During these events O'Higgins had remained in Chili as the head of the Government, and acted as administrator over seven years, until January, 1823."

On perceiving that public opinion was no longer satisfied with his administration, he preferred to retire from the Government, so as to save his fatherland from the terrors of a civil war. In thus acting he gave his fellow-citizens an example of the most noble unselfishness, and retired into private life in Peru. He died there, in the midst of his agricultural work at the beginning of 1842. His portrait is given in the book from which the above extract is taken. That the Chilians still revere his memory is shown by their naming their largest ironclad, "The O'Higgins." The writer of this note has seen some of his descendants in England, but they were not in appearance any way distinguishable from other South Americans of the better class.

Evoc.

THE HASTENING YEARS.

BY G. P. D. B.

Swiftly the shadows fly o'er field and glittering roof;
The trees in silhouette stand sharply out aloof,
And black against the sky. The bell in midnight tower
Chimes out across the silence, and the last swift hour
That marks the year is gone. The New Year dawns once more;
But with the old loved ones have passed to that bright shore
Beyond Time's utmost bound. Yet as the shadows fly,
So haste the years, dear heart, that now so darkly lie
Between us and the heavenly dawn. The East is red,
Look up; we soon shall meet again—be comforted.

COCOANUT EATING CRABS.

In the Dutch East Indies live a species of crabs which are accustomed to climb mangroves and palm trees for the purpose, it is believed, of feeding upon the fruit. Mr. C. P. Sliter, of Bantam, avers that he has seen these crabs climb to the top of trees fully 60 feet in height. Although he could not plainly see what they were about, he believes, from the behaviour of captive specimens, that they opened young cocoanuts and devoured their contents. It is doubtful if they can break the shell of a ripe cocoanut.

ULTAGHS.

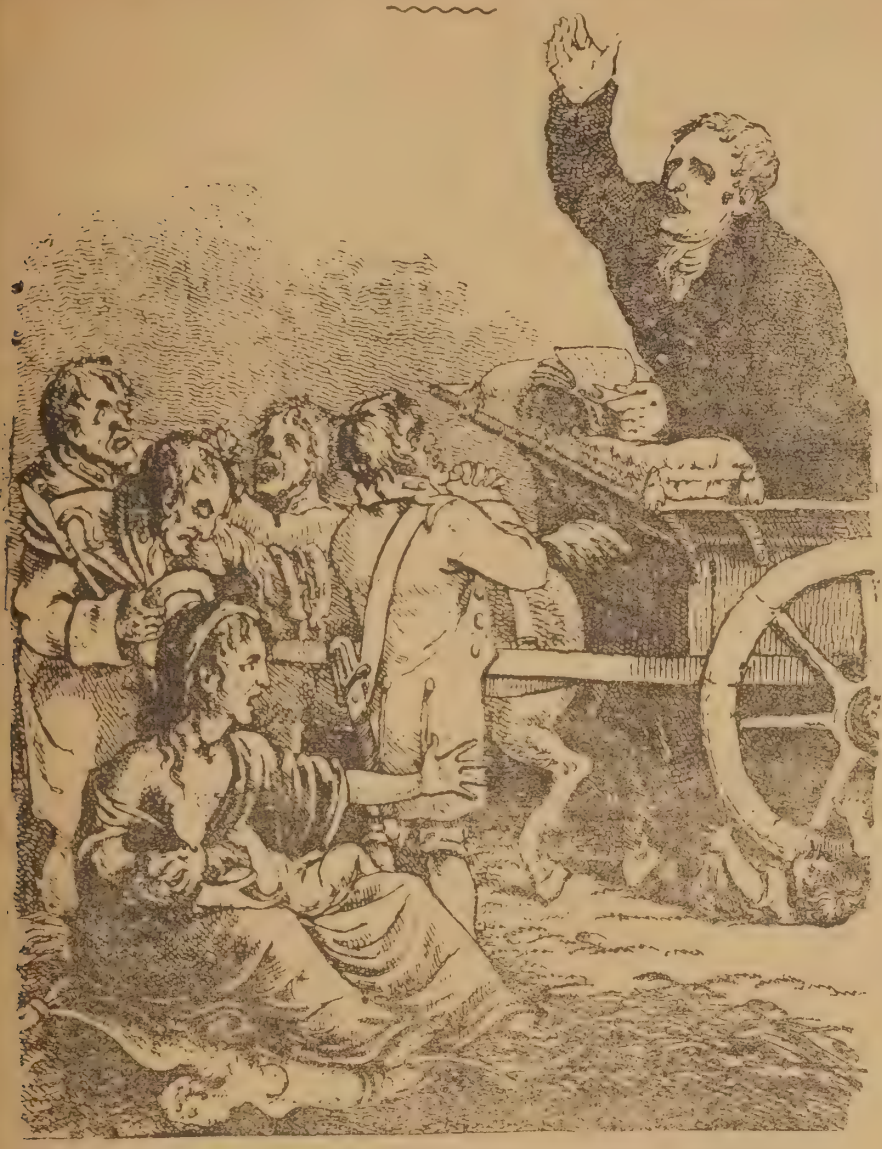
ULSTER FAMILIES DISPLACED BY THE PLANTERS.

BY REV. E. J. RYAN.

James VI., son of Mary, Queen of Scots, became King of Scotland in succession to his mother, on her abdication in 1567. In 1603 he became King of England also, immediately after Queen Elizabeth's death, with the title of James I., being nearest heir to the throne, by his descent from Henry VII., and he reigned under the union of the two crowns till his death in 1625. During his reign, in 1611, six counties of Ulster: Armagh, Cavan, Derry, Donegal, Fermanagh, and Tyrone, were confiscated to the extent of two million acres, and divided among English and Scotch Protestant settlers—portions being reserved to the natives. This event is known as the Colonisation, Plantation, or Settlement of Ulster. The ejected natives were driven out to the west and south of Ireland. Several parties of them came and settled in various places in Munster. These were called Ultaghs, an Irish name for Ulster people, a term extended to their descendants also. The soubriquet is applied to one branch of the families of Carey, and to the families of Benton, Carr, Devitt, Doherty, Loughman, McDonald, McHugh, Moore, Nolan, Quigley, Wade, and to other families from their surnames, besides families who are Ultagh only through the mother.

The name Carey is of different origin from Carew, which probably indicates an English descent. An Ultagh family name, Corehaun, is said to have been changed into Carey. Some members of the Carey family adopt, incorrectly, the name of Carew. It is likely that Carr was originally Kerr, both pronounced alike, of Ulster Scotch descent.

There is a tradition that a colony of Ulster people, driven out of their native county of Tyrone at the time of the Plantation, had with them a herd of cattle and a white bull, and that a wise woman—a northern soothsayer, told them to travel onward until on arising in the morning they should find the cattle lying in a circle about the bull, and to settle in the locality (1). This incident occurred, it is said, in a place called Clonasboe, the field of the cows, in the parish of Knockavella, about six miles north-westward from Cashel, Co. Tipperary, in the province of Munster. Clonoulty, in the neighbourhood, about seven miles south-westward of Thurles, was called after them, Clon-Ultagh, Anglicised into Clonoulty, the Ulstermen's field (2). It is said, furthermore, that these people gave the name to the parish of Clogher, the present civil parish, as a small hill upon which a church was built, was probably considered somewhat similar to the Clogher, in the Co. Tyrone.



Dwyer is said to have been the name of the

(1) In later times Ulster men and women used to travel occasionally in Co. Tipperary, collecting farm produce which they expected in considerable quantity, as alms. They used to employ herbs for curing diseases. The women had the reputation of being "knowledgeable," and used to tell fortunes, and give information of occult events. For these purposes they required silver coin.

(2) Some say the incident of the cattle happened in the rich Churchfield of Clonoulty, adjacent to the village.

ANOTHER "WATTY COX" CARICATURE.

(From the "Irish Magazine and Monthly Asylum of Neglected Biography," 1811.)

THE MAJOR TRYING A CHARITY SERMON IN MR. LATOUCHE'S TRAVELLING PULPIT.

Ulster party that settled in the locality, but possibly it was assumed as a precaution, as the name is a common one in the district, the O'Dwyers formerly being lords of Kilnamanagh, a barony which includes that portion of the country (3).

Ultagh families are found dispersed throughout the parishes of Clonoulty and Rossmore; Hollyford and Kilcommon; Upperchurch and Drumbane; and the northern part of the parish of Anacarty, in the vicinity of the village of Hollyford, almost all mountainous districts in the Archdiocese of Cashel and Emly.

Anaholty, in the parish of Castleconnell, Diocese of Limerick, derives its name from an Ultagh settlement, the word meaning the plain of the Ulster people.

It is alleged that in the circumstances in which the Ultagh refugees found themselves, they were obliged to subsist partly on horse-flesh. This allegation is still maintained, and their descendants are sometimes alluded to in uncomplimentary terms as horse eaters.

The mountain districts of Kilnamanagh were very wild at the time of the arrival of the Ulster colony, and long afterwards, although now well cultivated. In a portion of that territory the Ultagh residents were for a long time disliked as intruders by local inhabitants, and in some cases were subjected to harsh words and rough usage from them. The native people would not, unless in rare cases, intermarry with an Ultagh family. These invidious distinctions have long since practically ceased, and there is now a considerable mixture of the different families, while their northern origin is scarcely any longer considered a reproach to the Ultagh stock. The Ulster migrants left their native province under stress of political adversity, and both themselves and their posterity have proved useful citizens and respectable members of the society (4).

Hollyford, Tipperary.

(3) Kilnamanagh consists of two baronies: Upper and Lower Kilnamanagh. The area of Upper Kilnamanagh is 59,990 acres; of Lower Kilnamanagh, 42,042 acres; total, 102,032 acres, statute.

(4) From time to time isolated migrants from the north have become absorbed in the general population of the south.

THE FIRST MEETING.

A PAGE OF HISTORY.

By M. J. O'G.

'Twas night, and the streets of Paris trembled beneath the constant roll of carriages and other conveyances, bearing in quick succession many a distinguished personage and many a fair heart, to the Luxemburg Palace, in which a splendid fete had been prepared by Barras, the celebrated head of the French Directory.

It was in the year 1795, a period that will be always remarkable in the annals of the world.

The company which had assembled in the Luxemburg Palace on the evening our little sketch commences consisted of the elite of Paris and its neighbourhood, including statesmen well tried in the affairs of the Cabinet, old and stately warriors on whose rugged brows the marks of the battlefield were plainly to be traced, young and ambitious soldiers eager to emulate the actions of their seniors, and, though last, not least, beautiful and accomplished women. Together with being numerous, it was perhaps as brilliant and talented a throng as could have been assembled at the same period in any other city of Europe, and, consequently, in the world. For this evening were present many of those great men whom the French Revolution brought forth from the humbler paths of life to act so distinguished a part in the affairs of the world, and to whom were they inferior? Or what country could boast of men displaying higher traits of genius and originality than they did? And, although they may have directed their great attainments to the support of a wrong cause; although by their means, in some degree, a sovereign was placed on the Throne of France on whom the world looked with terror and fear, still the history of their actions cannot but excite our wonder, perhaps even more, our admiration. Need we say anything of the host—Barras, so well known, and so much admired, not merely for his own great and powerful talents, but for the facility he possessed of discovering those qualities in others, and for the generosity and kindness which he always evinced to those persons who were, of themselves, unable to bring their acquirements into notice? Placed at the head of the French Directory, and consequently the almost supreme ruler of France, how happy and successful were all his designs and plans. In his eyes neither the rich nor powerful enjoyed any superior advantages over the rest of their fellow creatures, unless they possessed the still highest of worldly blessings—understanding, and a mind capable of employing and disposing of that in a useful and becoming manner.

Barras, together with his other accomplishments, possessed a taste for society and refinement. Perhaps we might ascribe this to the highness of his descent, which was strictly noble. He was frequently in the habit of giving the most sumptuous entertainments to the distinguished persons that were then in Paris—a thing which a short time before, during Robespierre's dynasty, might perhaps have cost him his life—and it is at one of those meetings we have, as the reader may perceive, introduced ourselves to his notice.

The suite of ballrooms in which the company had assembled was furnished in a style of costly magnificence and taste. Beautiful and elegant chandeliers spread their pleasing light on all sides, which, as it sparkled and glittered on the rich costume of the soldier, seemed as if endeavouring to rival the fair sunshine. Soft and delicious music sent its strains through the rooms, and helped, by its charms, to lull and soothe the dark passions that dwelt in

many a heart present. Beauty, wit, and talent beamed on the countenances of all the guests, who were dressed in the highest style of fashion and elegance. Truly it was a rare, a noble assemblage. Here, in a retired part of the rooms, might be seen Reubel Latournou de la Manche and Reneillieic Lepaux—the well-known companions of Barras in the Directory—earnestly canvassing the cause of the resignation of Sieyes, the probability of who as successor—whether Tallien or Carnot. With noise, in another quarter, are a party of young officers disputing about some tactic in warfare, each offering his own opinion with all the confidence and impetuosity of youth. Apart from these, some old warriors are speaking in no complimentary strains of the formidable Dumouriez, whose sincerity to the Republic was about this time beginning to be suspected. Most, if not all, appeared determined to fulfill the purpose for which they had assembled, namely—to enjoy themselves to the greatest possible height, and, if one might judge from the scene around, all were pleased and content. Yet, among the varied and numerous throng that filled the Luxemburg Palace that evening, there was one who appeared as if present rather for the purpose of observing than joining in the merry scene around him. He was a young man, dressed in military uniform, with a pale and melancholy-looking countenance. His age, if one might judge from his looks, far exceeded thirty, though in reality he wanted many years yet of that number. He had, since his entrance into the ballroom, stood leaning against a richly-decorated pillar in a retired part of the saloons, apparently for the purpose of avoiding observation. But few in the crowded scene around him did he appear to know, and those not further than a nod or bow. No warm greetings met him. No friendly hand grasped his. To him, then, the world was all cold and careless. How long the young man might have thus remained is uncertain, had not his meditations been suddenly disturbed by the kind Barras himself, who, perceiving his absent air, feared least it might have been caused by any neglect on his part. "Venez mon cher, General," said he, seizing the officer by the arm, and leading him towards a group of some elegantly-dressed ladies. "Venez mon cher, General; throw aside that gloomy look of thine, at least for a short time, while I introduce you to the loveliest woman in Paris. Et pardieu, how fortunate! Here she approaches, and only two knights in her train. I am sure I have sufficient influence—." Before he could conclude they had reached quite close to the fair object of his praise, and truly he uttered no falsehood when he called her the loveliest woman in Paris. Had he a look into after events he might, perhaps, have added, the most fortunate, and still the most unfortunate, woman in Paris. "Permittez moi, madame,' said Barras, addressing his fair friend. "to introduce mon Jeune ami. Croyez moi. He is no home-made soldier; not the least recommendation to you, the inciter of every heroic and noble action." With a graceful movement did the lady accept the young officer's bras, and then proceeded with him to join the merry group of dancers in another part of the rooms.

. . . . . .

Seated at a window that overlooked a beautiful parterre, the close vicinity to which a delicious odour bore testimony, were the two friends. They were friends—yes, strict, tender, and rare. Friends such as the world seldom beholds. They had retired for a while from the busy scene of the ballroom to enjoy the pleasure of thinking and speaking alone, free from the flattery and adulation of which beauty and high intellectual endowments—and particularly when these qualities are united in woman—are always productive. That night they shone among the numerous assembly collected in the Luxemburg Palace, as the primary planets do among the inferior stars, though many of the latter are also bright and brilliant. That night had many a heart been excited by the highness of their thoughts, and many an eye dazzled by the beauty and splendour of their person; yet how kind, how pleasing were they to all, even to the most inferior, the most insignificant. Wearied from the attentions and compliments so unremittingly paid them, they took advantage of an incident that occurred in the rooms, by which the attention of most of the guests was attracted, to retire into a boudoir that opened from the suite of principal rooms, and which looked down on one of the flower-gardens of the palace.

It was a delightful evening, and the light of the moon made it appear—though late as it was—rather the decline of day than the middle of night, while now and then the pleasing strains of music might be heard in the distance, setting in motion many a fair and gallant form.

On various subjects for some time did the friends discourse—the calmness of the evening, the splendour of the moon—now shining in all its pride, the beauty and brilliancy of the stars. Now the conversation turns on the evening fete. At this point a gentle tap at the door interrupts their discourse, and, permission to enter being given, a fine-looking man walks in.

"Ah! my dear. How are you this evening? How fortunate I am to find you! I trust, madame, you are well."

"Very well, thank you, Monsieur Tallien," was the softly-spoken reply.

"And you, dear Tallien," said one of the ladies, and who was that distinguished person's wife, "we have not seen you this entire day. Engaged in some State affairs, I suppose?"

"Such was, in truth, the fact, ma belle. I had important business to transact with the Directory. It was very inconvenient that Barras could not attend."

"I saw him at tout-a-l'heure. He was inquiring for you; but, excuse me, my dear friend; you were about telling me of an incident that occurred to you to-night when Tallien's entrance interrupted our conversation."

"Oh, yes; as I was about joining your party, Barras stopped me, et introdu et a moi un officier de artilleris, very plain-looking, and with an unpleasant set of features. I had to endure dancing with him."

"What was his name?"

"I really forget it, as I did not hear it pronounced distinctly by Barras."

"Was he agreeable and pleasing in his manners and conversation?"

"Oh, no; he was quite reserved, and appeared to know very few in the rooms. I wonder why Barras invited him to the ball. He must be a person of some abilities to merit that honour."

"From your description, madame, I think I saw this person now, as I was passing through the rooms, walking by himself in the petit cabinet. I shall, ladies, with your permission, endeavour to find out who he is."

A short time having elapsed, Tallien again enters.

"I cannot find out, mescheres, the name of this young officer. Some persons to whom I have spoken say he has distinguished himself at Toulon, but, as I said before, no one knows his name. He may, perhaps, Monsieur, be a very clever and talented soldier, but I must confess—however unkind the observation may seem—I like not his looks."

And such was the first opinion formed by the woman of her future husband. Such were the feelings his appearance excited at the first view. Little could she then imagine that the brightest diadem that ever encircled the fair brow of woman was inferior to that which she was yet fated to wear through means of the plain, ill-looking officer that danced with her that evening; and little could she suppose, at the same time, how suddenly that change in her lot would turn—not through her own fault—into a source of misery and grief. What shall we say of her partner, the unknown, the unheeded in the numerous throng that filled the Luxemburg Palace that evening? He is yet to be a great man. For a long time will all his designs and plans succeed to his highest wish. Yes, as long as he adheres in his devotion to the lovely being that honoured him with her hand when unknown and uncared for by the world, so long will his success have no bounds. But, will he always remain unshaken in his allegiance to her? Will he always remember with what admiration and delight he first beheld her?

No; he fails in his duty to her, and everything with him fails. He deserts her for another, and, a short time after, he himself is left as solitary, where millions once vied with each other in expressing their admiration and delight for him. She is forced by him to leave the station which her virtues and good sense adorned, and he himself, in turn, is cast from the proud pinnacle of his greatness, to which he reached by his superior talents and acquirements, but which he lost by his injustice and rapacity. Ah! man! If then thou knewest as much as time has since revealed, how different, perhaps, would have been thy future destiny.

Need we say the above was the first meeting, the first introduction, between Napoleon Bonaparte, the then poor and unknown artillery officer, and Josephine Beauharnais, afterwards his companion for some time on the Throne of France, but from whom he was divorced, to enable him to marry Maria Louisa, daughter of the Emperor of Austria, an event from which historians date the first change in the good fortunes of Napoleon?

THE MAGIC OF A MANSION.

By Aloysius Coll.

Midway between the gates of Birth and Death,
Half-shadowed by Oblivion's border-wood,
Along a highway, hard with pilgrim feet,
A house, untenanted and empty, stood.

Wealth, gilded, came, with serf and prancing steed,
To dwell therein; and gold and precious stone
Glittered from rafter unto architrave—
But Wealth was cold, and lived her days alone.

Then Beauty knocked, and, entering with a smile,
Was given welcome, and a stately room;—
But never sister called on Beauty there,
And all her radiance faded in the gloom.

Power breached a wall, and locked himself behind
His sleepless guards and bars of tested steel:—
Beyond the help of friend, the wrath of foe,
He perished in his caution and his zeal.

The house grew old. Fame climbed an ivied wall,
And burned his deeds above the creaky door;—
But all men read the words of cold neglect,
And sought for Fame in that house nevermore.

Then Love, pursued by her own fear, one night
Took refuge in the mansion lone and drear.
A fire she kindled on the hearth—Behold!
A group of fellow fugitives drew near!

They warmed themselves before the blazing fire;
They sipped the wine for years in dungeons hid:
They found the bones of Wealth and Power and Pride,
And smiled about the foolish deeds they did.

Glad voices rang in many a startled room
Where silence dreamed her dusty dreams for years,
And laughter rattled many a shaky pane
Time's housekeeper had washed with misty tears.

And nevermore men pass that cheery house—
The young that ramble, and the old that tire—
Without a cup of comfort in its shade,
A moment's chat and rest before the fire!

THE ANCIENT AND PRESENT STATE OF THE COUNTY AND CITY OF CORK.

By CHARLES SMITH, M.D.

Æquum est enim meminisse & me, qui dissererem hominem esse, et vos, qui Judicetis ut si probabilia dicentur nihil ultra requiratis. Cicero Univers

In Two Volumes.

VOL. .

The Second Edition, with Additions.

BOOK II.

Containing the Topographical Description of this County, including the City of Cork.

Chapter II.—Continued.

The lands about Blarney are mostly under corn pasture; and dairies occupy the greater part of the adjacent country. The soil is a yellowish clay, which they manure mostly with lime. Plants growing near the lough were water horehound, water cinquefoil, angelica sylvestris, periclimenum, palma christi, iris lutea, pedicularis, &c. The wood to the N. side of the lough consists of oak, ash, birch, and alder, but was much greater than at present. In this wood are quarries of limestone. Plants observed in the wood were lingua cervina, circea, bugula, tutsan, tormentil, pimpernel with a yellow flower, arum, bear's garlick, eyebright, bulbocastanum; and on the rocks, adianthum, trichomanes, paronycha, rutac, &c.: this last in great plenty. On the S. side of the lough is a bed of white clay, probably a pipe clay. A few years ago, Robert, commonly called Lord Muskery, laid claim to a considerable part of this estate, being assisted with large sums by the late Duchess of Marlborough. But it was divided into so many hands that the suit seemed of too dangerous a nature to be suffered to go on; and therefore a petition was laid before the Parliament of England, and a stop put to any further proceedings.

At Blarney is a vein of limestone, from whence there is none to the north nearer than the Blackwater river. Daws-town (two miles N. of Blarney), the estate of John Putland, of Dublin, Esq., is a good house with a pretty plantation, occupied by Rowland Davis, Esq. Here are a very large flowering lime, good orchards, gardens and fish-ponds. About a mile to the S is Ballygibbone, a good house and plantation, held by Mr. Edward Butler, as is Kilowen, all the estate of the same gentleman. The castles of Cloghroe, Clogh-philip, and Carignavar belonged to the MacCartys, and were in the manor of Blarney.

As the small barony of Barrets runs through Muskery, I shall describe it before I proceed to the remaining part of that barony (14).

It takes its name from the ancient English family called Barret, of whom it is said that O'Neal, Earl of Tyrone, anno 1600, when marching by Castlemore, near Mallow, on his progress to Kinsale to assist the Spaniards, asked who lived in that castle? And being told, one Barret, who was a good Catholic, and his family possessed of that estate above 400 years, O'Neal swore, in Irish, "no matter, I hate the English churl as if he came but yesterday."

In the southern point of this barony (in the road leading from Cork to Bandon, four miles from the former) is a ruined abbey, called Ballyvacadane, founded by Cormac MacCarty MacTiege, surnamed Laider, for Austine nuns, about the year 1450. Part of the walls still remain.

Ballincolly, a large castle, not far distant, was an ancient seat of the Barrets, four miles from Cork. Anno 1600, William Barret, of Ballincolly, submitted to the Queen's mercy, having been concerned in Desmond's rebellion. This castle was garrisoned by Cromwell, and in the late wars for King James II. It is built upon a rock, and flanked with towers at each angle. The other chief seat of the Barrets was Castlemore, in the northern extremity of this barony. William Barret, of that place, Esq., was created a baronet June 4, 1665, now extinct. From the castle of Carrigrohan, in the liberties of Cork, the river Lee runs through this barony about six miles, dividing it from Muskery. Upon this river are several seats: On the north side is Iniscarra, a decent church, and neat-built parsonage house. Sirmount, the seat of Emanuel Moor, Esq., lies a mile more to the W. on a rising ground over the Lee; it is finely wooded on the east side, and has a good south prospect of a great extent of country. Not far from, and opposite to this, are the remains of a castle, named Castle-Inchy, which gave title of baron to Justin, Lord Viscount Mountcashel. Coronody, more to the west, is the seat and improvements of Mr Cross, east of which is Fergus, Mr. Farmer's, a good plantation. A mile north of Iniscarra, on a rising ground, is Ardrum, a pleasant seat of Sir John Colthurst, who was created a baronet, August 3, 1744, near which is the village of Cloghroe. More west stands Ballyally, an handsome house and park of Colonel Nicholas Colthurst. The river Dripsey divides this barony on the west from Muskery, over which is a fair bridge of eight arches; and not far from it the castle of Carrignamuck, now inhabited by Mr. Bear. This castle belonged to the MacCartys, being built by the founder of Blarney. In this place, which lies on the Muskery side of the river, Cromwell had a garrison for a considerable time. The northern part of this barony is coarse and mountainous. The most noted place in it formerly was Mourne, or Ballynamony, in which was a preceptory of Knights Hospitallers, or Knights of St. John of Jerusalem (15), founded in the reign of King John, under the invocation of St. John Baptist, by an English gentleman called Alexander de Sancta Helena. The Irish call it Monaster na Mona. It had several great possessions, particularly a large domain on the spot, five plowlands in the parish of Temple-Michael in Muskery, besides a great number of parish tithes. The brook which runs on the north of it into the Clydah river is, in old records, called Glame Ballycollen; and the land on which it was erected named Ballyknockane. The possessions of this preceptory were granted to Tiege MacCarty, whose descendants forfeited them by the rebellion of 1641; yet they are still called by the name of masters of Mourne. By an inquisition taken at Cork, Nov. 4, anno 1584, Ballynamony was found to be an ancient corporation. It was destroyed soon after (16) the death of the Duke of Clarence, Lord Lieutenant of Ireland, by Morogh O'Brien, who in the reign of King Edward IV. rebelled in Thomond, ruined several walled towns in Munster, and, in this county, Mourne and Buttevant. It is situated on the high road, three miles S. of Mallow. The body of the ruined church still remains, which was 180 feet long. The foundation walls of the preceptory enclosed several acres of ground. The south was defended by a strong castle, which was lately standing, and there were two towers to the W., but several parts of it have been of late demolished, and the stones used in repairing the turnpike road. In the church are some grave-stones of the Barrets, Quinlans, and other ancient Irish families.

A short way from this ruin is a small, well-finished church and steeple, adorned with a spire and weather-cock, called Ballynamona, rebuilt A.D. 1717, at which time, in the ruins of the old church was found a large spur and the head of an antique spear, probably belonging to one of the knights buried here in his martial habiliments. They were given to the late Sir Matthew Deane, who contributed to the building of the church. Over the W. door, on the steeple, is this inscription:

Gloria Deo in excelsis
Templum hoc Antiquum
De Temple-Michael alias Mourne-Abbey.
Jam diu dirutum
Reconditum fuit

Anno Redemptionis MDCCXVII.
Et ab inauguratione serenissimi
Georgii Domini Regis tertio.
Fear God, honour the King.

(14) It contains 15 parishes, viz, part of Carrigrohan-beg, Iniscarra, part of Matehy, part of Donaghmore, Kilcoleman, Aglish-Greenagh, part of Garricloyne, Mourne, Desart, part of the Ovens, part of Kilnaglory, part of St Finbar's, Carrigrohanmore, and Desart. The whole containing 86 plow-lands, and 26,282 acres.

(15) This preceptory belonged first to the Knights Templars, who were suppressed in Ireland, by order of King Edward II, anno, 1307, directed to Sir John Wogan, lord deputy, who executed the same on the 3rd of February that year. It was computed that the king got £400 value of their effects in Ireland; a great sum in those times. The Templers' lands and possessions were, soon after, given to the Knights Hopitallers.

(16) Davis's Hist. Relat.

Bottle-hill, midway between Cork and Mallow, is remarkable for a stout skirmish fought there between the English and King James's forces, on the 29th of April, 1691, wherein the former got the victory, which will be more particularly related in the third book of this work.

The barony of Muskery (17) is bounded on the N. by an uncultivated mountainous tract, upwards of ten miles long, and in some parts six miles over, called the Boggra, which is a common to the adjacent estates. In winter it is, for the most part, deep, marshy, and unpassable; but in summer hard and firm, producing grass and heath, and is then grazed by vast herds of cattle, which are removed to the lower lands when this season is over. This tract, though it stands high, is yet flat, and surrounded by higher grounds almost on every side, particularly to the N and W. The whole place is covered with black fogs for the greatest part of the year. Several considerable rivers, besides an infinite number of brooks, flow from this wild country. On the south, the most considerable are Blarney river, the Dripsy, the Lany, the Foherish, &c., which empty themselves into the Lee. On the north, the Clydagh, the Lyre, the Covane, Racool river, and the Fin-Awn, which discharge themselves into the Blackwater.

These lines of Mr. Thomson make no ill-drawn picture of the Boggra:

——— The brown burnt earth
Of fruits and flowers, and every verdure spoil'd,
Barren and bare, a joyless, dreary waste,
Thin cottag'd; and in time of trying need
Abandon'd ———
Those roving mists, that constant now begin

To smoak along the hilly country, these.
The mountain cisterns fill, those grand reserves
Of water, scoop'd among the hollow rocks,
Whence gush the streams, the ceaseless fountains play,
And their unfailing stores the rivers draw
To send a thundering torrent to the main.
Thomson's Seasons.

To the west of the Boggra are the mountains of Mushry, as they are commonly called, but rather of Muskery, and are distinguished into Muskery-more and beg, i.e., the larger and lesser mountains. These range partly north and south, high at both extremes, and hollow in the middle, and are esteemed the highest in this county. The upper part is covered with sedgy grass and bog, the rocks with London pride. The torrents have worn several deep furrows into their sides, which display no other soil but slaty pebbles, of a red, white, and dark colour, but nothing of any metallic substance.

The parish of Donaghmore lies in the N.E. part of this barony, and bounds the Boggra. A considerable part of it belongs to the see of Cloyne, together with a vast tract of the Boggra, which, by degrees, might be reclaimed. The patron saint was named St. Lachteen, and some years ago the parish priest kept here a brazen hand, as an holy relic, by which the people swore upon all solemn occasions; but this hand was removed by one of the titular Bishops of Cloyne. There are, of late, some very good improvements in this parish, as at Donaghmore, the Rev. Horace Townshend's; Derry, Mr. Daniel Gibs'. The Recorder of Cork, Joseph Bennet, Esq., has also a pretty lodge here.

The next parish, to the west, is Aghabolloge; near the old church is a celebrated well dedicated to St. Olan. In the churchyard is a stone, called St. Olan's cap, by which the common people also swear on all solemn occasions; and they pretend that if this stone was carried off, it would return of itself to its old place. At Magourney, a particle of this parish, is a new parish church and decent glebe house.

Mount Rivers, in the same parish, the house and improvements of John Whiting, Esq., commands a fair prospect to the south. Near it, a large human skull, almost double the common size, was some time ago dug up. Three miles E. of Macroomp stands the castle of Carrigadrohid, built on a steep rock, in the middle of the river Lee, by one of the Macarty family. It is said this romantic situation was the choice of the Lady O'Carrol, wife to MacCarty; yet others say it was built by the Learys. This bridge and castle formed a noted pass in the wars of 1641, and was often taken and recovered by the contending forces. It is in good repair, and inhabited by John Bowen, Esq. The way from this to Macroomp leads through a deep, gloomy, hollow way, called Glincaum, i.e., the crooked Glin; on either hand is a perfect wall of steep, craggy rocks, covered in some places with oak, ash, and birch, at the roots of which grew polypody in plenty, also a good quantity of the adianthum nigrum and trichomanes. To the south of this hollow way stands the high tower of Mashanaglass, built by the Mac-Swineys (18). The N. bank of the Sullane, being from hence, westerly, very rocky, is covered with heath and firs; the south side is not much better; yet in some places there are dairy houses, the land being generally meadow and pasture, and the soil a kind of brown, brittle clay.

Places E. of Macroomp are Omerg, Mr. Thornhill's; and Dromy, Mr. Moore's. A mile E. of Macroomp is a new erected bridge over the Sullane, being there joined by the Lany, a small distance from the bridge, whence, running a S.E. course, they enter the Lee. About three hundred yards N.W. of New-bridge, in a meadow near the bank of the river, are three large stones, set on an edgeways to each other, the middle one being 5 feet broad, 7 in height, and 2 thick, but the others much smaller; about 600 yards S.E. from the former is another stone set up, less than the middle one before-mentioned, but larger than the side ones. These stones (19) are said to be erected in memory of a celebrated battle fought here by Brien Boruma, King of Munster, and the O'Mahonys of Carbery.

(To be Continued.)

(17) It contains the following parishes, St Owens, or the Ovens, a part of St Finbar's, Ballynaboy, Desartmore, Knockavilly, Kilbonane, Moviddy, Aglish, Canaboy, Macloney, Kilmurry, Kilmihil, Inchegeelagh, Kilnamartery, Macroomp, Aghabolloge, Aghinagh, Kilcoleman, Matehy, Iniscarra, Donaghmore, Dunbolloge part of Whitechurch, part of Greenagh, Templemichael, being 160,072 Irish plantation acres, and 367 plowlands.

(18) King James I, on the 13th of April, 1612, directed a letter to Sir Arthur Chichester, lord deputy of Ireland, in behalf of Owen Mac-Swiney, alias Owen Hogy, of Mashanaglass, to accept the surrender of his lands, and to grant a patent to restore them to him. This Owen was particularly recommended to that prince, by the Lord Danvers, president of Munster, and Sir Richard Morison, vice-president, for having performed many faithful services in that king's reign, and in Queen Elizabeth's. He had also testimonials from Sir Charles Cornwallis, who was ambassador in Spain, of his dutiful and loyal behaviour; and how much he suffered for it in his fortune and reputation during his abode here, by the malignity of his countrymen. Owen Mac-Swiney, son to the above queen, was attainted, anno 1642, for being concerned in the Irish rebellion, and forfeited his estate. (From original MSS.) Mashanaglass signifies a stronghold or fortress.

(19) According to an ancient Irish chronicle, which relates the actions of Brien Boruma, king of Munster, that prince (in the second year of his his reign) sent an herald to challenge Miles Mac-Broin, who was chief of the Mahonys, and king of Oneachach (a part of S. Carbery) to fight him in a pitched battle, in the plains of Beallagh Leachta (i.e., the road of Saint Leachta, the patron of Donoughmore), which was near Macroomp, in order to seek revenge for the death of his brother, Mahon, who was murdered by O-Donovan Mac-Cahill, chief of that sept, and a dependant on O-Mahony. The king of Carbery accepted the challenge; and besides his, and O-Donovan's forces brought 1,500 Danes to assit him. The battle was furiously fought on both sides; but Brien and his forces being superior in number, broke through the enemy, and made a great slaughter, most of the Danes being slain. Keating also mentions this battle, Book II., p. 81.

The like stones have often been erected, to perpetuate the memory of singular actions, in those early ages, both on civil and religious account, and sometimes as trophies of a victory, as those mentioned by Plutarch; which were first of wood, that they might soon consume; and those it was prohibited to renew, lest the remembrance of ancient quarrels should be perpetuated.

THE MESSAGE OF THE BELLS.

BY MARY J. STAFFORD.

Ring out, blithe bells of the New Year,
Ring out to all your summons clear,
Message of hope, despair to quell,
Is borné upon your silvery swell.

Ring, bells of cheer, across the snow
Till with courage faint hearts glow.
Hath friend seemed faithless, love grown cold?
Hast lost that wand of magic, gold?

Saddest of all hath death snatched one,
Whose presence was to thee life's sun?
Yet look not back. The darkest cloud
But serves an azure sky to shroud.

Thy friend his fealty yet may prove,
Love that could change was never love,
And folly 't were lost wealth to mourn,
While fickle fortune's wheel doth turn.

Grim death, though conqueror of clay,
Bows to a mightier Conqueror's sway,
Thy loved one hath but crossed Time's sea
To its fair shore—Eternity.

THE MEMORY OF A BEE.

Associative memory, says Professor E. G. Conklin of the University of Pennsylvania, is the fused impressions of processes which occur together, so that when one is recalled the other comes with it. Then he adds, "There is no question whatever that a bee leaving its hive and flying for half a mile finds its way back by associative memory. It must travel by landmarks; it cannot travel by any scent of itself in the atmosphere. That is out of the question." Among other creatures giving evidence of the possession of associative memory, which is the first stage in the development of psychic life, Professor Conklin mentions ants and wasps, as well as cuttlefish, squids and the higher mollusks. Birds and many mammals show a high degree of associative memory.

CHRISTIAN THEORY OF THE ROUND TOWERS.

By George Petrie, R.H.A., V.P.R.I.A.

The class of buildings of which I have now to treat, and which gave origin to this lengthened inquiry, though only holding the places of accessories to the principal churches in Ireland, have yet, from the peculiarity of their form, and the wild theories which have been promulgated respecting their ages and uses, been regarded as objects of greater interest and importance than even the ancient churches themselves, or, indeed, than any other class of ancient monuments remaining. The inconclusiveness of the arguments and evidences which have been adduced to sustain the various theories assigning them a pagan origin, have been amply discussed in the First Part of this Inquiry, and to those who have accompanied me through that investigation, as well as through the preceding sections in this part, I can hardly imagine that it will appear necessary to occupy much space now with evidences to prove either their Christian origin, or the uses to which, by Christians, they were applied. I, at least, am persuaded that to any one having a tolerable acquaintance with medieval architecture, a sight of a few of these remains, or of accurate detailed drawings of them, would be alone sufficient to convince him, not only of their Christian date, but of the primary purposes for which they were constructed. But as I have to write not only for such persons, but for those also who are less instructed in such knowledge, and, as a consequence, are, for the most part, imbued with prejudices difficult to be removed, it is necessary that I should present them with such more direct evidences, on these points, as must necessarily lead their minds to a conviction of the truth.

Previously, however, to my entering on those evidences, I feel it necessary to impress on the memories of those who may still cling with tenacity to the theory of the pagan origin of those structures, a summary of the facts which, in refutation of that theory, I conceive I have already established.

1. That not even the shadow of an historical authority has been adduced to show that the Irish were acquainted with the art of constructing an arch, or with the use of lime cement, anterior to the introduction of Christianity into the country; and further, that though we have innumerable remains of buildings, of ages antecedent to that period, in no one of them has an arch, or lime cement, been found.

2. That in no one building inIreland assigned to pagan times, either by historical evidence or popular tradition, have been found either the form or features usual in the Round Towers, or characteristics that would indicate the possession of sufficient architectural skill in their builders to construct such edifices.

3. That previously to General Vallancey—a writer remarkable for the daring rashness of his theories, for his looseness in the use of authorities, and for his want of acquaintance with medieval antiquities—no writer had ever attributed to the Round Towers any other than a Christian, or, at least, a medieval origin.

4. And lastly, that the evidences and arguments tendered in support of this theory by Vallancey and his followers—excepting those of the late Mr. O'Brien and Sir William Betham, which I have not thought deserving of notice—have been proved to be of no weight or importance.

In addition to these facts, the four which follow will be proved in the descriptive notices of the ancient churches and towers which will constitute the Third Part of this Inquiry.

1. That the Towers are never found unconnected with ancient ecclesiastical foundations.

2. That their architectural styles exhibit no features or peculiarities not equally found in the original churches with which they are locally connected, when such remain.

3. That on several of them Christian emblems are observable; and that others display, in their details, a style of architecture universally acknowledged to belong to Christian times.

4. That they possess, invariably, architectural features not found in any buildings in Ireland ascertained to be of pagan times.

For the present, however, I must assume these additional facts as proved, and will proceed to establish the conclusions as to their uses originally stated; namely, I. that they were intended to serve as belfries; and II. as keeps and places of strength, in which the sacred utensils, books, relics, and other valuables, were deposited, and into which the ecclesiastics to whom they belonged could retire for security, in cases of sudden predatory attack.

AMONG THE VENEZUELAN ISLANDS.

BY A PRESBYTERIAN CLERGYMAN.

The entrance into the Parian Gulf from the Caribbean Sea is through a series of channels, deep and narrow, called Bocas or mouths, which divide into several islands a long peninsula stretching westwards from the north shore of Trinidad. Chacachacare is the longest of these islands, and the last looking across to Venezuela close at hand. It consists of ranges of hills about 600 feet high, greeny, and abruptly dropping into the sea, leaving here and there at considerable distance from each other, sandy bays with cocoanut trees and valleys quickly narrowing as they run up the hillsides. In these bays there is nearly always a summer cottage, or I should say a sea cottage, for it is always summer in these regions, and away from the cottage, thinly scattered negro cabins. The village of Chacachacare, situated on one of these bays, has about thirty houses planted anywhere, made of wattle with roof of palm leaves; or of mud covered with zinc. The schoolhouse alone is made of wood, and playing around it are many children, most of them clothed in rags, some having one garment and some having none. Opposite the village, but on the other side of the bay—La Tinta Bay—is the Church, a neat Roman Catholic frame building. On pursuing the circular road to it from the village we discover that the island is almost divided into two, and a sixth Boca formed. We come to a narrow neck of sand, on the north side of which is the Spanish Main, and on the south side the Parian Gulf, and right between is a cottage of concrete from which one can throw a stone into either sea. Cocoanut trees give shade and deliciously cool drinks, and immediately rise to the right and left, steep, lofty hills covered with cacti, green trees, and underneath them huge century plants. This is our home for a few days. At the north door is a crescent stretch of white sand and high rocky bluff at each horn. That on the right is bright red, with streaks of grey, and perfectly bare till the greeny rounded head is reached. That on the left is a huge mass of grey, shining like a mountain of silver, dotted with clumps of century plants and crowned with tree cacti. Before touching the water it suddenly splits and throws out a rocky islet, black with white lines of quartz. Round it the pelicans are ever wheeling, making shallowy detours of the bay, quickly descending with a great splash into the water, seizing their prey, and again on unwearied wing. The water seems teeming with fish; we see them leaping gleefully into the air; but their number will be smaller ere the sun goes down, for the fisherman comes round in his little boat for the wicker prisons sunk early in the day, and tumbles out upon a pile of pebbles, the finny captives of marvellous colours, mullet and king, and champion, and others as he choses to name them, beautiful in life, gold and silver, and black and green, and spotted, the very thing for an aquarium, but with another destiny in store for them.

What a glorious sunset! Now the great orb that has been fiercely blazing all day, is hurriedly departing behind the lofty peaks and rounds of the Venezuelan mountains. A circle of fire he seems in a yellow plane, dissolving into the softest loveliest blue, then into bands of brightest red, and cloudy masses of silver grey and black, changing into every variety of form and shade of colour, till blackness conquers, and darkness, dense darkness, covers land and sea. Then over mountain sides and through the surrounding foliage, myriads of fire-flies rush forth as at wizard call, and flash hither and thither over all, and through all, their brilliant scintillations, as the place had become the frontier of that glorious dome above, with the Plough right overhead, and the Southern Cross in the horizon, and the stars and planets thickly strewn, of marvellous size and lustre.

But the sunset is not always so. Last night there came rushing round the precipitous height and Pelican Isle, a huge cloud, black as night and thick, which spread itself over the whole main as a funeral pall. Then gathering itself up settled on the mountain tops, and down all, completely blotting out the grandeur of the departing sun, and rapidly throwing blackest night over the whole landscape. We hasten within the cottage between the two seas, behind, before and the two mountains, right and left. The wind has risen from a breeze to a gale; from a gale to what seems to us foreigners a hurricane. All night through it madly raged. The oceans on both sides rolled up their waters and dashed them on the rocks and sands with terrifying roar and hiss. The rain descended, not in drops but in oceans, and with a noise that mingling with the rage of seas and the awful howl and rush of wind, filled with fear the puny mortal lying in stillness and sleeplessness.

In the morning all was peace and sunshine. No trace of storm was visible, save a pool here and there in rocky hollows, and overflowing tanks and cisterns with heaven's precious boon. Dinah, the nearest cottager, is broad, tall and stately, black as ebony, with a pipe in her mouth, and a bottle on her head, with yellow green bodice and skirt buncher around her, ending midway in rags and tatters, over a snowy petticoat stiffened with starch, and surrounded with countless tucks and rows of insertion, and ending with inky ankles and feet, massive and flat. She has come with milk for early coffee, and will linger until she is seen, and sees.

LOOK OUT FOR YOUR PATE.

A contemporary says "pate" is slang for head. It is, eh? Wherefore? Surely the word is used in a trivial or derogatory sense, as noddle, noggin, cranium, brainpan, etc., but its origin is eminently respectable. Shakespeare says "the learned pate ducks to the golden fool." Pope's epigram is good:

You beat your pate and fancy wit will come;
Knock as you please, there's nobody at home.

We have "bald pate" and "shave pate." Why, the word is used once in the Bible, and by David, in Psalm vii. 16, "His mischief shall return upon his own head, and his violent dealing shall come down upon his own pate." Accurately, pate does not mean the head, but the crown of the head.

LITERARY NOTES.

In answer to its question concerning the books of 1902, the "Academy" has received the following belated reply from the editor of "Punch": "Regret inability to signal out any 'two new books that have pleased and interested me most in 1902.' All that I came across and read have pleased and interested if they didn't I dropped them at the 20th page."

✧ ✧ ✧

Mr. Stead has kept fiction out of the "Review of Reviews" for twelve years. With the January number he proposes to introduce in it in a rather startling manner. We are to have an endless romance, each chapter of which is to treat of some current event. How far fiction and reality are to meet and kiss each other in this new departure we do not know. But we may trust Mr. Stead's versatility to give us something surprising. This is a generation of up-to-dateness, and if such schemes do no more than make us return with pleasure to old-fashioned quietness, they have not been exploited in vain.

✧ ✧ ✧

Mr. Frank T. Bullen, who was the guest of the Authors' Club the other evening, explained how it was that he took to literature. Being dissatisfied with an income of £2 a week, he wrote a book, "The Cruise of the Cachelot," for which he received £100. Mr. Bullen was certainly fortunate in receiving so much for a first book. Then a review appeared in the "Times," and people began to ask him to write. That dissipated the idea that his first book was also to be his last, and Mr. Bullen has continued to write ever since, though not always with his original freshness. Indeed, we fear (a literary contemporary remarks) that Mr. Bullen's tendency is to forsake literature for preaching. The two things are not wholly incompatible, but the instances of their satisfactory union are extremely rare.

✧ ✧ ✧

"Punch's" sketchy interview this week is with Mr. J. M. Barrie. It opens thus:—

We found Mr. Barrie by the Round Pond in Kensington Gardens, cleaning his bonnie briar-root pipe and thoughtfully watching a yacht race.

"Jolly place," he said, "if it weren't for the Big Black Birds. Look at that one"—and he pointed out a predatory specimen with a beak full of food ravished from an adjacent perambulator: "Can you conceive anything odder and stouter? It terrifies me. Or rather," he added in a whisper, "he terrifies me. For his name is Peter Robinson. Or is it Jay?" he asked in tremulous accents.

We murmured something about the courage of a man who could stand up to fast bowling.

"Ah," said Mr. Barrie, removing his pipe and gazing at the contents of the bowl, "in some matters I am a Craven."

Mr. Barrie, it is needless to say, went home in a perambulator.

✧ ✧ ✧

Thackeray was noted, among his varied accomplishments, for the facility with which he could rattle off and illustrate "familiar letters" in the form of rhymed prose. An excellent unpublished specimen of his cleverness in this line is included in a collection of letters and drawings by Thackeray to be sold at Sotheby's next month. This collection was the property of the late Miss Kate Perry and her sister Mrs. Elliot (nee Jane Perry), the intimate friend of Thackeray. The letter referred to runs: "Well, I thought as sure as sure could be, should find a letter from kind J. E. Pray why doesn't she write to me? I'd like to know, and if not she, where's her sister. Miss K. P.? One or other is surely free to send a line to double you tea. What is the reason? I have often said. Are Kate and Jane both ill in bed Is that little shivering greyhound dead or has anything possibly happened to Fred? or have they taken a friend instead of that old fellow they've often fed (along with Venables, Clem, and Sped) with a broken nose and a snowy head? Tell me, how shall the riddle be read" In the same piece of fooling sent to Mrs. Eliot (December, 1856), he mentions that he had "more than 3,000 in the City Hall in Glasgow" at his lecture.

✧ ✧ ✧

The "News-Sheet" of the Bibliographical Society publishes some interesting details, taken from an interesting lecture by Mr. Falconer Madan, of the production of books by the Oxford Press. The history of printing in Oxford is comparatively easy to trace; the history of London printing, on the other hand, is too vast a subject to be dealt with exhaustively. The Oxford Press became really active in 1585. This, said Mr. Madan, was brought about by no special cause, but sprang rather from the increased social status of the University due to Elizabeth's policy. In 1625 a steady rise began, mainly due to the activity of Laud, who secured the University even greater privileges than those bestowed on Cambridge by Henry VIII. The following table gives a rough estimate of the production of books by the Press during successive half centuries:—

1585-1860	125
1601-1650	1.170
1651-1700	1,520
1701-1750	1,000
1751-1800	1,100
1801-1850	3,200
1851-1900	8.000

This makes the fine total of 16,000 volumes.

✧ ✧ ✧

We should like to believe that true, but history and experience are not in agreement with Mr. Norris. He is merely worshipping an ideal, that abstract "People" which does not exist as a court of appeal in matters of literature and art. By all means let our novelists strive after truth, but it does not follow that if they hit the bull's-eye they will get the prize. In a short prefatory note on the article in question, a letter from Mr. Hamlin Garland is quoted, in which he says of Frank Norris:—

He was the handsomest, bravest, brightest man of letters I ever knew. He looked at things American in a large way, and his work was sincere and very strong. And yet great as "The Octopus" and "The Pit" are, they were only the first-fruits of a tremendous creative energy. But after all is said I come back to the keen sorrow that seizes me as I remember his face, as beautiful in its cheery, blithe fashion as Edwin Booth's was in its sombre fashion. Norris was to me one of the most enviable of all men I knew. . . . I cannot realise that he has gone into the dark and cold.

✧ ✧ ✧

The Censor of plays may be said to live in hot water. Now we have Mr. Walter Stephens, who announces himself as part author of "Brown at Brighton" (presently to be produced), writing to the papers to say that he has been refused a licence for a play called "Paradise Lost." The play is founded on what Mr. Stephens calls Milton's "great epic poem," and the licence has been refused on the ground that it is "scriptural." Mr. Stephens complains that he is now compelled to produce his play in America and Germany. We know nothing, of course, of the merits either of "Brown at Brighton" or "Paradise Lost," but we suggest to Mr. Stephens that he should adopt a pseudonym for one or the other of his dramatic ventures. "Paradise Lost," by the author of "Brown at Brighton," would hardly look well even on a play-bill.

✧ ✧ ✧

The Christmas number of the New York "Critic" publishes a posthumous article by Frank Norris on "The Responsibilities of the Novelist." The author of "The Octopus" took the profession very seriously. He writes with youthful enthusiasm of the possibilities and responsibilities of the modern novelist, and on the whole what he says is sound enough, though it is not always quite logical. The novelist, he says, "more than all others should be careful of what he says; more than all others, he should defer to his audience." But that deferring to the audience (the "Academy" remarks) is one of the weaknesses of modern fiction; it means not only that the writer endeavours to avoid the wounding of the susceptibilities; it means also, in many cases, that he persistently presents an unsound view of society and life. A tradition has been set up, and to that tradition he conforms because, true or false, it is in the air. And in this passage it seems to us that Mr. Norris wrote without sanction:—

It is all very well to jeer at the People and at the People's misunderstanding of the arts, but the facts are indisputable that no art that is not in the end understood by the People can live or ever did live a single generation. In the larger view, in the last analysis, the People pronounce the final judgment.

✧ ✧ ✧

In "House Mottoes and Descriptions: Old and New" (Elliot Stock), by S. F. A. Caulfield, the author has collected house mottoes and descriptions from London and the English counties as well as from Scotland and Ireland. There is also a collection of foreign inscriptions, and many examples from bells, sundials, organs, and so on. Amongst the most remarkable of mural inscriptions were surely the following, which decorated the north, south, east, and west gates of the ancient city of Galway:—

From the ferocious O'Flahertys,
Good Lord, deliver us!
From the devilish O'Dalys,
Good Lord, defend us!
From the cut-throat O'Kellys,
Good Lord, save and keep us!
From the murderous O'Maddens,
Good Lord, preserve us!

✧ ✧ ✧

Since our last issue we have received (says the "Academy") the following additional replies to our question as to what books had most pleased and interested our readers:—

The Dean of Ripon—I have been unable to read new books for some time past, and I therefore cannot give any recommendations.

Mr. I. Zangwill—Berenson's "Study and Criticism of Italian Art," Jerome's "Paul Kelver." Have also enjoyed making Captain Kettle's acquaintance this year.

Mr. E. F. Benson—"The House with the Green Shutters," "The Phantom Millions."

Mr. Robert Hichens—Mathilde Serao's "La Vie en Detresse,'' Gustave Flaubert's "Correspondance."

Mr. F. Anstey—Joseph Conrad's "Youth," R. Hichen's "Felix."

✧ ✧ ✧

The New York "Bookman" prints an article entitled "The Poe Cult." The writer says: "One of the most astonishing facts in the literary annals of America, if not of the world, is the amazing rise of what may be called the Poe cult. The unhappy master of 'The Raven' was the victim of a fate more strange, more romantic, more tragical than poet ever imagined or novelist ever penned." The present recognition and enthusiasm for Poe in America is rather remarkable, for Poe was not in any way a typical American in matters of art His appeal, a literary contemporary remarks, was rather distinctly un-American; his prose owed much to France; his verse was entirely his own. In England he cannot even now be said to be popular: certain of the stories are well known, and everyone is familiar with "The Raven" and "The Bells." But he wrote finer things in verse than those poems, things more truly great. There are passages in "The Raven" which must always strike one as mere upholstery, and now and then "The Bells" has too mechanical a clang. For "The Raven" Poe received ten dollars; the writer in the "Bookman" estimates that if the original manuscript were in existence ten thousand dollars would glady be paid for it by one of those American millionaires who buy manuscripts, gems, houses, or horses with equal lavishness and disregard of value. The commercial value of Poe's letters is astonishingly high; we are told that they are worth five times as much as Byron's, twice as much as Shelley's, and a hundred times as much as Lowells and Longfellow's. A new edition of his works in seventeen volumes has just been published in America. It seems a curious comment upon that funeral in 1849 which was attended by only eight persons. Yet even then there were those who counted him amongst the immortals.

SCIENTIFIC TOPICS.

Germany's match-making industry, in which about £1,800,000 is vested, is said to be almost ruined by the output of the American Diamond Match Company's new factories near Mannheim. Six months ago matches made in German works were sold at £4 a case; now they are selling at £3 4s. a case, which is four shillings below the cost of production by German machinery. The Diamond Match Company uses machinery made in the United States.

✧ ✧ ✧

Bessel in 1831 first discovered the mass of the rings of Saturn by observing the motion of Titan, his largest satellite. The approximate mass obtained is admittedly large. Professor Hall, in a recent number of the "Astronomical Journal," has determined the mass of the ring to that of the planet as 1 to 7,092. This gives the ring a mass only two-thirds that of Titan, whose mass is to that of Saturn as 1 to 4.500.

✧ ✧ ✧

Desmoulieres has examined the colouring matter and sugars contained in apricots. He finds that the former can be removed from both acid and ammoniacal solution by amyl alcohol, and appeears to be identical with carotin. The sugars extracted were saccharose, invert sugar, and glucose, the proportion of the latter being small in ripe fruits, but larger in unripe fruits (0.353 and 0.771 per cent respectively).

✧ ✧ ✧

While there are probably large undeveloped mineral resources in other provinces of Cuba, mining as an employing industry is practically confined to Santiago. The copper mines once so successfully exploited are being re-opened, but do not yet appear in labour statistics. Manganese mines have been developed since the American occupation, about 125 men being regularly employed at 85 cents American money for a ten-hour day. This is surface working, and the mines are some distance from the city of Santiago. The iron mines of this province employ over 4,000 men when sufficient labour can be obtained.

✧ ✧ ✧

In the course of an article on animal sense perceptions, in which special attention is directed to nauseous or offensive odours as a means of protection, the editor of the "Zoologist" warns his readers against regarding animal etiology too much from the human standpoint. Because animals cannot speak, we must not assume that they have no modes of communication; it is by no means certain that the ordinary explanation of "warning colours" is the true one, while the evil smell of the durian fruit does not render it distasteful either to the ourang or to man himself.

✧ ✧ ✧

An oxyacetylene blow-pipe is described by M. Fouche in the Bulletin of the French Physical Society. The flame is formed by the combustion of a mixture of one part of acetylene to ½ of oxygen, and in order that the explosion may not travel back into the blow-pipe, a jet velocity is required, due to the pressure of a water column four metres in height. The flame melts most metals readily; it will solder iron and steel. Even silica and lime are melted by it. With a reduction of the proportion of oxygen, the flame becomes luminous, and on falling on lime the free carbon goes to form carbide of lime.

✧ ✧ ✧

The Sheffield electrical Engineer, Mr. S. E. Fedden, gives some interesting figures relating to the use of steam turbines for electrical power generation in a paper read recently before the Municipal Electrical Association. From a table of actual tests of a 500-kilowatt turbo-alternator running at 2,500 revolutions per minute and with 140 pounds steam pressure at the stop valve, it appears that the consumption of steam per kilowatt hour at full load varied between 22.2 pounds to 28.9 pounds. The former consumption was obtained with a vacuum of 28 inches and the latter with 22 inches in the condenser. An economy of 8 per cent. in steam consumption was obtained with 50 deg. superheat and 12 per cent. with 100 deg. superheat.

✧ ✧ ✧

J. O'Brien contributes a suggestive note to the "Gardener's Chronicle," on the differing odour of Odontoglossum hebraicum as observed at different periods. When first flowered by the writer the blooms had a marked cinnamon odour, quite distinct from the hawthorn fragrance of other members of the group. On passing into other hands, the plant, when it first flowered, gave off the hawthorn odour, but on the next occasion of its blooming the smell was that of cinnamon. The writer does not state if these differences of odour have been traced to diverse periods of the blooming. It has been noticed by those who grow the common jasmin that the flowers, when first expanded, possess in a marked degree the delicious fresh odour which is characteristic of them. But as flowering progresses, the perfume becomes less delicate, and the blooms are then very attractive to blue-bottle flies. This would appear to have some connection with the recorded formation of indol in the jasmin bloom as the process of flowering approaches completion.

✧ ✧ ✧

During the recent trials and experiments with alcohol for motors in Paris, M. Sorel carefully examined the exhaust gases to ascertain if complete combustion were effected with the various alcoholic agents utilized. He has prepared an extensive report upon the subject. From this it appears that he nearly always found acetic acid in the exhaust gases, proving that thorough combustion was not attained. It is also apparent from the various vehicles M. Sorel examined that the capacity of combustion is the least with light, high-speed vehicles, but he even found that heavy motors did not obtain the efficiency expected in this direction. To insure perfect combustion M. Sorel has found by experiment that the air supply which has been calculated upon a theoretical basis as sufficient to attain perfect combustion is deficient by 50 per cent. This scientist intends to investigate the subject still more, and to ascertain exactly what air pressure is requisite to insure the most efficient combustion, and the result of these investigations should prove of great value to those who use alcohol-driven motors.

✧ ✧ ✧

The "Centralblatt fur Accumulatoren und Elementenkunde" publishes details of tests carried out by order of the French Minister of the Marine with secondary cells of French manufacture—presumably for use on submarines. The method of testing the durability of the cells was as follows:—The cells submitted by the various manufacturers were connected up in a series to form one battery, and were charged and discharged 250 times. A current of 330 amperes was used for the first charging operation for a period of four hours, and subsequent chargings were carried out with the same current for a period equivalent in ampere hours to a 50 per cent. increase on the previous discharge from the battery. The discharge was carried out at 660 amperes, and was continued until the E.M.F. of any cell had fallen to 1.65 volts. Two chargings and dischargings were completed daily, and Sunday was observed as a rest day.

✧ ✧ ✧

The level of liquid in each cell was preserved constant by addition of water or acid during the period of the test. The cells which fell below 1.65 volts in less than half an hour from the commencement of any period of discharge were withdrawn from the series, and the plates submitted to a final examination in presence of a representative of the makers. The number of cells entered for the test was 21, these being submitted by thirteen manufacturers. The experiment continued from October 10 to March 17, and on the latter day only five cells were left as survivors of the durability test. The following are the trade names and final E.M.F.'s of these five cells:—Heinz (1,860 volts), Union (1,790 volts), Metaux (1,772 volts), Max (1,714 volts), Fulmen-d'Arsonval (1,650 volts). Of the above five makes of secondary cells, the first four are manufactured exclusively with pasted plates. The maximum weight of accumulators for the French navy is fixed by the Ministry at 225 kg. The Heinz cell had a total weight of 181 kg., of which 106 kg. represented the weight of the plates.

✧ ✧ ✧

The world-famed Chesapeake terrapin is evidently fast disappearing. All along the Chesapeake Bay terrapin hunters are finding greater difficulty than ever in capturing the diamond-backed creatures so highly prized by gourmets. It seems strange now to eread that in ante-bellum days the Maryland Legislature once passed a law prohibiting slave-owners from feeding terrapin to their slaves oftener than once a week—a law, the passage of which was prompted by the negro taste for pork. The preservation of the terrapin supply has been a problem that has given the dealers much concern during the last few years. It is doubtful whether the creature will propagate in captivity. But it is certain that incubators will protect the eggs from the ravashes of marsh rats and crows. The chief source of terrapin supply is now Crisfield, Md., although many diamond-backs come from the Choptank River and the waters of Talbot County. At Crisfield the dealers have been in the habit of gathering terrapin and impounding them in the water. The result of this is that all the good Chesapeake terrapin are at Crisfield, imprisoned by dealers. The price now for 7 and 8-inch terrapin is 60 dollars a dozen; for 6 to 7 inches, 36 dollars a dozen; 5 to 6 inches, 14 dollars a dozen; and under 5 inches, 2 dollars a dozen. The discrepancy between 60 dollars and 2 dollars a dozen is due to quality; for the diamond-back increases in flavour with age, and appears to become more tender as it grows older. Furthermore, the smaller terrapin cannot be marketed, since the law prohibits it.

✧ ✧ ✧

Mr. J Halm, of the Royal Observatory of Edinburgh, has proposed a new and more complete theory of the sun, briefly as follows: Previous theories of the periodic changes have taken no account of the absorbing envelope surrounding the photosphere. If the loss of energy by radiation exceed the production of heat due to shrinkage, the temperature must fall. The level of the layer of maximum radiation—i.e., of the photosphere—must shift toward the centre, and consequently the photosphere becomes protected by a greater thickness of absorbing and reflecting matter. After a time the increasing reflection may overheat the photosphere, but the overheated material may be retained at the level of the photosphere by convection currents until the upward tendency becomes so strong as to produce an eruption by which thermal equilibrium is temporarily restored, after which the cycle is repeated. The mathematical expression of the theory gives an equation from which a curve of sun spots may be computed which agrees very closely with the results of observation, while a "great period" of solar phenomena is accounted for by changes in the intensity of the convection currents, the equation showing that when the spot development is powerful the rise from minimum to maximum will be accelerated. A remarkable conclusion from the theory is that times of maximum spottedness correspond to times of minimum radiation, which would seem to be supported by the more important recent researches.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

DUBLIN, SATURDAY, AUGUST 18.

By order of the Commander-in-Chief, the barrack gates are closed every evening precisely at half-past seven o'clock, and after that hour no soldier is permitted to go out on any account whatever. This order has originated from a late misunderstanding between a party of the army and the police.

A silver mine near the Chair of Kildare has been lately discovered, and is now working with great success by Mr. Evans, Engineer to the Grand Canal Company. Should the mine turn out adequate to the expectations which are formed of it, it must be a most valuable acquisition, on account of its contiguity to the Grand Canal, and consequent cheapness of water carriage.

The wantonness which has hitherto been practised by apprentices, and other ignorant persons, in throwing orange peels, and committing other acts of outrage, in play-houses, is now likely to be put a total stop to. The Grand Jury of the city of Dublin, much to their honour, have found bills of indictment against a person who repeatedly spit down from the upper gallery on a gentleman in the middle, and when spoke to, treated him with the most abusive language. Happily he was taken in the act, which, no doubt, will be brought home to him.

Extract of a letter from Athy, August 15.

"This being the last day of our Assizes, Thomas Casey was indicted, tried, and capitally convicted, for having, in complicity with others, robbed and plundered the house of Mr. Tone, near Sallins, in the county of Kildare, of various valuable articles, to the amount of £450. On his trial he attempted to prove an alibi, and for that purpose produced a witness whose testimony went fully to establish it, but not content therewith, another evidence was produced, who contradicted every assertion of the former. After a learned charge from the judge, the jury withdrew, and brought in a verdict of guilty, on which the unhappy wretch received sentence to be executed on Tuesday, the 28th inst. The above culprit is said to be a notorious offender, and to have been concerned in many robberies. There were five in company with him at the time of the robbery, who are not yet taken. By his frequent robberies, and carrying on the pawnbroking business in Hanover lane, Dublin, it is reported he acquired a property of £1,300, and after conviction he swore that though he was found guilty, he was still worth £1,000. On his return from court, though heavily bolted, he made a most surprising leap."

It is, indeed, much to be lamented that a sum of money has not been granted by Parliament during the late session for the purpose of finishing the improvement of the new gardens in the style of elegance originally intended. It was laid out for a charitable purpose, and it is a pity that any effort for rendering the entertainment or amusement of the public, where benevolence is so immediately concerned, should not be properly and effectually supported.

We hear that an experiment is going to be made of paving our streets with mountain stone cut in squares, it being the opinion of many intelligent persons, a material both for its durability and roughness, to be preferred to either the Scotch or Arklow grit, hitherto used in Dublin.

DUBLIN, MONDAY, AUGUST 20.

The Amazon frigate has arrived at Milford, wit a large smuggler of three hundred tons, which she took off Cape Clear a few days ago, laden with a variety of rich prohibited goods from France. She is said to have been freighted at St. Martin's, in the Isle of Rhe, on the west coast of France, and is estimated at £24,000.

DUBLIN, TUESDAY, AUGUST 21.

As the weather has been calm for some days past, it was expected that the divers would have made their experiment at the Kish Bank, for the recovery of some of the bullion and dollars in the "Belgioso," but no such attempt has been hitherto made, though the temptation is great, as they are to share half what they recover.

Yesterday as Walter Dawson, Esq., of Ashgrove, near Armagh, was coming to Dublin, he was stopped between the Hill of Turvey and Swords by four footpads, who robbed him of cash and notes to the amount of £70. They suffered him to keep what silver he had, to serve, they said, for travelling expenses.

The Corporation of the city of Dublin have, we hear, in contemplation, a very spirited and useful design, which is that of extending the pipe-water works to the Circular Road, on which though the income will be by no means commensurate to the expense for many years, if ever, the expense cannot amount to less than £11,000.

Yesterday the annual Melon Feast was celebrated at Conway's Tavern, at the Blackrock, at which a numerous crowd of the most respectable citizens, accompanied by the most distinguished of the curious in our natural productions, atended; there were fourteen brace of melons produced by the claimants, all of which were of the most excellent flavour. There were two medals adjudged: the first a gold one, value three guineas, for the best-flavoured Rock Cantelope Melon; and for the second best, a silver one, value one guinea. The first was obtained by Mr. Clarke (gardener to the Right Hon. John Beresford); and the second by Mr. Allen (gardener to his Grace the Archbishop of Dublin). The medals were elegantly engraven; on one side was a representation of a fine melon, in full bearing; on the other, a suitable inscription. There were not less than two hundred people assembled on the above occasion, who all dispersed in the greatest harmony, highly gratified with their day's excursion.

DUBLIN, WEDNESDAY, AUGUST 22.

The spirit of improvement for which this city has of late been so much distinguished, is still extending itself; it has reached our University, and in a short time its internal appearance will correspond with the elegance of its exterior. The ground on the north side is now clearing for the purpose of erecting a chapel, and Palliser's old brick buildings are taking down. This new plan is to be constructed on the plan of the new Theatre, to which it will be directly opposite; the present Chapel and Old Hall come down, and an open square made in consequence, which will greatly add to the symmetry of the whole, and present a perfect and finished appearance.

So long as brewers sell their liquor under the price prescribed by Act of Parliament, in order to induce publicans to become their customers, it will be in vain to hope for the improvement of our malt liquor, or of its coming into general use. Whether it be sold below the legal price, or whether the brewer give a present or premium to the publican, the effect is the same to the public, and the laws should be rigorously enfarced to prevent this injurious collusion. No measure whatever could go further to effect a reformation of morals amongst the lower orders, than to substitute some temperate beverage for the pernicious use of whiskey, which, while it corrupts their manners, debilitates their constitutions.

Extract of a letter from Monaghan, August 18.

"We have had a conviction at our Assizes, which to extend the salutary effects of such an example, ought to be made known to the kingdom. Owen McIntee, Philip McIntee Peter Kelly, and William Kelly, were tried and convicted before the Hon. Baron Hamilton, upon the late Act, and by him sentenced to be transported for seven years, pursuant to said Act, for keeping a forcible possession against the Sheriff, and opposing him in the execution of his duty. At the same Assizes three persons were capitally convicted, two of whom were ordered for execution the 28th, two others were found guilty of clergyable felonies, and also sentenced to be transported. And the two men were sentenced to be pilloried, one of them Mark Nicholson (a man of decent appearance), for counterfeiting the seal of the Linen Board, who was to have his offence written in Capital Letters on a paper to be placed on his breast; two women were found guilty of petty larcenies, and ordered to be confined and privately whipped."

We hear the trustees of the Malahide turnpike road have ordered an estimate to be given for building a bridge across that part of the Strand between the Bathing-house and the new erected Glass-house near Ballybough bridge, which is at present not in very good order; their intention is to have the approach to this city through that spacious road (usually called the Long-strand) by the new Custom House, through Abbey street, etc., and to throw down Ballybough bridge; an improvement which will take place next session of Parliament. The building of the above bridge will be attended with very little expense, that part of the Strand not being covered more than three hours each tide.

The works at the Theatre in Crow street are carrying forward with the greatest celerity; the plan, it is said, is an entire new one, which the taking down of the galleries and altering the stage, seems to confirm. Within these few days, however, no person is admitted to enter the site of the Theatre, for the purpose, no doubt, of surprising the public with a place of elegant amusement in a style entirely new.

It is with pleasure we announce to the public, that a number of young men of genius in this city have associated themselves into a body, under the appellation of "The Society of Irish Artists." They purpose to have regular meetings, in order to consult upon the different improvements in their several departments. Specimens of execution, and models of new inventions, we hear, it is determined on regularly to present to the Royal Irish Academy, such as paintings, engravings, etc. By this means the reputation of the Irish artists will be established, the absurd folly of sending to the sister kingdom upon every occasion abolished, and in time the materials towards an Irish Museum accumulated.

(To be Continued.)

RATES OF SUBSCRIPTION.

"DUBLIN PENNY JOURNAL."

Post free to any part of Ireland, Great Britain, Australia, New Zealand, Canada, United States.

Twelve months, 6s 6d; Six months, 3s 3d; Three months 1s 8d.

Printed and published for the proprietors at 90 Middle Abbey street, Dublin, by W. F. Dennehy, to whom all cheques and money orders should be made payable.

Dublin Penny Journal

A Magazine of Art, Archæology, Literature, and Science

Vol. I., No. 41. DUBLIN, SATURDAY, JANUARY 10, 1903. PRICE ONE PENNY.

THE ABBEY OF BURISHOOL.

AN OLD MAYO MONASTERY.

AS ITS RUINS STOOD IN 1791.

From Grose's "Antiquities of Ireland," 1791.

The following is part of Pope Innocent VIII's bull for the founding of this abbey, A.D. 1486:—

"Bishop Innocent, servant of the servants of God, to the Venerable Father the Archbishop of Tuam, salvation and apostolic benediction. The immense benignity of the Apostolic See always complies with the pious desires of the faithful of the regular orders, and benevolently grants their requests. A petition lately exhibited to us on the part of Donald O'Moran of the friars preachers, states that Richard de Burgh, desirous by a happy commerce to exchange earthly for celestial, and transitory for eternal things, and for the salvation of his own and the souls of his progenitors, and for the singular devotion which he bears to the aforesaid order, grants and gives in pure and perpetual aims to said order, a certain place, called Bures-Vaill, fit and convenient for constructing one house for the use and habitation of the said brethren, particularly as there is no house of the order within twelve miles of it, &c."

This monastery is situated on a bay of the same name, on the road leading to Erris. The steeple erected on an arch still remains; two sides of the cloisters also. It was dedicated to the Virgin Mary, and was granted to Nicholas Weston, who assigned it to Theobald Dillon, Viscount Costellogalen. A great patron is held here the 4th of August, being St. Dominick's day.

This view was taken from an original drawing by Bigari, in the collection of the Right Honourable William Conyngham.

SLIABH-NA-MON,

AND

Its Fenian Traditions.

SUPPLEMENTARY NOTES BY REV. J. F. LYNCH.

VI.

At Athlone, as mentioned in D. P. J., Luan is stated to have slain the black pig, and it was also noted in D. P. J. that Athlone is in Tain Bo Chuailgne stated to be named from the luan of the Finnbheannach. O'Curry (Lectures, p. 40) says "The Don Chuailgne, at last coming up with his opponent, raised him on his horns, ran off with him, passed the gates of Medb's palace, tossing and shaking him as he went, until at last he shattered him to pieces, dropping his disjointed members as he went along. And wherever a part fell, that place retained the name of that joint ever after. And thus it was stated that Ath Luain, now Athlone, which was before called Ath Mor, or the Great Ford, received its present name from the Finnbheannach's Luan or loin, having been dropped there."

The Finnbheannach, or white horned bull, who fed on Magh Ai (35) in Co. Roscommon, was an ancient moon symbol.

In Silva Gadelica, p. 530, it is stated that Magh Liffe was named from Liffe, daughter of Canann Curchach, who eloped with Deltbanna mac Druchta, cup-bearer of Conaire mor, King of Tara, belonging to Bodb's Sidh of Femen (36), and Liffe admired the plain so much that she induced Deltbanna to get it named from her. The cup-bearer is often mentioned in the Irish tales, and is an important character. It is stated that the cup-bearers of the Greek Poseidon, the Latin Neptune, were black bulls.

The Irish tales for the most part are incorrect in the etymological ventures, but the tales are valuable on account of the old names and references to old customs contained in them. Professor Connellan (Trans. OS. Soc., vol. v., p. 169) says that the river Liffey, according to the Book of Ballymote, derived its name from the circumstance of a battle having been fought near it by the Milesians against the Tuatha De Danann and Fomorians, and the horse of the Milesian monarch Heremon (Eri-mon), which was named Gabhar Liffe, signifying the steed of Liffe, having been killed there, the river was called Liffe or Liffey.

In another account it is stated that it got its name from Life, the daughter of Iuchna of the Fir Bolg, who was drowned there. In Irish it was called Amhain Life, signifying the river Liffey, which was anglicised Avon Liffey, and changed to Amliffy and Anna Liffey, and the name has no connection with the Danish Amliffe or Aulaffe. The name Life simply means water, or river. The final vowel is what philologists term a consonantal rest, and the root is lif from libh, or lib, and this is a form of the old word lu, or li (37), "water." The old names of many of the Irish rivers and lakes are extensions of old words for water or river. The Shannon, Irish Sinann, comes from an old word, Su, or Si, "water," found in Sanskrit, and which still occurs in the Turkish language. Dr. Whitley Stokes has compared the word Sinann with Indus or Sindus, the Indian river name. A very good idea of the evolution of the Irish language may be obtained by examination of the old names of the rivers and lakes.

The Irish language is said to have been composed by a certain royal schoolmaster, named Fenius Farsaidh, who had for assistant Gaedhal, the son of Eathor. Those two names, Fenius and Gaedhal, are eponymous terms, and denote the Fene and the Gael, and in the Ara district we have succeeded in identifying the Fene with the Iberians. Fenius and Gaedhal are said to have composed the Irish language from all other languages, and to have arranged it in five dialects, the most polished of which was named Bearla Feine, or the language of the Fene, after Fenius himself, while the language generally was named Gaidhelg, from Gaedhal. I stated that the word Gaedhal signified "warrior," and that it was an eponymous term for the Gaedhilic race, who are the offspring of the Iberians.

The Irish race is a union of the Iberians and two branches of the Gael or Celts, and hence Fenius and Gaedhal had something to do with the formation of the Irish language, and the presence of the Iberian element in the Irish language will enable us to trace the old Irish names which have been much neglected to a very remote period. The names reflect the ideas of the people who first composed them. The late Canon Isaac Taylor, Mr. Baring-Gould, Professor Rhys, and others, have strongly insisted on the non-Aryan element in the British Isles, and it appears to me that the old names will furnish abundant proof of the existence of that element in Ireland.

In the tale of Bruighen da Derga, the swineherd of Bodb of Sidh Femin is named Nar, and this is an important name. In Silva Gadelica, p. 530, it is mentioned that Ros Nair was the old name of Ros Bladhma, beside Sliabh Bladhma or Slieve Bloom. In "Corca Laidhe," p. 58, Nar is said to be the son of Fearmora and Sigeang, daughter of Fearmora of the Ara Cliach, is said to have been mother of Cairbre Mor, Cairbre beg, and Cairbre Crom, who were born in Femhen-mhagh, or "plain of Femen," and fostered in Cliach-an-mhagh, or "plain of Cliach or Clin," of which I shall have somewhat to say in a future article, in which I hope to deal with the monuments of Oilioll Olom and Lughaidh Mac Con.

The explanations of old Irish personages and things given in this article will probably appear very strange and incredible to many, and especially to those who know nothing of the Irish language and literature, but it must not be forgotten that Ireland is, and has always been, a land full of surprises, and that our people have always claimed that the Irish race is an ancient race and that Erin is an ancient land.

The history of Ireland as told by the bards is now known not to be a correct history, but the tales of Ireland which the people have so well preserved must have some basis, must originally have been composed in order to keep from perishing some facts which came under the notice of the old folk. In Ireland we have no hieroglyphic or Cuneiform inscriptions, for our oghams do not count for very much, but in Ireland we have the oldest collection of folk tales in Europe, and we have a vast number of old names both personal and local, and we have the Irish language. We have sufficient material to re-write the history of our ancient land, and I think that we shall be able expose to view an Erin hitherto undreamed of, an Erin which can shake hands across the ages with ancient Egypt and Chaldæa, an Erin of whose antiquity her sons may well feel proud.

In Silva Gadelica, p. 572, we read:—"We have another denizen of this famous sidh: Fiamain mac Forai-i-Fiamain mac Buidb deirg meic an Dagda a Sidh fer Femhin, i.e., Fiamain, son of Foraei, that is to say, son of Bodb derg, son of the Daghda out of the Sidh of Femen (Mem. in Harl. 5280, f. 57b)."

Two of the lost tales of Erinn mentioned in O'Curry's list from Book of Leinster (Lectures, pp. 588-9) were Aided Fhiamain, or the Tragical Death of Fiamain, son of Forai (O'Curry's note 164), and Echtra Fiamain, or the Adventures of Fiamain.

35. Various explanations are given of the name Ai, or "Light." In the Bodleian Dinnshenches, p. 29, Magh Ai is said to be named from Ai, the name of the hound of Enna Aignech who pursued the magic swine of Drebrenn. In the Book of Lismore, quoted by Dr Whitley Stokes ("Lives." p. xxxv), the first poem ever made in Ireland is stated to have been made by Ai, son of Olloman, or Ollam, son of Delbaeth. Keating says that the six sons of Delbaeth, son of Oghma, were Fiachuidh, Ollam, Iondaoi (Ind Ai), Brian, Iuchar, and Iucharba. Keating (Joyce's edition, p. 22), says that Brian, Iuchar, and Iucharba, were three gods of the Tuatha De Danann. Compare also the account given of Brian and his brothers in "Children of Tuireann. In the Book of Leinster it is stated that Ai, son of Ollam, was one of the Irish triad who spoke immediately after birth.

36. In Silva Gadelica, p. 523 there is a tale setting forth that Cliach, the harper from Sidh Baine, went to invite Conchenn, daughter of Bodb Derg, out of the Sid on Femen on an elopement. This tale is given by O'Curry (Lectures), and by Professor Rhys (Hibbert Lectures).

37. Arabic grammarians call such roots as lu, or li open, and such a root as lib, shut. In lu the vocal stream is unconfined, but in lib, it is shut off, or closed, by the consonant. In the case of Luimneach (now Limerick), incorrectly explained by Dr. Joyce, the vocal stream of the word root lu, or li is closed by the consonant m and in the case of Liger, now Loire of France, the vocal stream of root lu, or li, is closed by conconant g an a suffix is added. Corssen derives Rome from the Celtic Sru, a river but there is an Irish word ru or ri, "water," found in Rib, the name of Loch Rib, now Lough Ree. In the mythology, Rib is made brother of Eochn of Lough Neagh.

; appears to me that the name Fiamain an extension of Fi (I, or Ai). Compare llamain from Oll, Segamain from Seg, id Eochamain from Eoch. The celebra- d dwarf of Knockaine and Tara is named er Fi, Fer Fighail, Fer Fiugail, son of ogabal of Knockaine, and fosterson of anannan Mac Lir, or "son of the sea" odleian Dinnshenches, p. 44).

Forai appears to mean "great Ai," as r (or, ur, fer) is an intensive particle. Silva Gadelica, p. 225, and in O'Curry's Manners and Customs," the four sons of ogabal of Knockaine are named Ferai 'er Fi), Aillen, Lu, and Fainnle (Ainule), id Mr. O'Grady (Silva Gadelica, p. 587) uates Ferai, that is, Fer Fai, with Fer , the Irish Apollo.
